PO 8: **Lifelong Learning**: Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self- directed learning aimed at personal development, and adapting to changing academic demands of work place through knowledge/ skill development/ reskilling.

PO 9: **Leadership Qualities**: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiringteam members to engage with that vision, and using management skills to guide people to the right destination in a smooth and efficient way.

PO 10: **Research Skills**: Prepare students for pursuing research or careers in industry in concerned subject and allied fields. Capability to use appropriate software to solve various problems and to apply programming concepts of C++ and Mathematica/ Matlab to various scientific investigations, problem solving and interpretation.

PROGRAMME SPECIFIC OUTCOMES FOR MSC MATHEMATICS

PSO 1: **Strong Foundation in Knowledge:** Have strong foundation in core areas of Mathematics, and able to communicate Mathematics effectively.

PSO 2: **Abstract Skills:** Evaluate hypotheses, theories, methods and evidence within their proper contexts

PSO 3: **Problem Solving**: Solve complex problems by critical understanding, analysis and synthesis

PSO 4: **Proficiency in Interdisciplinary Skills:** Select, interpret and critically evaluate information from a range of sources that include books, scientific reports, journals, case studies and internet.

PSO 5: **Application and Research Efficiency:** Provide a systematic understanding of the concepts and theories of mathematics and their application in the real world- to an advanced level, and enhance career prospects in a huge array of fields, viz. in industry, commerce, education, finance and research.

PSO 6: **Lifelong Practical Knowledge**: Recognise the need to engage in lifelong learning through continuous education, and research leading to higher degrees like PhD, DSc etc.

COURSES OFFERED IN MSC MATHEMATICS

Sl. No.	Course Name
1.1	Real Analysis
1.2	Linear Algebra
1.3	Abstract Algebra
1.4	Differential equations
1.5	Mathematical Methods I
1.6	Community engagement and Service Learning
1.7	Fractal geometry and Applications
2.1	Topology and Functional Analysis
2.2	Complex Analysis
2.3	Measure Theory and Probability Theory
2.4	Mathematical methods II
2.5	Classical Mechanics
2.6	Essential Mathematics for Machine Learning
3.1	Discrete Mathematics
3.2	Computer Programming In C
3.3	Computer Programming In C Lab
3.4	Research Methodology for Mathematical Sciences
3.5	Research Seminar
3.6.1	Field theory & commutative Algebra
3.6.2	Number Theory
3.6.3	Mathematical Logic
3.6.4	Fuzzy sets and Applications
3.7.1	Fluid Dynamics I
3.7.2	Riemannian Geometry & Tensor Calculus
3.7.3	Dynamical Systems and Chaos
3.7.4	Convex Optimization
3.7.5	Numerical solution of PDE
3.8.1	Computational Number Theory
3.8.2	Scientific Computing
3.8.3	Special Functions
3.8.4	Introduction to Game Theory
4.1.1	Advance Analysis
4.1.2	Graph Theory
4.1.3	Multivariable calculus
4.1.4	Algebraic Number Theory
4.1.5	Algebraic Geometry
4.2.1	Fluid Dynamics II
4.2.2	Continuum Mechanics
4.2.3	Theory of Relativity
4.2.4	Numerical Optimization
4.3.1	Design and Algorithms Analysis
4.3.2	Machine Learning
4.3.3	Finite Elements Methods
4.3.4	Introduction to Cryptography
4.4	Research Project
4.5	Statistical Methods & Software in Research

DETAILED SYLLABUS THEORY COURSES

MARA0014: REAL ANALYSIS

(4-0-0)

COURSE OUTCOMES

CO 1: Classify the convergence of sequences and series of real numbers, and study various tests. (Understanding)
CO 2: Recall the fundamental properties of continuity and uniform continuity. (Remembering)
CO 3: Test for uniform convergence of sequence and series of real valued functions. (Analysing)
CO 4: Solve problems of the Riemann integrals and improper integrals. (Evaluating)
CO 5: Develop the concepts of compact sets, connected sets and their properties. (Creating)

Module I: (14 lectures)

Review of set theory, relations and functions, finite and infinite sets, countable and uncountable sets, Real number system as a complete ordered field, Archimedean property, supremum, infimum. Sequence of real numbers, bounded sequence, limsup, liminf, Cauchy sequences, Series, convergence of series, root and ratio tests, absolute convergence.

Module II: (8 lectures)

Limit, Continuity, types of discontinuity, Intermediate value theorem, Fixed point theorem, uniform continuity, Monotonic functions.

Module III: (14 lectures)

Sequence and series of real valued functions, Point wise and uniform convergence, uniform convergence and continuity, uniform convergence and differentiation, uniform convergence and integration. Cauchy criterion for uniform convergence. Series of functions and convergence, Weierstrass M-test.

Module IV: (12 lectures)

Riemann sums and Riemann integral, Riemann-Stieltjes Integrals, Improper Integrals Functions of several variables, directional derivative, partial derivative, derivative as a linear transformation, inverse and implicit function theorems.

Module V: (16 lectures)

Open and closed sets, limit points, interior points, Euclidean space, compact spaces, Bolzano Weierstrass theorem, Heine Borel theorem in R only.

Suggested Readings

1. Principles of Mathematical Analysis, W. Rudin, McGraw Hill Kogakusha Ltd.
2. Mathematical Analysis, T. Apostol, Addison-Wesley; Publishing Company.
3. Introduction to Real Analysis, R. G. Bartle and D. R. Sherbert, John Wiley & Sons, Inc., New York.
4. The Elements of Real Analysis, R. G. Bartle, Wiley International Edition.

Mapping of COs to Syllabus

CO 1	H				
CO 2		H			
CO 3	M		H		
CO 4				H	
CO 5	M				H

MALA0015: LINEAR ALGEBRA

(4-0-0)

COURSE OUTCOMES

CO 1: Find the fundamental concepts and properties associated with vector spaces. (Remembering)
CO 2: Demonstrate the algebra of matrices, eigenvalues and eigenvectors. (Understanding)
CO 3: Develop the representation between linear transformations and Matrix theory. (Applying)
CO 4: Choose various examples in Inner product spaces and study the applications to various problems. (Evaluating)
CO 5: Elaborate quadratic forms and solve related problems. (Creating)

Module I: (10 lectures)

Vector spaces, subspaces, quotient spaces, linear dependence, basis, dimension of a vector space, LinearTransformations.

Module II: (20 lectures)
Algebra of Matrices, trace of matrices, rank and determinant of matrices, system of linear equations. Eigenvalues and eigenvectors, relation between characteristic and minimal polynomial, Cayley- Hamilton theorem, Diagonalizability.

Module III: (10 lectures)
Matrix representation of linear transformations. Change of basis, canonical forms, diagonal forms, triangular forms, Jordan forms.

Module IV: (15 lectures)
Inner product spaces, properties of inner products and norms, Cauchy-Schwarz inequality, Orthogonality and orthogonal complements, orthonormal basis, Gram-Schmidt process.

Module V: (5 lectures)
Quadratic forms, reduction and classification of quadratic forms.

Suggested Readings
1. Linear Algebra, K. Hoffman and R. Kunze, Prentice Hall.
2. Linear Algebra, G.E. Shilov, Prentice Hall.
3. Linear Algebra: A Geometric Approach, S. Kumaresan, Prentice-Hall of India Pvt. Ltd., New Delhi.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V
CO 1	H	M	M		
CO 2		H	M		
CO 3			H		
CO 4				H	
CO 5					H

MAAB0016: ABSTRACT ALGEBRA
(4-0-0)

COURSE OUTCOMES
CO 1: Find the concepts of Group theory and the application of Sylow theorems. (Understanding)
CO 2: Categorize among unique factorization domain, Euclidean domain, Principal ideal domain and irreducible criteria. (Analysing)
CO 3: Organize the characteristics of field extensions, Algebraic extension, Galois theory. (Applying)
CO 4: Develop the concepts related to representation theory and study their application. (Creating)

Module I: (15 lectures)
Review of Groups, Cayley's theorem, class equations, Sylow theorems and its applications, Direct products of groups,Solvable groups, Jordan-Holder theorem.

Module II: (20 lectures)
Rings, ideals, prime and maximal ideals, quotient rings, Euclidean domain. principal ideal domain, unique factorization domain, Polynomial ring over a field, reducible and irreducible polynomials, irreducibility criteria.

Module III: (20 lectures)
Fields, finite fields, field extensions, Algebraic extensions, Galois Theory.

Module IV: (5 lectures)
Fundamentals of representation theory.

Suggested Readings
1. Topics in Algebra, I. N. Herstein, Wiley Eastern Limited, New Delhi.
2. University Algebra, N. S. Gopalakrishnan, Wiley Eastern.
3. Contemporary Abstract Algebra, J. A. Gallian, Narosa Publishing.
4. Algebra, Dummit & Foote, John Wiley & Sons

CO 2		H		
CO 3			H	

CO 4				H

MADE0017: DIFFERENTIAL EQUATIONS

(4-0-0)

COURSE OUTCOMES

CO 1: Find the classification of differential equations with existence and uniqueness criteria. (Remembering)
CO 2: Develop appropriate methods to solve linear differential equations. (Applying)
CO 3: Examine the solvability of differential equation and partial differential equation. (Analysing)
CO 4: Determine various methods for the solution of Partial Differential Equation. (Evaluating)

Module I: (16 lectures)

Classification of Differential Equations, their origin and solution; Exact differential equation and integrating factors, special integrating factors, linear equation and Bernoulli equations. existence and uniqueness for initial Value problem: Peano and Picard theorem.

Module II: (18 lectures)

Second order Linear Differential equations, dimension of the solution space for homogeneous equations, general solution for non-homogeneous Equations.; method of undetermined coefficients, method of variation of parameters. Power series solution about an ordinary point, solution about singular points, Frobenius method BVP, Sturm-Liouville Problem, Orthogonality of Characteristic functions, Fourier series exp.

Module III: (26 lectures)

Origin of Partial Differential Equation, Linear and quasi-linear partial differential equation, method of characteristics, Lagrange's and Charpit's method to solve first order PDE, Cauchy problem for first order PDE, Classification of PDEs (second order), Method of separation of variables for Heat (one and two dimension), Wave and Laplace equation.

Suggested Readings

1. Differential Equations, S. L. Ross, Wiley-India.
2. Partial Differential Equations an introduction, W. Strauss, John Wiley and Sons Ltd.
3. Linear PDE for scientist and engineers, Tye Myint U and L. Debnath; Birkhauser, Boston.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III
CO 1	H	M	
CO 2	M	H	
CO 3		M	H
CO 4			H

MAMT0018: MATHEMATICAL METHODS I

(4-0-0)

COURSE OUTCOMES

CO 1: Explain basic numerical methods to solve algebraic and transcendental equations. (Understanding)
CO 2: Classify interpolation formulae and solve different numerical problems. (Applying)
CO 3: Make use of Interpolation formulae to solve numerical differentiation and integration. (Evaluating)
CO 4: Compose various methods to obtain numerical solutions of ODE and PDE. (Creating)
CO 5: Determine the methods to solve linear programming problems. (Evaluating)

Module I: (10 lectures)

Numerical solution of algebraic and Transcendental equations: Bisection method, Regula-Falsi methods and Newton- Raphson method; Rate of convergence of these methods. Of systems of linear algebraic equations: Gauss elimination method, Gauss-Jordan method, Gauss-Seidel methods, Error analysis.

Module II: (6 lectures)

Interpolation: Finite differences, Newton's forward and backward difference interpolations, Central difference interpolation, Lagrange's and Newton's divided difference interpolation, Hermite and spline interpolation.

Module III: (15 lectures)

Numerical differentiation and integration: Differentiation using interpolation formulae (Newton's forward and backward difference interpolation, Central difference interpolation, Lagrange's and Newton's divided difference interpolation), Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rule, Romberg method.

Module IV: (14 lectures)
Numerical solutions of ODE and PDE: Initial value problem for ODE of first and second order, Taylor series method, Picard's method, Euler and modified Euler methods, Runge-Kutta methods, Milne's and Adam's predictor and corrector methods, Finite difference solution of second order ODE and PDE.

Module V: (15 lectures)
Mathematical formulation of LPP, Solution of a LPP by graphical method, simplex method, Revised simplex method, Duality. Transportation and Assignment problem, Two person-zero sum games. Equivalence of Rectangular game and linear programming.

Suggested Readings
1. Numerical methods, Problems and solutions, M.K. Jain, S. R. K. Iyengar, R. K. Jain, New Age International(P) Ltd.
2. Elementary Numerical Analysis – An Algorithmic Approach, S D. Conte and Carlde Boor, McGrawHill.
3. Introduction to Numerical Analysis, K. E. Atkinson, John Wiley.
4. Operations Research: An Introduction, H. A. Taha, Macmillan.
5. Operations Research, Kant Swarup, P. K. Gupta and M. M. Singh, Sultan Chand and Sons.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V
CO 1	H	M			
CO 2	M	M	H		
CO 3				H	
CO4	L	M	M	H	
CO5					H

MATF0019: TOPOLOGY AND FUNCTIONAL ANALYSIS
(4-0-0)

COURSE OUTCOMES
CO 1: Demonstrate the basic characteristics and properties of metric spaces. (Understanding)
CO 2: Categorize the various properties related to Topological Spaces. (Creating)
CO 3: Examine the Connectedness and Compactness of Topological Spaces. (Analysing)
CO 4: Deduct various results from separation axioms and Metrization theorem. (Evaluation)
CO 5: Explain basic results related to Normed linear spaces, Banach spaces and Hilbert spaces. (Understanding)

Module I: (10 lectures)
Metric spaces, open and closed sets, limit points, interior points, convergence, Cauchy sequence, completeness, completion in metric spaces, separable spaces.

Module II: (10 lectures)
Topological Spaces, Basis for a topology, The order topology, The product topology, The subspace topology, Closed sets and limit points, convergent sequence, Continuous function, homeomorphism, metric topology.

Module III: (10 lectures)
Connected spaces, connected subspaces of real line, Components, local connectedness, Compact spaces, compact spacesof real line, limit point compactness, local compactness.

Module IV: (15 lectures)
The countability axioms, the separation axioms, Urysohn Lemma, Urysohn metrization theorem. Tychonoff's theorem, Stone-Cech Compactification.
Local finiteness, the Nagata Smirnov Metrization theorem, paracompactness, the Smirnov Metrization theorem, space of continuous function.

Module V: (15 lectures)
Normed linear spaces, properties of normed linear spaces, Banach space, Hahn-Banach theorem, Open mapping theorem, Closed graph theorem, Principle of uniform boundedness, Hilbert spaces, Orthogonal complements, orthonormal sets, the Reisz representation theorem, Bessel's inequality, Parseval's identity, The dual space, self –adjoint, normal and unitary operators.

Suggested Readings
1. Introduction to topology and modern analysis, G. F. Simmons, Tata-McGraw-Hill.
2. Topology, J. R. Munkres, Prentice Hall.
3. Introductory functional analysis with application, E. Kreyszig, John Willey and Sons.

Mapping of COs to Syllabus

CO 2	M	H	M		
CO 3		M	H		
CO 4				H	
CO 5					H

MACA0020: COMPLEX ANALYSIS

(4-0-0)

COURSE OUTCOMES

CO 1: Define the concept analytic functions and the significance of CR-equations. (Remembering)
CO 2: Explain the basic concepts and theorems associated with complex functions. (Understanding)
CO 3: Apply Cauchy Integrals formulae and Residue theorem to evaluate real and complex integrals. (Applying)
CO 4: Analyse various theorems associated with entire functions and Complex integrals. (Analysing)

Module I: (10 lectures)

Complex numbers and their properties, Complex Plane, Polar form of complex numbers, Powers and roots, set of pointsin the complex plane. Complex function, Special power functions, Reciprocal function.

Module II: (15 lectures)

Limits and Continuity, differentiability and analyticity, Cauchy-Reimann equations, Harmonic functions, Exponential and Logarithmic functions, complex powers, Trigonometric and Hyperbolic functions.

Module III: (20 lectures)

Complex integrals, Cauchy-Goursat Theorem, Cauchy's integral formula and their consequences, Taylor and Laurent series, Zeroes and poles, Residues and residue theorem and consequences, evaluation of real improper integrals.

Module IV: (15 lectures)

Entire function, Liouville's theorem, Maximum modulus principle, Schwarz Lemma, Schwarz-Pick Lemma, OpenMapping theorem. Conformal Mapping, Linear Fractional Transformations, Cross Ratio.

Suggested Readings

1. Foundation of Complex Analysis, S. Ponnusamy, Alpha science International.
2. Functions of one Complex variable I, J. B. Conway, Springer.
3. Complex variable, Murray Spiegel, Seymour Lipschutz, John Schiller, Dennis Spellman, Schum's outlines.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV
CO 1	H			
CO 2	M	H		
CO 3			H	
CO 4			M	H

MAMP0021: MEASURE THEORY AND PROBABILITY THEORY

(4-0-0)

COURSE OUTCOMES

CO 1: Explain the concept of algebra of sets, measure and Lebesgue measure. (Understanding)
CO 2: Demonstrate understanding of the statement and proofs of monotone convergence theorems and their applications. (Understanding)
CO 3: Explain the axioms and properties of probability theory. (Understanding)
CO 4: Develop probabilistic concepts within the framework of measure theory. (Applying)

Module I: (12 lectures)

Algebra of sets, Borel set, extension of measures, Lebesgue measure on: outer measure, measurable sets and Lebesgue measure. Extension of measure, Lebesgue-Stieltjes measures and distribution functions.

Module II: (18 lectures)

Measurable functions and Integration: Lebesgue integral, Monotone convergence theorem, extended monotone convergence theorem, Fatou's Lemma, dominated convergence theorem, Comparison of Riemann and Lebesgue integral. Radon-Nikodym

Theorem and related results.

Module III: (10 lectures)
Probability axioms, sample spaces, events, law of total probability, conditional probability, Bayes Theorem and independence.

Module IV: (20 lectures)
Random Variables, types of random variables, distribution functions, function of random variables, standard univariate discrete and continuous distributions and their properties; expectations, moments, moments generating functions; Chebyshev's inequality, joint, marginal and conditional distributions; covariance, correlation; Random vectors, functions of random vectors, strong and weak law of large numbers, central limit theorem.

Suggested Readings
1. Probability and Measure Theory, R.B. Ash and C. Doleans Dade, Academic press.
2. An Introduction to Probability Theory and its Applications, W. Feller, Wiley.
3. An Introduction to Probability and Statistics, V. K. Rohatgi and A. K. Md. E. Saleh, Wiley.
4. Real Analysis, Royden, H.L. and Fitzpatrick, P. M., Pearson.
5. Measure Theory, Halmos, P. R., Springer-Verlag.

Mapping of Cos to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV
CO 1	H	M		
CO 2		H		
CO 3	M		H	
CO 4			M	H

MAMD0022: MATHEMATICAL METHODS II
(4-0-0)

COURSE OUTCOMES
CO 1: Gain the knowledge fundamentals concepts of calculus of variation and integral equations and their applications. (Understanding)
CO 2: Use concept of Laplace and Fourier transform in solving science and engineering problems. (Applying)
CO 3: Analyse and classify Differential Equations, Partial Differential Equations and Integral Equations and their solutions by various methods. (Analysing)
CO 4: Determine the solutions of various classes of differential equations and special functions with their properties. (Evaluating)

Module I: (10 lectures)
Linear functional, minimal functional theorem, general variation of a functional, Euler- Lagrange equation, Necessary and sufficient conditions for extrema, strong extremum and weak extremum, broken extremum; Weirstras Erdmann corner conditions.

Module II: (10 lectures)
Linear integral equation of the first and second kind of Fredholm and Volterra type Reduction of ordinary differential equations into integral equations, Solution of integral Equations with separable kernels, Characteristic numbers and eigenfunctions, resolvent kernel.

Module III: (10 lectures)
Fourier Transform. Properties of Fourier Transform, Fourier sine and cosine transform, Inverse Fourier Transform, Application of Fourier transform to ordinary and partial differential equations of initial and boundary value problems.

Module IV: (12 lectures)
Laplace Transform and its properties, Convolution theorem, Inverse Laplace Transform, Application of Laplace Transform to solution of ordinary and partial differential equations of initial boundary value problems.

Module V: (18 lectures)
General solution of Bessel equation, Recurrence relations, Orthogonal sets of Bessel functions, Modified Bessel functions, Applications. General solution of Legendre equation, Legendre polynomials, Associated Legendre polynomials, Rodrigues formula, Orthogonality of Legendre polynomial, Concept and calculation of Green's function, Approximate Green's function, Green's function method for differential equations.

Suggested Readings
1. Introduction to Theory and Application of Laplace Transforms, Doetsch G., Springer Verlag.

2. Theory and problems of Laplace transforms, Murray Spiegel, Schum's Outline Series Tata Mc Graw Hill.
3. Integral Transforms & their applications, Brian Daries, Springers.
4. Integral Transforms & their applications, L Debnath, D Bhatta, Chapman & Hall/CRC.
5. Fourier analysis and its applications, G.B. Folland sally series, American Mathematical Society.
6. Fourier and Laplace Transform, R.J. Becrends H.G., Morsche. J.C. Vande Berg and E.M. VandeVrie, Cambridge Press.
7. Introduction to Fourier analysis and wavelets, Graduate Studies in Mathematics, Mark A. Pinsky, AmericanMathematical Society.

Mapping of COs to Syllabus

CO 1	H				
CO2		H	M	M	
CO3			H		
CO4			M	M	H

MACL0023: CLASSICAL MECHANICS

(4-0-0)

COURSE OUTCOMES

CO 1: Learn and understand the fundamental of motion and its governing equations. (Understanding)
CO 2: Extend the concept of rigid body in two dimensions. (Understanding)
CO 3: Apply concepts of Lagrangian and Hamiltonian methods to model various practical situations. (Applying)
CO 4: Analyse diverse physical motions by studying the properties of mathematical model. (Analysing)
CO 5: Evaluate different practical situations by discussing the properties of existing models. (Evaluating)

Module I: (18 lectures)

Introduction to the ideas of constrained motion, Different classifications of constraints of motion, Holonomic and nonholonomic constraints, rhenomic and scleronomic dynamical constraints, Concept of degree of freedom.
Introduction to generalized coordinates, generalized velocities, Total Kinetic energy of a system of particles in terms of generalized velocity. Introduction to generalized momenta and generalized force. D'Alemberts principle and Lagrangian form of equation motion of a dynamical system of N particles. Calculus of variations, Euler-Lagrange equation, applicationof calculus of variations in dynamical problems.

Module II: (12 lectures)

Two-dimensional motion of rigid bodies, Euler 's dynamical equations of motion for a rigid body, Motion of a rigid body about an axis, motion about revolving axis, Eulerian angles, Euler's theorem on the motion of a rigid body, infinitesimal rotations, rate of change of a vector, Coriolis force, Euler 's equations of motion, force free motion of a rigid body.

Module III: (15 lectures)

Hamilton's principle, Lagrange's equations from Hamilton's principle, extension of Hamilton's principle to non- conservative and non-holonomic systems, conservation theorems and symmetry properties. Hamilton's equations of motion, conservation theorems and physical significance of Hamiltonian, Hamilton's equations from variational principle, principle of least action.

Module IV: (15 lectures)

Hamilton Jacobi Method: Hamilton - Jacobi equation, Time independent Hamilton - Jacobi equation, canonical transformation generated by Hamilton characteristic function, application of Hamilton- Jacobi equation in solving problems of mechanics.

Suggested Readings

1. Classical Mechanics, H. Goldstein, Addison Wesley Publications, Massachusetts.
2. Lagrangian and Hamiltonian Mechanics by M.G. Calkin, World Scientific, Singapore.
3. Classical Mechanics, Takwale, R. G. & Puranik, P. S., Tata-McGraw Hill.
4. Problems and Solutions on Mechanics, Yung-Kuo, World Scientific.

Mapping of COs to Syllabus:

Course Outcomes	Module I	Module II	Module III	Module IV
CO 1	H			
CO 2	M	H	M	
CO 3	L	M	H	M
CO 4		M	H	M
CO 5		L	M	H

MADS0030: DISCRETE MATHEMATICS

(4-0-0)

COURSE OUTCOMES

CO 1: Explain how to work with some of the discrete structures which include sets, relations, functions, graphs andrecurrence relation. (Understanding)
CO 2: Construct mathematical statements using logical connectives and quantifiers. (Creating)
CO 3: Apply basic counting techniques to solve combinatorial problems. (Applying)
CO 4: Develop the given problem as graph networks and solve with techniques of graph theory. (Understanding)

Module I: Set Theory (18 lectures)

Sets and classes, relations and functions, Equivalence Relation, Partial Ordering Relation, Cantor's diagonal argument and The Power Set theorem, Schroeder-Bernstein theorem. Principles of Mathematical Induction: The Well-Ordering Principle, Recursive definition, Cardinal and ordinal numbers, Lattice; The Division algorithm: Prime Numbers, The Greatest Common Divisor: Euclidean Algorithm, The Fundamental Theorem of Arithmetic.

Module II: Logic (15 lectures)

Propositional logic: Syntax, Semantics, Validity and Satisfiability, Basic Connectives and Truth Tables, Logical Equivalence: The Laws of Logic, Logical Implication, Rules of Inference, The use of Quantifiers. Proof Techniques: Some Terminology, Proof Methods and Strategies, Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency. Predicate Calculus.

Module III: Combinatorics (12 lectures)

Combinatorics: Mathematical induction, recursive mathematical definitions, basics of counting, permutations, combinations, inclusion-exclusion, recurrence relations (nth order recurrence relation with constant coefficients, Homogeneous recurrence relations, Inhomogeneous recurrence relation), generating function (closed form expression, properties of generating functions., solution of recurrence relation using generating functions, solution of combinatorial problem using generating functions).

Module IV: Graphs and Trees (15 lectures)

Graphs and their properties, Degree, Connectivity, Path, Cycle, Sub Graph, Isomorphism, Eulerian and Hamiltonian Walks, Graph Colouring, Colouring maps and Planar Graphs, Colouring Vertices, Colouring Edges; trees.

Suggested Readings

1. Discrete Mathematics with Applications, Susanna S. Epp, Wadsworth. Publishing Co. Inc.
2. Elements of Discrete Mathematics A Computer Oriented Approach, C L Liu and D P Mohapatra, Tata McGraw – Hill.
3. Discrete Mathematical Structure and Its Application to Computer Science, J.P. Tremblay and R. Manohar, TataMcGraw-Hill.
4. Discrete Mathematics, N. Biggs, Oxford University Press.

MACP0031: COMPUTER PROGRAMMING IN C

(2-0-0)

COURSE OUTCOMES

CO 1: Interpret the concepts of C language's syntax. (Understanding)
CO 2: Choose the loops and the decision-making statements to solve various problems. (Applying)
CO 3: Implement standard algorithms and translate pseudo-codes into C programs. (Applying)
CO 4: Apply their analytical skills for choosing the right data structure, function, data types and develop logic to solve various instances of problems. (Analysing)

Module I: Introduction to Algorithms and Programming Languages (8 lectures)

Introduction to structured programming and problem-solving methods: Algorithms, key features of algorithms, flowcharts, pseudocode, generation of programming languages, structured programming languages. Overview of C:Introduction to C, basic structure of a C program, compiling and executing C programs, comments, characteristics of a good program, character set, identifiers, keywords, data types, constants and variables, I/O statements, operators and expressions, precedence and

associativity of operators, type conversion and type casting.

Module II: Decision Control Statements, Loops and Functions (8 lectures)
Decision Control Statements and Loops: Introduction to decision control statements, conditional branching statements, goto statements, while loop, do-while loop, for loop, nested loops, break and continue statements Functions: Need for functions, function declaration and definition, user defined and library functions, passing parameters to function, return statement, scope of variables, storage classes, recursive functions.

Module III: Arrays (7 lectures)
Arrays: One-dimensional arrays, passing array to function, multidimensional arrays and their applications, character arrays, dynamic memory allocation. Some algorithms and programs on theory of matrices and numbers like Sieve method for primality test, generation of twin primes, solution of congruence using complete residue system, addition, subtraction and multiplication of matrices, transpose, and determinant.

Module IV: Structures, Files (7 lectures)
Structures and Unions: Declaration of structures and simple implementation of structures, unions, enumerated data types. Files: Introduction to files, file managements-open, close, input/output operations, command line arguments.

Suggested Readings

1. Computer Fundamentals and Programming in C, Thareja R., Oxford University Press, New Delhi.
2. Computer Programming in C Rajaraman V., 2005, Prentice-Hall of India Pvt. Ltd.
3. Computer Fundamental and C Programming, Balagurusamy E., Tata McGraw Hill publishing company limited, New Delhi.
4. Programming with C (Schaum's outlines series), Gottfried Byron S., Tata McGraw Hill publishing company limited,
5. New Delhi.
6. Primes and Programming – An Introduction to Number Theory with Programming, Goblin P., 1993, Cambridge University Press.

MARM0032: RESEARCH METHODOLOGY FOR MATHEMATICAL SCIENCES

(3-0-0)

COURSE OUTCOMES
CO 1: Learn and understand some basic concepts of research and its methodologies. (Remembering)
CO 2: Compare different results and identify appropriate research topics with the help of literature review. (Understanding)
CO 3: Select and define appropriate research problem and parameters. (Applying)
CO 4: Organize and conduct research (advanced project) in a more appropriate manner. (Evaluating)
CO 5: Design and write a research proposal, research report and thesis. (Creating)

Module I: (12 lectures)
Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, literature survey of a research topic, Importance of knowing how Research is done, Research Process, Criteria of good Research, Problems encountered by Researchers in India.
Defining the Research problem: Selecting the Problem, Necessity of Defining the Problem, Techniques involved in defining a problem.

Module II: (15 lectures)
Report writing: Significance of Report writing, Difference steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Precautions for Writing Research Reports, Publishing a paper, Research proposal writing, Copyright issues, Ethics and plagiarism.

Module III: (18 lectures)
Research tools: MathSciNet, Scopus, ISI Web of Science, Impact factor, h-index, Google Scholar, ORCID, JStor, Online and open access journals, Virtual library of various countries. Scientific writing and presentation: LaTeX, Beamer. Software for Mathematics: MATHEMATICA, MATLAB.

Suggested Readings

1. Research Methodology; C.R. Kothari, New Age Publishers.
2. LaTeX, a Document Preparation System, L. Lamport, Addison-Wesley.

Mapping of COs to Syllabus

CO 5		M	H

MAFA0033: FIELD THEORY AND COMMUTATIVE ALGEBRA

(4-0-0)

COURSE OUTCOMES

CO 1: Define the key notions of field theory and outline their interrelation. (Remembering)
CO 2: Demonstrate the key concepts by interpreting them under various hypotheses. (Understanding)
CO 3: Identify perfect fields using separable extensions, construct examples of automorphism group of a field. (Applying)
CO 4: Analyse the proof a theorem by imposing the rules of commutative algebra. (Analysing)
CO 5: Determination of validity of a problem such as insolvability of quantic by field theoretic techniques. (Evaluating)

Module I: (10 lectures)

Field extensions. Simple extensions, algebraic and transcendental case. Minimum polynomial. Construction of simple algebraic extension from an irreducible polynomial. Classification of simple extensions.

Module II: (15 lectures)

Degree of extension. Algebraic elements and algebraic extensions; finite extensions. Algebraic numbers. Geometric constructions with ruler and compasses. The Galois group of an extension. Examples. Splitting field for a polynomial. Existence, uniqueness up to isomorphism. Normal extensions. Relation to splitting fields. Normality of intermediate extension. Normal closure.

Module III: (15 lectures)

Separability. Example of inseparable polynomial. Separability of all polynomials in characteristic zero. Separable extensions. Separability of intermediate extensions. Degree of the extension corresponding to a group of field automorphisms.

Module IV: (12 lectures)

Integral extension, integral closure of a ring, finitely generated modules, localization of a ring, construction, localization of modules, Dedekind domain, factorization ideals, unique factorization of ideals.

Module V: (8 lectures)

Galois groups of normal separable extensions, Galois extensions, factorization of prime ideals in Galois extensions, discrete valuation.

Suggested Readings

1. A First Course in Abstract Algebra, J.B. Fraleigh, Addison-Wesley.
2. Galois Theory, I. Stewart, Chapman and Hall.
3. Abstract Algebra, Dummit D.S.; Foote R. M., John Wiley and sons.
4. Introduction to Commutative Algebra, Atiyah M.F.; Macdonald I.G., Addision-Wesley.

CO 5					H

MANT0034: NUMBER THEORY

(4-0-0)

COURSE OUTCOMES

CO 1: Identify and analyse different types of divisibility tests, Euler's theorem, Wilson theorem etc and solve various related
CO 2: problems. (Applying)
CO 3: Apply Quadratic Reciprocity law and other methods to classify numbers as primitive roots, quadratic residues, and quadratic nonresidues. (Applying)
CO 4: Evaluate primitive roots and Pell's equation with the use of continued fraction. (Evaluating)
CO 5: Perceive classical cipher and public cryptosystem and their cryptanalysis. (Evaluating)

Module I: (15 lectures)

Divisibility, Congruences, complete residue system, reduced residue system, Chinese remainder theorem., Arithmetic modulo p, Fermat's little theorem, Wilson's theorem.

Arithmetic functions-Mobius function, Euler function.

Module II: (15 lectures)

Quadratic residues and congruences of second degree in one unknown, Legendre symbol, Jacobi symbol, congruences of second degree with prime modulus and with composite modulus.

Module III: (18 lectures)

Primitive roots and indices, order, necessary and sufficient condition for the existence of primitive roots, construction of reduced residue system.

Continued fractions, simple continued fractions, approximation of irrational numbers by continued fractions, solution of Pell's equation.

Introduction to partitions, geometric representation, generating functions, Euler's Pentagonal number theorem.

Module IV: (12 lectures)

Basic of Cryptography: History of cryptography, terminologies used in cryptography; Substitution Techniques- The Caesar Cipher, One Time Pads, The Vernam Cipher, Book Cipher; Transposition Techniques-Encipherment/Decipherment Complexity, Public Key Cryptography: Characteristics of Public Key System; RSA Technique-Encryption –Method; Diffie- Hellman Scheme.

Suggested Readings

1. Elementary Number Theory, M. Burton, Universal Book Stall, New Delhi.
2. An Introduction to the Theory of Numbers, G. H. Hardy and E. M. Wright, Oxford, Clarendon Press.
3. Number Theory, G. E. Andrews, Hindustan Publishing Corporation, New Delhi.
4. Number Theory, S. G. Telang, Tata McGraw Hill Publishing Company Limited, New Delhi.

MAML0035: MATHEMATICAL LOGIC

(4-0-0)

COURSE OUTCOMES

CO 1: Interpret any Mathematical statement into the language of logic. (Understanding)
CO 2: Analyse various methods of proofs and deduction theorems. (Analysing)
CO 3: Interpret the syntax of first-order logic and semantics of first-order languages. (Understanding)
CO 4: Analyse the validity a problem by means of completeness and consistency. (Analysing)
CO 5: Determine the valuation and validity of various logical statements. (Evaluating)

Module I: (15 lectures)

Propositions, truth table, negation, conjunction and disjunction. Adequate set of connectives, propositions and precedence of logical operators. Propositional equivalence: Logical equivalences. Arguments and validity.

Module II: (15 lectures)

Formal definition of proof, various methods of proof, theorem and deduction, theory of L of statement calculus. Valuation and tautology in L, extensions of L, adequacy theorem of L.

Module III: (15 lectures)
First order logic, truth values of well-formed formulas, first order systems with equality, first order arithmetic, formal set theory.

Module IV: (15 lectures)
Completeness and compactness, notion of consistency, Boolean algebra, incompleteness, first incompleteness theorem, undecidability.

Suggested Readings
1. Logic for Mathematicians - Hamilton A. G., Cambridge University press.
2. Introduction to Mathematical Logic - Mendelson E., CRC Press, Taylor and Francis Group.
3. Fundamentals of Mathematical Logic, Hinman P. G., A.K. Peters, 2005, Wellesley.
4. Mathematical Logic, 2nd edition, Ebbinghaus H.D., Flum J., Thomas W., Springer-Verlag

MAFS0036: FUZZY SETS AND APPLICATIONS

(4-0-0)

COURSE OUTCOMES
CO 1: Classify the crisp and fuzzy set theorems. (Understanding)
CO 2: Apply fuzzy set theory in modelling and analysing uncertainty in a decision problem. (Applying)
CO 3: Analyse and examine the difference between the crisp set and fuzzy set concepts. (Analysing)
CO 4: Determine fuzzy set theory and uncertainty concepts. (Evaluating)

Module I: (17 lectures)
Fuzzy sets - Fuzzy numbers, fuzzy numbers in the set of Integers, arithmetic with fuzzy numbers. Definition of fuzzy sets, α-level sets, convex fuzzy sets. Basic operations on fuzzy sets, types of fuzzy sets, Cartesian products, algebraic products, bounded sum and difference, t-norms and t-conorms. Fuzzy sets in contrast of probability theory.

Module II: (12 lectures)
The extension principle - the Zadeh's extension principle, image and inverse image of fuzzy sets. Fuzzy relations, basic properties of fuzzy relations, fuzzy relations and approximate reasoning.

Module III: (16 lectures)
Fuzzy relations and fuzzy graphs, composition of fuzzy relations, min-max composition and its properties, fuzzy equivalence relations, fuzzy relational equations, fuzzy graphs.

Module IV: (15 lectures)
Possibility Theory: Fuzzy measures, evidence theory, necessity measure, probability measure, possibility measure,possibility distribution, possibility theory and fuzzy sets, possibility theory and probability theory.

Suggested Readings
1. Fuzzy Sets and Fuzzy Logic: Theory and Applications, Klir, G. J. and Yuan, B., Prentice Hall of India, New Delhi.
2. 2 Fuzzy set theory and its Applications, Zimmermann, H. J., Allied publishers Ltd., New Delhi.
3. Fuzzy sets, fuzzy logic applications, G. Bojadzieve and M. Bojadzieve, World Scientific.

Mapping of COs to Syllabus

CO 1	H	M		H
CO 2	M	H	M	M
CO 3		M	H	
CO 4			M	H

MAFD0037: FLUID DYNAMICS I

(4-0-0)

COURSE OUTCOMES

CO 1: Develop an appreciation for the properties of Newtonian fluids. (Remembering)
CO 2: Understand the dynamics of fluid flows and the governing non-dimensional parameters. (Understanding)
CO 3: Apply concepts of mass, momentum and energy conservation to flows. (Applying)
CO 4: Formulate the problems on buoyancy and solve them. (Evaluating)

Module I: (20 lectures)

Classification of fluids, Lagrangian and Eulerian methods. Equation of continuity. Irrotational flow, vorticity vector, equi-potential surfaces. Streamlines, pathlines, streak lines of the particles, stream tube and stream surface. Mass flux density, conservation of mass leading to equation of continuity. (Euler's form.) Conservation of momentum and its mathematical formulation: Euler's form. Integration of Euler's equation under different conditions. Bernoulli's equation, steady motion under conservative body forces.

Module II: (15 lectures)

Boundary surface, Theory of irrotational motion, Kelvin's minimum energy and circulation theorems, potential theorems. Some two-dimensional flows of irrotational, incompressible fluids. Complex potential. Sources, sinks, doublets and vortices. Milne-Thomson circle theorem, Images with respect to a plane and circles. Blasius theorem.

Module III: (10 lectures)

Vortex motion and its elementary properties. Wave motion in a gas. Speed of Sound. Equation of motion of a gas. Subsonic, sonic and supersonic flows of a gas. Isentropic gas flows. Flow through a nozzle. Normal and oblique shocks.

Module IV: (15 lectures)

Three-dimensional flows. Sources, sinks, doublets. Axi-symmetric flow and Stokes stream function. Butler sphere theorem, Kelvin's inversion theorem and Weiss's sphere theorem. Images with respect to a plane and sphere. Axi- symmetric flows and stream function. Motion of cylinders and spheres.

Suggested Readings

1. A Treatise on Hydrodynamics, W. H. Besant and A. S. Ramsey, CBS.
2. Text book of Fluid Dynamics, F. Charlton, CBS.
3. Fluid Mechanics, P.K. Kundu and I.M. Cohen, Academic Press.
4. Theoretical Hydrodynamics, L.M. Milne Thomson, The Macmillan company, USA.
5. Ideal and incompressible fluid dynamics, N.E. Neill and F. Chorlton, Ellis Horwood Ltd.
6. Fluid Dynamics, D.E. Rutherford, Oliver and Boyd Ltd, London.

CO 2	M	H		
CO 3	M		H	
CO 4			M	H

MARC0038: RIEMANNIAN GEOMETRY AND TENSOR CALCULUS

(4-0-0)

COURSE OUTCOMES

CO 1: Recall the concept of calculating length of a curve and area of a domain in manifold *M.* (Remembering)
CO 2: Explain the Riemannian metric on surfaces embedded in Euclidean space. (Understanding)
CO 3: Apply the properties of geodesics on a Riemannian manifold in Euclidean space and for Lobachevski plane. (Applying)
CO 4: Evaluate Riemann curvature tensor. (Evaluating)

Module I: (15 lectures)

Introduction to Tensor, space of n dimensions, subspaces; transformation of coordinates; scalar; contravariant (tangent) and covariant (cotangent) vectors; scalar product of two vectors; tensor space of rank more than one contravariant and covariant tensors; symmetric and skew-symmetric tensors; addition and multiplication of tensors; contraction; composition of tensors; quotient law; reciprocal symmetric tensors of the second order, relative tensor, group properties.

Module II: (15 lectures)

Riemannian space; fundamental tensor; length of a curve; magnitude of a vector; associated covariant and contravariant

vectors; inclination of two vectors, orthogonal vectors; coordinate hypersurfaces; coordinate curves; field of normals to a hypersurface; principal directions for a symmetric covariant tensor of the second order; Euclidean space of n dimensions.

Module III: (15 lectures)
Levi-Civita tensors; Christoffell symbols and second derivatives; need for covariant derivative; parallel transformations; covariant derivative of a contravariant and covariant vector; curl of a vector and its derivative; covariant differentiation of a tensor; divergence of a vector.

Module IV: (15 lectures)
Gaussian curvature; Riemann curvature tensor; geodesics; differential equations of geodesics; geodesic coordinates; geodesic deviation; Riemannian coordinates; geodesic in Euclidean space; straight lines.

Suggested Readings
1. An Introduction to Riemannian Geometry and Tensor Calculus, Cambridge university Press, C. E. Weatherburn.
2. Aspects of Gravitational Interactions, Nova Science publications Inc., Commack, NY, S. K. Srivastava & K. P. Sinha.
3. Tensor Analysis John Wiley & Sons, Inc., I. S. Sokolnikoff.
4. Tensor Calculus and Riemannian Geometry, Krishna Prakasahan Media (P) Ltd, D C Agarwal.

CO 4				H

MANS0039: NUMERICAL SOLUTION OF PDE
(4-0-0)

COURSE OUTCOMES
CO 1: Define matrix norm, normed linear space and related results. (Remembering)
CO 2: Classify initial value problems (IVPs) and Boundary Value Problems (BVPs). (Understanding)
CO 3: Apply different numerical methods to PDEs. (Applying)
CO 4: Analyse accuracy of common numerical methods. (Analysing)
CO 5: Assess different numerical methods in order to find the approximate numerical solution of the PDEs. (Evaluating)

Module I: (10 lectures)
Review normed linear spaces, matrix norm and related results, eigenvalues for tridiagonal matrices. Matrix stability.

Module II: (20 lectures)
Classification of PDEs, Finite difference approximations to partial derivatives. Solution of one-dimensional heat conduction equation by Explicit and Implicit schemes (Schmidt and Crank Nicolson methods), CFL condition, stability and convergence criteria.

Module III: (15 lectures)
Hyperbolic equation, explicit/implicit schemes, method of characteristics. Solution of wave equation. Solution of 1st order Hyperbolic equation. Von Neumann stability.

Module IV: (15 lectures)
Finite difference method for stationary heat conduction, stability and convergence analyse.

Suggested Readings
1. Numerical methods for Ordinary differential equations, J.C. Butcher, John Wiley & Sons, New York.
2. Numerical methods for Ordinary differential systems: The initial value problem, J.D. Lambert, John Wiley & Sons,New York.
3. Numerical solution of ordinary differential equations, John Wiley, New York, K. Atkinson, W. Han and D.E. Stewart.
4. Finite Difference Methods (Oxford Applied Mathematics & Computing Science Series), G. D. Smith.
5. Numerical Solution of Ordinary Differential Equations (Wiley), E. Kendall, Atkinson, Han Weimin, David E. Stewart.
6. Numerical Methods for Scientific and Engineering Computation, M K Jain, S R K Iyengar, R K Jain, New AgeInternational.

MACN0040: COMPUTATIONAL NUMBER THEORY

(4-0-0)

COURSE OUTCOMES

CO 1: Explain basic of fundamental number theoretic algorithms. (Understanding)
CO 2: Apply finite field theory in cryptography. (Applying)
CO 3: Analyse primality testing algorithms and their uses in Cryptography. (Analysing)
CO 4: Explain the number theoretic foundations of cryptography and the principles behind their security. (Understanding)

Module I: (10 lectures)

Representation of integers and polynomials, Divisibility and the Euclidean algorithm, extended Euclidean algorithm, Congruences, Chinese Remainder theorem, Hensel's lifting lemma, Modular exponentiation - Some applications to factoring.

Module II: (15 lectures)

Finite Fields, Multiplicative generators, Uniqueness of fields with prime power elements, Quadratic residues and reciprocity.

Module III: (20 lectures)

Primality Testing: Probabilities Primality testing, primality testing for numbers of a special form, AKS primality test including detecting perfect powers; Computing the Order of an element and generating primitive roots (and elements ofa certain order), Computing Discrete Logarithms, Factoring Integers, factoring polynomials and tests constricting irreducible polynomials; Solving equations over Finite Fields including computing square roots.
Elliptic curves: The Geometry of elliptic curves, the Algebra of elliptic curves, elliptic curves overs finite fields, The elliptic curve Discrete Logarithm Problem.

Module IV: (15 lectures)

Cryptosystems and basic cryptographic tools: Secret –key cryptosystems, Public-key cryptosystems, block and stream ciphers, message integrity; message authentication codes, Signature schemes, nonrepudiation, certificates, Hash functions; Some simple cryptosystems, Shift cipher, Substitution cipher, Affinecipher, Vigenère cipher, Hill cipher, Permutation cipher, Stream ciphers, Cryptanalysis of affine, substitution, Vigenère, Hill and LFSR stream ciphers. RSA cryptosystem and Rabin encryption.

Suggested Readings

1. Computational Number Theory, Abhijit Das, CRC Press.
2. Prime Numbers and Computer Method for Factorization, Hans Riesel, Birkhauser.
3. Modern Computer Arithmetic, R.P. Brent and Zimmermann, Cambridge University Press.
4. A Course in Number Theory and Cryptography, Neal Koblitz, Springer- Verlag.
5. Hand book of Applied Cryptography, Van Oorschot and Vanstone S.A, CRC Press.
6. Cryptography Theory and Practice. Douglas R. Stinson & Maura B. Paterson, Chapman & Hall/CRC Press, Taylor & Francis.
7. Cryptography. Simon Rubinstein-Salzedo, Springer.
8. An Introduction to Mathematical Cryptography, Jeffrey Hoffstein, Jill Pipher& Joseph H. Silverman, Springer.

CO 4				H

MASC0041: SCIENTIFIC COMPUTING

(4-0-0)

COURSE OUTCOMES

CO 1: Classify Initial conditions and boundary conditions specific to the problem. (Understanding)
CO 2: Apply different numerical methods to ODEs. (Applying)
CO 3: Analyse accuracy of iterative numerical methods. (Analysing)
CO 4: Assess the approximate numerical solution of the linear and nonlinear problems. (Evaluating)

Module I: (13 lectures)
Initial value problems (IVPs) for the system of ordinary differential equations (ODEs); Difference equations; Numerical methods; Local truncation errors, Stability analysis; Interval of absolute stability; Convergence and consistency.

Module II: (13 lectures)
Single-step methods: Taylor series method; Explicit and implicit Runge-Kutta methods and their stability and convergence analysis; Extrapolation method; Runge-Kutta method for the second order ODEs; Stiff system of differential equations.

Module III: (16 lectures)
Multi-step methods: Explicit and implicit multi-step methods; General linear multi-step methods and their stability and convergence analysis; Adams-Moulton method; Adams-Bashforth method; Nystrom method; multi-step methods for the second order IVPs.

Module IV: (18 lectures)
Boundary value problems (BVPs): Two-point non-linear BVPs for second order ordinary differential equations; Finite difference methods; Convergence analysis; Difference scheme based on quadrature formula; Difference schemes for linear eigenvalue problems; Mixed boundary conditions; Finite element methods; Assemble of element equations; Variational formulation of BVPs and their solutions; Galerkin method; Ritz method; Finite element solution of BVPs.

Suggested Readings
1. Numerical methods for Ordinary differential equations, J.C. Butcher, John Wiley Sons, New York.
2. Numerical methods for Ordinary differential systems: The initial value problem, J.D. Lambert, John Wiley & Sons,New York.
3. Numerical solution of ordinary differential equations, K. Atkinson, W. Han and D.E. Stewart, John Wiley, New York.
4. Numerical Methods for Scientific and Engineering Computation (New Age International), M K Jain, S R K Iyengar, R KJain.

CO 4				H

MASF0042: SPECIAL FUNCTIONS
(4-0-0)

COURSE OUTCOMES
CO 1: Define the different types of special functions and their properties. (Remembering)
CO 2: Apply the properties of special functions in the mathematical analysis, functional analysis etc. (Applying)
CO 3: Analyse properties of special functions by their integral representations and symmetries. (Analysing)
CO 4: Illustrate purpose and functions of the gamma and beta functions, Fourier series and Transformation.(Understanding)

Module I: (12 lectures)
The Gamma and Beta Functions: Euler's' integral for Γ(z), the beta function, factorial function, Legendre's duplication formula, Gauss's multiplication theorem, summation formula due to Euler, behaviour of log Γ(z) for large |z |.

Module II: (18 lectures)
The Hypergeometric function: An integral representation. Its differential equation and solutions, F(a,b,c;1) as a functionof the parameters, evaluation of F(a,b,c;1), contiguous function relations, the hypergeometric differential equation, logarithmic solutions of the hypergeometric equation, F(a,b,c;z) as a function of its parameters, Elementary seriesmanipulations, simple transformations, relation between functions of Γ(z) and, Γ(1-z) quadratic transformations, theorem due to Kummer, additional properties.

Module III: (18 lectures)
The Confluent Hypergeometric function: Basic properties of 1F1, Kummer's first formula. Kummer's second formula,
Generalized Hypergeometric Series: The function pFq, the exponential and binomial functions, differential equation, contiguous function relations, integral representation pFq, with unit argument, Saalshutz' theorem, Whipple's theorem, Dixon's theorem, Contour integrals of Barnes' type.

Module IV: (12 lectures)

Bessel Functions: Definition, Differential equation, differential recurrence relations, pure recurrence relation, generating function, Bessel's Integral, index half an odd integer, modified Bessel functions, Introduction to Legendre function, Meijer G-

function and some basic properties.

Suggested Readings

1. Special Functions, Macmillan, Earl. D. Ranvillie.
2. Special Functions of Mathematics for Engineers, L.C. Andrews, SPIE Press.
3. Orthogonal Polynomials, Gabor Szego, American mathematical society.
4. Generalized Hypergeometric Functions, Reissue edition, L.J. Slater, Cambridge University Press.

MAAS0046: ADVANCED ANALYSIS

(4-0-0)

COURSE OUTCOMES

CO 1: Apply Holder and Minkowski inequalities in $L_p$spaces and understand completeness of L_p-spaces. (Applying)
CO 2: Explain the concepts of Banach algebras, culminating in the Gelfand-Naimark theorem. (Understanding)
CO 3: Define the concept of signed measure and significance of Hahn decomposition theorem. (Remembering)
CO 4: Assess the product measure by integrals and discuss the applications of Fubini's theorem. (Evaluating)

Module I: (15 lectures)

L_p −space, Holder inequality, Minkowski's inequality, convergence, completeness, bounded linear functional.

Module II: (17 lectures)

Banach Algebra, Gelfand theory, algebra, Gelfand-Naimark-Segal (GNS) construction, normal operators, spectral theorem, Fredholm operator, space, calculus for normal operators.

Module III: (16 lectures)

Signed measure, Hahn decomposition theorem, mutually singular measure, Radon-Nikodym theorem, Lebesgue decomposition, Reisz representation theorem.

Module IV: (12 lectures)

Outer measure, Caratheorory theorem, product measure, Fubini's theorem.

Suggested Readings

1. A first course in functional analysis, Conway J.B., Springer.
2. Banach algebra techniques in operator theory, Douglas R.G., Academic press.
3. Measure Theory, Halmos P.R., Springer-Verlag.
4. Measure theory and integration, Barra G.de, Wiley-Eastern.

MAGY0047: GRAPH THEORY

(4-0-0)

COURSE OUTCOMES

CO 1: Relate various basic terminologies, properties and results of graph theory. (Remembering)
CO 2: Classify different types of trees according to their properties. (Understanding)
CO 3: Analyse different properties of factorization, covering and colorability of graphs. (Analysing)
CO 4: Determine different results and properties of Eulerian, Hamiltonian and planner graphs. (Evaluating)

Module I: (13 lectures)

Graph, Types of Graphs, Subgraphs, walk, paths, cycles and components, intersection of graphs, Degrees, Degree sequences. operations on graphs, subdivision (of cycles), incentification (of vertices) homomorphism and contraction (of edges).

Module II: (18 lectures)
Trees, Spanning trees, Kruskal's and Prim's algorithm for minimal spanning tree, cycles, cocycles, cycle space, cocycle spaces, Connectivity, cut vertices, cut edges and blocks, connectivity parameters, Menger's theorem. Matching and covers.

Module III: (14 lectures)
Eulerian and Traversable graphs: Characterization theorems, characterization attempts for Hamiltonian graphs: Two necessary and sufficient conditions for a graph to be Hamiltonian, Factorization; Basic concepts, 1- factorization, 2- factorization, coverings, critical points and lines.

Module IV: (15 lectures)
Planarity and colorability: Plane and planar graphs, outer planar graphs, Euler's Polyhedron formula, Kuratowski's theorems. Chromatic number. Five colour theorem, Four Colour conjecture, chromatic polynomial. Adjacency matrix, Spectrum of a graph.

Suggested Readings
1. Graph Theory, F. Harary, Addison Wesley Publishing Co.
2. Introduction to graph theory, D. B. West, Prentice Hall, India (Pearson).
3. Algebraic Graph Theory, N. Biggs, Cambridge university press.

MACA0048: MULTIVARIABLE CALCULUS

(4-0-0)

COURSE OUTCOMES
CO 1: Demonstrate an understanding of the concepts of multivariate and vector-valued functions and their applications. (Understanding)
CO 2: Examine differentiability of vector valued functions on R^n and understand the relation between directional derivative and differentiability. (Analysing)
CO 3: Learn about generalisation of concept of integration and ability to solve higher dimension integrals. (Understanding)
CO 4: Demonstrate an understanding of Green's, Stokes' and Gauss' theorem and of some physical applications of these theorems. (Applying)

Module I: (15 lectures)
Vectors, dot product of vectors, projection, triangle and Cauchy-Schwarz inequality, cross product of vectors and determinants. Non-linear function, parametric equation of curves, level surfaces, vector fields.

Module II: (20 lectures)
Open sets in Rn, sequences and closed sets, function of several variables, limit of a function of several variables, continuity, sequential continuity, partial and directional derivative, differentiability, chain rule, gradient, curl, divergence, Taylor's theorem, inverse function theorem, implicit function theorem, maximum value theorem, critical points, second derivative test.

Module III: (15 lectures)
Introduction to integration of a function of several variables, multiple integrals, iterated integral, fubini's theorem, physical applications, determinant in n-dimensions, Jacobian and change of variables.

Module IV: (10 lectures)
Green's theorem, Stokes' theorem, Divergence theorem. Manifolds in Rn, Differential forms.

Suggested Readings
1. Calculus and Analytic Geometry, Thomas G. B., Finney R.L., Pearson.
2. Advanced Calculus, P. M. Fitzpatrick, AMS, Indian Edition.
3. Analysis on Manifolds, Munkres J.R., Wisley.
4. Principles of Mathematical analysis, Rudin W. McGraw-Hill.

CO 1	H			
CO 2		H		
CO 3			H	M
CO 4				H

MAAY0049: ALGEBRAIC NUMBER THEORY

(4-0-0)

COURSE OUTCOMES

CO 1: Demonstrate Field extensions and characterization of finite normal extensions as splitting fields and study prime fields. (Understanding)
CO 2: Illustrate cyclotomic polynomials, cyclic extensions, Radical field extensions and Ruler & Compass constructions. (Understanding)
CO 3: Analyse the role of Minkowski's theorem towards the proof of Four-square theorem. (Analysing)
CO 4: Know the important applications of Galois Theory. (Applying))
CO 5: Discuss Artin-Whaples approximation theorem and Hensel's lemma. (Creating)

Module I: (15 lectures)

Integral extension, integral closure of a ring, finitely generated modules, localization of a ring, construction, localization of modules, norm, trace, transitivity of trace and norm, quadratic extension of rationales, discriminant, Dedekind domain, factorization ideals, unique factorization of ideals, the ideal class group.

Module II: (12 lectures)

Factorization of prime ideals in ring extensions, ramification, Ram-Rel identity, lifting of ideals, norms of ideals, norm of a prime ideal, lattices, Minkowski's theorem, the canonical embedding.

Module III: (12 lectures)

The Logarithmic embedding, The Dirichlet's unit theorem, real and imaginary quadratic fields, units in quadratic fields, cyclotomic extensions, an integral basis of a cyclotomic extension.

Module IV: (12 lectures)

Galois extensions, factorization of prime ideals in Galois extensions, decomposition of inertia groups, local fields, absolute values, discrete valuation.

Module V: (9 lectures)

Artin-Whaples approximation theorem, completions, Hensel's lemma.

Suggested Readings

1. Algebraic Theory of Numbers, Samuel P., Herman.
2. Algebraic Number Theory, Richard A. Mollin, CRC Press, Taylor and Francis group
3. Algebraic Number Theory, Stewart I., Tall D., Chapman and Hall.
4. Problems in Algebraic Number Theory, Esmonde J., Murthy M. R., Springer.
5. Algebraic Number Fields, Janusz G.J., AMS.

Mapping of COs to Syllabus

CO 2	H	H			
CO 3			H		
CO 4			M	H	
CO 5					H

MAFL0050: FLUID DYNAMICS II

(4-0-0)

COURSE OUTCOMES

CO 1: Explain the concept of Newtonian and non-Newtonian fluid. (Understanding)
CO 2: Relate entropy principle to various thermal engineering applications. (Understanding)
CO 3: Apply the concept of second law efficiency and exergy principle to various thermal engineering applications.(Applying)
CO 4: Analyse steady state and transient heat conduction problems of real-life Thermal systems. (Analysing)

Module I: (15 lectures)

Stress components in a real fluid. Relations between rectangular components of stress. Connection between stresses and gradients of velocity. Navier-stokes equations of motion. Plane Poiseuille and Couette flows between two parallel plates, steady flow between concentric rotating cylinders, steady flow through cylindrical pipes; Reynolds' number. Theory of Lubrication. Flow through tubes of uniform cross section in the form of circle, annulus, ellipse and equilateral triangle under constant pressure gradient. Unsteady flow over a flat plate.

Module II: (12 lectures)

Boundary layer concept, Boundary layer equations in two-dimensional flow, Boundary layer flow along the flat plates: Blasius

solution. Shearing stress, momentum loss thickness, Boundary layer thickness and skin friction. Exact solution of the steady state boundary layer equations in two-dimensional motion. Flow past a wedge. Flow in a convergent channel.

Module III: (13 lectures)
Boundary layer on a surface with pressure gradient, Momentum integral theorems for Boundary layer, The Von Karman integral relation, Application of Momentum integral equation to Boundary layers: Von Karman-Pohlhansen method, Separation of boundary layer flow, Boundary layer control, Methods of Boundary layer control, Introduction to turbulent flow: Origin of turbulence, Reynold's modification of Navier- Stokes equations for turbulent flow, Semi-empirical theory of turbulence.

Module IV: (20 lectures)
Basic concepts of Magnetohydrodynamics, Maxwell's equations, Frame of reference, Lorentz force, Electromagnetic bodyforce, Fundamental equations of MHD, Ohm's law for a moving conductor, Hall current, Conduction current, Kinematic aspect of MHD, Magnetic Reynolds number, MHD waves: alfven's waves, MHD waves in compressible fluid, MHD approximations, Electromagnetic boundary conditions, One dimensional MHD flow, Hartmann flow, MHD Couette flow, MHD Stoke's flow, MHD Rayleigh's flow, Hartmann-Stoke's boundary layer, Alfven's boundary layer, Two dimensional MHD flow (a) Aligned flow (b) Stagnation point flow, MHD flows in a rotating medium, Effects of Hall current on MHD flows in a rotating channel, MHD heat transfer.

Suggested Readings

1. Boundary Layer Theory, H. Schlichting, McGraw Hill Comp.
2. Laminar Boundary Layer, L. Rosenhead, Dover Pub.
3. Fluid Mechanics [Si Units]:, Cengel, Tata McGraw-Hill Education.
4. Magnetohydrodynamics, T. G. Cowling, Interscience Publishers New York.
5. A Text Book of Magnetohydrodynamics, J.A. Shercliff, Pergamo.
6. Magnetohydrodynamics and Plasma Dynamics, S. I. Pai, Springer Verlag, New York.
7. Magnetofluid Dynamics for Engineers and Applied Physicists, K. R. Cramer and S. I. Pai, McGraw-Hill, New York.

CO 2		H		
CO 3			H	M
CO 4			M	H

MACM0051: CONTINUUM MECHANICS

(4-0-0)

COURSE OUTCOMES

CO 1: Define principles, axioms and hypothesis of governing equations of continuum mechanics. (Remembering)
CO 2: Extend the same principles to solve deformed and un-deformed configuration of particles. (Understanding)
CO 3: Develop the general theory to formulate and solve problems in hydrodynamics. (Applying)
CO 4: Examine the concept of macroscopic behaviour of particles. (Analysing)
CO 5: Estimate the elasticity behaviour of particles in continuum media. (Evaluating)

Module I: (15 lectures)
Principles of continuum mechanics, axioms. Forces in a continuum. The idea of internal stress. Stress tensor, Cauchy's stress principle. Equations of equilibrium. Symmetry of stress tensor. Stress transformation laws. Principal stresses and principal axes of stresses. Stress invariants. Stress quadric of Cauchy. Shearing stresses. Mohr's stress circles.

Module II: (20 lectures)
Deformation. Strain tensor. Finite strain components in rectangular Cartesian coordinates. Lagrangian and Eularian descriptions, Infinitesimal strain components. Geometrical interpretation of infinitesimal strain components. Principal strain and principal axes of strain. Strain invariants, strain quadratic of Cauchy's. The compatibility conditions. Compatibility of strain components in three dimensions. Constitutive equations.

Module III: (10 lectures)
Inviscid fluid. Circulation. Kelvins energy theorem. Constitutive equation for elastic material and viscous fluid. Navier and Stokes equations of motion. Motion of deformable bodies.

Module IV: (15 lectures)
Lagrangian and Eulerian approaches to the study of motion of continua. Material derivative of a volume integral. Equation of continuity. Equations of motion. Equation of angular momentum. Equation of Energy. Strain energy density function.

Suggested Readings

1. Schaum's Outline of Continuum Mechanics, G. E. Mase, Mc-Graw Hill.
2. A first course in continuum mechanics, Y.C. Fung, Cambridge University Press.
3. A course in continuum mechanics. Vol – I, L. I. Sedov, Groningen: Wolters-Noordhoff Publishing.
4. The elements of continuum Mechanics, C. Truesdell, Springer-Verlag.
5. Mathematical Theory of Continuum Mechanics, Rabindranath Chatterjee, Narosa.

CO 3		M	H	M
CO 4			H	
CO 5				H

MATR0052: THEORY OF RELATIVITY

(4-0-0)

COURSE OUTCOMES

CO 1: Recall the fundamental principles of inertial frames and uniform motion in relativistic mechanics. (Remembering)
CO 2: Illustrate the concept of vacuum and various physical quantities in flat space as well as curved space time. (Understanding)
CO 3: Apply the concept of relativistic mechanics to define physical quantities in various coordinate system. (Applying)
CO 4: Analyse the path of motion of particles in presence of curved space-time. (Analysing)
CO 5: Assess the relativistic frequency shifts for sources moving in a gravitational field. (Evaluating)

Module I: (20 lectures)

The special theory of relativity: inertial frames of reference; postulates of the special theory of relativity; Lorentz transformations; length contraction; time dilation; variation of mass; composition of velocities; relativistic mechanics; world events, world regions and light cone; Minkowski space- time; equivalence of mass and energy.

Module II: (10 lectures)

Energy-momentum tensors: the action principle; the electromagnetic theory; energy-momentum tensors (general); energy-momentum tensors (special cases); conservation laws.

Module III: (15 lectures)

General Theory of Relativity: introduction; principle of covariance; principle of equivalence; derivation of Einstein's equation; Newtonian approximation of Einstein's equations.

Module IV: (15 lectures)

Solution of Einstein's equation and tests of general relativity: Schwarzschild solution; particle and photon orbits in Schwarzschild space-time; gravitational red shift; planetary motion; bending of light; radar echo delay.

Suggested Readings

1. The Theory of Relativity, 2nd edition, R.K. Pathria, Hindustan Publishing co. Delhi.
2. General Relativity & Cosmology, J.V. Narlikar, Macmillan co. of India Limited.
3. Aspects of Gravitational Interactions, S. K. Srivastava and K. P. Sinha, Nova Science Publishers Inc. Commack, NewYork.
4. Essential Relativity – W. Rindler, Springer-Verlag.
5. General Relativity – R.M. Wald, University of Chicago Press.

MAFE0053: FINITE ELEMENT METHODS

(4-0-0)

COURSE OUTCOMES

Learn and relate some basic concept of variational methods and finite element method. (Remembering)

CO 1: Relate simple problems into finite elements. (Understanding)
CO 2: Develop finite element models. (Applying)
CO 3: Analyse finite element method in two dimensional problems. (Analysing)

Module I: (15 lectures)

Integral formulations and variational methods: Weighted integral and weak formulations of boundary value problems, Rayleigh-Ritz method, Method of weighted residuals.

Module II: (15 lectures)

Finite element analysis of one - dimensional problems: Discretization of the domain, Derivation of element equations, Connectivity of elements, Imposition of boundary conditions, Solution of equations, Applications.

Module III: (15 lectures)

Time dependent problems in one dimension: Formulation of eigenvalue problem, Finite element models, Applications of semi discrete finite element models for time-dependent problems, Applications to parabolic and hyperbolic equations.

Module IV: (15 lectures)

Finite element analysis of two- dimensional problems: Interpolation functions – Evaluation of element matrices, Assembly of element equations, Imposition of boundary conditions, Solution of equations, Applications to parabolic and hyperbolic equations.

Suggested Readings

1. An Introduction to the Finite Element Method, Reddy J.N., Tata McGraw Hill, New Delhi.
2. Finite Element Analysis, Schaum's Outline Series, Buchanen G.R. and Rudhramoorthy R, Tata McGraw Hill, New Delhi.
3. Fundamentals of Finite Element Analysis, Huttan D.V., Tata McGraw Hill, New Delhi.

CO 4			M	H

MADN0054: DESIGN AND ANALYSIS OF ALGORITHMS

(4-0-0)

COURSE OUTCOMES

CO 1: Learn the formal definition and importance of analysis of an algorithm and their asymptotic bounds. (Remembering)
CO 2: Outline different design strategies for the design of algorithms. (Understanding)
CO 3: Develop and analyse algorithms for given problems. (Applying)
CO 4: Compare and analysis different design strategies. (Analysing)
CO 5: Assess various algorithms in terms of correctness, computation cost and memory space used. (Evaluating)

Module I: (16 lectures)

a. Model of computations: Algorithms and their complexity, Random access machines, Computational complexity of RAM programs, A stored program model, abstraction of RAM, A primitive model of computation: Turing machine, relationship between Turing machine and RAM model.
b. Algorithms Analysis Techniques: Efficiency of algorithms, analysis of recursive programs, solving recurrence equations, a general solution for large class of recurrences.
c. Algorithms Design Techniques: Data structures: List, queues and stacks; Set representations, Graphs, Trees, Divide and Conquer algorithms, dynamic programming, Greedy algorithms, Backtracking, Local search algorithms, Balancing.

Module II: (10 lectures)

a. Sorting and Order Statistics: The sorting problem, Radix sorting, Sorting by comparison, Heapsort-an O(n logn) comparison sort, quicksort-an O(n logn) expected time sort, Order Statistics, Expected time of order statistics.
b. Data structures for set Manipulation problems: Fundamental operations on set, Hashing, Binary search, Binary search trees, Optimal binary search trees, A simple-disjoint set union algorithm, tree structures for UNION –FIND problem, Application and extensions of the UNION-FIND algorithm, Balanced tree schemes, Dictionaries and priority queues, Mergeable heaps, Concatenable queues, Partitioning.

Module III: (14 lectures)

a. Algorithms on Graphs: Minimum-cost spanning trees, Depth-first search, Bi-connectivity, Depth-first search of a directed graph, strong connectivity, Path- finding problems, A transitive closure algorithm, A shortest path algorithm, Path problems and matrix multiplication, Single- source problems, Dominators in a directed acyclic graph.
b. Matrix multiplications and related Operations: Basics, Strassen's matrix multiplication algorithm, Inversion of matrices, LUP decomposition of matrices, Application of LUP decomposition, Boolean matrix multiplication.

Module IV: (12 lectures)

a. NP-Complete Problems: Nondeterministic Turing machine, The class P and NP, Languages and problems, NP-completeness of the satisfiability problem, Additional NP-Complete problem, Polynomial space –bound problems.
b. Some Provably Intractable Problems: Complexity hierarchies, The space hierarchy for deterministic Turing machine. A problem requiring exponential time and space, A non- elementary problem.

Module V: (8 lectures)

Data structures and Algorithms for External Storage: A model for External computation, External sorting, Storing information in files, External search trees. Memory Management: The issues in memory management, Managing equal- sized blocks, Garbage collection algorithms for equal-sized blocks, storage allocation for objects with mixed sizes, Buddy systems, Storage compaction.

Suggested Readings

1. The Design and Analysis of Computer Algorithms, Alfred V Aho, John E Hopcroft and Jeffrey D Ullman, Addition Wesley.
2. Data Structures and Algorithms, Alfred V Aho, John E Hopcroft and Jeffrey D Ullman, Addition Wesley.
3. Introduction to algorithms- A Creative approach, V Manbar, Addition Wesley.
4. Fundamentals of Computer Algorithms, Ellis Harwitz, Sartaz Sahani, Computer Science Press.

MAIC0055: INTRODUCTION TO CRYPTOGRAPHY

(4-0-0)

COURSE OUTCOMES

CO 1: Define the terms and concepts of symmetric key ciphers. (Remembering)
CO 2: Identify the importance of modular arithmetic, modulo operator and algebraic structures in symmetric key cipher. (Applying)
CO 3: Discuss some asymmetric-key cryptography, Diffie-Hellman Key Exchange, Knapsack Cryptosystem, RSA Cryptosystem. (Analysing)
CO 4: Discuss some primality test algorithms and their efficiencies. (Analysing)
CO 5: Explain the concept of elliptic curve cryptosystems. (Understanding)

Module I: (14 lectures)

Introduction to Cryptography, classical cryptosystem, cryptanalysis on Substitution Cipher, Play Fair Cipher, Block Cipher. Data Encryption Standard (AES), Triple DES, Modes of Operation, Stream Cipher, Pseudorandom Sequence.

Module II: (16 lectures)

LFSR based stream cipher; Modular inverse, Extended Euclid Algorithm, Fermat's Little Theorem, Euler Phi-Function, Euler's theorem, Quadratic Residue, Polynomial Arithmetic. Advanced Encryption Standard (AES), Introduction to Public Key Cryptosystem, Diffie-Hellman Key Exchange, Knapsack Cryptosystem, RSA Cryptosystem.

Module III: (18 lectures)

Primality Testing: Probabilities Primality testing, primality testing for numbers of a special form, AKS primality test including detecting perfect powers; Computing the Order of an element and generating primitive roots (and elements ofa certain order), Computing Discrete Logarithms, Factoring Integers, factoring polynomials and tests constricting irreducible polynomials; Solving equations over Finite Fields including computing square roots. ElGamal Cryptosystem.

Module IV: (12 lectures)

Cubic curves, singular points, Discriminant, Elliptic curves, Elliptic Curve over the Reals, Elliptic Curve Modulo a Prime. Generalized ElGamal Public Key Cryptosystem, Chinese Remainder Theorem, Rabin Cryptosystem, Legendre and Jacobi symbol.

Suggested Readings

1. A Course in Number Theory and Cryptography, A Neal Koblitz, Springer.
2. An Introduction to Mathematical Cryptography, Jill Pipher, Jeffrey Hoffstein, Joseph H. Silverman, Springer.
3. An Introduction to theory of numbers, Niven, Zuckerman and Montgomery, Wiley.
4. Elliptic curves: number theory and cryptography, Lawrence C. Washington, Chapman & Hall/CRC.
5. An Introduction to Cryptography, R.A. Mollin, Chapman & Hall.
6. Rational Points on Elliptic Curves, Silverman and Tate, Springer.
7. Guide to elliptic curve cryptography Hankerson, Menezes, Vanstone, Springer.
8. Elementary Number Theory, Jones and Jones, Springer.

MADS0059: DYNAMICAL SYSTEMS AND CHAOS

(4-0-0)

COURSE OUTCOMES

CO 1: Define the concepts of nonlinearity, iterated functions, fixed points, differential equations, metric space andtopology. (Remembering)
CO 2: Interpret the link between regular systems and unpredictable systems with chaotic nature. (Understanding)
CO 3: Classify and interpret the dynamical properties for a given problem in a dynamical system. (Analysing)
CO 4: Derive the model on of given physical situations to prove the basic dynamic behaviour with the existence of chaos. (Applying)
CO 5: Determine bifurcation points, Topological entropy, Topological transitivity, Devaney chaos, Li-Yorke chaos.(Evaluating)

Module I: Dynamical Systems and Vector Fields (12 lectures)

The notion of Dynamical systems and Vector Fields, The fundamental theorem on existence and uniqueness, Orbits, Topological conjugacy and orbits, Phase Portraits, Graphical analysis of orbits, Periodic orbits and stability theory, Nonlinear analysis on Logistic map and Tent Map.

Module II: Discrete systems and Bifurcations (12 lectures)

Period doubling bifurcations, Saddle-node bifurcation, Transcritical bifurcation, Pitchfork bifurcation, various universal routes to chaos, Feigenbaum universality, Chaos, Strange attractor, Fractals, Sharkovskii Order, Period 3 implies chaos.

Module III: Continuous systems and Dynamics (12 lectures)

First order continuous autonomous systems, Classification of fixed points of autonomous systems, Attractors and repellors, Second order continuous autonomous systems, Phase curves and fixed points, Classification of fixed points of linear systems.

Module IV: Topological Dynamics (12 lectures)

Topological Dynamical systems, Examples and Basic Properties, Topological transitivity, Mixing, Weak mixing, Devaney chaos, Li-Yorke chaos, Topological entropy and Application.

Module V: Symbolic Dynamics (12 lectures)

Shifts- one-sided and two-sided, Sub shifts and codes, Shift spaces, Languages, The Perron Frobenius theorem, Higher block shifts and Higher Power shifts, Entropy and application , Finite type constraints , Graph representations of shifts of finite type and their properties.

Suggested Readings

1. Nonlinear Dynamics and Chaos with application to Physics, Biology, Chemistry, and Engineering, Steven H Strogatz,West view Press.
2. A First Course in Chaotic Dynamical Systems: Theory and Experiments, Robert L Davaney, CRC Press, Taylor and Francis.
3. An Introduction to Symbolic Dynamics and Coding, Douglas Lind and Brian Marcus, Cambridge University Press.
4. Introduction to Dynamical Systems, Michael Brin and Garrett Stuck, Cambridge university Press.
5. Introduction to Nonlinear Dynamical Systems and Chaos, S Waggins, Springer.
6. Chaos and Fractals, H O Peitgen, H Jurgens and D Saupe , New Frontiers of Science, Springer.
7. Nonlinear Oscillations, Dynamical Systems and Bifurcation of Vector Fields, J Guckenhemer and P Holmes, Springer.
8. Introduction to Dynamical Systems, D K Arrowsmith, Cambridge University Press.

MACO0060: CONVEX OPTIMIZATION

(4-0-0)

COURSE OUTCOMES

CO 1: Define some basic concept of functions and operations research. (Remembering)
CO 2: Analyse and solve a given a mathematical problem, classifying its algebraic structure. (Analysing)
CO 3: Derive the solution of a problem using mathematical methods and computing approach. (Applying)
CO 4: Determine the mathematical and social system solution procedure and analysing the results. (Evaluating)

Module I: Introduction (5 lectures)

Mathematical Optimization, least square and linear programming, convex optimization, nonlinear optimization.

Module II: Convex sets and functions (15 lectures)

Convex sets: Affine and convex sets, examples, operations that preserve convexity, generalised inequalities, separating and supporting hyperplanes, dual cones and generalised inequalities. Convex functions: Basic properties and examples, conjugate function, quasi-convex functions, log- concave and log convex functions, convexity with respect to generalised inequalities.

Module III: Convex optimization problems (20 lectures)

Optimization problems- convex, linear, quadratic, geometric, generalised inequality constraints, vector optimization. Duality: The Lagrange dual functions, geometric interpretation, saddle point, optimality conditions, perturbation andsensitivity analysis, theorem of alternatives.

Module IV: Applications (20 lectures)

Geometric problems- Projection on a set, distance between sets, Euclidean distance and angle, external volume ellipsoid, centering, classifications, placement and location, floor planning. Approximation and fittings- Norm, least- norm, regularised, robust, function fitting and interpolation, some problems involving two quadratic functions.

Suggested Readings

1. Convex optimization, Boyd and Vandenberghe, Cambridge University press.
2. Introductory lectures on convex optimization, YuriiNesterov, Kluwer Academic Publisher.

MAGT0061: INTRODUCTION TO GAME THEORY

(4-0-0)

COURSE OUTCOMES

CO 1: Define some basics of game theory, concepts of players, strategies, payoff etc. (Remembering)
CO 2: Illustrate different types of game strategies. (Understanding)
CO 3: Apply different methods to solve games and recommend which strategy to implement. (Applying)
CO 4: Analyse real life competitive situations using game theoretic techniques. (Analysing)
CO 5: Determine the methods of solution using simple real-life problem. (Evaluating)

Module I: Introduction (8 lectures)

Basics of game theory, Types of games, zero-sum games, non-zero-sum game, Simultaneous games, Sequential games, Prisoners Dilemma, Other Interesting two person games, Ultimate Game, Public Good Game, Theory of rational choice, Interacting decision makers, Solution of Game by Simplex method.

Module II: Games with Perfect Information (10 lectures)

Strategic games, the Prisoner's Dilemma, Nash equilibrium, Best response functions, Dominated actions, Equilibrium in a single population: symmetric games and symmetric equilibria, Cournot's model of oligopoly, Bertrand's model of oligopoly, Electoral

competition, The War of Attrition, Auctions, Accident law.

Module III: Mixed strategy Nash Equilibrium (12 lectures)
Strategic games with randomization, Mixed strategy Nash equilibrium: concept and examples, Correlated equilibrium, Expected Payoffs, Mixed Strategy Equilibrium, Dominated Actions, Formation of Players' beliefs, Information and Bayesian Games: examples, Bayesian game applications, Juries and Information Aggregation, Auctions with Private Information.

Module IV: Extensive Games (12 lectures)
Definitions, Subgame perfect equilibrium, the ultimatum game and the holdup game, Stackelberg's model of duopoly, buying vote, Extensive Games with Perfect Information: Extensions and Discussion, Coalitional Games and the Core, examples, Bayesian Games, Spence Signalling Game, Crawford and Sobel Cheap Talk Game.

Module V: Variants and Extensions (18 lectures)
Strictly Competitive Games and Maximization, Definition and Examples, Rationalizability, Iterated elimination of strictly and weekly dominated actions, Evolutionary Equilibrium, Monomorphic pure strategy equilibrium, Mixed strategies and polymorphic equilibrium, Asymmetric equilibria, Repeated games: The Prisoner's Dilemma, Infinitely repeated games, Strategies, Nash equilibria of general infinitely repeated games, Subgame perfect equilibria of general infinitely repeated games, Finitely repeated games, Bargaining, Repeated ultimatum game, Holdup game.

Suggested Readings
1. Game Theory, D. Fudenberg and J. Tirole, MIT press.
2. An Introduction to Game Theory, Osborne, M.J., Oxford University Press.
3. Microeconomic Theory, Mas-Colell, A., M.D. Whinston and J.R., Green Oxford University Press.
4. Primer in Game Theory, Gibbons, R.A, Pearson Education.

MAAN0062: ALGEBRAIC GEOMETRY

(4-0-0)

COURSE OUTCOMES:
CO 1: Show the correspondence between algebraic objects and their geometric counterparts. (Remembering)
CO 2: Explain the interplay between algebraic geometry and commutative algebra. (Understanding)
CO 3: Analyse the connection between algebraic objects and geometric properties. (Analysing)
CO 4: Evaluate the properties of local rings with their validity in more generalized setting. (Evaluating)

Module I: (17 lectures)
Review of properties of polynomial rings on several variables, properties of algebraic sets, Nullstalensatz (weak form), Zariski topology on algebraic sets, correspondence between ideals of zero set and radical ideals, Nullstalensatz (strong form), irreducibility in Zariski topology, affine line and Zariski topology, Noetherian decomposition.

Module II: (15 lectures)
Topological dimension, Krull dimension, height of a prime ideal, ring of polynomial functions on affine variety, open sets and basic open sets in Zariski topology, quasi compactness, characterizing affine varieties, correspondence between k algebras and morphisms, the coordinate ring of an affine variety, automorphism of affine spaces and polynomial rings.

Module III: (16 lectures)
Projective spaces, projective spaces as copies of affine spaces, graded rings and homogeneous ideals, homogeneous localization and related properties, local rings, local rings at a point of a projective space, function fields, global regular functions on projective varieties, category of varieties, properties of homogeneous coordinate rings.

Module IV: (12 lectures)
Isomorphism of local rings, geometric interpretation of isomorphism of local rings, birationality, idea of non-singularity, smooth manifolds, correspondence between hypersurfaces and varieties.

Suggested Readings
1. Abstract Algebra, Dummit D.S., Foote R. M., John Wiley and sons Inc.
2. Undergraduate Commutative Algebra, Reid Miles, Cambridge university press.
3. Elementary Algebraic Geometry, Hulek Klaus, AMS Student mathematical library.

4. Basic Algebraic Geometry I, Shafarevich I.R., Springer-Verlag.
5. Algebraic Geometry, Hartshorne R., Springer-Verlag.

CO 2		H		
CO 3		M	H	
CO 4			M	H

MANO0063: NUMERICAL OPTIMIZATION

(4-0-0)

COURSE OUTCOMES

CO 1: Learn some basic concept of numerical methods and operations. (Remembering)
CO 2: Illustrate the different optimization problem and their solving methods. (Understanding)
CO 3: Classify the algebraic structure and the solution procedure for a given a mathematical problem. (Analysing)
CO 4: Derive the solution of a problem using computing approach. (Applying)
CO 5: Evaluating the mathematical and social system solution procedure and analysing the results. (Evaluating)

Module I: Mathematical Formulation (5 lectures)

Transportation problem, continuous and discrete, constrained and unconstrained, global and local, stochastic and deterministic convexity, and optimization algorithms.

Module II: Fundamental of unconstrained optimization (10 lectures)

Solution of unconstrained problems, local minimum, non -smooth problems. Two strategies- Line search and Trust Region, search direction for linear search methods, models for Trust Region method, steepest Descent method, first order methods- Gauss- Seidel, method of successive approximation or Gradient method.

Module III: Line Search (15 lectures)

General scheme, computing new t, optimal step size, Wolfe's rule. Newton methods- Forcing global convergence, alleviating the method, Quasi- Newton methods, global convergence, local convergence. Conjugate gradient- developing the method, computing the direction, orthogonalization process.

Module IV: Trust Region (18 lectures)

Elementary problems, curvilinear search incidence on the sequence x_k, least square, Gauss- Newton, algorithm based on Cauchy point, improving on the Cauchy point. Quadratic programming-basic mechanism, solution algorithm and convergence.

Module V: Newton's methods in constrained optimization (12 lectures)

Differential calculus, existence and uniqueness of solutions, first order optimality condition, second order optimality condition, speed of convergence, projection onto a closed convex set.

Suggested Readings

1. Numerical Optimization, Jorge Nocedal, Stephen J Wright, Springer publication.
2. Numerical Optimization Theoretical and Practical Aspect, J Frederic Bonnans, J Charles Gibert Claude Lemarechal, Claudia A Sagastizabal, Springer publication.
3. Numerical methods and optimization an introduction, Sergiy Butenko, Panos M Pardalos, CRC press.

MAML0064: MACHINE LEARNING

(4-0-0)

COURSE OUTCOMES

CO 1: Explain the basic concepts of Machine learning, Data Mining and AI and their importance in real life. (Understanding)
CO 2: Illustrate the various characteristics machine learning. (Understanding)
CO 3: Utilize the ML algorithms for finding solutions of real-life problem. (Applying)
CO 4: Analyse ML methods for identifying problems. (Analysing)

CO 5: Determine the performances of ML by implementing Python. (Evaluating)

Module I: Introduction to Statistics and Machine learning (8 lectures)
Statistical Inference, Types of Variables, Probability Distribution, Normality, Measures of Central Tendencies, Normal Distribution, Fundamentals of Machine Learning, Data Science vs Machine Learning, Introduction to AI, Machine Learning Concepts and types, KNN methods, Productive Models.

Module II: Supervised Learning (12 lectures)
Classification, Regression, Random Forest, Decision tree, Linear Regression, Gradient Descent, Polynomial Regression, Learning Curves, Regularized Linear Models, Logistic Regression, Ridge Regression.

Module III: Unsupervised Learning (12 lectures)
Clustering, Partitioning Clustering, Hierarchical Clustering, Grid based clustering, Clustering algorithms, K-means algorithm, Applications of Clustering in different fields.

Module IV: Advanced Machine Learning concepts and techniques (10 lectures)
Ensemble methods, Boosting, Support Vector Machines, Linear SVM Classification, Nonlinear SVM Classification, SVM Regression, ANN, Deep Learning, Semi-supervised learning, Tensor flow, Evaluation in ML.

Module V: Dimensionality Reduction (8 lectures)
The Curse of Dimensionality, Main Approaches for Dimensionality Reduction, PCA, Kernel PCA, LLE, Other Dimensionality Reduction Techniques.

Module VI: Introduction Python in Machine Learning (10 lectures)
Introduction to Python, Python Basics, Variables and Data Types, Decision Making and Loops, Functions, Modules and Packages, Exception handling, File and Directories, Classes and objects, Regular expressions, Socket programming.

Suggested Readings

1. The Elements of Statistical Learning, T. Hastie, R. Tibshirani, J. Friedman; Springer Series in Statistics.
2. Machine Learning, Tom Mitchell, McGraw Hill.
3. Introduction to Machine Learning with Python, Andreas C. Muller and Sarah Guido, Sebastopol.
4. Pattern Recognition and Machine Learning, Chris Bishop, Springer.
5. Lecture notes in Machine Learning, Zdravko Markov, Tioga Publishing Co.
6. Data Mining Techniques, Arun Kumar Pujari, University Press.
7. Pattern classification, Richard O. Duda, Peter E. Hart, David G. Stork, Wiley, New York.

MAPD0065: PLASMA DYNAMICS

(4-0-0)

COURSE OUTCOMES

CO 1: Understand and use the basic mathematical formalism needed for describing the dynamics of continuous media (Understanding)
CO 2: Have a very good knowledge of mathematical models for plasma and will be able to distinguish the dynamics of plasmas and neutral fluid media. (Remembering)
CO 3: Use the general theory to formulate and modify the basic dynamic fluid equations to account for the dynamics of plasma media at different levels: from MHD to kinetic scales (Applying)
CO 4: Able to describe the propagation of waves in plasmas, plasma turbulence, instabilities and derive the dispersion relation for these waves (Analyzing)
CO 5: Solve complex model for the various astrophysical regions, and obtain analytical expressions for some characteristic quantities (Evaluating)

Module I (10 lectures) Introduction
Basic properties of plasmas: Definition, occurrence and importance of plasmas, Debye shielding, Quasi-neutrality, plasma parameter, plasma frequency, Larmor orbits (basics), Non-ideal plasmas

Module II (10 lectures) Elements of plasma dynamics
Single particle motion: Cyclotron motion, Electrodynamic equations for a conducting fluid (Maxwell's equations, Conservation

of electric charge, Generalized Ohm's law etc.) **,** Guiding center drifts: ExB, curvature and gradient.**,** Magnetic moment, adiabatic invariants, magnetic mirrors

Module III (18 lectures) Plasma as fluids
Introduction: The fluid equation of motion (Continuity equation, Momentum balance equation, Equations of state, Two-fluid equations, Plasma resistivity.
Waves in plasmas : Plasma oscillations, Langmuir waves, ion-acoustic waves ;Electromagnetic waves (parallel and perpendicular to B0)

Module IV (12 lectures) Kinetic plasma theory
Vlasov and Boltzmann equations, Obtaining fluid equations from Boltzmann equation, From the two-fluid to MHD description of plasmas;Longitudinal and transverse waves in an unmagnetized plasma. Solution of initial value problem by Landau's method. Landau damping.

Module V: (10 lectures) Nonlinear effects in plasmas
Introduction, The Sagdeev potential, Derivation of KdV equation for ion-acoustic waves, Soliton solution in one dimension, Elementary ideas about the ponderomotive force and parametric instability.

Suggested Readings:
1. Introduction to Plasma Physics and Controlled Fusion, F. F. Chen, Plenum Press, New York, Second Edition, Vol. 1, 1984.
2. Fundamentals of Plasma Physics, J. A. Bittencourt, Springer-Verlag New York, 2008.
3. Elements of Plasma Physics, S. N. Goswami, New Central Book Agency (P) Ltd, 2011.
4. Methods in Nonlinear Plasma Theory, R. C. Davidson, Academic Press, New York and London, 1972.
5. Waves in Plasmas, Thomas H. Stix, American Institute of Physics, USA, 1992.
6. Introduction to Plasma Physics, R. J. Goldston and P. H. Rutherford, IOP Publishing, Bristol & Philadelphia, 1995.

MAFG0154: FRACTAL GEOMETRY AND APPLICATIONS

(2-0-0)

COUSE OUTCOMES
CO 1: Explain the basic concepts of fractals and their mathematical constructions. (understanding)
CO 2: Develop fractal dimensions and study their applications. (Applying)
CO 3: Categorize Mandelbrot set and Julia sets, and classify their graphical representation and geometric properties. (Analysing)
CO 4: Interpret random fractals, and study their applications to Health science and Stock markets. (Evaluating and Applying)
CO 5: Demonstrate various chaos, renormalization, universality of chaos, and their significance. (Understanding and Creating)
CO 6: Elaborate various applications in different fields of science and technology. (Creating)

Module I: Regular Fractals and Self-similarity (5 lectures)
Self-similarity, Examples of self-similarity, Fractals, Cantor Set, Koch Curve, Sierpinski gasket, Menger Sponge, Initiators and Generators, Geometry of Plane Transformations, Iterated Function Systems(IFS), Inverse problems, Random IFS, Driven IFS, Architecture.

Module II: Natural Fractals and Dimensions (5 lectures)
Ineffective way to measure, Fractal Dimensions and calculation, Hausdorff measure and dimension, Box counting dimension, Similarity dimension, The Moran formula, other dimensions, Area-Perim, Dim Algebra, Natural Fractals,Manufactured Fractals.

Module III: The Mandelbrot Set and Julia Sets (5 lectures)
Complex iteration, Julia sets, Julia sets of quadratic functions, The Mandelbrot set, Combinatorics of the Mandelbrot set, The boundary of the Mandelbrot set, Scaling in the Mandelbrot set, Complex Newton's method, Universality of the Mandelbrot set, Fractal in arts.

Module IV: Random Fractals and the Stock Market (5 lectures)
Self-similar distributions, Random Cantor set, Brownian motion, Fractional Brownian motion , Diffusion Limited aggregation , Levy Stable processes, Percolation , Bacterial Growth, Galaxy distributions, Internet traffic , Random fractal Cartoons, Stock

market surrogates.

Module V: Chaos and Fractals (5 lectures)
Doubling, Introduction to Chaos, Test functions, Graphical iterations, Time series, Histograms, Bifurcation diagrams, Return map, Driven IFS, Kelly plot, Fixed points, Cycles, Period doubling bifurcations, Dust in the Tent map, Tent and Logistic bifurcation diagrams, Tangent bifurcations, Intermittency, Discontinuous bifurcations, Scaling, Universality, Renormalization, Control of chaos, Synchronization of chaotic processes.

Module VI: Fractal Applications (5 lectures)
Fractal growth, Singularities of Electrostatic and gravitational potentials, Fractal Antennas, Fractal in Finance, Self-Affine set and dimension, Application to encoding images, Panorama of Fractals and their uses, Animations, application of fractal geometry to Computer science, Telecommunications, and Medicine .

Suggested Readings
1. A Text by Michael Frame and Amelia Urry, Fractal Worlds, Yale University Press.
2. Fractal Geometry; mathematical foundations and Applications, Kenneth Falconer, John Wiley & Sons Ltd, England.
3. Fractal Geometry and Applications, Michel L Lapidus, A Jubilee of Benoit Mandelbrot,
4. The Fractal Geometry of Nature, Benoit Mandelbrot, W.H. Freeman and Co.
5. Fractal Geometry, Mathematical methods, Algorithms, Applications, A K Evans, Woodhead Publishing.
6. Fractals Everywhere, Michael Barnsley, Dover Books on Mathematics.
7. Chaos and Fractals: New Frontiers of Science, Heinz, Otto Peitgen, Springer and Verlag.

MAMR0153: STATISTICAL METHODS AND SOFTWARE IN RESEARCH

(3-0-0)

COURSE OUTCOMES
CO 1: Explain the basis necessity and application of Statistics in different fields of Science and Social Sciences. (Remembering and understanding)
CO 2: Develop the significance of data analysis and interpretation. (Applying)
CO 3: Categorize Correlation and Regression, and interpret graphical representation. (Analysing and creating)
CO 4: Elaborate various software to study different problems in Statistics. (Creating)

Module I: Importance, Functions, Limitations (5 Lectures)
Importance, Statistics in States, Statistics in Economics, Statistics in Business, statistics in Astronomy, Statistics in Education, Statistics in Mathematics, Functions of Statistics, Limitations of Statistics.

Module II: Collection of Data, Classification and Tabulation (10 lectures)
Primary and Secondary data, Choice of methods, Direct personal observations, Information through Agencies, Sources of Secondary data, Meaning of Classification, rules of Classification, Statistical series, Frequency distribution, Continuous or Grouped Frequency Distribution Class Group Frequency, Structure and rules of Tabulation, and applications.

Module III: Correlation and Regression (10 lectures)
Significance of the study of Correlation, Correlation and Causation, Karl Pearson's coefficient of correlation, Rank Coefficient of correlation, Correlation of time series, Significance of Regression study, Correlation and Regression, Regression equations, Standard error of estimate.

Module IV: Statistical Analysis Software (20 lectures)
Importance of Software in Statistical problems, SPSS (IBM) ,(Statistical Package for Social Sciences), R Foundation for Statistical Computing, MATLAB (MathWorks), Microsoft Excel ,their algebraic results and Applications.

Suggested Readings
1. Statistics (Theory and Practice), RSN Pillai, and Bagavathi, S Chand & Company Ltd, New Delhi.
2. All of Statistics: A Concise Course in Statistical Inference, Larry A Wasserman, Springer Publishing Co.

3. A Second Course in Probability, Sheldon M Ross and Erol A. Pekoz, Pekozbooks.
4. Statistical Software (Free Websites).

MAML0152: ESSENTIAL MATHEMATICS FOR MACHINE LEARNING

(2-0-0)

COURSE OUTCOMES

CO 1: Comprehend the basic and core concepts of vector space, matrices, matrix decompositions. (Understanding)
CO 2: Apply the concepts statistics and linear algebra in Dimension reductions. (Applying)
CO 3: Gain extensive knowledge of probability and statistics for analysis of data. (Analysing)
CO 4: Apply the fundamentals of calculus to evaluate partial derivatives, gradient and other concepts of vector calculus. (Applying)

Module I: (8 lectures)

Vector Spaces: Definitions and examples, Vector Subspaces: Examples and Properties, Basis and Dimensions, Linear Transformations, MATRIX THEORY- Norms and spaces, eigenvalues and eigenvectors, Special Matrices and their properties, least squared and minimum normed solutions.

Module II: (8 lectures)

Matrix Decomposition Algorithms- SVD: Properties and applications, low rank approximations, Gram Schmidt process, polar decomposition, DIMENSIONS REDUCTION ALGORITHMS and JCF- Principal component analysis, linear discriminant analysis, minimal polynomial and Jordan canonical form

Module III: (8 lectures)

Probability – Basic concepts of probability: conditional probability, Bayes' theorem, independence, theorem of total probability, expectation and variance, few discrete and continuous distributions, joint distributions and covariance.

Module IV: (6 lectures)

Calculus – Basic concepts of calculus: partial derivatives, gradient, directional derivatives, Jacobean, hessian, convex sets, convex functions and its properties.

Suggested Readings

1. Mathematics for Machine Learning, Marc Peter Deisenroth, A. Aldo Faisal, and Cheng Soon Ong, Cambridge University Press.
2. Analysis for Applied Mathematics. W. Cheney, New York: Springer Science Business Media.
3. Linear Algebra Done Right, Third Edition, S. Axler, Springer International Publishing.
4. Numerical Optimization. J. Nocedal and S. J. Wright, New York: Springer Science Business Media.
5. A First Look at Rigorous Probability Theory, Second Edition, J. S. Rosenthal, Singapore: World Scientific Publishing.

MASL0200: COMMUNITY ENGAGEMENT AND SERVICE LEARNING

(2-0-0)

COURSE OUTCOMES

CO 1: Develop understanding on Community University Engagement. (Remembering)
CO 2: Acquire knowledge of the measures taken by HEIs towards community engagement. (Understanding)
CO 3: Analyse a problem pertaining to the community by applying methods of participatory research. (Analysing)
CO 4: Apply various tools of CPBR to address real life issues of the communities. (Applying)
CO 5: Decide a suitable tool to connect with a certain community by identifying the major barriers. (Evaluating)

Module I: (Service Learning and Community University Engagement) (10 lectures)

Definition of Service Learning (SL), goals and objectives of SL. Meaning of community university engagement (CUE), Historical overview of Higher Educational Institutes (HEIs) in India, role played by various commissions in CUE, various policies adopted by University Grants Commission (UGC), objectives and structure of schemes adopted by UGC, measures taken by HEIs towards community engagement.

Module II: (Role of HEI fostering social responsibility) (10 lectures)

Understanding social responsibility of higher education institutes, forms of community engagement, notion of engaged teaching, engaged research, engaged service, meaning of an active citizen. Meaning of Community Based Participatory Research (CBPR), methods and tools associated with CBPR. Skills to utilize CPBR fostering social responsibility especially post emergency like pandemic etc.

Module III: Assignments (10 lectures)

a. Visiting nearby villages to collect data on the percentage of students enrolling into schools per year and represent the same using various Mathematical models.
b. To conduct fact finding visits in local areas to address a particular problem by helping the community understanding the situation employing tools like maps and meetings.

Suggested Readings

Where's the learning in service learning, J. Eyler, D.E. Giles Jr.

LABORATORY COURSES

MARS6001: RESEARCH SEMINAR

(2-0-0)

Objective

Objective of the Research seminar is to conduct a research literature survey which may lead to the development of a proposed project model to be executed in the 4th semester. This will help the students to familiarize themselves with the current literature on recent trends in the chosen area.

Tasks to be performed by the students will include.

- Literature survey on the chosen topic.
- Presentation on the chosen topic, comprising the following components:
  - Presentation.
  - Report.
  - Viva Voce examination.

COURSE OUTCOMES

CO 1: Find the steps required to do research and projects (Remembering)
CO 2: Illustrate the methodology of research and journaling. (Understanding)
CO 3: Apply the research presentation skills in seminars and conferences. (Applying)
CO 4: List topics to pursue research in the field of pure and applied mathematics. (Analysing)
CO 5: Defend their research dissertations and reports. (Evaluating)
CO 6: Develop research topics and present the research ideas. (Creating)

MACP6002: COMPUTER PROGRAMMING IN C LAB

(0-0-1)

COURSE OUTCOMES

CO 1: Understand the fundamentals of OS, file handling, creating and editing simple C programs. (Understanding)
CO 2: Develop programming skills using the fundamentals and basics of C Language. (Applying)
CO 3: Develop programs using the basic elements like control statements, Arrays and Strings. (Applying)
CO 4: Effective usage of arrays, structures, functions and pointers. (Applying)

List of programs

1. Introduction to OS; file handling, directory structures, creating and editing simple C programs.
2. C programming using variables, assignment and simple arithmetic expressions.
3. Determination of roots of quadratic equations, $ax2+bx+c=0$, $a\neq0$.
4. Arranging given set of numbers in increasing/decreasing order, calculation of Mean.
5. Calculation of GCD/LCM of two integers.
6. Evaluation of factorial of a positive integer and evaluation of binomial coefficients.
7. Evaluation of factorial of binomial coefficients mod 2.
8. Sieve method for primality test.
9. Generation of twin primes.
10. Solution of congruence using complete residue system.
11. Addition, subtraction and multiplication of matrices.
12. Transpose, determinant .

Suggested Readings

1. Programming in ANSI C, E. Balaguruswamy, McGraw-Hill.
2. A first book of ANSI C, J. Brosin, Cengagedelmer Learning India P.Ltd.
4. C Programming Language, Brain W. Kernighan & Dennis Ritchie, PHI.
5. Let us C, Kanetkar Y, BPB Publications, New Delhi.

MARP6003: RESEARCH PROJECT

(8 credits)

Objective

The objective of the research project is to train students to carry out research/investigation in a field that is of relevance to Mathematical science. During the project period, students will start a research project/investigation applying the knowledge acquired in the first three semesters and also incorporating the recent trends in the chosen area. In the project course, the student should be able to undertake detailed literature review as a way of information search, carry out detailed investigations as a way of solving project problems, write and put together a detailed report of the investigations carried out at the end of the fourth semester.

The mode and components of evaluation, supervisors and the weightages attached to them shall be published by the Department at the beginning of the semester.

COURSE OUTCOMES

CO 1: Identify different areas of research in the field of Mathematical sciences or in computing. (Remembering)
CO 2: Explain the importance of research in the chosen topic of interest. (Understanding)
CO 3: Apply theoretical knowledge to find out an appropriate topic of importance for research in the graduate level. (Applying)
CO 4: Analyse when a chosen approach does not yield the expected result. (Analysing)
CO 5: Evaluate the project and present in an appropriate form. (Evaluating)
CO 6: Learn to choose a methodology or technique or approach to fulfil a set of objectives or prove or disprove a hypothesis. (Creating)

MACM6004: COMPUTATIONAL SKILL DEVELOPMENT: MATHEMATICA

(2 Credits- 30 Lectures)

COURSE OUTCOMES

CO 1: Learn how to use Mathematica, a powerful coding language in science and engineeringcomputing (Remembering).
CO 2: Apply the application-oriented principle to various real-life problems (Applying)
CO 3: Evaluate simple math computations, modeling and simulation problems, data analysis andprocessing, as well as visualization techniques. (Evaluating)

Module I (10 Lectures)

Introduction to Mathematica and to the Wolfram Language (knowledge-based language, built- in support for real-world entities, Wolfram Alpha and the Wolfram Demonstrations Project), Notebook Interfaces, Text-Based Interfaces, Numerical Calculations: Arithmetic, Exact and Approximate Results, Some Mathematical Functions, Arbitrary-Precision Calculations, Complex Numbers, Getting Used to Mathematica, Mathematical Notation in Notebooks, Defining Variables, Making Lists of Objects, Manipulating Elements of Lists, The Four Kinds of Bracketing in Mathematica, Sequences of Operations.

Module II (10 Lectures)

Lists, strings, rules, patterns and pattern matching, different programming paradigms (procedural, functional and rule- based), Graphics and image manipulation (the 30+ members of the plot family, pixelsand voxels, the built-in image editor).

Module III (10 Lectures)

Linear and polynomial algebra. Exact and numerical optimization. Calculus and differential equations (analytic and numerical solutions of ODEs and PDEs). Plane and solid geometry. Probability and statistics(descriptive statistics, built-in support for 100+ distributions).

Suggested Readings

1. The Mathematica Book, S. Wolfram, 5th edition, Wolfram Media, 2003
2. Mathematica Basic Training Course Li Han Long, Sui Ying Deng, National Defense Industry Press,2016
3. Introduction to Mathematica with Applications, M. Muresan, Springer, 2017

MACS6005: COMPUTATIONAL MATHEMATICS WITH SAGE MATH

(2 Credits- 30 Lectures)

COURSE OUTCOMES

CO 1: Learn and understand the basic Python programming language. (Understanding)

CO 2: Understand how to use Sagemath software and its applications. (Understanding)

CO 3: Solve problems in Calculus, Applied Linear Algebra, Numerical Method and differential equations using Sagemath.(Evaluating)

Module I (10 lectures)

Installation of Python; Getting Started with Python Python as an advanced calculator; For loop in Python; While loop in Python; Use of SciPy and SymPy in Python; Classes in Python - Part 01; Classes in Python - Part 02;

Module II (12 lectures)

Solving Equations in SageMath;2d Plotting with SageMath;3d Plotting with Sage Math; Calculus of one variable with Sagemath, Integration with Sage Math; Improper Integral using SageMath; Application of integration using SageMath; Partial derivative with sage math, limit and continuity of real valued functions; working with vectors in sagemath; Solving systems of linear equation in sage math, vector space in sage math, Matrix Spaces with SageMath; Linear Transformations with SageMath, eigenvalues and eigenvectors with sage math;

Module III (8 lectures)

Finding Roots of algebraic and transcendental equations in Sage Math; Numerical solutions of linear equations and numerical integration with sagemath; Solving 1st and 2nd order ODE with Sage Math; Euler's Method to solve 1st order ODE with SageMath.

Suggested Readings

1. Computational Mathematics with SageMath, Paul Zimmermann , Siam
2. Mathematical Computational with Sagemath, Paul Zimmermann Alexandre Casamayou Nathann Cohen Guillaume Connan Thierry Dumont
3. An introduction to Sage Programming: With applications to SAGE Interacts for Numerical methods, Razvan A Mezei, Springer

DEPARTMENT OF PHYSICS

VISION:

To endow the students with profound understanding of physics, the foundation for all natural sciences, and drive them towards critical thought for further study and research, to pave the way for suitable career opportunities and enable them to be of service to the society as responsible human beings.

MISSION:

- To strengthen the fundamental concepts of physics and provide advanced understanding of physicalphenomena by emphasizing on the correlation between theory and observation.
- To spark creative interest towards the pursuit of innovative research in fundamental and appliedphysics.

PROGRAM OUTCOMES – MSC PROGRAMME

PO 1: **Critical Thinking**: Inculcate critical thinking to carry out scientific investigation objectively . Formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. Critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

PO 2: **Knowledge Skil**l: Equip the student with skills to analyse problems, formulate an hypothesis, evaluate and validate results, and draw reasonable conclusions thereof .Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems , rather than replicate curriculum content knowledge .

PO 3: **Scientific Communication Skills**: Imbibe effective scientific and / or technical communication in both oral and writing. Ability to show the importance of the subject as precursor to various scientific developments since the beginning of the civilization.

PO 4: **Ethics**: Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned .Ability to identify unethical behaviour such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actionsin all aspects.

PO 5: **Enlightened Citizenship**: Create awareness to become an enlightened citizen with commitment to deliver one's responsibilities within the scope of bestowed rights and privileges

PO 6: **Analytical Reasoning**: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyse and synthesise data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

PO 7: **Multicultural Competence**: Development of a set of competencies in order to enhance and promote the growth of multicultural sensitivity within universities. Integrating multicultural awareness such as race, gender, physical ability, age, income and other social variables, and by creating an environment that is , "welcoming for allstudents" .

PO 8: **Lifelong Learning**: Ability to think, acquire knowledge and skills through logical reasoning and to inculcatethe habit of self-learning throughout life, through self- paced and self- directed learning aimed at personal development, and adapting to changing academic demands of work place through knowledge/ skill development/reskilling .

PO 9: **Leadership Qualities**: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination in a smooth and efficient way.

PO 10: **Research Skills**: Prepare students for pursuing research or careers in industry in concerned subject and allied fields. Capability to use appropriate software to solve various problems and to apply programming concepts of C++ and Mathematica/ Matlab to various scientific investigations , problem solving and interpretation

PROGRAMME SPECIFIC OUTCOMES FOR MSC PHYSICS

PSO 1: **Understand the advanced theoretical concept of physics:** Understand the advanced theoretical principlesof physics.

PSO 2: **Acquire analytical and logical skill for research**: Acquire the ability to analyse critical research orientedproblems logically.

PSO 3: **Expertise in experimental physics and learn to use sophisticated instruments safely:** Learn to handle sophisticated experiments perfectly and safely.

THEORY COURSES

PSCM0020: CLASSICAL MECHANICS

(4-0-0)

COURSE OUTCOMES

CO 1: Explain Hamilton's and Lagrange's equations and use them for solving problems in physics. (Understanding)
CO 2: Build the concepts of Canonical transformation. (Creating)
CO 3: Explain the motion of rigid body and visualise the Euler rotations. (Understanding)
CO 4: Solve rigid body problems. (Applying)
CO 5: Develop the theory of special relativity in terms of four vector notation. (Creating)

Module I: (12 lectures)

Hamilton's variational principle; derivation of Lagrange's equations; velocity dependent forces; dissipation. Charged particles in an electromagnetic field. Space time symmetries and conservation Laws. Varial theorem. Space transformation.

Module II: (12 lectures)

Two-body problem; central forces; classification of orbits; differential equation for orbits. Kepler problem; scattering in laboratory and centre of mass frames, transformation of cross sections, energies. Rutherford scattering. Kinematics of decay of particles (into two particles).

Module III: (12 lectures)

Rigid body motion: fixed and moving coordinate systems; orthogonal transformations. Euler angles; angular momentum; rotational kinetic energy. Principal axes transformation; Euler equations; force free motion of a rigid body symmetric top.

Module IV: (12 lectures)

Legendre transformation; Hamiltonian equations; Significance of the Hamilton function. Cyclic coordinates and conservation theorems. Poisson Brackets – Poisson Bracket of Angular momentum with coordinates. Canonical Transformation Theory. Contact transformation; integral invariants.

Module V: (12 ectures)

Special theory of relativity: Lorentz transformations. Four dimensional formulation. Force momentum and energy inrelativistic mechanics. Properties of space-time in relativity. Two body decay of a particle.

Suggested Readings

1. Classical Mechanics, H. Goldstein, C. Poole and J. Safko, Pearson Education Asia.
2. Classical Mechanics, N. C. Rana and P. S. Joag, Tata McGraw Hills.
3. Classical Mechanics of Particles and Rigid bodies, K. C. Gupta, Wiley Eastern.
4. Principles of Dynamics, D. T. Greenwood, Prentice Hall.

CO 5					H

PSQM0021: QUANTUM MECHANICS I

(4-0-0)

COURSE OUTCOMES

CO 1: Conceptualise different interpretations of quantum mechanics. (Understanding)
CO 2: Apply the concepts of quantum mechanics to different problems in physics. (Applying)
CO 3: Make use of variational method and WKB approximation. (Applying)
CO 4: Inspect how to encounter spin. (Analysing)
CO 5: Comprehend the idea of symmetry in quantum mechanics. (Analysing)

Module I: (10 lectures)

Introduction and revision: inadequacy of classical mechanics; basic postulates of quantum mechanics; ensemble and Copenhagen interpretation. Schrödinger equation; continuity equation; Ehrenfest theorem; admissible wave functions; stationary states. One dimensional problems; potential well and barriers; harmonic oscillator.

Module II: (10 lectures)
Equation of motion: Schrodinger, Heisenberg and Dirac representations; equation of motion in the respective representations. Application to linear harmonic oscillator.

Module III: (10lectures)
Three dimensional problems: Separation of variables; orbital angular momentum; spherical harmonics. Harmonic oscillator in Cartesian and polar coordinates. A free particle and a particle in 3-D box in Cartesian and polar coordinates, Coulomb problem in spherical and parabolic coordinates - regular and irregular solutions.

Module IV: (11 lectures)
Spinors and their transformation properties. Pauli spin matrices. Identical particles and statistics. Addition of angular momenta. Clebsch-Gorden coefficients. Winger-Eckart Theorem.

Module V: (8 lectures)
Symmetry in quantum mechanics. Reflections, time reversal, space inversion, particle exchange. Displacement in space and time, space translation and rotational symmetry. Selection rule and conservation laws.

Module VI: (11 lectures)
Variational methods for bound states; lower and upper limits in simple cases. WKB approximation; connection with classical limits, validity of WKB approximation. Connection formulae; application to bound states, tunneling in one dimension. Application to radial Schrodinger equation.

Suggested Readings
1. Quantum Mechanics, E. Merzbacher, John Wiley.
2. Quantum Mechanics, G. Ahruldhas, Prentice Hall.
3. Quantum Mechanics, L. I. Schiff, McGraw Hill.
4. Quantum Mechanics, V. K. Thankappan, New Age Int. Pub.
5. Quantum Mechanics, P. T. Mathews and Venkatesan, Tata McGraw Hill.
6. Principles of Non-Relativistics and Relativistic Quantum Mechanics, K. D. Krori, PHI.
7. Quantum Mechanics (3 volumes), L. D. Landau and E. M. Lifshitz, Pergamon Press.
8. Quantum Mechanics, Albert Messiah, Dover Publications.

CO 2			H	M	M	M
CO 3						H
CO 4				H		
CO 5					H	

PSQM0024: QUANTUM MECHANICS II

(4-0-0)

COURSE OUTCOMES
CO 1: Explain relativistic quantum mechanics. (Understanding)
CO 2: Interpret path integral approach to quantum mechanics. (Understanding)
CO 3: Apply the concept of quantum mechanics to the problems of scattering. (Applying)
CO 4: Build concept about perturbation theory. (Applying)
CO 5: Develop concepts on advanced topics like Hartree- Fock equation. (Applying)

Module I: (11 lectures)
Stationary perturbation theory: Non Degenerate case; first and second order of energy and wave functions, perturbation of one dimensional harmonic oscillator by potentials of the bx^2 and cx^3. Degenerate case; first order Stark effect in hydrogen; Zeeman effect without electron spin.

Module II: (9lectures)
Time dependent perturbation theory; first order transition probabilities; constant perturbation. Transition to continuum; Harmonic perturbation; Fermi's golden rule; Sudden and adiabatic approximations.

Module III: (10 lectures)
Many Electron Atoms: Indistinguishable particles; Pauli's Principle; inclusion of spin; spin functions for two and three electrons; the Helium atom; central field approximation, Thomas-Fermi model of the atom; Hartree equation, Hartree- Fock equation.

Module IV: (13 lectures)
Scattering theory: asymptotic behaviour of scattering wave function; relation to cross sections, Green's function for scattering problem; Green's function with different boundary conditions; scattering integral equations; Born approximation and its validity criteria; scattering by screened Coulomb potential; Born series. Partial waves and phase shifts. Scattering amplitude; optical theorem; low energy scattering. Effective range; scattering length; resonance.

Module V: (12lectures)
Relative wave equations: Klein-Gordon equation. Difficulty with probability interpretation. Dirac equation; four component solutions for free particle; negative energy solutions – particles and antiparticles. Covariant form of Dirac equation; 4-current density. Properties of γ-matrices. Dirac equation in the presence of electromagnetic field; non- relativistic reduction; spin and magnetic moment.

Module VI: (5 lectures)
Path integral approach to quantum mechanics: Feynman's Path Integral method, equivalence of Feynman and Schrödinger equations, Dirac-Feynman Action Principle.

Suggested Readings
1. Quantum Mechanics, E. Merzbacher, John Wiley.
2. Quantum Mechanics, G. Aruldhas, Prentice Hall.
3. Quantum Mechanics, L. I. Schiff, McGraw Hill.
4. Quantum Mechanics, V. K. Thankappan, New Age Int. Pub.
5. Quantum Mechanics, P. T. Mathews and Venkatesan, Tata McGraw Hill.
6. Quantum Mechanics Theory and Applications, Ghatak and Lokanathan, Laxmi Publications.
7. Principles of Non-Relativistics and Relativistic Quantum Mechanics, K. D. Krori, PHI.

PSCP0025: CONDENSED MATTER PHYSICS
(4-0-0)

COURSE OUTCOMES
CO 1: Explain about crystal structure in details. (Understanding)
CO 2: Illustrate physics of phonons. (Understanding)
CO 3: Identify free electron and nearly free electron models. (Applying)
CO 4: Discuss about advanced topics like plasmons, polaritons, polarons, etc. (Creating)

Module I: (11lectures)
Crystal structure. Diffraction of waves by crystal. Scattered wave amplitudes, Brillouin zones. Fourier analysis of the basis. Crystal binding and elastic constants.

Module II: (9 lectures)
Phonons: quantisation of lattice vibrations, dispersion relation for acoustic and optical phonon, energy gap, density ofstates, heat capacity, thermal conductivity and thermal expansion.

Module III: (8 lectures)
Free electron Fermi gas: Fermi energy, density of states, heat capacity, thermal conductivity and electrical conductivity. Wiedemann-Franz law.

Module IV: (10 lectures)
Nearly free electron gas: Schrodinger equation of an electron in a periodic potential, Bloch theorem, energy gaps at the zone boundary, approximation solution near a zone boundary, energy bands and their role in properties of metals, insulators and semiconductors. Holes on energy bands. Hall effect.

Module V:(12 lectures)
Shape of fermi surfaces in the free electron and nearly free electron models. Tight binding approximations. Electron orbits, hole orbits and open orbits. Quantization of orbits in a magnetic field. De Hass-van Alphen effect and its role in experimental

determination of Fermi surfaces.

Module VI: (10 lectures)
Plasmons, polaritons and polarons: dielectric functions of the electron gas, plasmons, electrostatic screening, Mott metal-insulator transition, polaritons, polarons. Peierls instability of linear metals.

Suggested Readings
1. Introduction to Solid State Physics, C. Kittel, John Wiley and Sons, Inc.
2. Quantum Theory of Solids, C. Kittel, John Wiley and Sons, Inc.
3. Quantum Theory of the Solid State, J. Callaway, Academic Press, New York.
4. Solid State Physics, H. Ibach and H. Luth, Narosa Pub. House.

PSED0026: ELECTRODYNAMICS
(4-0-0)

COURSE OUTCOMES
CO 1: Explain various phenomena from the standpoint of electrodynamics. (Remembering)
CO 2: Outline the origin and propagation of electromagnetic waves. (Understanding)
CO 3: Explain the nature of electromagnetic radiation. (Understanding)
CO 4: Infer the extension of classical electrodynamics to the generalized 4-dimensional case. (Analysing)
CO 5: Apply the laws of electrodynamics to solve various physical problems. (Applying)

Module I: (7 lectures)
Maxwell's equations: review of Maxwell's equations; boundary conditions at interface between different media; Poisson's and Laplace's equations

Module II: (8 lectures)
Electromagnetic waves: linear and circular polarisation; Stoke's parameters; Poynting theorem of complex field vectors; frequency dispersion (normal and anomalous); characteristics of dielectrics, conductors and plasma and their interaction with electromagnetic waves.

Module III: (10 lectures)
a. Simple radiating systems: Gauge invariance; Green's function for the wave equation; concept of retarded potential, radiation from an oscillating dipole and its polarisation. Electric dipole fields, magnetic dipole and electric quadrupole fields; centre fed linear antenna, scattering at long wavelengths – viz. by dipoles induced in a small scatterer, scattering by a small dielectric sphere.
b. Diffraction: Scalar diffraction theory; vectorial diffraction theory, Scattering in a short wavelength limit.
c. Guided waves: waveguides, TE waves in a rectangular waveguide, coaxial transmission lines.

Module IV: (15 lectures)
Radiation from accelerated charge: Lienard-Wiechart potentials; radiated power from accelerated charge at low velocities. Larmor 's power formula. The fields of a point charge in arbitrary and uniform motion. Radiation from an ultra-relativistic particle. Angular and frequency distribution of radiation from moving charges.

Module V: (12 lectures)
Special theory of relativity: matrix representation of Lorentz transformation; infinitesimal generators; Thomas precession; invariance of electric charge; covariance of electrodynamics; transformation of electromagnetic fields

Suggested Readings
1. Classical Electrodynamics, J. D. Jackson, John Wiley and Sons.
2. Classical Electrodynamics, S. P. Puri, Tata McGraw Hill Publishing Company Ltd.
3. Electrodynamics, S. L. Gupta, V. Kumar and S. P. Singh, Pragati Prakashan.
4. Introduction to Electrodynamics, D. J. Griffiths, Prentice Hall of India.

PSAM0028: ATOMIC AND MOLECULAR PHYSICS
(4-0-0)

COURSE OUTCOMES
CO 1: Explain atomic and molecular spectroscopy in details. (Understanding)
CO 2: Understand interaction of radiation with atoms. (Understanding)
CO 3: Analyse bond formation. (Analysing)
CO 4: Apply the concept of symmetry to molecules. (Applying)

Module I: (15 lectures)
Introduction of atomic spectrum; fine structure and hyperfine structure of energy levels. Angular momentum and magnetic moment. Doublet structure energy levels and single electron atom. Term symbols and fine structure of energy levels of two electron atoms using L-S coupling and j-j coupling schemes; identification of ground state. Interaction of nuclear and electronic magnetic moments and hyperfine structure with examples.

Module II: (10 lectures)
Interaction of radiation with atoms; spontaneous and stimulated emission; absorption; transition. Einstein's A and B coefficients. Working principles of He-Ne laser.

Module III: (12 lectures)
Theories of molecular bond formation; van der Waals bonding, ionic bonding, valence bond and molecular orbital models of covalent bonding. Homonuclear diatomic molecules and the term symbols and their ground states.

Module IV: (8 lectures)
Vibronic states of molecules and nature of vibronic spectra; harmonic and anharmonic vibrations and potential constants; rotational spectrum and moment of inertia of molecules.

Module V: (15 lectures)
Symmetry of molecules; symmetry elements and points group; proper and improper rotations and their matrix representation. Introduction to character table of point group; reducible and irreducible representation for simple molecules such as H_2O, NH_3, etc.Normal coordinates and normal modes of vibrations. Infrared absorption and Raman scattering form molecular vibrations and rotations, and selection rules.

Suggested Readings
1. Introduction to Atomic Spectra, H. E. White, Mc-Graw Hill.
2. Atoms and Molecules, Martin Karplus and Richard N. Porter, W. A. Benjamin.
3. Spectra of Diatomic Molecules, G. Hertzberg, Van Vostrand.
4. Principles of Lasers, O. Svelto, Plenum Press.

PSCN0030: COMPUTER ORIENTED NUMERICAL METHODS
(2-0-0)

COURSE OUTCOMES
CO 1: Explain the concept of numerical methods. (Understanding)
CO 2: Apply numerical techniques to solve different problems in Physics. (Applying)
CO 3: Understand high level language through Fortran. (Understanding)

Module I: Numerical Analysis (10 lectures)
a. Introduction to numerical methods: approximate and significant figures, absolute and relative errors, general formula for

errors, application of the error formula to the fundamental operations of arithmetic and to logarithms. The error of a sum, the error of a difference, the error of a product and number of correct digits, the error of quotients and number of correct digits, the relative error of a power, the relative error of a root, successive approximation, Taylor 's series, principle of least square, law of error of residuals.

b. Matrices and linear equations: addition, subtraction and multiplication of matrices, inversion of matrices, Jacobi transformation of a symmetric matrix, determinant of a matrix, transpose of a matrix, solution of equations by matrix method, Gauss-Jordan elimination Method, eigenvalues and eigenvectors.

c. The solution of numerical, algebraic and transcendental equations: Equations in one unknown: Finding approximate values of the roots, finding roots by repeated application of location theorem, bisection method, the Newton- Raphson method; their convergence and geometric significance.

Module II: Solutions of Ordinary Differential Equations (9 lectures)

a. Equations of the first order: Euler 's method and its modification, the Runge-Kutta method, checks, errors and accuracy.

b. Equations of the second order and systems of simultaneous equations: Milne's-predictor and corrector methods, boundary value problems, conditions for convergence.

c. Minimization or maximization of functions: golden selection search in 1-D, parabolic interpolation and Brent 's method in 1-D, 1-D search with 1 derivatives, Downhill simplex method in multidimensions, Direction set (Powell's method in Multidimensions).

Module III: (5 lectures)

a. Numerical Integration: Classical formulae for equispaced abscissae: Simpson's rule, trapezoidal rule, Gaussian

b. quadrature formula.

c. Computation of factorials, computation of square roots, recurrence relations.

Module IV: Review of FORTRAN Language I (6 lectures)

a. Introduction to computing

b. Constants, variables, expressions, operations, statements, functions and built in functions.

c. Conditional and looping structures, arrays, subprograms and subroutines.

d. File operations.

Suggested Readings

a. Theory and problems of Programming with FORTRAN, Seymour Lipschutz and Arthur Poe, McGraw-Hill.

b. FORTRAN 77 and numerical methods, C. Xavier and R. Rajaraman, New Age International Publishers

c. FORTRAN 77 Programming, V. Rajaraman, Prentice Hall of India.

d. Numerical Analysis, V. Rajaraman, Wiley Eastern.

e. Numerical Recepies in FORTRAN, W. H. Press, S. S. Tenkulsky, W. T. Wettering and B. P. Flannery, CambridgeUniversity Press.

f. Introductory Methods of Numerical Analysis, S. Sastry, Prentice Hall of India.

g. Numerical Methods for Scientific and Engineering Computation, M. K. Jain et al., New Age International Publications.

h. Introduction to Numerical Analysis, F. B. Hildebrand, McGraw-Hill Book Company Inc.

PSSM0034: STATISTICAL MECHANICS

(4-0-0)

COURSE OUTCOMES

CO 1: Appreciate the connection between statistical mechanics and thermodynamics. (Analysing)

CO 2: Conceptualise quantum statistical mechanics. (Understanding)

CO 3: Understand the physics of phase transition. (Understanding)

CO 4: Understand non-equilibrium physics. (Understanding)

Module I: Essentials (17 lectures)

a. Probability theory: the random walk problem, binomial, Poisson and Gaussian distributions, central limit theorem.

b. Classical equilibrium statistical mechanics: concept of equilibrium; Ergodic hypothesis; microcanonical, canonical and grand canonical Ensembles; partition functions and their relation to thermodynamics.

c. Classical nonequilibrium statistical mechanics: approach to equilibrium, Liouville's theorem, Boltzmann's H theorem

Module II: Quantum Statistics (15 lectures)

a. Quantum statistical mechanics: Schrödinger and Heisenberg Picture; pure and mixed states, the density matrix, quantum mechanical Liouville's theorem; the fundamental postulates.
b. Quantum statistics: quantum gases of independent particles; partition functions; Bose Einstein's and Fermi Dirac's distributions; electrons in metals; black body radiation; Bose Einstein's Condensation

Module III: Phase Transitions (15 lectures)

a. Phenomenology: first and second order phase transitions; elementary ideas of critical phenomena; universalityof critical exponents; scaling of thermodynamic functions.
b. Theory: theLandau theory of phase transition with examples. c) Exact solutions: Ising model in one dimension.

Module IV: Non Equilibrium Phenomena and Irreversible Processes (13 lectures)

a. Non equilibrium phenomena: transport theory; Boltzmann equation; Maxwell-Boltzmann distribution.
b. Irreversible processes: fluctuations; Brownian motion; Langevin's equation; Wiener Khintchine relations, Nyquist theorem, Fluctuation-Dissipation theorem; Fokker Planck equation.

Suggested Readings

1. Fundamental of Statistical and Thermal Physics, FederickReif, McGraw Hill, Singapore.
2. World Scientific, Shang-Keng Ma, Statistical Mechanics, Singapore.
3. Wiley-Interscience, John Wiley and Sons Inc., Richard E. Wilde, and Surjit Singh, Statistical Mechanics: Fundamentaland Modern Applications, New York.
4. Statistical Physics: Statics, Dynamics and Renormalisation, Leo P.Kadanoff, World Scientific, River Edge, New Jersey.
5. Statistical Mechanics, K. Huang, John Wiley and Sons Inc., New York.
6. Statistical Physics, D. J. Amit and J. Verbin, World Scientific, Singapore.
7. Statistical Physics, L. D. Landau, E. M. Lifshitz, Butterworth-Heinemann.
8. Statistical Mechanics, R. K. Pathria, Academic Press.

PSPL0036: PLASMA PHYSICS I

(4-0-0)

COURSE OUTCOMES

CO 1: Understand and explain the basic theoretical concepts of plasma physics. (Remembering)
CO 2: Understand the behaviour of a single charged particle in electric and magnetic fields. (Understanding)
CO 3: Understand the purpose, principles and techniques of various plasma diagnostic. (Application)
CO 4: Understand the underlying principles of some laboratory and naturally occurring plasma. (Analysing)
CO 5: Know various applications of plasma. (Analysing)

Module I: Introduction to Plasma Physics (12 lectures)

Role of temperature in occurrence of plasma; definition of plasma: quasineutrality and collective behaviour of plasma; concept of temperature; Debye shielding; criteria for plasma; classification of plasma; occurrence of plasma in nature.

Module II: Single Particle Motion (12 lectures)

Uniform electric and magnetic fields; non-uniform magnetic field: grad-B drift, curvature drift, magnetic mirrors, the loss cone; non-uniform electric field; time-varying electric field; time- varying magnetic field; adiabatic invariants.

Module III: Plasma Diagnostics (14 lectures)

Langmuir probe: I-V characteristics, measurement of plasma potential, floating potential, electron temperature and electron density; double probe; optical emission spectroscopy: radiation from plasma, plasma models, temperature measurement by Boltzmann plot and line intensity ratio method, line broadening in plasma, Doppler broadening and stark broadening, applications; absorption spectroscopy; calorimetric methods; laser and microwave interferometer.

Module IV: Laboratory and Space Plasma (10 lectures)

Glow discharge plasma; production and stabilization of thermal plasma, principle of DC, AC and high frequency discharges, RF and ECR plasmas, dielectric barrier discharge plasma, laser produced plasmas; sun and solar winds, Van Allen belts, the

ionosphere, formation of, accretion disks, dusty plasmas.

Module V: Applications of Plasma (12 lectures)
Thermal plasma: nanoparticle synthesis, plasma spraying, waste management; plasma sputtering; plasma nitriding; plasma processing; plasma enhanced vapour deposition; plasma assisted surface engineering; biomedical applications; the magneto-hydrodynamic generator; plasma propulsion.

Suggested Readings
1. Introduction to Plasma Physics and Controlled Fusion, F. F. Chen, Plenum.
2. Fundamentals of plasma physics, J. A. Bittencourt, Springer.
3. Principles of plasma diagnostics, I. H. Hutchinson, Cambridge University Press.

Mapping of COs to Syllabus

PSEC0037: ELECTRONICS II

(4-0-0)

COURSE OUTCOMES
CO 1: Know about different types of transistors. (Understanding)
CO 2: Understand the application of transistors for circuit design. (Application)
CO 3: Utilize Describe devices like thyristors, operational amplifiers,oscillators, etc. (Analysing)
CO 4: Understand the digital electronics design using analog devices. (Understanding)
CO 5: Understanding the application of analog devices for electronic instruments and sensors (Application)

Module I: (20 lectures)
a. Bipolar junction transistor: BJT biasing: fixed bias, emitter bias, voltage divider bias, D.C. collector feedback bias; DC and AC load line, Q- point, stability considerations. BJT modeling: two port representation of BJT with z, y, h- parameters; re and hybrid models of C-E, C-B, C-C configuration.
b. Hybrid-pi model of C-E amplifier in voltage divider bias configuration, frequency response in low, mid and high frequency conditions, respective voltage gain, current gain, input and output impedances.
c. Field effect transistors: FET biasing: self bias, fixed bias, voltage divider bias, stabilization of Q-point. Small signal AC equivalent circuit of FET as amplifier, hybrid parameters. JFET amplifiers: CS, CD amplifiers; enhancement mode MOSFET amplifier, depletion mode MOSFET amplifiers; Introduction to CMOS, characteristics, structure of MOSFET, CMOS.

Module II: (25 lectures)
a. Thyristors: four layer diode, SCR, Photo SCR, gate controlled switch, silicon controlled switch, Diac, Triac, UJT;
b. Op-Amp - ideal operational amplifiers: Input impedance. DC offset parameters, frequency parameters, gain- bandwidth, CMRR, SVRR, SR. Op-Amp applications in constant gain multiplier, voltage summing, log - antilog amplifier, subtractor, comparator – zero crossing detector, Schmitt trigger, integrator, differentiator and controlled sources. instrumentation amplifier. Active filters: low, high and bandpass filters; ADC and DAC.
c. 555 timer: block diagram, monostable operation, astable operation, bistable operation, voltage controlled oscillator, ramp generator.

Module III: (15 lectures)
a. Feedback configurations: voltage series, voltage shunt, current series, current shunt.
b. Oscillators: introduction and classification, general form of LC oscillator, e.g. Hartley oscillator, Colpitts oscillator, RC phase shift oscillator, Wein Bridge oscillator, crystal oscillator.
c. Regulated power supply: voltage feedback regulation, current limiting characteristics, power supply characteristics, 3 terminal IC regulators, current boosters, switching regulators.
d. Characteristics of instruments: static characteristics, span, accuracy and precision, linearity, tolerance, error, repeatability, sensitivity, calibration, hysteresis, input impedance, resolution, bias and drift.

Suggested Readings
1. Electronic Devices and Circuit Theory, Robert L. Boylestad andLowisNashelsky, Pearson Education.
2. Millman's Electronic Devices and Circuits, Jacob Millman, Christos C. Halkias and Satyabrata Jit, Tata McGraw Hill.
3. Electronic Devices and Circuits, S. Salivahanan, N. Suresh Kumar and A. Vallavaraj, Tata McGraw- Hill.

4. Solid State Electronic Devices, Streetman and Banerjee, Prentice Hall.
5. Electronic Devices and Circuits, David A. Bell, Prentice Hall of India.
6. Integrated Electronics, Jacob Millman, Christos C.Halkias, McGraw Hill Int.
7. Op-amps and Linear Integrated Circuits, Ramakant A. Gayakwad, PHI.

PSNS0041: NANOPHYSICS II

(4-0-0)

COURSE OUTCOMES

CO 1: Explain different properties of nanomaterials. (Understanding)
CO 2: Know about different methods for the synthesis of nanomaterials. (Applying)
CO 3: Appreciate the technology associated with characterization of nanomaterials. (Applying)

Module I: (15 lectures)

Surfaces and interfaces in nanostructures; ceramic interfaces, superhydrophobic surfaces, grain boundaries in nanocrystalline materials, defects associated with interfaces; thermodynamics of nanomaterials, natural nanomaterials; toxicology of nanomaterials.

Module II: (25 lectures)

Chemical routes for synthesis of nanomaterials: electrochemical synthesis, photochemical synthesis; synthesis in supercritical fluids. hydrothermal growth of nanoparticles and different nanostructures. Ostwald ripening; zeta potential; fabrication of nanomaterials by physical methods: -inert gas condensation, arc discharge, plasma arc technique, RF plasma, MW plasma, ion sputtering, laser ablation, laser pyrolysis, ball milling, molecular beam epitaxy, physical and chemical vapour deposition method; electrodeposition. Core-shell quantum dots.

Module III: (20 lectures)

Nanostructures: zero-, one-, two- and three- dimensional structure, size control of metal nanoparticles; properties: optical, electronic, magnetic properties; surface plasmon resonance, structural characterization X-ray diffraction, small angle x-ray scattering, optical microscope and their description, scanning electron microscopy (SEM), scanning probe microscopy (SPM), TEM and EDAX, SAED analysis, scanning tunneling microscopy (STM), atomic force microscopy (AFM). Spectroscopic characterizations: basic concepts of spectroscopy, operational principle and application for analysis of nanomaterials, UV-VIS-IR spectrophotometers, principle of operation and application for band gap measurement (Taucplot).

Suggested Readings

1. A. Rao Introduction to nanoscience, G. L. Hornyak, J. Dutta and H. F. Tibbals, CRC Press.
2. Nano: The Essentials, T. Pradeep, McGraw Hill.
3. Nanotechnology and Global Sustainability, D. Maclurcan and N. Radywyl (Eds.), CRC Press.
4. Fundamentals of Nanoelectronics, G. W. Hanson, Pearson.
5. Springer Handbook of Nanomaterials, R. Vajtai (Ed.), Springer.
6. Springer Handbook of Nanotechnology, B. Bhushan (Ed.), Springer.

PSGR0044: GENERAL THEORY OF RELATIVITY AND COSMOLOGY

(4-0-0)

COURSE OUTCOMES

CO 1: Relate the concepts from special theory of relativity with generalized tensor calculus. (Remembering)
CO 2: Explain Einstein's field equation from basic principles. (Understanding)
CO 3: Illustrate the implications of the general theory of relativity. (Understanding)
CO 4: Extend Einstein's gravity to the cosmological scale. (Understanding)
CO 5: Identify Newtonian gravity as a special case of general relativity. (Applying)

Module I: Theoretical Background of Relativity (15 lectures)

a. Foundations of relativity: postulates of relativity, GR units, space-time intervals, proper time; special Lorentz transformations in Minkowski space-time; four-vectors.
b. Review of tensor calculus in Euclidean space; tensor calculus in Riemannian space: generalized N-dimensional spaces, covariant and contravariant tensors; Riemann-Christoffel curvature tensor, Christoffel symbols, Einstein's tensor, geodesics; metric tensor, covariant differentiation, Bianchi Identities, Ricci tensor.

Module II: General Theory of Relativity (30 lectures)

a. Motion of a free particle in a gravitational field, equations of electrodynamics in the presence of a gravitational field; gravitational field equations – action for gravitational field, energy-momentum tensor, extremum principle, Einstein field equations, energy-momentum pseudotensor.
b. Field of gravitating bodies – Schwarzschild solution, Birkhoff 's theorem, motion in a centrally symmetric gravitational field, precession of perihelion of Mercury, deflection of light, gravitational lensing; black holes – Schwarzschild black holes, Kruskal space, black hole thermodynamics; gravitational waves – plane waves, weak field approximation, gravitational radiation, transverse-traceless gauge.

Module III: Fundamentals of Cosmology (15 lectures)

a. Cosmological principle, cosmological time; spaces of constant curvature, Hubble's constant, Hubble's Law, red-shift of galaxies, big bang, age and density of universe; cosmological constant
Einstein space, de Sitter space, anti-de Sitter space; Robertson-Walker metric, introduction to Friedmann-Robertson-Walker (FRW) universe.
b. The observed universe and its dynamics, Friedmann-Lemaitre-Robertson-Walker (FLRW) metric, Friedmann equation and its solutions; composition of the universe – origin of matter, big bang nucleosynthesis, abundance of light elements, dark matter and dark energy, cosmological constant as dark energy, origin of matter-antimatter asymmetry, baryogenesis.

Suggested Readings

1. Introduction to Tensor Calculus, Relativity and Cosmology, D. F. Lawden, Dover Publications.
2. A First Course in General Relativity, B. Shutz, Cambridge University Press.
3. Introduction to Cosmology, B. Ryden, Cambridge University Press.
4. Gravitation, C. W. Misner, K. S. Thorne and J. A. Wheeler, Princeton University Press.
5. The Classical Theory of Fields, L. D. Landau and E. M. Lifshitz, Butterworth-Heinmann.
6. The Meaning of Relativity, A. Einstein, Oxford & IBH.
7. General Theory of Relativity, P. A. M. Dirac, Prentice-Hall of India.
8. Feynman Lectures on Gravitation, R. P. Feynman, F. B. Moronigo and W. G. Wagner, Addison-Wesley.
9. Gravitation and Cosmology, S. Weinberg, Wiley.
10. Introduction to Cosmology, J. V. Narliker, Cambridge University Press.
11. Modern Cosmology, S. Dodelson, Academic Press.
12. Physical Foundations of Cosmology, V. Mukhanov, Cambridge University Press.
13. Fundamentals of Special and General Relativity, K. D. Krori, PHI.

PSAR0045: ASTROPHYSICS

(4-0-0)

COURSE OUTCOMES

CO 1: Define and spell out fundamental concepts of Astronomy. (Remembering)
CO 2: Outline the various parameters describing the behaviour of stars and their evolution. (Understanding)
CO 3: Classify the various types of interstellar media. (Analysing)
CO 4: Explain the physical processes underlying the energy generation in stars. (Understanding)
CO 5: Apply astrophysical models to various observational scenarios. (Applying)

Module I: Fundamentals of Astronomy (12 lectures)

Astronomy fundamentals: celestial coordinate systems, telescope and its operational principles and mounting, atmospheric extinctions, magnitude systems. Radiation mechanism, flux density and luminosity, specific intensity, (emission/absorption coefficients, source functions), basics of radiative transfer and radiative processes.

Module II: Stellar Parameters (18 lectures)

Magnitudes, motions and distances of stars: absolute stellar magnitude and distance modulus, bolometric and radiometric magnitudes, colour-index and luminosities of stars, stellar positions and motions, velocity dispersion, statistical and moving cluster parallax, extinction, stellar temperature, effective temperature, brightness temperature, color temperature, kinetic temperature, excitation temperature, ionization temperature, spectral classification of stars, utility of stellar spectrum, stellar atmospheres. Binaries, variable stars, clusters, open and globular clusters, compact objects, shape, size and contents of our galaxy, normal and active galaxies.

Module III: Interstellar Medium (10 lectures)

Neutral and ionized gas, gaseous nebulae, HII regions, supernova remnants, photo-dissociation regions, different phases of the interstellar medium: cold neutral medium, warm neutral and ionized medium, hot medium, diffuse clouds, dense clouds.

Module IV: Stellar Physics (20 lectures)

Introduction to stars: HR diagram, a discussion on the variety of stellar phenomena, stellar structure, stellar opacities, stellar polytropes, energy generation in stars: calculation of thermonuclear reaction rates for non-resonant and beta-decay reactions, various reaction chains: pp-I, II, III, CNO, He-burning, C-burning, Si-burning, stellar degeneracy and equations of state: stellar degeneracy, Chandrasekhar mass, EoS of matter at near-nuclear and nuclear densities, final stages of stellar evolution: supernovae and neutron stars.

Suggested Readings

1. An Introduction to Astronomy and Astrophysics, P. Jain, CRC Press.
2. An Introduction to Astrophysics, B. Basu, PHI Learning Pvt. Ltd.
3. Astrophysics: Stars and Galaxies, K. D. Abhayankar, Universities Press.
4. Introduction to Stellar Astrophysics, Erika Böhm-Vitense, Cambridge University Press.
5. Gravity: Introduction to Einstein's General Relativity, J. B. Hartle, Pearson Education.
6. Physical Cosmology, P. J. E. Peebles, Princeton University Press.

Mapping of COs to Syllabus

PSPM0046: PLASMA PHYSICS II

(4-0-0)

COURSE OUTCOMES

CO 1: Understand fluid and kinetic model of plasma and their uses in the study of plasma. (Understanding)
CO 2: Explain the theory of various kinds of waves existing in plasma. (Understanding)
CO 3: Explain the phenomenon of diffusion in plasma and its consequences. (Analysis)
CO 4: Explain some basic instabilities and non linear phenomena in plasma. (Remembering)
CO 5: Understand the principles and challenges involved in energy production by fusion. (Analysis)

Module I: Plasma as fluids and Plasma Kinetic Theory (20 lectures)

Introduction to fluid model; equation of motion; continuity equation; fluids drifts perpendicular to B; fluids drifts parallel to B;

the plasma approximation; Introduction to kinetic theory; equations of kinetic theory; derivation of the fluid equation; plasma oscillation; Landau damping: meaning and physical derivation.

Module II: Waves in Plasma (10 lectures)
Representation of waves; group velocity; plasma oscillation; electron plasma waves; sound waves;ion waves; validity of plasma approximation; ion acoustic waves; Alfven waves.

Module III: Diffusion and Resistivity (10 lectures)
Diffusion and mobility; plasma decay by diffusion; steady state solution; recombination; diffusion across a magnetic field;the single MHD diffusion equation; solutions of the diffusion equation.

Module IV: Instability and Non-linear Effects (10 lectures)
Hydro-magnetic equilibrium; diffusion of magnetic field into a plasma; classifications of instability; two stream instability; plasma sheaths; ion acoustic shock waves; the ponderomotive force; parametric instabilities; plasma echoes; nonlinear Landau Damping.

Module V: Controlled Fusion (10 lectures)
Controlled fusion and problems; magnetic confinement: toruses, mirrors, pinches; laser fusion;plasma heating; fusion technology; tokamaks; ITER.

Suggested Readings
1. Introduction to Plasma Physics and Controlled Fusion, F. F. Chen, Plenum.
2. Fundamentals of plasma physics, J. A. Bittencourt, Springer.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V
CO 1	H	L	L		
CO 2		H			
CO 3			H		
CO 4				H	
CO 5					H

PSER0047: ELECTRONICS III
(4-0-0)

COURSE OUTCOMES
CO 1: Illustrate advanced topics of digital electronics. (Understanding)
CO 2: Explain microprocessor, microcontroller and assembly language. (Understanding)
CO 3: Apply the knowledge in advanced digital structures. (Applying)
CO 4: Understand digital circuit design (Application)
CO 5: Analyse the working of processor for execution of computer program (Analysing)

Module I: (15 lectures)
a. Number system: representation of signed integers, binary arithmetic on signed and unsigned integers and detection of overflow and underflow, weighted binary Codes: BCD, 2421, non- weighted codes: excess-3 codes, gray codes, error detecting codes, error correcting codes, alphanumeric codes: ASCII code, EBCDIC codes.
b. Boolean algebra and logic gates: rules (postulates and basic theorems) of Boolean algebra, dual and complement ofa Boolean expression, sum of products and product of sums forms. canonical forms. Conversion between different forms, conversion between Boolean expression and truth table; implementing logic expressions with logic gates (logic circuits).
c. Digital logic families: designing of basic logic gates with diode and transistor; elementary idea of DTL, TTL, RTL, ECL, I2L logic family and characteristics.

Module II: (15 lectures)
a. Combinational circuit: Simplification of Boolean expressions using algebraic method, Karnaugh map method and Quine-McCluskey method, Don't Care conditions. Multiplexer, demultiplexer, encoder, decoder, half-adder, hull- adder, magnitude comparator, parity checkers: basic concepts, design of parity checkers, parity generation, code converters, binary –to- gray and gray-to-binary Code converter; concept of magnitude comparator.
b. Sequential circuit: simple R-S flip-flop or Latch, clocked R-S Flip-flop, D flip-flop. J-K flip-flop, T flip-flop, master-slave flip-flop, J-K Master-Slave flip-flop. Asynchronous preset and clear, edge triggering and level triggering. Registers: shift registers, parallel/serial in, parallel/serial out. Buffer counter design: different types of counters like asynchronous and synchronous, up and down, ring, Johnson etc. counter design using state diagram, state table and state equation.

c. Semiconductor memory: classification of memories, main memory and secondary memory, sequential access memory, static and dynamic memory, volatile and nonvolatile memory, concept of ROM, PROM, EPROM, RAM, DRAM, SDRAM, PSRAM, memory decoding.

Module III: (30 lectures)

a. History and evolution of microprocessor; introduction to CPU: components of CPU, block diagram, buses-data, control and address; ALU, control unit; main memory and secondary memory; I/O devices; memory addressing- memory mapped I/O and I/O mapped I/O; address decoding; memory and I/O interfacing.
b. Introduction to 8085; block diagram, registers, use of register pairs, PSW, accumulator; addressing modes; Instruction set of 8085: data transfer, arithmetic, logic, branch and machine control instructions; instruction cycle: fetch, decode and execute. Delay and counter; stack and its application; interrupt and its application; assembly level language programming of 8085.
c. Interfacing: Memory interfacing; I/O interfacing; interfacing small devices like keyboard,7-segment display, relay, event counter etc.; idea of PPIs like 8251, 8255, 8257 and 8279 (block diagram and function only); serial communication standard (RS-232C).
d. Example of 16-bit processors (introduction to 8086); microcontroller (block diagram and application of 8051).

Suggested Readings

a. Digital Logic and computer Design, M. Mano, PHI.
b. Modern Digital Electronics, R. P. Jain, TMGH.
c. Digital Fundamentals, Jain and Floyd, Pearson Education.
d. Digital Electronics, Malvino and Leach, Pearson Education.
e. Digital Computer Electronics, Malvino, TMGH.
f. Digital Design, Principles and Practices, Morris Mano, Pearson Education.
g. Digital Circuits and Design, S. Salivahanan and S. Arivazhagan, Vikash Publishing House Pvt. Ltd.
h. Digital Techniques, P. H. Talukdar, N. L. Publications.
i. Fundamentals of Digital Circuits, Anand Kumar, PHI.
j. Introduction to Microprocessors, Gaonkar, New age Publication.
k. Fundamentals of Microprocessor, B. Ram, Dhanpat Rai.
l. 8085 Microprocessor Programming and Interfacing, N. K. Srinath, PHI.
m. Microprocessor Based Design, Slater, PHI.
n. Microprocessors, Gilmore, McGraw Hill Publication.

Mapping of COs to Syllabus

PSNY0048: NANOPHYSICS III

(4-0-0)

COURSE OUTCOMES

CO 1: Explain properties of nanomaterials in detail. (Understanding)
CO 2: Explain quantum effects on nanostructures. (Understanding)
CO 3: Give outline nanomechanics. (Understanding)
CO 4: Take part in higher studies and research in nanophysics. (Analysing)

Module I: (15 lectures)

Absorption and scattering of EM waves from nanoparticles based on bulk properties. Electronic phenomena in nanostructures: electronic structures and effective mass theory for bulk Si , Ge, GaAs; excitons. Boltzmann electron transport in bulk. Electron energy states in quantum confined systems, semiconductor heterojunctions.

Module II: (20 lectures)

a. X-ray photoelectron spectroscopy (XPS): fundamentals: photoelectric effect, binding energy and chemical shift,ultraviolet photoelectron spectroscopy (UPS): information.
b. Extracted: band structure, occupied band states of clean solid surfaces as well as bonding orbital states of adsorbed molecules; fundamentals of Fourier transform infrared radiation (FTIR) and Raman spectroscopy.
c. 2-DEG systems, quantum wires, quantum dots. Transmission in nanostructures: tunneling in planar barrier, resonant

tunnel diodes. Ballistic transport, Landauer formula, electron transport in quantum wave-guide structures.

Module III: (15 lectures)
Single electron phenomena: electronic states in quantum dots, without and with magnetic fields, single electron tunneling and Coulomb blockade, single electron tunneling, elastic, inelastic, spin polarized tunneling, surface density of states for different dimensions, role of tip geometry, lithography and atomic manipulation; single electron transistor. Spin-orbit interaction and spin effects.

Module IV: (10 lectures)
Nanomechanics: introduction to NEMS, CNT oscillation, nanoscale electrometer, bolometer nanophotonics; science of Graphene.

Suggested Readings
1. Transport in Nano-Structures, D. K. Ferry and S. M. Goodnick, Cambridge University Press.
2. Electronic Transport in Mesoscopic Systems, S. Datta, Cambridge University Press.

CO 1	H		L	L
CO 2		H		
CO 3				H
CO 4			H	

PSEL0049: ELECTRONICS I
(4-0-0)

COURSE OUTCOMES
CO 1: Explain about passive components and DC networks, digital electronics (Understanding)
CO 2: Understanding physics of electronic devices and circuits (Understanding)
CO 3: Explain electronic communication. (Understanding)
CO 4: Experiment with electronic devices and circuits. (Applying)

Module I: Passive Components and DC Networks (15 lectures)
a. Passive components: resistors, capacitors and inductors-types, characteristics and applications;
b. DC networks: voltage and current sources, dependent sources, KCL, KVL, current division rule, voltage division rule, Y-Delta conversion, mesh analysis, node analysis, Thevenin's theorem, Norton's theorem, superposition theorem, maximum power transform theorem.

Module II: Electronic Devices and Circuits (20 lectures)
a. Semiconductor concepts: semiconductor material, intrinsic semiconductor, extrinsic semiconductor, energy levels, concept of hole and electron, mobility, conductivity, n-type and p-type, majority and minority carriers, mechanism of current flow.
b. Semiconductor diode: PN junction and various biasing conditions, V-I characteristics, diode equation, diode resistance, equivalent circuit, transition capacitance and diffusion capacitance; rectifier circuit with filter, clipper, clamper, voltage multiplier.
c. Special purpose diodes: Zener diodes, LED, 7 segment display, photo diode, photo transistor, opto coupler, Schottky diode, varactor diode, tunnel diode.
d. Transistor - BJT: construction, npn, pnp, operation and configuration, V-I characteristics, introduction to FET- JFET, MOSFET.
e. OP-AMP: block diagram, ideal op-amp equivalent circuit, ideal characteristics, transfer curve, open loop and closed loop configurations, op-amp as an inverting amplifier, non-inverting amplifier, adder, subtractor.

Module III: Digital Circuits (12 lectures)
Number systems, Boolean algebra, De-Morgan's law, AND, OR, NOT, Universal gates, combinational logic circuits.

Module IV: Communication (13 lectures)
a. Introduction: communication process, source of information, communication channels, modulation types andneed, block diagram of communication systems, AM, FM, PAM, PWM, PPM.
b. Introduction to digital modulation: ASK, PSK, FSK.

Suggested Readings
1. Electronic Devices and Circuits, S. Salivahanan, McGraw Hill Publications.
2. Communication System, R. D. Singh and S. D. Sapre, TMGH.

3. Networks and Systems, D. Roy Choudhury, New Age International.
4. Electronic Devices and Circuits, David A. Bell, Oxford University Press.
5. Digital electronics, Moris Mano, EEE.

CO 4	H	H	M	

PSNP0050: NANOPHYSICS I

(4-0-0)

COURSE OUTCOMES

CO 1: Explain basic concepts of nanophysics. (Remembering)
CO 2: Explain the working principle of various characterization techniques. (Understanding)
CO 3: Explain various fabrication techniques. (Understanding)
CO 4: Analyse the relation between nanoparticles size and their properties. (Analysing)
CO 5: Understand various natural nanomaterials and bio-molecular nanoscience. (Understanding)

Module I: Introduction (20 lectures)

Distinction between nanoscience and nanotechnology, requisite definitions; historical perspectives; nanomaterials: overview, definitions, and examples; structurally confined materials: nanoparticles, islands, nanowires, thin films; metal nanoparticles: fundamentals and applications; self- assembled monolayers, semiconductor quantum dots: fundamentals and applications; ceramic nanomaterials: fundamentals and applications; carbon nanomaterials(Fullerenes and carbon nanotubes and nanofibers): fundamentals and applications; magnetic nanoparticles: fundamentals and applications; bionanomaterials, computational nanomaterials, composite nanomaterials and applications.

Module II: Characterization tools (10 lectures)

Electron microscopy, atomic force microscopes, X-ray spectroscopy, surface enhanced Raman spectroscopy, lithography, computer modelling and simulation.

Module III: General Fabrication Methods (12 lectures)

Background; top down fabrication: mechanical methods, thermal methods, high energy methods, chemical fabrication methods, lithographic methods; bottom up fabrication: gaseous phase methods, liquid phase methods, template synthesis

Module IV: Basic Properties of Nanomaterials (10 lectures)

Importance of surface: natural, inorganic and the nano perspectives; particle shape and surface; surface: geometricsurface to volume ratio, specific surface area; atomic structure: crystal systems.

Module V: Natural and Bio-nanoscience (8 lectures)

Natural nanomaterials: inorganic natural nanomaterials, nanomaterials from the animal kingdom, nanomaterials derived from cell walls, nanomaterials in insects; Introduction to biomolecular nanoscience: history, biomolecular nanoscience, nano perspective

Suggested Readings

1. Introduction to nanoscience, G. L. Hornyak, J. Dutta and H. F. Tibbals, A. Rao, CRC Press.
2. Nano: The Essentials, T. Pradeep, McGraw Hill.
3. Nanotechnology and Global Sustainability, D. Maclurcan and N. Radywyl (Eds.), CRC Press.
4. Environmental Chemistry for a Sustainable World, Vol.2, E. Lichtfouse, J. Shwarzbauer and D. Robert, Springer Verlag.
5. Introduction to nanotechnology, G. L. Hornyak, J. Dutta, H. F. Tibbals and A. Rao, CRC Press.
6. Fundamentals of Nanoelectronics, G. W. Hanson, Pearson.

CO 5					H

PSRM0051: RESEARCH METHODOLOGY
(3-0-0)

COURSE OUTCOMES
CO 1: Understand the meaning, significance and ethics of research. (Understanding)
CO 2: Conduct literature survey. (Understanding)
CO 3: Present and defend their project accurately, both orally and written. (Applying)
CO 4: Present and defend their research results accurately, both orally and written at specialized levels. (Creating)
CO 5: Appreciate statistics as a tool for designing research, analysing data and drawing validconclusions therefrom. (Analysing)

Module I: Introduction to Research (6 lectures)
Definition of research; objectives of research, importance of research, motivation in research, research methods and research methodology, importance of research methodology; types of research: Basic Research and Applied Research, theoretical; simulations and experimental research. Various stages of research; ethics in scientific research: ethical values of science, ethics of researcher, personal and internal code of conduct, conduct guidelines, ethical standards of publication, scientific fraud and malpractice; plagiarism.

Module II: Literature Survey (6 lectures)
Functions of the literature review in research, conducting a literature survey, sources of information, use of internet, technical and scientific documents, characteristics and quality indices of journals, developing theoretical and conceptual frameworks, writing literature review.

Module III: Research Documentation and Presentation (8 lectures)
Structure of scientific documents; types of scientific reports: research papers, patents, dissertation, posters, slide presentation; skills for academic writing, online communication technologies, preparation of research projects, monitoring and evaluation processes; writing dissertation using LaTeX documents and beamers; citing references and bibliography, thesis defense.

Module IV: Statistics in Research (10 lectures)
Discrete distributions – binomial, geometric, Poisson; continuous distributions – Gaussian, log-normal, gamma, chi- squared; central limit theorem; populations and samples, sample statistics – averages, variance, standard deviation, moments, covariance and correlation; standard errors and confidence limits; Bayesian inference; hypothesis testing – Neyman-Pearson test, Student's t-test, Fisher's F-test; goodness-of-fit.

Suggested Readings
1. Research Methodology: A Step-by-Step Guide for Beginners, Ranjit Kumar, Sage Publications Ltd.
2. Research Methodology: Methods and Techniques, C. R. Kothari, New Age International (P) Ltd.
3. Methodology of Educational Research, Lokesh Koul, Vikas Publishing.
4. The A-Z of PhD Trajectory, Eva O. L. Lantsoght, Springer.
5. Writing for Publication, Mary RenckJalongo and Olivia N. Saracho, Springer.
6. Mathematical Methods for Physicists: A Comprehensive Guide, George B. Arfken, Hans J. Weber and Frank E. Harris,Associated Press.
7. Bayesian Statistics for Beginners: A Step-by-Step Approach, Therese M. Donovan and Ruth M. Mickey, Oxford UniversityPress.
8. Data Analysis: A Bayesian Tutorial, D. S. Sivia and J. Skilling, Oxford University Press.
9. Mathematical Methods for Physics and Engineering, K. F. Riley, M. P. Hobson and S. J. Bence, Cambridge University Press.
10. Writing for Publication, Mary RenckJalongo and Olivia N. Saracho, Springer.

CO 5				H

PSHP0052: HIGH ENERGY PHYSICS I
(4-0-0)

COURSE OUTCOMES
CO 1: Summarize the mathematical skills like group theory, tensors, kinematics, etc. (Understanding)
CO 2: Explain different groups like Lorentz group, Lie group and their algebra. (Understanding)
CO 3: Explain scalar field quantisation. (Analysing)
CO 4: Explain quantum field theory and hence identify quantum electrodynamics. (Applying)

Module I: Preliminaries (8 lectures)
Tensors,covariant and contravariant tensors, Lorentz covariance and four vector notation; Klein-Gordon equation; Dirac equation and its covariant form.

Module II: Group theory and Tensors (10 lectures)
Introduction to group theory, Lie group and Lie Algebra, representation theory, Representations of both Lorentz and Poincaré groups, Irreducible representations of the Lorentz group; Young tableau.

Module IV: Quantum field theory (22 lectures)
Concepts of fields and quantisation, Lagrangian field theory, Hamiltonian field theory, Noether's Theorem and Conserved Currents, canonical quantization of freefields (Scalar, complex, EM and Dirac fields), conservation ofenergy, momentum and charge of the field, The concept of vacuum and Fock space in field theory; C, P, T transformation of scalar and E. M. fields.

Module V: Quantum Electrodynamics (20 lectures)
Concepts of Causality, propagator and Feynman propagator, Green's function, Interaction picture and time evolution operator, S-matrix, path integral formalism, Covariant perturbation theory, Feynman rules in momentum space, Wick's theorem, reduction of time-ordered products, calculation of second order process, Compton scattering, Klein-Nishima formula, Mott scattering, Basics of renormalization.

Suggested Readings
1. Introduction of Elementary Particle, D. Griffiths, Wiley-vch Verlag Gmbh.
2. Quarks and Leptons: An Introductory Course in Modern Particle Physics, F. Halzen and A. D. Martin, Wiley India.
3. Quantum Field Theory, L. H. Ryder, Cambridge University Press.
4. Introduction to High Energy Physics, D. H. Perkins, Addison-Wesley.
5. Particle Physics, Brian R. Martin and Graham Shaw, Wiley.
6. An introduction to Quantum Field Theory, Michael E. Peskin and Daniel V. Schroeder, Westview Press Inc.

PSEP0053: HIGH ENERGY PHYSICS II
(4-0-0)

COURSE OUTCOMES
CO 1: Explain gauge theories. (Understanding)
CO 2: Familiarise with physics of spontaneous symmetry breaking and Higgs mechanism. (Analysing)
CO 3: Explain standard model and physics beyond standard model. (Understanding)
CO 4: Build the theory of neutrino physics. (Analysing)
CO 5: Recall group theory and learn how to apply it to gauge theory. (Applying)

Module I: Introduction (10 lectures)
Introduction to Gauge symmetries – global and local gauge transformations, abelian group U(1) (QED), Yang-Mills (Non-Abelian) groups – SU(2) (isospin), SU(3)C (QCD).

Module II: Spontaneous Symmetry Breaking (SSB) (12 lectures)
Ground state with spontaneous symmetry breaking, some examples; global symmetry breaking and Goldstone bosons, proof of Goldstone theorem, local symmetry breaking and Higgs mechanism for giving masses to vector bosons, examples U(1), SU(2).

Module III: Standard Model (SM) (12 lectures)
Standard model of electroweak unification, gauge bosons W^+, W^-, Z^0, charged weak current and neutral current, Higgs particle, experimental status.

Module IV: Beyond Standard Model (12 lectures)
a. Introduction to Grand Unified Theories (GUTs) – SU(5) and SO(10), and proton decay predictions;
b. Minimal Supersymmetric Standard Model (MSSM) and its extension, its predictions;
c. Introduction to String Theories and Planck scale physics.

Module V: Neutrino Physics (14 lectures)
Solar and atmospheric neutrino puzzles, theory of neutrino oscillations in vacuum and medium (MSW mechanism), neutrino masses and leptonic mixings, survey of various neutrino oscillation experiments, seesaw mechanism for small neutrino masses.

Suggested Readings
1. Gauge Theory of elementary particle physics, Ta-Pei Cheng and Ling-Fong Li, Oxford University Press.
2. Quarks and leptons: An introductory Course in Modern Particle Physics, Francis Halzen and Alan D. Martin,John Wiley & Sons.
3. Introduction to Elementary Particles, David Griffiths, John Wiley & Sons.
4. A First Course in String theory, Barton Zwiebach, Cambridge Univ. Press.
5. Grand Unified theories, Graham G Ross, Oxford University Press.
6. Massive Neutrinos in Physics and Astrophysics, R. N. Mohapatra and P. B. Pal, World Scientific, Singapore.

PSNP0054: NUCLEAR AND PARTICLE PHYSICS
(4-0-0)

COURSE OUTCOMES
CO 1: Explain the properties of nucleus in details. (Understanding)
CO 2: Describe Shell model and learn to calculate the spin and parity of nuclear ground state. (Analysing)
CO 3: Knowledge of nuclear reaction and learn the selection rules for nuclear transitions. (Analysing)
CO 4: Classify the elementary particles and explain the quark model. (Understanding)

Module I: General Properties of Nuclei (6 lectures)
Nuclear size, shape and charge distribution, spin, parity and isospin of nucleon and nuclei. Determination of nuclear size and charge density, concept of magnetic dipole moment and electric quadrupole moment, Binding energy.

Module II: Nuclear Two Body Problem and Nuclear Force (12 lectures)
Properties of deuteron bound state and low energy n-p scattering in terms of scattering length and effective range, spin dependence, charge independence of nucleon force. Non-central part of nucleon force, exchange forces, Yukawa theory of nuclear force, magnetic moment and electric quadrupole moment of deuteron.

Module III: Nuclear Models (10 lectures)
Semiempirical mass formula, liquid drop model, Failure of Liquid drop model, Evidence of shell structure, magic numbers, effective single particle potentials (square well, harmonic oscillator, Wood-Saxon with spin orbit interaction), extreme single particle model and its successes and failures in predicting ground state spin, parity, Nordheim rule, rotational and vibrational model.

Module IV: Nuclear Reactions (12 lectures)
Kinematics governing nuclear reactions, Q-value, cross section of nuclear reactions, neutron reactions at low energies, Coulomb effects in nuclear reactions, neutron reactions, compound nucleus hypothesis, Breit Wigner one level formula for resonance reactions. Elements of direct reactions (qualitative), energies of fission and fusion, neutron induced fission, chain reaction.

Module V: Nuclear Decay (8 lectures)
Fermi theory of decay, selection rules, non-conservative of parity. Gamma decay, electric and magnetic multipole transitions,

selection rules, examples of beta and gamma decay.

Module VI: Particle Physics (12 lectures)
Classification of fundamental forces, Elementary particles and their quantum numbers (charge, spin, parity, isospin, strangeness, etc.), Symmetries and conservation laws, SU(2) and SU(3), CPT theorem, CP violation in K decay, Gell-Mann Nishijima relation, quark model, baryons and mesons, coloured quarks and gluons, Relativistic kinematics.

Suggested Readings
1. Atomic and Nuclear Physics, Vol-II, S. N. Ghosal, S. Chand and company Ltd.
2. Introductory Nuclear Physics, S. M. Wong, Prentice Hall Inc.
3. Concepts of Nuclear Physics, B. L. Cohen, Tata McGraw Hill Publishing Company Ltd.
4. The Atomic Nucleus, R. D. Evans, Tata McGraw Hill Publishing Company Ltd.
5. Nuclear Radiation Detectors, S. S. Kapoor and V. S. Ramamurthy, Wiley Eastern Ltd.
6. An introduction to nuclear Physics, W. N. Cottingham and D. A. Greenwood, Cambridge University Press.

CO 4						H

PSMP0055: MATHEMATICAL PHYSICS-I

(3-1-0)

COURSE OUTCOMES
CO 1: Explain the concepts and applications of the function of complex variables. (Remembering)
CO 2: Apply the advanced concepts of vector spaces in solving physical problems. (Applying)
CO 3: Utilize the concepts and applications of some special functions. (Applying)
CO 4: Illustrate some of the basic concepts of residue theorem. (Understanding)
CO 5: Analyse physical scenarios using the concepts of vector space. (Analysing)

Module I: (16 lectures)
Functions of complex variable: Analytic functions; derivatives of an analytic function. Series of analytic functions: Taylor series, Laurent series; zeros and isolated singular points of analytic functions; the calculus of residues: theorem of residues; evaluation of integrals; Jordan's lemma; Principal value of an integral; multi-valued functions; Riemann surfaces; evaluation of an integral involving a multi- valued function; analytic continuation; dispersion relations.

Module II: (16 lectures)
Review of vector analysis; definition of vector spaces; finite dimensional vector spaces: linear independence, basis and dimensionality, inner product of vectors and norm of vector, Schemidt's orthogonalization method, Schwarz's and Bessel's inequalities; matrices: orthogonal, Hermitian, unitary and normal matrices; linear operators: matrix representation of linear operators; linear transformation: similarity transformation, orthogonal and unitary transformations; eigenvectors and eigenvalues, diagonalization of matrices (or operators); infinite dimensional vector space: Hilbert space, Fock space.

Module III: (20 lectures)
Special functions: associated Legendre differential equation and functions; generating functions; spherical harmonics; orthonormality. Bessel's equation; Bessel function; Spherical Bessel function, Neumann and Hankel functions; expansion of a plane wave into partial waves. Laguerre and associated Laguerre differential equation and functions; generating functions; recurrence relations; orthonormality. Hypergeometric and confluent hypergeometric functions.

Module IV: (8 lectures)
Integral transforms: general properties of Laplace transforms; inverse Laplace transform; application of Laplace transforms; convolution theorem; solution of differential equations using Laplace transform.

Suggested Readings
1. Mathematical Methods for Physicists, G. Arfken, H. Weber and F. Harris, Elsevier.
2. Mathematical Methods of Physics, J. Mathews and R. L. Walker, The Benjamin-Cumminngs Publishing Company.
3. Mathematics for Physicists, P. Dennery and A. Krzywicki, Harper and Row.
4. A.W.Joshi, Matrices and Tensors in Physics, 3rd Edition, New Age Int. (2005)
5. S. Andrilli & D.Hecker, Elementary Linear Algebra, Academic Press (2006).
6. J. Brown and R.V.Churchill, Complex Variables and Applications, McGraw-Hill, 8th Edition (2008)

PSMP0056: MATHEMATICAL PHYSICS-II

(3-1-0)

COURSE OUTCOMES

CO 1: Explain the concepts and applications of the special function (Applying)

CO 2: Illustrate some of the basic concepts of tensor analysis and its application to different brances of physics. (Understanding, Applying)

CO 3: Analyse Illustrate some of the basic concepts of group theory and its application to different brances of physics. (Understanding, Applying)

Module I: (20 lectures)

Special functions-II

Power series solution, Frobenius method, Sturm-Liouville theory and boundary value problems, boundary value problems on Laplace equation, Poisson equation and diffusion equation, Green's functions and method involving Green's function and its applications; method of separation of variables for different wave equations in Cartesian and curvilinear coordinates involving special functions like Legendre, Hermite, Laguerre and Bessel functions

Module II: (20 lectures)

Tensor Calculus

Manifolds and coordinate systems. Transformation of coordinates: Galilean and Lorentz transformations. Tangent vectors and gradients, inner and outer products, contraction, symmetric and antisymmetric tensors, metric tensor, covariant and contravariant derivatives. Metric tensor in different curved spaces. Four vectors and physical examples from special relativity and electrodynamics. Covariant derivatives and parallel transport. Geodesics. Idea of curvature. Calculation of Laplacian in curved spaces.

Module III: (20 lectures)

Group Theory

Group axioms, permutation groups (S2 and S3) and symmetry operations of equilateral triangle, multiplication table, subgroup, classes and characters, finite groups (Zn), cosets, factor group, normal subgroup, point symmetry group, direct and semi direct product of groups, homomorphism and isomorphism, direct and semi-direct products, block diagonalisation - reducible and irreducible representation, group representation by matrix [unitary representation and conservation laws], Lie groups and algebras [generators, SO(2), SO(3) and SU(2)]; unitary group, special unitary group, Lorentz group, rotation group, direct product, Young Tableau, Dynkin diagrams.

Suggested Readings

1. Mathematical Methods for Physicists, G. Arfken, H. Weber and F. Harris, Elsevier.
2. Mathematical Methods of Physics, J. Mathews and R. L. Walker, The Benjamin-Cumminngs Publishing Company.
3. Mathematics for Physicists, P. Dennery and A. Krzywicki, Harper and Row.
4. A.W.Joshi, Matrices and Tensors in Physics, 3rd Edition, New Age Int. (2005)
5. M. Hamermesh, Group Theory and Its Applications to Physical Problems, Dover (1989)
6. D.B. Lichtenberg, Unitary symmetry and elementary particles, second edition, Academic Press (1978).

PSPS0200: PHYSICS AND SERVICE LEARNING

(2-0-0)

COURSE OUTCOMES

CO 1: Explain the meaning of service learning and active learning. (Understanding)

CO 2: Illustrate engaged teaching and engaged research. (Understanding)
CO 3: Organise service learning. (Applying)
CO 4: Illustrate CBPR. (Understanding)
CO 5: Find the regulations of educational statutory bodies on social responsibility. (Remembering)

Module I: (6 lectures)
Understanding social responsibility of educational institutes; meaning of community university engagement (CUE), engaged teaching, engaged research. Community Based Participatory Research (CBPR). Statutory bodies of higher educational institutions and social responsibility.

Module II: (9 lectures)
Active learning. Service learning; principles of service learning; classification of service learning models; difference between service learning and other community experiences; historical context of university community partnership;physics students and service learning. Service Learning for a postgraduate physics student and its scope in research.

Module III: (15 lectures)
Conceptualisation of the idea of service learning through any two of the following practical implementations: (i) conducting awareness programmes on scientific temper for nearby communities, (ii) organising demonstrations of scientific experiments for school children to eradicate the fear of pursuing higher studies in science, (iii) surveying the need of the communities and find out various possibilities of providing the solutions from physics point of view, (iv) providing consultancy to school students for various inter school science competitions, (v) providing video lectures and/or demonstrations for school students. (vi) Radiation measurement activity and awareness campaign by students.

Suggested Readings
1. Service-Learning Essentials: Questions, Answers, and Lessons Learned, Barbara Jacoby, Jossey-bass.
2. Where's the Learning in Service-Learning?,Janet Eyler and Dwight E. Giles Jr., Jossey-bass.

LABORATORY COURSES

PSPL6003: PHYSICS LABORATORY II

(0-0-4)

COURSE OUTCOMES

CO 1: Explain the characteristics of SCR. (Understanding)
CO 2: Find out resistivity of a semiconductor. (Application)
CO 3: Determine of difference in wavelengths of Na using Fabry-Perot interferometer. (Application)
CO 4: Verify the Beer-Lambert law using UV visible spectrometer. (Analysis)
CO 5: Use nuclear radiation detectors. (Application)
CO 6: Understand phonon dispersion using simulator. (Understanding)
CO 7: Have some fundamental understanding of plasma experiments. (Understanding)

At least 10 experiments should be performed from the following:

1. To study the characteristic of SCR using the breadboard.
2. To study resistivity of a semiconductor by probe method.
3. Determination of difference in wavelengths of Na using Fabry-Perot interferometer.
4. To verify the Beer-Lambert law using UV visible spectrometer.
5. Verification of inverse square law for gamma ray using GM counter.
6. To study attenuation of beta rays using GM counter.
7. To determine the activity of a gamma emitter.
8. To study gamma ray spectrum of Cs-137 source and determine the resolution of agamma-ray spectrometer.
9. To calibrate the scintillation spectrometer and determine the energy of gamma raysfrom an unknown source.
10. To study attenuation of gamma-rays from Cs-137 source by using different absorbers.
11. To study the decay curve for half-life components of irradiated 115In by a neutron source.
12. To study phonon dispersion of a monatomic chain of atoms using electronicanalogue of the chain.
13. Experimental verification of Paschen law in a glow discharge system.
14. To find the floating potential of a plasma using the Langmuir probe.

PSPL6009: PHYSICS LABORATORY I

(0-0-4)

COURSE OUTCOMES

CO 1: Demonstrate the validity of various network theorems. (Understanding)
CO 2: Explain the working of various circuits containing semiconductor devices. (Understanding)
CO 3: Construct various rectifier circuits. (Applying)
CO 4: Build various filter circuits. (Applying)
CO 5: Illustrate the working of various transistor circuits. (Understanding)
CO 6: Explain the behaviour of Op-Amp circuits. (Understanding)
CO 7: Demonstrate the working of logic circuits. (Understanding)
CO 8: Explain the transmission of electromagnetic waves through optical fibers. (Understanding)

At least 10 experiments should be performed from the following:

1. Verification of KCL and KVL using discrete components.
2. Verification of Thevenin's theorem.
3. VI characteristics of PN junction diode.
4. Series voltage regulation using zener diode and transistor.
5. Design and study the clipper circuit.
6. Design and study the clamper circuit.

7. VI characteristics of Zener diode.
8. Design of Half wave and Full wave rectifier with and without filter.
9. RC low pass and high pass filter realization.
10. Static Characteristics of a Bipolar Junction Transistor (CE Mode).
11. Static Characteristics of a Bipolar Junction Transistor (CB Mode).
12. Design of voltage multiplier: voltage doubler / quadrupler.
13. Design BJT as a switch.
14. Op-Amp as Inverting and Non Inverting amplifier.
15. Realization of basic gates using discrete components.
16. To measure attenuation and bending losses of an optical fibre.
17. To study and verify the truth table of logic gates.
18. To realize half/full adder and half/full subtractor.

PSCN6010: COMPUTER ORIENTED NUMERICAL METHODS LAB

(0-0-8)

COURSE OUTCOMES

CO 1: Find out inverse, eigenvalues and eigenvectors of a matrix. (Application)
CO 2: Perform numerical integration and differentiation and solution of differential equations. (Application)
CO 3: Understand special functions and orbitals. (Understanding)
CO 4: Numerical solutions of algebraic equations. (Application)
CO 5: Numerical solutions of simultaneous equations. (Application)
CO 6: Understand chaos. (Understanding)
CO 7: Apply Monte-Carlo simulations. (Application)
CO 8: Study LCR circuits. (Application)
CO 9: Model data. (Analysing)
CO 10: Compute Fourier transform. (Application)

At least 10 experiments should be performed from the following:

(All experiments are to be done using the Fortran, C Language)

1. Basic operations using a matrix A.
   a. To find the transpose of A.
   b. To find the inverse of A.
   c. To verify the accuracy of AA-1= I.
   d. To diagonalise a given matrix.
   e. To find the eigenvalues and eigenvectors.
2. Numerical differentiation.
   a. To find the derivative of a given function f(x) using the standard formula where h is the step size.
   b. To determine the second derivative of a given function f(x) using the standard formula.
   c. Plot the case (a) as a function of x.
   d. Plot the case (b) as a function of x.
   e. Compare the above cases (a) and (b) with the results obtained analytically in specific cases.
3. Numerical method of solving Schrödinger equation.
   a. Obtain numerical solution for the time independent Schrodinger equation in one dimension for a given potential using Runge-Kutta Method or Fox Godwin method.
   b. To plot the wave function obtained from above versus x.

c. Obtain numerical solution for the time independent Schrodinger equation in three dimension for a given potential using Runge-Kutta method or Fox Godwin Method.
d. To plot the wave function obtained from above versus r.
e. To evaluate the eigenvalues and eigenvectors for case (a).
f. To evaluate eigenvalues and eigenvectors for case (b).
g. To count the number of nodes of the function determined in (a) above and see if it is consistent with the theoretical expectation.
h. To determine the boundary value problems for cases (a) and (c).

4. Spherical harmonics.
   a. To compute the Legendre polynomials.
   b. To plot spherical harmonics as a function of polar angles.
   c. To compute the spherical Bessel function (regular and irregular).
   d. To plot the case (c).
5. Numerical integration.
   a. To integrate a given function numerically by Simpson's Rule.
   b. To compare the results obtained form (a) with those obtained analytically.
   c. To integrate a given function numerically by Trapezoidal rule.
   d. To compare the results obtained from (b) with those obtained analytically.
   e. To integrate a given function numerically by Gauss-Legendre integration.
   f. To compare the results obtained form (c) with those obtained analytically.
6. Solution of algebraic equations.
   a. Solve a given equation numerically using Newton Raphson method.
   b. Compare the result of (a) with those obtained numerically.
   c. To solve a given equation using bisection method.
   d. Comparative study of (a), (b) and (c).
7. Solution of simultaneous equations.
   a. Using Gauss-elimination and Gauss Jordan elimination method.
   b. Compare (a) with solutions obtained analytically or algebraically.
8. Logistic systems.
   To explore the regions of (a) stable fixed points (b) periodic and (c) chaotic solution.
9. Radioactivity.
   a. Use Monte-Carlo method to simulate radioactive decay.
   b. Write a program for a radioactive series, when the daughter is also radioactive and soon.
   c. Plot N (number of nuclei) Vs time t.
   d. From the slope calculate the activity at different times.
10. LCR circuits.
    a. To compute the charge and discharge of an RC circuit using DC source.
    b. To compute the charge and discharge of RC circuits using AC source.
    c. Analyse the energy in the RL circuit using the Runge-Kutta method.
    d. Study the energy dissipated in a series LCR circuit. Plot it versus time t.
11. Modelling of data.
    a. To compute for a given sample of data.
    b. To fit a given sample of data by least square method by a straight line.
    c. To fit by minimizing by straight line.
    d. To make a polynomial fit by least square method.
    e. To make a polynomial fit by minimizing.
12. Fourier transform special methods.
    a. To compute Fourier transform of discretely sampled data.
    b. To compute Fast Fourier transform of real functions and Sine and CosineTransformations.
    c. To compute Fourier transform of a given function in two or more dimensions.

PSPM6013: PLASMA PHYSICS LABORATORY

(0-0-4)

COURSE OUTCOMES

CO 1: Explain the breakdown mechanism of gasses. (Remembering)
CO 2: Understand the electrical properties of a gas discharge. (Understanding)
CO 3: Operate and conduct experiments in plasma devices. (Application)
CO 4: Collect and analyse data from plasma devices. (Analysing)
CO 5: Use plasma diagnostic tools. (Application)

At least 10 experiments should be performed from the following:

1. Experimental determination of minimum breakdown voltage in a glow discharge system.
2. To study the effect of variation in chamber pressure on different regions of a glow discharge.
3. To study the effect of variation in discharge voltage on different regions of a glow discharge.
4. To plot the I-V characteristics of a glow discharge plasma.
5. To find the variation in resistance of a glow discharge plasma with chamber pressure.
6. To find the variation in resistance of a glow discharge plasma with discharge voltage.
7. To find the variation in floating potential with discharge voltage of a plasma using Langmuir probe.
8. To find the variation in floating potential with chamber pressure of a plasma using Langmuir probe.
9. To find the plasma potential of a plasma using Langmuir.
10. To find the electron temperature of a plasma using the Langmuir probe.
11. To find the electron density of a plasma using the Langmuir probe.
12. Identification of different ions/atoms/molecules in plasma by optical emission spectroscopy(OES).
13. To find the plasma density by optical emission spectroscopy (OES) using Stark Broadening of hydrogen lines.
14. To find the plasma temperature by optical emission spectroscopy (OES) using line intensity ratio method.
15. To find the plasma temperature by optical emission spectroscopy (OES) using Boltzmann Plot method.

PSEL6014: ELECTRONICS LABORATORY

(0-0-4)

COURSE OUTCOMES

CO 1: Explain transistor operation. (Remembering)
CO 2: Understand amplifier design using transistor. (Understanding)
CO 3: Operational Amplifier and Timer applications. (Application)
CO 4: Analyse Logic Gates. (Analysis)
CO 5: Application of gates for Digital circuits. (Application)

At least 10 experiments should be performed from the following:

1. Design of amplifiers: Transistor amplifiers with and without feedback.
2. Design of Integrator and Differentiator using Op-amp.
3. Op-amp linear applications: adders, subtractors, comparator.
4. Op-amp based active filters.
5. 555 timer as monostable multivibrator.
6. 555 timer as astablemultivibrator.
7. 555 timer as bistablemultivibrator
8. To verify the truth table of MUX and DEMUX.

9. Realization of 2:4 decoder and 4:2 encoder design.
10. To verify the truth table of one bit and four bit comparators using logic Gates.
11. Truth table verification of Flip-Flops: (i) RS-Type, (ii) D- Type, (iii) T- Type, (iv) J-K Master Slave
12. To study shift register in all its modes i.e. SIPO/SISO, PISO/PIPO.

PSNY6015: NANOPHYSICS LABORATORY

(0-0-4)

COURSE OUTCOMES

CO 1: Calculations of molarity. (Remembering)
CO 2: Understanding hydrothermal synthesis. (Understanding)
CO 3: Understanding characterization techniques. (Understanding)
CO 4: Application of characterization techniques on synthesized material. (Application)
CO 5: Analysis of characterizing results. (Analysis)

At least 10 experiments should be performed from the following:

1. Calculate molarity for different solutions. Learn to use the scientific balance (adjustments, taring,etc.).
2. Prepare stock solution of the following (100 ml)
   - 10mM $Zn(NO_3)_2 . 6H_2O$
   - 10mM 100ml $C_6H_{12}N_4$
   - 25 mM $Na_3C_6H_5O_7$
3. Synthesize ZnO nanoparticles using hydrothermal process.
4. Perform seeding of pre-synthesized ZnO nanoparticles on glass substrate. Also perform directseeding of ZnO particles on glass substrate by thermal oxidation.
5. Grow ZnO nanorods on glass substrate hydrothermally.
6. Synthesize ZnS nanoparticles using hydrothermal process.
7. Synthesize manganese doped ZnS nanoparticles using hydrothermal process.
8. Make film of ZnO nanoparticles on glass substrate using the LBL machine.
9. Use Super-hydrophobicity testing machine to find out the roll-off and contact angle of ananoparticle coated surface.
10. Synthesize CdS nanoparticles using hydrothermal process. Observe colour variations with sizewhen illuminated with UV light.
11. Synthesize gold nanoparticles using Turkevitch process.
12. Sample preparation for different characterization techniques.
13. UV-vis spectroscopy to study optical properties of nanomaterials.
14. Tauc's plot to determine band gap of semiconductors.
15. Electron Microscopy Imaging of metallic and semiconducting nanoparticles.
16. Analysing SAED patterns.
17. Measurement of lattice fringes in TEM images using ImageJ software.
18. Analysing EDS plots.
19. Extracting information from XRD plots.
20. Measurement of WCA and ROA for different nanomaterial coated substrates.
21. PL spectroscopy on luminescent nanoparticles.

PSST6016: STUDY TOUR

Study Tour is a mandatory non-credited course to be taken up in the final semester of M.Sc. (physics) with an objective to provide students an exposure to higher studies and research in physics in other reputed institutes of the county. The study tour will not be less than 2 days and will not exceed 14 days. During the tour, the focus will be on visiting different higher educationalinstitutes and/ or research institutes. A report will be submitted and a presentation will be given at the end of the tour by each student based on which he/she will be declared "Pass"/"No Pass" in the course**.**

PSPP6017: PROJECT PHASE I

(2 credits)

During this phase the student will start a project applying the knowledge acquired during the first two semesters and also incorporating the recent trends in the chosen area. It should include phases of design, implementation and reporting. This project is to be executed individually within or outside the campus. The mode and components of evaluation and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester.

E-resource for learning:

LaTeX

PSPR6018: PROJECT PHASE II

(3 credits)

During this phase the student will complete the project started in the previous semester. The final implementation of the project and report writing shall be done in this semester. The student shall be required to make a number of presentations to report on the progress of the project. There will be a viva voce examination which shall follow the final submission of the project report. The mode and components of evaluation and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester.

PSCP6120: COMPUTATIONAL PHYSICS USING PYTHON

(2-0-0)

COURSE OUTCOMES

CO 1: Outline the fundamental elements of Python computing. (Understanding)
CO 2: Estimate the accuracy and speed of a Python code. (Applying)
CO 3: Develop Python code for solving definite integrals and finding derivatives. (Applying)
CO 4: Solve systems of equations using Python arrays. (Applying)
CO 5: Develop optimized numerical solutions of ordinary differential equations. (Applying)
CO 6: Make use of Monte Carlo methods in random processes for solving physical problems. (Applying)
CO 7: Propose computational solutions to physical problems using Python. (Creating)

Module I: Elements of Python programming (9 lectures)

Data types, basic mathematical operations, variables; lists: indexing, slicing, altering, appending and deleting elements, concatenation; tuples and dictionaries; conditional statements; loops: while and for loops, nested-for loops; Python libraries: installing packages, importing packages; NumPy arrays and matrices, example: eigenvalues and eigenvectors; basics of data handling using Pandas; introduction to SciPy; data visualization using Matplotlib and Seaborn.

Module II: Accuracy and speed (2 lectures)

Variables and data ranges; numerical error; program speed.

Module III: Numerical integrals and derivatives (4 lectures)

Fundamental integral evaluation methods: trapezoidal rule, Simpson's rule; error estimation of integrals; Romberg integration; Gaussian quadrature; numerical differentiation: forward and backward differences, central differences, second derivatives, partial derivatives, differentiation error estimation.

Module IV: Solving linear and non-linear equations (6 lectures)

Linear equations: Gaussian elimination, back-substitution, pivoting, LU decomposition, matrix inverse, tridiagonal and banded matrices; nonlinear equations: binary search, Newton's method, secant method

Module V: Numerical solutions of ordinary differential equations (4 lectures)

First-order differential equations with one variable: Euler's method, Heun's method, 4^{th} order Runge-Kutta method; differential

equations with multiple variables; second-order differential equations; boundary value problems: shooting method, relaxation method; eigenvalue problems.

Module VI: Random processes (5 lectures)
Random numbers generators and seeds; non-uniform random numbers, Gaussian random numbers; Monte Carlo integration: mean value method, integrals in many dimensions, importance sampling; importance sampling; Markov chain methods.

Suggested Readings

1. Mark E.J. Newman, Computational Physics, Createspace Independent Pub.
2. Rubin H. Landau, Manuel J. Paez and Cristian C. Bordeianu, Computational Physics: Problem Solving with Python, Wiley.
3. Wes McKinney, Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython, O'Reilly Media.
4. David Beazley and Brian K. Jones, Python Cookbook: Recipes for Mastering Python 3, O'Reilly Media.
5. Jake VanderPlas, Python Data Science Handbook: Essential Tools for Working with Data, O'Reilly Media.
6. Duncan M. McGreggor, Mastering Matplotlib, Packt Publishing.

Service Learning	BCSL0200	Service Learning in Bio Sciences	NC	1385
Value Added Course	BTCL6014	Clinical Laboratory Techniques	NC	1410
Value Added Course	BTBB6015	Basic Bioinformatics	NC	1411
Total Credits			24	
SEMESTER IV				
Core Course (Theory)	MBIF0018	Industrial and Food Microbiology	4-0-0	1422
Elective courses				
Elective Course 1 (Theory)	BTAT0017	Agriculture Technology	2-0-0	1404
Elective Course 2 (Theory)	MBNB0016	Nanobiology	2-0-0	1421
Elective Course 3 (Theory)	BCBM0021	Bioresource Management	2-0-0	1384
	MBDI6007	Dissertation Phase II	0-0-16	756
Service Learning	BCSL0200	Service Learning in Bio Sciences	NC	1385
Total Credits			22	
Total Programme Credits			89	

- Non- credit courses (NCC) are mandatory and assess the student performance by grading their score in internal and final examinations as – satisfactory (S) or Unsatisfactory (US) based on the performance of the students. Students securing 60% or above may be considered satisfactory (S).
- NPTEL -students can select any one course from NPTEL and produce a certificate as the end of the examination.
- Industrial or laboratory visit is mandatory on the basis of applicability and mentoring of the students. A report on the experience and learning can be submitted to respective mentors.
- Remedial Teaching & NET Coaching will be one hour/week
- Skill development program; options include Fermentation technology; herbal drug formulation; mushroom cultivation; waste management; (any 1)
- Value added course will be open for all and on completion of the course the student will receive a certificate to the learning
- Students will go for internships during the semester break between – I and II semester or II and III semester or III and IV Semester and produce a certificate and report of the training.
- Semester - IV- One Core course (4 credits) + One elective (2 credits) + Dissertation (16 credit)

DEPARTMENT OF BOTANY
MASTER OF SCIENCE IN BOTANY
MSc COURSE STRUCTURE

SEMESTER I				
Type of Course/Category	**Course Code**	**Course Name**	**Credits T-L-P**	**Page**
Core Course (Theory)	BOMP0021	Mycology and Phycology	4-0-0	1432
Core Course (Theory)	BOBP0022	Bryophytes, Pteridophytes and Gymnosperms	4-0-0	1432
	BOAN0023	Angiosperms	4-0-0	1433
Core Course (Lab)	BOMP6026	Mycology and Phycology Lab	0-0-3	1456
Core Course (Lab)	BOBA6027	Bryophytes, Pteridophytes and Gymnosperms and Angiosperms Lab	0-0-3	1456
Value added course	BOBF6035	Bio-Fertilizer Technology	NC	1461
Value added course	BOBC6038	Biomass Conversion, Biorefinery & Circular Bioeconomy	NC	1462
Service Learning	BOSL0100	Service Learning on Ethno Botanical Practices	NC	1464
Total Credits			18	
SEMESTER II				
Core Course (Theory)	BOCM0024	Cell and Molecular Biology	4-0-0	1434
Core Course (Theory)	BOPB0025	Plant Physiology and Biochemistry	4-0-0	1435
Core Course (Theory)	BOPP0026	Plant Microbiology and Plant Pathology	4-0-0	1437

Core Course (Dissertation)	ZGDS6009	Dissertation (Phase II)	0-0-8	1504
Value Added Course	ZGTM6010	Teaching Methodology and Class room Management	NC	1504
Total Credits			**18**	
Total Programme Credits			**82**	

Note: Mandatory Course EDPC0201: Indian Polity and Constitution

SCHOOL OF LIFE SCIENCES
DEPARTMENT OF BIOSCIENCES
PROGRAMME: MASTER OF SCIENCE (MSC) BIOCHEMISTRY

PROGRAMME OUTCOMES

PO 1: Critical Thinking: Inculcate critical thinking to carry out scientific investigation objectively. Formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. Critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

PO 2: Knowledge Skill: Equip the student with skills to analyse problems, formulate a hypothesis, evaluate and validate results, and draw reasonable conclusions thereof. Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge

PO 3: Scientific Communication Skills: Imbibe effective scientific and/or technical communication in both oral and writing. Ability to show the importance of the subject as precursor to various scientific developments since the beginning of the civilization

PO 4: Ethics: Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects

PO 5: Enlightened Citizenship: Create awareness to become an enlightened citizen with commitment to deliver one's responsibilities within the scope of bestowed rights and privileges.

PO 6: Analytical Reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyse and synthesise data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

PO 7: Multicultural Competence: Development of a set of competencies in order to enhance and promote the growth of multicultural sensitivity within universities. Integrating multicultural awareness such as race, gender, physical ability, age, income and other social variables, and by creating an environment that is, "welcoming for all students".

PO 8: Lifelong Learning: Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self- directed learning aimed at personal development, and adapting to changing academic demands of work place through knowledge/ skill development/ reskilling.

PO 9: Leadership Qualities: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination in a smooth and efficient way.

PO 10: Research Skills: Prepare students for pursuing research or careers in industry in concerned subject and allied fields. Capability to use appropriate software to solve various problems and to apply programming concepts of C++ and Mathematica/Matlab to various scientific investigations, problem solving and interpretation

PROGRAMME SPECIFIC OUTCOMES:

PSO1: Confidence: Demonstrate a comprehensive understanding of chemical and biological structure, principles, techniques, and applications

PSO2: Knowledge based Skill: To develop better understanding and improve skills that would enable them to begin a career in research laboratories, industries as well as to generate self-employability

PSO3: Scientific Social Responsibility: To develop linkages between scientific community and society to build trust, partnership and responsibility of science towards achieving social goals

PSO4: Research and analysis: Realize the impact of science in society and plan to pursue research, and learn to work as a team as well as independently to retrieve information, carry out research investigations and result interpretations

PSO5: Diagnostic skills: Attain a remarkable understanding of biochemical principles of bioenergetics, metabolism, physiology and disorders through diagnostic laboratory procedures.
PSO6:Technical and analytical skills: Acquire a thorough knowledge on omics biology, high-throughput omics approaches to analyse biological samples such as genomics, transcriptomics, proteomics, metabolomics and comprehensive analysis approach.

DETAILED SYLLABUS
THEORY COURSES

BCBM0010: MEDICAL BIOCHEMISTRY (3-0-0)

Course Outcomes

CO 1: Define the different disorders of the body related to carbohydrate metabolism, lipid metabolism, Nitrogen metabolismand digestive disorders (Remembering)
CO 2: Develop an understanding o f how the different metabolism are interconnected (Understanding)
CO 3: Classify disorders of each metabolism (Understanding)
CO 4: Compare all metabolic disorders with their symptoms and etiology (Applying)
CO 5: Examine the normal level of glucose, glycogen, protein, amino acid, nitrogen, diagnostic enzymes (Analysing)
CO 6: Evaluate the genetic relation of each metabolic disorder with corresponding metabolism (Evaluating)
CO 7: Discuss the link between the metabolic disorders and genetic make of patients (Creating)
CO 8: Gain the knowledge on the molecular diagnostic test used in various infectious diseases (Understanding)

Module I (10 Lectures)

a. Disorders of Carbohydrate Metabolism - Diabetes mellitus, glucose and galactose tolerance tests, sugar levels in blood, renal threshold for glucose, factors influencing blood glucose level, glycogen storage diseases, pentosuria, galactosemia.
b. Disorders of Lipids – Plasma lipoproteins, cholesterol, triglycerides and phospholipids in health and disease,hyperlipidemia, hyperlipoproteinemia, Gaucher's disease, Tay-Sach's and Niemann-Pick disease, ketone bodies

Module II (10 Lectures)

a. Abnormalities in Nitrogen Metabolism – Uremia, hyperuricemia, porphyria and factors affecting nitrogen balance.
b. Disorders of liver and kidney – Jaundice, fatty liver, normal and abnormal functions of liver and kidney. Inulin and ureaclearance
c. Inborn Errors of metabolism – Phenylketonuria, alkaptonuria, albinism, tyrosinosis, maple syrup urine disease, Lesch-Nyhan syndrome, sickle cell anemia, histidinemia, disorders of blood

Module III (10 Lectures)

a. Digestive diseases – Maldigestion, malabsorption, creatorrhoea, diarrhoea and steatorrhoea.
b. Electrolytes and acid-base balance – Regulation of electrolyte content of body fluids and maintenance of pH, reabsorption of electrolytes.
c. Diagnostic Enzymes – Enzymes in health and diseases. Biochemical diagnosis of diseases by enzyme assays – SGOT, SGPT,CPK, cholinesterase, LDH.

Module IV (15 Lectures)

a. Molecular diagnostics: Basic techniques used in molecular diagnostics, Molecular diagnostics of HIV, Tuberculosis, cholera and pathogenic E. coli
b. Cancer and Ageing –Molecular basis of carcinogenesis, Oncogene and signal transduction, oncogene and G-proteins, oncogene and cell survival, carcinogens and cancer therapy, Cancer pathways, Diagnosis, prevention and treatment of cancer. Ageing: Antioxidants and ageing, DNA repair, Heat shock proteins, role of dopamine receptors in ageing.
c. Disorders of Signal transduction: Disorders of cell surface receptors, Antibodies to receptors, Disorders of Intracellular receptors
d. Oxidative stress related diseases: Role of oxidative stress in various cancers, role of free radicals in diabetic I and diabetic II type of diseases, various inflammatory disorders associated with free radicals, oxidative stress in neurodegenerative diseases; Alzheimer's disease, Parkinson's disease, Huntington's disease. Mitochondrial free radical theory of aging.

Suggested Readings

1. Medical Biochemistry, 7th Edition, Chatterjee MN and Shinde R, 2007, Jaypee Brothers Medical Publishers P (Ltd)
2. Biochemistry, 5th Edition, Jeremy M Berg, John L Tymoczko, and Lubert Stryer, 2002, W.H. Freeman and Co.
3. Text-book of Biochemistry with clinical correlations,7th Edition, Devlin TMJ, 2010, Wiley and Sons.
4. Textbook of Medical Physiology, 12th Edition, Guyton AC and Hall JE, 2012, Elsevier Health Sciences

CO 8				H

BCPY0011: PHYSIOLOGY (3-0-0)

Course Outcomes

CO 1: Define and have an enhanced knowledge of the fundamentals of physiology by recalling and relating (Remembering).
CO 2: Summarize how the separate systems interact to yield integrated physiological responses (Understanding).
CO 3: Implement the acquired knowledge of the various mechanisms in executing and constructing experiments and apply in their day to day life (Applying).
CO 4: Analyze and report on experiments and observations in physiology (Analysing).
CO 5: Evaluate by presenting and defending opinions by making judgments about the mechanisms and functioning of organs and organ systems (Evaluating).
CO 6: Appreciate, compile and generate new ideas on physiology (Creating).

Part A: Plant Physiology Module I (13 lectures)

a. Electron transport system in plants - Oxidative phosphorylation, mitochondrial respiratory complexes, order and organization of electron carriers, electrochemical gradient, chemiosmotic theory, ATP synthase and mechanism of ATP synthesis.
b. Nitrate assimilation - Structural features of nitrate reductase and nitrite reductase, incorporation of ammonia into organic compounds, regulation of nitrate assimilation.
c. Photosynthesis – Photosynthetic apparatus, pigments of photosynthesis, role of carotenoids, photosystems I and II, their location; Hill reaction, photosynthetic electron transport and generation of NADPH & ATP, cyclic and non-cyclic photo-phosphorylations, complexes associated with thylakoid membranes; light harvesting complexes, path of carbon in photosynthesis – C_3 and C_4 pathway of carbon reduction and its regulation, Photorespiration.

Module II (10 lectures)

a. Special features of secondary plant metabolism - Terpenes (classification, biosynthesis), lignin, tannins, pigments, phytochrome, waxes, alkaloids, biosynthesis of nicotine, functions of alkaloids, cell wall components.
b. Toxins of plant origin – Mycotoxins, phytohemagglutinins, lathyrogens, nitriles, protease inhibitors, protein toxins.
c. Stress metabolism in plants - Environmental stresses, salinity, water stress, heat, chilling, anaerobiosis, pathogenesis, heavymetals, radiations and their impact on plant growth and metabolism, criteria of stress tolerance.
d. Antioxidative defence system in plants – Reactive oxygen species and their generation, enzymic and non-enzymic components of antioxidative defense mechanism.

Part B: Human Physiology Module III (12 lectures)

a. Blood and Circulatory system - Composition and functions of plasma, erythrocytes including Hb, Leucocytes and thrombocytes, plasma proteins. Blood Coagulation – mechanism and regulation. Transfer of blood gases – Oxygen and carbon dioxide, role of 2,3-diphosphoglycerate, Bohr effect and chloride shift.
b. Digestive system – Composition, functions and regulation of saliva, gastric, pancreatic, intestinal and bile secretions. Digestion and absorption of carbohydrates, lipids, proteins, & nucleic acids.
c. Respiratory system– Air passages and lung structure, pulmonary volumes, alveolar surface tension, work of breathing and its regulation.

Module IV (10 lectures)

a. Endocrine system – Secretion and functions of hormones of thyroid, pituitary and gonads. Role of hormones in reproduction.Mechanism of action of hormones.
b. Nervous system-Muscle proteins, molecular mechanisms of muscle contraction (skeletal and smooth), nerve conduction,chemical regulation of synapses, neurotransmitters, neurons, resting membrane potential and action potential.
c. Excretory system – Structure of nephron, glomerular filtration, tubular reabsorption of glucose, water and electrolytes.Tubular secretion. Homeostatic regulation of water and electrolytes, Acid-base balance.

Suggested Readings

1. Harper's Illustrated Biochemistry, 31st Edition, Rodwell VW, Bender DA, Botham KM, Kennely PJ, Weil PA, 2009, MHLMP
2. Textbook of Biochemistry with clinical correlations, 7th Edition, Devlin TM, 2010, WLP

3. Ganong's Review of Medical Physiology, 25th Edition, Barrett KE, Barman SM, Boitano S, Brooks HL, 2017, MHE
4. Textbook of Medical Physiology, 11th Edition, Guyton AC, Hall JE, 2015, EI
5. Principles of Biochemistry, 5th Edition, Voet D, Voet JG, Pratt CW, 2018, WP
6. Lehninger's Principles of Biochemistry, 7th Edition, Nelson DL, Cox MM, 2017, ML
7. Medical Biochemistry, 2nd Edition, Bhagavan N V, 2015, AP
8. Biochemistry, 6th Edition, Garret RH, Grisham CM, 2017, SCP

CO4	L	H	L	L
CO5	L	M	M	M
CO6			M	M

BCFB0013: FUNDAMENTALS OF BIOCHEMISTRY (4-0-0)

Course Outcomes

CO 1: Relate of the structural and functional aspects of biomolecules (Remembering)
CO 2: Compare and draw the chemical structures of different biomolecules (Understanding)
CO 3: Identify the monomers and polymers of biomolecules (Applying)
CO 4: Analyse the interaction and importance of equilibrium maintenance of different biomolecules for health related issues (Analysing)
CO 5: Estimate the different concentrations of biomolecules for biological applications (Evaluating)
CO 6: Elaborate the biological applications of different biomolecules in drug discovery (Creating)

Module I (6 lectures)

Introduction to Biochemistry, water as biological solvent, weak acids and weak bases, pH and pK, buffers, Henderson-Hasselbalch equation, physiological buffers, fitness of the aqueous environment for living organisms

Module II (14 lectures)

a. Classification, basic chemical structure, general reactions and properties, biological significance of monosaccharide, Sugar derivatives, deoxy sugars, amino sugars, and sugar acids, Mutarotation of sugar, Anomeric effect of sugar (Methylation effect), Inversion (hydrolysis) of cane sugar
b. Polysaccharides - occurrence, structure, isolation, properties and functions of homoglycans - starch, glycogen, cellulose, dextrin, inulin, chitins, xylans, arabinans, galactans
c. Occurrence, structure, properties, and functions of heteroglycans - bacterial cell wall polysaccharides, glycoaminoglycans, agar, alginic acid, pectins, blood group substances and sialic acids, Glycoprotein and their biological applications, Lectins structure and functions

Module III (14 lectures)

a. Definition and Classification - (simple, complex, derived lipids - structure and example). Saturated and unsaturated fatty acids, Nomenclature of fatty acids, General chemical reactions of fatty acids – esterification, hydrogenation and halogenations
b. Phospholipids - classification, structure and functions, Ceramides and Sphingomyelins, Eicosanoids, structure and functions of prostaglandins, thromboxanes, leukotrienes, Types and functions of plasma lipoproteins, Amphipathic lipids - membranes, micelles, emulsions and liposomes.
c. Steroids - cholesterol structure and biological role - bile acids, bile salts.
d. General chemical reactions of fats: Hydrolysis, Saponification number, I_2 number, acetylation, acetyl number, and volatile fatty acid number, Rancidity of fat.

Module IV (4 Hours)

Porphyrins: the porphyrin ring system, chlorophyll, hemoglobin, myoglobin and cytochrome.

Module V (10 lectures)

Watson-Crick Model of DNA structure: A, B and Z – DNA. Chemical Properties: Hydrolysis (acid, alkali), enzymatic hydrolysis of DNA. Cruciform structure in DNA, formation and stability of cruciform, HDNA, palindrome, secondary and tertiary structure of RNA, hnRNA, si RNA, Cot value curve, hypochromic and hyperchromic effect, DNA-protein interactions, Viscosity, Buoyant density, Tm

Module VI (12 lectures)

a. Definition, classification, structure, stereochemistry and reactions of amino acids;
b. Classification of proteins on the basis of solubility and shape, structure, and biological functions. Primary structure - determination of amino acid sequences of proteins, the peptide bond, Ramachandran plot.
c. Secondary structure - weak interactions involved - alpha helix and beta sheet and beta turns structure, Pauling and Corey model for fibrous proteins, Collagen triple helix, and super secondary structures - helix-loop-helix.
d. Tertiary structure - alpha and beta domains. Quaternary structure - structure of haemoglobin, Solid state synthesisof peptides, Protein-Protein interactions, Concept of chaperones.

Suggested Readings

1. Biochemistry, 5th Edition, Jeremy M Berg, John L Tymoczko, and Lubert Stryer, 2002, W.H. Freeman and Co.
2. Fundamentals of Biochemistry, 4th Edition, Voet D, Voet JG and PrattCW,2012, John Wiley and sons NY.
3. Lehninger's Principle of Biochemistry, 7th Edition, David L Nelson and Michael M Cox, 2017, W. H. Freeman and Co.
4. Biochemistry, 4th Edition, Zubey GL, 1998, WCB London.

BCAT0014: ANALYTICAL TECHNIQUES (4-0-0)

Course Outcome

CO 1: Define the basic principles, concepts and applications of various analytical techniques used in biological sciences (Remembering)
CO 2: Apply the knowledge of centrifugation to separate a constituent from a complex mixture (Applying)
CO 3: Choose a suitable microscopic, electrophoretic, and chromatographic technique to identify and purify a target molecule from a complex mixture (Applying)
CO 4: Select an opposite spectroscopic technique to characterize a sample (Analysing)
CO 5: Ability to appraise the various techniques and formulate an appropriate plan for research studies (Evaluating)

Module I (12 lectures)

Principle of centrifugation, concept of RCF, different types of instruments and rotors, preparative, differential and density gradient centrifugation, analytical ultra-centrifugation, determination of molecular weights and other applications, subcellular fractionation

Module II (9 lectures)

Concepts of spectroscopy; Beer-Lambert's law, Principles and applications of colorimetry, Visible and UV spectroscopy, CD, IR and NMR

Module III (11 lectures)

Concepts of chromatography; Principles and applications of paper, thin layer, ion exchange, affinity, gel permeation, adsorption, partition and high-performance liquid chromatography

Module IV (13 lectures)

Principles of electrophoretic separation, types of electrophoresis viz. paper, cellulose, Native PAGE, SDS PAGE, Pulse field gel electrophoresis

Module V (15 lectures)

Basic concepts of microscopy, transmission electron microscopy, scanning electron microscopy, Freeze fracture technique. Principle and applications of Autoradiography

Suggested Readings

1. Instrumental Methods of Analysis. 6th Edition, H. H. Willard, L. L. Merritt Jr. and others1986, CBS Publishers and Distributors.
2. Instrumental Methods of Chemical Analysis, Chatwal G and Anand, S., 1989, Himalaya Publishing House, Mumbai.
3. A Biologist's Guide to Principles and Techniques of Practical Biochemistry Williams, B.L. and Wilson, K., 1975
4. Spectroscopy, Volume 1B. B. Straughan and S. Walker Eds., Chapman and Hall Ltd.

5. Gel Electrophoresis of Proteins - A Practical Approach Hanes,

CO 2	H				
CO 3			H	H	H
CO 4		H			
CO 5	H	H	H	H	H

BCMB0015: MOLECULAR BIOLOGY (4-0-0)

Course Outcomes

CO 1: Define the principles of DNA replication, transcription and translation (Remembering)
CO 2: Explain the structural and functional properties of biological macromolecules and to understand the role of gene regulation (Understanding)
CO 3: To recognize Central Dogma from replication of DNA till translation of protein (Applying)
CO 4: Distinguish between replication, transcription and translation (Analysing)
CO 5: Execute quantitative analysis to interpret biological data (Evaluating)
CO 6: Design a scientific process,gain insight into the most significant molecular methods to expand our understanding of biology (Creating)

Module I (15 lectures)

Nucleic acid as genetic material: it's proof; Different modes of replication (conservative, semi-conservative and dispersive); DNA replication in prokaryotes, eukaryotes and virus (rolling circle model): General features and enzymology; detailed mechanisms of initiation, elongation and termination; experiments underlying each step and role of individual factors; proofreading and processivity of DNA polymerase; telomerases: mechanism of replication, maintenance of integrity and role in cancer; effect of different inhibitors on replication.

Module II (15 lectures)

Basic concepts of promoter, operator, terminator, enhancer; RNA polymerases and its sub-Modules; different sigma factors and their relation to stress, viral infections etc; initiation, elongation and termination (rho-dependent and independent) mechanism of RNA synthesis; post transcriptional modification of RNA - capping, splicing and poly A tailing; effect of different inhibitors on prokaryotic and eukaryotic transcription.

Module III (20 lectures)

The genetic code and its nature; structure of t-RNA, ribosomal structure; activation of amino acids; initiation, elongation and termination mechanism of polypeptide chain synthesis; role of r-RNA in polypeptide chain synthesis; differences between prokaryotic and eukaryotic translational processes; post-translational modification of peptide, its transportation; non- ribosomal peptide synthesis with special reference to cyclic polypeptide antibiotics synthesis in bacteria; effect of different inhibitors on protein synthesis in both prokaryotes and eukaryotes.

Module IV (10 lectures)

Positive and negative control; catabolite regulation-definition and mechanism; effect of anti-termination and attenuation on the process of gene regulation; various protein motifs involved in DNA-protein interactions during gene regulation. Epigenetics - definition and mechanism.

Suggested Readings

1. Lewin's Genes XII,12 th Edition, Krebs JE, Kilpatrick ST, Goldstein ES, 2017, JB
2. Molecular Biology of the Gene, 7th Edition,Watson JD, Baker TA, Bell SP, Gann A, Levine M, Bell SP, Losick R, Harrison SC, 2020, PP
3. Molecular Biology, 5th Edition, Weaver RF,2011, MGHC.
4. Molecular Biology, 3rd Edition, Clark DP,Pazdernik NJ, 2014, API
5. Molecular Biology, 5th Edition, Freifelder D, 2004, NPHPL.

BCFI0016: FUNDAMENTALS OF IMMUNOLOGY (4-0-0)

Course Outcomes

CO 1: Course begins with general overview of immunity to get you adjusted to the basics in the field. To demonstrate comprehension of general terms associated with immunological responses and the roles of nearly every cell associated with the immune system. Understand the differentiation of hematopoietic stem cells (HSCs) into lymphoid or myeloid immune cells (Understanding)

CO 2: To understand the immunological defense against intruders Cellular basis for innate immunity against all types of pathogens. To describe different mechanisms exist in body to recognize pathogens nonspecifically (Understanding)

CO 3: To demonstrate comprehension of antibody structure, composition, and classes. Understand antibodies associated with particular immunological responses. Gain insights into the coordination of innate and adaptive immune response (Understanding)

CO 4: Major Histocompatibility Complex (MHC), which determines how individuals display, present, and respond to foreign antigens. To understand the importance of MHC in determining transplant eligibility and autoimmune disease. Understand antigen transport through exogenous or endogenous location and attachment on MHC molecule on the cell surface. (Understanding)

CO 5: Understand how T cells develop, rearrange T-cell receptor. To develop insights into key differences between rearrangements and Differential pathways that a T cell undergoes (Understanding)

Module I (10 lectures)

General overview of Immunity, Introduction to Metaphors, Pathogens and Immunity, Surveying the cells and organs of Immune system- Innate and adaptive cells, Hematopoietic Stem Cell, primary and secondary organs; Innate and Adaptive Immune response

Module II (7 lectures)

Ubiquity of Innate immune response, Anatomic Barriers-Skin, Mucosa and GI defenses; Apoptosis, Inflammation- Extravasation, Lymphocyte Extravasation, Trafficking, and Homing, Inflammatory Mediators, Inflammatory Cytokines and Chemokines, Clinical Considerations, Chronic Inflammatory Response; Innate Targeting of Pathogens-Pathogen Recognition System, PAMPs (Pathogen Associated Molecular Patterns), TLR, Cell Types and Function

Module III (14 lectures)

Introduction to models in immune system, Immunoglobulin Superfamily, Structure of Immunoglobulin Receptors (BCR) and Antibodies, Immunoglobulin Classes, Antigen Binding, Antibody Dependent Cell Mediated Cytotoxicity (ADCC), Monoclonal Antibodies

Complement System: Overview and Terminology of the Complement System, Complement Activation, Classical, Alternative and Lectin pathway, Consequences of Complement Activation

Module IV (14 lectures)

Structure of the MHC Locus, Class I MHC, Class II MHC and Class III MHC, Haplotypes, Recombinant Haplotypes, MHC Protein Structure, Specifics of Peptide Binding, Genetic Expression and Cellular Expression, Non-Classical MHC Genes, MHC and Disease

Antigen Processing and Presentation: T Cell Antigen Recognition, Professional Antigen Presenting Cells (APCs), Self-MHC restriction, Cytosolic Pathway: Class I Processing and Presentation, Transport to the RER, Exogenous Pathway: Class II Processing and Presentation, Variations- Cross presentation, T-cell receptor-Structure and Roles, αβ versus γδ receptors, Common Elements, Functional Differences, T-Cell Receptor Genes, Gene Rearrangement- Alpha Rearrangement-,Beta Rearrangement, Delta Rearrangement

Module V (8 lectures)

Maturation in the Thymus, Double Negative Transitions, Double Positive (DP) Events Completing the Receptor, Displaying Co-Receptors, Beginning Selection; Positive and Negative Selection, CD4+ TH Cells: Types and Functions, Determination of Subclass,Superantigens, TH Cell Activation Pathway

Module VI (2 lectures)

Central and Peripheral Tolerance, Malnutrition, SCID, HIV

Module VII (5 lectures)

Types of hypersensitivity reactions 1,2,3 and 4, Autoimmunity and autoimmune diseases

Suggested Readings

1. Cellular and Molecular Immunology, 7h edition by Abbas, et al. 2012, Elsevier/Saunders.

2. Janeway Immunobiology, Kenneth Murphy, Casey Weaver, 9th edition, Norton & Company
3. Molecular Biology of the Cell, Alberts et al., 5th edition, 2014, W. W. Norton & Company
4. Kuby Immunology, Judy Owen, 6th and 7th editions, W H. Freeman

BCHD0017: HERBAL DRUG TECHNOLOGY (1 - 0 - 0)

Course Outcomes

1. Explain steps of herb selection, identification, raw material preparation, extraction and phytochemical study (Evaluating)
2. Perceive the application of herbs in formulation of herbal products and their multifarious application (Evaluating)
3. Design procedure of various plant-based products (Creating)

Definition of herb, source of herbs, selection, identification and authentication of herbal materials, processing of herbal raw material, Preparation of plant extracts and oil extraction. Phytochemical screening techniques. Herbal Products-Herbal cosmetics, Herbal Excipients, Herbal Formulations, Nutraceuticals

Activity:

1. Base preparation and herbal soap
2. Herbal Tea and/or green tea
3. Herbal incense sticks with mosquito and/or fly property
4. Herbal spray with insecticidal and/or pesticidal property
5. Herbal colourant
6. Herbal drink with health beneficial property

Suggested Readings

1. Herbal Drug Technology Mohan Lal Kori, Santram Lodhi, Tushar A Deshmukh, Rageeb Md. Usman, Vaibhav M Darvheka, NiraliPrakashan Publication
2. Herbal Drug Technology, Paridhavi Agarwal, Universities Press Private Ltd.

BCBE0018: BIOENERGETICS (3-0-0)

Course Outcomes

CO 1: Summarise the basic concepts of free energy, standard free energy, redox potential and other thermodynamic concepts about biological systems (Understanding)

CO 2: Use principle of transmembrane transport and its various types with special emphasis to mitochondrial respiratory chain and its carriers (Applying)

Module I (15 lectures)

Concept of free energy, standard free energy, determination of G for a reaction, Relationship between equilibrium constant and standard free energy change, biological standard state & standard free energy change in coupled reactions. Biological oxidation

- reduction reactions, redox potentials, relation between standard reduction potentials and free energy change (derivations included). High energy phosphate compounds – introduction, phosphate group transfer, free energy of hydrolysis of ATP and sugar phosphates along with reasons for high G. Energy charge.

Module II (15 lectures)

Chemotaxis and chemoreceptors chemo-osmotic theory, ion transport across energy transducing membranes, Influx and efflux mechanisms, Proton circuit and electrochemical gradient, the transport and distribution of actions, anions and ionophores, Uniport, antiport and symport mechanisms, shuttle systems.

Module III (15 lectures)

The mitochondrial respiratory chain, order and organization of carriers, proton gradient, iron sulphur proteins, cytochromes and their characterization, The Q cycle and the stoichiometry of proton extrusion and uptake; P/O and H/P ratios, Reversed electron transfer, respiratory controls and oxidative phosphorylation, uncouplers and inhibitors of energy transfer.

Fractionation and reconstitution of respiratory chain complexes, ATP- synthetase complex, Microsomal electron transport, partial reduction of oxygen, superoxides.

Suggested Reading

1. Biochemistry, M. Berg, J. L. Tymoczko, L. Stryer, Freeman Publicatio
2. Biochemistry, Voet and Voet, John Wiley and Sons
3. Bioenergetics: A practical approach, paperback Brown and Cooper, Oxford University Press

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III
CO I	H		
CO 2		H	H

BCNM0019: NUTRITIONAL BIOCHEMISTRY & METABOLISM (3-0-0)

Course Outcomes

CO 1: To acquire the knowledge of the dietary requirement of vitamins and minerals in human body (Remembering).
CO 2: To describe the various pathways that describes the metabolism of breakdown and synthesis of carbohydrates, amino acids and lipids in a biological system (Understanding)
CO 3: Interpret the significance of nutritional distribution of the carbohydrates, amino acids, and fats and their disturbancesin the absence of its regulatory enzymes (Applying)
CO 4: Infer the deficiency diseases and abnormalities in response to the dysfunction of enzymes associated with carbohydrates, lipids and amino acids metabolism (Analysing)
CO 5: Compare the linkage of carbohydrate, amino acids and lipid metabolism in in a biological system (Evaluating)

Module I (11 lectures)

Brief account on carbohydrates; Glycolysis; Fates of pyruvate under aerobic and anaerobic conditions; Regulation of glycolysis; Pentose phosphate pathway; Oxidative and Non-oxidative phases of PEP; Citric acid cycle; Production of acetyl CoA, Pyruvate dehydrogenase complex, Regulations of the Citric Acid Cycle; Gluconeogenesis pathway and its regulation; Glycogen biosynthesis and its regulation.

Module II (11 lectures)

Brief account of amino acids; essential and non-essential amino acids; metabolic fates of amino acids; amino acid metabolism: transamination, deamination; amino acid pathway and its degradation; nitrogen excretion and urea cycle; linkage of urea cycle and citric acid cycle

Module III (10 lectures)

Brief account of lipids, Synthesis and storage of triacylglycerol, Transport and mobilization, Essential fatty acids, Fatty acid oxidation, Biosynthesis of cholesterol and steroids.

Module IV (8 lectures)

Importance of carbohydrates, lipids and amino acids in our daily diet; essential and non essential amino acids; dietary input of carbohydrates, lipids and amino acids; deficiency diseases associated with carbohydrates, lipids and amino acids; distribution process of carbohydrates, fats and proteins in the human body once injested.

Module V (5 lectures)

Importance of vitamins in our diet; nutritional significance of minerals and trace elements; dietary sources of vitamins and minerals; requirements and deficiency diseases associated with Vitamins (fat soluble and water soluble vitamins) and minerals

Suggested Readings

1. Biochemistry, 5th edition, M. Berg, J. L. Tymoczko, L. Stryer, 2002, Freeman Publication.
2. Biochemistry, 4th edition, Voet and Voet, 2002, John Wiley and Sons.
3. Lehninger's Principle of Biochemistry, 7th edition, David L. Nelson and Michael M. Cox, W. H., 2017, Freeman and Co.
4. Text Book of Biochemistry with Clinical Correlation, 6th edition, Thomas M. Devlin, John Wiley- Liss, ed. Hobokhen, 2006, NJ publishers
5. Nutritional biochemistry and metabolism: with clinical applications, 2nd edition, M.C. Linder, 1991.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V
CO 1					H
CO 2	H	H	H	L	
CO 3				H	

CO 4	M	M	M	H	
CO 5	L	L	L	H	L

BCOB0020: OMICS BIOLOGY AND ITS TOOLS (4-0-0)

Course Outcomes

CO 1: Recall mapping and sequencing of genomes, transcriptome, proteome and metabolome (Remembering)
CO 2: Illustrate the different sequencing techniques (Understanding)
CO 3: Apply the tools of bioinformatics to analyze biological data (Applying)
CO 4: Analyze the data with biostatistics software (Analysing)
CO 5: Decide the type of spectroscopic method for sample analysis (Evaluating)
CO 6: Construct phylogenetic tree after analysis of biological samples (Creating)

Module I (15 Lectures)

a. Mapping and sequencing genomes: Genetic and physical mapping, Sequencing genomes different strategies, High-throughput sequencing, next-generation sequencing technologies, comparative genomics, population genomics, epigenetics.
b. Human genome project, pharmacogenomics, genomic medicine, genome editing, applications of genomics to improve publichealth, drug discovery and agriculture, metagenomics.

Module II (15 Lectures)

a. Transcriptome, analysis of gene expression - ESTs, SAGE, recent developments in RNA sequencing; metatranscriptomics, applications in gene regulation: alternative splicing, non- coding RNA.
b. Introduction to proteomics, techniques to study proteomics such as 1D and 2D PAGE, X- ray crystallography, Mass spectrometry including MALDI-TOF, protein microarrays, protein database analysis, comprehensive analysis of protein-protein interactions in different cell types.

Module III (10 Lectures)

a. Metabolomics, metabolome and metabolite, Structural diversity, number of metabolites in biological system, basic concept of metabolic channeling or metabolons, new approaches to analyze metabolic pathways.
b. Sample preparation, strategy and techniques used for metabolomic studies viz. GC-MS, LC-MS, NMR; data analysis (PDA,PLSDA), Lipidpomics, Glycomics, Phenomics, etc.

Module IV (20 Lectures)

a. Technical writing**:** Preparation of scientific report. Thinking and planning, information, ideas, order of paragraph writing; Presentation of a review; Objective and its importance; design of the experiment; parameters used; data interpretation; compilation of experimental record.
b. Case studies derived from scientific literature (genomics, transcriptomics, proteomics and metabolomics) including comparisons between healthy and diseased tissues.
c. Bioinformatics: Databases, phylogenetic tree, critical analysis of -omics data using advanced tools.
d. Biostatics tools: Data analysis with excel and software (SPSS).

Suggested Readings

1. Principles of Proteomics, 2nd Edition, Twyman RM, 2013, Garland Science
2. Metabolome Analysis: An introduction, 1st Edition, Villas-Boas SG, Roessner U, Hansen MAE, Smedsgaard J, Nielsen J, 2007, Wiley
3. Bioinformatics - From genomes to drugs, 1st Edition, Langauer T, Mannhold R, Kubinyi H, Timmerman H, 2002, Wiley VCH
4. Principles of gene manipulation, 7th Edition, Primrose SB, Twyman RM, 2006, Blackwell Publishing

CO 2	H	H	H	M
CO 3	M	M	M	H
CO 4				H
CO 5		H	H	
CO 6				H

BCBM0021: BIORESOURCE MANAGEMENT (2-0-0)

Course Outcomes

CO 1: Gain an enhanced knowledge of the fundamentals of bioresources and realize the impact of human activity on the environment Summarize how nature works regarding the climate, biodiversity, and the flow of natural resources, and realize the impact of human activity on the environment (Understanding).

CO 2: Acquire knowledge of bioresources eg., sericulture, captive breeding, integrated pest management etc., through different conservation methods, which will open scope for future research (Applying).

CO 3: Able to think innovatively and apply the understanding of bioresources, critically think through hands-on activities viz., biocosmetics, bioinsecticides etc, and industrial field visits which will motivate research, and entrepreneurship (Analyzing and Evaluating).

Module 1 Bioresource Management – approaches and tools

Definition of Bioresources and types, Bioresource and sustainability, Bioresource management through land use planning, Post- harvest management of agricultural produce, Sustainable agriculture, Earthworm technology, Integrated farming, Induced breeding, Captive breeding, Sericulture, Integrated pest management, Concepts of hot spots and red data book, Conservation of biodiversity in seed banks, gene banks and germplasm reserves, Habitat restoration. Application of remote sensing technology for bioresource management, Bio prospecting and bio piracy issues with particular reference to India's biodiversity Sustainable agriculture, Climate change and its impact on crop productivity

Module 2 Bioresource utilization and sustainability

Formulation of biopesticides, bio insecticides, bio weedicides, bio manure, bio cosmetics, bioplastics, Green energy, and biofuel generation from natural sources. Green building, Green walls Sustainable approach in floriculture and horticulture. Organization/Policy role and objectives -Indian Bioresources Information Network, Convention of Biological Diversity and Ramsar Convention, Hands-on Training and Industry/Field Visit with Report writing

Suggested Readings

1. Bioresource Management and climate change, 1st Edition, R. N. Kumar, 2015, OBC
2. Bioresources and their management, 1st Edition, Trivedi SP, Jahageerdar S, Rajendran KV, Kumar D, 2012, AP
3. Bioresources Conservation and Management, 1st Edition, Raju AJS, 2009, TTPP
4. Bioresources of the Eastern Ghats: Their Conservation and Management, 1st edition, Krishnamurthy KV, Murugan R, 2014,NHBS
5. Forest Management, 4th Edition, Davis LS, 2001, MHI
6. Human resource Management, 16th Edition, Dessler G, Varrkey B, 2020, PP
7. Research trends in Bioresource Management, 1st Edition, Maiti R, 2018, APC
8. Biofertilizer and biopesticide, 1st Edition, Lakshman HC, Channabasava A,2014, PP

CO 2	M	H
CO 3		M
CO 4		M
CO 5		M
CO 6		M

BCSL0200: SERVICE LEARNING IN BIOSCIENCES (2-0-0)

Course Outcomes

CO 1: To understand the essence of learning through community service

CO 2: To realise and identify the needs of community

CO 3: To apply subject related knowledge for service to the community

Module I (8 lectures)

Service learning: Definitions; Principles of Service Learning; Awareness of Community; Involvement with Community; Commitment to service

Module II (12 hours)

Fermentation and food microbiology; Herbal Drug Technology; Waste Management; Mushroom cultivation; Principles of Floriculture and Horticulture; Health -hygiene and disease awareness

LABORATORY COURSES

BCIM6004: MEDICAL BIOCHEMISTRY LAB

Course Outcomes

CO 1: Practically estimate lipoprotein, bilirubin, blood urea, creatine phosphokinase from a serumsample (Applying)
CO 2: Perform glucose tolerance tests and understand the normal and abnormal constituents of urine (Applying)

List of Experiments

1. Estimation of lipoproteins
2. Glucose tolerance test
3. Estimation of bilirubin
4. Estimation of blood urea
5. Estimation of creatine phosphokinase
6. Normal and abnormal constituents of urine

Suggested Readings

1. Medical Biochemistry, 7th Edition, Chatterjee MN and Shinde R, 2007, Jaypee Brothers Medical Publishers P (Ltd)

Mapping of COs to Syllabus

CO 1	H		H	H	H	H
CO 2		H				

***P: Practical**

BCPY6005: PHYSIOLOGY LAB

Course Outcome

CO 1: To be able to understand and master the conceptual and practical physiological functions of systems (Understanding)
CO 2: To acquire basic knowledge and perform experiments in physiology (Applying)
CO 3: To be able to determine, estimate and report on experiments and observations in physiology (Evaluating)
CO 4: To be able to perform an assay, analyse and report on experiments and observations in physiology (Analysing)
CO 5: To equip students with skills and techniques related to physiology to design experiments necessary for careers in research (Creating)

List of Experiments

1. Estimation of urea in serum
2. Estimation of cholesterol in serum.
3. Estimation of calcium in serum.
4. Assay of Serum glutamate oxaloacetate transaminase (SGOT) and serum glutamate pyruvate transaminase (SGPT)
5. Assay of alkaline phosphatase
6. Assay of amylase in serum
7. Estimation of glucose in serum by glucose oxidase-peroxidase method.
8. Assay of LDH activity in serum
9. Separation of plasma proteins by electrophoresis
10. Estimation of glycosylated hemoglobin
11. Counting white blood cells, red blood cells, platelets

Suggested Readings

1. Laboratory Manual for Practical Biochemistry, 2nd Edition, Ganesh MK, Shivaraja SYM, 2013, JB
2. Textbook of Practical Physiology, 5th Edition, Pal GK, Pal P, 2001, UP

***P: Practical**

BCBM6006: BIOENERGETICS LAB

Course outcomes

CO 1: Interpret how cells manufacture energy-ATP generation (Evaluating)
CO 2: Illustrate the mechanism of cellular respiration in yeast, plants and mitochrondria (Understanding)

List of Experiments

1. Numerical solving related to determination of free energy, free energy determination from equilibrium constants and standard reduction potentials
2. Demonstration of cellular respiration in yeast
3. Isolation of chloroplast from plant cells
4. Isolation of mitochondria form mouse liver tissue

Suggested Readings

1. Bioenergetics: A Practical Approach Brown, G. C. and Cooper, C. E. Oxford University Press

Mapping of COs to Syllabus

Course Outcomes	P1	P2	P3	P4
CO1	H			
CO2		H	H	H

***P: Practical**

BCDI6007: DISSERTATION PHASE I (0-0-2)

Course Outcomes

CO 1: Develop a scientific mindset with the capacity for analytical and innovative thinking (Creating).
CO 2: Develop writing skill, referencing and citations for effective communication (Applying).
CO 3: Improve communication and creative expression skills to articulate scientific ideas (Creating).
CO 4: Examine the research gap in the related field and formulate strategies to address the same (Analysing).

Syllabus

1. Familiarization with research topic and methodologies by a thorough literature review.
2. Writing of review of literature to brush up already existing knowledge on a given area.
3. Formulate a research hypothesis and a proposed work plan.
4. Presentation of the research topic at department level and submission of literature review.

Suggested Readings

1. Scientific review and research articles published in respective specialized area of research.

Mapping of Course outcomes to Syllabus

Course Outcomes	P1	P2	P3	P4
CO 1	H	H		
CO 2		H	H	
CO 3		H	H	H
CO 4	L	M	L	H

***P: Practical**

BCDI6008: DISSERTATION PHASE II (0-0-16)

Course Outcomes

CO 1: Support the research hypothesis with experiments executed ethically (Evaluating).
CO 2: Develop skill to independently carry out a research in the laboratory (Creating).
CO 3: Examine the methodology, analyse results, and defend the research work (Analysing).

Syllabus

1. Execute a scientific dissertation based on the proposed plan in Phase 1 through bench work.
2. Present and report data at various stages of the research work to the assigned supervisor.
3. Analysing the results, correlating it with different experiment performed during the dissertation.
4. Present the findings in a department level to internal and external examiners, and submission of completed thesis.

Suggested Readings

1. Scientific review and research articles published in respective specialized area of research.

Mapping of COs to Syllabus

Course Outcomes	P1	P2	P3	P4
CO 1	H	L	M	
CO 2	H	M	H	L
CO 3		H	H	H

***P: Practical**

BCFB6009: FUNDAMENTALS OF BIOCHEMISTRY LAB

Course Outcomes

CO 1: Estimate and prepare buffer solutions for different experiments
CO 2: Quantify various biomolecules at different concentrations for future research experiments
CO 3: Apply the technique based on spectrophotometer for analysis of various biomolecules

List of Experiments

1. Preparation of buffers
2. Determination of pKa and pI of acidic, basic, and neutral amino acids
3. Estimation of amino acids by Ninhydrin method
4. Estimation of DNA by DPA method
5. Estimation of RNA by Orcinol method
6. Estimation of proteins by Bradford method
7. Estimation of proteins by Lowry method
8. Isolation and estimation of lipids from seeds
9. TLC of plant pigments
10. TLC of lipids

Suggested Readings

1. The Protein Protocols Handbook, 3rd Edition, Walker, JH, 2009,HumanaPress
2. Biochemical methods, 2nd Edition, SadasivamandManickam,2004, New Age International(P) Limited Publishers, New Delhi.

***P: Practical**

BCAT6010: ANALYTICAL TECHNIQUES LAB

Course Outcome

CO 1: Recall and perform the laboratory analysis in accordance with Good Laboratory Practices, in conditions of hygiene and safety (Remembering)
CO 2: Describe the principles and the theoretical concepts of the instruments (Understanding)
CO 3: Choose an appropriate separation technique for analysis of the samples (Applying)
CO 4: Ability to undergo a comparative analysis of different identification and purification protocols that can best suit a particular experiment (Analysing)
CO 5: To evaluate the spectrophotometric parameter for understanding the nature of the biological sample (Evaluating)
CO 6: Design an analytical work flow to characterize a biological sample (Creating)

List of Experiments

1. Study of UV absorption spectra of biological macromolecules-proteins, nucleic acids
2. Separation of bacterial lipids/amino acids/sugars/organic acids by TLC
3. Separation of bacterial lipids/amino acids/sugars/organic acids by Paper Chromatography
4. Study of nucleic acids using Agarose gel electrophoresis.
5. Study of serum proteins by vertical gel electrophoresis
6. Separation of haemoglobin or blue dextran by gel filtration
7. Quantitative estimation of hydrocarbons/pesticides/organic solvents/methane by gas chromatography
8. Demonstration of PCR and its application

Suggested Readings

1. The Protein Protocols Handbook, Walker,J.H.(Ed.) Humana Press
2. Principles and Techniques of Biochemistry and Molecular Biology Wilson, K. and Walker,J., Cambridge University Press

Mapping of COs to Syllabus

BCRT6012: REMEDIAL TEACHING & NET COACHING

BCNM6013: NUTRITIONAL BIOCHEMISTRY & METABOLISM LAB

Course Outcomes

CO 1: To discuss the effect of pH and temperature on enzyme activity (Understanding).
CO 2: To analyze the saponification value (Analysing)
CO 3: To measure the content of vitamins in food sample (Evaluating)
CO 4: To estimate the acidity in milk and evaluate its causes (Evaluating)
CO 5: Design a protocol to study how pH and temperature effects the regulation of enzymes (Creating)

List of Experiments

1. Determination of saponification value of fats/oils
2. Estimation of acidity in milk
3. Estimation of vitamin C from biological sources
4. Effect of pH on amylase activity.
5. Effect of temperature on amylase activity

Suggested Readings

1. Fundamentals of Biochemistry, 5th edition, Voet, D., Voet, J. G., & Pratt, C. W., 2007. John Wiley.
2. Biochemistry, 4th Edition, Zubey, G. L., 1998, WCB London.

BCMB6013: MOLECULAR BIOLOGY LAB

Course Outcomes

CO 1: Define the principles for isolation of DNA from bacteria, plant and animal (Remembering)
CO 2: Demonstrate the knowledge of laboratory practices in molecular biology and conduct independent work in laboratory (Understanding)
CO 3: Apply practical knowledge to perform isolation of genomic and chromosomal DNA from bacteria (Applying)
CO 4: Test for DNA amplification by PCR and observe the amplicons of gel electrophoresis (Analysing)
CO 5: Execute quantitative analysis to interpret clear and concise communication of biological data and evaluate student progress with guided enquires (Evaluating)
CO 6: Design a scientific process, think critically and employ the scientific method in the formal practices of observation and experimentation (Creating)

List of Experiments

1. Isolation of genomic DNA from bacteria/plant/animal
2. Isolation of chromosomal DNA from bacteria.

3. DNA amplification by PCR and visualization of DNA by gel electrophoresis
4. Restriction digestion of DNA

Suggested Reading

1. Molecular Biology Techniques, A Classroom Laboratory Manual, 4th Edition, Carson S, Heath M, Melissa S, Witherow DS, 2019, AP

CO 4			H	H
CO 5			H	
CO 6	M	M		

***P: Practical**

BCFI6014: FUNDAMENTALS OF IMMUNOLOGY LAB

Course Outcomes

CO 1: Visualize the types of cells present in the blood and understand their normal and abnormal percentage as a sign of infection
CO 2: Analyze the basic difference between serum and blood plasma
CO 3: Determine antigen antibody interaction
CO 4: Determine immunodiagnostic application
CO 5: Understand the type and detection of antibodies present in body secretions
CO 6: Understand the principles for isolation of various blood cell types

List of Experiments

1. Microscopic examination of blood cells
2. Isolation of serum and plasma from blood
3. Antibody capture ELISA
4. Antigen capture ELISA
5. Blood grouping through agglutination
6. Antibody IgG purification
7. Detection of secretory IgA from saliva
8. Apoptosis determination using standard kits
9. Separation of peripheral blood mononuclear cells by Ficoll-Hypaque

Mapping of COs to syllabus

BCRT6015: REMEDIAL TEACHING & NET COACHING

BCSC6017: SCIENTIFIC WRITINGS AND COMMUNICATIONS (0-0-1)

Course Outcomes

CO 1: Assess published data, critically read, interpret, and present it (Analysing)
CO 2: Compare the strengths and weaknesses of publications (Evaluating)
CO 3: Develop skills in interpreting and evaluating scientific data (Creating)
CO 4: Demonstrate ethics in research and related good laboratory practices (Understanding)
CO 5: Relate the relevance of personality for boosting overall confidence (Understanding)

CO 6: Design paper writing based on advanced fields of research (Creating)

Activities-Lecture/Talk by students/Faculty/Outsourcing

1. Introduction to Good Laboratory practices
2. Development of personality skills and refinement of communication skills for scientific presentation and interviews
3. Presentation of research articles/classical papers by 3rd Semester
4. Problem solving and critical thinking session by giving the research problem and allow them to present strategy
5. Scientific communication and its ethics
6. Invited Talk

PROGRAMME: MASTER OF SCIENCE (MSC) BIOTECHNOLOGY

PROGRAMME OUTCOMES

PO 1: Critical Thinking: Inculcate critical thinking to carry out scientific investigation objectively. Formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. Critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

PO 2: Knowledge Skill: Equip the student with skills to analyse problems, formulate a hypothesis, evaluate and validate results, and draw reasonable conclusions thereof. Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge.

PO 3: Scientific Communication Skills: Imbibe effective scientific and/or technical communication in both oral and writing. Ability to show the importance of the subject as precursor to various scientific developments since the beginning of the civilization.

PO 4: Ethics: Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.

PO 5: Enlightened Citizenship: Create awareness to become an enlightened citizen with commitment to deliver one's responsibilities within the scope of bestowed rights and privileges.

PO 6: Analytical Reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyse and synthesise data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

PO 7: Multicultural Competence: Development of a set of competencies in order to enhance and promote the growth of multicultural sensitivity within universities. Integrating multicultural awareness such as race, gender, physical ability, age, income and other social variables, and by creating an environment that is, "welcoming for all students".

PO 8: Lifelong Learning: Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self- directed learning aimed at personal development, and adapting to changing academic demands of work place through knowledge/ skill development/ reskilling.

PO 9: Leadership Qualities: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination in a smooth and efficient way.

PO 10: Research Skills: Prepare students for pursuing research or careers in industry in concerned subject and allied fields. Capability to use appropriate software to solve various problems and to apply programming concepts of C++ and Mathematica/Matlab to various scientific investigations, problem solving and interpretation.

PROGRAMME SPECIFIC OUTCOMES:

PSO1: Confidence: Demonstrate a comprehensive understanding of chemical and biological structure, principles, techniques, and applications

PSO2: Knowledge based Skill: To develop better understanding and improve skills that would enable them to begin a career in research laboratories, industries as well as to generate self-employability

PSO3: Scientific Social Responsibility: To develop linkages between scientific community and society to build trust, partnership and responsibility of science towards achieving social goals

PSO4: Cell culture handling and transgenic technology: The programme will help in gaining knowledge on *in vitro* culture techniques for plant and animal cells which contributes in the development of transgenic plants and animals.

PSO5: Grasp of industrial and environmental aspects of Biotechnology: The programme will help in the understanding the application and working of pharmaceutical, and fermentation industry for healthcare and food products. It will also emphasise on environment protection and its long-term sustainability

PSO6: Scale-up and connect to advanced and modern concepts: The programme will update students about the most recent developments in the fields of OMICS, genome editing, systems biology, nano-biotechnology and nano-materials to stimulate scaling up to advanced learning.

BTRM0003: RESEARCH METHODOLOGY AND BIOSTATISTICS (4-0-0)

Course Outcomes

CO 1: Recall and classify the different forms of research – basic, applied, interdisciplinary, etc. Scientific literatures (Remembering)

CO 2: Summarize an understanding of various kinds of research, objectives of doing research, research process, research design and sampling, scientific problems (Understanding)

CO 3: Apply statistical methods of data analysis and interpretation. (Applying)

CO 4: Explain ethical conduct of research and its communication. (Analysing)

CO 5: Recommend adequate knowledge of hypothesis testing procedures, measurement, scaling techniques and quantitative data analysis (Evaluating)

CO 6: Produce a manuscript by conducting research work on original ideas, formulating research synopsis, research report, data analysis and meaningful interpretation of data (Creating)

Module I (15 lectures)

a. Scientific research- Definition, types: basic and applied research, interdisciplinary research, Steps involved in scientific research

b. Scientific literature primary and secondary literature, biological abstract, current content, review, monograph, peer-reviewed journals, e-resources; research and review articles; scientific communication- scientific paper, scientific posters

c. Scientific problems: What is scientific problem? Methods and techniques, research conditions, data types, techniques, repeatability, reproducibility and reliability, validity, effect measure and choice of statistical test, experimental protocol, experimental routine

d. Research design: Meaning, need for research design, features of a good design, Types of research design

Module II (5 lectures)

Brief introduction to ethics, scientific conduct and misconduct-plagiarism, authorship issues, investigation and punishment of scientific misconduct, ethics of animal and human research

Module III (15 lectures)

a. Introduction to Biostatistics: definition and applications of biostatistics;
b. Data-types and presentation: types of biological data, accuracy and significant figures;
c. Population and samples: populations, samples from populations, random sampling, variables and attributes, statistical errors.
d. Frequency distributions
e. Graphical representation of data: line diagram, bar diagram, pie chart, histogram
f. Measures of central tendency: the arithmetic mean, median and mode
g. Measures of dispersion: range, mean deviation, variance, standard deviation, standard error of mean, standard score

Module IV (6 lectures)

a. Permutations and combinations, sets
b. Probability: Introduction, counting possible outcomes, probability of an event, adding and multiplying probabilities
c. Probability distributions: Binomial, Poisson and Normal distribution

Module V (19 lectures)

a. Testing of hypothesis and goodness of fit: Null hypothesis, level of significance, errors of influence, Student's t-test,paired t-test, Fischer's test, Chi-square test, linear correlation and linear regression
b. Analysis of variance: variances of samples and their means, F distribution, partitioning of the total sum of squaresand degrees of freedom, models and types of ANOVA

Suggested Readings

1. Educational Research Planning, conducting and evaluating quantitative and qualitative research, 6th Edition, Creswell JW,2019, PP
2. Research Methodology in the medical and biological sciences, 1st Edition, Laake P, Benestad HB and Olsen BR. 2007,Academic Press, EP.
3. Research Methodology: Methods and technique, 2nd Edition, Kothari CR, 2008, NAIP
4. Research Methodology for Biological sciences. 5th t Edition, 2011, Gurumani N, MJPP
5. Introduction to Biostatistics, 5th Edition, Banerjee PK, 2014, SCCL
6. Biometry: The principles and practices of statistics in biological research, 3rd Edition, Sokal RR and Rohlf FJ, 1995, SFWHF
7. Biostatistical Analysis, 5th Edition, Zar JH, 2010, PPH.
8. Statistical Methods in Biology, 2nd Edition, Bailey NTJ, 1980, HP

CO 1	H				M
CO 2	H	M			M
CO 3			H	H	M
CO 4	M	H			H
CO 5			H	H	H
CO 6	L		M	M	M

BTGE0005: GENETIC ENGINEERING (3-0-1)

Course Outcomes

1. To understand the properties and function of different enzymes used in genetic engineering (Understanding)
2. To compare the different types of cloning and expression vector used in genetic engineering and its limitations(Analysing)
3. To understand the concepts regarding different hybridization techniques and applications (Understanding)
4. To acquire theoretical knowledge in the techniques, tools, and application of genetic engineering (Remembering)
5. To develop an ability to design and conduct genetic engineering experiments, as well as to analyse and interpret data (Applying)

Module I (10 lectures)

Restriction nucleases: Exo and Endonucleases: History, Restriction endonuclease nomenclature, classification of restriction endonuclease–typeI, typeII, and typeIII, cleavage patterns– sticky ends, blunt ends, applications; Modifying enzymes–ligases, kinases, RNAse, polymerases, phosphatases and methylases, RNA dependent DNA polymerase, Terminal Deoxynucleotidyl transferase

Module II (13 lectures)
Cloning vectors: Plasmids and plasmid vectors, phagemids, cosmids, artificial chromosome vectors, (YAC, BAC), E. Coli plasmid vectors– pBR322, pUC18, pET21, Bacterio-phage vectors–λ and M13, Cosmids, phagemids and Phasmids, Shuttle vectors-Yeast vectors, Baculo virus vector. Intein-based vectors; Inclusion bodies; Plant based vectors, Ti and Ri as vectors, Yeast vectors, Insertion and Replacement vectors, Expression vectors; Strategies for production of foreign proteins in E.coli, Yeast,animalcell,pMal;GST;pET-basedvectors;Proteinpurification;His-tag;GST-tag;MBP-tag

Module III (12 lectures)
Isolation of genomic and plasmid DNA, DNA cloning; Strategies forc onstruction of genomic and cDNA libraries, chromosome walking; screening of ibraries; Oligonucleotide, cDNA and antibody probes; The Southern, Northern, Western, North-Western, Zoo blots, Southwestern, Farwestern blotting and Colony hybridization, yeast-two hybrid system, c-DNA synthesis and cloning: mRNA enrichment, reverse transcription, DNA primers, linkers, adaptors and their chemical synthesis; Cloning interacting genes two-hybrid systems, cloning differentially expressed genes. Site directed mutagenesis and protein engineering

Module IV (10 lectures)
Maxam and Gilbert method and Sanger's method, Next generation sequencing, Applications of genetic engineering: Transgenic animals and plants, production of recombinant pharmaceuticals, gene therapy, disease diagnosis, Transgenic and gene knockout technologies: Vector engineering, strategies of gene delivery, gene replacement/augmentation, gene correction, gene editing, gene regulation and silencing

Suggested Readings
1. Principles of Gene Manipulation and Genomics, 7th Edition, Primrose SB and Twyman R, 2006, Wiley-Blackwell
2. Genomes 4,4th Edition, Brown TA,2017, Garland Science
3. Molecular Cloning: A Laboratory Manual,3rd Edition, Sambrook J and Russell DW, 2001, Cold Spring Harbor Laboratory Press

Mapping of COs to Syllabus

CO 2		H		
CO 3			H	
CO 4				H
CO 5	M	M	L	

BTBE0007: BIOPROCESS ENGINEERING (3-0-1)

Course Outcomes
1. Outline the principles of fermentation, design and operation of bioreactors for production of biomass and products (Understanding)
2. Compare strategies of bioprocess development for industrial production of bioproducts and specialized applications (Analysing)
3. Relate fermentation and related bioprocess development in food, industry and environment(Understanding)
4. Estimate the contribution and prospect of bioprocess engineering in commercial biotechnology (Evaluating)

Module I (8 lectures)
Introduction to bioprocess engineering; Isolation, preservation and maintenance of industrial microorganisms, strain improvement strategies media formulation for industrial fermentation, air and media sterilization; kinetics of microbial growth, Fermenter/bioreactor- types and classes, Designing of a fermenter/Bioreactor.

Module II (10 lectures)
Kinetics of operation of bioreactors -batch, fed batch and continuous bioreactor; Measurement and control of bioprocess parameters in a bioreactor – heat and mass transfer, aeration and agitation, scale up ans scale down; Biotransformation, Mixed microbial cultures, immobilized cells, Specialized bioreactors (pulsed, fluidized, photo bioreactors); Advanced and non-conventional bioprocesses (animal and plant cell culture, genetic engineering, tissue engineering)

Module III (12 lectures)
Downstream processing: Product recovery and purification, removal of microbial cells and solid matters, precipitation, filtration, centrifugation, cell disruption, extraction and purification-, chromatography, drying and crystallization, ; Industrial production of chemicals using biological aid: alcohols, acids (citric, acetic and gluconic), solvents (glycerol, acetone, butanol), antibiotics (penicillin, streptomycin, tetracycline) amino acids (lysine, glutamic acid), biotransformation of steroids and non-steroid compounds.

Module IV (15 lectures)

Food: Bakery and dairy products, wine, beer and other alcoholic beverages and formulated bio-products, Conventional and molecular breeding of plants for food production; Mushroom production; Single cell proteins; Probiotics; Food spoilage and preservation process

Environment: Techniques of bioremediation of industrial and medical effluent disposal; Phyto- remediation and myco-remediation; Bioremediation of heavy metals, oil spills, dyes and plastics.

Suggested Readings

1. Principles of Fermentation Technology. 2ns Edition, Stanbury PF, Whitaker A, Hall SJ., 1995, Butterwoth Heinemann.
2. Bioprocess Engineering: Basic Concepts. 2nd Edition, Shuler, ML and Kargi, F., 2002, Prentice Hall, PTR.
3. Industrial Microbiology, 1st Edition, Casida LE., 2007, John Wiley and Sons.
4. Microbial Biotechnology, 2nd Edition, Glazer AN and Nikaldo H., 2007, WH Freeman & Co.
5. Prescott and Dunn's Industrial Microbiology. 4th Edition, Reed, G., 2004, CBS Publishers, New Delhi

Mapping of COs to Syllabus

Course outcomes	Module I	Module II	Module III	Module IV
CO 1	H	H	M	
CO 2	M	H	H	
CO 3	M	M	H	H
CO 4	H	H	H	H

BTTE0009: THERMODYNAMICS AND ENZYMOLOGY (3-0-1)

Course Outcomes

1. To relate the entropy to law of thermodynamics and Free energy and its relation to chemical equilibria (Evaluating)
2. To understand the fundamentals of enzyme structure, properties and function (Understanding)
3. To compare the different types of methods for protein purification (Analysing)
5. To understand the rate of reactions and order of reactions, and inhibitions and their kinetics (Understanding)
6. To describe the structure, functions and the mechanism of different enzymes (Evaluating)
7. To understand the application of enzymes (Understanding)

Module I (5 lectures)

Laws of thermodynamics, reversible and irreversible processes, entropy, enthalpy, internal energy, free energy and equilibrium constant, Gibbs free energy equation, determination of free energy change of under standard and non-standard conditions, high energy compounds, coupled reactions, determination of feasibility of reactions.

Module II (5 lectures)

Classification, nomenclature and general properties like effects of pH, substrate and temperature on enzyme catalyzed reactions. Isolation and purification of enzymes, Salting out of protiens, Isoelectric point, Electrophoresis of protein.

Module III (7 lectures)

Kinetics of enzyme catalyzed reaction: Single substrate reactions, bi-substrate reactions, concept of Michaelis-Menten, Determination and significance of kinetic constants, Limitations of Michaelis-Menten Kinetics, Briggs Haldane relationship

Module IV (10 lectures)

Activation energy and Arrhenius concept, Binding energy, Enzyme catalysis: enzyme specificity and the concept of active site, determination of active site. Stereospecificity of enzymes, Mechanism of catalysis: Proximity and orientation effects, general acid-base catalysis, concerted acid – base catalysis, nucleophilic and electrophilic attacks, catalysis by distortion, metal ion catalysis. Theories on mechanism of catalysis, Inhibition of enzyme activity: Competitive-cite: succinate on Malonate dehydrogenase a s e x a m p l e , n o n - c o m p e t i t i v e -cite: lodoacetamide on triose phosphate dehydrogenase and EDTA as example: Suicide inactivation-action of penicillin on bacterial cell wall biosynthesis as an example.

Module V (9 lectures)

Mechanism of enzymes action: mechanism of action of lysozyme, chymotrypsin, carboxypeptidase and DNA polymerase. Multienzymes system, Mechanism of action and regulation of pyruvate dehydrogenase and fatty acid synthetase complex. Coenzyme action.

Module VI (9 lectures)

Enzyme regulation: Allosteric enzymes, Feedback Regulation, Sigmoidal kinetics and their physiological significance, Symmetric and sequential modes for action of Allosteric enzymes. Reversible and irreversible covalent modification of enzymes, cascade systems, Immobilised enzymes and their industrial applications, Ribozyme (catalytic RNA) and Abzyme (use of antibody as enzyme) - definition only.

Suggested Readings

1. Lehninger Principles of Biochemistry, 6th Edition, Nelson DL and Cox MM,2013, W. H. Freeman
2. Physical Chemistry, Rakshit P C,2014, Sarat Book House
3. Biochemistry (Biochemistry (Berg)), 6th Edition, Berg JM,Tymoczko JL and Stryer L ,2006, W. H. Freeman
4. Fundamentals of Biochemistry: Life at the Molecular Level,4th Edition, Voet D,2012, John Wiley & Sons Inc
5. Textbook of Biochemistry with Clinical Correlations, 7th Edition, Devlin TM,2010, Wiley-Liss

CO 3		H				
CO 4			H	H		
CO 5					H	H
CO6						M

BTCA0010: COMPUTER APPLICATIONS AND BIOINFORMATICS (3-0-2)

Course Outcomes

1. To recall the basics of operation of computer and its related softwares, languages (Remembering)
2. To utilize concepts of C- programming language for preparing application based programs.(Applying)
3. To demonstrate the working principle of the World Wide Web and the internet protocols involved (Understanding)
4. To inspect the role of the biological resources in sequence alignment, methods of gene prediction, phylo-genetic tree construction and other tools (analysing)
5. To perceive the importance of methodologies involved in protein structure prediction, structure analysis tools and drug designing (evaluating)

Module I (10 lectures)

Basic computer organization, Processor and memory, secondary storage devices, Input-Output devices, Computer software, Computer language; Basic Ideas in Programming in C: Variables, data types, Constants, Keywords, Input/output, Control Statements, Functions, Structures; Operating system–Basic commands in Linux.

Module II (5 lectures)

Introduction to Spreadsheet, presentation software, document and word processing. WorldWideWeb, Client-server organization; Internet Protocols-FTP, HTTP, Telnet; Search engines- search concepts

Module III (12 lectures)

Concept of databases: Biological Databases-Primary, secondary, composite databases; Databases for Literature, Sequence and structure; Searching and their retrieval. DNA and Protein sequence alignments- Pairwise alignment, dot plot, global and local alignment algorithms-Needleman and Wunsch algorithm, Smith-Waterman algorithm; Multiple sequence alignment – progressivealignment and alterative alignment algorithms; PAM and Blosum scoring matrices; Multiple sequence alignment-based database searching– PSI-Blast

Module IV (9 lectures)

Gene prediction approaches in prokaryotic and eukaryotic genomes, Methods of gene prediction, Introduction to gene prediction tools, Regulatory sequence analysis, Oligo design and analysis tool. Bioinformatics for phylogenetic analysis. Character based and distance based phylogenetics tree, interpretation of phylogenetic tree, Construction of phylogenetic tree from distance matrix Human genome project; concept of microarray and principles of microarray data analysis

Module V (9 lectures)

Structural biology and Protein structure prediction, Methods of protein structure prediction: Homology modeling, Threading and Ab initio methods, Molecular visualization tools- Rasmol, Pymol and Swiss pdb viewer. Structure analysis tools -VAST and DALI. Stages of Drug development , Definition of drug, target and its properties Steps in Drug Designing, Lead identification, Types of drug designing, ADME along with concept of Lipinski rule of five and drug likeliness, Molecular docking, QSAR

Suggested Readings

1. Bioinformatics: Sequence and Genome analysis, Mount D, Cold Spring Harbor Laboratory Press.
2. Essential Bioinformatics. Xiong J, Cambridge University Press
3. Introduction to Bioinformatics, Attwood TK and Parry-Smith DJ, Pearson Education
4. C- Programming made easy. Rajaram R. Universities Press.
5. Bioinformatics Principles and Applications, Ghosh Z and Mallick B. Oxford University Press
6. Bioinformatics-Students Companion. Kalbulla Syed Abrahin, Guruswami Gurusubrmanian, Zothansanga, Ravi Prakash

Yadav, Nachimuthu Senthil Kumar, Shunmugiah karutha Pandian, Probodh Borah, Surendra Mohan, Springer

Mapping of COs to Syllabus

BTPB0011: PLANT BIOTECHNOLOGY (3-0-2)

Course Outcome

1. To inspect the relevance of plant tissue culture and their application in *in vitro* propagation of indigenous as well genetically manipulated plants (Analysing)
2. To perceive the techniques of gene transfer by biological and non- biological methods in developing transgenic plants (Evaluating)
3. To examine the role of transgenic plants in developing plants carrying desirable traits and its related advanced techniques (Analysing)

Module I (15 lectures)

Definition, brief history, principle and significance of tissue culture; Cellular totipotency: Cytodifferentiation: Organogenic Differentiation: induction, factors affecting shoot bud differentiation; Cell suspension Culture, Callus Culture, Embryo Culture, Haploid Culture: microspore and macrospore culture. Triploid culture: Endosperm Culture, Protoplast: isolation, Culture and Fusion; Somatic hybridization and cybridization; Somatic Embryogenesis and Synthetic Seed Production; Androgenesis and its applications in genetics and plant breeding; Germplasm conservation and c ryopreservation.

Module II (15 lectures)

Introduction to transgenic plants, methods of gene transfer – Agrobacterium tumefaciens mediated, Agrobacterium rhizogenes mediated; Direct gene transfer methods – Chemical, Physical and alternative methods. Selectable markers, reporter gene and promoter in plant vectors

Module III (15 lectures)

Transgenic plants, characterization of transgenics; chloroplast transformation; marker-free methodologies; advanced methodologies- cisgenesis, intragenesis and genome editing .Strategies for Introducing genes of biotic and abiotic stress resistance in plants (Herbicide resistance; drought, Salinity, thermal stress, flooding and submergence tolerance, insect resistance, virus resistance) longer shelf life (including strategies for suppression of endogenous genes), male sterility, enhanced nutrition (golden rice), edible vaccines molecular pharming - concept of plants as biofactories, production for industrial enzymes and pharmaceutically important compounds.

Suggested Readings

1. Plant tissue and Organ culture fundamental methods. Gamburg OL, Philips GC., Narosa publications
2. Text book of BiotechnologySingh BD., Kalyani publishers

Mapping of COs to Syllabus

Course outcomes	Module I	Module II	Module III
CO I	H		
CO 2		H	M
CO 3	M	M	H

BTAB0012: ANIMAL BIOTECHNOLOGY (3-0-1)

Course Outcomes

1. Have a basic understanding on different types of media composition, different cell culture and its characteristics (Understanding)
2. Applications of various techniques involved in improvement of animal (Applying)
3. Application of Genetic engineering methods for production of important compounds and treating diseases (Applying)

Module I (10 lectures)

General considerations of cell culture: Aseptic condition, Media, Balanced salt solution, Carbon dioxide incubator, feeder layer,

serum, growth factors; Types of culture media (defined and undefined media), culture media composition; role of different media. Types of cell culture –organ, Organotypic, single cell, Histotypic/3D, primary cells, cell lines, adherent, suspension cell cultures, stem cell culture, embryonic stem cell culture; Characteristics of cells in culture; measurement of cell viability, apoptosis, senescence; Scaling up of animal cell culture.

Module II (8 lectures)
Embryology: Collection and preservation of embryos; culturing of embryos; micromanipulation technology and fertilization in animals; Equipment used in micromanipulation; Sperm sorting; Enrichment of semen for x (female) or y (male) sperm; Biotechnology Techniques in Animal Breeding: Artificial Insemination, In Vitro Fertilization and embryo transfer.

Module III (12 lectures)
Transgenic animal: methods of production and application; transgenic animals as models for human diseases; transgenic animals in livestock improvement; industry, biomedicine chimera mice production; Gene knockouts, production of human antibodies in animals; gene therapy for animal diseases; Animal cloning and ethical issues.

Suggested Readings

1. Animal Biotechnology, 2nd Edition, Ranga MM,2018, Agrobios India Limited
2. Culture of Animal Cells: A Manual of Basic Technique, 5th Edition, Freshney IR, 2005, Wiley
3. Plant tissue and Organ culture fundamental methods, Gamburg OL, Philips GC, 2005, Narosa publications
4. Text book of Biotechnology,5th Edition, Singh BD, 2016, Kalyani publishers

Mapping of COs to Syllabus

Course outcomes	Module I	Module II	Module III
CO 1	H		
CO 2		H	M
CO 3			H

BTFF0013: FERMENTATION AND FOOD MICROBIOLOGY (1-0-0)

Course Outcomes

1. Demonstrate the understanding of the principles of fermentation and food microbiology in skill development (Understanding)
2. Construct experimental platforms with fermentation systems to learn the making of commercial food products (Applying)
3. Analyze experimental data interpret results to arrive at credible conclusions (Analysing)

Module I (2 lectures)
Production of wine from fruit juice (Monitoring of sugar reduction during wine production; Estimation of alcohol concentration in wine)

Module II (2 lectures)
Production of traditional rice beer of ethnic communities of NE region (microbial isolation; growth monitoring, alcohol concentration)

Module III (1 lecture)
Estimation of vicinal diketone in beer

Module IV (1 lecture)
Microbial production of curd (assay milk quality by MBRT test; Isolation and identification of *Lactobacillus* from fermented dairy products; lactic acid estimation

Module V (2 lectures)
Making of bread and other bakery products by fermentation

Module VI (1 lecture)
Pickled products: Making of traditional pickles of India (NE region); production of Sauerkraut; fermented fish and other products

Module VII (2 lectures)
Fermentation in flavour and fragrance (tea processing; essential oil)

Module VIII (2 lectures)
Microbial enzyme production *via* liquid and solid-state fermentation

Module IX (1 lecture)
Sterility testing in food products (microbial examination of food)

Suggested Readings

1. Principles of Fermentation Technology. 2nd Edition, Stanbury PF, Whitaker A, Hall SJ. 1995, Butterwoth Heinemann
2. Industrial Microbiology, 1st Edition, Casida LE., 2007, John Wiley and Sons.
3. Prescott and Dunn's Industrial Microbiology. 4th Edition, Reed, G. 2004, CBS Publishers, New Delhi

Mapping of COs to Syllabus

Course outcomes	Module1	Module2	Module3	Module4	Module5	Module6	Module7	Module VIII	Module9

CO 3	H	H	H	H	H	H	H	H	H

BTIE0014: IPR AND ENTREPRENEURSHIP (1-0-0)

Course Outcomes

1. Interpret different IPR, laws governing IPR and their management in biosciences (Understanding)
2. Relate the fundamentals of business and entrepreneurship to biosciences (Understanding)
3. Apply the understanding of IPR and entrepreneurship in innovation management and start-up (Applying)

Module I (9 lectures)

Concept of Intellectual Property; Introduction to intellectual property rights and its types: patents, trademarks, copyright and related rights, industrial design, geographical indications, Protection of new varieties of plants and plant breeder's rights; World Intellectual Property Organization (WIPO) and its role, PCT; Indian Patent Act 1970 R u l e s and amendments thereof; Drafting and filing patent applications; management and practical use of IP rights, including licensing, enforcement and ethics.

Module II (6 lectures)

Entrepreneurship essentials: opportunities, ideas and Innovation; feasibility and market research; business plan; Building a business: business models, teams, pitching and investment, finance; Start-up ecosystem; Technology and bio-entrepreneurship – case studies.

Suggested Readings

1. Biotechnology and Intellectual Property Rights: Legal and Social Implications, 1st Edition, Singh, KK., 2015, Springer, India.
2. IPR, Biosafety and Bioethics, 1st Edition, Goel D, Parashar S, 2013, Pearson Publishers.
3. Fundamentals of Entrepreneurship. 3rd Edition, Nandan H, 2007, Phi Learning, New Delhi,.
4. Entrepreneurship and Small Business Management, 2nd Edition, Mariotti S and Glackin C, 2016, Pearson Publishers.

Mapping of COs to Syllabus

Course outcomes	Module I	Module II
CO 1	H	
CO 2		H
CO 3	M	M

BTPE0015: PHARMACEUTICAL & ENVIRONMENTAL BIOTECHNOLOGY (3-0-0)

Course Outcomes

1. Choose suitable methods to distinguish the sources, types and composition of waste with methods of handling and sampling strategies (Remembering)
2. Demonstrate the concepts of environment, regulation of population and associated factors (Understanding)
3. Explain the basic concepts of pharmacology used in drug formulation (Understanding)
4. Inspect the working structure of pharmaceutical industries and role of regulatory bodies (Analysing)
5. Plan the management of the environmental pollution load with respect to its physical properties and associated critical considerations in view of emerging technologies (Applying)
6. Appraise the various steps involved in clinical trials and various approaches for toxicity studies (Evaluating)
7. Interpret and infer the relationships among the different constituents of the environment (Analysing)

Module I (9 lectures)

Pharmacology – history, nature and source of drug, classification of drugs, Dosage forms, Routes of drug administration, site of action of drug, Factors modifying drug action. Concept of Pharmacodynamics, Mechanism of action of drug, drug Interaction, adverse drug reaction, Pharmacogenetics, Principles of pharmacokinetic, models of pharmacokinetics, Transmembrane transport of drug, Drug absorption pathway, Bio-availability of drug, Drug metabolizing enzyme, Excretion of drug. Biological half-life of the drug, Bioassay and therapeutic drug monitoring

Module II (7 lectures)
Hit to lead optimization by Preclinal studies and clinical trials, Approaches to screen lead molecules, source of lead molecules, Clinical trials- Ethical considerations, regulatory requirements of clinical trials and phases of clinical trials. Preclinical Toxicology- Acute, subacute and chronic toxicity, Anima tests, prodrug, Formulation and drug delivery systems.

Module III (7 lectures)
Regulatory Authorities and regulatory application- Overview, policies and Procedure. Role of various regulatory organization- USFDA, WHO, CSDA. ICMR guidelines for drug discovery. Drug and Cosmetic Act, India.Good manufacturing Practices, Structure of Pharmaceutical Industry, Manufacturing small molecule APIs and large molecule APIs, Pharmacogenomics -the scope of personalized medicine

Module IV (10 lectures)
Basic concepts of environment viz. atmosphere, hydrosphere, lithosphere; biotic environment; biotic and abiotic interactions; energy flow and nutrient cycling (C,N,P); Concept of habitat and niche; niche width and overlap; fundamental and realized niche; resource partitioning; character displacement; Population-environment relationship modules *viz*. Characteristics of a population; Survivorship graph curves; population dynamics; population density curves; population regulation strategies (r and K selection); meta population; age structured population.

Module V Environmental monitoring and pollution treatment (12 lectures)
Pollution types and monitoring approaches: Environmental pollution; sources (air, water, soil); pollutants and its types; standard criteria of pollution monitoring; biotechnological approaches of environmental monitoring viz. plant based, animal based, cell biology based, molecular biology-based approaches; pollution management.
Pollution treatment methodologies: sewage/waste water treatment; primary, secondary and tertiary methods of treatment; sources and characteristics of solid waste; Solid waste stabilization (aerobic and anaerobic treatment); Bioremediation strategies (in-situ and ex situ bioremediation); role of microorganisms in bioremediation; Significance of genetic engineering in degradation of toxic compounds

Suggested Readings

1. Microbial Ecology, 2nd edition, Campbell, R., 1983, Blackwell.
2. Microorganisms Function, Form and Environment, 2nd Edition, Hawker, L. E. and Linton, A. H., 1989, Edward Arnold.
3. Environmental Microbiology, 2nd edition, Mitchell, R., 1992, John Wiley & Sons.
4. Rang & Dale's Pharmacology 9th Edition James Ritter Rod Flower Graeme Henderson Yoon Kong Loke David MacEwan Humphrey Rang. Elsevier Publishing, 2019
5. Essentials of Medical Pharmacology, 8th Edition, KD Triparthi. Jaypee Brothers Medical Publisher
6. Biotechnology and Biopharmaceuticals: Transforming Proteins and Genes into Drugs. 2nd Edition, Rodney J Y Ho., Wiley Publishers, 2013

BTTB0016: TRENDS IN BIOTECHNOLOGY (4-0-0)

Course Outcomes
1. Recall the fundamentals of biotechnology, biochemistry, molecular biology to better comprehend the recent topics in biotechnology (Remembering)
2. Relate with developments in Omic, particularly Genomics, Transcriptomics, Proteomics, Metabolomics and other emerging fields of study (Understanding)
3. Assess the global and Indian scenario of innovation and commercial biotechnology and their impact on human life and environment (Evaluating)
4. Examine the new and emerging frontiers in biotechnology at an interdisciplinary level (Analysing)

Module I (30 lectures)
Genomics: Genome sequencing, History of sequencing, Next Generation Sequencing (NGS), whole genome sequencing, model organisms, genome projects, microarrays; epigenomics, pharmacogenomics, comparative genomics, metagenomics, and their

applications
Transcriptomics ESTs, SAGE, NGS(RNASeq); metatranscriptomics, alternative splicing, non- coding RNA
Proteomics: 2D PAGE, X-ray crystallography, Mass spectrometry including MALDI-TOF, protein microarrays, recent developments in secretomics, interactomics; applications of proteomics in drug discovery
Metabolomics: Metabolome diversity; Metabolite profiling; High throughput analytical techniques for metabolome analysis (GC-MS, LC-MS, NMR), applications
Other emerging Omics – Lipidpomics, Glycomics, Phenomics, etc.
Bioinformatics and statistical analysis in Omics (PCA, HCA, PLSDA, Heatmap and other tools of analysis and data representation)

Module II (10 lectures)
Genome editing, synthetic biology, molecular evolution, nanobiotechnology and advanced biomaterials, structural and computational biology, gene ontology, systems biology

Module III (10 lectures)
Global and Indian biotech sector, Segments of biotech market, Bioprospecting in biotechnology, ethical concerns; Commercial production of industrial bio-molecules; bio-products from both natural and synthetic source and their commercialization, vaccines and therapeutics, diagnostics; commercial plant tissue culture including automation, strategies for environment cleanup and their commercialization.

Module IV (10 lectures)
New colors of biotechnology: Blue (aquatic and marine life); Yellow (food and nutrition), White (gene-based bio-industry) Gold (bioinformatics and nanobiotechnology), Brown (extreme environments), Violet (bioethics and laws) Purple (Inventions and IPR), Dark (bio-terrorism, bio-weapons)

Suggested Readings
1. Principles of Gene Manipulation and Genomics, 7th Edition, Primrose, S.B. and Twyman, R., 2006, Wiley – Blackwell Publishers.
2. Genome, Trascriptome and Proteome Analysis. 1st Edition, 2001, Bernot, A., John Wiley & Sons Ltd.
3. Omics: Biomedical Perspectives and Applications. 1st Edition, Barh, D, Blum, K and Madigan, MA, 2012, Taylor & Francis Group.
4. Industrial Biotechnology: Products and Processes, 1st Edition, Wittman, C and Liao, JC, 2016, Wiley Publishers

Mapping of COs to Syllabus

CO 4		H		H

BTAT0017: AGRICULTURE TECHNOLOGY (2-0-0)

Course Outcomes
1. Relate with agriculture as a multidisciplinary field of scientific study (Understanding)
2. Analyze the concepts of farming and agricultural technology and their impact on agriculture. (Analysing)
3. Apply principles of agriculture in farm and agribusiness management (Applying)

Module I (9 lectures)
Scope of agriculture and agro-economy of India, History of Indian agriculture, Green Revolution, Food security, Agencies involved in agricultural development (India and Global)
Introduction to disciplines of agricultural sciences: Agronomy, Horticulture, Plant Breeding and Genetics, Agricultural Biotechnology, Biochemistry and Microbiology, Physiology, Plant Pathology, Entomology, Soil Science, Water technology, Agricultural extension, Agricultural engineering, Agricultural economics and statistics, Meteorology, Seed technology, Plantation crops, Animal husbandry and Fishery

Module II (14 lectures)
Nature of soil, Soil chemistry, biology and biochemistry, Soil fertility and nutrient management, Soil analysis techniques, bio-fertiliser, organic farming, soil conservation
Principles of irrigation and water management, Water analysis techniques, Water stress, Dryland agriculture and watershed management; Flood stress, Salinity stress
Nutrition, Food testing, Crop varietal improvement, Crop breeding techniques, Seed technology, Crop production and protection techniques including biotech, post-harvest management, Farm machinery and equipment; Innovation in agriculture

Module III (7 lectures)

Farm management principles, integrated farming systems, agricultural market, agro-based industry, agribusiness and local farm economy, Government schemes, Credit, Crop insurance, Soil health cards.

Suggested Readings

1. Handbook of Agriculture, 6th Edition, ICAR, 2016, Indian Council of Agriculture and Research, New Delhi.
2. Fundamentals of Agriculture, 1st Edition, Singh KP, 2014, Kalyani Publishers, New Delhi.
3. Agricultural Microbiology, 2nd Edition, Rangaswami, G., Bagyaraj, D.J. 2005, Prentice Hall India Learning Private Limited, NewDelhi.
4. Textbook of Agricultural Biotechnology, 1st Edition, Nag, A., 2008, Prentice Hall India Learning Private Limited, New Delhi.

CO 2	H	H	
CO 3		M	H

LABORATORY COURSES

BTAP6003: ANIMAL BIOTECHNOLOGY LAB

Course Outcomes

1. To understand the principle of the techniques (Understanding)
2. To prepare culture media and cell cultures (Analysis)
3. Analysis of the data (Analysis)
4. To develop research aptitude (Applying)
5. To develop writing skill (Applying)
6. To develop technical skills (Applying)

List of Experiments

1. Isolation of lymphocytes
2. Cell viability by using tryphan blue.
3. Isolation of genomic DNA from animal cells
4. Preparation of animal cell culture media and Filter sterilization
5. Preparation of single cell suspension from spleen/liver/thymus
6. Quantitation of animals cells using hemocytometer

Suggested Readings

1. John R W Masters Animal Cell Culture: A Practical Approach, Fifth Ediction
2. Hirenkumar Sherathiya (Author), 2012, Practical manual for Plant Tissue Culture, Munich, GRIN Verlag,

CO 3	L	H	M			H
CO 4	L	L	L	L	L	L
CO 5	L	L	L	L	L	L
CO 6	H	M	H	H	H	H

***P: Practical**

BTGE6004: GENETIC ENGINEERING LAB

Course Outcomes

1. To understand the different types of techniques used in genetic engineering experiments(Understanding)
2. To develop technical skills (Applying)
3. To interpret experimental datas (Evaluating)
4. To develop research aptitude (Applying)
5. To develop writing skill (Applying)

List of Experiments

1. Transformation
2. Cloning in plasmid/ Phagemid vectors
3. Gene expression in *E. coli* and analysis of gene product
4. Silver staining of gels (protein)
5. RFLP (Restriction fragment length polymorphisms)
6. RAPD (Random Amplification of Polymorphic DNA)

Suggested Readings

Molecular Cloning: A Laboratory Manual,3rd Edition, Sambrook J and Russell DW, 2001, Cold Spring Harbor LaboratoryPress

Mapping of COs to Syllabus

Course outcomes	P1	P2	P3	P4	P5	P6

CO 4	M	M	M	M	M	M

CO 5	L	L	L	L	L	L

***P: Practical**

BTBE6006: BIOPROCESS ENGINEERING LAB

Course Outcomes

1. Recall the theoretical topics in bioprocess engineering (Remembering)
2. Experiment with fermentation systems for estimation of biomass and product formation (Applying)
3. Analysing data from the scientific experiments and interpret results (Analysing)

Syllabus

1. Parts and design of fermenter
2. Media for Industrial Fermentation
3. Isolation, preservation and maintenance of industrial microorganisms
4. Solid state fermentation
5. Submerged fermentation
6. Production and estimation of protease
7. Production and estimation of amylase
8. Growth kinetics for batch culture
9. Production and quantification of alcohol using yeast
10. Lactic acid fermentation process

Suggested Readings

1. Principles of Fermentation Technology. 2ns Edition, Stanbury PF, Whitaker A, Hall SJ., 1995, Butterwoth Heinemann.
2. Bioprocess Engineering: Basic Concepts. 2nd Edition, Shuler, ML and Kargi, F., 2002, Prentice Hall, PTR.
3. Industrial Microbiology, 1st Edition, Casida LE., 2007, John Wiley and Sons.
4. Microbial Biotechnology, 2nd Edition, Glazer AN and Nikaldo H., 2007, WH Freeman & Co.
5. Prescott and Dunn's Industrial Microbiology. 4th Edition, Reed, G., 2004, CBS Publishers, New Delhi

Mapping of COs to Syllabus

Course outcomes	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10

***P: Practical**

BTDI6007: DISSERTATION PHASE I (0-0-2)

Course Outcomes

1. Develop a scientific mindset with the capacity for analytical and innovative thinking (Creating).
2. Develop writing skill, referencing and citations for effective communication (Applying).
3. Improve communication and creative expression skills to articulate scientific ideas (Creating).
4. Examine the research gap in the related field and formulate strategies to address the same (Analysing).

Syllabus

1. Familiarization with research topic and methodologies by a thorough literature review.
2. Writing of review of literature to brush up already existing knowledge on a given area.
3. Formulate a research hypothesis and a proposed workplan.
4. Presentation of the research topic at department level and submission of literature review.

Suggested Readings

Scientific review and research articles published in respective specialized area of research.

Mapping of Course outcomes to Syllabus

Course outcomes	P1	P2	P3	P4
CO 1	H	H		
CO 2		H	H	
CO 3		H	H	H
CO 4	L	M	L	H

***P: Practical**

BTDI6008: DISSERTATION PHASE II (0-0-16)

Course Outcomes

1. Support the research hypothesis with experiments executed ethically (Evaluating).
2. Develop skill to independently carry out a research in the laboratory (Creating).
3. Examine the methodology, analyse results, and defend the research work (Analysing).

Syllabus

1. Execute a scientific dissertation based on the proposed plan in Phase 1 through bench work.
2. Present and report data at various stages of the research work to the assigned supervisor.
3. Analysing the results, correlating it with different experiment performed during the dissertation.
4. Present the findings in a department level to internal and external examiners, and submission of completed thesis.

Suggested Readings

Scientific review and research articles published in respective specialized area of research.

Mapping of COs to Syllabus

CO 1	H	L	M	
CO 2	H	M	H	L
CO 3		H	H	H

***P: Practical**

BTTE6009: THERMODYNAMICS AND ENZYMOLOGY LAB

Course Outcomes

1. To understand the principle of the experiments on enzyme activity (Understanding)
2. To conduct an experiment on enzyme activity (Applying)
3. To analyse the effect of different physicochemical condition on enzyme activity (Analysing)
4. To interpret experimental datas (Evaluating)
5. To develop research aptitude (Applying)
6. To develop writing skill (Applying)

Syllabus

1. Effect of pH on amylase enzyme activity
2. Effect of temperature on amylase enzyme activity
3. Determination of Km and V_{max} of salivary amylase enzyme
4. Assessment of inhibitor on enzyme activity.
5. Assessment of activatoron enzyme activity.

Suggested Readings

1. Introductory Practical Biochemistry, Sawhney SK and Singh R, 2001, Narosa Publishing
2. An Introduction to Practical Biochemistry,3rd Edition, Plummer D, 2017, McGraw Hill Education

Mapping of COs to Syllabus

Course outcomes	P 1	P 2	P 3	P 4	P 5
CO 1	H	H	H	H	H
CO 2	H	H	H	H	H
CO 3	H	H	H	M	M
CO 4	H	H	H	H	H
CO 5	M	M	M	M	M
CO 6	L	L	L	L	L

***P: Practical**

BTCA6010: COMPUTER APPLICATIONS AND BIOINFORMATICS LAB

Course Outcomes

1. To construct various application program by using the concepts of C programming (Applying)
2. To demonstrate the usage of basic commands for operation in LINUX systems (Understanding)
3. To execute sequence alignment, primer designing, gene prediction phylogenetic tree construction by utilizing thevarious

biological database and tools (Evaluating)

4. To build the 3D protein structures by homology modeling methods, visualize it to subject to molecular docking experiments (Creating)

Syllabus

1. Programs of C language
2. Introduction to basic commands used in LINUX operating systems
3. Introduction to various databases available, their usage in sequence searching, retrieval available in databases
4. Sequence alignment
5. Introduction to Gene prediction tools
6. Primer designing and analysis
7. Phylogenetic Analysis based on sequence alignment data and RAPD/ protein profile data
8. Visualization of structures of protein, ligands in databases and their molecular docking
9. Homology modeling

Suggested Readings

Bioinformatics. A Practical Approach. Shui Qing Ye, Chapman and Hall/CRC

Mapping of COs to Syllabus

Course outcomes	P1	P2	P 3	P 4	P5	P 6	P 7	P 8	P 9
CO1	H								
CO2		H							
CO3			M	H	H	H	H		
CO4			M					H	H

***P: Practical**

BTIV6011: INDUSTRIAL/LABORATORY VISIT

BTBP6011: PLANT BIOTECHNOLOGY LAB

Course Outcome

1. To design the composition of plant media and solution (Creating)
2. To develop various techniques of plant tissue culture. (Applying)
3. To determine the application of the various techniques used in plant tissue culture (Analysing)

Syllabus

1. Preparation of Plant tissue culture media and Stock solutions
2. Callus induction, Shoot/ Root induction – organogenesis
3. Cell suspension culture
4. Haploid production – Anther and ovule culture
5. Artificial seed production
6. Protoplast fusion by PEG

Suggested Readings

Hiren Kumar Sherathiya Practical manual for Plant Tissue Culture, Munich, GRIN Verlag.

Mapping of COs to Syllabus

Course outcomes	P1	P2	P3	P4	P5	P6
CO 1	H	M	M	M	M	M
CO 2	M	H	H	H		
CO 3					H	H

***P: Practical**

BTPE6012: PHARMACEUTICAL & ENVIRONMENTAL BIOTECHNOLOGY LAB

Course Outcomes

1. Experiment with handling animals and the routes of injections (Applying).
2. Determine the techniques of evaluation of sterility of pharmaceutical products(Evaluating)
3. Design experiments for testing cyto-toxicity of pharmaceutical products (Creating)
4. Test for the physical properties of wastewater and solid waste (Analysing)
5. Design protocol to estimate the level of pollution in water and solid (Creating)

6. Determine an appropriate method for waste management (Evaluating).

Syllabus

- Demonstration of method of injecting drugs by various routes.
- Sterility testing methods for pharmaceutical products
- Assessment of cyto-toxicity of drug by mitotic index
- Assay of vitaminB_{12} in commercially available capsules/tablets.
- Determination of pH and conductivity of wastewater.
- Determination of pH and conductivity of solid waste.
- Determination of BOD of wastewater samples.
- Determination of COD of wastewater samples.

Suggested Readings

1. Chandrakant Kokare. Pharmaceutical Biotechnology Experiments and Techniques, Nirali Prakashan, Fifth Edition
2. Microorganisms Function, Form and Environment, 2nd Edition, Hawker, L. E. and Linton, A. H., 1989, Edward Arnold.
3. Environmental Microbiology, 2nd edition, Mitchell, R., 1992, John Wiley & Sons.

CO3		M	H	M				
CO4					H	H		
CO5							H	H
CO6					M	H	M	M

***P: Practical**

BTCL6014: CLINICAL LABORATORY TECHNIQUES (0-0-1)

Course Outcome

1. Perform the experiments necessary for careers in research and diagnostic laboratories. (Applying)
2. Detect Inflammation which could help them in diagnoses of underlying health condition (Analyzing)
3. These diagnostic tests will help learner to analyze the presence of pathogenic agents and guide them for further screening (Analyzing)
4. Analyze and correlate hemoglobin with different health conditions and can guide the patient for further diagnostic test (Analyzing)
5. Developing methods of identification of clinically important microorganisms and study response to antibiotics (Applying).

Syllabus

1. Good Laboratory practices
2. Determination of blood groups (A, B, O and Rh system)
3. Determination of total erythrocyte count, total leucocyte count and determination of platelet count
4. Estimation of sugar by DNS Assay
5. CRP estimation in blood
6. Antigen and antibody detection ELISA
7. Haemoglobin estimation in blood
8. Preparation of microbiological media
9. Isolation of microorganisms from a clinical sample.
10. Staining techniques and microscopic examination of microbial cells.
11. Antibiotic susceptibility testing

Suggested Readings

1. Laboratory Manual for Practical Biochemistry, 2nd Edition, Ganesh MK, Shivaraja SYM, 2013, JB
2. Textbook of Practical Physiology, 5th Edition, Pal GK, Pal P, 2001, UP
3. Practical Microbiology, Maheshwari DK, 3rd Edition, 2002, SCP

Mapping of COs to syllabus

Course outcomes	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11

***P: Practical**

BTBB6015: BASIC BIOINFORMATICS (0-0-1)

Course Outcome

1. To recognize the importance of various types of biological databases (Remembering)
2. To apply the bioinformatics tools for performing the different types of sequence alignments (applying)
3. To construct the phylogenetic tree by using various strategies (Creating)

Module I

Definition of Bioinformatics and introduction to Biological databases, classification, Concept of nucleotide sequence, protein sequence and sequence alignments, types

Module II

Features of Phylogenetic tree, types of trees, interpretation of tree.

Module III

Nucleic acid databases, Protein databases, Small molecules/ Ligand databases and literature databases, Searching of sequences and retrieval of sequences, Pairwise sequence alignment and multiple sequence alignment using BLAST, Introduction to MEGA sequence alignment tool

Module IV

Sequence based phylogenetic tree construction using BLAST, Phylogenetic tree construction from chromatogram of sequencing results using MEGA & BIOEDIT tool and tree construction from RFLP profile and protein profile using DendroUPGMA

Suggested Readings

1. Introduction to Bioinformatics, Attwood T K and Parry-Smith DJ, Pearson Education.
2. Bioinformatics-Students Companion. Kalbulla Syed Abrahin, Guruswami Gurusubrmanian, Zothansanga, Ravi Prakash Yadav, Nachimuthu Senthil Kumar, Shunmugiah karutha Pandian, Probodh Borah, Surendra Mohan, Springer

CO2	H	M	H	M
CO3	M	H	M	H

PROGRAMME: MASTER OF SCIENCE (MSC) MICROBIOLOGY

PROGRAMME OUTCOMES

PO 1: Critical Thinking: Inculcate critical thinking to carry out scientific investigation objectively. Formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. Critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

PO 2: Knowledge Skill: Equip the student with skills to analyse problems, formulate a hypothesis, evaluate and validate results, and draw reasonable conclusions thereof. Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge.

PO 3: Scientific Communication Skills: Imbibe effective scientific and/or technical communication in both oral and writing. Ability to show the importance of the subject as precursor to various scientific developments since the beginning of the civilization.

PO 4: Ethics: Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.

PO 5: Enlightened Citizenship: Create awareness to become an enlightened citizen with commitment to deliver one's responsibilities within the scope of bestowed rights and privileges.

PO 6: Analytical Reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyse and synthesise data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

PO 7: Multicultural Competence: Development of a set of competencies in order to enhance and promote the growth of multicultural sensitivity within universities. Integrating multicultural awareness such as race, gender, physical ability, age, income and other social variables, and by creating an environment that is, "welcoming for all students".

PO 8: Lifelong Learning: Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self- directed learning aimed at personal development, and adapting to changing academic demands of work place through knowledge/ skill development/ reskilling.

PO 9: Leadership Qualities: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination in a smooth and efficient way.

PO 10: Research Skills: Prepare students for pursuing research or careers in industry in concerned subject and allied fields. Capability to use appropriate software to solve various problems and to apply programming concepts of C++ and Mathematica/Matlab to various scientific investigations, problem solving and interpretation.

PROGRAM SPECIFIC OUTCOMES

PSO1: Confidence: Demonstrate a comprehensive understanding of chemical and biological structure, principles, techniques, and applications

PSO2: Knowledge based Skill: To develop better understanding and improve skills that would enable them to begin a career in research laboratories, industries as well as to generate self-employability

PSO3: Scientific Social Responsibility: To develop linkages between scientific community and society to build trust, partnership and responsibility of science towards achieving social goals

PSO4: Knowledge of microbial diversity – Students develop the understanding of microbial life in diverse environmental ecosystems for sustainability and economic benefit.

PSO5: Molecular diagnostic skills: Students shall develop and demonstrate competence in laboratory safety, practical quantitative and qualitative research skills that help evaluate the public health research affecting our own community, molecular diagnosis of infectious diseases caused by fungi, viruses and bacteria, Identification of new disease markers, Phage therapy.

PSO6: Industrial applications – Students learn to how to scale-up microbial cultures to an industrial set-up for production of medicine, solvents, biofuel, biofertilizers and food - quality control, safety regulations and ethics form an integral part of the same.

MBVM0003: VIROLOGY AND MYCOLOGY (3-0-1)

Course Outcomes

1. To develop a comprehensive understanding about viruses in general
2. To gain insights on the infection pattern of viruses and to detect viral infection in vitro
3. Understand the in vitro models of viral infection (Understanding)
4. To gain deep insights into various types of viruses on the basis of its genetic material
5. To understand detail mechanism on different types of viral diseases prevalent across the globe
6. To understand about bactriophages and how they play important role in the treatment of infections (understanding)
7. To understand basic principle behind how vaccine works and trace the history of vaccines
8. Understand diseases successfully recovered due to vaccination (Understanding)
9. Understand the risk and benefits of vaccination and develop vaccine schedule
10. To understand general overview and characteristics of fungi
11. To differentiate fungi on the basis of nutritional types and how fungi are important in plant growth (Understanding)
12. Fungi as a model to understand some of the human diseases
13. Understand how biotechnology helped in the exploitation of fungi industrially
14. Develop knowledge on various aspects of fungi from medicine to food security
15. Gain insights into the drug targets and antifungal agents (Analysing)

Module I (10 lectures)

Introduction to virology: Virus history, Diversity, shapes, sizes and components of genomes, Baltimore classification of Viruses Infectious cycle: Attachment and entry into the cells, entry of non-enveloped virions, Assay of virus infectivity, modes of transmission of viral diseases

Isolation and purification of viruses: animal cell culture, multiplicity of Infection, virus preservation

Module II (20 lectures)

Animal Viruses: + Stranded RNA viruses: Picornaviruses, Flaviviruses- West Nile virus and Dengue virus, Coronaviruses- SARS pathogenesis

–ve strand RNA viruses: Paramyxoviruses, Orthomyxoviruses: Influenza pathogenesis and Bird flu, Rhabdoviruses: Rabies pathogenesis

Retroviruses: structure, classification, life cycle; reverse transcription. Retroviruses: HIV, viral pathogenesis and AIDS Bacteriophages: Phage basics, Infectious cycle: Lytic and lysogenic, regulation of switch between lytic and lysogenic cycle, assay

of bacteriophages, Phage therapy

Module III (5 lectures)
Basic principles, Small pox and polio vaccine, subunit vaccine, Flu vaccination, how toxic are vaccines, Vaccine schedule

Module IV (10 lectures)
Introduction: Overview of fungi**,** general characteristics of fungi, fungal structure, Fungal Cell wall – architecture and biosynthesis, reproduction in fungi-vegetative, asexual and sexual, homothallism and heterothallism
Nutrition classification of fungi: fungi, saprophytic, parasitic, obligatory and facultative, biotrophic
Fungal-plant interactions: symbiotic and antagonistic interactions, ecto-mycorrhizae, endomycorrhizae and vesicular arbuscularmycorrhizae, Yeast as model for human diseases

Module V (5 lectures)
Importance of Fungi in biotechnology, industrially important enzymes from fungi, Fungal metabolites and their economic significance - mycotoxins, medicinal uses of fungi (antibiotics), Antifungal agents and their mode of actions, drug targets, Fungi as food - mushrooms, mushroom poisoning

Suggested Readings
1. Human Virology, 5th edition, Leslie Collier, John Oxford, and Paul Kellam,2016, Oxford university press
2. Medical Mycology, 1st edition, Christopher C et.al, 2017, OUP Oxford
3. Clinical Virology manual,5th edition, Michael Loeffelholz, Richard L. Hodinka, Benjamin Pinsky, Stephen Young,2016, Wiley
4. The Mushroom Cultivator, 1st edition, Paul Stamets and J.S. Chilton, 1985, Richmond Publishing Co Ltd
5. Radical Mycology, 1st edition, Peter McCoy's, 2016, Chthaeus Press
6. Fantistic fungi,1st edition, Paul Stamets and Schwartzberg, 2019, Earth Aware Editions

CO 1	M				
CO 2		M			
CO 3			M		
CO4				M	
CO5					M

MBEM0009: ENVIRONMENT MICROBIOLOGY (3-0-1)

Course Outcomes
1. Outline the traditional and modern approaches of microbial biodiversity analysis (Understanding).
2. Relate the role of a habitat in natural selection of diverse microbial forms (Remembering).
3. Classify the different modes of microbial interaction in a micro- and macro-habitat (Understanding).
4. Apply the properties of microbes in agriculture and in wastewater remediation (Applying).

Module I (10 lectures)
a. Taxonomy: classical and modern - polyphasic approach, molecular chronometers, chemotaxonomy, genetic methods.
b. Biodiversity: structure and function of a microbial community, estimates of total number of species, measures, and indices of diversity (diversity, dominance, and species richness indices), culture dependent and culture independent methods, microbial biodiversity analysis and documentation.

Module II (10 lectures)
a. Ecology: Microbial ecology vs. macroecology, concept of habitat and niche, fundamental and realized niche, resource partitioning and character displacement, characteristics of microbial population growth curves, microbial population regulation, r and K selected strategies, microbial community succession.
b. Extremophiles: Molecular and physiological adaptation of acidophiles, alkalophiles, halophiles, thermophiles and hyperthermophiles, psychrophiles and barophiles.

Module III (15 lectures)
a. Microbial interaction: Brief account of the interactions - rhizosphere, phyllosphere, microbial interactions within community - mycorhizza, epiphytic and endophytic microorganisms and their functional capability, microbial biofilm: definition, development, and importance.
b. Biogeochemical cycles: microbial role in biogeochemical cycles (C, N, P, S), primary production and decomposition.
Application of bacteria in agriculture: nitrogen fixing organisms – nitrogenase system and nif genes. Bio fertilizers – Bacterial, Azotobacter and vermiform compost

Module IV (10 lectures)

Waste treatment: Types of waste – solid and liquid waste characterization, bioremediation - several sustainable approaches for remediation of xenobiotic compounds and hydrocarbons, Physical, chemical and biological treatment methods, wastewater remediation – trickling, activated sludge, oxidation pond. Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive test/MPN tests, tests for faecal coliforms (b) Membrane filter technique.

Suggested Readings

1. A Textbook on Microbiology, 4th Edition, Dubey RC, Maheshwari DK, 2013, S Chand Publishing.
2. General Microbiology, 7th Edition, Schlegel HG, 1993, Cambridge University Press.
3. Applied Microbiology (Agriculture, Environmental, Food and Industrial Microbiology), 1st Edition, Reddy SM, Girisham S, Narendra Babu G, 2017, Scientific Publishers.

CO 1	H			
CO 2		H	L	
CO 3		L	H	
CO 4			M	H

MBMM0010: MEDICAL MICROBIOLOGY (3-0-1)

Course Outcomes

1. Define the role of microflora in human body and its mode of transmission (Remembering).
2. Explain the mode of microbial pathogenesis in disease causation (Understanding).
3. Illustrate the differences in bacterial and fungal diseases (Understanding).
4. Examining different diagnostics methods and treatment options for microbial infections (Analysing).

Module I (5 lectures)

a. Human Microflora: Normal microbiota in human body, role of resident microbial flora.
b. Transmission: Routes of transmission, community and nosocomial infections, opportunistic infections
c. Detection strategies and protocol: Collection, transportation and processing of clinical samples, Quality control of a medicalmicrobiology laboratory

Module II (15 lectures)

a. Toxigenesis: Account of several virulence factors – pili, fimbriae, flagella, lipopolysaccharide, exo-enzymes, adhesins, capsules and toxins; classification and action of endo-toxins and exo-toxins.
b. Mechanisms of pathogenesis: adhesion, colonization and invasion of host tissue – mucous membrane of respiratory, enteric and urogenital tracts; role of aggressins, depolymerizing enzymes, organotropisms, pathogenecity islands, cytoskeletal modulation of host cell.

Module III (15 lectures)

a. Bacterial diseases: Clinical features, transmission, characteristics of causative organism, pathogenesis, laboratory diagnosis, prevention and control of bacterial diseases and clinical syndromes – typhoid fever, cholera, diphtheria, tetanus, meningitis, septic arthritis, conjunctivitis, otis media, pneumonia, gastroenteritis, urinary tract infections, wound infections, skin and soft tissue infections.
b. Fungal diseases: Clinical features, transmission, characteristics of causative organism, pathogenesis, laboratory diagnosis, prevention and control of bacterial diseases and clinical syndromes – Cutaneous mycoses: Tinea pedis (Athlete's foot) Systemic mycoses: Histoplasmosis, Opportunistic mycoses: Candidiasis.

Module IV (10 lectures)

a. Antibiotic therapy: antibiotic sensitivity assays - Stokes method, Agar dilution method, Broth dilution method, E-strip method, efficacy; pharmacokinetics and side-effects, prophylaxis.
b. Microbial drug resistance: emergence and evolution of antibiotic resistance, current issues of MDR/XDR microbial strains, resistance tests – phenotypic and molecular, combination therapy.

Suggested Readings

a. Essentials of Medical Microbiology, 3rd Edition, Sastry AS, Bhat S, 2020, Jaypee Brothers Medical Publishers (P) Ltd.
b. Review of Medical Microbiology, 27th Edition, Jawitz, Melnick and Adelberg, 2015, Mc Graw Hill education.

CO 1	H			
CO 2	L	H		
CO 3		M	H	
CO 4			H	H

MBCG0011: CELL BIOLOGY AND GENETICS (4-0-1)

Course Outcomes

1. Recall the fundamental concepts of cell biology and genetics (Remembering)
2. Relate cellular structure to function, physiology and communication (Understanding)
3. Examine the principles of genetics, mutation and recombination (Analysing)
4. Compare concepts in cell, developmental biology and genetics (Evaluating)

Module I (9 lectures)

Cell and its organelles: Structure of prokaryotic and eukaryotic cell and their organelle; Cell wall, nucleus mitochondria, chloroplast, ribosome, Golgi bodies, endoplasmic reticulum, lysosome; Plasma membrane: structure, transport across membrane, cell junction, Cytoskeleton and its role in topography, motility. Major cellular processes: protein synthesis, sorting and secretion, respiration and photosynthesis.

Module II (12 lectures)

Organization of genes and chromosomes: Structure of chromatin and chromosomes, unique and repetitive DNA, heterochromatin, euchromatin; Concept of gene, operons, gene families; Cell division and cell cycle and its regulation, Uncontrolled cell growth – cell cycle in cancer; oncogenes, tumor suppressor genes; Programmed cell death,; Basic concepts of development: stages and mechanisms of early and late development; differentiation, Stem cells.

Module III (15 lectures)

Cellular communication: General principles of cell communication, cell adhesion and roles of different adhesion molecules, gap junctions, extracellular matrix, integrins, neurotransmission and its regulation. Cell signaling: Hormones and their receptors, cell surface receptor, signal transduction pathways, second messengers and their roles in signal transduction, regulation of signaling pathways.

Module IV (15 lectures)

Mendelian principles: Mendel's laws, concept of allele, multiple alleles, pseudoallele, codominance, incomplete dominance, gene interactions, pleiotropy, genomic imprinting, penetrance, expressivity.

Linkage and crossing over, sex linkage, sex limited and sex influenced characters. Extra chromosomal inheritance: Inheritance of mitochondrial and chloroplast genes, maternal inheritance; Genetic disorders, Pedigree analysis; Gene Mapping- linkage maps, molecular markers; Basic principles of population and evolutionary genetics, Quantitative genetics- polygenic inheritance and biostatistics.

Module V (9 lectures)

Fine structure of a gene: Cistron, muton and recon; Basic genome organization (prokaryotic and eukaryotic); Bacterial genetics (transformation, transduction, conjugation)

Mutation: Types, causes and detection, mutant types– lethal, conditional, biochemical, loss of function, gain of function, germinal verses somatic mutants, insertional mutagenesis. Structural and numerical alterations of chromosomes: Deletion, duplication, inversion, translocation, ploidy and their genetic implications. Transposable genetic elements;

Recombination: Homologous and non-homologous recombination, including transposition, site-specific recombination.

Suggested Readings

1. Cell Biology, Genetics, Molecular Biology, Evolution & Ecology, 1st Multicolor Edition, Verma,PS and Agarwal, VK,2005,S. Chand& Co.
2. Cell and Molecular Biology,8th Edition, deRobertis,EDPanddeRobertis,EMF,2017, Wolters Kluwer Publishing
3. Principles of Genetics.8th Edition, Gardner, J., Snustad, D. P., Simmons, M. J., 2005, Wiley, India
4. Cell-A Molecular Approach. 6th Edition, Cooper, GM. and Hausman, RE, 2015, SinauerAssociatesInc.US.

CO 2	H	H	H		
CO 3				H	H
CO 4	M	M	M	M	M

MBWM0012: WASTE MANAGEMENT (1-0-0)

Course Outcomes

1. Choose an appropriate method to segregate and recycle different types of waste (Create)
2. Formulate a plan on recycling waste towards economic growth (Create)

Basic concepts and principle of waste management; sources of waste; waste management hierarchy; management strategies; challenges and opportunities; contribution to economic growth.

Activities:

1. Wastewater treatment technologies.
2. Reuse and recycling of plastic waste.
3. Solid organic waste conversion.
4. Preparation of liquid organic fertilizer.
5. Trainings/Field visit

MBMC0013: MUSHROOM CULTIVATION (1-0-0)

Course Outcomes

1. To develop comprehensive understanding basics of mushroom and their importance to humans and environment (Remembering)
2. To develop skills on techniques of mushroom cultivation and understand global market and demand of mushrooms (Understanding)
3. To develop skills on preservation techniques for mushrooms, risk and benefits associated(Analysing)

Module I (5 lectures)

Definition of a Mushroom, Mushroom Hunting, Ecological Classification of Mushrooms, Food Supply through Mushroom, Enhance Human Health through Mushroom Derivatives, Benefit the Environment through Mushroom Mycelia

Module II (7 lectures)

Mushroom Cultivation: Both a Science and an Art, World Mushroom Production, Differences in Mushroom Production Patterns, World Mushroom Market, Nutritive value of mushrooms, Poisonous Mushrooms

Phases of Mushroom Cultivation: Sterilization : Knowledge of General Safety, health and hygiene, Optimum growing condition Substrate: Preparation of beds for cultivation of various mushrooms and its maintenance, Problems in mushroom cultivation & its remedies Cultivation of selected mushrooms: Oyster Mushroom Cultivation, Milky Mushroom Cultivation, Button Mushroom cultivation, Shiitake Mushroom cultivation

Practical aspects: Sterilization process practice, morphological and microscopic identification of mushroom mycelium, Molecular identification of mushrooms, Spore printing technique, Growing and Identification of viable Spawn, microbial analysis of substrate and optimization,

Module III (3 lectures)

Economics of Mushroom cultivation, Post Harvesting care and processing, Packaging and storage

Practical aspects: Visits and trainings to research laboratories and Mushroom farms, mushroom trainings to community people

Suggested Readings

1. Paul Stamets. Growing Gourmet and Medicinal Mushrooms The Mushroom Cultivator by, 2000, Ten Speed Press
2. Paul Stamets and J.Chilton. A Practical Guide for Growing Mushrooms at Home, by,1985, Richmond Publishing Co Ltd

Mapping of Course outcomes

Course Outcomes	Module I	Module II	Module III
CO 1	M		
CO 2		H	
CO 3			H

MBBM0014: BASIC MICROBIOLOGY (2-0-1)

Course Outcomes

1. Differentiate and classify a significant number of common bacteria by their salient properties (Understanding).
2. Compare the nutritional needs of bacteria for growth and their metabolism (Understanding).
3. Identify key factors of the microbial growth curve and growth kinetics (Applying).
4. Define the physical and chemical methods of microbial growth control (Remembering).

Module I (5 lectures)

a. Historical perspective: Discovery of microbial world, Landmark discoveries relevant to the field of microbiology, controversy over spontaneous generation
b. Microbial taxonomy and diversity: Basis of microbial classification, Haeckel's 3 Kingdom concept, Whittaker's 5 Kingdom Concept, three Domain of Carl Woese, Archael taxonomy.
c. Staining techniques: Basic and acidic dyes, simple and differential staining, negative and positive staining, Grams' staining,acid fast staining, flagella and spore staining

Module II (10 lectures)

a. Nutritional classification: nutritional groups of bacteria - photoautotroph, photoorganotroph, chemolithotroph (ammonia, nitrite, sulfur, hydrogen, iron oxidizing bacteria), chemoorganotroph; classification based on - oxygen requirement, temperature, pH and salinity - and tolerance.
b. Microbial growth: Definition of growth and bacterial reproduction, microbial growth curve, mathematical expression of exponential growth phase, measurement of growth and growth yields - spectrophotometric method, microscopic counting, serial dilution and viable cell count, most probable number, synchronous and continuous culture
c. Microbial cultures: Concept of pure culture, methods of pure culture isolation, enrichment culturing techniques, single cell isolation, and pure culture development.
d. Culture media: chemically defined, complex, differential, and special selective media.
e. Transport of nutrients: Microbial nutrient uptake – diffusion, active transport (periplasmic binding protein and ABC transporters), group translocation and protein export system

Module III (10 lectures)

a. Photosynthesis: characteristics and metabolism of autotrophs, an-oxygenic photosynthetic bacteria and cyanobacteria, CO2fixation and mechanism of photosynthesis
b. Metabolism: An overview of metabolism, Glycolysis, Pentose-phosphate pathway, Entner- Doudoroff pathway, Citric acid cycle; electron transport system, aerobic and anaerobic respiration.
c. Endospore – Structure, properties, and germination.

Module IV (5 lectures)

a. Sterilization: physical and chemical control of bacteria.
b. Antimicrobials: General characteristics of antimicrobial drugs – antibiotics, antifungals and antivirals, classification and mode of action, antibiotic susceptibility testing - Kirby-Bauer's disc diffusion method; antiseptics and disinfectants

Suggested Readings

1. A Textbook on Microbiology, 4th Edition, Dubey RC, Maheshwari DK, 2013, S Chand Publishing.
2. General Microbiology, 7th Edition, Schlegel HG, 1993, Cambridge University Press.

CO 1	H	H		
CO 2		H	H	
CO 3			H	L
CO 4			L	H

MBIM0015: INFECTION AND MOLECULAR DIAGNOSTICS (3-0-0)

Course Outcomes

1. Develop understanding on basic terminology associated with infection and diseases
2. Understand how far vaccines are effective in reducing the burden of infectious diseases
3. To understand various challenges faced in the developing world to reduce the burden of infectious disease (Analysing)
4. To gain knowledge on various types of infectious agents as a means of infection
5. To understand different mechanism for the transmission, pathology and control of infectious diseases (Understanding)
6. To understand changing paradigm of global health and strategies towards their control
7. To understand novel emerging infectious diseases which are constant threat to public health
8. To understand the problem multidrug resistance and solutions
9. Gain insights into the role of IPC in control of infections

10. To develop an understanding on how human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission (Evaluating)
11. To gain knowledge on antigen antibody based immunodiagnostic test as a primary screening for detection of infection
12. To understand the mechanisms and advancement in the techniques for screening of infectious diseases(Understanding)
13. To understand problems associated with traditional approaches for detection and how advancement in nucleic acid-based detection method decreased time and increased specificity
14. To understand the currently available molecular diagnostic approaches for detection of infectious diseases (Understanding)

Module I (10 lectures)

a. Acute infections, chronic infections, outbreak, epidemic and pandemic, epidemiology, endemicity, reproductive number, Age dependent pattern of infection, herd immunity
b. Vaccines-Impact, questions, safety and challenges, disease eradication, Nutrition and infection in developing world

Module II (10 lectures)

a. Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan), The role of vectors, reservoirs, and environmental factors
b. Epidemiology of diarrheal diseases, TB, Hepatitis B,A, C and E, epidemiology and control of Malaria, meningococcal diseases: global problem and solutions, bioterrorism

Module III (15 lectures)

Nipah virus, SARS, COVID-19, Ebola, Plague, Diptheria, Acute encephalitis syndrome (AES), Hantavirus Pulmonary Syndrome - causes, spread and control; Case studies, endemic, pandemic and epidemic diseases, Zoonotic diseases, Combating emerging infections, Viral mediated cancers, current issues of MDR/XDR microbial strains, concept of DOTS, emergence of antibiotic resistance, gut microbiota in health and disease, Role of Infection prevention and control (IPC)

Module IV (10 lectures)

Immunoelectrophoresis, agglutination, ELISA, immunofluorescence, Immunohistochemistry; Fluorescent Activated Cell Sorter (FACS); Single and double immunodiffusion, Immunofluorescence, RIA, ELISA, Western blot, FACS

Module V (10 lectures)

Non nucleic acid-based methods: Biotyping, Antimicrobial susceptibility testing, serotyping, bacteriophage typing, Nucleic acid-based methods - Agarose gel electrophoresis, RFLP, PFGE, PCR

Suggested Readings

1. Infectious Diseases, 4th Edition, Jonathan Cohen, William Powderly and Steven Opa,2016, Elsevier
2. Oxford handbook of infectious diseases and microbiology, 2nd Edition, Estee Torok , Ed Moran and Fiona Cooke,2010,Oxford University Press
3. Molecular diagnosis of infectious diseases, 2nd Eition, Jochen Decker and Udo reischl,2004, Springer
4. Clinical Immunodiagnostics,1st Edition, Ian C Clift,2020, Jones & Bartlett Learning
5. The elements of Immunology,1st Edition, Fahim Halim Khan,2009, Pearson Education India

MBNB0016: NANOBIOLOGY (2-0-0)

Course Outcomes

1. To understand the history and concept of nanotechnology (Understanding)
2. To explain the different types of nanomaterials (Applying)
3. To compare the different types of methods involved in the synthesis of nanoparticles (Evaluating)
4. To analyse the properties of nanoparticles by using different instruments (Analysing)
5. Application of nanotechnology in different fields (Applying)

Module I (5 lectures)

Introduction to nanobiotechnology; History of nanotechnology; Types of nanomaterials- Quantam dots, Carbon based, Metal

based, Dendrimer, Composite; Properties of nanomaterials

Module II (13 lectures)

Synthesis of Nanomaterials- Physical, Chemical, Biological (Bacteria, Fungus, Plants); Characterization of nanomaterials- UV-Vis Spectroscopy, Electron microscope- Energy Dispersive X-ray Spectroscopy, Mass Spectroscopy-Types-Nuclear Magnetic Resonance (NMR) Spectroscopy, FT-IR Spectroscopy- X-Ray Diffraction (XRD)

Module III (12 lectures)

Application of Nanotechnology- Drug delivery system; Disease treatment; Agriculture; Food industry; Detection system; Nanotechnology - Environmental and health effects

Suggested Readings

1. Nanotechnology: An Introduction to Synthesis, Properties and Applications of Nanomaterials, 1st Edition, Varghese T and Balakrishna KM, 2012, Atlantic
2. A Textbook of Nanoscience and Nanotechnology, Varghese PI and Pradeep T, 2003, Tata McGraw-Hill Education
3. Designing Hybrid Nanoparticles, Maria Benelmekki, 2015, Morgan & Claypool Publishers
4. A Textbook of Nanoscience and Nanotechnology, Bhattacharya SA, 2013, Wisdom Press
5. Textbook of Nanoscience and Nanotechnology, Murty BS, Shankar P, Raj B, Rath BB and Murday J,2013,Springer

CO 2	H		
CO 3		H	
CO 4		H	
CO 5			H

MBIF0018: INDUSTRIAL AND FOOD MICROBIOLOGY (4-0-0)

Course Outcomes

1. Recall methods of isolation and screening methods for industrially important microorganisms (Remembering).
2. Illustrate techniques for scaling of microbial fermentation for food and product formation (Understanding)
3. Develop methods for production of economically important products and its preservation (Applying).
4. Categorize important preservation and safety measures for food production in North-east India (Analysing)
5. Compare the diverse fermented food products and its mode of preparation in tribal population of North-East India (Understanding)

Module I (15 hours)

a. Microbes: Isolation and Screening of industrially important microorganisms, improvement of microbial strains, qualities of anindustrially important microbe, preservation and maintenance of industrial strains.
b. Fermentation basics: Fermentation medium and sterility, types of fermentation process - Solid-state and liquid-state (stationary and submerged) fermentations; batch, fed-batch (e.g. baker's yeast) and continuous fermentations, fermentationkinetics.
c. Industrial design: Bioreactor – design and components, bioreactor types - Laboratory, pilot- scale and production fermenters,constantly stirred tank and air-lift fermenters, fermentation process control. Post production techniques and down-stream processing.

Module II (15 hours)

a. Production: Microbial production of industrial products, micro-organisms involved, media formulation, fermentation conditions, upstream and downstream processing and uses - Citric acid, ethanol, penicillin, streptomycin, glutamic acid, Vitamin B12, Enzymes (amylase, protease, lipase), wine, beer.
b. Biofuel: Production of gaseous fuel – biohydrogen and biomethane; liquid fuel – bioethanol, biodiesel and biobutanol.
c. Methods of immobilization, advantages and applications of immobilization, large scale applications of immobilized enzymes(glucose isomerase and penicillin acylase).

Module III (15 hours)

a. Food preservation: Food as a substrate for microbes, microbial growth in food, characteristics of micro-organisms in food, food preservation – physical methods (dehydration, freeze drying, heat and irradiation), chemical methods (chemical preservatives and additives), canning.
b. Food Spoilage: characterization of contamination and spoilage of cereals, sugar products, vegetables, fruits, meat and meat products, milk and milk products, fish and sea foods, poultry, beer and wines; Spoilage of fermented foods and

canned foods. Laboratory testing protocols and biosensors in food industry.

Module IV (15 hours)

a. Food safety: Microbiological quality standards of food, Food control agencies and their regulations – FDA, EPA, CDC and ISI. ISO and Hazard analysis and Critical Control point (HACCP) system, Food Safety Act and Trade Regulations.
b. Fermented food: Cultures for food fermentation, fermented foods and their production – bread, cheese, fermented vegetables, dairy products –acidophilus milk, yoghurt, single cell proteins, pickles, oriental foods and beverages, locally fermented alcoholic beverages, probiotics, prebiotics and symbiotic.

Suggested Readings

a. An Introduction of Industrial Microbiology, 1st Edition, Sivakumaar PK, Joe MM, Sukesh K, 2010, S Chand Publishing.
b. Food Microbiology, 5th Edition, Frazier WC, Westhoff DC, Vanitha NM, 2014, McGraw Hill Education.
c. Biotechnology, 1st Edition, Satyanarayana U, Chakrapani U, 2020, Books & Allied Ltd.

LABORATORY COURSES

MBCB6011: CELL BIOLOGY AND GENETICS LAB

Course Outcomes

1. Recall the theoretical topics in cell biology and genetics (Remembering)
2. Apply the fundamental concepts of cell biology and genetics in laboratory (Applying)
3. Analyze data and numerical problems from experiments and interpret results (Analysing)

Syllabus

1. Method s of cell lysis and staining
2. Cell imaging and documentation
3. Study of mitosis and meiosis in plants/cultured cells
4. Isolation of DNA from animal and plant sources
5. Agarose gel electrophoresis of isolated genomic DNA
6. Determination of Tmof DNA
7. Isolation of auxotrophic mutants by replica plating
8. Numerical problems in genetics(Mendelian, population and bacterial genetics, mutation, recombination, etc.

Suggested Readings

1. Cell Biology, Genetics, Molecular Biology, Evolution & Ecology, 1st Multicolor Edition, Verma, PS and Agarwal,VK,2 0 0 5 , S. Chand & Co.
2. Cell and Molecular Biology, 8th Edition, deRobertis, EDPanddeRobertis, EMF, 2017, Wolters Kluwer Publishing
3. Principles of Genetics.8th Edition, Gardner, J., Snustad, D. P., Simmons, M. J., 2005, Wiley, India
4. Cell-A Molecular Approach. 6th Edition, Cooper, GM. and Hausman, RE, 2015, Sinauer Associates Inc. US.

MBBM6012: BASIC MICROBIOLOGY LAB

Course Outcomes

1. Experiment with different microbial isolation techniques (Applying)
2. Examine cell structure through microscopy and microbial colonies for identification (Analysing).
3. Determine the factors that affect microbial growth (Evaluating).

Syllabus

1. Preparation of various routine laboratory media - differential, selective and enriched.
2. Isolation of microorganisms by serial dilution method
3. Isolation of pure cultures by streak plate method
4. Staining techniques and microscopic examination of bacteria – Gram's staining, negative staining, capsule staining, spore staining, acid fast staining of bacteria
5. Staining techniques and microscopic examination of fungi – Lactophenol cotton blue
6. Measurement of microbial growth curve by direct cell count method/turbidity method
7. Measurement of fungal growth by colony diameter method/biomass method
8. Preservation of bacterial cells by various techniques
9. Antibiotic susceptibility testing (disc diffusion/broth microdilution)

Suggested Readings

1. Practical Microbiology, 3rdEdition, Maheshwari DK, 2002, S Chand Publishing
2. Experiments in Microbiology, Plant pathology, tissue culture and Microbial Biotechnology, 5thEdition, Aneja KR, 2017, NewAge International Publishers.

MBVM6008: VIROLOGY AND MYCOLOGY LAB

Course Outcomes

1. Apply the knowledge on bacteriophages to isolate and quantify (Applying)
2. Learn the technical skills to isolate DNA from phages (Analysing)
3. Apply the knowledge on fungi to isolate, and identify (Applying)
4. Learn the technical skills to isolate DNA from fungi (Analysing)
5. Analyse different nutrients in macro fungi (Analysing)

Syllabus

1. Isolation of bacteriophage from natural sources
2. Cultivation and quantification of phages
3. Isolation of DNA from bacteriophage
4. Phage identification by PCR
5. Isolation of fungi from soil
6. Staining of fungus
7. Nucleic acid isolation of fungi
8. Spore printing of fungi
9. Detection of protein, minerals and vitamins in fungi

Suggested Readings

1. General Virology, 3rd edition, S. E. Luria, J. E. Darnell, 1978, John Wiley & Sons
2. Textbook of Virology ,2nd edition, A.J. Rhodes and C.E. Van Rooyen,1953,The Williams & Wilkins Company
3. Virus-insect-plant Interactions, 1st edition, Kerry F. Harris, Oney P. Smith, James E,2001 Duffus, Academic Press Inc
4. Principles of Virology: Molecular Biology, Pathogenesis, and Control, 1st edition, S. J. Flint, Lynn W. Enquist, Robert M. Krug,Vincent R. Racaniello, 2000, American Society for Microbiology
5. Introductory Mycology, 4th edition, Constantine J. Alexopoulos, Charles W. Mims, Meredith M. Blackwell,1996, Wiley

MBEM6009: ENVIRONMENT MICROBIOLOGY LAB

Course Outcomes

1. Experiment with different protocols for isolation of microbes from natural habitats (Applying)
2. Examine microbial interactions in soil, water, and plant systems (Analysing)
3. Evaluate the roles of microbes for its medicinal, plant growth promoting, and degradation properties (Evaluating).

Syllabus

1. Isolation of microbes (bacteria & fungi) from soil (28ºC&45ºC)
2. Isolation of Cyanobacteria from natural sample
3. Isolation of antibiotic producing microbes from soil sample.
4. Determination of antimicrobial spectrum of isolate
5. Isolation of anaerobic microorganisms
6. Isolation of microbes (bacteria & fungi) from rhizosphere and rhizoplane
7. Isolation of protease secreting bacteria from soil
8. Isolation of xenobiotic compound degrading bacteria by enrichment culture technique
9. Assessment of microbiological quality of water
10. Microbial biofilm detection
11. Isolation and identification of symbiotic bacteroids of Rhizobium sp. from root nodules of leguminous plants
12. Isolation of phosphate solubilizing bacteria from soil and quantitative measurement of the phosphate solubilisation

Suggested Readings

1. Practical Microbiology, 3rd Edition, Maheshwari DK, 2002, S Chand Publishing
2. Experiments in Microbiology, Plant pathology, tissue culture and Microbial Biotechnology, 5th Edition, Aneja KR, 2017, NewAge International Publishers.

MBMM6010: MEDICAL MICROBIOLOGY LAB

Course Outcomes

1. Developing methods of identification of clinically important microorganisms (Applying).
2. Categorize microbes based on their physiology to develop methods for diagnosis (Analysing).
3. Assess the response of bacteria to antibiotics by *in vitro* assays (Evaluating).

Syllabus

1. Biochemical tests – IMViC tests – of enteric bacteria
2. Isolation and biochemical characterization of pathogenic bacteria from any clinical sample
3. Isolation and biochemical characterization of normal micro flora of skin, throat or oral cavity
4. Isolation and identification of fungal pathogens from clinical specimens
5. Isolation of hemolytic bacteria using blood agar media.
6. Minimum inhibitory concentration (MIC) determination of antimicrobial compound against microorganism
7. Isolation and screening of bacterial and fungal cultures for enzyme production – amylase or gelatinase
8. Determination of presence of catalase and oxidase activity in bacteria
9. Determination of the ability of bacteria to utilize sugars by oxidative or fermentative mode
10. Demonstration of sugar fermentation – sucrose, lactose and glucose

Suggested Readings

1. Practical Microbiology, 3rd Edition, Maheshwari DK, 2002, S Chand Publishing
2. Experiments in Microbiology, Plant pathology, tissue culture and Microbial Biotechnology, 5th Edition, Aneja KR, 2017, New Age International Publishers.

MBIM6015: INFECTION AND MOLECULAR DIAGNOSTICS LAB

Course Outcomes:

1. Analyse antibodies by different types of ELISA generated due to microbial infection (Analysing)
2. Standardization of Indirect Immunoflourescence assay (Evaluating)
3. Demonstrate practical knowledge on Single radial immune diffusion (Analysing)
4. Demonstrate practical knowledge on Double immune diffusion method (Analysing)
5. Demonstrate practical knowledge on Immunoelectrophoresis (Analysing)
6. Standardize antimicrobial susceptibility test and learn analysing its result (Evaluating)

Syllabus

1. Detection of antimicrobial antibodies by ELISA
2. Indirect Imunoflourescence assay
3. Single radial immune diffusion
4. Double diffusion method of Ouchterlony
5. Immunoelectrophoresis
6. Rocket electrophoresis
7. DOT ELISA for the presence of specific antigen.

8. Antimicrobial susceptibility testing

Suggested Readings

1. Practical Immunology,4th edition, Drank C.Hay,2002, Wiley-Blackwell
2. Handbook of Practical and Clinical Immunology, 2nd edition, G.P. Talwar and S.K.Gupta,2017, CBS
3. Current diagnosis and treatment in infectious diseases, 2nd edition, Walter R. Wilson and Merle A. Sande, 2013, McGraw-Hill Education

MBDI6006: DISSERTATION PHASE I (0-0-2)

Course Outcomes

1. Develop a scientific mindset with the capacity for analytical and innovative thinking (Creating).
2. Develop writing skill, referencing and citations for effective communication (Applying).
3. Improve communication and creative expression skills to articulate scientific ideas (Creating).
4. Examine the research gap in the related field and formulate strategies to address the same (Analysing).

Syllabus

1. Familiarization with research topic and methodologies by a thorough literature review.
2. Writing of review of literature to brush up already existing knowledge on a given area.
3. Formulate a research hypothesis and a proposed workplan.
4. Presentation of the research topic at department level and submission of literature review.

Suggested Readings

1. Scientific review and research articles published in respective specialized area of research.

Mapping of Course outcomes to Syllabus

***P: Practical**

MBDI6007: DISSERTATION PHASE II (0-0-16)

Course Outcomes

1. Support the research hypothesis with experiments executed ethically (Evaluating).
2. Develop skill to independently carry out a research in the laboratory (Creating).
3. Examine the methodology, analyse results, and defend the research work (Analysing).

Syllabus

1. Execute a scientific dissertation based on the proposed plan in Phase 1 through bench work.
2. Present and report data at various stages of the research work to the assigned supervisor.
3. Analysing the results, correlating it with different experiment performed during the dissertation.
4. Present the findings in a department level to internal and external examiners, and submission of completed thesis.

Suggested Readings

Scientific review and research articles published in respective specialized area of research.

MASTER OF SCIENCE IN BOTANY
DEPARTMENT OF BOTANY

Vision:

To motivate and encourage the students in effective ways to utilize the knowledge of 'Plant Sciences' in order to solve the future needs of Food, Fuel, Energy and Environment for the betterment of mankind and society.

Mission:

The department endeavours to make substantial contribution in the field of 'Plant Sciences' by new research innovations and producing competent students who are not only well versed with the subject but are also better adjusted socially, emotionally and intellectually.

MSC PROGRAM OUTCOMES

PO 1: Critical Thinking: Inculcate critical thinking to carry out scientific investigation objectively. Formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. Critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

PO 2: Knowledge Skill: Equip the student with skills to analyse problems, formulate a hypothesis, evaluate and validate results, and draw reasonable conclusions thereof. Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge.

PO 3: Scientific Communication Skills: Imbibe effective scientific and/or technical communication in both oral and writing. Ability to show the importance of the subject as precursor to various scientific developments since the beginning of the civilization.

PO 4: Ethics: Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.

PO 5: Enlightened Citizenship: Create awareness to become an enlightened citizen with commitment to deliver one's responsibilities within the scope of bestowed rights and privileges.

PO 6: Analytical Reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyse and synthesise data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

PO 7: Multicultural Competence: Development of a set of competencies in order to enhance and promote the growth of multicultural sensitivity within universities. Integrating multicultural awareness such as race, gender, physical ability, age, income and other social variables, and by creating an environment that is, "welcoming for all students".

PO 8: Lifelong Learning: Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self- directed learning aimed at personal development, and adapting to changing academic demands of work place through knowledge/ skill development/ reskilling.

PO 9: Leadership Qualities: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination in a smooth and efficient way.

PO 10: Research Skills: Prepare students for pursuing research or careers in industry in concerned subject and allied fields. Capability to use appropriate software to solve various problems and to apply programming concepts of C++ and Mathematica/Matlab to various scientific investigations, problem solving and interpretation.

PROGRAMME SPECIFIC OUTCOMES (PSO)

PSO1: Acquire basic as well as in-depth knowledge on plant science in addition to understanding interdisciplinary fields such as molecular biology, cell culture, bioprocess engineering, computational biology, recombinant DNA technology, statistics etc, and their applications in healthcare, agriculture, environment, and industry.

PSO2: Acquire sound practical knowledge on plant science, molecular biology, microbiology, plant tissue culture, etc, and become well-trained for employment or self-employment.

PSO3: The students would be equipped and well-trained on applied sciences and also empowered to independently develop basic research projects on multidisciplinary fields.

PSO4: The students would be well-prepared for competitive examinations conducted by national and international organisations.

COURSES OFFERED IN M. SC BOTANY

SEMESTER	COURSE CODE	COURSE NAME
I	BOMP0021	Mycology and Phycology
	BOBP0022	Bryophytes, Pteridophytes and Gymnosperms
	BOAN0023	Angiosperms
	BOMP6026	Mycology and Phycology Lab
	BOBA6027	Bryophytes, Pteridophytes and Gymnosperms and Angiosperms Lab
	BOBF6035	Bio-Fertilizer Technology
	BOBC6038	Biomass Conversion, Biorefinery & Circular Bioeconomy
	BOSL0100	Service Learning on Ethno Botanical Practices
II	BOCM0024	Cell and Molecular Biology
	BOPB0025	Plant Physiology and Biochemistry
	BOPP0026	Plant Microbiology and Plant Pathology
	BOPE0028	Plant Ecology and Phytogeography
	BOCB6028	Cell and Molecular Biology and Plant Physiology and Biochemistry Lab
	BOPP6029	Plant Microbiology and Plant Pathology Lab
	BOPE6030	Plant Ecology and Phytogeography Lab
		MOOCS/NPTEL Course
	BOSL0100	Service Learning on Ethno botanical Practices
III	BOCP0027	Cytogenetics and Plant Breeding
	BOBB0029	Biochemicals, Molecular Techniques and Bioinformatics
	BOER0031	Environmental Management, Research Methodology and Biostatistics
	BOCT6031	Cytogenetics and Molecular Techniques
	BOER6033	Environmental Management, Research Methodology and Biostatistics Lab
	BOHM6036	Herbal Medicine
	BOFI6037	Forest Inventory and Mensuration
	BOSL0100	Service Learning on Ethno botanical Practices
	BODI6032	**Dissertation Phase I**
IV	BOFP0032	Fundamentals of Plant Biotechnology
	BOAB0033	Advances in Plant Biotechnology
	BOGT0034	Genetics, Plant Breeding and Transformation
	BOMB0035	Molecular Genetics and Bioinformatics
	BOTS0038	Taxonomy of Angiosperms and Biosystematics
	BOBE0039	Economic Botany and Ethnobotany
	BOEG0040	Ecology, Environment and Global concerns
	BORG0042	Restoration Ecology and Geoinformatics
	BOPY0043	Plant Pathology
	BOMA0044	Microbial Genetics and Applied Microbiology
	BOPP0045	Advanced Plant Physiology
	BOBM0046	Plant Biochemistry and Metabolism
	BOBB0047	Biomass, Biorefinery and Circular Bioeconomy
	BOPD0048	Bioprospecting of Plant Diversity and Automation
	BODI6034	Dissertation Phase II
	BOSL0100	Service Learning on Ethno botanical Practices
		MOOCS/NPTEL Course

THEORY COURSES

BOMP0021: MYCOLOGY AND PHYCOLOGY

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course outcomes

At the end of this course, student will be able to:

1. Understand general characteristics, classification and economic importance of fungi and algae (Remembering)
2. Able to compare the vegetative and reproduction structures among groups of fungi and algae (Understanding)
3. Able to tell the importance of algae in environment and agriculture (Evaluating)
4. Develop scientific skill sets in and implement in agriculture (Applying)

Module I: Introduction (4 Hours)

Introduction, history, general features and economic importance of fungi

Module II: Classification of fungi (20 Hours)

Myxomycotina, Mastigomycotina, Zygomycotina, Ascomycotina, Basidiomycotina,Deuteromycotina - important features; thallus organizations; modes of reproduction

Module III: Role of Fungi in agriculture and environment (4 Hours)

Mycorrhizal associations and Lichens-their importance to agriculture and environment; Fungi asbio-fertilizers

Module IV: Introduction to algae (4 Hours)

History; general description; systems of classification and economic importance of algae

Module V: Classification of algae (20 Hours)

Classification (*Cyanophyta, Chlorophyta, Phaeophyta, Rhodophyta, Xanthophyta, Chrysophyta, Bacillariophyta, Pyrrophyta, Euglenophyta, Eustigmatophyta, Prasinophyta* and *Prochlorophyta*); cell structure; thallus organization and mode of reproduction in algae

Module VI: Role of algae in agriculture and environment (4 Hours)

Algal blooms - its importance; Algae as feed; bio-fertilizers; pollution indicators

Module VII: Research on Fungi and algae (4 Hours)

Current and future research; Future prospects/scopes in these areas

Suggested Readings:

1. Alexopoulos CJ, Mims CW, Blackwell M. Introductory Mycology, Willey.
2. Dube HC. An Introduction to Fungi, Scientific Publishers.
3. Aneja KR. Mehrotra RS. Introduction to Mycology, New Age International Publisher.
4. Peterson JH. The Kingdom of Fungi, Princeton University Press.
5. Smith AL. Lichens, Wentworth Press.
6. Sharma, O.P. Algae, McGraw-Hill Education.
7. Van Den Hoek, C., Mann, D. G. and Jahns, H.M. Algae: An Introduction to Phycology,Cambridge University Press.
8. Bilgrami, K.S. and Saha, L.C. A textbook of Algae, CBS.
9. Lee, R.E. Phycology, Cambridge University Press.
10. Bellinger, E.G. and Sigee, D.C. Freshwater Algae: Identification, Enumeration and use asBioindicator, Willey Blackwell.
11. Dutta, T.C. and Dutta, A. C. A Class-Book of Botany. Oxford University Press

BOBP0022: BRYOPHYTES, PTERIDOPHYTES AND GYMNOSPERMS

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes:

At the end of this course, student will be able to:

1. Summarize the general characteristics, morphological and reproductive diversity amongdifferent groups of Bryophytes (Understanding)
2. Compare the general characteristics, morphological and reproductive diversity amongdifferent groups of Pteridophytes (Understanding)
3. Interpret the general characteristics, morphological and reproductive diversity amongdifferent groups of Gymnosperms (Understanding)
4. Identify the different economic importance of the Bryophytes, Pteridophytes andGymnosperms (Applying)
5. Infer fossils and fossilization (Understanding)

Module I: Bryophytes (20 Hours)

General introduction, Classification of Bryophytes; evolutionary history and phylogenetic characterization of bryophytes; comparative account of gametophyte and sporophyte structure of *Hepaticopsida, Bryopsida* and *Anthocerotopsida*; Peristome structure and its significance in the classification of Mosses; Economic importance of Bryophytes

Module II: Pteridophytes (20 Hours)

General introduction, Classification and range of thallus of Pteridophytes; evolutionary history and phylogenetic characterization of pteridophytes; Early vascular plants; A brief account of the following classes of Pteridophytes: *Psilotopsida, Lycopsida, Sphenopsida, Pteropsida*; Telome concept, apogamy and apospory, heterospory and seed habit; Economic importance of Pteridophytes

Module III: Gymnosperms (15 Hours)

General introduction, Classification of Gymnosperms; Comparative study of *Cycadales, Ginkgoales, Coniferales, Ephedrales, Welwitschiales* and *Gnetales*; Economic importance of Gymnosperms

Module IV: Paleo-botany (5 Hours)

Introduction, Fossils, Kinds of fossils and process of fossilization; Geological time scale; Importance of fossils

Suggested Readings:

1. Alam, A. Textbook of Bryophyta, I K International Publishing House Pvt Ltd.
2. Johri, R.M, Lata, S, Tyagi, K. A Textbook of Bryophyta, Dominant Publishers and Distributors (Cornell University).
3. Vashishta, P.C., Sinha, A.K. and Kumar, A. Botany for Degree Students-Pteridophyta, S.Chand.
4. Mitra, J.N, Mitra, D. and Chowdhury, S.K. Studies in Botany (Vol I & Vol II), MoulikLibrary.
5. Sharma, O.P. Pteridophyta, McMillan India Limited.
6. Rashid, A. An Introduction to Pteridophyta, South Asia Books.
7. Verma, H.K.A Textbook of Pteridophyta. Random Pub.
8. Bhatnagar, S.P. Gymnosperms, New Age International Publishers

BOAN0023: ANGIOSPERMS

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course, student will be able to:

1. Understand the concepts of plant identification, classification nomenclature(Understanding)
2. Understand the general morphology and distinguishing characteristics of different angiosperm families (Understanding)
3. Identification of dicotyledons and monocotyledons plants with reference to specific keycharacters (Applying)
4. Understand the internal organization of the tissue and cell structure of both vegetativeand floral parts of angiosperm plants (Understanding)
5. Understand the development of gametophytes, fertilization, endosperm, embryo,apomixis and parthenocarpy

in angiospermic families (Understanding)
6. Application of anatomy and embryology in taxonomy (Applying)

Module I: Taxonomy (12 Hours)
History of plant taxonomy; Methods of Plant identification; Taxonomic Keys: Single access and Multi-access; Field inventory; Collection; Herbaria: Functions of Herbarium, Preparation of Herbarium; Major systems of classification: Cronquist (1981); Takhtajan's System (1997), APG IV (2016) (merits and demerits). Principles and rules of Botanical Nomenclature

Module II: Morphology (8 Hours)
Vegetative Characters: Modified Roots and Stems; Leaf Phyllotaxy, Vennation; Trichomes. Reproductive Characters: Floral parts, Arrangements of flowers on the floral axis, Unisexual and Bisexual Flowers, Variation in fruit surface, Placentation, Variation in seed coats

Module III: Angiospermic Families (15 Hours)
Dicotyledons: Magnoliaceae, Annonaceae, Tiliaceae, Sterculiaceae, Rutaceae, Meliaceae, Vitaceae, Sapindaceae, Anacardiaceae, Fabaceae, Caesalpinaceae, Mimosaceae, Oleaceae, Apocynaceae, Asclepidaceae, Boraginaceae, Scrophulariceae, Bignoniaceae, Acanthaceae, Euphorbiaceae, Moraceae. Monocotyledons: Orchidaceae, Musaceae, Araceae, Commelinaceaee, Zingiberaceae, Cyperaceae, Poaceae

Module IV: Anatomy (10 Hours)
Meristem, Classification of meristems; Permanent tissue; Theory of shoot apical meristem and root apical meristem; Origin, structure and function of cambium; Primary and secondary structure of root and stem, Anomalous secondary growth in roots and stems. Cork cambium and its derivatives, function of cork and abscission layers. General structure of plants; cell wall, stomata and secretary structure; Anatomy of floral organs; Anatomy in relation to taxonomy

Module V: Embryology (15 Hours)
Structure of microsporangium, microsporogenesis and development of male gametophyte; Structure of ovule, megasporogenesis and development of female gametophyte; Pollen-Pistil interaction; Fertilization and its control; Endosperm types, structure and functions; Dicot and monocot embryo; Embryo endosperm relationship; Polyembryony and its induction, Apomixis, causes and significance; Parthenocarpy; Embryology in relation to taxonomy

Suggested Readings:

1. Pandey, B.P. A textbook of Botany: Angiosperms S. Chand.
2. Sharma, O.P. Plant Taxonomy McGraw-Hill Education
3. Nair, R. Taxonomy of Angiosperms APH Publishing Corporation
4. Singh, G. Plant Systematics: An Integrated Approach. CRC Press.
5. Lawrence, G.H.M. Taxonomy of Vascular Plants Scientific Publisher.
6. Subramanyam, N.S. Modern Plant Taxonomy. Vikas Publishing House Pvt. Ltd. New Delhi.
7. Sambamurty, A.V.S.S. Taxonomy of Angiosperms. I. K. International Publishing House Pvt.Ltd., New Delhi.
8. Verma, B.K. Introduction to Taxonomy of Angiosperms. PHI Learning Private Limited, NewDelhi.
9. Pandey, B.P. Plant anatomy, S. Chand & Co., New Delhi
10. Esau, Anatomy of Seed Plants. John Wiley & Sons, New York.
11. Grewal, Plant anatomy. Campus Books International, New Delhi.
12. Maheshwari, An Introduction to Embryology of Angiosperms. Tata McGraw Hill PublisingCo., New Delhi.
13. Bhojwani, S.S., Bhatnagar, S.P. and Dantu, P.K. The Embryology Angiosperms, VikasPublishing

Mapping of COs to Syllabus:

BOCM0024: CELL AND MOLECULAR BIOLOGY
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course, student will be able to:

1. Memorize the key concepts of cell and its structural organization (Remembering)
2. Analyse the process of DNA replication and compare various repair mechanism (Analysing)
3. Gain better understanding of gene cloning and DNA libraries (Understanding)
4. Understand the basics of gene cloning and importance of genome evolution (Understanding)

Module I: Basics of Cell (4 Hours)

Cell: Concept, structural organization of plant cell.

Module II: Cellular Organelles: Their Organizations and Functions (15 Hours)

Mitochondria: structure, genome organization, protein import and mitochondrial assembly. Chloroplast: structure, genome organization, import and sorting of chloroplast proteins. Endoplasmic reticulum: structure, translocation of secretory proteins across ER membrane, insertion of protein into ER membrane, protein folding and processing. Golgi apparatus: organization, protein glycosylation, protein sorting and export from Golgi, the vesicular transport mechanism. Nucleus: nuclear envelope, nuclear pore complex, trafficking between nucleus and cytoplasm.

Module III: Gene and Genome (6 Hours)

Gene and genome: fine structure of gene, genome organization

Module IV: Enzymes for Gene Manipulations (7 Hours)

DNA/gene manipulating enzymes, restriction enzymes: endonuclease, exonuclease, types of endonucleases, recognition sequences, ligase, polymerase, phosphatase, transcriptase,transferase, topoisomerase

Module V: DNA Replication (7 Hours)

Various models, enzymes for replication, structure of DNA polymerase, speed of replication, collaboration of proteins, process and termination of replication

Module VI: DNA Damage and Repair Mechanism (6 Hours)

Basic concept, types of DNA damage thymine dimer, 6- 4 photoproducts, photo-reactivation, excision repair

Module VII: Transposons and Genetic Recombination (8 Hours)

Mobile genetic elements: Insertion elements, transposons. Genetic recombination: Holliday, Potter & Dressler, Meselson and Radding and Szostak model of genetic recombination

Module VIII: Basics of Gene Cloning (7 Hours)

Gene cloning: cloning vectors (types and characteristics), molecular cloning and construction of DNA libraries

Suggested Readings:

1. Lewin. Genes. Published by Pearson Prentice Hall
2. Albert. Molecular Biology of Cell
3. Singh, B. D. Fundamentals of Genetics Kalyani Publications
4. Brown TA. Gene Cloning and DNA Analysis: An Introduction. Blackwell Publishing
5. Watson J. Molecular Biology of Gene

Course Outcomes	Module I	Module II	Module III	Module IV	Module V	Module VI	Module VII	Module VIII
CO1	H	H	L	L	L		H	L
CO2		L			H	H		
CO3	L					M	L	H
CO4		L	H	M				M

BOPB0025: PLANT PHYSIOLOGY AND BIOCHEMISTRY
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course outcomes

At the end of this course, student will be able to:

1. Explain the concepts of plant water relation, transpiration, mineral nutrition, uptake and translocation of nutrients (Understanding)
2. Understand the process of photosynthesis and respiration (Understanding)
3. Analyze the role of photoreceptors, growth regulators in different physiological process and plants respond towards abiotic stress (Analyzing)
4. Explain the concepts of thermodynamics, enzyme kinetics and biomolecule metabolism (Understanding)

Module I: The Basic Concept and Transport Mechanism (4 Hours)
Water potential, theories supporting uptake of water: Bose theory, cohesion-adhesion theory, Comparison of xylem and phloem transports, phloem loading and unloading, passive and active transports

Module II: Photosynthesis and Transpiration (14 Hours)
Cyclic and non-cyclic photophosphorylation. PSI and PSII system, stages of photosynthesis, light reaction and dark reaction. C_3, C_4 and CAM pathways, photorespiration, photophosphorylation, factors effecting photosynthesis, types of transpiration, mechanism and factors effecting transpiration

Module III: Sensory Photobiology and Growth Hormones (8 Hours)
Discovery of phytochromes and cryptochromes and their photochemical and biochemical properties, molecular mechanism of action of photo morphogenetic receptors, physiologicaleffects and mechanism of action of plant growth hormones, signal transduction and gene expression

Module IV: Photoperiodism and Physiological Stress (6 Hours)
The flowering process: endogenous clock and its regulation, ABA model physiological responses to abiotic stresses: light, temperature, water and salts; acclimation of physiological processes under abiotic stresses

Module V: Thermodynamics and Bioenergetics: (8 Hours)
Laws of thermodynamics, Gibbs Free Energy, enthalpy, entropy, energy change in coupled reactions energy rich phosphate compounds, energetics of metabolic processes, energy rich phosphate compounds, ATP as universal currency of energy, ATP synthesis

Module VI: Properties of Water and Enzyme Kinetics (10 Hours)
Dissociation of water, ion product of water, pH, ionization of weak bases, biological buffers Henderson-Haselbach Equation. prosthetic groups and co-enzyme, mechanism of catalysis, kinetics, Michaelis-Menten Equation, bisubstrate reaction, active sites, factor contributing to catalytic efficiency, enzyme inhibition, regulatory enzyme, ribozyme

Module VII: Metabolism of Biomolecules (10 Hours)
Structures and functions of amino acids, peptides and proteins. lipid: synthesis of saturated and unsaturated fatty acids, oxidations of fatty acid. Carbohydrate- classification**,** structures, functions, biosynthesis and metabolism. glycolysis, gluconeogenesis, and the pentose phosphate pathway assimilation, transportation and metabolism of sulphur in plants

Suggested Reading:

1. Davies PJ. Plant Hormones: Biosynthesis, Signal Transduction, Action. 3rd Edition, KluwerAcademic Publisher, Dordrecht, The Netherlands.
2. Nelson DL. and Cox MM. Lehninger Principles of Biochemistry, 4th Edition, W.H. Freemanand Company, New York, USA.
3. Jordan BR. The Molecular Biology and Biotechnology of Flowering, 2nd Edition, CABInternational, Oxford shire, U.K.
4. Taiz L and Zeiger E. Plant Physiology, 4th Edition, Sinauer Associates Inc. Publishers,Massachusetts, USA.
5. Lodish H, Berk A, Kaiser CA and Krieger M. Molecular Cell Biology, 6th Edition, W.H.Freeman and Company, New York, USA.

BOPP0026: PLANT MICROBIOLOGY AND PLANT PATHOLOGY
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Classify various microorganisms and their reproduction and isolation methods (Understanding)
2. Analyze the roles of microorganisms in environment (Analyzing)
3. Identify and detect microbial plant diseases and decide control strategies (Applying)
4. Asses and apply post-harvest controls measures and techniques (Evaluating)

Module I: Introduction to microbial world and microscopy (6 Hours)
A brief history of microbiology and its evolution; Microscopy-principle, types and applications

Module II: Microbial diversity and applications (10 Hours)
Bacteria & Archaebacteria: properties, classification, nutritional types; Viruses- properties andclassification, prions and bacteriophages; Role of microorganisms in the environment

Module III: Isolation and cultivation of bacteria and viruses (10 Hours)
Types of nutritional media (Liquid & solid), types of bacterial cultures- batch, continuous and synchronous, growth curve and pure culture of microorganism; Isolation methods of bacteria, virus and phages

Module IV: Microbial Genetics and its life cycle (8 Hours)
Genome organization in microorganism (DNA, RNA, Plasmids); mechanisms of transformation, conjugation and transduction in bacteria; Life cycle of viruses and bacteriophages

Module V: An insight into Plant Pathology (8 Hours)
Historical and developmental aspects of plant pathology, mode of infection and role of enzymes and toxins in plant disease, defense mechanisms of plants against infection

Module VI: Plant diseases & control measures (12 Hours)
Study of plant diseases caused by fungi, bacteria, viruses, nematodes and mycoplasma; approaches for plant disease control- cultural, chemical, biological, bio pesticides, breeding for resistant varieties, plant quarantine, integrated pest management; molecular and transgenic approach for crop protection

Module VII: Post-harvest Management (6 Hours)
Post-harvest pathology: Fungal deterioration of food commodities, mycotoxins and health hazards, control measures; overview of integrated pest management

Suggested Reading:

1. Pelczar MJ. Microbiology, 5th edition, Tata McGraw-Hill Co, New Delhi.
2. Prescott L, Harley JP, Klein DA. Microbiology, McGraw Hill, India. 6th edition.
3. Campbell NA, Reece JB, Urry. A., Cain L, Wasserman SA, Minorsky PV, Jackson
4. Mehrotra RS, Aggarwal A. Plant Pathology, 2nd Edition, Tata McGraw-Hill PublishingCompany Ltd.
5. Singh RP. Plant Pathology, 2nd Edition, Kalyani Publishers.
6. Mehrotra RS, Aggarwal A. Fundamentals of Plant Pathology, Tata McGraw-Hill PublishingCompany Ltd.
7. Sambamurty AVSS. A textbook of Plant Pathology, Dreamtech Press, Wiley.
8. Gour HN. Physiological and Molecular Plant Pathology, Scientific Publishers India.
9. Dickinson M. Molecular Plant Pathology, Garland Science

BOPE0028: PLANT ECOLOGY AND PHYTOGEOGRAPHY

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course, student will be able to:

1. Understand the concepts and scope of ecology (Remembering).
2. Understand about the fundamental structural and functional aspect of ecosystem (Understanding)
3. Analyze the characteristic feature of plant population, dynamics and interrelationships (Analysis)
4. Understand the concept of community, concept of climax, ecological succession (Understanding).
5. Understanding the concept of ecological stability and perturbations (Understanding)
6. Acquire detail knowledge on plant diversity, its status and threats, strategies for conservation (Remembering)
7. Understanding the concept of phytogeography and phyto-geographical division of India (Understanding)

Module I: Introduction to Ecology and Ecological Organization (12 Hours)

Introduction to ecology, scope of ecology, Ecosystem: concept, components and organization, structure and functions of ecosystem, energy dynamics (trophic organization, energy flow pathways, ecological efficiencies), eco-physiology, ecosystem nutrient cycles, ecological niche, ecosystem types, major ecosystems of the world

Module II: Population Ecology (14 Hours)

Population Ecology: Characteristics of population, population growth curves, population size and density, spatial distribution, Age structure, natality, mortality, biotic potential; life history strategies (r and k selection), population dynamics, competition and coexistence, population interaction, Intra-specific interactions, interspecific interactions, Mutualism and commensalism, Prey-predator interactions, Scramble and contest competition.

Module III: Community Ecology and Ecological Succession (12 Hours)

Concepts of community, species diversity and pattern diversity in community, Ecological succession: Trends of succession, Types and general process of succession, models and mechanisms of ecological succession, concept of climax, community evolution

Module IV: Ecosystem Stability (10 Hours)

Concept (resistance and resilience); ecological perturbations (natural and anthropogenic) and their impact on plants and ecosystems; ecology of plant invasion

Module V: Biodiversity and Phytogeography (12 Hours)

Plant diversity: Concept, status in India, utilization and concerns, Loss of diversity and causes, Indigenous medicinal systems, Strategies for conservation - in situ conservation and ex situ conservation: general account of the activities of Botanical Survey of India (BSI), Sustainable development, Phytogeography - Principles and importance of plant geography, phyto-geographicregions of world and India, biomes: Classification and components, Willis - Age and Area hypothesis. Continuous range, cosmopolitan circum polar, circum boreal and circum austral, Discontinues distribution - Wagener theory - continental drift hypothesis, endemism

Suggested Readings:

1. Kormondy EJ. Concepts of ecology. PHI Learning Pvt. Ltd., Delhi, India. 4th edition
2. Odum EP. Fundamentals of ecology. Cengage Learning India Pvt. Ltd., New Delhi. 5thedition.
3. Singh JS, Singh SP, Gupta S. Ecology Environment and Resource Conservation. AnamayaPublications, New Delhi, India.
4. Wilkinson DM. Fundamental Processes in Ecology: An Earth Systems Approach. OxfordUniversity Press. U.S.A.
5. Sharma PD. Ecology and Environment. Rastogi Publications, Meerut, India. 8th edition.
6. Ambasht, R.S. (1988). A text books of plant ecology. Students, Friends & Co., Varanasi
7. Kumar, H.D. (1997). General ecology, Vikas Publication company, New Delhi
8. Pandey, K. and Shukla, J.P. (2009). Elements of toxicology, Wisdom press, New Delhi

BOCP0027: CYTOGENETICS AND PLANT BREEDING
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Infer eukaryotic genome organization structure of nucleosome, its assembly and deassembly (Understanding)
2. Summarize the cytogenetics of haploids and their uses in plant breeding (Understanding)
3. Compare euploids with aneuploids and explain chromosomal banding patterns (Understanding)
4. Illustrate the role of plant breeding and transgenic research in crop improvement (Understanding)
5. Outline the various methods of gene transfer (Understanding)
6. Compare the different types of DNA and also interpret gene mapping (Understanding)

Module I: Overview of Gene and Genome Organization (10 Hours)
Organization of eukaryotic genetic material, Chromatin organization and replication: Chemical constituents-DNA and histones, nucleosome and higher order organization, DNA packaging and genetic activity, nucleosome assembly and deassembly, DNA content and adaptability, nuclear DNA and C-value paradox

Module II: Cytogenetics of Haploids (8 Hours)
Haploidy/monoploidy, meiosis and breeding behaviour of haploids, uses of haploids in plant breeding and genetic studies

Module III: Euploidy and Aneuploidy (10 Hours)
Induction and characterization of monosomics, trisomics and nullisomics, aneupolid gene mapping, inheritance pattern in autopolyploids, status of allopolyploids in plant evolution

Module IV: Chromosomal banding (6 Hours)
Chromosome banding patterns: Linear differentiation of chromosome segments, types of chromosome banding, uses of chromosome banding in cytogenetics

Module V: Plant Breeding and Crop Improvement (10 Hours)
Objectives and scope of plant breeding, hybridization in self- and cross-pollinated crops, genetic basis of inbreeding depression and heterosis, breeding for disease and insect resistance, transgenes and transgenic plants, bio-safety concerns & regulation of transgenic crops in India

Module VI: Gene Transfer Technology (6 Hours)
Alien gene transfer through chromosome: Transfer of gene through individual chromosome, characterization and utility of alien addition and substitution lines

Module VII: Types of DNA and Gene Mapping (10 Hours)
Repetitive DNA, split genes, overlapping genes, physical and genetic mapping using molecular markers

Suggested Reading:

1. Allard RW. Principles of Plant Breeding (2nd Edition), John Wiley and Sons
2. Hartwell LH, Hood L, Goldberg ML, Reynolds AE, Silver LM, Veres RC. Genetics –FromGenes to Genomes, 3rd edition, McGraw Hill.
3. Acquaah G. Principles of Plant Genetics and Breeding, Blackwell Publishing Ltd. USA.
4. Hartl DL and Jones EW. Genetics – Analysis of Genes and Genomes, 7th edition, Jones andBarlett publishers.
5. Lewin B. Genes IX, Jones and Barlett Publishers.
6. Strickberger MW. Genetics, 3rd Edition, Pearson (Prentice Hall).

BOBB0029: BIOCHEMICALS, MOLECULAR TECHNIQUES & BIOINFORMATICS

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course, student will be able to:

1. Interpret different molecular biology techniques (Understanding)
2. Compare various blotting techniques, summarize spectrometry and spectroscopy (Understanding) CO3: Interpret RNAi (Understanding)
3. Demonstrate various chromatographic and microscopic techniques (Understanding)
4. Utilize the knowledge on bioinformatics to use various biological databases and software (Applying)

Module I: An introduction to Molecular Biology: methods & techniques (15 Hours)

Isolation and purification: Genomic and plasmid DNA; RNA; proteins. Electrophoresis: Polyacrylamide gel electrophoresis (PAGE), agarose gel electrophoresis, native PAGE, SDS- PAGE, 2D electrophoresis. DNA amplification and genome mapping: PCR, RT-PCR, RFLPs, RAPD, AFLP, SSR, ISSR, SNP, Isoelectric focusing (IEF): Principles, kinds of pH gradients used in IEF- free carrier ampholytes, immobilized pH gradients, genome expression analysis: Microarray, EST, SAGE. DNA sequencing: Various methods of DNA sequencing, protein and whole genome sequencing strategies. Isolation, separation and analysis of carbohydrate and lipid molecules, Bar-coding with references to plants

Module II: Immunotechniques & Biophysical methods (10 Hours)

Blotting: Principles, types of blotting, immunoblotting- Southern, Northern, Western and Dot blots, FISH, GISH, Mass spectrometry: GC-MS, LC-MS, Spectroscopy: basic concept, NMR & ESR spectroscopy

Module III: Basic principle of Gene silencing (5 Hours)

Gene silencing: RNA interference (RNAi)

Module IV: Chromatographic techniques (10 Hours)

Chromatography: Gel filtration, ion exchange & affinity chromatography, paper chromatography, TLC, HPLC, GC- basic concept

Module V: Microscopic techniques (10 Hours)

Resolving powers of different microscopes, Microscopy: Phase contrast, confocal, fluorescence, scanning & transmission electron microscopy

Module VI: Bioinformatics (10 Hours)

Basic concepts of computer hardware; Operating systems-Windows, Unix and Linux; use of common application software in biology: word processing, spread sheets, graphics and database; introduction to web browsing software and search engines with special reference to online bioscience resources; database, sequence analysis, phylogenetic inference package, sites and centres, Primer designing using various softwares, BLAST

Suggested Reading:

1. Hofmann A. Wilson and Walkers Principles and Techniques Of Biochemistry And Molecular Biology, 8th South Asia Edition, Cambridge University Press.
2. Carson S, Miller HB, Witherow DS. Molecular Biology Techniques: A Classroom Laboratory Manual, 4th Edition, Elsevier.
3. Agrawal and Suraksha. Techniques in Molecular Biology, 2008 Edition, IBDC Publishers.
4. Bajpai PK. Biological Instrumentation & Methodology, S. Chand.
5. Lesk AM. Introduction to bioinformatics, 4th Edition, Oxford Attwood TK, Parry-Smith DJ. Introduction to Bioinformatics, Pearson India

CO2		H				
CO3			H			M
CO4				H	H	H

BOER0031: ENVIRONMENTAL MANAGEMENT, RESEARCH METHODOLOGY & BIOSTATISTICS
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Acquire the concepts of Environmental Management and Environmental Impact assessment (Understanding)
2. Understand the salient features of EIA and safety norms (Understanding)
3. Identify and argue the complex issues inherent in selecting a research problem, selecting an appropriate research design and implementing a research project (Applying)
4. Understand the principal concepts in biostatistics (Understanding)
5. Analyze the concepts of scientific research problems and its solutions (Analyzing)

Module I: Basics of Environmental Management & Impact Assessment (10 Hours)
Introduction and scope of environmental management; basic concepts of sustainable development; Environmental impact assessment (EIA); general guidelines for the preparation of environmental impact statement; scope and types of environmental audit; energy audit; cost benefit analysis

Module II: Environmental Management Plans and Safety Norms (10 Hours)
Environmental management plan; ISO 14000 standards and certification; environmental risk management and environmental safety norms; International summits and treaties related with environment

Module III: Introduction to Research Methodology (10 Hours)
Definition; basic and applied research; interdisciplinary research; Discriminative reading; reading and reviewing scientific literature; biological abstract; review; monograph; peer- reviewed journals; e-resources; research and review articles

Module IV: Introduction to Research Problems, Communication and Ethics (10 Hours)
Definition of scientific problems; scientific papers and posters; Introduction to ethics, scientific conducts and misconduct; plagiarism; authorship issues; ethics of animal and human research

Module V: Introduction to Biostatistics (5 Hours)
General concepts and terminology; measures of location; scale and shape; mean, median, mode, standard deviation, standard error and coefficient of variance; Binomial, Poisson and Normal distribution

Module VI: Hypothesis Tests, Multivariate Analysis and Sampling Design (15 Hours)
Contingency tables and chi-square test; comparison of means: t-test, multiple range tests, F-test, Run test, sign test, Karl Pearson coefficient of correlation, Kruskal-Wallis H test and Mann-Whitney U-test, Analysis of variance; Correlation and regression analysis; Introduction to multivariate methods; Sampling methods; Simple experimental design

Suggested Readings:

1. Gupta SC, Kapoor, V.K. Fundamentals of Mathematical Statistics, 11th Edition, SultanChand & Sons
2. Krishnan V. Statistics for Beginners, Atlantic Publishers & Distributors Pvt. Ltd.
3. Fuller WA. Sampling Statistics, Wiley.
4. Easterling RG. Fundamentals of Statistical Experimental Design and Analysis, Wiley
5. Bhattacharyya, D. K. (2005): Research Methodology, Excel Books, New Delhi
6. Ahuja, R. (2001): Research Methods, Rawat Publications, Jaipur and New Delhi
7. Sulphey, M.M. and Safeer, M.M. (2015). Introduction to Environment Management (3rdedn.). PHI Learning Pvt.Ltd, New Delhi.
8. Tiwari, M., Khulbe, K. and Tiwari A. (2007) Environmental Studies. I.K. International, NewDelhi

CO2	L	H				
CO3			H	H		L
CO4					H	
CO5				L	L	H

SPECIALIZATION: PLANT BIOTECHNOLOGY

BOFP0032: FUNDAMENTALS OF PLANT BIOTECHNOLOGY
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Grasp the insight of plant biotechnology (Remembering)
2. Comprehend the underlying concept of tissue culture (Understanding)
3. Learn and analyse the importance of genetic engineering in crop improvement (Analysing)
4. Utilize biosafety measures in handling GMOs and transgenics in laboratories (Applying)

Module I: Elementary Plant Biotechnology (5 Hours)
Historical background: plant cell and tissue and organ culture, principle of genetic engineering; totipotency and morphogenesis, scope and importance in crop improvement: plant tissue culture practical application and conventional plant breeding; Advantages - disadvantages

Module II: Basics of Organogenesis (7 Hours)
Organogenesis and somatic embryogenesis in plant tissue culture- development of whole plant - root formation, transfer of plant lets to the soil, hardening, principles of cellular regeneration, single cell culture and its applications, protoplast culture, factors effecting organogenesis, advantages-disadvantages and application

Module III: Micropropagation and Virus Indexing (8 Hours)
Shoot-tip meristem culture - raising virus free plants for rapid, methods of virus indexing *in vitro* mutagenesis; *in vitro* fertilization; *in vitro* germplasm conservation; hybrid embryo rescue, production of secondary metabolites, synthetic seed production technology, production of industrial phytochemicals, advantages of micropropagation in agriculture and horticulture

Module IV: Principles of Genetic Engineering (15 Hours)
Principles of recombinant DNA technology, restriction enzymes; vectors for gene transfer – gene cloning, viral vectors and their benefits, screening and selection of transformants; DNA profiling and blotting techniques, types, procedure, application, advantages-disadvantages, nanobiotechnology and its application

Module V: Genetically Modified Organisms (GMOs) and Transgenics (15 Hours)
GMOs and their significance in biotechnology, transgenic plants and its application in agriculture, different methods of plant genetic transformation, *Agrobacterium tumefaciens*, infection and molecular mechanism of tumor formation, Ti plasmids and RI plasmids, binary vectors, genetic markers, reporter genes and its application in genetic engineering, other methodsof plant genetic transformation, environmental issues associated with transgenic crops

Module VI: Biosafety, IPR and Bioethics (10 Hours)
Biosafety and risk assessment issues; national biosafety policies and law, General principles for the laboratory and environmental biosafety; creation of superweeds/superviruses, ecologicalaspects of GMOs and impact on biodiversity; food and feed safety issues associated with transgenic crops, intellectual properties, copyrights, trademarks, trade secrets, patents; Indian patent act and amendments, patent filing, Implications of intellectual property rights on the commercialization of biotechnology products

Suggested Readings:

1. Singh BD. Biotechnology: Expanding Horizon. Kalyani Publication
2. Pierik RLM. *In Vitro* Culture of Higher Plants. Kluwer Academic Publishers
3. George EF, Hall MA, Geert-Jan De Klerk. Plant Propagation by Tissue Culture (3rd Edition),Springer, Netherlands.
4. Herman EB. Media and Techniques for Growth, Regeneration and Storage Agritech Publications, New York, USA.
5. Brown TA. Gene Cloning and DNA Analysis: An Introduction. Blackwell Publishing
6. Watson J. Molecular Biology of Gene

CO3	M			H	M	L

CO4	L	L	M	H	H	H

BOAB0033: ADVANCES IN PLANT BIOTECHNOLOGY
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course outcomes
At the end of this course, student will be able to:
1. Apply the concept of plant biotechnology into practice (Applying)
2. Work out the significance of tissue culture technique (Understanding)
3. Learn and analyze the importance of molecular techniques in up-scaling crop improvement (Understanding)
4. Figure out the importance of molecular farming in transforming secondary metabolites (Analysing)

Module I: Haploid Production and Cybridization (7 Hours)
Haploid production and uses, anther and microspore culture, pathways of development, factors affecting androgenesis, diploidization of haploids applications of haploids, limitations of haploids, cytoplasmic hybrids: technique of cybridization, application of cybrids, limitations, transgenics developed through cybridization and haploid productions

Module II: Biotransformation (7 Hours)
Hairy root cultures; screening of high yielding cell lines; procedures for extraction of high value industrial products, fractionation, bioassays; growth and production kinetics of cell cultures in shake flasks; scale-up procedures in bioreactors, types of bioreactors for plant cell cultures; Manipulation in production profile by biotic and abiotic elicitation; biotransformation of secondary metabolites

Module III: Molecular Farming and Energy Crops (7 Hours)
Aims and scope, strategies of molecular farming, production of industrial enzymes, biodegradable plastics, antibodies, edible vaccines; manipulation of metabolic pathways forproduction of secondary metabolites, transplastomics plants; energy crops: concept, types and examples, advantages-disadvantages of biofuels, application

Module IV: Molecular Markers in Crop Improvement (15 Hours)
DNA marker techniques, PCR and hybridization-based methods, methods of physical mapping – restriction mapping, DNA fingerprinting and foot printing methods, Development of sequence based molecular markers - SSRs and SNPs; advanced methods of genotyping, QTL mapping, Marker assisted selection (MAS)

Module V: Advanced Molecular Techniques (12 Hours)
Gel electrophoresis- agarose and PAGE (nucleic acids and proteins), isolation of high molecular weight DNA and analysis, southern hybridization; northern hybridization; western blotting and ELISA RNAi, antisense RNA, biosensor, Microarray studies, Marker-free transgenic development strategies

Module VI: Transgenics and Their Applications (12 Hours)
Target traits and transgenic crops, Genetic engineering for resistance against abiotic and biotic stresses; genetic engineering for increasing crop productivity by manipulation of photosynthesis, nitrogen fixation and nutrient uptake efficiency; genetic engineering for quality improvement; Discussion on application of molecular, transformation and genomic tools for the genetic enhancement in some major field crops such as rice, wheat, cotton, maize, soybean, oilseeds, sugarcane

Suggested Readings:
1. Singh BD. Biotechnology: Expanding Horizon. Kalyani Publication
2. Pierik RLM. *In Vitro* Culture of Higher Plants. Kluwer Academic Publishers
3. George EF, Hall MA, Geert-Jan De Klerk. Plant Propagation by Tissue Culture (3rd Edition),Springer, Netherlands.
4. Herman EB. Media and Techniques for Growth, Regeneration and Storage Agritech Publications, New York, USA.
5. Brown TA. Gene Cloning and DNA Analysis: An Introduction. Blackwell Publishing Watson J. Molecular Biology of Gene

SPECIALIZATION: GENETICS AND PLANT BREEDING

BOGT0034: GENETICS, PLANT BREEDING AND TRANSFORMATION
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Summarize the concepts of cell division and cell cycle (Understanding)
2. Interpret classical genetics (Understanding)
3. Illustrate the role of plant breeding in crop improvement (Understanding)
4. Outline the various techniques of plant genetic engineering (Understanding)
5. Infer the concept of cisgenics (Understanding)

Module I: Fundamentals of cell division and cell cycle (10 Hours)
Mitosis and meiosis: cell cycle, stages, synoptonemal complex, cytokinesis, molecular basis ofcell cycle: cyclin dependent kinases (Cdks) and cyclins, cell cycle and cancer

Module II: Plant Genetics: an overview (10 Hours)
Mendelian genetics, multiple alleles, linkage and crossing over, sex linked traits and sex determination, cytoplasmic inheritance, structural and numerical changes in chromosome, mutation

Module III: Plant breeding for crop improvement (20 Hours)
Hybridization techniques in self- and cross-pollinated crops, molecular markers and their applications, role of association mapping and allele mining in crop improvement

Module IV: Recombinant DNA technology and genetic engineering (20 Hours)
Gene cloning, methods of plant transformation, biosafety issues and regulation of GMOs, generation of marker free transgenic lines: cre-lox system, co-transformation, FLP/FRT recombination system, AC/DS transposon system, twin T-DNA binary vector, cisgenics

Suggested Reading:

1. Alberts B, Johnson A, Lewis J, Morgan D, Raff M, Roberts K, Walter P. Molecular Biologyof the Cell, 6th Edition, W.W. Norton & Co., U.S.
2. Acquaah G. Principles of Plant Genetics and Breeding, Blackwell Publishing Ltd. U.S.A.
3. Snustad DP, Simmons MJ. Principles of Genetics, 6th Edition, John Wiley & Sons, Inc., U.K.

CO5				H

BOMB0035: MOLECULAR GENETICS AND BIOINFORMATICS
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Interpret the fundamental processes in biology (Understanding)
2. Summarize the concepts of gene silencing (Understanding)
3. Comprehend the notions of genome editing (Understanding)
4. Utilize the knowledge on bioinformatics to run various biological databases and soft-wares (Applying)

Module I: Understanding the fundamental processes (20 Hours)
DNA replication, repair and recombination, RNA and protein syntheses and their processing,regulation of gene expression

Module II: Gene silencing: Its concepts (10 Hours)
Transcriptional and post transcriptional gene silencing, RNAi: History, mechanism, enzymesinvolved; role of RNAi in crop improvement

Module III: Introduction to genome editing (15 Hours)
Genome editing: basic concepts, history, techniques of genome editing: TALENs, ZFNs,CRISPR/Cas (CRISPR/Cpf1), application of genome editing in crop improvement

Module IV: Bioinformatics (15 Hours)
Understanding the concepts of bioinformatics, its applications, introduction to online biological databases, phylogenetic inference package, sites and centers, BLAST, sequence alignment, primer designing, conceptual data modeling

Suggested Reading:

1. Watson J, Baker TA, Bell SP, Gann AAF, Levine M, Losick RM. Molecular Biology of theGene, 7th Edition, Pearson Education
2. Lewin B. Genes IX, Jones and Barlett Publishers
3. Sohail M. Gene silencing by RNA Interference, 1st Edition, CRC Press

SPECIALIZATION: ANGIOSPERM TAXONOMY

BOTS0038: TAXONOMY OF ANGIOSPERMS AND BIOSYSTEMATICS
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Understand the concepts of plant identification, classification, nomenclature and biosystematics (Understanding)
2. Identification of plant with the help of keys and their relevant literatures (Applying)
3. Comparison of classical plant taxonomy with modern experimental plant taxonomy (Analyzing)
4. Summarize taxonomic hierarchy and principles and rules of botanical Nomenclature (Understanding)
5. Application of numerical taxonomy and phylogenetic systematic in angiosperms (Applying

Module I: Taxonomy and Biosystematics (10 Hours)

Taxonomy: Components of taxonomy, Phases of taxonomy, Integrative taxonomy, Cyber taxonomy, DNA taxonomy, Reverse taxonomy. Systematics: Development and scope, Aim and Objectives, Significance. Biosystematics: Objectives, Steps, Relationship with Classical Taxonomy

Module II: Identification and Taxonomic Literature (10 Hours)
Methods of Plant identification; Taxonomic Keys: Single access and Multi-access; Character andCharacter states; Field inventory; Collection; Herbaria: Functions of Herbarium, Preparation of Herbarium; Important herbaria and botanical gardens of the World and India; Virtual herbarium. Taxonomic Literature: Flora, E-flora, Monographs, Revisions, Checklists, Periodicals; Taxonomic Indexes; Ret Data Book

Module III: Taxonomic Hierarchy and Botanical Nomenclature (15 Hours)
Concept of taxa (family, genus, species); Categories and Taxonomic Hierarchy; Infra-species; Species Concept (taxonomic, biological, evolutionary); Principles of Nomenclature (ICNafp); Rules of Nomenclature: Ranks and names; Typification, Priority of Publication; Nomenclature of Taxa; Effective Publication; Valid Publication; Author Citation; Rejection of Names, principle of priority and its limitations; Names of hybrids

Module IV: Systems of classification and Systematic evidences (10 Hours)
Major systems of classification: basis, merits and demerits: Cronquist (1981); Takhtajan's System (1997), APG Classification, with special reference to APG IV (2016). Systematic evidences: Morphology, Anatomy, Embryology, Palynology, Cytology, Phytochemistry, Molecular taxonomy–DNA barcoding

Module V: Numerical Taxonomy, Phylogenetic Systematic (Cladistics) (15 Hours)
Numerical Taxonomy: Principles, Methods, Characters, Variations; OTUs, Character Weighting,Coding, Cluster analysis, Phenogram, Merits and Demerits; Biometrics. Cladistics: Methodologyof Cluster Analysis, Applications. Homology and Homoplasy; Monophyly, Paraphyly and Polyphyly; Primitive and Advanced; Phylogenomics

Suggested Readings:

1. Pandey, B.P. A textbook of Botany: Angiosperms S. Chand.
2. Sharma, O.P. Plant Taxonomy McGraw-Hill Education
3. Mandal, A.K. Advanced Plant Taxonomy New Central Book Agency
4. Nair, R. Taxonomy of Angiosperms Aph Publishing Coorporation
5. Gupta, R. Plant Taxonomy: Past, Present and Future The Energy and Research InstituteTERI.
6. Balfour, A. (Editor) Plant Taxonomy Syrawood Publishing House.
7. Singh, G. Plant Systematics: An Integrated Approach. CRC Press.
8. Bhojwani, S.S., Bhatnagar, S.P. and Dantu, P.K. The Embryology Angiosperms, VikasPublishing.
9. Davis, P.H. and Heywood, V.H. Principles of Angiosperm Taxonomy, Scientific Publishers(India).
10. Lawrence, G.H.M. Taxonomy of Vascular Plants Scientific Publisher.

CO5					H

BOBE0039: ECONOMIC BOTANY AND ETHNO-BOTANY

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Understand the nature of plant products, aspects and classification of economic important plants (Understanding)
2. Taxonomic status of food plants, industrial plants and drug plants and its uses (Understanding)
3. Understand the cultivation, extraction processes and uses of different economically useful plants (Understanding)
4. Understand the need to conserve floristic and cultural diversity of the region (Understanding)
5. Rescue and document Ethno-botanicals for sustainable use of plant resources (Analyzing)

Module I: Introduction to Nature of Plant Products (10 Hours)
Importance and Nature of Plant Products: Protoplasm and its Activities; Photosynthesis; Plant skeleton; Reserved food (Carbohydrates, Fats and Proteins); Secretions and Excretions (Essential Oils, Pigments, Tannins, Latex, Waxes, Alkaloids, Glycosides, Organic Acids, Enzymes, Vitamins, Hormones). Different Aspects of Economic Botany;

Classification of Economically Important Plants

Module II: Fibers and Fibers Plants (5 Hours)
Economic Classification of Fibers: Textile Fibers; Surface Fibers; Soft Fibers; Structural Fibers; Brush Fibers; Plaiting and Rough Weaving Fibers; Filling Fibers; Natural Fabrics; Paper Making Fibers. Cotton, Jute, Flax and Agave (Characteristics, Cultivation, Extraction, Uses)

Module III: Forest Products and Resources (5 Hours)
Importance and Structures of Wood; Mechanical Properties and Factors of Wood; General account with special reference to Teak, Sal, Pine and Bamboos

Module IV: Tanning and Dye materials (5 Hours)
Sources of Tanning Materials: Barks, Leaves, Fruits, Roots; Manufacture of Tannins inks. Sources of dyestuffs: Barks, Leaves, Flowers, Fruits, Roots, Woods. General account withspecial reference to Indigo, Safflower and Lichens

Module V: Oil-Yielding, Sugar-Yielding and Rubber-Yielding Plants (5 Hours)
General account with special reference to Drying oils, Semi drying oils; Non-drying oils and Vegetables Fats. Sugarcane and Sugar beet (cultivation, extraction and uses); Para rubber and Assam Rubber: Tapping, Processing and Uses. Fatty oils and their extractions

Module VI: Cereals, Pulses, Beverages and Spices (5 Hours)

Staple food crops - cereals, pulses, millets; tropical, subtropical and temperate fruits; Tea, Coffeeprocessing and uses; Important spices, their family and part used

Module VII: Introduction to Ethno-botany (10 Hours)
Concept, Relevance, Scope and Status; Plant parts used in Ethno-medicine; Role of Ethno- medicine and its scope in modern times. Concept of Protected Areas; CITES, IUCN Red List Categories. Role of Ethno-botany in conservation and sustainable development; Centers of Ethno botanical studies in India; Contributions of AICRPE and FRLHT to ethno-biology of India

Module VIII: Methods and techniques in Ethno botany (15 Hours)
Field activities for data collection: Approach, Documentation, Consent forms, Forest productivity check by analyzing the log books of Forest, Authentication of plant species and Lab Procedures, Preparation of Data Sheet and Data Base. People Biodiversity Register (PBR). Impact of Ethno-botany in herbal medicine industry, land-use development, agriculture, forestry, betterment of rural livelihoods and education; Biodiversity and conservation of useful medicinal plants; Sharing of wealth concept with few examples from India; Plant used in ethno-medicine e.g.: *Emblica officinalis*, *Ocimum sanctum*, *Saraca asoca*, *Rauwolfia serpentina*, *Mentha piperita*, *Aloe vera*, *Eclipta alba*, *Azadirachta indica*, *Centella asiatica* preparation and their uses.

Suggested Readings:

1. Pandey B.P. Economic Botany, Revised edition, S. Chand Publishers, New Delhi References
2. Verma V. Textbook of Economic Botany, First edition, Ane Books Pvt. Ltd., New Delhi
3. The Wealth of India – Raw Materials Series. CSIR publications, New Delhi.
4. Sharma, O.P. Hill's Economic Botany. Tata McGrow Hill, New Delhi.
5. Kocchar, S.L. Economic Botany of the Tropics. McMillan India Ltd., Delhi.
6. Pandey, B.P. Economic Botany. S. Chand & Co., New Delhi.
7. Das, A.P. & Pandey, Advances in Ethno-botany. Bishen Singh Mahendra Pal Singh, DehraDun.
8. Saroya, A.S. Herbalism, Phytochemistry and Ethnopharmacology, CRC Press, UK
9. Jain, S. K. & Mudgal, V. A. Handbook of Ethno botany, Bishen Singh Mahendra Pal Singh, Dehra Dun.
10. Nair, M. N. B., Hamami, S. M. & Ashaari, Z. Sustainable Management of Non-Wood Forest Products. Sustainable management of non-wood forest products: proceedings of an international workshop. University Putra Press, Malaysia.

SPECIALIZATION: PLANT ECOLOGY

BOEG0040: ECOLOGY, ENVIRONMENT AND GLOBAL CONCERNS
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Understand about the fundamental characteristic, structural and functional aspect of ecosystem (Understanding)
2. Understand environmental pollution its cause, effects and control (Understanding)
3. Understand the scenario and mechanism of climate change and also various mitigation initiatives undertaken (Understanding)
4. Addresses ecological resilience and its relationship to ecosystem services (Analyzing)

Module I: Ecology and Ecosystem Analysis (12 Hours)
Principles and Scope of Ecology Structure and Functions of Ecosystems - Abiotic and Biotic components; Energy dynamics; Niche concept; Eco-physiology; Ecosystem nutrient cycles; Ecosystems Types and Diversity; Concepts relating to limiting factors; Populations and communities characteristics; Population dynamics; Population interaction; Models and mechanisms of ecological succession; Ecosystem Stability

Module II: Environment and Pollution (18 Hours)
Energy and Environment; Components, types and segments of Environment; Environmental pollution: Origin of pollution, types of pollutions; Atmosphere: region and composition ofatmosphere; Air pollution: classification and major air pollutants, sources and effect of airpollution; Water pollution: types of pollution and pollutants, sources and effect of water pollution; Soil pollution: sources and effect of soil pollution; Treatment and control of pollution

Module III: Climate Change and Awareness (18 Hours)
Basic concepts and mechanism: Climate change, ozone layer depletion, global warming and greenhouse effect, causes and consequences; Mitigation and adaptation: Carbon storage and sequestration, carbon management: biotic and abiotic, Carbon farming and carbon trading; International responses: Intergovernmental Panel on Climate Change (IPCC) and its role, United Nations Framework Convention on climate change (UNFCCC), CDM and Kyoto Protocol, REDD+, The Copenhagen Accord; India's response to climate change

Module IV: Ecological Resilience and Ecosystem Services (12 Hours)
Definitions and concepts of ecological resilience; Characteristics of Resilient Ecosystem; Ecological, General, and Spatial Resilience; Linkage between Resilience, Vulnerability and Adaptive Capacity; Components of Resilience-Based Management; Ecosystem service concept, model and classification; Factors and drivers determining ecosystem services; Mapping and assessment of ecosystem services, Ecosystem services in natural resource management

Suggested Readings:

1. Odum, E., & Barrett, G. (2009). Fundamentals of ecology. Australia: Cengage Learning.
2. Kormondy, E., & Kormondy, E. (1986). Concepts of Ecology. Prentice Hall, New Delhi.
3. Singh, J.S., Singh, S.P., & Gupta, S. (2014). Ecology Environment and Resource Conservation. Anamaya Publications, New Delhi, India.
4. Sharma, P.D. (2012). Ecology and Environment. Rastogi Publications, Meerut, India. 8thedition
5. Ahluwalia, V., & Malhotra, S. (2013). Environmental Science. New Delhi: Ane Books.
6. Parry, M.L., et al. Climate change 2007: Impacts, Adaptation and Vulnerability, CambridgeUniversity Press
7. Singh, P., Singh, S., Rangabhashiyam, S., & Srivastava, K.K. (2021). Global Climate Change. Elsevier Science, Netherlands
8. Gunderson, L., Allen, C.R., & Holling, C.S. (2012). Foundations of Ecological Resilience,Island Press.

CO4			L	H

BORG0042: RESTORATION ECOLOGY AND GEOINFORMATICS
(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Understand the ecological perspectives of restoration including factors that regulate ecosystem function (Understanding)
2. Understand the ecological theories that have moulded restoration ecology (Understanding)
3. Relate restoration practices and efforts to different ecological levels (Applying)
4. Explores into the planning, execution, monitoring, and assessment of restoration work (Analysing)
5. Role of remote sensing as a tool for ecological restoration processes (Applying)

Module I: Introduction to Restoration Ecology (8 Hours)
Concept and Definition of Restoration Ecology; Degradation of Ecosystems; Different Restoration Approaches; Varying Scales of Restoration; Ecosystem Disturbances; Fire Disturbances; Fragmentation; Nutrient and Hydrological Cycling; Keystone Species

Module II: Succession and Assembly (8 Hours)
Theories of Succession; Successional Processes and Restoration; Management of Succession; Monitoring Succession; Ecosystem Resistance and Stability; Regime Shift; Assembly Rules

Module III: Biodiversity and Forest Restoration (10 Hours)
Levels of Biodiversity; Threats to Biodiversity; Extinction; Rate of Extinction and Species vulnerability; Restoration of Genetic Diversity; Restoration of Species Diversity; Ecosystem Diversity; Forest Degradation; Forest Restoration

Module IV: Landscape and Invasive species (12 Hours)
Definition and Types of Landscape; Landscape matrices; Connectivity and Metapopulation; Landscape Restoration; Process of Invasion; Effects of Invasion on Ecosystems; Methods to Control Invasion; Restoration to Constrain Invasion

Module V: Management of Restoration Plans (10 Hours)
Project Planning; Implementation; Adaptive Management Cycle; Monitoring; Selecting Monitoring Parameters and Methods; Additional Considerations in Developing a Monitoring Plan; Legal Framework and International Agreements

Module VI: Remote Sensing in Restoration Ecology (12 Hours)
Remote sensing fundamentals; Satellite Data and Sensors; Spectral, Temporal, Radiometric and Temporal Resolutions; Image Processing; Image Interpretation and Classification; Accuracy Assessment; Measuring and Monitoring Land Cover, Land Use, Change and Vegetation Characteristics; Conservation and Ecology Applications; Global Positioning System

Suggested Readings:

1. Greipsson, S. (2011). Restoration Ecology. United States: Jones and Bartlett Publishers.
2. Holl, K. (2016). Foundations of Restoration Ecology. United States: Island Press.
3. Holl, K. (2020). Primer of Ecological Restoration. United States: Island Press.
4. Aronson, J., (2012). Restoration Ecology: The New Frontier. Germany: Wiley.
5. Sarah, E.G., & Turner, M. (2017). Learning Landscape Ecology: A Practical Guide to Concepts and Techniques. Germany: Springer New York.
6. Lillesand, T. M., & Kiefer, R. W. (1994). Remote Sensing and Image Interpretation. UnitedKingdom: Wiley.

SPECIALIZATION: PLANT PATHOLOGY AND MICROBIOLOGY

BOPY0043: PLANT PATHOLOGY

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course, student will be able to:

1. Classify various Plant diseases and their causative organisms (Understanding)
2. Analyze the roles of pathogens in diseases development (Analyzing)
3. Identify and detect various modes of pathogen attack and defence strategies of plants (Applying)
4. Asses specific plant diseases caused by various microorganisms (Analyzing)
5. Asses and apply disease control measures and techniques (Evaluating)

Module I: Introduction (16 Hours)

Introduction to Plant pathology; The concept of disease in Plants; History of plant pathology; Types of plant diseases; Role of pathogens as causes of plant disease; Significance of plant disease; Basic procedure in diagnosis of plant diseases-Infectious diseases (caused by Parasitic higher plants, Nematodes, Fungi, bacteria, Viruses and Viroids) and non-infectious diseases; Identification of previously unknown disease: Koch's rules

Module II: Parasitism and Disease Development (8 Hours)

Parasitism and pathogenicity; Development of disease in plants: Stages in the development of disease (Disease cycle); Relationship between disease cycle and epidermis.

Module III: Pathogen attack and Plant Defense Mechanisms (10 Hours)

Mode of pathogen attack via various means (Mechanical force, Chemical, Enzymatic, Microbial toxins); Role of growth regulators in plant disease; Plant defence against pathogen: Pre-existing Structural and chemical defenses, Induce structural and biochemical defense

Module IV: Specific Plant Diseases (20 Hours)

Plant diseases caused by Fungi: Characteristics of fungal pathogen; Symptoms and Isolation of pathogen; Late blight of potato, Downy mildews/Powdery mildews, Ergot of cereals and grasses, Loose smuts of cereals; Plant diseases caused by Bacteria: Characteristics of bacterial pathogens, Identification and symptoms caused; Bacterial blight of beans, Crown gall, Citrus canker; Plant diseases by Viruses: Characteristics of Viruses; Symptoms caused by viruses and their transmission, Viroids; Plant diseases caused by Nematodes: Characteristics of plant pathogenic nematodes; Isolation of nematodes and their symptoms; Root-knot, cyst, lesion caused by nematodes; Plant diseases caused by Protozoa: Charatcteristics; Phloem necrosis of Coffee, Empty root of Cassava

Module V: Disease Control Management (6 Hours)

Control methods: Exclusion of plant pathogens; Eradication or reduced pathogen inoculum; Immunizing or improving the host resistance; overview of integrated pest management

Suggested Reading:

1. Agrios GN. Plant pathology, 4th Edition, Academic Press London, UK.
2. Mehrotra RS, Aggarwal A. Plant Pathology, 2mnd Edition, Tata McGraw-Hill Publishing Company Ltd.
3. Singh RP. Plant Pathology, 2nd Edition, Kalyani Publishers.
4. Mehrotra RS, Aggarwal A. Fundamentals of Plant Pathology, Tata McGraw-Hill Publishing Company Ltd.
5. Sambamurty AVSS. A textbook of Plant Pathology, Dreamtech Press, Wiley.
6. Gour HN. Physiological and Molecular Plant Pathology, Scientific Publishers India.
7. Dickinson M. Molecular Plant Pathology, Garland Science

CO4				H	
CO5					H

BOMA0044: MICROBIAL GENETICS AND APPLIED MICROBIOLOGY

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course, student will be able to:

1. Tell the chemistry and functions of microbial cells and organelles (Understanding)
2. Apply the concepts of vector and cloning mechanisms in plant improvement (Applying)

3. Understand the gene regulatory mechanisms and pathways and their functions (Understanding)
4. Understand the roles of microbes in industries and environment (Understanding)
5. Detect and identify microorganisms from any samples (Evaluating)
6. Use microbes in agriculture, industries and environmental protection (Applying)

Module I: Microbial Cells and organelles (8 Hours)
Over view of prokaryotic cell- structure &functions, cell wall synthesis, Membrane transport in bacteria-simple, group translocation, ABC transporters, Protein export in bacteria. Membrane organelles: lysosomes, mitochondria (with small ribosomes), Golgi bodies, endoplasmic reticulum, nucleus

Module II: Microbial Genetics and Microbial vectors in genetic Engineering (18 Hours)
Structure, function and types of DNA and RNA, DNA replication in bacteria; Gene expression (concept of gene, gene structure, genetic code, transcription and translation, post transcriptional and post translational modifications); Gene regulation in prokaryotes- The operon concept (Lac and Trp operon -induction and repression); Mutations (Definition, types, molecular basis of mutations, detection of mutants); DNA repair mechanisms (Dark repair, photo-reactivation, recombination repair, SOS repair), Transposons; Plasmid (size, copy numbers, classification, applications as vectors; Bacteriophages (types, applications as vectors); vectors for eukaryotes and other higher plants; plasmids and antimicrobial resistance, cloning (basic principle, techniques and applications)

Module III: Microbes Preservation and Fermentation technology (12 Hours)
Importance of preservation of microbes, types of preservation techniques, revival of microbes; History of fermentation, introduction to fermentation processes, Microbial culture selection for fermentation processes. Media formulation and process optimization; Design and operation of Fermenters, Basic concepts for selection of a reactor, Packed bed reactor, Fluidized bed reactor, Trickle bed reactor, Bubble column reactor, Scale up of Bioreactor; basic concept of upstream and down-stream processing

Module IV: Microorganisms in Environmental and Agriculture (15 Hours)
Microbes as tools for pollution abatement, bio-indicators, restoration of degraded ecosystem, biodegradation, bioremediation, biogenic gases; Role of microbes in relation to agriculture: nitrogen economy, plant health, biological control. Symbiotic association: concepts, types and application

Module V: Microorganisms in Food and Pharmaceutical Industries (10 Hours)
Microbes in food and dairy industries: mushroom, fermented foods, microbial spoilage of food and dairy products; Gene manipulation for production microbial toxin, types, mode of action, production of novel commercial products such as biopolymer and antibiotics; basic concepts of immunology, vaccines, immunotherapy, microbes in biological warfare

Suggested Reading:
1. Willey JM, Sherwood L, Woolverton CJ (2013) Prescott's Microbiology, 9 th edition, McGraw-Hill, New York.
2. Pelczar M.J., Chan E.C.S. and Krieg N.R. (2003) Microbiology. 5 th Edition, Tata McGraw-Hill Publishing Company Limited, New Delhi.
3. Waites MJ, Morgan NL, Rockey JS, Higton G. Industrial Microbiology: An Introduction, Wiley-Blackwell
4. Brock T.D. and Madigan M., Biology of Microorganisms, Prentice Hall of India Pvt. Ltd.
5. Moat A.G. and Foster S.W., Microbial Physiology, John Wiley and Sons, New York.

CO5			H		
CO6			L	H	H

SPECIALIZATION: PLANT PHYSIOLOGY AND BIOCHEMISTRY

BOPP0045: ADVANCE PLANT PHYSIOLOGY
(4 CREDITS-60 HOURS) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Analyze the role of microbes in mineral acquisition (Analyzing)
2. Understand the process of photosynthesis and respiration and its regulatory enzymes (Understanding)

3. Interpret the signal transduction and gene expression of growth hormones (Understanding)
4. Assess the mechanism of plant response towards abiotic and biotic stresses and action of photoreceptors (Evaluating)

Module I: Mineral nutrition (8 Hours)
Mineral Absorption and transport, Role of microbes in nutrient acquisition by plants; Assimilation of mineral nutrients with emphasis on phosphorus and potassium assimilation

Module II: Photosynthesis (10 Hours)
Primary charge separation events in reaction centres; regulatory action of uncoupling agents of photophosphorylation; energy loss during vectorial electron transfer in light reaction; genetics of RUBISCO subunit assembly and organization in plants; physiological and ecological aspects of photosynthesis; efficiency of carbohydrate synthesis

Module III: Respiration (12 Hours)
Regulation of key respiratory enzymes with particular emphasis on phosphofructo kinase, glyceraldehydes-3-phosphate dehydrogenase and pyruvate dehydrogenase; mechanism of action of inhibitors of oxidative phosphorylation; arrangement and organization of protein complexes in mitochondrial electron transport chain

Module IV: Plant growth regulators (12 Hours)
Signal perception and signal transduction, hormone binding receptors, hormone induced changes in gene expression and specific functions of Auxin – cell elongation, Gibberellins – germination of dormant seeds, Cytokinins – cell division and retardation of senescence of plant parts, Abscisic acid – stomatal closure and induction of drought resistance and Ethylene – fruit ripening

Module V: Stress Biology and Sensory Photobiology (18 Hours)
Mechanism of plant response to water (low and high), temperature (low and high), Salt (Salinity and Alkalinity), heavy metals and biotic stresses (Pathogens and insects), Oxygen deficiency. Sensory Photobiology: Structure, function and mechanisms of action of phytochromes, cryptochromes and phototropins

Suggested Reading:

1. Davies PJ. Plant Hormones: Biosynthesis, Signal Transduction, Action. 3rd Edition, Kluwer Academic Publisher, Dordrecht, The Netherlands
2. Taiz L and Zeiger E. Plant Physiology, 4th Edition, Sinauer Associates Inc. Publishers, Massachusetts, USA
3. Bajracharya D. (1999) Experiments in Plant Physiology- A Laboratory Manual, Narosa Publishing House, New Delhi
4. Hopkins, W.G. and Huner, A. (2008) Introduction to Plant Physiology, 4th edition, John Wiley and Sons, USA

CO4					H

BOBM0046: PLANT BIOCHEMISTRY AND METABOLISM

(4 CREDITS-60 HOURS) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Understand the molecular biology of nitrogen fixation (Understanding)
2. Interpret the biosynthesis of secondary metabolites and their defence mechanism (Understanding)
3. Rephrase the structure and functions of vitamins (Understanding)
4. Understand the mechanism of cell signalling (Understanding)
5. Determine and estimate different phytochemical compounds from plant samples (Evaluating)

Module I: Nitrogen metabolism (10 Hours)
Process of biological nitrogen fixation; nodule formation-role of NOD genes and nodulins; NIF genes; molecular biology of nitrogenase complex; regulation of nitrogen fixation; nitrogen assimilation in higher plants

Module II: Secondary metabolites (12 Hours)
Biosynthesis and roles of terpenes, phenolic compounds, nitrogen containing compounds; commercial and economic importance of secondary metabolites; role of secondary metabolites in plant defence against insects, herbivores and pathogens

Module III: Vitamins (10 Hours)

Structure, and functions of Thiamine, Riboflavin, Nicotinic Acid, Pantothenic Acid, Pyridoxine, Biotin, Folic Acid, Vitamin B12, Ascorbic Acid, Vitamin A, D, E and K

Module IV: Cell Signalling (16 Hours)
Overview, second messengers, receptors and G-proteins, phospholipid signaling, role of cyclic nucleotides, calcium-calmodulin cascade, diversity in protein kinases and phosphatases, specific signaling mechanisms and their regulation, e.g. simple and hybrid type of two-component sensor-regulator system in bacteria and plants (examples of chemotaxis, osmosensing, ethylene and cytokinin signaling), quorum sensing

Module V: Biochemical methods (12 Hours)
Determination of mineral nutrients in plant samples; Estimation of chlorophyll and carotenoids from leaf sample; Preparation of standard curve, extraction and estimation of total soluble sugars, starch, total free amino acids, total protein, fats, vitamins, antioxidative enzymes, secondary metabolites from plant samples.

Suggested readings
1. Nelson DL and Cox MM. (2004) Lehninger Principles of Biochemistry, 4th Edition, W.H. Freeman and Company, New York, USA.
2. Davies PJ. Plant Hormones: Biosynthesis, Signal Transduction, Action. 3rd Edition, Kluwer Academic Publisher, Dordrecht, The Netherlands
3. Taiz L and Zeiger E. Plant Physiology, 4th Edition, Sinauer Associates Inc. Publishers, Massachusetts, USA
4. Bajracharya D. (1999) Experiments in Plant Physiology- A Laboratory Manual, Narosa Publishing House, New Delhi

CO5				H	M

SPECIALIZATION: ADVANCES IN PLANT SCIENCE

BOBB0047: BIOMASS, BIOREFINERY AND CIRCULAR BIOECONOMY
(4 CREDIT, 60 Hours T-L-T:4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Identify potential biomass feedstocks including energy crops based on its biochemical composition (Analysing)
2. Have an understanding of the existing and emerging biomass to various technologies (Understanding)
3. Develop a critical thinking about sustainability and its prospect to generate circular bio-economy (Evaluating)
4. Determine sustainable solutions for bioresources by incorporating different technologies and assessment will be explored. (Application)

Module I: BIOMASS FEEDSTOCK, COMPOSITION AND SUPPLY LOGISTICS (10 Hours)
Biomass Feedstocks I- Harvested Feedstocks (first generation feedstock, second generation, third generation feedstocks) in context to biofuel and biorefinery. Biomass Feedstocks II- Residue Feedstocks (Agricultural waste, Forestry waste, Farm waste, Organic components of residential, commercial, institutional and industrial waste). Biochemical composition of different biomass feedstock. Conventional and Advanced logistic Systems, Feedstock barriers and strategies moving forward, Supply chain and reverse logistics

Module II: BIOMASS CONVERSION TECHNOLOGIES (12 Hours)
Biomass Conversion Technologies I- Biorefinery Concept -Understanding biorefinery concept, Bio-refineries & endproducts. Biomass Conversion Technologies II- Biochemical Conversion I-(Hydrolysis, enzyme & acid hydrolysis, Fermentation). Biochemical Conversion II- (Anaerobic digestion, Trans-esterification. Biomass). Conversion Technologies III- Thermochemical Conversion -(Combustion, Gasification, Pyrolysis. Other thermochemical conversion technologies, Scaling up emerging technologies.

Module III: LOW CARBON CIRCULAR ECONOMY and VALUE-ADDED CHEMICALS (16 Hours)
Advanced low-carbon economy from biofuel/biopolymer/value added product–Case study, Mixed alcohols (Acetone, ethanol, butanol), C3 sugars (Lactic acid, Propionic acid), C4 sugars (Malic acid), C5 sugars (Furfural, levulinic acid, xylitol), C6 Sugars Hydroxymethylfurfural (HMF), Lignin, PHB, Bio-oil, biochar, biodiesel, bio hydrogen and other value-added

organic products. carbon credit and carbon economy. Bioeconomy, value creation and business development, Circular economic principles and business models Biotechnology and other bioprocesses enabling circular bioeconomy. Opportunities, framework conditions and barriers for a circular bioeconomy.

Module IV: BIOREFINERY (10 Hours)
Basic Concept and Types of Integrated biorefinery (Aquaculture and algal biorefinery, waste biorefinery). Economics and Life Cycle Analysis I- (General understanding of LCA, Cradle-to-grave, field to wheels concepts, Goal and scope determination, defining LCA boundaries). Life Cycle Analysis II. Life Cycle Inventory, Life Cycle Assessment. GIS based distribution study.

Module V: BIOSAFETY, IPR AND ENTREPRENEURSHIP (12 Hours)
History of biosafety, risk assessment, biosafety levels, personal protective equipment, laboratory facilities and safety equipment, disinfection, decontamination, sterilization, regulatory compliance, laboratory security and emergency response, administrative controls, Current trends in biosafety. Patentability search in biofuel sectors. Entrepreneurship essentials: opportunities, ideas and Innovation; feasibility an-d market research; business plan; Building a business: business models, Startup ecosystem; Technology and bio-entrepreneurship – case studies.

Suggested readings:

1. Ashok Pandey, R. D. Tyagi, Sunita Varjani. Biomass, Biofuels, Biochemicals: Circular Bioeconomy—Current Developments and Future Outlook. 2021, Elsevier Science Publishing Co Inc.
2. Wiebke Reim, Vinit Parida, David R. Sjodin. Circular Business Models for the Bio-Economy: A Review and New Directions for Future Research. Sustainability; 11, 2558.
3. Juan-Rodrigo Bastidas-Oyanedel, Jens Ejbye Schmidt. Biorefinery “Integrated Sustainable Processes for Biomass Conversion to Biomaterials, Biofuels, and Fertilizers.”Springer.
4. Fundamentals of Entrepreneurship. 3rd Edition, Nandan H, 2007, Phi Learning, New Delhi.
5. Entrepreneurship and Small Business Management, 2nd Edition, Mariotti S and Glackin C, 2016, Pearson Publishers.
6. Ipr Biosafety And Bioethics 2013 Edition by GOEL, PEARSON

BOPD0048: BIOPROSPECTING OF PLANT DIVERSITY AND AUTOMATION
(4 CREDIT, 60 Hours T-L-T:4-0-0)

Course Outcomes
At the end of this course, student will be able to:
1. Identify and explore the prospect of Plant and its molecules in industry (Understanding)
2. Recalling the Bio prospect of various plant molecules for commercialization (Remember)
3. Application of GIS and remote sensing in plant resource utilization and mapping (Analysing)
4. Understanding the impact climate change in soil microbiome affecting Plant diversity (Understanding)
5. Understanding the role of Automation in plant Science (Applications)

Module 1: Introduction to Bioprospecting: (6 Hours)
Definition, Introduction, recent trends in Bioprospecting, Pros and Cons, Omics and in silico bioprospecting, bionic bioprospecting, Bioprospecting Act and Biopiracy.

Module 2: Microbial and Marine Bioprospecting: (8 Hours)
Sources of marine planktons and their Bioprospecting, Isolation and cultivation of Marine Bioresource, Isolation of algal strain, Types of cultivations and its industrial applications, Bioactive chemicals from Seaweeds and their applications. Role of algae in Biodiesel, fertilizers and nanobiotechnology. Isolation of Microbial metabolites and their bioactivity. Endophytic microbial products as Antibiotics.

Module 3: Bioprospecting of Forestry and above ground biomass residues (8 Hours)
Cultivation and uses of Food, Fodder, paddy waste, Fibers, Oil yielding crops, wood and timber, Non-wood forest products (NWFPS): Bamboos, Invasive Plant management and valorization, Gums, Dyes, Resins, Fruits etc, Botany, Chemistry, Properties and uses of Medicinal, herbal and Aromatic plants, rle of plants in phytoremediation of industrial waste

Module 4: Application of Remote Sensing and GIS in Bioresource management and Conservation. (10 Hours)
GIS in agro-residue bioenergy planning, Issues needing attention while using GIS, Life Cycle Assessment (LCA) in agro-residue, Spatial LCA in bioenergy and environmental planning, Satellite sensors used in Remote sensing, Predictor variables, Spectral indices, vegetation index and spatial imagery for biomass distribution

Module 5: Biotransformation and Fermentation technology (10 Hours)
Molecular farming, production of industrial enzymes, biodegradable plastics, antibodies, edible vaccines; manipulation of metabolic pathways for production of secondary metabolites, transplastomics plants, extraction of high value industrial products, growth and production kinetics of cell cultures in shake flasks; scale-up procedures in bioreactors, types of bioreactors for plant cell cultures; Manipulation in production profile by biotic and abiotic elicitation. Production of crop plants under organic and conventional fanning system, Bio-fertilizers, Bio-methylation, preparation of compost / vermicomposting.

Module 6: Microbiome and Climate Change (8 Hours)
Microbiome data for applications in energy, environment, health, and agriculture, Implication of Soil microbiome, climate change and carbon storage nexus, Clean Development Mechanism, carbon offset, carbon cycle, carbon sequestration, Carbon capture, storage and uptake and Artificial photosynthesis

Module 7: Automation in Plant Science (10 Hours)
Application of IOT, digital image processing in plants (quantifying disease detection, quantification and Precision agriculture. Big Data in Plant study and conservations, Application of spectral signatures in plant distribution, taxonomy, biochemical estimation, vegetation index (NDVI, PVI, SVI), characterize by its size, shape, boundaries and internal structure ETC

Suggested Readings

LABORATORY COURSES

BOMP6026: MYCOLOGY AND PHYCOLOGY LAB (3 CREDITS-60 HOURS) (L-T-P: 0-0-3)

Course Outcomes

At the end of this course, student will be able to:

1. Learn about the vegetative and reproductive structures of some important classes of fungi and algae (Understanding)
2. Acquire knowledge and importance of mycorrhizae and lichens (Understanding)
3. Learn the techniques of isolation of fungi and algae (Applying)
4. Learn the technique of producing fungal and algal bio-fertilizers (Applying)

Expt.1. Study of thallus organization, Spore producing organs, and accessory structures of Myxomycotina, Mastigomycotina, Oomycotina, Zygomycotina, Ascomycotina, Basidiomycotina, Deuteromycotina

Expt.2. Study of morphological and anatomical features of Crustose, Foliose and Fruticose lichens

Expt.3. Isolation and characterization of fungi up to species from soil

Expt.4. Study of range of vegetative and reproductive structures of algae in Cyanophyta, Chlorophyta, Phaeophyta, Rhodophyta, Xanthophyta, Bacillariophyta, and Euglenophyta

Expt.5. Production techniques of fungal and algal based bio-fertilizers

BOBA6027: BRYOPHYTES, PTERIDOPHYTES, GYMNOSPERMS AND ANGIOSPERMS LAB (3 CREDITS-60 HOURS) (L-T- P: 0-0-3)

Course Outcomes

At the end of this course, student will be able to:

1. Interpret the concepts of classification system and identification of few important bryophytes (Understanding)
2. Infer the concepts of classification system and identification of few important pteridophytes (Understanding)
3. Summarize the concepts of classification system and identification of few important gymnosperms (Understanding)
4. Collect, prepare and document herbarium specimens through non-destructive field collection method so as to get acquainted with herbarium technique (Applying)
5. Differentiate between monocots and dicots (Understanding)
6. Interpret sporogenesis and gametogenesis in angiosperms (Understanding)

Part 1: Bryophytes, Pteridophytes and Gymnosperms

Expt.1. Study of morphology and reproductive structures of the following bryophytes: Riccia, Marchantia, Anthocerus, Sphagnum, Polytrichum, Funeria, Porella.

Expt.2. Study of morphology and reproductive structures and observe arrangement of Sori on a receptacle of the following pteridophytes: Lycopodium, Selaginella, Marsilea, Equisetum, Azolla, Salvinia, Adiantum

Expt.3. To study the anatomy, morphology and reproductive features of the following gymnosperms: Cycas, Pinus, Cryptomeria, Thuja, Podocarpus, Gnetum , Zamia, Ginkgo

Part 2: Angiosperms

Expt.4. Collection, preparation and documentation of herbarium specimens through non-destructive field collection method so as to get acquainted with herbarium technique.

Expt.5. Taxonomic study of selected families of dicots and monocots of angiospermic plants with the help of analytical drawings, botanical description and identification up to the rank of species.

Expt.6. Study of various stages of sporogenesis and gametogenesis in selected species of angiospermic plants

BOCB6028: CELL & MOLECULAR BIOLOGY, PLANT PHYSIOLOGY & BIOCHEMISTRY LAB (3 CREDITS-60 HOURS) (L-T- P: 0-0-3)

Course Outcomes

At the end of this course, student will be able to:

1. Get acquainted with tools and techniques of molecular biology (Remembering)
2. Perform isolation of genomic DNA and their quantification and understand how to calculate recombination frequencies (Understanding)
3. Analyze the concept of osmosis and impact of organic solvent in membrane permeability (Analyzing)
4. Understand the underlying principle behind respiration, transpiration and photosynthesis. (Understanding)
5. Analyze the functions of phytohormones and the properties of plant biomolecules (Analyzing)

Part 1: Cell & Molecular Biology

Expt.1. Acquaintance with molecular biology laboratory and instruments
Expt.2. Practical on cytoplasmic streaming in plant cell
Expt.3. Extraction of DNA from strawberry/banana by alcohol precipitation method
Expt.4. Isolation of genomic DNA from plant materials using SDS/CTAB method
Expt.5. Calculation of recombination frequencies of genes

Part 2: Plant Physiology

Expt.6. Determination of osmotic potential in potato tuber
Expt.7. To study the effect of different organic solvents (alcohol, formalin, benzene) on the permeability of plasma membrane of beet root
Expt.8. Determination of the effect of CO2 concentration on the rate of photosynthesis by inverted funnel method
Expt.9. Determination of the effect of intensity of light on the rate of photosynthesis
Expt.10. To study the effect of different Phytohormones on the germination of seeds

Part 3: Plant Biochemistry

Expt.11. Estimation of protein using calibration curve following the protocol of Lowry et al., method
Expt.12. Estimation of nitrate reductase activity
Expt.13. To study the effect of NR activity in presence of light and dark period
Expt.14. Preparing the calibration curve of nitrite using azo-coupling method of Snell and Snel
Expt.15. Isolation of Plant DNA and their spectrophotometric quantification

BOER6033: ENVIRONMENTAL MANAGEMENT, RESEARCH METHODOLOGY AND BIOSTATISTICS & BIOCHEMICAL LAB (2 Credits-40 Hours) (L-T-P: 0-0-2)

Course Outcomes

At the end of this course, student will be able to:

1. Apply ideas gained for experimental surveys and writing sound scientific papers (Applying)
2. Apply the concepts of statistics for interpreting scientific data (Applying)
3. Develop ideas for small scale start-ups (Creating)

Expt.1. Practical on design of vermicompost/mushroom unit
Expt.2. Survey of environment risk prone areas
Expt.3. Scientific search engine tour for e-resources, research article, review article, scientific problems
Expt.4. Calculation of mean, median, mode, standard deviation, quartile deviation and coefficient of variation from a given dataset
Expt.5. Calculation of chi square statistic (goodness of fit & independence of attributes)
Expt.6. Calculation of student's t-test
Expt.7. Calculation of analysis of variance (ANOVA)
Expt.8. Designing CRD for an experimental layout
Expt.9. Designing RBD for an experimental layout
Expt.10. Determination of coefficients of partial and multiple correlation
Expt.11. Determination of the regression coefficient

BODI6032: DISSERTATION PHASE I (4 CREDITS-80 HOURS)

Description

1. Review of literature related to the research problem assigned to the students.
2. Practicing research ethics and methodology
3. Writing review articles related to the research problem.
4. Publishing these review articles in peer-reviewed journals.
5. Initial setting up of experiments to resolve the research problem
6. Writing and presenting the synopsis of the research problem.

BOPP6041: PLANT MICROBIOLOGY AND PLANT PATHOLOGY LAB (2 CREDITS-40 HOURS) (L-T-P: 0-0-2)

Course Outcomes

At the end of this course, student will be able to:

1. Prepare different media used in microorganism isolation (Applying)
2. Apply various techniques for identifying different microbes (Applying)
3. Develop protocols and methods for characterizing microbes (Creating)
4. Identify chemicals agents, plants pathogens and their symptoms on diseased plant (Applying)

Expt.1. Preparation of nutrient media (solid/liquid) for culture
Expt.2. Staining techniques (Grams staining, flagella staining, capsule staining and acid fast staining of bacteria)
Expt.3. Isolation and characterization of pure cultures of microbes from soil, water and plant samples
Expt.4. Estimation of bacterial growth by spectrophotometric method
Expt.5. Culturing and isolation techniques of viruses (through seminar/virus lab visit)
Expt.6. In vitro and in vivo evaluation of chemicals against plant pathogens
Expt.7. Detailed study of symptoms of representative diseases of plantation crops, Collection and dry preservation of diseased specimens of important crops

Mapping of COs to syllabus:

Course Outcomes	Expt. 1	Expt. 2	Expt. 3	Expt. 4	Expt. 5	Expt. 6	Expt. 7

CO4					L	H	H

BODI6034: DISSERTATION PHASE II (10 Credits-200Hours)

Description

1. Conducting experiments to resolve the research problem
2. Writing research articles and reviewing papers related to the research problem
3. Publishing these research and review papers in peer-reviewed journals
4. Presenting, explaining and defending the dissertation
5. Writing the dissertation

BOPE6042: PLANT ECOLOGY AND PHYTOGEOGRAPHY LAB (2 CREDITS-40 HOURS) (L-T-P: 0-0-2)

Course Outcomes

At the end of this course, student will be able to:

1. Gain knowledge about the population and communities characteristics in a given field
2. Gain knowledge about the concepts of analyzing edaphic characteristics
3. Gain knowledge about the analysis of physicochemical properties of water bodies

Expt.1. To determine the minimum size of the quadrat by species area-curve method.
Expt.2. To determine abundance, density, frequency, basal covers of plant communities by quadrat method.
Expt.3. To determine minimum number of quadrats required for reliable estimate of biomass in grasslands.
Expt.4. To compare protected and unprotected grassland stands using community coefficients (similarity indices).
Expt.5. Estimation of Importance Value Index (IVI) of the species in a grassland/woodland using quadrat method.
Expt.6. To estimate the above ground and below ground biomass from unit area.
Expt.7. To analyze the edaphic characteristics- Soil profile, Texture, Soil moisture, Water holding capacity, Porosity, pH, Organic matter content, and quantitative estimation of N, P, K.
Expt.8. To study the physicochemical characteristics from polluted and unpolluted water bodies: DO, COD, BOD, pH, Hardness, Alkalinity, Conductivity, Free CO2, Chloride, Nitrate and Phosphate.
Expt.9. Field Study

Mapping of COs to Syllabus:

BOCT6040: CYTOGENETICS AND MOLECULAR TECHNIQUES LAB (3 CREDITS-60 HOURS) (L-T-P: 0- 0-3)

Course Outcomes

At the end of this course, student will be able to:

1. Interpret mitosis, meiosis and chromosomal aberration (Understanding)
2. Solve problems based on gene interactions (Applying)
3. Show hybridization in self- and cross-pollinated crops (Applying)
4. Utilize various chromatographic techniques to separate amino acids and plant pigments (Applying)
5. Isolate biomolecules and learn to use a thermal cycler (Applying)
6. Design primers using various software and use BLAST to identify sequences of similarity (Applying)

Part 1: Cytogenetics

Expt.1. Identification of mitosis from suitable plant material (Onion and garlic root tips)
Expt.2. Identification of meiosis from suitable plant material (Onion floral buds)
Expt.3. Study of chromosomal aberrations in plant (Rhoeo)
Expt.4. Study of numerical problems involving gene interactions
Expt.5. Practice of hybridization technique in self- and cross-pollinated plants species

Part 2: Molecular Techniques & Bioinformatics

Expt.6. Separation of amino acids and plant pigments by paper chromatography and thin layer chromatography (TLC)
Expt.7. Isolation of plasmid/genomic DNA
Expt.8. Isolation of total RNA from plant sample using Trizol method
Expt.9. Understanding the functioning of a thermal cycler/ Amplification of a gene using PCR
Expt.10. Designing of primers and identifying regions of similarity in biological sequences using BLAST

VALUE ADDED COURSES

BOBF6035: BIO-FERTILIZER TECHNOLOGY (NON-CREDIT COURSE - 30 HOURS)

Course Outcomes:
At the end of this course, student will be able to:

1. Gain the basic knowledge about Bio-fertilizer and Organic farming and its field application (understanding).
2. Able to prepare bio-compost/organic compost/vermicomposting (Applying)

Module I: (3 Hours)
Bio-fertilizer concepts, types and applications; microorganisms used as bio-fertilizers

Module II: (12 Hours)
Rhizobium, *Azospirillum*, *Azotobacter*: classification, isolation, characterization and massmultiplication – carrier-based inoculant, associative effect of different microorganisms, Cyanobacteria as fertilizer, *Azolla-Anabaena* association and their role in agriculture, Mycorrhizal association, types, applications in crop fields

Module III: (15 Hours)
Organic farming concept; Green manure and organic fertilizers; bio-composts, vermicomposting– field applications Preparation of organic compost/bio-compost/bio-fertilizer; setting up of vermicomposting unit

Suggested Readings:
1. John Jothi Prakash, E. 2004. Outlines of Plant Biotechnology. Emkay -Publication, NewDelhi.
2. Sathe, T.V. 2004 Vermiculture and Organic Farming. Daya publishers.
3. Subha Rao, N.S. 2000, Soil Microbiology, Oxford & IBH Publishers, New _Delhi.
4. Vayas,S.C, Vayas, S. and Modi, H.A. 1998 Bio-fertilizers and organic _Farming AktaPrakashan, Nadiad 55

Mapping of COs to syllabus:

Course Outcomes	Module I	Module II	Module III
CO1	H	H	H
CO2	L	H	H

BOHM6036: HERBAL MEDICINES (NON-CREDIT COURSE - 30 HOURS)

Course Outcomes:
At the end of this course, student will be able to:

1. Acquire the concepts of herbal medicines (Understanding)
2. Utilize knowledge about conservation strategies and IPR principles (Applying)
3. Develop formulations of herbal medicines (Creating)

Module I: Module I: Introduction to Herbal Medicines (6 Hours)
Medicinal plant research scenario in India; Commercial cultivation of medicinal plants

Module II: Module II: Herbal Medicines in Medical Science (14 Hours)
Diagnostic features, bioactive molecules and therapeutic value of some common medicinalplants. Standardization of herbal drugs; Neutraceutical and medicinal food

Module III: Module III: IPR and Conservation Strategies (10 Hours)
Conservation of medicinal plants; Bioprospecting, biopiracy and protection of traditional medicinal knowledge (IPR)

Suggested Readings:
1. Alamgir ANM. Therapeutic Use of Medicinal plants and Their Extracts. Volume I.
2. Panda H. Handbook of Medicinal Plants with Uses. Publisher: Centre for Information Technology.
3. Singh KP. Conservation, Cultivation and Sustainable Utilization of Medicinal and herbal Plants. SR Scientific Publication Rastogi RP. A Compendium of Indian Medicinal Plants. Publisher: Publications and Information Directorate.

CO1	H	H	M
CO2	L	M	H
CO3	H	H	H

BOFI6037: FOREST INVENTORY AND MENSURATION (NON-CREDIT COURSE - 30 HOURS)

Course Outcomes:
At the end of this course, student will be able to:

1. Exhibit forest inventorying and mensuration skills for data collection, analysis, andinterpretation (Applying)
2. Interpret a wide range of scientific and popular literature related to forest inventories(Analyzing)
3. Prepare, analyses and present both written and verbal technical reports on forestinventories (Applying)

Module I: Introduction to Forest Inventory and Sampling Design (15 Hours)
Introduction; Types of forest inventory; Choosing a sampling design: Simple random sampling, Stratified random sampling, Systematic sampling, Cluster sampling, Choosing sampling intensity, Locating sampling units: compass and measuring distance, GPS device; Sampling approaches: Fixed-area methods, Line intercept method, Distance-based sampling, Selecting an appropriate sampling unit

Module II: Forest Mensuration (15 Hours)
Measuring individual trees: Age, Stem diameter, Height, Canopy cover; Characterizing stand structure: Age and size structure, Height and vertical structure, Leaf area, Stand volume, Stand density; Spatial structure of tree populations; Species richness and diversity: Species richness, Species diversity, Beta diversity and similarity; Analysis of floristic composition: Cluster analysis, Ordination, Importance values

Suggested Readings:

1. Avery, T. E. and Burkhart, H. E. (2002). Forest measurements, 5th edition. McGraw-Hill,NY
2. Newton, A.C. (2007). Forest Ecology and Conservation - A Handbook of Techniques.Oxford University Press Inc., New York
3. Sutherland, W. (ed.) (1996). Ecological census techniques, a handbook. Cambridge University Press, Cambridge
4. Underwood, A. J. (1997). Experiments in ecology: Their logical design and interpretation using analysis of variance. Cambridge University Press, Cambridge
5. West, P. W. (2004). Tree and forest measurement. Springer-Verlag, Berlin

Course Outcomes	Module I	Module II
CO1	H	H
CO2	M	M
CO3	M	M

BOBC6038: BIOMASS CONVERSION, BIOREFINERY & CIRCULAR BIOECONOMY (NON-CREDIT COURSE - 30 HOURS)

Course Outcomes:
At the end of this course, student will be able to:
1.Identify potential biomass feedstocks including energy crops based on its biochemical composition (Analysing)
2.Have an understanding of the existing and emerging biomass to various technologies (Understanding)
3.Have an understanding of Biorefinery, LCA and applications. (Understanding)
4.Develop a critical thinking about sustainability and its prospect to generate circular bio-economy
5.(Evaluating)
6.Determine sustainable solutions for bioresources by incorporating different technologies and assessment will be explored. (Application)

Module I: INTRODUCTION TO DIFFERENT BIOMASS TYPES AND COMPOSITION (4 hours)
Biomass Feedstocks I- Harvested Feedstocks (first generation feedstock, second generation, third generation feedstocks) in context to biofuel and biorefinery. Biomass Feedstocks II- Residue Feedstocks (Agricultural waste, Forestry waste, Farm waste, Organic components of residential, commercial, institutional and industrial waste). Biochemical composition of different biomass feedstock

Module II: BIOMASS CONVERSION TECHNOLOGIES (8 hours)

Biomass Conversion Technologies I- Biorefinery Concept -Understanding biorefinery concept, Bio-refineries & end products. Biomass Conversion Technologies II- Biochemical Conversion I-(Hydrolysis, enzyme & acid hydrolysis, Fermentation). Biochemical Conversion II- (Anaerobic digestion, Trans-esterification. Biomass). Conversion Technologies III- Thermochemical Conversion -(Combustion, Gasification, Pyrolysis. Other thermochemical conversion technologies, Scaling up emerging technologies.

Module III: LOW CARBON CIRCULAR ECONOMY VALUE ADDED PLATFORM CHEMICALS (10 hours)

Advanced low-carbon economy from biofuel/biopolymer/value added product–Case study, Mixed alcohols (Acetone, ethanol, butanol), C3 sugars (Lactic acid, Propionic acid), C4 sugars (Malic acid), C5 sugars (Furfural, levulinic acid, xylitol), C6 Sugars Hydroxymethylfurfural (HMF), Lignin, PHB, Bio-oil, biochar, biodiesel, bio hydrogen and other value-added organic products. Low carbon credit and carbon economy. Bioeconomy, value creation and business development, Circular economic principles and business models. Biotechnology and other bioprocesses enabling circular bioeconomy. Opportunities, framework conditions and barriers for a circular bioeconomy.

Module IV: BIOREFINERY (8 hours)

Basic Concept and Types of Integrated biorefinery (Aquaculture and algal biorefinery, waste biorefinery). Economics and Life Cycle Analysis I- (General understanding of LCA, Cradle-to-grave, field to wheels concepts, Goal and scope determination, defining LCA boundaries). Life Cycle Analysis II. Life Cycle Inventory, Life Cycle Assessment. GIS in agro-residue bioenergy planning, Biomass Supply and Logistics management.

Suggested readings:

1. Ashok Pandey, R. D. Tyagi, Sunita Varjani. Biomass, Biofuels, Biochemicals: Circular Bioeconomy—Current Developments and Future Outlook. 2021, Elsevier Science Publishing Co Inc.
2. Wiebke Reim, Vinit Parida, David R. Sjodin. Circular Business Models for the Bio-Economy: A Review and New Directions for Future Research. Sustainability; 11, 2558.
3. Juan-Rodrigo Bastidas-Oyanedel, Jens Ejbye Schmidt. Biorefinery “Integrated Sustainable Processes for Biomass Conversion to Biomaterials, Biofuels, and Fertilizers.”Springer.

CO5				3

SERVICE-LEARNING COURSE

BOSL0100: SERVICE LEARNING ON ETHNOBOTANICAL PRACTICES (NON-CREDIT COURSE - 30 HOURS)

Course Outcomes:

1. Ability to think critically and analyze what they have learned in the classroom and how toapply their theoretical knowledge in the real world for the betterment of the society (Applying)
2. Development of social accountability and greater participation in community services. (Applying)
3. Development of communication skill, personality skill, decision making ability and other career related skill. (Evaluating)
4. Awareness about the cultural diversity and their relationship with traditional plants (Understanding)
5. Better understand the basic concepts of ethno-botany and their conservation practices (Understanding)
6. Recognize the ethno-botanically important plants species (Remembering)

Module 1: Introduction to Service Learning (10 Hours)

Definitions; Aims and Objectives of Service Learning; Types of Service Learning; Principles of Service Learning; Important tools of Service Learning; Scopes of Service Learning; Benefits of Service Learning ; Community based Service Learning and Volunteering Service Learning

Module 2: Introduction to Ethno-botany (10 Hours)

Concepts of Ethno-botany: Definitions, Interdisciplinary; Aims and Objectives of Ethno-botany; Scope of Ethno-botany: Documentation, Preservation, Conservation; Application of Ethno- botany; Concept on Rare Endangered and Threatened (RET) Taxa; Basic concept on the Conservation and Management of native plants; Basic concept on Intellectual Property Right (IPR)

Module 3: Orientation Programme (10 Hours)

Lectures from experts; Discussion on various issues related to health and wellness, environment,waste management, education; Videos on community services

Module 4: Service Learning on Ethno-botanical practices (180 Hours)

Implement of an interaction programme with the local ethnic group to understand their relationships with the native plants; Awareness programme on the conservation and management of rare and medicinal plants; Awareness campaign on the reconstruction of forest in the local community; Fundraise for cultivation of medicinal plants in the community; Creation of medicinal plant garden for recreation and to earn income for livelihood and to help those who arein need; Combat of invasive plants to restored ecosystems in preserve areas for public use.

DEPARTMENT OF ZOOLOGY
DETAILED SYLLABUS

VISION:

- To develop the Department as an interdisciplinary centre for learning, research, and innovation
- To develop the Department into a hub of biodiversity research while making the surrounding a natural laboratory

MISSION:

- To provide a better understanding of Zoological Sciences through interaction with the natural environment and sensitizing the students about their social responsibilities
- to expose the learners to recent advances in Zoology and to provide high quality education with an emphasis on learning and research.

PROGRAMME: BSC ZOOLOGY (HONOURS)

PROGRAM OUTCOMES (PO) - BSC PROGRAMME

PO 1: **Critical Thinking**: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspective.

PO 2: **Effective Communication**: Speak, read, write and listen clearly in person and through electronic media, and make meaning of the world by connecting people, ideas, books, media and technology.

PO 3: **Social Interaction**: Elicit views of others, mediate disagreements and help reach conclusions in group settings.

PO 4: **Effective Citizenship**: Demonstrate empathetic social concern and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO 5: **Ethics**: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO 6: **Environment and Sustainability**: Understand the issues of environmental contexts and sustainable development.

PO 7: **Self-directed and Life-long Learning**: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.

PROGRAMME SPECIFIC OUTCOMES (PSOs)- BSc (Honours) Zoology

PSO 1: **Knowledge and Concept:** Acquire detailed knowledge on the extensive diversity of organisms inhabiting varied ecological niches of the earth as well as understand the complexity of the various life-systems operating in these organisms.

PSO 2: **Applying knowledge for self-sustenance:** Build foundations for novel thinking through application-based studies such assericulture and aquarium fish keeping, thus ensuring better opportunities for self-sustenance in future.

PSO 3: **Skills in handling scientific instruments:** Develop interest as well as proficiency in handling scientific instrumentsintroduced as part of practical courses, thereby warranting all-around growth.

PSO 4: **Conservation strategies:** Recognize the importance of conservation and encourage designing of effective strategies toaddress present conservation issues with preference to sustainable development.

COURSES OFFERED IN BSC (HONOURS) ZOOLOGY

Sl. No	COURSE NAME
1.1	Environmental Studies
1.2	English Communication
1.3	Foundations of Service Learning
1.4	Non-chordates I: Protista to Pseudocoelomates
1.5	Perspectives in Ecology
1.6	Non-Chordates II: Coelomates
1.7	Cell Biology
1.8	Animal Diversity
1.9	Atomic Structure, Bonding, General Organic Chemistry and Aliphatic Hydrocarbons
2.0	Environment and Public Health
2.1	Diversity of Chordates
2.2	Animal Physiology: Controlling and Coordinating Systems

2.3	Fundamentals of Biochemistry
2.4	Research Methodology
2.5	Comparative Anatomy of Vertebrates
2.6	Animal Physiology: Life-Sustaining Systems
2.7	Biochemistry of Metabolic Processes
2.8	Sericulture
2.9	Aquarium Fish Keeping
3.0	Environmental Biotechnology
3.1	Economic Botany and Plant Biotechnology
3.2	Chemical Energetics, Equilibria and Functional Organic Chemistry - I
3.3	Molecular Biology
3.4	Principles of Genetics
3.5	Wildlife Conservation and Management
3.6	Animal Behaviour and Chronobiology
3.7	Computational Biology
3.8	Animal Biotechnology
3.9	Developmental Biology
4.0	Evolutionary Biology
4.1	Immunology
4.2	Parasitology
4.3	Fish and Fisheries
4.4	Biology of Insecta
4.5	Non-chordates I: Protista to Pseudocoelomates Lab
4.6	Perspectives in Ecology Lab
4.7	Non-Chordates II: Coelomates Lab
4.8	Cell Biology Lab
4.9	Animal Diversity Lab
5.0	Atomic Structure, Bonding, General Organic Chemistry and Aliphatic Hydrocarbons Lab
5.1	Environment and Public Health Lab
5.2	Diversity of Chordates Lab
5.3	Animal Physiology: Controlling and Coordinating Systems Lab
5.4	Fundamentals of Biochemistry Lab
5.5	Comparative Anatomy of Vertebrates Lab
5.6	Animal Physiology: Life-Sustaining Systems Lab
5.7	Biochemistry of Metabolic Processes Lab
5.8	Environmental Biotechnology Lab
5.9	Chemical Energetics, Equilibria and Functional Organic Chemistry – I Lab
6.0	Economic Botany and Plant Biotechnology Lab
6.1	Molecular Biology Lab
6.2	Principles of Genetics Lab
6.3	Wildlife Conservation and Management Lab
6.4	Animal Behaviour and Chronobiology Lab
6.5	Computational Biology Lab
6.6	Animal Biotechnology Lab
6.7	Developmental Biology Lab
6.8	Evolutionary Biology Lab
6.9	Immunology Lab
7.0	Parasitology Lab
7.1	Fish and Fisheries Lab
7.2	Biology of Insecta Lab

PROGRAMME: MSC ZOOLOGY

PROGRAM OUTCOMES (PO)- MSC ZOOLOGY

PO 1: **Critical Thinking**: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational and personal) from different perspective.

PO 2: **Effective Communication**: Speak, read, write and listen clearly in person and through electronic media, and make meaning of the world by connecting people, ideas, books, media and technology.

PO 3: **Social Interaction**: Elicit views of others, mediate disagreements and help reach conclusions in group settings.

PO 4: **Effective Citizenship**: Demonstrate empathetic social concern and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO 5: **Ethics**: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO 6: **Environment and Sustainability**: Understand the issues of environmental contexts and sustainable development.

PO 7: **Self-directed and Life-long Learning**: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.

PO 8: **Skill Development**: Acquire and develop skills in handling scientific instruments, planning and executing biological research for employability and social service.

PO 9: **Entrepreneurship**: Inculcate a holistic approach towards amalgamating and applying the acquired knowledge, ideas and views towards formulating a model that would not only encourage financial stability of the person concerned but also generate employability and strengthen the socio-economic aspect of a region or locality as a whole.

PO 10: **Creative Thinking**: Promote creative thinking and innovative ideas for the welfare of the society.

PROGRAMME SPECIFIC OUTCOMES (PSOs)- MSc ZOOLOGY

PSO 1: **Knowledge and concept**: To acquire in-depth knowledge about the complexity of life systems at the molecular level.

PSO 2: **Research-inclined mindset**: To apply and analyze the various research techniques through minor dissertation projects, thus inculcating the fundamentals for future scientific studies.

PSO 3: **Applied Zoology and Entrepreneurship**: To apply the acquired knowledge to invigorate the existing areas of application-based zoological studies for creating productive models for self-sustenance.

PSO 4: **Conservation Models**: To specifically recognize the existing conservation issues with regards to both animal and environment and develop strategies to address these issues through ecologically sustainable methods.

COURSES OFFERED IN MSC ZOOLOGY

Sl. No	Course Name
1.1	Research Methodology and Biostatistics
1.2	Developmental Biology
1.3	Insects: Structure and Function
1.4	Insect Physiology
1.5	Cell and Molecular Biology I
1.6	Immunology I
1.7	Taxonomy and Functional Anatomy
1.8	Aquaculture and Fish Genetics
1.9	Animal Ecology and Biogeography
2.0	Wildlife Conservation and Management
2.1	Insect Ecology
2.2	Principles of Pest Management
2.3	Cell and Molecular Biology II
2.4	Immunology II
2.5	Capture Fishery and Post-Harvest Technology
2.6	Limnology, Fisher Economics, Ornamental Fishery and Fish Pathology
2.7	Wildlife Resource Management, Laws and Techniques In Population Study

2.8	Techniques in Wildlife Study, Wildlife Health, Forensics, and Conflict
2.9	Biosystematics and Evolution
3.0	Cell Biology and Immunology – Theory and Applications
3.1	Molecular Biology and Genetics
3.2	Animal Physiology
3.3	Ecology and Environmental Biology
3.4	Endocrinology and Biochemistry
3.5	Applied Zoology
3.6	Ethology and Population Genetics
3.7	Service Learning in Zoology
3.8	Project Management, Reporting, and Documentation
3.9	Dissertation Phase I
4.0	Introduction to Journalism and Photography
4.1	Dissertation Phase II
4.2	Teaching Methodology and Classroom Management
4.3	Specialization Lab I-Entomology
4.4	Specialization Lab I-Cell and Molecular Biology
4.5	Specialization Lab I-Fishery Science
4.6	Specialization Lab I-Animal Ecology and Wildlife Biology
4.7	Specialization Lab II-Entomology
4.8	Specialization Lab II- Cell and Molecular Biology
4.9	Specialization Lab II- Fishery Science
5.0	Specialization Lab II- Animal Ecology and Wildlife Biology
5.1	Biosystematics and Environmental Biology Lab
5.2	Cell Biology, Genetics and Basic Bioinformatics Lab
5.3	Developmental Biology and Biochemistry Lab
5.4	Ethology and Population Genetics Lab

DETAILED SYLLABUS
THEORY COURSES

BTRM0003: RESEARCH METHODOLOGY AND BIOSTATISTICS (4 CREDITS – 60 HOURS) [L-T-P: 4-0-0]

Course Outcomes

At the end of the course students will be able to:

1. Identify the complex issues inherent in selecting a research problem, selecting an appropriate research design and implementing a research project (Applying)
2. Define various kinds of research, objectives of doing research, research process, research designs and sampling. (Remembering)
3. Analyze the application of statistics in educational research. (Application)
4. Identify the ethical issues of research. (Applying)
5. Design and develop synopsis and thesis writing. (Creation)

Module I: Introduction to Scientific Research (15 hours)

a) Definition, basic and applied research, interdisciplinary research,
b) Discriminative reading, reading and reviewing scientific literature – consulting source material, primary and secondary literature, biological abstract, current content, review, monograph, peer- reviewed journals, e-resources; research and review articles
c) Introduction on scientific problems, your scientific problem, methods and techniques, research conditions, data types, techniques, repeatability, reproducibility and reliability, validity, effect measure and choice of statistical test, experimental protocol, experimental routine
d) Scientific communication - scientific paper, scientific posters

Module II: Ethics and Scientific Conduct (5 hours)

Brief introduction to ethics, scientific conduct and misconduct-plagiarism, authorship issues, investigation and punishment of scientific misconduct, ethics of animal and human research

Module III: (15 hours)

a) Introduction to Biostatistics: definition and applications of biostatistics;
b) Data-types and presentation: types of biological data, accuracy and significant figures;
c) Populations and samples: populations, samples from populations, random sampling, variables and attributes, statisticalerrors
d) Frequency distributions
e) Graphical representation of data: line diagram, bar diagram, pie chart, histogram
f) Measures of central tendency: the arithmetic mean, median and mode
g) Measures of dispersion: range, mean deviation, variance, standard deviation, standard error of mean, standard score

Module IV: (6 hours)

a) Permutations and combinations, sets
b) Probability: introduction, counting possible outcomes, probability of an event, adding and multiplying probabilities
c) Probability distributions: Binomial, Poisson and Normal distribution

Module V: (19 hours)

a) Testing of hypothesis and goodness of fit: Null hypothesis, level of significance, errors of influence,

Student's t-test, paired t-test, Fischer's test, Chi-square test, linear correlation and linear regression

b) Analysis of variance: variances of samples and their means, F-distribution, partitioning of the total sum of squares anddegrees of freedom, models and types of ANOVA

Mapping of COs to Syllabus

CO 2	L	H			
CO 3	M	M	H	H	H

ZGDB0005: DEVELOPMENTAL BIOLOGY (4 CREDITS–60 HOURS) (L-T-P: 4-0-0)

Objective: The objective of this course on Developmental Biology is to enable the students to understand the process of development in animals and the phenomena associated with it. It will enable the students to understand the environmental

influences on development and factors responsible for age so as to imbibe the current knowledge pertaining to the development of animal embryos of diverse taxonomic groups through experimental analyses based on modern biological tools.

Course Outcomes

1. Develop the concepts of mechanisms of embryonic development. (Applying)
2. Categorize different mechanisms of embryological development through experimental techniques. (Analyzing)
3. Assess the effects of various teratogenic agents and environmental estrogens on development. (Evaluating)
4. Appraise the interactions of maternal effect of gene, gap gene, pair-rule gene, and hox- gene in development with respect to Drosophila. (Evaluating)
5. Discuss the various methods of assisted reproductive technology. (Creating).

Module I (14 hours)

a) Fertilization-pre and post fertilization events: activation of eggs, gamete fusion and concept of prevention of polyspermy

b) General concept of embryonic Induction in animals (experimental evidence); Imaginal disc of insects

c) Experimental evidence of hybridization experiments in animals, nuclear transplantation experiments.

Module II (10 hours)

a) Principles of experimental embryology: the developmental dynamics of cell specification, stem cells and developmental commitment, totipotency and pluripotency.

b) Morphogenesis and cell adhesion- the thermodynamic model of cell interactions, concept of morphogen gradient and morphogenetic field, cell adhesion molecules.

Module III (10 hours)

Role of maternal contribution in early embryonic development in Drosophila: maternal effect genes, gap genes, pair rule genes and hox genes in development

Module IV (10 hours)

Organogenesis: Vulva formation in Caenorhapditis elegans; Regeneration of Salamander limbs; Lens regeneration in amphibia; Bone and neural regeneration-Medical Advances in regeneration.

Module V (16 hours)

a) Medical implications of Developmental Biology - Genetic error of human development; Environmental assault on human development, Teratogenic agents (Retinoic acid, pathogens, alcohol, drugs and chemicals, heavy metals);

b) Infertility- In vitro fertilization and embryo transfer. Cloning experiments- Amphibians and Mammals.

c) Sex determination- Temperature-dependent sex determination in animals, Endocrine disruptors and sex determination problems

Suggested Readings

1. Balinsky, B.I. An Introduction to Embryology. W.B Saunders Co., Philadelphia.
2. Gilbert, S.F. Developmental Biology. Sinamer Associates Inc. Saunderland, Massachusetts, U.S.A.
3. John E. Hall: Textbook of Medical Physiology. Guyton & Hall
4. Kalthoff: Analysis of biological development. McGraw-Hill, 1996.
5. Karp, G. and Berrill, N.J. Development. McGraw Hill, New York.
6. Nagabhushanam, R. and Sarojini, R. Invertebrate Embryology. Oxford and IBA Publishing Co.
7. Oppenheimer, S.B. Introduction to Embryonic Development. Allyn and Bacon, Inc.
8. Saunders, J.W. Developmental Biology. MacMillan Co., London.
9. Tyagi and Shukla, Development of Fishes. Jaya Publishing House, New Delhi.
10. Wolpert: Principles of development. Oxford.
11. N. Arumugan, A textbook on Embryology, Saras Publication.
12. Gurbachan S. Miglani, Developmental Genetics, I.K. International Publishing House Pvt. Ltd.
13. VermaP.S. and Agarwal V.K, Chordate Embryology, S. Chand Publishing.
14. Chordate Embryology by Verma P.S. and Agarwal V.K., S. Chand Publishing.
15. Saidapur.S.K. Reproductive cycles of Indian vertebrates. (Allied Publishers Ltd. New Delhi)
16. Sarkar. H.B.D Principles of Vertebrate reproductive Biology
17. Chester-Jones I: Fundamentals of Comparative vertebrate Endocrinology (Pleum Press: NY)

CO4						H
CO5			H		H	

SPECIALISATION I: ENTOMOLOGY

ZGIF0008: INSECTS- STRUCTURE AND FUNCTION (4 CREDITS-60 HOURS; L-T-P: 4-0-0)

Course/Learning Outcomes (CO)

At the end of this course students will be able to:

1. Recall the basics of insect classification of different insect orders up to family level. (Remembering)
2. Identify details of insects' morphology, origin and locomotion and the different receptor organs. (Applying)
3. Discuss the basic concepts of insect-plant interactions. (Creating)

Module I (20 hours)

a) Origin and evolution of insects
b) Segmentation of insect: head, thorax and abdomen: body tagmata, sclerites and segmentation, Type of mouthparts, antennae, legs, their modifications and functional significance; model Genitalia and their modifications; Embryonic and post-embryonic development; Types of metamorphosis in insects.
c) Wings: wing structure, venation and wing coupling; Insect flight taking Drosophila as a model.

Module II (20 hours)

Basic concept of surveillance and sampling of insect.

Classification of insect up to family with example : a) Coleoptera, Diptera, Hymenoptera; b) Lepidoptera, Odonata; c) Orthoptera, Hemiptera and; Insect molecular taxonomy-DNA as a new tool for insect identification

Module III (8 hours)

Insect integument: Structure, chemical composition, bio-composition of chitin, function of integument

Module IV (12 hours)

a) Receptor organ in insects (Chemoreceptors,
b) mechano receptors and photoreceptors);
c) Sound and Light producing organs in insects;
d) Locomotion in insects,
e) Insect Muscle,
f) Insect eye.

Suggested Readings

1. R.F. Chapman, The Insect Structure and Functions, Cambridge University Press
2. D.B. Tembhare, Modern Entomology, Himalaya Publishing House
3. K.P. Srivastava, Textbook of Applied Entomology Vol- I & Vol- II, Kalyani Publishers
4. Abhishek Shukla and Sushil Kumar Saxena, Introduction to General and Applied Entomology, Astral International (P) Ltd.
5. H. Maxwel-Lefroy & F.M. Howlett, Indian Insect Pests, Astral International (P) Ltd.
6. Abhishek Shukla, A Handbook on Economic Entomology, Astral International (P) Ltd.
7. T.V. Sathe & Jyoti M. Oulkar, Insect Pest Management: Ecological Concepts, Astral International (P) Ltd.

ZGIP0009: INSECT PHYSIOLOGY (4 CREDITS-60 HOURS; L-T-P: 4-0-0)

Course/Learning Outcomes

1: Develop knowledge on detailed different systems of physiology of insects. (Applying)
2: To analyze the different reproductive system of insects in relation to recent literature (Analyzing)
3: Improve the knowledge that neural and hormonal controls have within each system. (Creating)
4: Develop a sense of how physiology can be infused in major research topics in entomology. (Applying)

Module I (25 hours)

a) **Digestive System:** Different types of alimentary canal, salivary glands, physiology of digestion and absorption.
b) **Respiratory System**: General organization of respiratory system, classification of respiratory system, respiration in terrestrial insects-different types of spiracles and their structure, opening and closing mechanism of spiracle, trachea and tracheoles, air sac, ventilation of tracheal system, mechanism of gaseous exchange, respiration in aquatic insects, physiology of gill andplastron respiration, respiration in parasitic insects.
c) **Circulatory system**: Diaphragm and sinuses, dorsal vessels, accessory pulsatory organs, blood circulation, chemical composition of haemolymph, different types of haemocytes and their functions.

Module II (18 hours)

a) **Nervous system:** Structure and types of neurons, central nervous system basic plan, gross anatomy and microanatomy of brain and ganglion, sympathetic nervous system, nerve impulse transmission.
b) **Excretory System**: Basic and cryptonephridial system, malpighian tubules-anatomy and histology, Accessory organs of excretion, metabolic pathways of formation of uric acid and ammonia, elimination of Uric acid by malpighian tubules;
c) **Diapause**: Hormonal control of embryonic, larva, pupal and reproductive diapause

Module III (17 hours)

a) **Reproductive System:** male and female reproductive system, spermatogenesis, oogenesis; Hormonal control of reproduction in male and female insects;
b) **Neuroendocrine System**: Neuroendocrine organs, hormones produced by neurosecretory cells, corpus allatum, corpus cardiacum and prothoracic gland, their chemical nature and functions; Insect immunity; Growth and metamorphosis of insects; Insect Pheromones.

Suggested Readings

1. The Insect Structure and Functions, R.F. Chapman, Cambridge University Press
2. Modern Entomology, D.B. Tembhare Himalaya Publishing House
3. Text Book of Applied Entomology Vol- I & Vol- II, K.P. Srivastava, Kalyani Publishers
4. Introduction to General and Applied Entomology, Abhishek Shukla and Sushil kumar Saxena, Astral International (P)Ltd.
5. Indian Insect Pests, H. Maxwel-Lefroy & F.M. Howlett, Astral International (P) Ltd.
6. A Handbook on Economic Entomology, Abhishek Shukla, Astral International (P) Ltd.
7. Insect Pest Management: Ecological Concepts, T.V.Sathe & Jyoti M. Oulkar, Astral International (P) Ltd.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III
CO 1	H	H	H
CO 2	H	H	H
CO 3	H	H	H

SPECIALIZATION II: CELL AND MOLECULAR BIOLOGY SPECIALIZATION

ZGCB0010: CELL AND MOLECULAR BIOLOGY-I (4 CREDITS; 60 HRS; 4-0-0)

Course Outcomes

1. Analyze the structure and working of various components of the cell such as bio membrane structure and organization; genes and gene regulation and protein hierarchical structure. (Analyzing).
2. Evaluate the various types of protein in the cell organization. (Interpreting)
3. Classify the positive and negative control of gene expression and also the molecular structure of chromosomes. (Analyzing)
4. Recommend the use, Ramachandran plot for the prediction of secondary structure of protein. (Evaluating)

Module I (10 hrs)

Transport across cell membrane: Mechanism of diffusion, Facilitated diffusion; Osmosis and water channels, movement, Flick's law, Donnan equilibrium; Uniporter-catalyzed transport, difference between uniport-catalyzed transport and passive diffusion, GLUT- 1 transport & its kinetics; Intracellular ion environment and membrane electric potential; Active transport - P-class ion pumps, F-class and V-class ion pumps and ABC superfamily, Plasma Membrane Ca++ ATPase pump, Muscle Ca++ ATPase pump and Na+/K+ ATPase pump; Cotransport by symportors and antiporters; Transport across epithelia, Receptor mediated

endocytosis.

Module II (15 hrshrs)

Cytoskeleton: Microfilaments: Actin cytoskeleton, G-actin and F-actin; structural and functional polarity. Cortical actin network, erythrocyte and platelet cytoskeleton; Actin bundle support projecting fingers of membrane; Dynamics of actin assembly, actin polymerization; Toxins effect on actin monomer - polymer equilibrium, stabilization of actin filaments by actin capping proteins; Movement with actin polymerization (a) Intracellular bacterial and viral movements (b) Actin polymerization at the leading edge of moving cells; Myosin: (a) Structure and mechanism of movement with actin (b) Conformational changes in myosin during movement.

Microtubules: Microtubules structure and microtubule assembly from organizing centers, Microtubule dynamics, Microtubule associated proteins (MAP's) and crosslinking of microtubules.

Microtubules and mitosis (a) Centrosome duplication (b) Kinetochore and force for poleward chromosome movement (c) Organization of spindle pole and orientation of assembly (d) Formation of poles and capture of chromosomes (e) Kinetochore and force of poleward chromosome movement (f) Astral microtubule and cytokinesis (g) Microtubules and plant cell formation.

Module III (20 hrs)

Molecular structure of genes and chromosomes: Definition of gene; Chromosomal organization of genes- coding and non-coding DNA; Functional re-arrangements in chromosomal DNA; Organizing cellular DNA into chromosomes; Morphological and functional elements of eukaryotic chromosomes.

Regulation of Gene expression: Operon concept; Positive and Negative regulation; Inducers and corepressors; Regulation by attenuation-his and trp operons.

Module IV (15 hrs)

Protein structure and function: Structure and chemistry of amino acids; Hierarchical structure of proteins-Secondary structure: α-helix, β-pleated sheets and bends; Prediction of secondary structure, Ramachandran plot; Tertiary structure, forces stabilizing tertiary structure; Domains and Motifs; Quarternary structure of proteins

DNA binding proteins and gene regulation: DNA binding domain**;** Homeodomain proteins; Zinc finger proteins**;** Winged-helix (Forked head) proteins; Leucine-Zipper proteins; Helix Loop helix proteins.

Suggested Readings

1. Cooper, G. M., Cell (A Molecular Approach)
2. DeRobertis&DeRobertis: Cell and Molecular Biology
3. Lodish et al: Molecular Cell Biology
4. Karp: Cell and Molecular Biology
5. Becker et al: World of Cell
6. T.A. Brown: Genome
7. Griffith et al: Modern Genetic Analysis
8. Hartl& Jones: Essential Genetics: A Genome Perspective
9. Ram Mahabal, Fundamental of Cytogenetics and Genetics
10. Lewin, Genes VIII

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV
CO1	L			
CO2		M		
CO3			H	
CO4				H

ZGIY0011: IMMUNOLOGY-I (CREDIT 4; 60 HRS; 4-0-0)

Course Outcomes

1. Demonstrate the basic concepts of the immune system and its components. (Understanding)
2. Apply the concept of antigenic determinant, antigen specificity and hybridoma technology to construct monoclonal antibodies. (Applying)
3. Examine how the antigen processing and presentation of both exogenous and endogenous antigen works. (Analyzing)
4. Compare various agents responsible for different types of hypersensitivity reactions. (Evaluating)
5. Elaborate the network of various components and complexes of the immune system and make a checklist of organ specific and systemic autoimmune diseases. (Creating)

Module I (15 hrs)

Cells and organs of immune system: Hematopoiesis- B-Lymphocytes, T-lymphocytes and Null cells; Mononuclear cells (antimicrobial and cytotoxic activities, secretion of factors); Granulocytic cells (Neutrophils, Eosinophils and Basophils); Mast cells; Dendritic cells and Langerhans cells; Organs of immune system: Primary lymphoid organs (Thymus and bone marrow), Secondary lymphoid organs (Lymph nodes, spleen, mucosal associated lymphoid tissue and cutaneous associated lymphoid tissue, tonsils and Peyer's patches; Lymphatic system.
Molecular Immunology: Components of immunity**;** Innate (nonspecific) immunity**-** Anatomic barriers**,** Chemical barriers**,** Phagocytic barriers**,** Inflammatory barriers; Adaptive (specific) immunity**-**Humoral and cell-mediated immunity (CMI):(a) Recognition of antigen by B-and T-lymphocytes and antigen presenting cell (APC)(b) Clonal selection of lymphocytes**;** Cellular interactions required for generation of immune responses(a) Activation and proliferation of B and T cells (b) Generation of humoral immune responses (c) Generation of Cell mediated immune responses.

Module II (15 hrs)
Antigens: Immunogenicity versus antigenicity**;** Factors that influence immunogenicity**,** Contribution of the immunogens (foreignness, molecular size, chemical composition and heterogenesity, susceptibility to antigen processing and presentation); Haptens and epitopes; Immunogen dosage and route of administration and adjuvants.
Immunoglobulins structure and function: Molecular structure of Ig**;** Immunoglobulin classes (lgG, lgM, IgE and lgD and their biological activities; Immunoglobulin - mediated effector functions (Opsonization, activation of complement, antibody dependent cell- mediated cytotoxicity , neutralization); Antigenic determinants on immunoglobulin (isotype, allotype and idiotype); Monoclonal antibodies: Formation and selection of hybrid cells, Production of monoclonal antibodies, Clinical uses of monoclonal antibodies, Catalytic monoclonal antibodies (abzymes).
Antigen - Antibody Interaction: Antibody affinity and activity; Cross reactivity; Agglutination reactions; Precipitation reaction.

Module III (20 hrs)
Major Histocomptability complex: General organization and inheritance of MHC; Location and function of MHC; MHC haplotypes; MHC molecules and gene: Structure of class I molecules; Structure of class II molecules; Organization of class I and II genes; Peptide binding by MHC molecules; Class III molecules; Regulation of MHC expression; MHC and immune responsiveness; MHC and disease susceptibility.
Antigen processing and presentation: Role of antigen presenting cell**,** Early evidence for the necessity of antigen processing; Cells that function in antigen presentation; Evidence for two processing and presentation pathways; Endogenous antigens (The cytosolic pathway): (a) Peptide generation by proteosomes (b) Peptide transport from the cytosol to rER (c) Assembly of peptide with class I MHC molecules**;** Exogenous antigens (The endocytic pathway)(a) Peptide generation in endocytic vesicles(b) Transport of class II MHC molecules to endocytic vesicles.(c) Assembly of peptide with class 11 MHC molecules.

Module IV (10 hrs)
Hypersensitivity: Type I, II, III and IV; *In vivo* and *in vitro*
Autoimmunity: Organ specific autoimmune disease; Systemic autoimmune disease.

Suggested Readings
1. Kuby et al.: Kuby Immunology
2. Abbas A.K., Lichtman A.K. and Pober J.S. Cellular and Molecular Immunology
3. Roitt et al, Essential Immunology
4. Price C.P., Newman D.J., Principles and Practices of Immunology
5. Kindt T.J., Osborne B.A., Goldsby R., Immunology

Mapping of COs to Syllabus

3			M	
4				M

SPECIALIZATION III: FISHERY SCIENCE

ZGTF0012: TAXONOMY AND FUNCTIONAL ANATOMY (4 CREDITS- 60 HOURS/L-T-P: 4-0-0)

Course Outcomes
1. Analyze the non-piscine fishery resources and their importance in fisheries. (Analyzing).
2. Apply the knowledge of fish biology and its importance in fishery practices for the development of future entrepreneurship. (Applying).
3. Develop fundamental skill to identify and classify various groups of fishes, their relationship with morpho-anatomical and

molecular techniques. (Creating)

Module I (10 hours)

a) **Fin fish taxonomy:** General characters and classification, major fish groups (extant & extinct), phylogeny of fishes;
b) **Gross external anatomy of fishes:** skin and its derivatives, scales and their significance; Significance of fish osteology in taxonomy.
c) Fish barcoding.

Module II (30 hours)

a) **Fin fish functional biology:** Food and feeding habits: Food– Kinds and varieties, abundance of food and its availability,structural adaptation, search for food, classification based on food and feeding habits;
b) **Respiratory organs in fishes** – Modification of gills and Tracheae in relation to habit – Structural adaptations of air breathing fishes;
c) **Age and growth:** Growth, length weight relationships, condition factors, morphometric indices and bioenergetics index, variation in growth rate, age determination;
d) **Fin fish reproductive biology:** Modes of reproduction, reproductive cycle, gonad maturity stages, Hormonal regulation of gonadal development, activity of Gonadotropin-releasing hormone, modes of spawning; Environmental factors controlling reproduction and factors affecting development.

Module III (20 hours)

a) Shellfish taxonomy:
General characters and classification of major groups of crustacean and molluscs.

b) Food and feeding biology of Shellfish:
- Food, feeding habits and adaptations of cultured prawn and shrimps.
- Food, feeding habits and adaptations of cultured Molluscs.

c) Shellfish reproductive biology:
- Reproductive patterns in prawn and shrimp, reproductive organs, gonad maturity, spawning and fertilization.
- Endocrine organs in crustaceans and their role in reproduction.
- Reproductive patterns in Molluscs, reproductive organs, gonad maturity, spawning and fertilization.

Suggested Readings

Course Outcomes	Module I	Module II	Module III
CO 1			H
CO 2		H	
CO 3	H		

ZGAF0013: AQUACULTURE AND FISH GENETICS (4 CREDITS-60 HOURS/ L-T-P: 4-0-0)

Course Outcomes

1. Identify various freshwater fish culture methodologies and their significance. (Applying).
2. Utilize the knowledge on the process of fishery and aquaculture management for development of future entrepreneurship. (Applying).
3. Determine the nutritional requirements in fishery and development of skill on fish feed formulation for a profitable fish farming system. (Creating).
4. Apply the knowledge of the application of modern biotechnological tools and their role in the development of fishery. (Applying)

Module I (15 hours)

a) **Fishery Management:** Construction of fish farm and reclamation of swamps; Selection of species for culture – Biological principles, Preparation and management of nursery ponds, rearing ponds and stocking ponds along with control of weeds, pests and predators, Construction of hatcheries and their management.
b) **Aquaculture Management**: Feed, health and water quality management.

Module II (15 hours)

Freshwater fish culture: Indian Major carps and exotic carps - Composite Fish Culture; Air breathing fishes; Integrated Fish Farming – Paddy cum Fish Culture and Fish cum Livestock Culture, Monoculture, Monosex culture; Sewage fed fisheries, Catfish culture, Trout culture, Freshwater prawn culture; shrimps and Crab culture; cage culture and pen culture, Lobster culture, Mussel culture; Pearl oyster culture; Edible oyster culture

Module III (15 hours)

a) **Fish nutrition:** Nutritional requirements, formulation and preparation of fish feeds Food & Feeding habits of commercially important fishes. Larval nutrition — Importance of live feed and artificial feed, Different types of feed available for larvae.
b) **Fish seed resources:** Procurement and transportation of seed from natural resources.

Module IV (15 hours)

a) **Fishery Genetics and Biotechnology:** Inheritance in fishes, sex determination, hybridization
b) **Cytogenetics and molecular techniques in fisheries:** Comet Assay, Micronuclei Test, Fish cell lines and cell culture. Application of biotechnological tools: Recombinant DNA, Transgenesis, Gynogenesis and Androgenesis, Jellyfish Green Fluorescent Proteins and their applications; Cryopreservation.

Suggested Readings

SPECIALIZATION IV: ANIMAL ECOLOGY AND WILDLIFE BIOLOGY

ZGEB0014: ANIMAL ECOLOGY AND BIOGEOGRAPHY (4 CREDITS: 60 HOURS, L-T-P: 4-0-0)

Course Outcomes (CO)

1. Identify various freshwater fish culture methodologies and their significance. (Applying).
2. Utilize the knowledge on the process of fishery and aquaculture management for development of future entrepreneurship. (Applying).
3. Determine the nutritional requirements in fishery and development of skill on fish feed formulation for a profitable fish farming system. (Creating).
4. Apply the knowledge of the application of modern biotechnological tools and their role in the development of fishery. (Applying)

Module I: Basic Ecological concept (15 hours)

a) Habitat & Niche, Ecological Versatility & Niche dimension.
b) Competitive displacement: Gause's principle of Competitive Exclusion, Predator-Prey relation: Lotka Volterra Model ofInterspecific Competition, Ecological equivalents.
c) Species diversity, Species richness, Global patterns in species richness, Theories of species richness, Invasive species and itseffect on species richness.
d) Ecosystem model

Module II: Habitat and landscape ecology (25 hours)

a) Introduction to Habitat Ecology: Ecology of major habitats- Grasslands, Wetlands, Forests, Physical and anthropogenicfactors influencing habitats.

b) Introduction to Landscape Ecology: Edge, ecotones, Edge effect interspersion and juxtaposition. Habitat fragmentation andits effect on the resident community.
c) Metapopulation concept and its application in designing Nature reserve; Theory of Island Biogeography.
d) Measuring Wildlife habitat: Inventory, evaluation and monitoring of wildlife habitat - availability, quality, palatability of graze and browse. Inventory of unique habitats, their distribution and need for conservation, Animals signs as indicators of habitatuse.

Module III: Principles of Biogeography (10 hours)

History of biogeography. Ecology of dispersal and faunal exchange, barriers, mode of dispersal, origins and radiation; island biogeography: endemism, refugia. Continental drift; dispersal and vicariance biogeography; dispersal mechanisms and dispersal barriers.

Module IV: Indian biogeography (10 hours)

India's biogeographic classification. Case studies of Indian fauna explaining Biogeographic Theories. Biogeographic affinities of the fauna and flora of the Indian sub-continent.

Suggested Readings

ZGWM0015: WILDLIFE CONSERVATION AND MANAGEMENT (4 CREDITS: 60 HOURS, L-T-P: 4-0-0)

Course outcome (CO)

1. Relate different principles and practices of wildlife management and make use the concepts of conservation (Understanding, applying)
2. Explain the concepts of wildlife management and applying theories on habitat management (Understanding, Applying)
3. Explain about different plant diversity, Phyto resource utilization and their importance, threatened plants of India with respect to Northeast India. (Understanding)

Test the efficacy of conservation efforts of an eco-sensitive zone in (Northeast) India and develop a framework for its management. (Creating**Module I: Conservation Biology (20 hours)**

a) Introduction to conservation biology: Values of biodiversity and conservation ethics, Patterns and process of biodiversity, losses and threats to biodiversity. Geological and present extinctions, changes in species composition and problem of climate change.
b) Strategies for conservation –
   - In situ conservation: International efforts and Indian initiatives; protected areas in India – sanctuaries, national parks,biosphere reserves, sacred groove and Community Reserve. Ecological restoration and its significance
   - Ex situ conservation: Principles and practices; botanical gardens, fields gene banks, seed banks, cryobanks; non-formalconservation efforts.

Module II: Wildlife Management (25 hours)

a) Principles and practices of wildlife management; Management of special habitats: riparian zones, Grasslands, wetlands.
b) Species conservation projects: Tiger, Lion, Rhino, Crocodile, Turtle, Adjutant stork.
c) Management plan for Protected Areas: Principles of planning, objectives, resource surveys, analysis of surrounding region, management zones, theme plans, communications, staff and visitor amenities, monitoring. Financing protected areas; Needfor wildlife management planning

Module III: Plant diversity and Phytoresources (15 hours)

a) Plant Biodiversity: Concept, status in India, utilization and concerns.
b) Forest products: Important timber yielding planting. Timber types,
c) Non-Timber Forest products
d) Plants used as avenue trees for shade, pollution control and aesthetics. e) Threatened plants of India with special referenceto NE India

Suggested Readings

Course Outcomes	Module I	Module II	Module III
CO1	H	M	L
CO2	M	H	
CO3			H

SPECIALISATION I: ENTOMOLOGY

ZGIG0017: INSECT ECOLOGY (4 CREDITS-60 HOURS, L-T-P: 4-0-0)

Course Outcomes

1. Apply the basics of insect ecology to the development of their research (Applying)
2. Acquire knowledge on behavioural ecology, insect association, interactions and population ecology (Applying)
3. Outline and interpret the concepts of ecology, basic principles of distribution and abundance of organisms and their causes and the impact of climate change on insect diversity (Understanding)
4. Explain the life history of some insects (Understanding)
5. Estimate the diversity of insects using different diversity indices (Creating)

Module I (15 hours)

a) Dynamics of insect life system-determinants of insect abundance, population change, birth rate, Death rate, movements; ; Law of minimum, law of tolerance
b) Population growth models, Exponential and logistic model, discrete and continuous growth model, concept of carrying capacity, life tables and their application to insect biology, survivorship curves, case study of insect life tables,

Module II (9 hours)

a) Regulation of insect populations, Population dynamics- Factors affecting abundance- Environmental factors,dispersal and migration, Seasonality in insects. Diapause (Quiescence) -aestivation, hibernation.
b) Dominance of insect-cause of success; Adaptation of insect- aquatic, terrestrial, soil, boring wood

Module III (18 hours)

c) Calculation of some diversity indices: Shannon, Simpson Problem solving in ecology
d) Insect biodiversity, threats to insect biodiversity, impact of climate change on insect communities;
e) Insect plant interaction Pollination Biology with special reference to Bees

Module IV (18 hours)

a) Insect behavior: chemotropism, thigmotropism, hydrotropism, rheotropism, anemotropism, phototropism, thermotropism, geotropism, instinct.Protective behavior: mimicry crypsis, warning coloration. Behavioral defense, chemical defense; Breeding behavior.

Suggested Readings

1. The Insect Structure and Functions, R.F. Chapman, Cambridge University Press
2. Modern Entomology, D.B. Tembhare Himalaya Publishing House
3. Text Book of Applied Entomology Vol- I &Vol- II, K.P. Srivastava, Kalyani Publishers
4. Introduction to General and Applied Entomology, Abhishek Shuklaand Sushilkumar Saxena, Astral International (P) Ltd.
5. Indian Insect Pests, H. Maxwel-Lefroy &F.M. Howlett, Astral International(P) Ltd.
6. A Handbook on Economic Entomology, Abhishek Shukla, Astral International(P) Ltd.
7. Insect Pest Management: EcologicalConcepts, T.V. Sathe & JyotiM.Oulkar, Astral International (P) Ltd.

ZGPM0035: APPLIED ENTOMOLOGY AND PRINCIPLES OF PEST MANAGEMENT (4 CREDITS-60 HOURS, L-T-P: 4-0-0)

Course Outcomes

At the end of this course students will be able to:

1. Illustrate the classification and life histories of the important household and agricultural and forest pests. (Understanding)
2. Develop the knowledge of Insect's role as a source for commercial products (honey, wax, silk, lac and medicines). (Applying)
3. Apply the latest knowledge of application of modern technique and principles of biological control and Chemical control of pest. (Applying)
4. Adapt the knowledge of use of insects in Forensic Science. (Creating)

Module I (10 hours)

Definition of Insect Pest; Classification of Insect Pest; Major pest of rice, wheat, cotton, vegetables, tea, jute, pulses, stored grain pest- life history, nature of damage and control.

Module II Pest Control (24 hours)

a) Primary control measures: Physical, mechanical, traditional and legislative measure.
b) Chemical Control Measures: Nomenclature and Classification of Insecticides; Mode of action of Insecticides; Advantage and Hazards of Insecticides; LD_{50} and LC_{50}.
c) Biological control measures
d) Autocidal control measures
e) Integrated Pest Management (IPM)

Module III Industrial Entomology and Pest of Medical Importance (16 hours)

a) Apiculture, Sericulture (Muga, Eri, Mulberry and Tasar), Lac culture.
b) Insects of medical importance: Mode of Transmission; Common Vector Insects (Mosquitoes, House flies, Sand flies, Human louse and Tsetse flies)- Morphology with role in disease transmission and control

Module IV Forest Entomology and Forensic Entomology (10 hours)

1. Insect common to forest and their damage, defoliators, borers and sap suckers.
2. Insects of Forensic importance; Carcass condition and incidental attack by insects; Investigation methodology by forensic insects.

Suggested Readings

1. The Insect Structure and Functions, R.F. Chapman, Cambridge University Press
2. Modern Entomology, D.B. Tembhare Himalaya Publishing House
3. Text Book of Applied Entomology Vol- I & Vol- II, K.P. Srivastava, Kalyani Publishers
4. Introduction to General and Applied Entomology, Abhishek Shukla and Sushil Kumar Saxena, Astral International (P) Ltd.
5. Indian Insect Pests, H. Maxwel-Lefroy & F.M. Howlett, Astral International (P) Ltd.

6. A Handbook on Economic Entomology, Abhishek Shukla, Astral International (P) Ltd.
7. Insect Pest Management: Ecological Concepts, T.V. Sathe & Jyoti M. Oulkar, Astral International (P) Ltd.
8. Indian Pest Aphids, T.V. Sathe & B.V. Jadhav, Astral International (P) Ltd.
9. Insect Pest Predators, T.V. Sathe & Y.A. Bhosale, Astral International (P) Ltd.
10. Insect Predators and Pest Management, Vaishali J. Patil & T.V. Sathe, Astral International (P) Ltd.
11. Insect in Vegetables, Dhamo K. Butani & M.G. Jotwani, Astral International (P) Ltd.

SPECIALIZATION II: CELL AND MOLECULAR BIOLOGY

ZGMB0019: CELL AND MOLECULAR BIOLOGY-II (4 CREDIT; 60 HRS; 4-0-0)

COURSE OUTCOMES

1. Define the cell adhesion molecules and their role in cell junctions. (Remembering)
2. Demonstrating the concept of protein targeting. (Understanding)
3. Make use of various theory of aging for understanding its process. (Applying)
4. Analyze the genetics and physical mapping of mutation. (Analyzing)
5. Estimate the effect of Cyclins and cyclin - dependent kinases in cell cycle regulation. (Evaluating)

Module I (15 hours)

Cell-Cell Signaling: Endocrine, paracrine and autocrine signaling; Receptor Proteins- Cell Surface receptors and intracellular receptors; Cell Surface receptors-G-protein coupled receptors, ion channel receptors, tyrosine kinase-linked receptors and receptors with intrinsic enzymatic Activity; Second messenger System - cAMP and IP3, DAG; MAP kinase cascade, JAK/STATand TGF –β / Smad signaling, NF-kB signaling; Signaling from plasma membrane to nucleus (a) CREB links cAMP signals to transcription (b) MAP kinase. Wnt pathway, Hedgehog pathway and Notch pathway

Module II (10 hours)

Protein sorting and targeting to organelles: Protein traffic through the endomembrane system; Targeting of proteins to the Rough Endoplasmic Reticulum and Golgi complex; Anterograde and retrograde transport; Signal-mediated protein transport to organelles (i) Nucleus (ii) Mitochondria (iii) Peroxisome

Module III (10 hours)

Genetic analysis in Cell Biology: Mutation: type and causes; Isolation and analysis of mutants; Physical and Genetic mapping of mutations; Molecular cloning of genes defined by mutations.

Module IV (15 hours)

a) Cell Cycle: Bacterial cell cycle (Helmstetier - Cooper or I+C+D model); Partition and cytokinesis; Eukaryotic cell cycle – G l, S, G 2 and M phases; Cell cycle checkpoints; Molecular basis of cell cycle regulation(a) Cyclins and cyclin - dependent kinases(b) Regulation of CDK cyclin activity.
b) Cell Death: Apoptosis and necrosis; Apoptosis-its characteristics; Genes involved in apoptosis.

Module V (10 hours)

a) Aging, the biology of senescence: Maximum life span and life expectancy; Causes of aging: (i) General wear and tear andgenetic instability (ii) Free radicals, oxidative damage and antioxidants (iii) Telomerases and aging.
b) Cancer: Tumor cells and onset of cancer; Proto-oncogenesis and tumor suppressor genes; Mutation causing loss of cell cycle;Mutations affecting genuine stability.

Suggested Readings

ZGIM0020: IMMUNOLOGY II (4 CREDIT; 60HRS; 4-0-0)

Course Outcomes

1. Illustrate the basic organization and expression of the immunoglobulin genes. (Understanding)
2. Make use of non-virulent strain of microorganism for the development of vaccine. (Applying)
3. Examine the properties and role of various cytokines related to diseases. Compare the immune responses to various infectious diseases caused by bacterial, viral and protozoan infections. (Analyzing)
4. Estimate opportunistic agents and therapeutic agents to deal with immunodeficiencies. (Evaluating)
5. Formulate the use of various tumor suppressive drugs for preventing the graft rejection and also to develop various methods for immunization. (Creating)

Module I (20 hours)

Organization and expression of Ig genes: Multigene organization of lg genes; Light-chain multigene family; Heavy chain multigene family; Variable region gene rearrangement, V-J rearrangements in light chain DNA, V-D-J rearrangements in heavy chain DNA, Mechanism of gene rearrangement, Allelic exclusion; Generation of antibody diversity, Multiple germlineV, D and J gene segments; Combinatorial V-J and V-D-J joining; Junctional diversity; Association of heavy and light chain; Expression of Ig genes, Differential RNA processing of heavy chain primary transcripts, Expression of membrane secreted Ig, Simultaneous assembly and secretion of IgM and IgD, Synthesis, assembly and secretion of Ig; Class switching of constant regions

Module II (15 hours)

a) Cytokines: Properties of cytokines, General structure of cytokines, Function of cytokines, Cytokines related diseases, Bacterial septic shock, Bacterial toxic shock and similar diseases, Lymphoid and myeloid cancers, Chagas disease
b) Immune system in health and disease: Immune response to infectious disease; Viral infections (i) Viral neutralization by humoral antibody (ii) Cell - mediated antiviral mechanism (iii) Viral evasion of host defense mechanisms; Bacterial infections
(i) Immune responses to extracellular and intracellular bacteria (ii) Bacterial evasion of host defense mechanism; Protozoandiseases; Diseases caused by helminths.

Module III (15 hours)

a) Vaccines: Active and passive immunization; Designing vaccines for active immunization; Whole organism vaccine (i) Attenuated viral or bacterial vaccines (ii) Inactivated viral or bacterial vaccines; Polysaccharide vaccines; Recombinant vectorvaccines; DNA vaccines; Synthetic peptide vaccines; Multivalent peptide vaccines
b) Immunodeficiencies: Primary and Secondary Immunodeficiencies, lymphoid and myeloid lineage; AIDS: Structure and types,genome organization, replication, opportunistic agents and therapeutic agents

Module IV (10 hours)

a) Tumor immunology: Tumor antigen; Tumor evasion; Immune system against tumors; Therapies.
b) Transplantation immunology: Acute, hyperacute and chronic rejection; Tissue matching (HLA typing); Graft Vs host (GVH)reaction; Xenotransplantation; Immunosuppressive drugs; role of monoclonal antibodies in transplantation.

Suggested Readings

SPECIALIZATION III: FISHERY SCIENCE

ZGCP0021: CAPTURE FISHERY AND POST-HARVEST TECHNOLOGY (4 CREDITS-60 HOURS/ L-T-P: 4-0-0)

Course Outcomes

1. Identify the capture fishery resources of the country and the managerial practices for sustainable utilization of these aquatic resources. (Applying)
2. Develop the knowledge of cold-water fishery resources of the country and their applicability in the development of future entrepreneurs in the fishery sector of the region. (Creating)
3. Categorize various fishing gears and crafts used in various water bodies of the country. (Analyzing)
4. Develop new ideas on the development of efficient fishing tools and the skill to predict the possible fish stock in the water bodies and management for sustainable utilization of the resources. (Creating)
5. Develop the skill of fish preservation and processing for long term utilization. (Creating)

Module I (20 hours)

Capture fishery: Fish catch statistics of the world with special reference to India; Riverine Fisheries River Systems in India, their ecology and fisheries (Ganga & Brahmaputra); Reservoir Fisheries: Development, Exploitation and management of Reservoirs with special reference to India–Dams and their effect On fish migration; Beel fisheries of Assam: Fish resources, problems and management;

Module II (10 hours)

Cold water fisheries: Hill stream fisheries of North East India; Mahseer fisheries: prospects and problems with special reference to NE India; Major Estuaries of India and their fisheries; Brackish water Fisheries: Chilka lake. Hilsa fishery–causes of decline and efforts for revival

Module III (10 hours)

a) Craft and Gear used in Fisheries: Traditional and mechanized boats and nets used in catching fish; Population Dynamics: Fish populations and factors affecting the population structures; Estimation of fish yield and control of overfishing, Yield and optimum catch; Fishing crafts and gears used in Inland capture fisheries; Destructive fishing– its impact on fish diversity.
b) Fish oils, Fish Proteins, Fish manure, Fish glue, Fish flour, Isinglass, Fishmeal, Fish Silage, Fish guano, Bone meal; Productionof fish sauce by lactic acid fermentation.

Module IV (20 hours)

Post-harvest technology and fish by-products: Preservation and processing: Methods of preservation Of both finfish and shellfish preservation(Refrigeration and freezing, Drying, Salting, Smoking, Canning, Pickling, pasting and spicing) and associated problems; Rigor mortis and post-mortem changes. Handling and packaging of fish for marketing; product stability and shelf-life. Fish by-products

Suggested Readings

ZGLF0022: LIMNOLOGY, FISHERY ECONOMICS, ORNAMENTAL FISHERY AND FISH PATHOLOGY (4 CREDITS-60 HOURS/ L-T-P: 4-0-0)

COURSE OUTCOMES (CO)

1: Explain the needs of physico-chemical factors in maintaining a proper productive aquatic ecosystem, an essentialelement in aquaculture and fishery management. (Understanding)
2: Utilize the understanding of fishery economics and laws of the country, various fishery training institutions and their roles and extension program in fishery development. (Applying)
3: Develop the skill on ornamental fish culture and aquarium preparation and maintenance. (Creating)
4: Apply the knowledge acquired on fish pathology and their prophylactic control measures. (Applying)

Module I (15 hours)

Limnology: Physico-chemical factors of fresh water habitat; Nutrients – Availability, Seasonal distribution and availability of phosphorus, Nitrogen and Silicon; Ecological classification of freshwater organisms; Plankton –Distribution, seasonal variation inspace and time, planktonic migration, cyclomorphosis

Module II (15 hours)

Fishery economics and law: Larvivorous fishes in relation to public health; Exclusive Economic Zone(EFZ) and its strategy; Fisheries co-operatives and their role in fish production and marketing; Aquaculture and rural development in India; Fishery education, training and extension; Fishery research Institutes in India; Fishery legislation and their role in fishery development.

Module III (15 hours)

Ornamental fishery: Ornamental fish culture: Ornamental aquarium fishes, Breeding and care of Freshwater aquarium fishes; Aquarium keeping—Design and construction of tanks; species-wise tank size requirement; heating, lighting, aeration and filtration arrangements; decorations; common aquarium plants and their propagation; Maintenance of Natural Colour of fishes in Aquarium.

Module IV (15 hours)

Fish pathology: Fish and Prawn/Shrimp Diseases: Types of Diseases-viral, bacterial, fungal, protozoan and other parasitic diseases; symptoms & control measures; Diagnosis-Histopathological methods; Immunoassay; Biochemical assay; Serological techniques; Role of biopesticides; Application of Monoclonal antibodies; Vaccines and immune stimulants; Drug resistance.

Suggested Readings

1. Agarwal, S.C. Limnology
2. Bond, E. Carl. Biology of fishes.
3. Datta, J. J. Datta Munshi. Fundamentals of Limnology
4. Dholakia, A.D. Ornamental Fish Culture and Aquarium Management. Daya Publishing House
5. Edward,J. Noga. Fish Disease: Diagnosis & Treatment
6. Gerald, A. Textbook of Limnology. The C.V. Morby Co.
7. Hutchinson, G.E.A. Treatise on Limnology. Vol.1. John Wiley & Sons.

13. Smith David J. Aquarium Keeping: Aquarium Keeping Essentials
14. Thornton Kent W., Bruce L. Kimmel, Forrest E. Payne. Reservoir Limnology: Ecological Perspectives
15. Untergasser, D. Handbook of Fish Diseases. TFH Publications
16. Welch, P.S. Limnological Methods. McGraw Hill Book Company, New York.
17. Wetzel, Robert G. Limnology: Lake and River Ecosystems. Elsevier Academic Press

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV
CO 1	H			
CO 2		H		
CO 3			H	
CO 4				H

SPECIALIZATION IV: ANIMAL ECOLOGY AND WILDLIFE BIOLOGY

ZGRE0025: WILDLIFE RESOURCE MANAGEMENT, LAWS AND TECHNIQUES IN POPULATION STUDY (4 CREDITS: 60 HOURS, L-T-P: 4-0-0)

Course Outcome

1. Define wildlife disease, identify major parasitic diseases in wild animals and assess animal health conditions. (Remembering, Applying).
2. Apply different techniques of wildlife study. (Applying)
3. Discuss about wildlife forensic, various protocols for species identification and trade of wildlife products. (Creating)
4. Develop the prospects of ecotourism in Northeast India, its importance and consequences and recommend mitigation plans to reduce human animal conflict. (Evaluating, Creating)

Module I Species conservation (20 hours)

IUCN categories, criteria for allocation into different categories. Threatened animal species of India with special reference to NE India. Role of Iconic species designation in conservation. Concept and significance of conservation of Flagship (Target) species; overview of conservation problems and issues of fauna of Indian sub-continent.

Module II Natural resource management and conservation (15 hours)

a) Introduction to forestry, principles of forest management, Importance and performance of joint forest management (JFM) Role of Non-Government Organizations (NGO).
b) Conservation movement in India. Concept of stakeholders. International conservation bodies; IUCN, UNDP, Durrell WildlifeConservation trust.
c) Project Grants for Wildlife Conservation

Module III Forest and Wildlife laws of India (5 hours)

Wildlife Protection Act, 1972;The Biological Diversity Act, 2002; The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of forest Rights) Act, 2006.

Module IV Population ecology and Sampling Techniques (20 hours)

a) Demographic and life history parameters, evolution of life history parameters: r & K selection, allometry, aging and sexing,life tables, age and stage structures models, methods of estimation of life history and demographic parameters
b) Sampling designs for population estimation, population estimation methods: Mark-Recapture for Closed Population, Collection Techniques used in wildlife study.

Suggested Readings

1. Caughley G (1978). Analysis Of Vertebrate Populations. John Wiley, Chichester.
2. Hastings A (1997). Population Biology: Concepts And Models. Springer Verlag, New York.
3. Neal D (2004). Introduction to population biology. Cambridge University Press. UK
4. Ricklefs R (2010). The Economy of Nature (6 edition). W. H. Freeman
5. Tokeshi M (1998). Species Coexistence: Ecological and Evolutionary Perspectives.
6. W. J. Ecological Census Techniques Cambridge University Press
7. Patro, L. Biodiversity Conservation and Management
8. Misra, H.N. – Managing Natural Resources- Focus on Land and Water
9. Anderson, Sweeney and Williams- Wildlife and Natural Resource Management

10. Deal, K.H. Environmental Economics and Natural Resource Management
11. Kumar, R. Environmental Laws
12. Muthukrishna- Natural Resource Economics
13. Field, B.C. Economics of Environment
14. Began, M. & Mortimer, M.- Population Ecology
15. Rockwood- Introduction to population Ecology

ZGWC0026: TECHNIQUES IN WILDLIFE STUDY WILDLIFE HEALTH, FORENSICS AND CONFLICT (4 CREDITS: 60 HOURS, L-T-P: 4-0-0)

Course Outcome

1. Define wildlife disease, identify major parasitic diseases in wild animals and assess animal health condition. (Remembering, Applying).
2. Apply different techniques of wildlife study. (Applying)
3. Discuss about wildlife forensic, various protocols for species identification and trade of wildlife products. (Creating)
4. Develop the prospects of ecotourism in Northeast India, its importance and consequences and recommend mitigation plans to reduce human animal conflict. (Evaluating, Creating)

Module I: Wildlife Health (20 hours)

a) Introduction to disease and epizootiology, Determinants of disease and disease transmission, Disease and populationdynamics.
b) Assessment of condition, health and nutritional status in free-ranging populations. Disease control operations, Planning andmanagement of wildlife health programmes.

Module II: Techniques for wildlife study, Capture and handling of wild animals (15 hours)

a) Techniques for wildlife study: Radio telemetry and acoustic analysis.
b) Capture and handling of animals - purpose, restraint techniques, different capture methods and animal barriers. Drug immobilization - drug delivery equipment and accessories.Handling and transport of wild animals, designing sledge, crate and holding enclosures.

Module III: Conservation Genetics, Wildlife Forensics and Trade (15 hours)

a) Application of genetics for wildlife conservation; Application of Molecular markers, PCR, DNA Sequencing in wildlife forensics and conservation. Loss of genetic diversity
b) Wildlife Forensics- Overview, various forensic protocols for species identification.
c) Wildlife trade: The Convention on International trade in Endangered Species of Wild Fauna and Flora (CITES)

Module IV: Human-wildlife conflict (10 hours)

a) Causes and management; Impact on ecosystem, lives and livelihood of human
b) Ecotourism: problems and prospects with special reference to northeast India.

Suggested Readings

1. Fowler- Restraint and Handling of wild and Domestic Animals
2. Briscoe, Ballou and Frankhan- Introduction to Conservation Genetics
3. Leeschcke, Temivk and Jain – Conservation Genetics
4. Frankhan, Ballou and Briscoe- Primer of Conservation Genetics
5. Cooper and Cooper- Wildlife Foresnsic Investigations
6. Huffman and Wallacw- Wildlife Forensics – Methods & Applications
7. Sahaipal, Thakar & Goyal – Forensic Examination of Hair of Protected Indian Wildlife Species
8. Linacre and Tobe- Wildlife DNA analysis
9. Rao, G. Textbook on pathology of Wildlife Diseases
10. Jani, R. Basic of Wildlife Health Care Management
11. Ayadi, D.P. Human Wildlife Conflict
12. Wang, J. Human Wildlife Conflict management: Understanding the Fundamentals of Human Wildlife Conflicts in HumanDominated Landscape

CO2	M	H		
CO3		L	H	L
CO4				H

ZGBE0027: BIOSYSTEMATICS AND EVOLUTION (4 CREDITS -60 HOURS) (L-T-P:4-0-0)

Course Outcomes

1. Explain the concept of Biosystematics and Taxonomy, ICZN rules and formation of names of taxa (Understanding)
2. Explain the causes of evolution and natural selection. (Understanding)
3. Apply Taxonomy to solve the species problem and Identify species on the basis of taxonomic keys. (Applying)
4. Justify the role of isolating mechanisms in speciation, estimate, construction of evolutionary trees, and measurement of genetic relationship among organisms. (Evaluating)
5. To apply application of knowledge on science involving society and culture

Module I: Biosystematics (10 hours)

Trends in Biosystematics: Chemotaxonomy, Cytotaxonomy, Numerical and Molecular Taxonomy; Dimensions of Speciation; Species Concepts: Subspecies and other intraspecific Categories; Cladistics

Module II: Taxonomy and Nomenclature (10 hours)

Taxonomic Categories. Different Kinds, Hierarchy of Categories; Taxonomic Procedures: Taxonomic collections, Preservations, Process of identification(General Idea); Taxonomic Keys: types, merits and demerits; International Code of Zoological Nomenclature (ICZN):Operative principles, interpretation and application of important rules; Formation of names of various Taxa.

Module III: Evolution (15 hours)

Micro and Macro evolution; Natural Selection-Concept of stabilizing selection, Frequency dependent selection, Balancing selection, Disruption selection; Destabilizing factors-Mutation, Genetic drift, Migration, Meiotic drive; Emergence of Non Darwinian theory of evolution, Neutral theory of evolution (Kimura).

Module IV: Speciation and Molecular basis of evolution (15 hours)

a) Isolation Mechanisms-Isolation Mechanisms and their role in speciation, Models of speciation (Allopatric, sympatric, parapatric)
b) Molecular basis of evolution-Constructing evolutionary trees, measures of genetic relationship among organisms, Molecularclock of evolution, Molecular phylogeny; Origin and
c) C)Evolution of Primates.

Module V: Society and Science (10 hours)

a) Citizen Science: Significance, challenges and drawbacks
b) Ethnozoology: Brief introduction, importance, historical aspects and current trends
c) Citizen science: Case study

Suggested Readings

1. G. G. Simpson. Principle of animal taxonomy; Oxford IBH Publishing Company.
2. V.C Kapoor-Theory and practice of animal taxonomy
3. J.C. Avise. Molecular Markers, Natural History and Evolution, Chapma & Hall, New York.
4. E.O. Wilson, Biodiversity, Academic Press, Washington.
5. E. Mayer & P. Ashlock. Principles of systematic Taxonomy
6. E.O. Wilson. The Diversity of Life (The College Edition),W.W. Northem & Co.
7. Dalela and Sharma. Animal taxonomy and Museology, Jai Prashnath & company.
8. Bugs, Butterflies, Spider, snakes (1998).Kern Preston-Mafham, Nigel Marven & Roblturvey.
9. Dobzhansky,Th.,F.J.Ayala,G.L.StebbinesandJ.M.Valentine.Evolution.SurjectPublication,Delhi.
10. Futuyma,D.J.EvolutionaryBiology,Suinuae Associates,INCPublishers,Dunderland.11.Jha,
11. A.P- Genes and Evolution. John Publication, New Delhi.
12. Ashok Verma, Principles of Animal Taxonomy, Alpha Science International Ltd, Delhi.
13. Ramesh Chandra Tripathi, Biosystematics and Taxonomy, University Book House, Jaipur.
14. Avers, C.J. Evolution Process and Pattern in Evolution Oxford University, Press, New York, Oxford.

ZGCI0028: CELL BIOLOGY AND IMMUNOLOGY- THEORY AND APPLICATIONS (4 CREDITS-60 HOURS) (L-T-P:4-0-0)

COURSE OUTCOMES (CO)

1. Illustrate the operative mechanism of the cell. (Understanding)
2. Examine and analyze the different Cell signaling pathways (Analyzing)
3. Compare the different types of Immunological systems (Evaluating)
4. Demonstrate molecular techniques to understand underlying cellular composition. (Analyzing)
5. Discuss and implement the different analytical techniques in cell biology and immunological process (Creating).

Module I: Cell Organisation (10 hours)

a) Biomembranes-Molecular composition and functional feature of membrane lipid, protein and carbohydrate.
b) Cytoskeletons -Structure and Organisation of Microfilament, Microtubule and Intermediate filament.
c) Cell Motility- Intercellular transport, kinesin-dynein, cilia and flagella.

Module II: Cell adhesion molecule, Cell signaling, Cell cycle (15 hours)

a) Extracellular Matrix and Cell Interaction-Cell walls, Adhesion junctions, Tight junctions, Gap junctions, Plasmodesmata; Cell- Cell Adhesion - Ca++dependent and Ca++ independent Homophilic Cell-Cell Adhesion.
b) Cell division and cell cycle regulation and control of cell cycle; Cyclins and Cyclin Dependent Kinases(CDK), Regulation of CDK-

Cyclin activity, Molecular basis of Cellular Checkpoints

c) Cell-Cell Signalling-Cell Signalling, Cell surface receptors, G-Protein coupled receptors and Second messenger

Module III: Immunology (15 hours)

a) Immune system-innate and adaptive immunity; components and characteristic features, humoral and cell-mediated immunity;
b) Cells and organs of immune system; T cells and B cells-maturation, activation and differentiation;
c) Antigens-immunological properties of antigens, factors influencing antigenicity; Immunoglobulin-structure and function, classes of Ig molecules, Antigen-antibody interactions.

Module IV: Analytical techniques (20 hours)

a) Review of principles of light microscopy; principles and applications of phase contrast and fluorescence microscopy
b) Principles and applications of Transmission and Scanning Electron microscopy
c) Spectroscopy: basic principles and types
d) Theories of Tissue fixation and staining techniques
e) Basic principles of colorimetry
f) Principles and applications of centrifugation techniques: types of centrifugation; Introduction to hydrodynamics
g) Molecular modeling
h) ELISA, RIA, Immunodiffusion

Suggested Readings

1. Cooper, G. M., Cell (A Molecular Approach)
2. Sadava D. E., Cell Biology
3. Kish V. M. and Kleinsmith L. J., Cell and Molecular Biology
4. DeRobertis & DeRobertis: Cell and Molecular Biology (Lee & Febiger, 1987)

5. Karp: Cell and Molecular Biology
6. Lodishet al: Molecular Cell Biology
7. Pollard & Earnshaw: Cell Biology
8. Verma P. S. and Agarwal V.K, Cell Biology, Genetics, Molecular Biology, Evolution and Ecology, S. Chand & Company Ltd.
9. Verma P.S. and Agarwal V.K, Cell Biology (Cytology, biomolecules and Molecular Biology),S. Chand & Company Ltd.
10. Kuby et al. : Kuby Immunology

CO 5	L	L	L	H
CO 6		H		

ZGBG0029: MOLECULAR BIOLOGY AND GENETICS (4 Credits-60 hours) (L-T-P:4-0-0)

Course Outcomes

1. Understand the basic concepts of Genetics and Molecular Biology techniques. (Understanding)
2. Analyze the differences in molecular biology and genetic techniques. (Analyzing)
3. Compare and interpret the various patterns of genetic inheritance. (Evaluating)
4. Interpret and discuss different cytogenetics and molecular biology tools (Creating)

Module I: Nucleic Acids (16 hours)

a) Nucleic acids - Molecular Structures of DNA and RNA.
b) DNAReplication-Replication in Prokaryotes and Eukaryotes, Semi conservative nature of DNA replication, Messelsons-Stahl experiment, Enzymes and proteins associated with replication, DNA polymerases, Regulation of eukaryotic genome replication.
c) DNA Damage and Repair Mechanism-Different types of DNA Damage, Direct repair system, Excision repair system, Mismatch repair system, DNA break repair.

Module II: Transcription and Translation (12 hours)

a) Transcription-Basic concept of Prokaryotic and Eukaryotic transcription, Promoters (Pribnow Box, TATAbox, CpGisland), Transcription factors, Initiation, elongation and termination of transcription in Eukaryotes.
b) Post Transcriptional Modification
c) Translation- Genetic Code, Mechanism of Initiation, Elongation and Termination.

Module III: (10 hours)

a) Organisation of genetic material-Nucleosome, Molecular anatomy of eukaryotic chromosome; Genome size and Complexity-

C value paradox, Unique and repetitive DNA, Euchromatin and Heterochromatin

b) Sex Chromosomes - Sex determination, Role of Y chromosome, Dosage Compensation in Drosophila and Human Being, X-

Chromosome inactivation, Sex chromosome anomalies

c) Human Genetics-Normal Human Karyotyping, Autosomal chromosome abnormalities, Principle and Methods of Pedigree Analysis
d) Genomic Imprinting-Imprinting of genes, Epigenetic, Epigenetic regulation by DNA methylation; Somatic Cell Genetics-Cellfusion technology, Chromosome mapping, Application of Somatic Cell Genetics.

Module IV: Genetic Inheritance (10 hours)

a) Concept of gene: Allele, multiplealleles, pseudoallele, complementation tests; Extensions of Mendelian principles: Codominance, incomplete dominance, gene interactions, pleiotropy, penetrance and expressivity, phenocopy, linkage and crossing over, sex linkage, sex limited and sex influenced characters
b) Extra Chromosomal Inheritance: Inheritance of Mitochondrial and chloroplast genes, maternal inheritance.

Module V: Bioinformatics (5 hours)

a) Gene Prediction-Finding genes in prokaryotic and eukaryotic genomes, Regulatory sequence analysis; Genome maps andmarkers, Genome variation.
b) Human genome project; Concept and Software used in Gene expression analysis and Microarray.
c) Structural biology-Protein structure prediction and classification.

Module VI: Electrophoretic Techniques (7 hours)

a) Basic principles of Electrophoresis, Agarose gel, native and SDS-PAGE
b) Isoelectric focusing, 2D-PAGE and their uses in protein research
c) Blotting Techniques

Suggested Readings

1. Gardner, Principles of Genetics
2. Strickberger, Genetics
3. Ram Mahabal, Fundamentals of Cytogenetics and Genetics
4. Brooker: Genetics: Analysis and Principles
5. Griffith et al: Modern Genetic Analysis
6. 6.Hartl & Jones: Essential Genetics: A Genomic Perspective
7. Boyer: Modern Experimental Biochemistry and Molecular biology
8. DeRobertis & DeRobertis: Cell and Molecular Biology
9. Hanes, Gel Electrophoresis of Proteins - A Practical Approach
10. Sedgewick R and WayneK.Introduction Computer Science, Princeton University [available online].
11. Blum R and LeBlanc Dee-Ann. Linux for Dummies, WILEY [available online].
12. Kanetkar YP. Let Us C [available online].

ZGAP0030: ANIMAL PHYSIOLOGY (4 CREDITS-60 HOURS) (L-T-P:4-0-0)

Course Outcomes

1. Outline the physiology and mechanism of digestion, absorption by summarizing the role of the different glands and their secretions involved. (Understanding)
2. Build a clear concept of mammalian blood chemistry, clotting mechanism, musculature in vertebrates, molecular mechanism and regulation of muscle contraction. (Applying)
3. Explore the physiology of respiration and analyze the oxygen dissociation curve and regulation of respiration. (Analyzing)
4. Explain the urine formation physiology and compare the osmoregulation in terrestrial and aquatic animals. (Evaluating)
5. Elaborate the dynamics of neural impulse conduction along the axonal axis, at electrical and chemical synapse. (Creating)

Module I Physiology of digestion (10 hours)

a) Glands and secretion of digestives enzymes,
b) Mechanism of digestion, Gastrointestinal hormones
c) Absorption of Carbohydrates, lipids and proteins.

Module II Physiology of Respiration (10 hours)

a) Alveolar ventilation, alveolar-capillary gas exchange, Transport of O2and CO2
b) Oxygen dissociation curve and the factors influencing it,
c) Regulation of respiration.

Module III Mammalian blood chemistry (10 hours)

a) Mammalian blood chemistry and blood groups.
b) Blood clotting mechanism
c) Cardiac cycle and its regulation in mammals.

Module IV Musculature in vertebrates (10 hours)

a) Musculature in vertebrates: Types of muscles, Ultrastructure and chemical composition of skeletal muscles,

b) Molecular mechanism and regulation of muscle contraction, muscle fatigue and rigor mortis.

Module V Physiology of Excretion (10 hours)

a) Ultrastructure of nephron, mechanism of urine formation, excretion of dilute solutes and mechanism of excretion of excesssolutes, counter current mechanism
b) Osmoregulation in different animal groups (aquatic and terrestrial)

Module VI Nerve physiology (10 hours)

a) Neuron: Ultrastructure, types and function,
b) Membrane potential: Resting membrane, membrane potential, action potential, Nernst Equation, Chronaxie, Rheobase,utilization time.
c) Neural impulse induction through an axon, neurotransmitters and synaptic transmission-mode of information transferacross electrical and chemical synapses

Suggested Readings

1. Brooks and Marshall: Essentials of Endocrinology, Blackwell Science.
2. Ganong: Review of Medical Physiology, Lang Medical Publications
3. Guyton and Hall: TextBook of Medical Physiology ,W.B. Saunders
4. Hadley: Endocrinology, Prentice hall. International Edition.
5. Keel et al: Samson Wright 's Applied Physiology, Oxford Press,
6. Larson:WilliamsTextBookofEndocrinology,10thedition.W.B.SaundersCompany,Philadelphia.

ZGEE0031: ECOLOGY AND ENVIRONMENTAL BIOLOGY (4 CREDITS - 60 HOURS) (L-T-P:4-0-0)

Course Outcomes

1. Outline the foundations of Ecology. (Understanding)
2. Identify the effects of abiotic environment on plants and animals to understand the distribution and abundance of life on earth (Applying)
3. Develop solutions to pressing environmental problems that threaten ecological systems at every level (Creating)
4. Analyze the importance of biodiversity and threats to biodiversity. (Analyzing)
5. Design steps to protect and conserve biodiversity. (Creating)

Module I (12 hours)

a) Types of ecosystems–Salient features of aquatic and terrestrial ecosystems and their biotic communities.
b) Ecological energetic and energy flow; Measuring ecosystem productivity
c) Population Ecology-Population density, Growth rate, Natality, mortality, survivorship curves and life tables, Biotic potential

Module II (12 hours)

a) Community Ecology-Types of biotic communities, organization, carrying capacity, r and k-selection.
b) Community Development–Types of community changes, ecological succession-its causes and examples, climax community.
c) Species interactions, Competition theory, Niche, Habitat,
d) Ecological Equivalents, Character displacement; Liebig law of minimum, Shelford's law of tolerance, Significance of limiting

factors, Ecotone and Edge effect.

e) Thermoregulation: Heat balance in animals, Adaptations to temperature extremes, Aestivation, hibernation and Diapause,acclimatization, avoidance and tolerance

Module III (12 hours)

a) Eutrophication in the aquatic ecosystem, Remediation of eutrophication.
b) Acidification in aquatic and terrestrial environment, Consequences and control strategies.
c) Environmental monitoring, Environmental impact assessment and environmental management plan.
d) Biogeochemical cycles–carbon, nitrogen, sulphur cycles, impact of human activity on nutrient cycles.

Module IV (12 hours)

a) Biodegradation and Bioremediation: concept, environmental limitation for bioremediation, bioremediation of ecosystem (Air/water/soil)
b) Wastes in Ecosystem and management: Agricultural wastes and Management, Biomedical wastes and Management,Domestic waste, effects and management for purification and recirculation.
c) Environmental toxicology: Diversity and classification of environmental toxins, Air, Water and soil pollutants, Food additives and contaminants, Pesticides, Metals and Solvents, Radioactive pollution.

Module V Biodiversity (12 hours)

a) Components of Biodiversity (Genetic, Organismal and Ecological), Value of Biodiversity, threats to biodiversity, biodiversityconservation, Mega biodiversity countries, hotspots and heritage sites,
b) IUCN Red list categories. Habitat diversity of Indian wildlife, endemic and Threatened species of northeast India
c) Ethnozoology with special reference to Northeast India

ZGEB0032: ENDOCRINOLOGY AND BIOCHEMISTRY (4 CREDITS-60 HOURS) (L-T-P: 4-0-0)

Course Outcomes

1. Define the various metabolic pathways and the role of hormone. (Remembering)

2. Explain the basic principles of modern analytical techniques. (Understanding)
3. Analyze the energy production and utilization. (Analyzing)
4. Explain the enzyme kinetics. (Evaluating)

Module I: Basic concepts: Hormone, action and Feedback Mechanism (5 hours)

Hormone: Classification and Chemical nature of hormones Homeostasis: Concept and Feedback system Hormone receptor and target organ concept, Mechanism of hormone action. Hypothalamo- hypophyseal axis

Module II: Endocrine glands-Structure, Hormones, Functions, Axis, Abnormalities (15 hours)

a) Structure of the pituitary gland; pituitary hormones and their functions
b) Structure of thyroid glands, thyroid hormones–biosynthesis and metabolic functions. Role of thyroid hormone in amphibianmetamorphosis
c) Structure of adrenal gland; Synthesis of adreno-cortical and medullary hormones and their functions.
d) Structure of endocrine pancreas and Hormones of Islets of Langerhans.

Module III: Reproductive Endocrinology (10 hours)

a) Testis and ovary –endocrine structure and their functions
b) Reproductive cycle- Oestrous cycle and Menstrual cycle, Role of Hormones in Implantation, Parturition and Lactation
c) Neuroendocrine regulators in insects and mammals

Module IV: Metabolism (13 hours)

a) Carbohydrate metabolism-Glycolysis, Glycogenolysis, Gluconeogenesis, TCA cycle, Cori cycle, Phosphogluconate pathway.
b) Lipid Metabolism-Oxidation of fatty acid, Cholesterol biosynthesis and metabolism, Prostaglandins.
c) Protein metabolism- Amino acid Classification, Amino acid degradation, Decarboxylation, Deamination, Ornithine Cycle.

Module V: Bioenergetics And Enzymes (10 hours)

a) Bioenergetics-Energy producing and utilizing system, Electron transfer system and Oxidative Phosphorylation.
b) Enzymes-Classification of enzymes, General properties of enzymes, Mechanism of enzyme action, Enzyme kinetics, Michaelis-Menten and Lineweaver-Burk Equations; Enzyme inhibition.

Module VI: Basic concepts of biochemistry (10 Hours)

a) Review of concepts of acids and bases, Principle and working of pH meter, Buffer preparation
b) Principle of Laminar-air flow chamber.
c) Principles, types and applications of Chromatography
d) Gas Chromatography, GC-MS, LC – MS / MS, MALDI TOF mass spectrometer
e) Ion Exchange Chromatography, gel permeation, Affinity and reverse phase chromatography
f) HPLC and FPLC

Suggested Readings

1. Brooks and Marshall: Essentials of Endocrinology, Blackwell Science.
2. Ganong: Review of Medical Physiology, Lang Medical Publications
3. Guyton and Hall: Text Book of Medical Physiology ,W.B. Saunders
4. Hadley: Endocrinology, Prentice hall. International Edition.
5. Keel et al: Samson Wright 's Applied Physiology, Oxford Press,
6. Williams TextBook of Endocrinology,10thedition.W.B.SaundersCompany,Philadelphia.
7. Murray et al: Harper 's Illustrated Biochemistry, Appleton & Lange
8. Norris: Vertebrate Endocrinology. Lea & Febriger.
9. Turner and Bagnara: General Endocrinology, W. B. Saunders Company Philadelphia.

ZGAZ0033: APPLIED ZOOLOGY (4 CREDITS-60 HOURS) (L-T-P: 4-0-0)

Course Outcomes

1. Identify methods of silkworm cultivation, maintenance of the farm, seed technology, silkworm rearing and silk reeling. (Applying)
2. Assess the basic life cycle of the honeybee and about beekeeping tools and equipment for honey production and pollination. (Evaluating)
3. Apply the latest knowledge in poultry management. (Applying)
4. Develop an overall idea of fish farming, the scientific management of different species in aquaculture, aquarium keeping and fish diseases. (Applying)
5. Identify the different types of parasites, their life cycles and the diseases caused by them. (Applying)
6. Develop the concepts in Zoology with the core principles of Sustainable Development. (Applying)

Module I (15 hours)

a) **Sericulture:** Types of Silk Worm (Muga and Eri), their host plants, silkworm rearing and management practices. Diseases and Pest of SilkWorm and their management, Biodiversity conservation project through sericulture (Case study- 7Weaves Model)
b) **Apiculture:** Different species of honey bees, bee plants, pollen calendar, bee keeping and management practices, beeproducts, Bee enemies and diseases.
c) **Vermiculture:** species of worms, condition for efficient vermiculture (domestic and commercial level), Economics of Vermiculture

Module II (10 hours)

Aquaculture: Aquarium fish keeping: Ornamental Fishes of India special reference to North East India, common aquarium fishes; Aquarium Maintenance, Fisheries management: Composite fish culture, induced breeding and hybridization; Prawn and Pearl Culture, Exotic and Indigenous food Fishes of NE India, Fish and shellfish diseases and their control measures. Fish genetic resource conservation; Aquaphonics–prospect and future.

Module III: Poultry management (8 hours)

Poultry Rearing / Farming: Housing and equipment; Nutritional Requirements; Poultry diseases; Poultry products: Broilers, meatprocessing and meat products, Poultry by products

ModuleI IV: Parasitology (10 hours)

Introduction to Parasitology: Types of parasites, Types of Host, Zoonosis, Host-parasite Relationship, Sources of Infection, Mode of infection, Pathogenesis.
Vibrio cholera and Clostridium tetani- Life Cycle, mode of transmission, infection and treatment.
Dengue and Bird flu - Life cycle, mode of transmission, infection and treatment.

Module V: Insect pest management, Public Health and Forensic Entomology (12 hours)

a) Concept of Pest, concept of integrated pest management (IPM)
b) Mosquito (Aedes, Culex, Anopheles)-Taxonomy, Biology, Behavior and their control. Life cycle of Calliphora and Scrophaga,determination of death and causes of death.

Module VI: Sustainable Development Goals and Zoology (5 hours)

Concept of Sustainable Development, Background of SDGs, role of a zoologist, SDGs and Zoology (SDGs 1,3,5,6,8,11,12,13,14 and 15), SDG(s)-based projects/dissertations

Suggested Readings

1. Venkitaraman: Economic Zoology, Sudarsana Publishers
2. Srivastava : A Text Book of Applied Entomology, Vol. II & II.I Kalyani Publishers
3. Shukla And Upadhyaya :Economic Zoology. Rastogi Publishers.

ZGEP0034: ETHOLOGY AND POPULATION GENETICS (4 CREDITS- 60 HOURS) (L-T-P: 4-0-0)

Course Outcomes(Co)

1. Define states and events of behaviour. (Remembering)
2. Illustrate the concept of ethology and its significance. (Understanding)
3. Elaborate fitness in terms of evolution (Creating)
4. Apply Hardy Weinberg law for studying population genetics (Applying)
5. Identify sociobiology, social hierarchy, dominance in group living animals. (Applying)
6. Construct behavioral catalog for studying animal behavior. (Creating)

Module I: Basic Concepts of Ethology (10 hours)

a) Concepts of Ethology,
b) Genes and behaviour: Selfish gene concept, Fisher's Runaway theory
c) Evolution and development of behaviour
d) Deception, Mimicry, and Camouflage: Deimatic behaviour, Aposematic behaviour

Module II: Sociobiology (20 hours)

a) Social Behaviour:Properties And Advantages Social Grouping, social group of monkeys;
b) Fitness: Darwinian fitness, individual fitness, kin selection, group, cooperation, reciprocation, altruism, reciprocal altruism,Proximate and Ultimate causations;
c) Parental care in animals(amphibians)

Module III: Learning and Communication (10 hours)

a) Communication in animals-vocal, and aggression tactile, visual and chemical; Territoriality
b) Learning: Introduction and definition, Types-Habituation, trial and error, conditioning, cognition and imprinting; Short and long term memory, neural mechanism of learning

Module IV: Population Genetics (20 hours)

a) Gene frequencies in population - The Hardy-Weinberg principle and analysis of gene frequencies in natural population.

b) Major factors influencing gene frequencies (migration, inbreeding), Effects of selection and mutation on gene frequencies.
c) Gene flow between subpopulations

Suggested Readings

1. Drickamer & Vessey: Animal Behaviour –Concepts, Processes and Methods, Wadsworth
2. Goodenoughet al :Perspectives on Animal Behaviour, Wiley,
3. Grier : Biology of Animal Behaviour, Mosby,
4. John Alcock: Animal Behaviour, Sinauer associates
5. John Krebs, Baron Krebs: An introduction to behavioural ecology, Blackwell scientifics
6. Aubrey Manning: An introduction to animal Behaviour, Cambridge University press

ZGBB0036: BASIC BIOINFORMATICS THEORY
(1 CREDIT: 15 Hours) (L-T-P: 1-0-0)

Objective(s): To gather knowledge on fundamental concepts and methodologies in Bioinformatics, focusing on practical applications and data analysis and equip with the skills to analyze biological data and explore how computational approaches are applied to biological research questions.

COURSE OUTCOMES:

CO1: Explain the key concepts and applications of Bioinformatics in Modern biology. Apply Bioinformatics tools to retrieve and analyze biological data from various databases. (**Understand & apply**)
CO2: Analyze sequence data using alignment techniques to identify similarities and differences. Utilize different bioinformatics tools and software in decoding nucleic acid and protein sequence, their structure and interactions, and correlate these data amongst different species. (**Analyse & apply**).
CO3: Evaluate phylogenetic relationships using tree construction methods and interpret the results. Analyze the evolutionary interrelationship amongst different organisms using sequence alignment tools. (**Evaluate**).
CO4: Exercise the Homology modeling, Molecular Docking. (**Apply & determine**).
CO5: Develop critical thinking skills and ethical awareness for Bioinformatics research. Create a bioinformatics workflow to address a specific biological question, integrating multiple tools and datasets. (**Create**).

Module I: Introduction to Bioinformatics (1 Hours)

Concept and scope of Computational Biology and Bioinformatics. Applications and Importance of Bioinformatics. Key concepts and terminology.

Module II: Biological Databases (3 Hours)

Introduction to Literature Database and Biological Databases; Primary, Secondary and Composite databases; Navigation and data retrieval from Nucleic acid databases (GenBank, DDBJ, EMBL and NDB); Protein databases (PIR, SWISS-PROT, TrEMBL, PDB); Metabolic pathway database (KEGG, EcoCyc, and MetaCyc); Small molecule databases (PubChem, Drug Bank, ZINC, CSD). Genome visualization- UCSC.

Module III: Data Generation and Data Retrieval (3 Hours)

Generation of data (Gene sequencing, Protein sequencing), Sequence submission tools (BankIt, Sequin, Webin). Data retrieval systems (SRS, Entrez). Sequence analysis (Introduction to GTF, GFF file Formats, FASTA/FLAT file Genbank file analysis, BED files). Gene and Protein data retrieval system and processes.

Module IV: Sequence Alignment and Evolutionary Bioinformatics (3 Hours)

Sequence alignment and its application: Local and Global Alignment, Scoring Matrices (PAM, BLOSUM), Methods of Alignment (Dot matrix, Dynamic Programming), Alignment algorithms (Needleman-Wunsch, Smith-Waterman), Pair wise and multiple sequence alignments (MSA); Introduction to Tools: BLAST, FAST-A, CLUSTAL, and various software and servers; Phylogenetic Analysis using academic software.

Module V: Structural Bioinformatics and Molecular Docking (4 Hours)
Basics of protein structure and function, Homology modeling and structure prediction, structure validation. Tools for structural analysis (SWISS-MODEL, PyMol). Introduction to Molecular Docking, Principles of ligand-receptor interactions, Introduction to Docking software (AutoDock, Swiss Dock).

Module VI: Ethics in Bioinformatics (1 Hour)
Ethical Considerations (Data Privacy and Confidentiality, Handling and Protection of Genetic Data), Ethical Implications of Genome Editing Technologies (CRISPR-Cas9), Ethical Dimensions of artificial Intelligence (AI) and Machine Learning (ML) applications in Bioinformatics.

Suggested Readings

1. Ghosh Z and Mallick B. (2008). Bioinformatics: Principles and Applications, Oxford University Press.
2. Pevsner J. (2009). Bioinformatics and Functional Genomics, II Edition, Wiley Blackwell.
3. Zvelebil, Marketa and Baum O. Jeremy (2008). Understanding Bioinformatics, Garland Science, Taylor and Francis Group, USA.
4. S. Jayanitha, T. Kartheeswaran (2019). Ethical, Legal and Social Issues in Bioinformatics Applications. (Proceedings of the Vavuniya Campus International Research Symposium).
5. Andreas Dress, Michal Linial, Olga Troyanskaya, Martin Vingron. Computational Biology (Print ISSN -1568-2684) by International Society for Computational Biology (Springer).
6. Zhumur Ghosh, Bibekanand Mallick (2008). Bioinformatics: Principles and Applications. Oxford University Press (ISBN: 9780195692303).
7. Jin Xiong (2006). Essential Bioinformatics. Cambridge University Press (ISBN: 9781139450621).

ZGSL0200: SERVICE LEARNING IN ZOOLOGY

Course Outcomes
1. Develop an understanding about the importance of service to community. (Understanding)
2. Identify the needs of a community. (Applying)
3. Apply skills acquired in Zoology to render service to community. (Creating)
4. Examine what can be learned from the community. (Analyzing)

Module I (5 hours)
Service learning: Definitions; Principles of Service Learning; Awareness of Community; Involvement with Community; Commitment to service

Module II (10 hours)
Aquaculture: Aquarium management - Aquarium fish keeping and breeding using local resources
Sericulture: Eri and their host plants **plantations**; indoor rearing and management practices; marketing and management of produce

LABORATORY COURSES

ZGPR6004: PROJECT MANAGEMENT, REPORTING AND DOCUMENTATION (30 HOURS) (P/NP)

Course Outcomes

1. Identify qualities of a successful entrepreneur and develop competencies. (Applying)
2. Construct economically and socially sound business ideas. (Creating)
3. Analyze the potentials of a social catalyst and examine case studies. (Analyzing)
4. Assess plans for effective preparation of Detailed Project Report (DPR) and financials of a DPR. (Analyzing)
5. Develop skills for project implementation and management. (Applying)
6. Define concept of market. (Remembering)
7. Distinguish different methods of Bookkeeping and Accountancy. (Analyzing)
8. Adapt effective plans for preparing accurate project report and practicing positive documentation. (Creating)

Objective: Help the student to understand Entrepreneurship, identification of qualities of a successfulentrepreneur & how to develop it

Module I: Entrepreneurship : Concept and Functions

Who is an entrepreneur?

Entrepreneurial competencies(Initiative, Creativity and Innovation, Risk Taking and Risk Management, Problem Solving, Leadership, Persistence, Quality Performance,

Information Seeking, Systematic Planning, Persuasion and Influencing Others,

Enterprise Launching Competencies, Enterprise Management Competencies)

Functions of an entrepreneur (Promotional functions: Innovation, Risk-taking,

Organisation Building, Discovery of an idea, Detailed Investigation, Assembling the Requirements, Financing the Proposition. Managerial functions: Planning, Organizing,

Staffing, Leadership, Supervision, Communication, Motivation, Controlling.

Commercial Functions : Production, Finance, Marketing, Accounting)

Types of entrepreneur (Innovative Entrepreneur, Imitative Entrepreneur, Fabian

Entrepreneurs, Drone Entrepreneurs)

Entrepreneurship: meaning and definition; types of entrepreneurship;

entrepreneur and entrepreneurship

Difference between entrepreneur and employee

Objective: Help the students to generate various business ideas and link the best one with them

Module II: Generation of business ideas and linking

EDP: Meaning, Need, Importance of EDP

Necessity of generating ideas

Ways to generate ideas, Area Assessment Survey – Modes (Desk Research, Field

Work, Market Need Based Opportunities, Ideas from Existing Entrepreneurs)

Linking business ideas with the entrepreneur

Methodology of Opportunity Identification & Profiling Business Ideas (Preparation of Personal Profile, Development of OS (decision making) Framework, Snap Investigation of ideas generated, Evaluation in terms of OS (decision making) Framework and Short-listing of Ideas, Pre-feasibility Studies, Errors in Selection, Final Opportunity Selection)

Preparation of business project plan and business project plan execution (Summary of the Project/Project at a Glance, General Information, Details of the Proposed Project, Market Potential, Manufacturing Process, Production Programme/Sales Revenue, Cost of Manufacturing and Profitability Projections)

Objective: To impart knowledge on social entrepreneurship

Module III: Social entrepreneurship

Who is a social entrepreneur (definition and case study)

Difference between entrepreneurship and social entrepreneurship

Characteristics of social entrepreneur (Social Catalysts, Socially aware, Opportunity- seeking, Innovative, Resourceful, Accountable)

Examples and case study

Objective: To impart knowledge on preparation of DPR

Module IV: Preparation of Detailed Project Report (DPR) and financials of a DPR

Business plan : key questions

Technical arrangement & Production process (Manufacturing process, Sources of technical know how, plant & machinery, Supplier identification & supplier selection, Raw materials, packaging, land requirement, utilities and manpower, financial viability) and Location selection (Layout, built up area etc).
Product and Market (Product description, Capacity, Market study and market demand, Product mix, Branding, Channels of distribution, Advertising and Promotion etc.)
Project cost and means of finance (Land, site development, building and civil works, plant and machinery cost, other fixed assets, technical knowhow fees, preliminary and preoperative expenses, working capital margin, contingency andescalation)
Income analysis (Capital utilisation and income estimate, Expenditure estimate, Profit estimate, income tax estimate, profitability ratios : TC ratio, cash flow estimate, risk analysis, sensitivity analysis etc.)

Objective: Impart knowledge on implementing, managing and monitoring the progress of the selected project

Module V: Project implementation and management
Understanding Total Quality Management (Acceptable Quality Level, Benchmarking, Deming Wheel, ISO 9000,Pareto Analysis, Quality Circles, Measures of Central Tendency and Dispersion, Geometric Moving Average, Statistical Process Control etc.)
Goal Oriented Project Planning (Project Planning Matrix and Product Matrix)
Project Activity Planning and Implementation (Gantt Charts, the Programme Evaluation and Review Technique (PERT) andCritical Path Method (CPM) of project scheduling)
Soft skills for launching and managing a project (Creativity and Problem Solving, Interpersonal Communication, Persuasion and Use of Influence Strategy, Negotiation and Networking, Delegation of Authority and Work Effort, Efficiency Orientation As a Trait, Leadership, Concept of risk and risk taking, Legal Requirements, Types of business organisation)
Managing Business Crisis – Starting and Liquidity Crisis

Objective: To impart the Knowledge of different component of Market

Module VI: Concept of market
Traditional market
Emerging market : E commerce
Analysing the market environment 4
Researching the market and market survey
Marketing mix
Product mix
Promotion mix
Price mix, method of pricing

Objective: To impart knowledge on Book Keeping

Module VII: Bookkeeping and Accountancy
Basic concept of Accounting (Management and financial accounting)
Basic books of accounts (Journal, Purchase book, Purchase return book, Sales book, Sales return book, ledger book, Cash book etc.)
Financial statement: Meaning, Importance
Profit and loss account
Balance sheet
Depreciation and adjustment etc.
Interpretation of financial Statement (Liquidity, Current ratio, Profitability ratio, Inventory turnover ratio, Debtors turnover ratio, ROI etc)
Fund flow Analysis

Objective: To impart knowledge on Documentation and Reporting

Module VIII: Documentation and Reporting
Why to Document
What is a Documentation Report
When and How to prepare the Documentation Report
Typical format of a Documentation report
Layout of the Report
Writing a Report

ZGDI6006: DISSERTATION PHASE I (4 CREDITS)

Course Outcomes

At the end of Dissertation phase I students will be able to:

1. Review and analyse scientific papers (Analyzing)
2. Design and perform experiments and prepare work plan (Applying)
3. Formulate hypotheses and choose appropriate methodologies to achieve the desired objectives (Creating)

The dissertation phase I is the preliminary stage where a student selects a research topic on interest in consultation with the assigned supervisor. In this phase the student is learns to identify research gap, formulate objectives and hypothesis, design work plan and experiments and fixes his/her methodologies to achieve the desired objectives.

ZGWP6011: INTRODUCTION TO WILDLIFE PHOTOGRAPHY (30 HOURS, L-T-P: 2-0-0) (P/NP)

Course Outcomes

1. Discuss the history of Photography, moving images and Stock photography Creating)
2. Demonstrate a brief understanding of ethics of journalism, photo journalism and sources (Understanding)
3. Assess the importance of digital technology in photography (Evaluating)
4. To define camera basics and different genres of photography (Remembering)

Learning Objective

1. Through theory and practical assignments, this class provides the students with hands on experiences in photography. Lectures, field studies, guest instructors, student presentation and group work will help you develop the analytical basisand insight to reflect upon and assess the impact of photographs on our ideas of the world.
2. By the end of this course, Students will: Be able to start their career in photography. Will be able to create picture story /Photo Essays and understand the conventions and challenges of telling stories through images
3. Gain personal leadership through challenging, intercultural assignments

Objective: This module will help to understand the students about photography basics

Module I: Introduction to photography

Camera Basics, Types of Camera, Operating a Camera, Exposure, Aperture & Shutter Speeds Light Meter, Depth of Field, Choosing Lenses, Types of lens, Lighting, Flash Photography, Filters, Steady Shooting, Composition in wildlife Photography.

Objective: *This module will help to understand the students about different types of photography in details*

Module II: Different genres of photography

Mobile Photography, **Microscopic photography**, **Macro photography, Drone photography, Wildlife Photography**

Objective: Post production is an important part of photography student will learn post-production in this module

Module III: Post Processing

Enhancing Photographs, Organizing the Picture, Quality Control, Intermediate/advanced use of post-production software like Adobe Photoshop, Lightroom etc

Objective: How to earn the livelihood from selling your images internationally

Module IV: Stock Photography

Introduction to Stock Photography, How to contribute to various stock photo agencies. Causes of rejections, Submitting Guidelines, Meta Data

Objective: This module focuses on photojournalism.

Module V: Ethics in Wildlife Photography

How to prepare for a photo tour (Dress code in wildlife photography, permissions, water bottle, notebook and other accessories) How to remain safe during shooting (How close is too close, keeping antivenom & antiallergen; leach guard, safety of gears used) Ethics in wildlife photography (knowing Schedules of animals in Wildlife (Protection) Act, 1972, not using any bait, not taking any animal out of its habitat without permission, non use of flash, not altering the habitat)

CO 2		M			H
CO 3	H	H	H	L	M
CO 4	H	M	H	M	M

ZGDS6009: DISSERTATION PHASE II (8 CREDITS)

Course Outcomes

At the end of Dissertation phase II students will be able to:

1. Conduct experiments/ field studies using different materials and methods (Analyzing)
2. Collect various types of data and use those data for testing hypotheses (Analyzing, Evaluating)
3. Make use of several statistical tools for data analysis (Analyzing)
4. Create a scientific report based on the study (Creating)

During the dissertation phase II, a student learns how to perform experiment/field study and collect necessary data for data analysis. He/She also learns to use several statistical tools to analyze data and create a dissertation thesis based on original work done during the end semester examination.

ZGTM6010: TEACHING METHODOLOGY AND CLASSROOM MANAGEMENT (30 HOURS: P/NP)

Course Outcome (CO):

1. Define different concepts of teaching skills (Remembering)
2. Create effective teaching instruction (Creating)
3. Evaluate assessments (Evaluate)
4. Make use of ICT(Analyzing)

Module I: Introduction to Core teaching Skills. Micro- teaching.

a) Introduction to Methods, Maxims, Devices and techniques of teaching. Practice teaching on Core teaching Skills in Microteaching mode.
b) Approaches and methods of teaching Science - (i) Lecture, demonstration, explanation, Observation. (ii) Ensuring Problemsolving, laboratory, Project, Heuristic, Discussion for teaching science. (iii) Learning by discovery, group work and team teaching.
(iv) Collaborative strategies, provision in heterogeneous classroom.

Module II: Planning and designing for effective instruction in science.

a) Design of unit and lesson planning approaches to lesson planning, format of lesson plans
b) Teaching aids and laboratories in science, their necessity and importance.
c) Museum, field trips and excursion, their relevance to science. Preparation of simple aids of Science teaching.

Module III: Evaluation of Learners Progress.

a) Concept and importance of assessment & evaluation.
b) Techniques of evaluation (Theory & Practical)
c) Construction of Unit test: Design and blueprint, Item construction, Question wise analysis, Construction of Science question paper including marking scheme.

Module IV: Information and Communication Technology (ICT) Integration in Science teaching.

a) Introduction to ICT
b) Importance of ICT in Science teaching.
c) Exploring various ICT tools for Science teaching.
d) Open Education Resources (OER) and its uses in Science teaching.
e) ICT Integration in Science teaching.

f) Exploring FOSS in Science teaching

CO2		H		
CO3			H	
CO4				H

ZGEE6011: SPECIALIZATION LAB I – ENTOMOLOGY (2 CREDITS)

Course Outcomes

1. Explain and Identify insects of different insect orders
2. Develop the skill required to properly collect and preserve insects (Creating)
3. Compare the different types of legs, antennae and mouthparts of insects (Analysing)
4. Develop a sound knowledge on basic aspects of anatomy of different systems, physiology of internal systems like digestive system, circulatory system, reproductive system and nervous system. (Creating)
5. To Estimate haemolymph, chitin and uric acid in insects (Creating)

Syllabus

1. Insect collection and preservation
2. Different types of mouth parts
3. Different types of antenna
4. Different types of legs
5. Preparation of arolium, empodium and pollen basket
6. Preparation and identification of haemocytes, quantitative count of haemocytes.
7. Detection of chitin in insect cuticle
8. Detection of Uric acid in insects
9. Estimation of haemolymph proteins in insects.
10. Histological study of foregut, midgut and hindgut of insect.
11. Reproductive system of cockroach
12. Prothoracic gland of cockroach
13. Biosensing activity in Butterflies, Honeybees and beetles
14. Identification Of insects of forensic importance and forest defoliator

ZGCM6012: SPECIALIZATION LAB I- CELL AND MOLECULAR BIOLOGY (2 CREDIT; 30 HRS, 0-0-2)

Course Outcome

1. To demonstrate the method to study cell morphology. (applying)
2. Demonstrating the method of preparation of histological slides. (applying)
3. Show the method of preparation to study various chromosome. And also demonstrating the pk value of buffer.(analysing)
4. To demonstrate various method of detecting concentration of an unknown sample. (applying)
5. Demonstrating the enzyme end point technoiques. (analyzing)
6. Illustrating various immunological techniques. (analysing)
7. Creating a report on the techniques observed in advanced lab. (creating)

Syllabus

1. Use of occulometer-standardization and measurements of cell height, nuclear diameters and tabular diameters
2. Histology of biological tissues and sectioning by microtome
3. Preparation of salivary gland chromosomes from Drosophila /Chironomous larva and stain with acetocarmine/aceto-orcein/fuelgen
4. Preparation of mammalian chromosomes from bone marrow or testis and stain with Giemsa stain

5. Determination of pK value of buffer
6. Determination of relationship between absorption and various concentration of a solution using a colorimeter, spectrocolorimeter/spectrophotometer.
7. Preparation of standard curve for total cholesterol
8. Quantization of enzymes: End point techniques (alkaline phosphatase), enzyme kinetics.
9. Permanent Slides: Types of cells (squamous, cuboidal, columnar epithelial cells, blood cells, nerve cells, muscle cells), connective tissues of various types, adipose tissue, mitotic & meiotic chromosomes and their different phases.
10. Preparation of emulsions- syringe method and hubbed needle method
11. Immunization routes: Intradermal, Subcutaneous, Intramuscular, Intraperitioneal, Intravenous
12. Bleeding Schedules and collection of blood: cardiac puncture, external jugular vein
13. Separation and preservation of serum: Liquid Storage using preservative and by sterilization
14. Report submission- Visit to advanced lab.

ZGFS6013: SPECIALIZATION LAB I- FISHERY SCIENCE (2 CREDITS: 30 HOURS/ L-T-P: 0-0-2)

COURSE OUTCOMES (CO)

1. Identify commercially important fish species of Northeast India. (Applying)
2. Prepare fish bones using various techniques. (Analyzing)
3. Analyze various biological parameters of fish. (Analyzing)
4. Determine various indices of fish. (Evaluating)
5. Create reports on visits to fish landing centres and fish farms. (Creating)

Syllabus

1. Identification of commercially important fish species of north east India representing all fish groups
2. Fish osteology —preparation of fish skeleton (using KOH and Trypsin).
3. Biological Analysis of fish samples for gut contents, maturity stages and fecundity
4. Dissecting out the pituitary gland and preparing the extract, Weberian Ossicle.
5. Determination of length-weight analysis in fishes.
6. Determination of gonado somatic index (GSI), hepatosomatic index(HSI),condition factor(CF), and fecundity.
7. External characters, types of scales, fins, types of teeth, structure of alimentary canal, gill rakers.
8. Visit to fish landing centre and fish farms and make Reports of visit

ZGAW6014: SPECIALIZATION LAB I- ANIMAL ECOLOGY AND WILDLIFE BIOLOGY [2 CREDITS: 30 HOURS, L-T-P: 0-0-2]

Course Outcome

1. Identify different flora and fauna (Applying).
2. Applying ecological sampling techniques (Applying)
3. Create and Analyse animal behavior (Analyzing, Creating)
4. Identify different successional stages (Applying)
5. Evaluate species diversity and similarity between communities (Analyzing)
6. Create field reports by studying different protected areas (Creating)

Syllabus:

1. Identification of species of butterfly, fishes, amphibia, reptilia, aves and mammalia from collection/model/photographs etc.
2. Identification of fish, amphibian and reptiles (local fauna) using Morphometric landmarks.
3. Ecological Sampling techniques: a) point transect, b) line transects, c) belt transect,
4. Behavioural study through Ethogram preparation
5. Time and Activity budgeting using Focal/Scan sampling.
6. Systematic study of common plants: Field and Herbarium techniques.
7. Study of successional stages of various forest communities.
8. Measuring diversity using Diversity:
   a) Diversity Indices: Shannon Weinner Index, Brillouin's index, Simpson index.
   b) Similarity Indices: Morisita's index, Sorenson's coefficient, Sorenson's and Dice index, Jaccard index
   c) Dissimilarity indices: Bray-Curtis, Ochiai index
9. Report Submission: Study of nearby protected areas (forests and grasslands) under various management regimes and makea report

ZGEE6015: SPECIALIZATION LAB II – ENTOMOLOGY AND ENVIRONMENTAL BIOLOGY (2 CREDITS, L-T-P: 0-0-2)

Course Outcomes

1. To categorize aquatic, terrestrial and boring insects (Analysing)
2. To Identify different pests of insects, insects of forest importance and forest defoliator (Analysing)
3. To identify major vector species of insects (Analysing)
4. Demonstrate phylogenetic tree (Understanding)
5. Develop a sound knowledge on basic aspects of physiology of different systems (Applying)

Syllabus:

1. Alimentary canal of house fly with crop
2. Bacterial chamber of termite
3. Pharyngeal, labial and thoracic salivary gland of honey bee
4. Sting apparatus of honey bee
6. Identification of aquatic, terrestrial and boring insects with specific adaptive characteristics.
7. Visit to agricultural field/tea garden and forest for on spot study of pest and damage caused by them
8. Preparation of Phylogenetic tree of Insect species
9. Study of Life Cycle of Mosquito, Housefly, Drosophila
10. Collection and identification of economically important insects and various stages of their life history (using uniquerepresentatives)
11. Identification Of Pests (Tea , Jute, Paddy stored grain)
12. Identification and anatomical studies of major vector species of Anopheles, Culex and Ades

ZGCM6016: SPECIALIZATION LAB II- CELL AND MOLECULAR BIOLOGY (2 CREDIT; 30 HRS; 0-0-2)

Course outcomes:

1. Demonstrating the method of separation of various cell organelles.(Understanding)

2. Illustrating the separation of nuclic acid, proteins, and amino acids. (Applying)
3. Qualitative analysis of carbohydrate, protein, lipid, nuclic acid by various methods. (Analysis).
4. Demonstration the method of lymphocyte count. (Applying)

Syllabus

1. Tissue homogenization and fractionation by differential centrifugation for isolation of mitochondria, nuclei and cytosol
2. Separation of DNA by agarose gel electrophoresis
3. Separation of proteins on Sodium dodecyl sulphate - polyacrylamide gel electrophoresis
4. Separation of amino acids by Thin Layer Chromatography.
5. Detection of Carbohydrate (a) PAS method/(b) Alcian blue method
6. Detection of Proteins (a) Mercury bromophenol blue method/(b) Ninhydrin method
7. Detection of Lipids (a) Phosphomolybic acid method/(b) Copper phthalocyanine method
8. Detection of DNA by Feulgen method and differential detection of DNA and RNA in a cell by Methyl green- Pyronin method.
9. Isolation and vital staining of lymphocytes obtained from spleen and lymph nodes of sensitized animals

CO 3					H	H	H	H	
CO 4									H

ZGFS6017: SPECIALIZATION LAB II- FISHERY SCIENCE (2 CREDITS: 30 HOURS/ L-T-P: 0-0-2)

Course Outcomes

1. Evaluate the physicochemical parameters of water samples. (Evaluating)
2. Estimate and determine productivity of water bodies and its biotic components. (Evaluating)
3. Analyze important fish parasites. (Analyzing)
4. Develop efficient fishing tools for sustainable utilization of the resources. (Creating)
5. Create reports on the study of freshwater bodies and fish processing centre. (Creating)

Syllabus

1. Analysis of water samples for various physicochemical parameters–pH, freeCO2, dissolved oxygen, alkalinity, chloride,hardness, nitrates, phosphates, BOD, COD
2. Estimation of primary productivity by light and dark method.
3. Composition and biomass of phytoplankton, Collection, enumeration and biomass of Zooplankton
4. Identification of important fish parasites (external and internal).
5. Identification of fishing gears and fish by products.
6. Fieldwork: Visit to fresh water bodies, study of physico-chemical and biological status and make a report
7. Visit fish processing centers and make a report.

CO 4					H		
CO 5						H	H

ZGAW6018: SPECIALIZATION LAB II- ANIMAL ECOLOGY AND WILDLIFE BIOLOGY [2 CREDITS: 30 HOURS, L-T-P: 0-0- 2]

Course Outcome:

1. Apply ecological techniques (Applying)
2. Analyze animal sign (Analyzing)
3. Make use of GPS to create habitat maps (Applying)
4. Make use of wildlife equipment (Applying)
5. Make use of software for sound analysis and species abundance data (Analyzing)
6. Explain and Perform DNA isolation (Understanding, Applying)

7. Create report on conservation practices (Creating)

Syllabus:

1. Ecological census techniques: a) mark recapture b) quadrat sampling c) plotless sampling d) pellet group count
2. Animal sign & marks analysis: Pug mark analysis; Scat/ Dung analysis: (parasite identification)
3. Mapping distribution of endangered animal fauna of Northeast India
4. Demonstration and use of equipment- camera traps, remote drug delivery equipments, tags, collars, radio tracking equipment
5. Analysis of Abundance Data
6. Extraction of DNA from biological sample, PCR amplification
7. Preparation of an area map using on field GPS data.
8. Acoustic analysis of birds /amphibians
9. Report Submission: Preparation of conservation statements-through review of literature or via field visit.

ZGBE6019: BIOSYSTEMATICS AND ENVIRONMENTAL BIOLOGY LAB (2 CREDITS) (L-T-P:0-0-2)

Course Outcomes

1. Explain taxonomic procedures and identify various fauna. (Understanding)
2. Apply biodiversity indices. (Applying)
3. Determine parameters of the Environment. (Evaluating)
4. Application of biostatistical tools. (Applying)
5. Make use of bioinformatics softwares for genetic analysis. (Applying)
6. Demonstrate survey techniques. (Applying)

Syllabus

1. Collection, preservation, curation and identification of non-chordata and chordate species (only pest and cultured species)
2. Identification with only diagnostic features (specimen or model/diagnostic photograph) of different phyla
3. Survey and application of biodiversity indices on animal species (any one group)
4. Calculation of Pearson correlation coefficient, T-test (One sample t-test, Two sample t- test,Paired t-test); Chi square test, ANOVA, Mann-Whitney test on supplied data.
5. Preparation of Taxonomic key, study of evolution through models/charts.
6. Estimation of CO2, DO, Nitrites, total alkalinity and hardness of water sample.
7. Study of zooplanktons and its role in a pond ecosystem.
8. Analysis of physical parameters of soil.
9. Study of different types of survey techniques

ZGCI6020: CELL BIOLOGY, GENETICS AND BASIC BIOINFORMATICS LAB (2 CREDITS) (L-T-P:0-0-2)

Course Outcomes

1. Demonstrate laboratory safety protocols. (Understanding)
2. Identify laboratory equipment and their uses. (Remember)

3. Interpret cell division and the stages. (Understanding)
4. Analyze macromolecules using electrophoretic techniques. (Analyzing)
5. Apply bioinformatics tools to archive, retrieve, and analyze biological data. (Analyzing)

Syllabus

1. Use and care and maintenance of common lab equipment (microscope, colorimeter/ spectrophotometer, balance, pH meter, oven, incubator, microtome, electrophoretic apparatus, centrifuge, water bath etc.) and glass wares.

2. Identification of various stages of mitosis and meiosis from prepared slides.

3. Temporary squash preparation of onion root-tip/tadpole tail-tip cells to study stages of mitosis and Grasshopper/ Gryllotalpa testis to study meiotic stage of cell division.

4. Comparison of RBC and WBC in different groups of Vertebrate.

5. Isolation of DNA from any animal source.

6. Agarose Gel electrophoresis of isolated genomic DNA.

7. Detection of Barr body from epithelial cells

8. Pedigree analysis of some human inherited trait

9. Preparation of metaphase chromosome and chromosome banding studies

ZGDB6021: DEVELOPMENTAL BIOLOGY AND BIOCHEMISTRY LAB (2 CREDITS: 30 HOURS) (L-T-P: 2-0-0)

Course Outcomes

1. Develop the concepts of mechanisms of embryonic development. (Applying)
2. Categorize different mechanisms of embryological development through experimental techniques. (Analyzing)
3. Assess the effects of various teratogenic agents and environmental estrogens on development. (Evaluating)
4. Appraise the interactions of maternal effect of gene, gap gene, pair-rule gene, and hox- gene in development with respect to Drosophila. (Evaluating)
5. Discuss the various methods of assisted reproductive technology. (Creating).

Syllabus

1. In vivo/in vitro culture and study of chick embryo
2. Study of blastula, gastrula, tail bud and gill stages of frog embryo.
3. Study of developmental stages of Chick embryo from permanent slides.
4. Study of different stages of estrous cycle in mice (photographic).
5. Mini Project: Study of different types of eggs of invertebrates and vertebrates (Field visit or visit to an institution for study) and preparation of project report.
6. Preparation buffers of different pH using Henderson-Hasselbalch Equation And Its Verification using pH meter.
7. Quantitative estimation of amino acid using ninhydrin reagent.
8. Quantitative estimation of total soluble protein by Lowry method.
9. Estimation of glucose in serum by glucose oxidase peroxidase method/tissue by Anthrone reagent
10. Determination of in vitro antioxidant property (of plants extracts).

ZGEP6022: ETHOLOGY AND POPULATION GENETICS LAB (2 CREDITS: 30 HOURS) (L-T-P: 0-0-2)

Course Outcomes

1. Compare different types of behavior and analyze the methods of behavior sampling. (Evaluating)
2. Identify characteristic features of social organization in primates and analyze inclusive fitness. (Applying)
3. Construct gene frequencies using Hardy Weinberg Law. (Creating)
4. Determine food preferences in fish or insects. (Evaluating)
5. Distinguish behavioral changes in zooplanktons in relation to temperature and chemicals. (Analyzing)

Syllabus

1. Identification of different behavioral types (States and Events) in any group of animals.
2. Preparation of behavioral catalog (Ethogram)
3. Behavioral sampling Techniques: Scan animal Sampling, Focal animal sampling
4. Time and activity budgeting
5. Social organisation in primates
6. Analysis of gene frequencies using Hardy Weinberg Law using case studies.
7. Thermotactic behaviour in Zooplanktons/ Earthworm
8. Chemotactic behaviour in Zooplanktons/ Earthworm
9. Food preference in Tribolium / fish.
10. Study of Deimatic behaviour/ Aposematic behaviour in any group of animals.
11. Analysis of inclusive fitness.

ZGBB6023: BASIC BIOINFORMATICS LAB
(1 CREDIT: 15 Hours) (L-T-P: 0-0-1)

Objective(s): To acquire practical skills in bioinformatics and computational biology techniques and develop critical thinking abilities and ethical reasoning skills necessary for conducting research in the field.

COURSE OUTCOMES:

CO1: Identify different databases and utilise for sequence/structure retrieval. Data visualization of various 3D models and determine molecular structures and their functions.

CO2: Distinguish sequence alignment techniques and comparison and analysis of biological sequences.

CO3: Building 3D protein structures and explore protein structure-function relationships. Solve questions for interactions between proteins and ligands through molecular docking.

CO4: Analyze phylogenetic relationships to investigate evolutionary patterns and understand biological diversity and evolutionary history.

CO5: Develop critical thinking skills through case study evaluation to analyze and evaluate the ethical implications of computational techniques in biology research.

List of Practicals

1. Retrieval of Nucleotide sequences / Protein structure from the databases.
2. To visualize three-dimensional (3D) structure of protein in various models
3. To perform Pair-wise Sequence Alignment using NCBI BLAST (BLASTN) and interpret the output.
4. To perform Sequence Alignment using NCBI Protein BLAST (BLASTP) and interpret the output.
5. To perform Multiple Sequence Alignment (MSA) using Clustal Omega and interpret the output.
6. To build 3D structure of a target protein through Homology Modelling.
7. To perform Phylogenetic Analysis using academic software.

8. To investigate the interactions between protein and ligands through Molecular docking.
9. Ethical Analysis by Case Study Evaluation - To evaluate the ethical implications and assess their impact on societal values, individual rights, and scientific integrity. – *Assignment*.

SERVICE LEARNING IN ZOOLOGY PRACTICAL

Course Outcomes

1. Demonstrate aquaculture practices and techniques. (Applying)
2. Demonstrate techniques in Sericulture. (Applying)
3. Examine what can be learned from the community. (Analyzing)

Syllabus

1. Identification of local potential aquarium fishes
2. Aquarium making and management
3. Preparation and setting up of aquarium
4. Rearing of Eri silkworm
5. Identification of silkworm pests

FOUNDATIONS OF SERVICE LEARNING PRACTICAL (2 CREDITS)(L-T-P: 0-0-2)

Course Outcomes

1. Demonstrate waste management practices. (Applying)
2. Demonstrate proper health and hygiene practices. (Applying)
3. Examine what can be learned from the community. (Analyzing)

Syllabus

1. Identification and segregation of waste in designated bins
2. Composting of biodegradable waste
3. Visit to nearby school and demonstration of personal hygiene habits

4. Awareness Programme on breeding grounds
5. of vectors and their control.

SCHOOL OF HUMANITIES AND SOCIAL SCIENCES
DEPARTMENT OF ECONOMICS

VISION

To envision excellence in quality education and moulding intellectually competent persons in economics for creating novelideas through innovative teaching and research contributing to the modern society.

MISSION

- Empower the students with critical understanding of economic theory, analytical treatment and empirical interpretations of economic issues.
- Make the students aware of recent and ongoing developments in the field of economics.
- Enhance the skill and efficiency of the students for better employability in competitive job markets.

Programme Outcomes – MA Economics

PO 1: **Critical Thinking**: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

PO 2: **Effective Communication**: Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.

PO 3: **Social Interaction**: Elicit views of others, mediate disagreements and help reach conclusions in group settings.

PO 4: **Effective Citizenship**: Demonstrate empathetic social concern and equity centered national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO 5: **Ethics**: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO 6: **Environment and Sustainability**: Understand the issues of environmental contexts and sustainable development.

PO 7: **Self-directed and Life-long Learning**: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.

Programme Specific Outcomes – MA Economics

PSO 1: **Knowledge of Economic Structure:** Ability to understand theories of basic economic structure and enhanced policy making. It also provides detailed knowledge of Indian Economy especially in post independence period.

PSO 2: **Applications of Mathematical and Econometric Methods:** To acquaint with the basic and applied mathematical and econometric methods to solve real economic problems. This develops skills required for empirical research.

PSO 3: **Growth and Sustainable Development Outlook:** To acquaint with in-depth knowledge of growth and sustainable development policies and strategies.

PSO 4: **Understanding of Trade and Financial Policies:** To equip with the fundamental strategies and principles governing trade and relations across countries.

PSO 5: **Perspective of Sectoral Knowledge:** To equip with the knowledge of sectoral behaviour, sector specific theories and policies.

PSO 6: **Population and Behavioural Studies:** To understand the principles of population and human decision making behaviour guided by cognitive skills.

DETAILED SYLLABUS – MA ECONOMICS

THEORY COURSES

ENML0046: MICROECONOMIC ANALYSIS (4-0-0)

COURSE OUTCOMES

1. Describe the detail concepts of microeconomics (Remembering)
2. Illustrate the behaviour of economic agents as well as the behaviour of the firms (Understanding)
3. Apply microeconomic concepts and theories to analyse real-life situations (Applying)
4. Illustrate the interactions of Microeconomics with other branches of Economics (Analyzing)
5. Elucidate the effects of economic policies on microeconomic behaviour and thus on the overall economic activities (Evaluating)
6. Develop ideas and critical insights for analysing real-life economic problems (Creating)

Module I: Choice under Risk and Uncertainty (12 hours)

The von-Neumann-Morgenstern Axioms; Expected Utility Theory; Risk Aversion; Certainty Equivalent and Risk Premium; Reducing Risk – Diversification, Insurance, Information; Comparative Risk Aversion; The Demand for Risky Assets; The State Preference Approach to Choice under Uncertainty

Module II: Imperfect Market Structure: Oligopoly (15 hours)

Basic Market Structure; Non-collusive Oligopoly – Cournot, Bertrand, Stackelberg, Paul Sweezy; Collusive Oligopoly – Cartels, Price Leadership, Single Basing-point Price; The Mark-up Rule

Module III: Factor Pricing and Income Distribution (15 hours)

Review of Factor Pricing under Perfectly Competitive Markets; Factor Pricing Under Imperfectly Competitive Markets; Monopolistic and Monopsonistic Powers; Labour Union and Collective Bargaining; Bilateral Monopoly; Elasticity of Factor Substitution; Technological Progress and Factor Share; Pricing of Fixed Factors – Rents and Quasi Rents

Module IV: The Theory of Public Choice (10 hours)

Pareto Optimality; Social Welfare Functions – Bergson & Samuelson, Arrow; Maximisation of Social Welfare; Compensation Criteria; Arrow's Impossibility Theorem; The Theory of Second Best; Social vs. Private Costs and Benefits

Module V: Market Failures (8 hours)

Externalities and Inefficiency; A Simple Bilateral Externalities; Public Goods and Free Riders Problems; Imperfect Markets; Asymmetric Information and Markets for Lemons; Moral Hazard; Adverse Selection; Signaling

Suggested Readings

1. A. Koutsoyinnis, Modern Microeconomics, International Edition, Macmillan Press Ltd
2. Baumol, W.J., Economic Theory and Operations Analysis, 1982.
3. C. Snyder & W. Nicholson, Fundamentals of Microeconomics, Cengage Learning (India), 2010
4. D. Salvator, Principles of Microeconomics, 5th Edition, OUP
5. Hal R. Varian, Intermediate Microeconomics, a Modern Approach, W.W. Norton and Company/Affiliated East-West Press(India), 8th Edition, 2010
6. Karl E. Case & Ray C. Fair, Principles of Economics, Pearson Education Inc., 8th Edition, 2007.
7. N. Gregory Mankiw, Economics: Principles and Applications, India edition by South Western, a part of Cengage Learning,Cengage Learning India Private Limited, 4th Edition, 2007.
8. R. S. Pindyck, D. N. Rubinfeld & P. L. Meheta, Microeconomics, 7th Edition, Pearson, New Delhi

CO6			H		H

ENMY0047: MACROECONOMIC ANALYSIS (4-0-0)

COURSE OUTCOMES

1. Describe the detail concepts of macroeconomics and its related terms. (Remembering)
2. Identify the behaviour of macroeconomic variables and their interdependences in a closed as well as in an openeconomy. (Understanding)
3. Apply macroeconomic variables and concepts in examining the real-life situation (Applying)
4. Evaluate the role of macroeconomic variables in smooth functioning of an economy and its dynamics. (Analyzing)
5. Elucidate the effects of macroeconomic changes and policies on overall growth and development of an economy. (Evaluating)
6. Formulate and develop macroeconomic models and tools for analyzing real-life macroeconomic situations. (Creating)

Module I: Consumption and Investment Functions (12 hours)

Theories of Consumption – Absolute Income, Relative Income, Life Cycle, Permanent Income; Theories of Investment – The Present Value Criterion for Investment, Marginal Productivity of Capital, The Marginal Efficiency of Capital and Investment, Financial Theory of Investment; Lags in Investment; Portfolio Disequilibrium and the Transmission Mechanism

Module II: Money Demand, Inflation and Unemployment (15 hours)

Post-Keynesian Theories of Demand for Money – Friedman, Patinkin, Baumol, Tobin; Determinants of Money Supply; Patinkin's Real Balance Effect; Theories of Inflation; Inflation and Unemployment – Phillips Curve Analysis; Trade-off vs. No Trade-off – Tobin, Friedman; The Inflationary Pressure Curve; Adaptive and Rational Expectations; Okun's Law; Keynesianism vs. Monetarism

Module III: New-Classical Macroeconomics (10 hours)

Main Features of New-Classical Model; Rational Expectation – Barrow's View; Rational Expectations and the Real Business Cycles – Kydland, Prescott; Expectations of Future Variables – Sargent, Muth; Macroeconomic Imbalances; Lucas Aggregate Supply Function; The Rational Expectations Hypothesis and its Critique

Module IV: Cyclical Fluctuation (8 hours)

Characteristics of Cyclical Fluctuation; Business Cycle in Market Economies; Short-Term vs. Long-Term Growth Trend; Theories of Business Cycles – Samuelson, Hicks, Kaldor, Schumpeter; Impact of Recession on Trade Imbalances

Module V: Open Economy Macroeconomics (15 hours)

IS-LM Analysis in Open Economy; Mundell-Fleming Model; Marshall-Lerner Condition; Interest-Rate Differentials; Inflation and Unemployment in the Open Economy; Fiscal Policies with Exchange Rate and Inflation; Floating Exchange Rates with Zero and Perfect Capital Mobility; Exchange Rate Expectations; Exchange Rate Overshooting

Suggested Readings

1. Andrew B. Abel & Ben S. Bernanke, Macroeconomics, Pearson Education, Inc., 7th Edition, 2011
2. Dornbusch, Fischer and Startz, Macroeconomics, McGraw Hill, 11th Edition, 2010.
3. Errol D'Souza, Macroeconomics, Pearson Education, 2009.
4. N. Gregory Mankiw, Macroeconomics, Worth Publishers, 7th Edition, 2010.
5. Olivier Blanchard, Macroeconomics, Pearson Education, Inc., 5th Edition, 2009.
6. Paul R. Krugman, Maurice Obstfeld & Marc Melitz, International Economics, Pearson Education Asia, 9th Edition, 2012.
7. Richard T. Froyen, Macroeconomics, Pearson Education Asia, 2nd Edition, 2005.

ENMM0048: MATHEMATICAL METHODS IN ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Identify the body of basic mathematics that enables economic analysis (Remembering)
2. Explicate the usage of the concepts of mathematics in Economics (Understanding)
3. Apply mathematical techniques to elucidate economic problems (Applying)
4. Assess the role of economic theory and draw inference in context of mathematical techniques (Analysing)
5. Explain the solution concepts for economic problems with a variety of economic applications (Evaluating)

6. Develop or build mathematical models to analyse real economic problems (Creating)

Module I: Optimization with Equality Constraint (12 hours)
Solving Equality Constrained Optimization without Lagrange Multiplier; Lagrange Characterization – Single and Multi- constraint Cases; Complementary Slackness Condition; Sensitivity Analysis; Income Expansion Path

Module II: Optimization with Inequality Constraint and Input-Output Model (13 hours)
Binding and Non-binding Constraints; Solution with One and Two Inequality Constraints; Kuhn-Tucker Method; Mixed Constraints – Solution with Equality and Inequality Constraints; Basic Structure of Input-Output Model; Open and Closed Model; Hawkins-Simon Condition; Static and Dynamic Model

Module III: Difference and Differential Equations (15 hours)
Solution of First Order Difference Equations; Economic Applications; Solution of Second Order Difference Equations – Homogeneous and Non-Homogeneous Equations; Economic Applications of Second Order Homogenous and Non-Homogeneous Equation – Cobweb Market Model, Market Model with Inventory, Determining Dynamic Market Equilibrium Price; Plotting Differential Equation – Phase Diagram

Module IV: Basic Game Theory (20 hours)
Appraisal of Normal Form Games; Games with Perfect Information – Strategic Games, Nash Equilibrium and Existence Properties, Application to Market Equilibrium and Pricing; Extensive Form Games with Perfect Information – Pure Strategy and Nash Equilibrium, Sub-game Perfect Equilibrium, Backward Induction, Bargaining Game (Split-the-Pie); Extensive Form Games with Imperfect Information – Principles for the Equivalence of Extensive Games, Mixed and Behavioural Strategies, Nash Equilibrium; Repeated Games – Finitely Repeated Games and Backward Induction, Infinitely Repeated Games; Dependent Strategies

Suggested Readings

1. Allen, R.G.D., Mathematical Analysis for Economists, Macmillan and Co Ltd.
2. Chiang A.C. & K. Wainwright, Fundamental Methods of Mathematical Economics, McGraw Hill International Edition
3. Hoy, L., Mckenna, Rees & Stengos, Mathematics for Economics, Prentice Hall, 2004.
4. J. M. Henderson and R. E. Quandt, Micro-economic Theory – A Mathematical Treatment
5. K. Sydsaeter & P. Hammond, Mathematics for Economic Analysis, Pearson Educational Asia: Delhi, 2002.
6. T. Yamane, Mathematics for Economist: An Elementary Survey, 2nd Edition, Prentice Hall of India Pvt. Ltd., New Delhi.

ENEO0049: ECONOMICS OF DEVELOPMENT (4-0-0)

COURSE OUTCOMES

1. Define the key aspects of economic development. (Remembering)
2. Explain the role of various measurement of economic development. (Understanding)
3. Identify the various theories and approaches to economic development. (Applying)
4. Analyse the uses of various development theories of growth. (Analyzing)
5. Explain the importance of development theories. (Evaluating)
6. Discuss the various key aspects of dualistic development theories and its applicability. (Creating)

Module I: Measurement of Economic Development (10 Hours)
Measurement of economic development – National Income/GDP and Per Capita Income as an Index of Development; Alternative Measures of Development Gap: HDI, GDI and related indices; Structural Changes in the Development Process – Kuznets

Module II: Theories and Approaches to Economic Development (17 Hours)
Evolution in the Concept of Economic Development – Growth to Sustainable Development; Approaches to Development – Income Approach and Criticism; Sen's Capability Approach; Establishment Space in Economic Development; Theories of Economic Development – Karl Marx and Development of Capitalist Economy; Theory of Social Change; Surplus Value and Profit

Module III: Theories of Growth (15 Hours)
Summary of Classical Growth Models – Structural Model and Limitations; A Brief Review of Neo-classical Growth Models – Production Function in Neo-classical Growth; Instability of Growth; Solutions of Instability Problem; The Convergence Debate; Endogenous Growth Models – Arrow, Uzawa-Locus, Romer; The New Economic Geography – Krugman

Module IV: Development Strategies and Dualistic Pattern of Development (18 Hours)
Big Push – Rosenstein-Rodan; Balanced Growth – Nurkse; Unbalanced Growth – Hirschman; Critical Minimum Efforts – Leibenstein; Structural Change Models - Lewis, Fei-Renis; Rural-Urban Migration– The Harris-Todaro Model; Core- Periphery Models; The Process of Cumulative Causation – Myrdal; Neo-Colonial Dependence Model

Suggested Readings

1. Barro & Salai-Martin, Economic Growth, Prentice Hall of India.
2. Basu, K., Analytical Development Economics: Oxford Economic Papers.
3. Meier, G.M., Leading Issues in Economic Development, Oxford Economic Papers.
4. Roy, D., Development Economics, Oxford Economic Papers.
5. Thirlwal, A. P., Growth and Development, Palgrave.
6. Todaro, M.P., Development Economics, Pearson.
7. UNDP, Human Development Reports, Oxford Economic Papers.
8. World Bank, World Development Reports, Oxford Economic Papers.

ENMB0050: MONEY AND BANKING (3-0-0)

COURSE OUTCOMES

1. Learn basic ideas of monetary theory and the effects of monetary variables on the macroeconomic system.(Remembering)
2. Understand the working of non-banking financial institution and international financial institutions. (Understanding)
3. Develop the ability to understand the role of monetary forces and real forces and their interconnection in shaping and influencing the monetary and related policies both at the national and international levels. (Applying)
4. Understand the working of Indian baking system and the inter connectivity of the banks. (Analyzing)
5. Enable to evaluate the trend of financial reform in the field of financial inclusion. (Evaluating)
6. Understand the various determinant of demand and supply of money and its role in balancing the growth of theeconomy. (Creating)

Module I: Supply and Demand for Money (11 hours)
Money Supply – Theoretical and Empirical Attempts to Define Money; Components of Money Supply; Money Creation by the Banking System; High Powered Money and Money Multiplier; Measures of Money Supply and Liquidity in India; Balance Sheet of Central Bank; Demand for Money; Interest Sensitivity of Demand for Money – A Review of Classical, Keynesian and Monetarist Theories of Demand for Money

Module –II: Theories in Rate of Interest (12)
Term Structure of Interest Rates; Expectations Theory; Liquidity Premium Theory; Structure of Interest Rates in India; Monetary Policy – Targets, Goals and the Trade Offs among Alternate Goals; Lags in Operation; Keynesian and Monetarist Views on Transmission Mechanism; Rules vs. Discretion

Module-III: Banking Structure in India (11 hours)
Central Banking – Main Functions; Policy Tools, Recent Monetary Policy of RBI; Money Aggregates Targeting; Interest Targeting and Inflation Targeting Approaches of RBI; Autonomy of RBI; Commercial Banking – Types of Commercial Banks in India; Credit Creation Process; Major Developments in Commercial Banking in India since Reforms (including Mergers); Recent Developments on Financial Inclusion; Performance of Private and Public Banks

Module –IV: Non-Banking Financial Institutions (11 hours)
Role, Growth and Structure of Non-Banking Financial Institutions (NBFIs) in India; Types and Control of Non-Banking Financial

Companies (NBFCs); International Monetary System: IMF as provider of International Liquidity; Constituents of International Money and Capital Markets

Suggested Readings

1. Bhole, L.M., Financial Institutions and Markets. Tata Mcgraw Hill. 2016.
2. Bofinger, P., Monetary Policy: Goals, Institutions, Strategy and Instruments. Oxford University Press, 2001.
3. Dennis Geoggrey, E.J., Monetary Economics, Longman, 1981.
4. Desai, V., The Indian Financial System and development, Himalaya Publishing House, 2019.
5. Diulio, A. E., Theory and Problems of Money and Banking, International Edition (Schaum's Outline Series), 1987.
6. Fabozzi, F. J. & Franco, Capital Markets Institutions and Instruments, (4th ed.), New Jersey: Prentice Hall, Modigliani, 2009.
7. Gordon, E. & Natarajan, K., Financial Markets & Services, Himalaya Publishing House, 2019.
8. Handa. J., Monetary Economics, 2nd Edition, Routledge, London, 2009.
9. Howells, P. & Bain, K., The Economics of Money, Banking and Finance, Prentice Hall, Pearson Education Ltd., 2002.
10. Khan, M.Y., Indian Financial System, Tata Mcgraw Hill, 2017.
11. Kulkarni, G., Modern Monetary Theory, New Delhi: Macmillan, 1999.
12. Mankiw, N.G., Macro-economics. New York: Macmillan, Worth Publishers, 2008.
13. Mohan, R., Monetary Policy in a Globalized Economy – A Practitioner's View, Oxford University Press concerned, 2009.
14. Walsh, Carl E., Monetary Theory and Policy, Third Edition, The MIT Press Cambridge Massachusetts, 2010.

ENIP0051: INDIAN ECONOMIC DEVELOPMENT (3-0-0)

COURSE OUTCOMES

1. Learn the key issues related to the Indian economy. (Remembering)
2. Understand the economic reforms and its impact on Indian economy. (Understanding)
3. Identify the policies and performance in different sector (Applying)
4. Evaluate the impact of various development policies in Agriculture and Industry in the Indian Scenario. (Analyzing)
5. Explain the economic reform and its impact in Indian economy. (Evaluating)
6. Discuss their understanding of the usefulness of various development policies. (Creating)

Module I: Indian Economic Development: An Overview (10 hours)

Growth and Structure of the Indian Economy – Planned Economic Development, Development Strategy after Independence; Economic Growth, Distribution and Structural Change since Independence; Critical Evaluation of Trendand Issues in Demography – Education, Health, Poverty, Inequality, Unemployment

Module II: Economic Reforms (12 hours)

Economic Reforms Since 1991 – Liberalization, Privatization, Globalization; Major Developments in Post EconomicReforms Period; Critical Evaluation of the Changing Structure of the Indian Economy – Pre and Post-reform Eras

Module III: Sectoral Development (13 hours)

Issues and Concern in Indian Agriculture – Land Reform, Green Revolution, Agricultural Price Policy; Agriculture and WTO; Industrial Development in India – Industrial Growth since 1991, New Industrial Policy and its Impact; Trends in Exports and Imports – Foreign Trade Policy; Assessment of Performance of Service Sector in India in the Contemporary Period

Module IV: Macroeconomic Policies and their Impact in Indian Economy (10 hours)

Financial Sector Reform and Impact of Monetary Policy; Reforms in Banking Sector; Capital Market and its Reform; Reforms in fiscal Policy – Fiscal Responsibility and Budget Management (FRBM) Act; Reform in Indian Labour Market inPost-liberalization Period

Suggested Readings

1. Kapila, U., Economic development and policy in India, Academic Foundation, 2009.

2. Rakesh Mohan, India's Financial Sector and Monetary Policy Reforms, in Shankar Acharya and Rakesh Mohan, Editors,
3. India's Economy: Performances and Challenges: Development and Participation, Oxford University Press, 2010.
4. Pulapre Balakrishnan, The Recovery of India: Economic Growth in the Nehru Era, Economic and Political Weekly, November, 2007.
5. Pulapre Balakrishnan, Ramesh Golait & Pankaj Kumar, Agricultural Growth in India Since 1991, RBI DEAP Study No. 27,2008.
6. Rakesh Mohan, India's Financial Sector and Monetary Policy Reforms, in Shankar Acharya and Rakesh Mohan, editors,
7. India's Economy: Performances and Challenges: Development and Participation, Oxford University Press, 2010.
8. A. Ahsan, C. Pages & T. Roy, Legislation, Enforcement and Adjudication in Indian Labour Markets: Origins, Consequences and the Way Forward, in D. Mazumdar and S. Sarkar, Editors, Globalization, Labour Markets and Inequality in India, Routledge, 2008.

CO5			H	
CO6				L

ENSM0052: STATISTICAL METHODS IN ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Define and explain the measures and approaches of various statistical tools and techniques (Remembering & Understanding)
2. Apply statistical distribution and probability theory for estimation (Applying)
3. Analyze the results of hypothesis testing and statistical inferential outcomes (Analysing)
4. Evaluate the underlying assumptions of various analysis tools and techniques and suggest recommendations to the decision making processes (Evaluating & Creating)

Module I: Distribution Theory (15 hours)

Review of Distribution Theory – Discrete and Continuous Distribution; Truncated Distribution – Poisson Only; Compound Distribution – Binomial, Poisson; Random Vectors; Joint Distributions; Variance-covariance Matrix; Transformations of Bivariate Random Variables; Bivariate Normal Distributions

Module II: Probability Theory (15 hours)

Review of Axiomatic Approach to Probability and Baye's Theorem; Expectations of Functions of Random Variables; Conditional Expectation and Distribution; Conditional Variance; Applications; Characteristic Function of a Random Variable

Module III: Sampling Techniques (15 hours)

Basics of Sampling – Random and Non-random sampling; Random Sampling and Estimates of a Population Mean; Ratio Method Estimation – Concept, Bias; Ratio Estimators in Simple Random Sampling and Stratified Random Sampling

Module IV: Statistical Inference (15 hours)

Methods of Constructing Estimators; Theory of Hypothesis Testing – Test Function, Randomized and Non-randomized Tests; Interval Estimation – Confidence Intervals; Relationship with Tests of Hypotheses; Inference on Population Mean – Comparing two Population Means; Inference on Variance – Comparing two Population Variance; Likelihood Ratio Tests and their Properties; Large Sample Theory – Delta Method; Derivation of Large Sample Standard Error

Suggested Readings

1. Johnson N. L. & Kotz. S., Distributions in Statistics Vol-I, II and III, John Wiley and Sons, New York, 1996
2. Rohatgi, V. K., Introduction to Probability Theory and Mathematical Statistics
3. Larsen, R., Marx, M. An introduction to mathematical statistics and its applications, Prentice Hall, 2011.
4. Miller, I., & Miller, M., J. Freund's mathematical statistics with applications, 8th ed, Pearson, 2017

CO2	M		H	
CO3		M		H
CO4			H	

ENEM0053: ECONOMETRIC METHODS (4-0-0)

COURSE OUTCOMES

1. Define the basic concepts of econometrics and statistics. (Remembering)
2. Explain the concepts of simple linear regression and its associated topics. (Understanding)
3. Apply the regression models estimating regression parameters using OLS. (Applying)
4. Analyse the results of regression models with hypothesis testing and different statistical tests. (Analysing)
5. Evaluate the regression models along with diagnostics and model specification. (Evaluating)
6. Create and design hypothesis of economic problems and advance regression models with qualitative variables.(Creating)

Module I: Linear Regression and Diagnostic Analysis (18 hours)

Overview of the Classical Linear Regression Models - Simple and Multiple; Methods of Estimation-Methods of Moments, Method of Least Squares, Maximum Likelihood Method; Properties of Estimator; Goodness of Fit - R Square and Adjusted R Square; Hypothesis Testing for Regression Coefficients; Analysis of Variance (ANOVA); Problems with Linear Regression - Specification Bias, Autocorrelation, Heteroscedasticity, Multicollinearity; Outliers – Leverage and Influence; Tests for Outliers; Test for Linearity; Tests of Omitted Variables

Module II: Advanced Models in Regression (12 hours)

Use of Instrumental and Dummy Variables; Models with Qualitative Dependent Variables – Probit, Logit and Tobit Probability Models; Simultaneous Equation Models – Nature and Problems; Simultaneity Bias; Structural, Reduced-form and Recursive Models; Identification Problem – Rank and Order Conditions; Identification and Multicollinearity; Over Identified Linear Model – Generalised Method of Moments

Module III: Estimation of Simultaneous Equation Models (10 hours)

Indirect Least Squares (ILS); Method of Instrumental Variables (IV); Two Stage Least Squares (2SLS); Limited-Information Maximum Likelihood Method; Exogeneity and Causality – Weak and Strong Exogeneity, Tests for Exogeneity, Granger Causality

Module IV: Dynamic Econometric Models (10 hours)

Lagged Variables – Meaning and Importance; Distributed Lag Models – Koyck and Almon Approaches; Autoregressive Models – Partial Adjustment Model and Adaptive Expectation Models

Module V: Basics of Time Series Analysis (10 hours)

Stationary and Nonstationary Time Series; Box-Jenkins Approach; Unit Roots Tests – Null and Alternative Hypotheses under Unit Root Tests; Cointegration and Cointegrating Regression

Suggested Readings

1. Dougherty, C., Introduction to Econometrics, 4th ed., Oxford University Press, 2011.
2. Gujarati, D., & Porter, D., Essentials of Econometrics, 4th ed., McGraw-Hill, 2010.
3. Kmenta, J., Elements of Econometrics, Khosla Publishing House, 2008.
4. Maddala, G., & Lahiri, K., Introduction to Econometrics, 4th ed., Wiley, 2009.
5. Maddala, G.S., Introduction to Econometrics, 3rd Ed, Wiley India, 2009.
6. Madnani, G.M.K., Introduction to Econometrics: Principles and Applications, CBS Publishers & Distributors, 2009.
7. Wooldridge, J., Introduction to Econometrics: A Modern Approach, 5th ed., Cengage Learning, 2014.

ENPS0054: PUBLIC ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Define the main concepts in public economic policies. (Remembering)
2. Explain the concepts of public goods, public expenditures and taxation. (Understanding)

3. Identify the main issues of budgeting and fiscal policies. (Applying)
4. Evaluate economic concepts of income redistribution. (Analyzing)
5. Explain the evaluation of public investment projects and decision making in the public sector. (Evaluating)
6. Discuss their understanding of the usefulness and problems related to government subsidies and income support (Creating)

Module I: Government Activity and Public Economic Policies (15 hours)
Efficiency, Markets and Governments – Markets, Prices, Efficiency Conditions; Market failure – A Preview of the Basis for Government Activity and the Functions of the Government; Equity vs. Efficiency – Positive and Normative Analysis; Externalities and Government Policy – Market Failures, Externalities and Efficiency; Public Choice Theory – Meaning, Outcomes of Collective Choice; The Choice Process – Unanimity, Majority Rule, Cyclical Voting and the Voting Paradox, Arrow's Theorem

Module II: Theories of Public Goods, Public Expenditures and Taxation (15 hours)
The Theory of Public Goods; Provision of Private Goods and Public Goods – Markets and Government; The Demand for a Pure Public Good; Efficient Output of a Pure Public Good – Partial and General Equilibrium Analysis; Individual Action; Voluntary Cooperation and Efficiency; Local Public Goods; Voting Models of Public Goods; The Theory of Public Expenditure –Tiebout, Samuelson, Buchanan; Theories of Taxation; Tax Neutrality; Direct vs. Indirect Taxes and Equity; Buoyancy and Elasticity Estimates of Taxation; Tax Efforts; The impact of Taxes on Market Prices and Efficiency

Module III: Budgeting, Fiscal Policies and Income Redistribution (15 hours)
Program Budgeting – It's Application; Zero-Based Budgeting; Budgeting Policies; Theory of Fiscal Policy; Fiscal Policy with Special Reference to Under-developed Countries; Federal-Fiscal Relation in India; Income Redistribution – Taxes, Government Expenditures and the Distribution of Income, Welfare, Social Security and the Social Safety Net; Demographic Changes and the Future of Social Security; The Impact of Social Security on Savings and Work Incentives; Government Subsidies and Income Support – The Basis and Trade-off

Module IV: Public Investment Projects and the Public Sector (15 hours)
Public Utilities and Project Evaluation – Cost-Benefit Analysis; Distributional and Political Considerations; Problem of Government Failure – Privatization, Devolution, Rules vs. Discretion; Citizen Decision Making; Public and Private Sectors – Lack of Residual Claimant, Citizens and Rational Ignorance, Collective vs. Individual Consumption, Lack of Revealed Preference; Measuring and Valuing Public/Private Output

Suggested Readings

1. Buiter, W.H., Principles of Budget and Fiscal Policy, MIT Press, 1990.
2. Browning E K & Browning J M, Public Finance and the Price System, Pearson Education, Singapore.
3. Hyman D N, Public Finance: A Contemporary application of Theory to Policy,Thomson South Western
4. Jha, Raghbendra, Modern Theory of Public Finance, Wiley Eastern, Delhi, 1987.
5. Ulbrich, H., Public Finance in Theory and Practice, Thompson South Western.
6. Mukherjee, S., Ghose, A. & Nag, N. N., Analytical Public Finance. Public Economics – Public Choice - Public Policies, NewCentral Book Agency (P), Kolkata
7. Musgrave, Richard A., The Theory of Public Finance, Tata McGraw Hill, N.Y., 1959.
8. Ghosh A & Ghosh C, Public Finance, PHI Learning Private Limited, Delhi.
9. Musgrave & Musgrave., Public Finance in Theory and Practice, McGraw Hill, Singapore.
10. Cullis, John & Jones, Philip, Public Finance and Public Choice, McGraw Hill.
11. Ursula, H., Public Finance, James Nisbet and Co., London, 1968.

ENDV0055: INDIAN ECONOMIC DEVELOPMENT AND POLICY (4-0-0)

COURSE OUTCOMES
1. Understand the recent economic reforms in Indian economy since 1991. (Remembering)
2. Explain the sector wise reform ranging from agriculture to service sector and foreign trade as well. (Understanding)

3. Identify the main issues of reform and policy debate and its performance in Indian Economy. (Applying)
4. Evaluate the impact of various development policies in Agriculture and Industry in the Indian Scenario. (Analyzing)
5. Explain the trends and performance in service sectors. (Evaluating)
6. Discuss their understanding of the usefulness of various development policies. (Creating)

Module I: Economic Reforms Since 1991 (14 hours)
Indian Economy During Reforms – An Assessment; Main Aspects of New Economic Policy and its Relevance; Recent Issuesof Indian Economy – National Institution for Transforming India (NITI Aayog), Demonetization, Goods and Service Tax (GST), The Insolvency and Bankruptcy Code (IBC), Digital India, Make in India

Module II: Sectoral Development and Recent Reforms (18 hours)
Issues and Concern in Indian Agriculture – Agriculture Price Policy, Farm Law, Indian Agricultural Industry Reform; Industrial reform – MSME Development, Impact of Financial Reforms on Industrial Sector; Foreign Trade – Current Position of Balance of Payments of India, Export-Import Policy (EXIM); Foreign Direct Investment (FDI); Service Sector –Reasons for Rapid Service Sector Growth, Information and Communications Technology (ICT), India's Information Technology (IT) and ITES Industry

Module III: Major Issues of Indian Economy (15 hours)
Poverty, Inequality and Inclusive Growth – A Critical Assessment; Employment and Unemployment – Policy Implications;Rural Development – Role of Cooperatives, Agriculture Diversification, Organic Farming; Sustainable Economic Development; Privatization and Disinvestment Debate; Regional Imbalances

Module IV: Performance of Indian Economy (13 hours)
Indicators of Development – Physical Quality of Life Index (PQLI), Human Development Index (HDI), Gender DevelopmentIndices (GDI); Inequality-Adjusted Human Development Index Indicators of India's Economic Performance – Fiscal and Financial Sector Reforms and Recent Changes in the Policy; Recent Changes in Monetary Policy in India and its Impact; Centre State Finance Relations; Finance Commission in India

Suggested Readings
1. Dutt Rudder & K.P.M Sunderam, Indian Economy. S Chand & Co. Ltd. New Delhi, 2017.
2. Mishra S.K & V.K Puri, Indian Economy and – Its Development Experience. Himalaya Publishing House, 2017.
3. Kaushik Basu, The Oxford Companion to Economics of India, Oxford University Press, 2007.
4. Kapila U, Indian economy since independence, Academic foundation, New Delhi
5. Government of India, Economic Survey (Annual), Economic Division, Ministry of Finance, New Delhi.
6. Ahluwalia, I.J. & I.M.D. Little (Eds.), India's Economic Reforms and Development (Essays in honour of Manmohan Singh),
7. Oxford University Press, New Delhi, 1999.

ENPB0056: PUBLIC FINANCE (3-0-0)

COURSE OUTCOMES
1. Know about Indian tax system and its type and reforms over the years (Remembering)
2. Discuss the various types of grants available and the mechanism of availing those grants (understanding)
3. Develops analytical framework that facilitates the evaluation of public policy and subsequently inform the publicdebate. (Applying)
4. Evaluate the process of budget allocation and discuss the trend of government expenditure (Analyzing)
5. Examining the working of various international financial institution in the context of globalization (Evaluating)
6. Develop administrative skill with the knowledge of government fiscal policy (creating)

Module I: Taxation and Budget: (13 hours)
Indian Tax System; Revenue of the Union; Major Taxes in India; Base of Taxes; Direct and Indirect Taxes; Reforms in Directand Indirect Taxes; Taxes on Goods and Services – GST; Analysis of Central and State Government Budgets; Kinds of Budget; Different Concepts of Budget Deficits; Lack of Flexibility in Central and State Budgets; Shrinking Size of Development Finance Through Budgets; Trends in Public Expenditure; Non Plan Expenditure; Growth of Subsidies Public Debt; Trends in Internal and

External Debt; Crowding out of Private Investment and Activity; Devolution of Resources and Grants; Reports of Finance Commissions in India; Transfer of Resources from Centre and State to Local Bodies; PanchayatiRaj Finances

Module II: Government expenditure and Theories of Public Expenditure (11 hours)
Public Policy and Expenditure Allocation of Resources; Provision of Public Goods; Voluntary Exchange Models; Demand Revealing Schemes for Public Goods; Contributions of Clarks; Groves and Leyard; Tiebout Model; Stabilization Policy; Keynesian Case for Stabilization Policy; Wagner's Law of Increasing State Activities; Wiseman-Peacock Hypothesis; Pure Theory of Public Expenditure; Structure and Growth of Public Expenditure; Criteria for Public Investment; Social Cost- benefit Analysis

Module III: Deficit Financing: Concept and its Relation with Inflation (10 hours)
Deficit Financing in India; Issues Relating to Public Debt; Debt Burden Analysis and Management of Public Debt; Domar's concept of Debt Sustainability; Public Debt in India; Need for Rule Based Fiscal Consolidation; Fiscal Responsibility and Budget Management (FRBM) Act 2003; Recent Amendments to FRBM Act

Module IV: Intergovernmental Grants in Theory and Practice (11 hours)
Growth and Decline of Federal Grants; Purposes of Grants; Correcting Spatial Externalities; Redirecting Priorities; Types of Grants – General Purpose vs. Categorical, and Project grant. Lump-sum or Matching, Open-ended vs. Close-ended, Matching Grants; Various Classification; Efficiency and Equity Effects of Grants; Indifference Analysis of Grants;

Suggested Readings

ENRM0057: RESEARCH METHODOLOGY IN ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Describe the different types of research and the needs of research in Economics (Remembering)
2. Identify the essential conditions helpful for the formulation of research hypothesis and evaluate the various tools and techniques of sampling to collect data (Understanding and Applying)
3. Gain knowledge of statistical software for analyzing data and assess the relative importance of various analytical tools and techniques (Analyzing and Evaluating)
4. Formulate logical arguments for a research problem (Creating)

Module I: Basics of Research (10 hours)

Meaning, Types, Characteristics and Scope of a Scientific Research; Steps Involved in Scientific Research; Literature Review and Identification of a Research Gap; Formulation and Types of Hypothesis and/or Research Questions; Objectives; Research Design; Reference and Documentation; Limitations and Ethical Issues in Research

Module II: Sample Design and Data Processing (12 hours)

Nature and Sources of Data; Types of Data – Cross Sectional, Time Series, Pooled; Accuracy of Data; Types of Sampling, Determination of Sample Size, Sampling Procedure; Choice of Sampling Technique; Errors in Sampling; Processing of Data; Validation of Field Work; Editing and Coding; Classification and Presentation

Module III: Data Analysis (15 hours)

Qualitative and Quantitative Analysis; Univariate and Multivariate Analysis; Descriptive and Inferential Analysis; Testing of Hypotheses – Single and Multiple Comparison; Non-Parametric Tests; Test for Randomness; Advanced Data Analysis Techniques; Multidimensional Scaling; Basics of Computer and its use in Research; Introduction to Different Software (Excel, SPSS, STATA, EVIEWS, etc.); Entering Data in Software; Defining and Recoding Variables; Computing new Variables; Data Analysis with Statistical Software (Use Practical Examples)

Module IV: Report Writing and Interpretation of Results (10 hours)

Types of Report; Importance of Report; Steps in Report Writing; Citation Styles; Footnotes and Bibliography; Presentation and Interpretation of Results; Research Findings and Suggested Recommendations

Module V: Statistical Software for Data Analysis (13 hours)

Basics of Computer and its use in Research; Introduction to Different Software (Excel, SPSS, STATA, EVIEWS, etc.); Entering Data in Software; Defining and Recoding Variables; Computing new Variables; Data Analysis with Statistical Software (Use Practical Examples)

Suggested Readings

1. Krishnaswamy, O.R., Research Methodology in Social Science, Himalaya Publishing House, Bombay, 2002.

ENES0058: ENVIRONMENTAL ECONOMICS AND SUSTAINABILITY (4-0-0)

COURSE OUTCOMES

1. Define the basic concepts of environmental economics, including its key principles and methods. (Remembering)
2. Understand the environmental issues in relation to the theory of externalities, public goods, and welfare. (Understanding)
3. Apply environmental principles concerning the choice of instruments for controlling pollution and the relative strength and weaknesses of environmental policies based on command-and-control and market-based instruments.(Applying)
4. Analyze environmental problems using various economic techniques and to assess various environmental policies and issues. (Analysing)
5. Evaluate and examine the methods developed for valuing environmental goods and services for sustainabledevelopment. (Evaluating)
6. Develop and design various approaches to examine issues in the contemporary environmental discourse from and economists' point of view. (Creating)

Module I: Economics of Resources (12 hours)

Economics of Natural Resources; Resources and its Management; Optimal use of Renewable Resources; Common Property Resources and Open Access; Tragedy of Commons; Non-renewable Resources – Economic Issues Relating to use of Non-renewable Resources; Optimal Depletion; Backstop; Exploration and Technological Progress

Module II: Environmental Issues and Regulation (13 hours)

Problems of Market Failure - Public Bads and Externalities; Environment Degradation as Market Failure; Externality – Environmental Damage as Negative Externality; Social Choice of Optimum Pollution; Pigouvian Tax; Coase Theorem; Property Rights; Pollution – Environmental Pollution as a Public Bad; Optimal Pollution; Pollution Control – Market Based Instruments, Emission Fees, Tradable Pollution Permits, Hybrid Instruments, Double Dividend Hypothesis; Environmental Policies in India

Module III: Valuation of Environmental Goods (15 hours)
Ordinary Goods vs. Environmental Goods; Use and Non-use Values; Willingness to Pay and Willingness to Accept; Valuation Methods for Environmental Goods; Direct Methods or Stated Preference Methods – Contingent Valuation;Indirect or Revealed Preference Methods – Hedonic Pricing Method, Travel Cost Method

Module IV: Global Environmental Concerns and Sustainable Development (20 hours)
Climate Change, Loss of Biodiversity, Ozone Depletion, Pollution Havens; Sustainable Development – Concept, Notions and Different Approaches to Sustainability; Measurement of Sustainability; Sustainable Accounting – United Nations' System of Environmental and Economy Accounting; Brundtland Commission; Sustainable Industrialization; EnvironmentalImpact Assessment; Meaning of Resource Conversation; Material Substitution; Recycling – Optimum Recycling; Waste Management; Micro Planning for Eco-preservation – Watershed and Joint Forest Management, Wildlife Management; Role of International Organizations – IPCC, UNEP, Earth System Governance Project

Suggested Readings

ENEG0059: AGRICULTURE ECONOMICS – ISSUES AND MANAGEMENT (4-0-0)

COURSE OUTCOMES
1. Draw distinctive features of agriculture resources and production (Remembering)
2. Recognize and identify different market forms and role of government in agriculture credit (Understanding and analyzing)
3. Explain the trade-off between agriculture and non-agriculture to achieve sustainable agricultural development and in sensitizing overall development (Evaluating)
4. Use of economic theories in optimizing the production and distribution of agricultural products (Creating)

Module I: Agricultural Resources and Production (15 hours)
Resources in Agriculture; Land as a Resource; Land Capability; Issues in Utilization of Land; Competition for Agricultural Land; Effects of Urbanization; Land Degradation; Water as a Resource; Institutional Arrangements and Issues in Water Allocation; Managing Disasters – Drought, Flood, Famine; Production Function in Agriculture; Substitutability of Factors; Farm Size and Laws of Return

Module II: Agricultural Markets and Pricing (20 hours)
Role of Marketing in Agriculture; Scope of Agricultural Marketing; Characteristics of Agricultural Commodities; Classification of Markets; Producer's Surplus-Marketable and Marketed Surplus; Marketing Functions, Approaches to Marketing Efficiency Estimators; Marketing Approaches; Market Structure Approaches; Problems in Agricultural Marketing; Suggestions to Improve Agricultural Marketing; Role of Government in Agricultural Marketing

Module III: Agricultural Finance (13 hours)
Function of Prices; Types of Price Instability; Measurement of Instability; Cobweb Model; Problems of Agricultural Credit in India; Need for Agricultural Finance; Requisites of Good Credit System; Classification of Credit or Loss; Institutional Agencies in Agricultural Credit; Co-operative Movement in India; Higher Financing Agencies; Programmes of Rural Development

Module IV: Farm Management (12 hours)

Meaning and Scope; Farm Management-its Relationship with other Sciences; Farm Management Decisions; Law of Diminishing Returns; Principle of Factor and Product Substitution; Equi-marginal Returns; Principle of Comparative Advantage; Types of Farming; Farm Planning- Characteristics and Limitations; Size of Farm- Factor influencing Size of Farm; Farm Efficiency Measures- Physical Efficiency and Financially Efficiency

Suggested Readings

ENED0060: ECONOMICS OF EDUCATION (4-0-0)

COURSE OUTCOMES

1. Know Understand the concept of welfare economics and its applicability in education sector (Remembering)
2. Understand the educational financing from the point of view of Economics (Understanding)
3. Gain policy level understanding for improvement of health sector from economics prospective. (Applying)
4. Explore approaches of economic theory to health sector. (Analyzing)
5. The students can evaluate the investment pattern in education and also understand the direct and indirect benefits of education in development of society. (Evaluating)
6. Get an idea on various scopes to do research on education and health sector by applying the different economicstheories. (Creating)

Module I: Economics of Education (15 hours)

Human Capital – Types, Components; Human Capital Theory; Education as an Instrument for Economic Growth; Demand for Education; Supply of Education; Determinants of Demand for Education; Costs of Education – Private Costs, Social Costs; Benefits of Education – Direct, Indirect, Social; Wastage and Stagnation in Education – Causes and Measures; Manpower Planning –Meaning, Techniques of Forecasting

Module II: Education and Budget Allocation (15 hours)

Measurement and Trends; Correlation between Alternative Measures of Wellbeing; The Concept of Knowledge Economy – The Spread of Education across the World; Budgetary Allocations across Space and Time; Institutional Design;Alternative Systems for Service Delivery; The Role of Imperfect Information, Incentives and Contracts

Module III: Education and Planning (15 hours)

Approaches to Educational Planning – Production Function Models, Manpower Requirement Approach, Input-Output Model, Gender Based Approach; Educational Planning in Developing Countries with Special Reference to India; VocationalEducation in India; New Education Policy

Module IV: Discrimination and Inequality in Education (15 hours)

Models of Preference-based and Statistical Discrimination; Effective Policies to Address Historical Inequalities; Evaluating Policy Impact – The Estimation of Treatment Effects in Randomized Experiments and in Observational Data

Suggested Readings

1. Banerjee, A. & Somanathan, R., The Political Economy of Public Goods, 2007.
2. Becker G.S., Human Capital (2nd Edition), National Bureau of Economic Research, New York, 1974.
3. Becker, G., Investment in Human Capital: a Theoretical Analysis, The Journal of Political Economy, 70(5), 9-49, 1962.

ENHE0061: HEALTH ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Learn the detail concepts of health economics and application of economic concept in the health sector.(Remembering)
2. Develop ideas and critical understanding on the health system in the context of Indian scenario. (Understanding)
3. Identify the demand and supply gap in healthcare system to suggest healthcare professionals and policymakers. (Applying)
4. Assess the role of government in health care delivery system and identifying the scope of health financing. (Analyzing)
5. Evaluate the health care programmes and policy to provide decisions concerning the allocation of resources. (Evaluating)
6. Develop or build economic perspective for research problem in health sector. (Creating)

Module I: Basics of Health Economics (18 hours)

Concepts, Definition of Health Economics; Measures of Health Status; Topics in Health Economic Theory – Production Function of Health, Grossman's Model of Demand for Health; Supply-side Health Economics; Theory of Health Behavior;Market of Health Insurance

Module II: Economic Evaluation in Healthcare (18 hours)

Economic Evaluation in Healthcare – Concepts, Importance; Types of Economic Evaluation in Healthcare – Cost Minimization Analysis, Cost Effectiveness Analysis, Cost Benefit Analysis, Cost Utility Analysis; Health TechnologyAssessment – Basic Concept, Importance of HTA in Health Economics

Module III: Public Policy on Health (12 hours)

Public Policy in Health Care Delivery – Role of State, Rationale for Government Intervention in the Health Sector – Publicand Private sector; Health Financing; Concept and Calculating Methods of HALE, QALYs and DALYs

Module IV: Health Sector in India (12 hours)

Overview of Health Care in India; Health System of India – Post Reform Scenario; Health Outcomes; Socio-economic Determinants of Health; Different Dimension of Health - Poverty, Malnutrition, Gender Perspectives in Indian context

Suggested Readings

1. Henderson, J. W., Health Economics & Policy, (3e), Thomson South-Western, Latest Edition, 2007.
2. David Wonderling, Reinhold Gruen & Nick Black, Introduction to Health Economics, Open University Press, 2005.

ENEI0062: ECONOMICS OF INDUSTRY (4-0-0)

COURSE OUTCOMES

1. Recall the concepts of micro economics concepts of price, market type, business motives (Remembering)
2. Understand basic models of the behaviour of firms and industrial organization and how they can be applied to policyissues (Understanding)
3. Assess economic situations – particularly those determining the relationships among firms within an industry and the strategies that each firm can adopt –, relate them to concrete problems and provide policy recommendations. (Applying)
4. Understand the minimal cost input factor quantities for a firm and optimal selling prices, supply quantities andresulting profits of firms in different market structures (Analyzing)
5. Discuss the need of competitive environment and the degree competition for a healthy functioning of a market. (Evaluating)
6. Develop the ability to calculate market concentration with different index and understand the relation between competition level and market concentration. (Creating)

Module I: Exploring the Subject Matter of Industrial Economics (15 hours)

Meaning, Scope, Need and Significance of the Study of Industrial Economics; Types and Choice of form of Organization; Business Motives – Alternatives Types of Motives/Goals; Industrial Profile – Private Sector, Large, Medium and Small Scale Industries; Integration; Industrial Combinations – Causes, Mergers and Amalgamations, Diversification

Module II: Theories of Industrial Location (15 hours)

Approaches to Industrial Location Analysis – Alfred Weber's Theory, Sergant Florence's Theory, Market Area Theory,Central Place Theory of Losch; Industrial Imbalances – Causes and Remedies; Government Policy and Approach for Backward Regions in India

Module III: Industrial Efficiency, Productivity and Pricing (15 hours)

Economic Efficiency – Meaning; Factors Determining Efficiency; Productivity – Norms and Measurement; The Competitive Environment; Market Concentration – Meaning and Measurement; Pricing in Practice – Cost-plus Pricing, Variable Cost Pricing, Target Rate of Return Pricing, The Going Rate Pricing, Transfer Pricing

Module IV: Indian Industrial Growth and Finance (15 hours)

Industrial Policy in India- Role of Public and Private Sectors; Trends in Indian Industrial Growth after 1991 Industrial Policy;Role of MSME in India; Sources of Industrial Finance – GDR, ADR; Disinvestment as a Sources of Finance; Choice of Funding – External vs. Internal Sources, Financial Statements – Balance Sheet; Profit and Loss Account; Analysis of Financial Ratios; Project Appraisal and Capital Budgeting

Suggested Readings

1. Barthwal, R.R., Industrial Economics, Wiley Eastern limited, New Delhi, 1985.
2. Cherunilam, F. Industrial Economics: Indian Perspective (3rd Edition), Himalaya Publishing House, Mumbai, 1994.
3. Desai, B., Industrial Economy of India, Himalaya Publishing House, Mumbai, 1999.

ENIN0063: INTERNATIONAL ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Define and illustrate the key concepts, principles, models and practical applications of international economics including international trade and international finance. (Remembering & Understanding)
2. Apply the theories and models of international trade for economic growth and global welfare and critically comment on international economic policy. (Applying)

3. Analyse the links between trade, international finance, economic growth and globalization, with a particular emphasis on the experiences of developing countries. (Analysing)
4. Evaluate international trade policies regarding increase in exports, international debt, and international institutions to solve domestic problems like inflation, unemployment and value of currency etc. (Evaluating & Creating)

Module I: International Trade Theory (18 hours)
The Law of Comparative Advantage; Production Frontier with Increasing Costs; Gains from Trade with Increasing Costs; Offer Curves; Terms of Trade; Factor Endowments and the Heckscher-Ohlin Theory; Economies of Scale, Imperfect Competition and International Trade; Stolper-Samuelson Theorem; Specific Factors Model, Leontief Paradox; Technological Gap Model; Product Cycle Theory; The Gravity Model

Module II: International Trade Policy (12 hours)
Trade Restrictions – Tariffs, Partial and General Equilibrium Analysis of a Tariff, Optimum Tariff, Tariff structure; Nontariff Trade Barriers and the New Protectionism; Economic Integrations – Free Trade Areas, Customs Unions, Common Markets, Optimum Currency Area, Economic Union, Political Union; Dumping; Retaliation Against Dumping; International Cartels

Module III: Balance of Payments and Foreign Exchange Markets (10 hours)
Balance of Payments – Current and Capital Account; Foreign Exchange Markets – Types and Functions; Exchange Rates – Absolute and Relative Purchasing Power Parity Theory, Exchange Rate and the Balance of Payments, Portfolio Balance Model and Exchange Rates, Exchange Rate Dynamics; Spot and Forward Rates, Currency Swaps, Futures, and Options; Foreign Exchange Risks – Hedging, Speculation, Interest Arbitrage

Module IV: International Exchange Rate Determination (10 hours)
Exchange Rate Determination – Absolute Purchasing Power Parity Theory, Relative Purchasing-Power Parity Theory; Monetary Approach to Balance of Payments and Exchange Rate – Fixed Exchange Rates, Flexible Exchange Rates;

Module V: International Resources Movements and Managements (10 hours)
International Capital Flows - Foreign Portfolio Investment (FPI), Foreign direct investment (FDI); Its determinants and benefits; International Labor Migration – Motives, Welfare Effects; International Monetary System – Classic Gold Standard, Bretton Woods System, WTO and International Trade; International Debt Crisis; Recycling of Petro-Dollars; Causes of Debt Crisis; Secondary Market for Debt of Developing Countries

Suggested Readings

1. Bhagwati, Jagdish N., International Trade: Selected Readings, Cambridge, Mass: MIT Press, 1987.
2. Chacholiades, M., International Trade: Theory and Policy, McGraw Hill, 1988.
3. Cherunilam, F., International Economics, McGraw Hill India, 5th Edition, 2008.

ENPE0064: POPULATION ECONOMICS (4-0-0)

COURSE OUTCOMES
1. Highlight various policies on population control measures (Remembering)
2. Develop the knowledge of the different models, theories about the relationship between population growth and development (Understanding)
3. Develop the ability to relate the changes in social and political economy due to demographical changes. (Applying)
4. By the end of the course the students are expected to learn the two important concepts of Fertility and Mortality and

relate the factors for change in population in a particular region. It gives an idea about calculation of different rates of fertility and mortality. (Analyzing)

5. The students will be in a position to narrate the international and internal migration of India. Identify the factors responsible for internal and international Migration. (Evaluating)
6. Discuss the models of population projection and help in focusing the future policy measures (Creating)

Module I: Population and Development (15 hours)

Demography –Meaning and Scope; Evolution of Population Policy in India – The Shift in Policy from Population Control to Family Welfare, to Women Empowerment; Family Planning Strategies and their Outcomes; Measures of Population Change; Population Structure; Population Distribution; Theories of Population – Malthus, Optimum Theory of Population; Theory of Demographic Transition – Views of Meadows, Enke and Simon; Population and Development – Demographic Dividend

Module II: Distributional Pattern of Population (15 hours)

Population Trends in the Twentieth Century; Population Explosion and its Dynamics; Pattern of Age and Sex Structure in Developed and Less Developed Countries; Determinants of Age and Sex Structure; Demographic Effects of Sex and Age Structure; Economic and Social Implications; Age Pyramids Projections

Module III: Fertility, Nuptiality and Mortality (15 hours)

Fertility – Emerging Issues in Fertility Control; Fertility Analysis; Social Structure and Fertility Change; Nuptiality Concept and Analysis of Marital Status – Single Mean Age at Marriage, Synthetic Cohort Methods, Trends in Age at Marriage; Mortality – Death Rates, Crude Age-specific; Mortality at Birth and Infant Mortality Rate; Sex and Age Pattern of Mortality; Levels and Trends of Mortality rate in Developed and Less Developed Countries; Life Table Construction and Uses; Concepts of Stable Population; Methods of Population Projection

Module IV: Migration and Urbanization (15 hours)

Internal and International Migration Flows; Internal Migration its Effect on Population Growth and Pattern; Factors Affecting Migration; Theories of Migration Related to Internal Migration; International Migration Flows; Dynamics of the International Migration Process; Urbanization Growth and Distribution of Rural-urban Population in Developed and Developing Countries; Population Growth, Employment and Housing in Mega Cities in Developing Countries; Gravity Model

Suggested Readings

ENOR0065: OPERATIONS RESEARCH (4-0-0)

COURSE OUTCOMES

1 Familiar with basic ideas, characteristics and different phases of Operations Research (Remembering)
2. Describe the basic concepts of convex sets and linear programming method (Understanding)
3. Identify situations where linear and non-linear programming problem can be applied (Applying)
4. Perform sensitivity analysis to assess the magnitude of change of a linear programming (Analysing)
5. Develop strong analytical skills and logical argument to work on with complex issues (Evaluating)
6. Formulate linear programming model of a real-world problem and demonstrate the solution process (Creating)

Module I: Basics of Operations Research (10 hours)

Meaning and Definition; Phases of an Operations Research Study; Importance and Scope; Limitations of Operations Research; Operations Research in Decision Making; Application of Operations research

Module II: Assignment and Transportation Problems (15 hours)

Assignment Problem – Concept, Nature, General Formulation; Solution of Assignment Problems – Hungarian Method; Transportation Problem – Concept, Nature, General Formulation; Solution of Transportation Problems – North West Corner Method; Dual Transportation Model; Difference between Transportation and Assignment Problem

Module III: Network Analysis (15 hours)

Basic Concepts; Classic and Modern Network Models – PERT and CPM; Drawing of Network Activity; Critical Path;Determination of Floats – Total Float, Free Float and Independent Float; Social Networking Problems; Pivotal Agents in Social Networks

Module IV: Linear Integer Programming and Models of Inventory (20 hours)

Modeling with Integer Variables; Canonical and Standard forms; Branch and Bound Methods; Applications – Production Planning, Scheduling; Algorithms for Integer Optimization – Cutting Plane Methods, Approximation Algorithms; Problem of the Economic Order Quantity; Problem with Price Breaks; Static Multi-commodity Model with Limited Capacity of the Stock; Dynamic Problems – Basic Concepts

Suggested Readings

ENGE0066: GENDER ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Relate the demography concepts to understand the demography of female population (Remembering)
2. Articulate connections between global, regional and local issues and their relation to women's experiences and to human rights. (Understanding)
3. Examine the various gender indices to understand the framework of policy relating to gender issues. (Applying)
4. Explore the factors responsible for gender discrimination in India (Analyzing)
5. Evaluate the role of technology and institutions in addressing the problem of gender inequalities. (Evaluating)
6. Analyze interconnection between good governance, gender budgeting, Democratic decentralization and women empowerment. (Creating)

Module I: Concept and Importance of Gender Economics (15 hours)
Importance of Gender Economics; Women in Patriarchal and Matriarchal Societies and Structures; Gender Bias in the Theories of Values; Distribution and Population; Demography of Female Population; Causes of Declining Sex Ratios and Fertility Rates in LDCs and Particularly India; Women and their Access to Nutrition, Health, Education and Community Resources and their Impact in Female Mortality and Fertility; Gender Planning Frameworks and Tools; Gender Inequality Indices – GII,MPI, WEIA, SIGI, GDI, GEM; Gender Inequalities in India; Gender and National Planning; Theories of Gender Inequality

Module II: Decision Making, Economic Activity and Women (15 hours)
Factors Affecting Decision Making by Women; Property Rights; Access to and Control Over Economic Resources and Assets; Power of Decision Making at Household, Class, Community Level; Economic Status of Women and its Effect in WPR, Income Level, Health and Education in Developing Countries; Concept and Analysis of Women's Work – Visible and Invisible Work, Economically and Socially Productive Work; Female Contribution to National Income

Module III: Labour Market, Technology, Environment and Women (15 hours)
Factors Affecting Female Entry in Labour Market; Supply and Demand for Female Labour in Developed and Developing Countries; Studies of Female work Participation in Agricultural and Non-agricultural Rural Activities; Wage Differentials in Female Activities; Determinants of Wage Differentials – Gender, Education, Skill, Productivity, Efficiency, Opportunity; Structure of Wage Across Regions and Economic Sectors; Impact of Technological Development and Modernization on Women's Work Participation; Women and Environment – Female Activities and Environmental Concerns; International Agreements

Module IV: Social Security, Gender Planning and Development Policies (15 hours)
Effectiveness of Collective Bargaining; Review of Legislation for Women's Entitlement Protection of Property Rights; Schemes for Safety net for Women; Need for Female Labour Unions; Affirmative Action for Women and Improvement in their Economic and Social Status; Gender Mainstreaming in Development Policies; Gender Sensitive Governance – Gender Budgeting, Democratic Decentralization (Panchayats) and Women's Empowerment in India; The Kudumbashree Experience in Kerala, A comparative assessment on Gender policies between developed and developing countries (with special reference to Asian countries); Gender and technology based education institution in development and developingcountries.

ENFE0067: FINANCIAL ECONOMICS (4-0-0)

COURSE OUTCOMES

1. Learn the key concepts of financial economics. (Remembering)
2. Understand the fundamental concept and application of financial field. (Understanding)
3. Identifying the current financial issues and problems to provide better decision-making to investors. (Applying)
4. Illustrate the trading in the stocks market and analyze the complexities of the derivative market. (Analyzing)
5. Evaluate the financial policy and programme to provide financial advice to policymakers. (Evaluating)
6. Use of financial economics concept in solving real life problems.(Creating)

Module I: Investment Theory and Portfolio Analysis (18 hours)
Overview of Investment Evaluation Methods and Evaluation Criteria; Fixed-income Securities; Bond Prices; Spot Prices; Discount Factors; Arbitrage; Yield-to-maturity; Price Sensitivity; Interest Rate Sensitivity and Duration; The Term Structure of Interest Rates; Yield Curves; Spot Rates and Forward Rates; Portfolios of Assets – Measurement of Return and Risk; Effects of Diversification; Optimal Portfolio Choice; Mean-variance Frontier of Risky and Risk-free Asset; Portfolio Weights

Module II: Options and Derivatives (15 hours)
Options and other Derivatives – Concepts, Definitions; Interest Rate Futures; Futures and Hedging; Hedging Strategies; Option Markets – Call and Put Options; Bounds for Option Prices; Put-call Parity; Option Pricing Formula – Binomial Approach; Factors Affecting Option Prices; Option Trading Strategies; Option to Expand; Valuation of Real Option; Pricing of other Derivatives; Numerical Problems for Derivative Pricing

Module III: Corporate Finance (12 hours)
Types of Corporate Financing – Owner's Funds, Debt Funds; Strategy of Corporate Financing and Corporate Value; The role of Capital Market in Explaining Corporate Performance; Portfolio for Corporate Bonds; Corporate Debt and DividendPolicy, The Modigliani-Miller Theorem; Capital Asset Pricing Model and its Use in Corporate Finance

Module IV: Valuation of Financial Assets (15 hours)
Concept of Value; The Time Value of Money and Asset Pricing – The Valuation of Debt Instruments; The Equilibrium Priceand Quantity of Bonds – Loanable Fund Approach, Demand and Supply Approach; Valuing Stock and other Assets – Income Stocks and Growth Stocks; Equilibrium Price and Value of Stock Transactions

Suggested Readings

ENLE0069: LABOUR ECONOMICS (4-0-0)

COURSE OUTCOMES
1. Define and relate the main concepts of labour economics. (Remembering & Understanding)
2. Identify the main issues of wage determination. (Applying)
3. Analyse the theoretical issues in labour economics. (Analyzing)
4. Explain the practical applicability of theories related to labour productivity and labour mobility and appraise the key issues of Indian labour market to solve the problems in labour market. (Evaluating & Creating)

Module I: Introduction to Labour Economics (10 Hours)
Concept, Nature and Scope of Labour Economics; Labour Market – Concept, Labour Supply, Labour Demand; Measuring the Labour Force, Workers Preferences, Time and Budget Constraints, Hours of Work Decision; Production Function; Imperfections in the Labour Market.

Module II: Theories of Wage Determination (15 hours)
Theories of Wage – Classical, Neo-classical, Modern; Employment Decision in the Short Run and Long Run; Long Run Demand for Labour; Labour Market Equilibrium – Equilibrium in a Single Competitive Labour Market, Competitive Equilibrium Across Labour Markets, Non-competitive Labour Markets; Wage Determination in Organized and Unorganized Sector; Human Capital Theory of Wage

Module III: Wage Differentials, Labour Efficiency and Discrimination (15 Hours)
Homogenous Workers and Jobs; Heterogeneous Workers and Jobs; The Hedonic Wage Function; Alternative Pay Schemes and Labour Efficiency; Theory of Optimal Fringe Benefits; Labour Efficiency – Education in the Labour Market, Schooling Model; Efficiency Wage Models; Segmentation and Discrimination in Labour Market – Race and Gender in the Labour Market, The Crowding Model, Employer and Employee Discrimination; Measuring Discrimination – The Oaxaca Decomposition; Relation between Wage and Employment; Impact of Trade Union and Collective Bargaining on Employers

Module IV: Labour Productivity, Unemployment and Migration (10 Hours)
Labour Productivity – Concept, Measurement; Wages, Prices and Employment; Unemployment – Frictional, Structural, Demand-deficient Unemployment; Measurement of Unemployment – The Stock-Flow Model; Reducing Unemployment – Public Policies; Labour Mobility; Migration as an Investment in Human Capital; Determinants of Migration; Consequences of Migration; The Economic Benefits of Immigration

Module V: Issues in Indian Labour Market (10 Hours)
Features of Indian Labour Market – Size and Composition in the Organized and Unorganized Labour Market; Major issues in the Indian Labour Market; Labour Productivity in India; Labour Turnover and Absenteeism in India; Women and Child Labour in India; Agricultural and Rural Labour; Labour Market Institutions of Minimum Wage; Employment and Wage Policy in India; Informal Labour and Social Security Measures; Globalization and Labour Market; Labour Statistics in India

Suggested Readings

1. Ashenfelter, Orley & Richard Layard, The Handbook of labour Economics. Vol. 1 and 2, New York: North-Holland, 1986, Vol.3A, 3B and 3C, 1999.

8. Michael Hopkins, Labour market planning revisited, Palgrave Macmillan, 2002.
9. Rees, A., Economics of Work and Pay, Harper and Row, NY, 1973.

ENBE0070: BEHAVIOURAL ECONOMICS (4-0-0)

COURSE OUTCOMES
1. Learn the principles and methods of Behavioural Economics (Remembering)
2. Identify the systematic departures of economic behaviour from the prediction of the neoclassical model(Understanding)
3. Get the idea of how behavioural principles have been applied to economic problems (Applying)
4. Understand the principles behind the behavioural approach for the development of analytical tools in Economics (Analysing)
5. Incorporate psychologically motivated assumptions into economic models (Evaluating)
6. Interpret how behavioural models change the predictions for equilibrium behaviour and their implications for optimal policy (Creating)

Module I: Introduction to Behavioural Economics (10 hours)
Behavioural Economics Meaning, Definitions; Behavioural Economics and the Standard Economic Models; Scope and Methodology of Behavioural Economics; Applications

Module II: Decision-making under Risk and Uncertainty (13 hours)
Preferences and Choice; Anomalies in Expected utility Theory; Alternatives to Expected Utility Theory – Disappointment, Decision-Weighting, Rank-dependent Utility; Role of Reference; Dependent Preference in Risky and Risk Free Choices

Module III: Intertemporal Decision-making (13 hours)
Discounted Utility Model; Alternative Choice Models – Time Preferences, Time Inconsistent Preferences; Utility and Consumption Independence; Independence of Discounting from Consumption

Module IV: Behavioural Game Theory (13 hours)
Nature and Equilibrium of Behavioural Game Theory; Mixed Strategies and Iterated Games; Modelling of SocialPreferences; Inequality Aversion Model; Reciprocity Model

Module V: Basic Behavioural Macroeconomics (11 hours)
Neo-Keynesian Rational Expectation Model; Rational Expectation and Attainment of Business Cycle and Labour Market Equilibrium; Determination of Asset Price; Stability Analysis of Macroeconomic Models

Suggested Readings

1. Peter Diamond & Hannu Vartiainen, Introduction to Behavioural Economics and Its Applications, Princeton UniversityPress, 2012.

ENNE0071: ECONOMY OF NORTH EASTERN REGION (4-0-0)

Course Objectives:

This course is designed to expose the students to the overview of North East Economy. It explains the trend and performance of agriculture, industry and service sector in the context of North East scenario. It also includes the evaluation of various developmental policies for structural transformation of the region.

Course/Learning Outcomes

At the end of the course the students would be able to:

1. Define and understanding of macroeconomics policies and their impact of North East Economy. (Remembering)
2. Explain the policies and Performance in Agriculture. (Understanding)
3. Identify the policies and performance in Industry. (Applying)
4. Evaluate the impact of various development policies in Agriculture and Industry in the Indian Scenario. (Analyzing)
5. Explain the trends and performance in service sectors and the scope of growth of enterprises in the North Eastern region and the role of various policies in it. (Evaluating)
6. Discuss the usefulness of various development policies and the different development initiatives in the North Eastern region along with some of the reasons for its failure. (Creating)

Module I: Overview and Characteristics of North East Economy (20 hours)

North Eastern Region as an economy; Characteristics of the economy; Trend and Pattern of GDP growth in NER; Demographic features of the NE economy; Poverty and Inequality in NER comparison with the Indian economy; Trends of Employment and Unemployment; Recent developments in human resource.

Module II: Agriculture in North East Economy (15 hours)

Agriculture: features and challenges; Growth of Agricultural Sector in NE; Agricultural Finances-Sources and Limitations; Agricultural Policies of NE States; Agriculture-Industry linkage especially in NER, Problems of Agricultural Marketing in NE.

Module III: Industry and Service Sectors in North East Economy (20 hours)

Industry: growth, composition and challenges, Growth of Micro Small and Medium Enterprises (MSME); North East Industrial and Investment Promotion Policy (NEIIPP) 2007 & 2015; Services sector; Trends, growth and challenges; Rural economy, Diversification of rural employment; Infrastructure and regional economic development, Nature and characteristics of Public finance for NER trends and challenges.

Module IV: Structural Transformation and Institutions in North East (20 hours)

Institutions and economic Development; Governance and development-government failure and its correction; Local self-government and development; Community participation and development, community failure; Role of DONER and NEC; New development initiatives in NER, Vision Document 2020 and Act East Policy

Suggested Readings:

1. Banerjee and Kar (1999): Economic Planning and Development of North-Eastern States, Kanishka, ND.
2. Deb, B.J & B. Dutta Ray (2006): Changing Agricultural Scenario in North-East India, Concept Publication, New Delhi

4. Maithani, B.P. (1997): Local Self-Government in North-East India: An Appraisal, NIRD, Hyderabad

5. Menon, S. (Ed.) (2007): India's North East Economy-Problems and Prospects, ICFAI Univ. Press, Hyd.
6. Mishra, B. (2006): Fiscal Policy in North-East India, Akansha Publishing House, ND.
7. Nayak. P. (Ed.) (2010): Growth and Human Development in North- East India, Oxford University Press.
8. RBI (2006): Report of the Committee on Financial Sector Plan for North Eastern Region, RBI.
9. World Bank (2007): Development and Growth in Northeast India The Natural Resources, Water, and Environment Nexus

ENDI6003: DISSERTATION PHASE-I (2-0-0)

Course Description:
The MA students would be required to do project work and submit dissertation. The project work is to be related to the specialization area chosen by the student. Dissertation submitted by the students would be evaluated by External Examiners appointed by the University. The work for the MA dissertation is spread over Semester III and Semester IV as Dissertation Phase-I and Dissertation Phase-II respectively. The total dissertation grades are distributed between the two semesters i.e. 2 credits in Semester III and 4 credits in Semester IV equaling 6 credits in total.

Course Objectives:
The aim of the course is to equip the students with presentation skills and develop academic writing skill. Moreover, the students will also be able to apply the statistical research training acquired in the taught element of the program by designing an appropriate research strategy and research methodology to carry out the research.

The Structure of the Course:
In Dissertation Phase-I, the students have to independently think of a research idea and, by the end of the semester, has to defend a research proposal based on the idea i.e. need to present the Synopsis by the end of the third semester. The total credit in Dissertation Phase-I equals to 2 credits.

Structure of Dissertation Phase-I

Sl. No.	Tentative Stages to be completed	Tentative Duration
1.	Research idea or concept note, i.e., Statement of the Problem	First month
2.	Review of Literature	Second month
3.	Research Methodology Sampling, Sample size determination, Selection of sample, Analytical tools to be used, Questionnaire preparation, Preliminary exploration of data i.e. Pilot Survey	Third month andFourth month (3/4 common classes)
4.	Synopsis Presentation Submission of Modified Synopsis to the Head of the Department	Before the commencement of the end semester examination (date will be notified later) Evaluation by the end of Third Semester (Based on Synopsis)
5.	Students have to collect all the required data during the semester break (between 3rd and 4th semester)	

ENDI6004: DISSERTATION PHASE-II (4-0-0)

Course Descriptions:
The MA students would be required to do project work and submit dissertation. The project work is to be related to the specialization area chosen by the student. Dissertation submitted by the students would be evaluated by External Examiners appointed by the University. The work for the MA dissertation is spread over Semester III and Semester IV as Dissertation Phase-I and Dissertation Phase-II respectively. The total dissertation grades are distributed between the two semesters i.e. 2 credits in Semester III and 4 credits in Semester IV equalling 6 credits in total.

Course Objectives:
The aim of the course is to fine-tune the dissertation he/she working in the Phase-I and during the work, the students will also learn how to apply the statistical and econometric tools in their own research.

The Structure of the Course:
In Dissertation Phase-II, the student has to carry out data analysis and write the dissertation and defend it by the end of the fourth semester. The dissertation will include original research question(s) if any, critical review of the relevant literature, analytical tools employed in response to the research questions, data analysis and interpretation. Finally, the students need to submit the dissertation to the university authority maintaining all instructions provided by the university. Under the process, the students will be guided by an assigned supervisor of the department to do the work. The total credit in Dissertation Phase-II

equals to 4 credits.

Structure of Dissertation Phase-II

Sl. No.	Tentative Stages to be completed	Tentative Duration
1.	Validation of data, data entry and preliminary analysis of data(drawing graphs, trend lines, etc.)	First month
2.	Main data analysis	Second month
3.	Dissertation writing and Proof reading	Third and fourth month
4.	Submission and Viva Voce	Evaluation by the end of Fourth Semester

DEPARTMENT OF EDUCATION

VISION:

To build a pool of intellectually competent educational leaders and teacher educators leading on the process of education in general and teacher education in particular which nurtures individual autonomy and social development by ensuring quality with peace across the globe

MISSION:

The Mission of the Department is to facilitate the expression of leaders hidden within the students, developing sound cognitive, affective and psychomotor abilities and making them a sound citizen of the country and world as a whole.

PROGRAM OUTCOMES - MA EDUCATION

PO 1: **Critical Thinking:** To inculcate critical thinking among the students.
PO 2: **Effective Communications:** To generate an ability among the students to communicate their thoughts and ideas from one end to another clearly for making others comfortable in understanding.
PO 3: **Scientific Temper:** To inculcate scientific temper among the students to be judicious and logical in their thinking and presentation.
PO 4: **Effective Citizenship:** To enable the students to possess the qualities of a good citizen and prove to be a productive member of the society.
PO 5: **Ethics:** To create ethical values among the students to be a righteous individual.
PO 6: **Environment and Sustainability:** To create environmental awareness among the students lashing with the sense of sustainability.
PO 7: **Gender Sensitization and social commitment:** To sensitize the students about the gender variability and its utility in harmonious ways of life.
PO 8: **Self-directed and life -long learning:** To create a positive attitude among the learners to havethe zeal for self-directed and life- long learning.

PROGRAM SPECIFIC OUTCOMES - MA EDUCATION

PSO 1: **Educational Foundations and Educational Leadership:** To equip the PG students with foundations of education and inculcating educational leadership among the students.
PSO 2: **Skill Based Competence: To** inculcate some skills relating to teaching, research, leadership,management computer etc.
PSO 3: **Curriculum and Pedagogical Issues:** To make the PG students well aware of the curriculum planning and designing and pedagogy to transact the curriculum effectively and testing the students.
PSO 4: **Ethics and Social Responsibility in Education:** To produce morally upright PG students whoare to contribute in environmental sustainability and social development.

MA List of Courses

1.1 Philosophical Foundations of Education	3.2 Principles and Techniques of Teaching and Pedagogy
1.2 Fundamentals of Educational Psychology	3..3 Teacher Education
1.3 Emerging Trends in Education	3.4 Measurement and Evaluation in Education
1.4 History and Development of Education in India	3.5 Educational Law and Government Policy

DETAILED SYLLABUS
MA EDUCATION DETAILED SYLLABUS

EDLR0007: LEADERSHIP AND SOCIAL RESPONSIBILITY (3-0-0)

COURSE OUTCOMES

1. State the meaning of leadership and the qualities of a true leader. (Remembering)
2. Discuss the concept of leadership and management and the different theories and stylesof leadership. (Understanding)
3. Analyze the role of individual social responsibility and the social responsibility ofeducators. (Analysis)
4. Identify the role of leadership in the decision-making process and find out thetechniques that improves decision making process. (Application)
5. Discuss the role of leadership in policy formulation and find out the effect of leadership in social entrepreneurship. (Application)

Module I: Leadership and Management (13 Lectures)

Understanding Leadership; Its need and function; Styles and Theories of Leadership Styles of leadership (Autocratic, Democratic, Laissez Faire) and Theories of Leadership (Great Man Theory, Trait Theory, Fiedler's Contingency Theory, Hersey and Blanchard's Situational Theory, Tannenbaum and Schmidt Leadership Continuum); Changing roles of Leadership; Concept of Management, functions of Management, Leadership and Management issues; Discipline in Leadership, Leadership-A bridge to improved practice, Ways to improve Staff Achievement; Staff motivation, Performance and Personal Organization .

Module II: Social Responsibility (10 Lectures)

Concept of Social Responsibility, Types of Social Responsibility, Its need, Changing role; Social Engagement; Individual Social Responsibility and Corporate Social Responsibility, Social Responsibility of the Educators.

Module III: Leadership and Decision Making (12 Lectures)

Decision Making process; Types of Decision Making, Key steps in Decision Making, techniques of effective Decision Making; Barriers towards Decision Making, Ways of mitigating Barriers in Decision Making; Importance of Decision Making in Educational Institution, Organisational Behaviour, Leadership and Decision Making.

Module IV: Leadership Implementation and Implantation (10 Lectures)

Leadership and implantation; Leadership roles in Policy Formulation; Complexity of joint actions; Economic theory and program implementation; Implantation as exploration; Volunteerism; social entrepreneurship.

EDTE0013: EMERGING TRENDS IN EDUCATION (3-0-0)

COURSE OUTCOMES

1. Recall contemporary issues, techniques in education. (Remembering)

2. Explain/ identify/ classify the contemporary issues and techniques in education.(Understanding)
3. Use the new techniques of teaching in practice. (Application)
4. Appraise the present educational institutions regarding the challenges and hurdlesfaced. (Evaluation)
5. Formulate actionable strategies to prevailing problems in the educational system.(Creation)

Module I: Recent Pedagogical and Delivery Techniques (10 Lectures)
Distance Education – Purposes, functions, organization and management of Distance Education Programme; e-learning – Nature, Characteristics, Styles, Arrangement for e-learning in an educational institution; Virtual Classrooms – Modus operandi, Advantages and Limitations. Teleconferencing and; Video conferencing – Meaning, types, Educational Advantages.

Module II: Recent Techniques in Education (10 Lectures)
Language laboratory - Need, Types, Functioning, Uses and Applications; Team Teaching-Meaning, Definition, Objectives, Principles, Types, Organization, Procedure and steps, Advantages and Limitations; Co-operative learning and collaborative learning-Key elements-Implementing the elements.

Module III: Autonomy, Accountability and Accreditation (8 Lectures)
Autonomy-Meaning, Need; Academic, Administrative and Financial Autonomy, Objectives, Salient Features, Advantages of Autonomous colleges; Accountability and Accreditation; Accreditation process, Assessment and Accreditation –NAAC, NBA-ISO, Accreditation and Certification.

Module IV: Challenges in School Education (10 Lectures)
Current student related Challenges: Parental Involvement, Drugs and Violence, School safety. Current Teacher related challenges: Diverse learning needs, Quality and expectations, Pupil- Teacher ratio. Teacher mentee /mentor programs. Current School related challenges- Technology issues, Bullying, harassment and ragging.

Module V: Learning Environment in Educational Institutions (7 Lectures)
The concept of Institutional environment, The classroom learning environment- Disciplinary problems, The effects of the Institutional environment on Academic performance, Punishment and its effects. Creating Trustworthy school environments; Guidance and Counselling.

EDDE0014: HISTORY AND DEVELOPMENT OF EDUCATION IN INDIA (3-0-0)

COURSE OUTCOMES

1. Recall the characteristic features of education in ancient India, Pre- Independent India and post- Independent India. (Remembering)
2. Explain, compare and draw generalizations about the various educational commissionsand policies. (Understanding)
3. Justify the relevance of different educational features from ancient to post-independent India in present day educational system. (Application)
4. Critically analyze the various policies and commissions in terms of their relevance andimplementation. (Analysis)
5. Trace the contribution of each period to the shaping of the present education system.(Evaluation)
6. Construct ways and means of improving the quality and quantity of Indian educationsystem. (Creation)

Module I: Ancient Indian Education (8 Lectures)

Fundamentals of Ancient Indian Education, Salient features, purpose of studying Vedas, Relevance of Ancient Indian education in the 21st Century. Chief Characteristics of Vedic Educational System; Education in post Vedic (Buddhist) period – features; Female education; Swadhyaya (Self-Education, State patronage and Growth of education, Primary Education (Maktabs), Higher Education (Madrasas), Female Education, Student and Teacher relationship

Module II: Education during Pre Independent India (13 Lectures)

Anglicization of Education 1836-1855- Exponents of Oriental Education, The Anglicists, Macaulay's Minutes and its effect, Wood's Despatch – 1854, India Education Commission regarding Primary, Secondary and University Education, The University Commission (1902), The Hartog Committee (1928-29), The Filtration Theory of Education. Important Development in Education during 1921-1931- Inter University Board, Establishment of new Universities, Teachers Training, Technical Education

Module III: Education during Post Independent India (14 Lectures)

Various Commission and policies in Education - Secondary Education Commission 1953, Education Commission 1964-66, National Policy on Education 1986, Ramamurthy Review Committee 1990, National Commission on Teacher 1983-85, Problems of Indian Education- Wastage and Stagnation, Examination Reform, Inclusive Education and Education of the Marginalized.

Module IV: Current Government Policies (10 Lectures)

DPEP, National policy on ICT, Panchayat Raj Act, Rashtriya Madhyamik Shiksha Abhiyan, Rashtriya Uchchatar Shiksha Abhiyan ,SSA, RTE, NAEP, National Knowledge Commission, NAS, SPQEM, NEP-2020.

EDET0015: EDUCATIONAL TECHNOLOGY (3-0-0)

COURSE OUTCOMES

1. State the nature, scope and approaches of Educational Technology. (Remembering)
2. Describe the teaching models and explain the concept of instructional design. (Understanding)
3. Analyze the different instructional approaches in the process of teaching and learning.(Analysis)
4. Discuss the nature of the process of communication and the application of ICT in the teaching learning process. (Application)
5. Identify the various software and hardware and state its use both in face to face and virtual classroom platforms. (Application)

Module I: Educational and Behavioural Technology (13 Lectures)

Meaning, nature and scope; Historical perspective of Educational Technology; Approaches- Software, hardware and system; Utility and problems of Educational technology in Formal and non-formal education; Behavioural Technology: teacher behaviour and teaching behaviour, teaching skills, Micro Teaching; SSST and FIACS.

Module II: Designing Instructional System (12 Lectures)

Teaching learning process, variables, levels, functions, taxonomies of instructional objective, instructional strategies, PI, PSI, MI, CAI, BMLS.

Module III: Process of Communication and ICT (10 Lectures)

Concept and process of communication, Barriers to communication, Principles of communication,Mass Media and multimedia; Concept and need of ICT.

Module IV: Emerging trends in Educational Technology (10 Lectures)

Distance Education; Open learning system; New technologies- Videotapes, Radio, Teleconferencing, CCTV, INSAT, EDUSAT, Internet, Broadband; Resource centres for Educational Technology: CIET, UGC, IGNOU, NIOS; 3D printing, mobile learning, Gamification, Flipped, blended learning /classrooms, Cloud computing, Massive open online course (MOOCs), Flash notes, Virtual Reality, Wearables, etc.

SPECIALISATION: EDUCATIONAL LEADERSHIP

EDEL0019: DEVELOPING EDUCATIONAL LEADERSHIP (3-0-0)

COURSE OUTCOMES

1. Explain the importance of education and describe the educational system andinstitutions (Understanding)
2. Appraise the nature of collaboration and role played by stakeholders in the field ofeducation. (Evaluation)
3. Critically analyze the curriculum content and pedagogy existing in schools. (Analysis)
4. Illustrate the role of leadership in the process of inclusion. (Application)
5. Describe the various features of good leadership in the field of education.(Remembering)

Module I: Education system and Institutions (15 Lectures)

a. Education as an ideal (What is education?; Aims of education); Education as a system; School as a social institution.
b. Decentralisation of Education: Education- a concurrent subject in the Constitution; Structure of the educational system in India; Study of the structure at the state level; Linkages within the system.
c. Roles and responsibilities of the personnel involved: Teacher as an academic leader, Head teacher as a school leader, CRC, BEO, DEO, DIET Principal, SCERT Director, NCERT Director, Panchayati Raj Institutions.
d. Reflecting on one's own experiences of schooling to understand school as a social institution, nature of relationships among the various stakeholders in the school and overarching values as stated by the school

Module II: Stakeholder Collaboration (10 Lectures)

a. Parent, learners, community, teachers as stakeholders: their expectations and roles. Ensuring their participation.
b. Analysis of research on impact of stakeholder participation, challenges and principles for successful collaboration.

Module III: Leadership for Inclusion (10 Lectures)

a. School Culture: Meaning and components; Hidden curriculum.
b. Zones of exclusion. Analysing curriculum-content and pedagogy to critically examine school processes; Identifying school processes that cause exclusion.
c. Synthesizing principles of inclusive institutional culture.

Module IV: Constructing 'Educational Leadership' (15 Lectures)

a. Leadership for quality education, equity and inclusion, continuous professional development of teachers, creation of learning communities, ensuring autonomy of learners, teachers and other staff, contextualisation of the curriculum.
b. Crafting vision and mission for an educational institution. Critical review of the vision based on the parameters of educational aims, ideals of administration and values of democratic society. Assess an educational issue to arrive at strategic principles, action plans, resource management to address the issue.

SPECIALISATION: EDUCATIONAL PSYCHOLOGY

EDDL0020: HUMAN DEVELOPMENT AND LEARNING (3-0-0)

COURSE OUTCOMES

1. Explain the nature of child and childhood education. (Understanding)
2. Characterize the nature of human growth, maturation and development. (Application)
3. Appraise the nature and theories of development. (Evaluation)
4. Describe an understanding about adjustment mechanism in social context.(Remembering)
5. Classify the differently abled persons and discuss their educational implications.(Analysis)

Module I: Understanding Child and Childhood (10 Lectures)

Importance of understanding child and childhood; capabilities of children belonging to different socio-economic and cultural backgrounds; idea of multiple childhood; nature-nurture debate; language development; learning and acquisition; promoting autonomy in children.

Development of case studies of children belonging to different backgrounds

Module II: Development and Learning (13 Lectures)

Stages of development; growth and maturation; Adolescence: why it is a sensitive period, the importance of recognizing issues related to adolescence; Erikson's stages of psycho-social development; Vygotsky's theory on social constructivism; Piaget's Theory of Cognitive development. Piaget and Vygotsky debate

Developing a personal narrative of experiences of adolescence

Module III: Enabling learning and Understanding learning of differently abled persons (12 Lectures)

Bronfenbrenner's ecological systems; theory of development; social context of learning; enabling school environment; promoting independence of thought and action; parenting at different stages of development; Understanding differently abled persons and their educational implications: ADHD, autism, dyslexia. juvenile delinquency.

Module IV: Psychology of Adjustment and Adjustment Mechanisms (10 Lectures)

Adjustment as a process; a theory of cognitive adaptation. frustration and conflict; causes of maladjustment; contribution of Freud, Adler, Jung and Neo-Freudians to understand maladjustment, adjustment mechanisms. conflicts and defence mechanisms, mental hygiene.

EDTP0022: PRINCIPLES & TECHNIQUES OF TEACHING AND PEDAGOGY (3-0-0)

COURSE OUTCOMES

1. Explain the nature of teaching. (Understanding)
2. Mention the theories of teaching and different models of teaching. (Analysis)
3. Distinguish the different methods of teaching. (Application)
4. Narrate the concept of pedagogy in the process of teaching and learning. (Evaluation)
5. Communicate the various Recent Developments in Pedagogy. (Application)
6. Describe the aspects of teaching in connection to various skills. (Analysis)

Module I: Concept and aspects of teaching (10 Lectures)

Teaching: Concept, nature and scope; Teaching competency: Understanding the child, understanding the subject, contextualization, punctuality, regularity, integrity, humility, accountability, humanism, empathy, enthusiasm; Skills of teaching: Explaining, questioning, stimulus variation, reinforcement, achieving closure, etc.; Integration of different teaching skills and Strategies of teaching: Autocratic, Permissive, Democratic. Study the biographies of famous teachers and develop teacher profiles within historical and contemporary perspectives.

Module II: Theories and models of teaching (10 Lectures)

Principles and maxims of teaching; Theories of teaching: behaviourism, cognitivism, constructivism, co-operative approach; Models of teaching: information processing models, social models, behavioural models and personal models Demonstration on models of teaching by students.

Module III: Teaching Methods (15 Lectures)

Teacher-centred methods: lecture, demonstration, team-teaching, mastery learning strategy; Learner-centred methods: programmed learning, personalized system of instruction, problem solving method; Activity-centred methods: seminar,

workshops, peer-tutoring, group discussion, projects, heuristic method, panel discussion, brainstorming, symposium and role-play; Teaching aids: significance, types and uses Classroom teaching practice.

Module IV: Recent developments in Pedagogy (10 Lectures)
Pedagogy: concept and significance; History of pedagogy: Indian, Greek and Roman history of pedagogy; Innovative pedagogy: crossover learning, learning through argumentation, incidental learning, learning by doing, embodied learning; Pedagogical approaches for diversity in societyand its interface with the classroom.
Analysis of teaching in a real classroom situation

EDTE0023: TEACHER EDUCATION (3-0-0)

COURSE OUTCOMES
1. Describe the concept of teacher education. (Understanding)
2. Explain teaching as a profession. (Application)
3. Identify the structure of teacher education programmes. (Application)
4. Illustrate the recent trends of teacher education. (Remembering)
5. Prepare the course structure of Teacher Education with integrated Teacher EducationProgrammes. (Analysis)
6. Distinguish the various aspects of teaching as a profession. (Evaluation)

Module I: Concept and Fundamentals of Teacher Education (13 Lectures)
Meaning, nature and scope of teacher education; Aims and objectives of teacher education; Historical perspectives of teacher education - Kothari Commission, National Commission on Teachers (1983-85), NPE (1986), Revised POA (1992); Recent developments in teacher education - NCF 2005, NKC 2007 & NCFTE 2009. History and status of Teacher Education in North East India. Problems and issues of Teacher Education in N.E. India. Comparative analysis of Teacher education in the past and present.

Module II: Teaching as a Profession (12 Lectures)
Approaches to teacher education: Behaviouristic and constructivist approaches; Modification of teaching behaviour: Simulated teaching, Flanders' Interaction Analysis; Performance appraisal of teacher; Teacher effectiveness; Code of conduct and ethics in teacher education.
Classroom observation and analysis using Flanders' Interaction Analysis.

Module III: Structure of Teacher Education Programmes (10 Lectures)
Role of professional organizations and bodies of Teacher Education; Pre-service and In- service teacher education; Teacher education by open and distance learning; Role of different agencies in quality assurance – MHRD, UGC, NCERT, NCTE, SCERT, NAAC, RIE, SIE, IASE, UGC-HRDC
Analysis of a distance learning teacher education programme

Module IV: Recent trends in Teacher Education (10 Lectures)
Internship, Practice teaching for developing an effective teacher, Integrated Teacher education programme; Action research; ICT in teacher education; preparing teachers for inclusive classrooms; Issues and challenges in teacher education. Analyse the

course structure of an integrated teacher education programme.

EDME0024: MEASUREMENT AND EVALUATION IN EDUCATION (3-0-0)

COURSE OUTCOMES

1. Describe the conceptual framework of educational measurement andevaluation.(Applying)
2. Mention different dimensions of educational measurement and evaluation.(Remembering)
3. Explain the concepts of reliability and validity of test scores. (Remembering)
4. Identify the tools and techniques to be used in the process of educational measurementand evaluation (Analyzing)
5. Apply the process of construction and standardization of tools. (Applying)
6. Find out reliability and validity of a tool. (Applying)

Module I: Educational Measurement (7 Lectures)

Overview of measurement and assessment; Types of measurement - psychological and physical; Functions of measurement - Prognosis, Diagnosis, Research; Scales of measurement, Properties and Types - Nominal, Ordinal, Equal interval, Ratio; General problems of measurement; High stakes' testing, Performance and portfolio assessment.

Critical evaluation of the current trends in educational measurement

Module II: Dimensions of Educational measurement and Evaluation (10 Lectures)

Diagnostic, Aptitude, Achievement, Intelligence; Mode of assessment - formal, informal, formative, summative, continuous, terminal, process, product, internal and external; Process of assessment - Teacher-made test, standardized test, Norm reference test and criterion reference test.

Review of Stanford-Binet Test and General Aptitude Test Battery (GATB)

Module III: Reliability and Validity of a Test (8 Lectures)

a. Overview of reliability - Methods of estimating reliability with computation - test retests method, Equivalent forms method, Split half method, Kuder-Richardson method; Inter-rater consistency; Interpreting reliability coefficient; factors influencing reliability measures.
b. Nature of validity, major considerations in validation – content consideration, construct consideration, test-criterion relationship, consideration of consequences; Methods of estimating validity; factors influencing validity; Relationship between reliability and validity.

Practice session on estimating reliability and validity.

Module IV: Tools and techniques for educational measurement (10 Lectures)
Overview of constructing various types of objective tests; Guidelines for writing objective test items; Essay questions: forms, uses, guidelines for constructing, scoring criteria. Interpretive exercises: nature, forms, and uses of the interpretive exercises, Advantages and limitations.
Administration of a group test of intelligence using a standardized tool.

Module V: Standardization of a test (10 Lectures)
Planning the test: Determining the objective and test specification, preparing the preliminary format- writing, arrangement, review and editing of test items; tryout of the test - administration, scoring and item analysis; preparing the final form of the test - selection of items, fixing the time limit, direction to the examinee, preparation of scoring key; administration of the final form of the test- determining validity, reliability, norms, standard scores; manual of the test, interpretation of test results, characteristics and uses of standardized test.
Students will prepare, administer and standardize a test, following the set procedures of standardization of a test.

SPECIALISATION: EDUCATIONAL LEADERSHIP

EDFM0026: FINANCIAL MANAGEMENT AND ACCOUNTING (3-0-0)

COURSE OUTCOMES
1. Describe accounts and finance in relation to education. (Application)
2. Illustrate the various processes of taxation regulations related to education. (Evaluation)CO3Work out the double entry accounting. (Analysis)
3. Illustrate the process of budgetary control and Auditing. (Application)
4. Identify the Process of Deduction of Tax and computation of Tax at source.(Remembering)
5. Explain the importance and working of Balance Sheet in accounting. (Evaluation)

Module I: Introduction (8 Lectures)
Evaluation of Financial Accounting; Difference between Accounting and Bookkeeping; Accounting Concepts; Principles, Bases and Policies.

Module II: Journal (8 Lectures)
Double Entry Accounting; Journal; Posting; Ledger.

Module III: Balance Sheet (8 Lectures)
Trial Balance; Final Account – Trading Account, Profit And Loss Account, Receipt And Payment Account; Income Expenditure Accounts; Balance Sheets.

Module IV: Financial Management (10 Lectures)
Decision Making; Meaning and Scope; Cost Analysis; Budgetary Control; Standard Costing; Financial Analysis; Relevant Cost; Management Accounting Framework; Function of Management Accounting; Internal Audit; School Accounting and Auditing; Investment.

Module V: Taxation Management (11 Lectures)
Basic Concepts; Deduction from Gross Total Salaries; Income From House, Property; Profits and Gains of Business and Profession; Capital Gains; Income from other Sources; Set off and Carry Forward of Losses; Assessment of Individuals and Computation of Tax at Source, Assessment of Companies and Fringe Benefit and Service Tax. VAT/ GST.

EDLE0027: LIFE SPAN DEVELOPMENT AND EDUCATION (3-0-0)

COURSE OUTCOMES
1. Recognize the meaning, concept, process, nature, and scope of life, development, lifespan development, and emotions of an individual. (Remembering)
2. Understand the biological bases and anatomical structures controlling human development along with understanding emotional development and its associatedcomponents. (Understanding)
3. Analyze theories of development M1 and issues of human development at variousstages. (Analysis)
4. Apply the principles and knowledge of the theories of development and human anatomy in educating children as well as mitigating bio-psycho-socio-emotional issues.(Application)
5. Evaluate the influence of socialization on the development process of an individual.(Evaluation)
6. Creating models to bring about a balanced emotional development of students.(Creation)

Module I: Introduction to LifeSpan Development (8 Lectures)
Life Span Perspective: Importance of studying Life-Span Development, Characteristics of life-span development, Nature of Development, Scope of Lifespan development. Theories of Development (Brief discussion of all theories), Influence of Socialization and Development.
Analyze the role of education in socialization and development of the child.

Module II: Biological Bases of Human Development and Anatomy of the Nervous system (14 Lectures)
The Evolutionary perspective and Heredity-Environment Correlations, genetic foundation, Conception, effect of Teratogens on Prenatal Development, Neonatal health - Low birth weight, Neonatal Assessment; Neuron: Structure, types and functions. Structure of the nervous system, physiological basis of the action potential (neural response); Structure and function of the brain: fore brain, midbrain, hindbrain, cerebral cortex, temporal, parietal and occipital lobes; prefrontal cortex; The effect of hormones on the nervous system
Debate on heredity and environment: essential factors affecting human development.

Module III: Physical development across lifespan (11 Lectures)
Physical growth during childhood, adolescence and old-age brain development across lifespan, Bio- Psycho- Social health model, aging, biological theories of aging and death.
Discussion on educational implications of stages of physical development.

Module IV: Emotional and Moral Development (12 Lectures)
Development of Emotion, Temperament, Attachment, Love, intimacy, sexuality, self-identity, gender identity and personality across the life span.
Theories of moral development. Changes in moral reasoning (Kohlberg ’s Theory). Development of

values, Religion, Spirituality and Meaning in Life, Fowler 's Theory
'Emotions are springs of human actions'- A group discussion on teachers' role in bringing about balanced emotional development of students.

EDLI0028: LEARNING AND INDIVIDUAL DIFFERENCES (3-0-0)

COURSE OUTCOMES

1. Recognize the concept, nature, process, laws, types, and methods of learning.(remembering)
2. Understand the relationship of learning with interest, motivation, maturation, andindividual difference. (Understanding)
3. Analyse various factors influencing learning. (Analysis)
4. Apply the laws and theories of learning, use components of learning to solve problems, and utilize the knowledge of individual differences to facilitate adequate provisions. (Application)
5. Evaluate the educational implications of learning and effectiveness of learning styles.(Evaluation)
6. Create a conducive environment of learning. (Creation)

Module I: Understanding Learning (10 Lectures)

Learning: Concept and Scope; Nature of learning: learning as a process and learning as an outcome; Laws of learning; Types of learning: factual, associations, conceptual, procedural, generalizations, principles and rules; Methods of effective learning; Learning curves - Types, features and its educational implications; Plateaus in Learning; Learning styles.
Students analyze their own learning styles.

Module II: Factors Influencing Learning (12 Lectures)

Factors influencing learning - Intellectual, Emotional, Physical and Social; Concept and nature of attention, determinants of attention, relationship with interest; Concept, nature and types of motivation – intrinsic, extrinsic and achievement; Learning and maturation; Learning to think, reason and solve problems
Discuss the role of a teacher in addressing various factors influencing learning.

Module III: Transfer of learning (10 Lectures)

Transfer of learning - Concept, Importance, Nature; Types of transfer of learning; Theories of transfer of learning - Theory of mental discipline, Theory of identical elements, Theory of generalization and theory of ideals; Methods of enhancing transfer of learning.
Developing a narrative of personal experiences on the basis of transfer of learning in various situations.

Module IV: Individual Difference (13 Lectures)

Concept of individual difference; Dimensions of individual difference; Determinants: Role of heredity and environment, their inter-relationship; Types/varieties of individual differences - Physical, mental, motor, emotional, interest and aptitude, attitudes, social and moral development. Individual difference and education; Influence of individual differences on learning

outcomes; Provisions for individual differences in educational institutions; Implications of individual differences for organizing educational programmes Sharing session on the problems and issues related to individual differences as faced by the students.

EDOC0029: ORGANISATIONAL COMMUNICATION (4-0-0)

COURSE OUTCOMES

1. Understand the concept, scope, importance, process, types, advantages, and barriers of communication in an organization. (Understanding)
2. Apply skills of presentation utilizing visual aids, implement decision making techniques for effective communication. (Application)
3. Analyse the communicative dimensions of team work and violation of professionalboundaries. (Analysis)
4. Create and draft business letters and design and develop conflict managementstrategies. (Creation)
5. Understand the concept, need, significance, and execution of administrative feedback in organizational communication. (Understanding)
6. Evaluate the modes of effective communication and feedback models in anorganization. (Evaluation)

Module I: Conceptual Framework of Communication (10 lectures)

Concept and functions of Communication; Communication and four senses; Communication process, communication model and its elements; scope of communication

Module II: Organisational Communication (12 lectures)

Relationship between Organisation and Communication; common modes of communication in an organisation: writing, conversation, reading, media, charts, proceedings, T.V. telephone, e-mail and other modes of communication; Formal and informal communication; practical approaches in understanding administrative communication: cross communication, downward communication, upward communication

Module III: Communication Techniques (13 lectures)

Presentation skills, effective use of voice in presentation: articulation, tone, pitch; making effective presentations; use of visual aids in presentation; communication in teams: project teams, quality improvement teams, virtual teams; communicative dimension of team work- roles, norms, decision- making processes and management of conflict.

Module IV: Feedback and professional boundaries (10 lectures)

Feedback, Administrative feedback, models of feedback, assessing the listening skills; maintaining Professional Communication-

professional boundaries, violation and maintaining of boundaries

Suggested Readings

SPECIALIZATION: EDUCATIONAL LEADERSHIP

EDEA0030: EDUCATIONAL ADMINISTRATION (3-0-0)

COURSE OUTCOMES

1. Recognize the nature, scope, objectives, significance, and elements of educationaladministration. (Remembering)
2. Understand the characteristics of successful and democratic administration along with understanding the concept of school, school management, supervision and its features, evaluation and its principles, and role of headmaster and teachers in school management. (Understanding)
3. Apply democratic educational administration in practical situations and the principles ofevaluation in supervisory works. (Application)
4. Analyse the duties of educational administrators/school managers including headmasterand teachers. (Analysis)
5. Evaluate democratic administration, functional basis of supervision, and roles ofeducational administrators. (Evaluation)
6. Utilize creative ways towards infrastructural resource management and supervisory programmes. (Creation)

Module I: Conceptual Framework of Educational Administration (12 Lectures)

Nature and scope of educational administration; Objectives of educational administration; Elements of educational administration; Characteristics of successful administration; Democratic administration.

Module II: School Management (10 Lectures)

Concept of School; Need of school; School management; Headmaster/Principal as the school manager and her/his qualities; Role of teachers and community in school management; Infrastructural resource management.

Module III: Concept of Supervision (12 Lectures)

Meaning of supervision; Difference between supervision and administration; Effective supervision; Functional basis of supervision; Supervision as leadership.Module IV: Evaluation and Supervision (11 Lectures)
Concept of evaluation; Principles of evaluation; Evaluation of supervisory programme; Evaluation of Educational administrative programme; Evaluation as a continuous programme for qualityimprovement.

EDSR0031: ETHICS AND SOCIAL RESPONSIBILITY IN EDUCATION (3-0-0)

COURSE OUTCOMES

1. Recognize the meaning, need, and components of ethics and value, identify the significance of values and morals along with types of ego, and meaning, need, role, andtypes of social responsibility. (Remembering)
2. Understand the theoretical perspectives of ethics and social responsibility, relationshipof educational ethics with gender and leadership, and significance of teaching profession. (Understanding)
3. Evaluate the strategies of social responsibility and role of ethics in a workplace.(Evaluation)
4. Apply the criteria of profession and UGC's code of conduct for teachers. (Application)
5. Analyze the influence of globalization on ethics and developmental activities andimportance of code of conduct. (Analysis)
6. Mitigate the problems encountered in the process of delivering social responsibility.(Creation)

Module I: Educational Ethics (9 Lectures)

Concept of Ethics and educational ethics; Need of ethics in educational settings; Components of ethics; types of values, morals.

Module II: Theoretical Perspectives of ethics (12 Lectures)

Ethical theories: Utilitarianism, Kantian ethics, Natural rights theories; religious ethics; virtue ethics; Kantian vs utilitarian; gender and ethics; ethics and leadership. Concept of ego: psychological, ethical, rational. Moral philosophy.

Module III: Ethics and Social Responsibilities (12 Lectures)

Concept of social responsibility; Need of social responsibility; Types of social responsibility; Social responsibility of educators; Strategies of social responsibility.

Module IV: Professional Development (12 Lectures)

Concept of profession; Criteria for a profession; Teaching as a profession; Workplace and code of conduct, Technology and globalization in relation to professional ethics and developmental activities.

SPECIALIZATION: EDUCATIONAL PSYCHOLOGY

EDSP0032: COUNSELLING SKILLS FOR EDUCATIONAL PSYCHOLOGISTS (3-0-0)

COURSE OUTCOMES

1. State the meaning, nature, objectives, scope, process, types, and approaches ofcounseling. (Remembering)
2. Explain various theories of counseling and understand the concept, need, and skills of educational psychologists. (Understanding)
3. Apply the theories and tools and techniques of counseling. (Application)
4. Assess the skills of counseling and role of teacher as a counselor. (Evaluation)
5. Analyze the theories of counseling and various types of guidance. (Analysis)
6. Create the tools and techniques to be used for student counseling and improvise teachers' role in counseling process. (Creation)

Module I: Introduction to Counselling (12 Lectures)

Meaning, nature, objectives and scope of counselling; counselling as a process: factors affecting counselling process, stages of counselling process; types: individual and group; approaches of counselling: Directive, Non-directive and Eclectic Counselling.

Module II: Theories of Counselling (12 Lectures)

Gestalt Counselling; Psychoanalytic Counselling; Cognitive Psychologists; Personality -Cattle's Truth Theory; Behavioral Counselling.

Module III: Introduction to Educational Psychologists (11 Lectures)

Concept of Educational psychologists; need of educational psychologists; educational psychology as a career; key skills for educational psychologists; concept of guidance, need and types of guidance; guidance and counselling services; tools and techniques to be used for student counselling process.

Module IV: Teacher as a Guide and Counsellor (10 Lectures)

Role of teacher as an educational psychologist; guidance worker and counsellor; Counselling skills: Building trust, Listening, Attending, Building rapport, Demonstrating Empathy, Observing; Difference between counsellors, educational psychologists, clinical psychologists.

EDCA0033: CHILD AND ADOLESCENT MENTAL HEALTH (3-0-0)

COURSE OUTCOMES

1. Recognize the historical background of mental health, objectives, scope, and need of mental health, factors affecting mental health of children and adolescents, and the characteristics of a mentally healthy person. (Remembering)
2. Explain the factors affecting mental health in childhood, the features of adolescents,and the role of parents and teachers in these regards. (Understanding)
3. Apply solutions to various problems pertaining to mental health of child andadolescents. (Application)
4. Evaluate problem behaviours among children and adolescents. (Evaluation)
5. Analyze the status of mental health of school going children and adolescents and thebest practices in mental health care. (Analysis)
6. Create awareness among the students about mental health of children and adolescentsand develop preventive measures for mental health by designing a mental health system. (Creation)

Module I: Introduction to Mental Health (11 Lectures)
Concept of mental health: Historical background of mental health, objectives, scope, and need of mental health, factors affecting mental health; characteristics of a mentally healthy person; Mental health promotion, preventive intervention & treatment.

Module II: Mental Health as a Primary Health Concern among children (12 Lectures)
Childhood as critical stage of development: Child mental health as a primary health concern, factors affecting child mental health; Children with problem behaviours and developmental difficulties- language difficulties, Autism, Need for a comprehensive mental health system; Integrated approaches to early childhood mental health; Government policies and programs addressing childhood well- being.

Module III: Mental Health as a Concern among Adolescents (12 Lectures)
Concept of adolescents and adolescence, Adolescence as a period and its characteristics, Adolescence as period of stress and storm; Indicators of mental health development among adolescents, Introduction to problem behaviours among adolescents - delinquency, anxiety, conflict, stress, depression, drug abuse, substance abuse, alcoholism, adjustment mechanisms.

Module IV: Education and Mental Health (10 Lectures)
Mental health services in schools; child guidance clinic; Role of parents and teachers in fostering mental health among children and adolescents; promoting psychological well-being among children and adolescents; guidance and counseling.

EDRM0034: RESEARCH METHODOLOGY IN EDUCATION (4-0-0)

COURSE OUTCOMES
1. Describe the conceptual framework of Research process. (Understanding)
2. Explain the methods and designs in Educational Research. (Analysis)
3. Apply and interpret the tools and techniques of research. (Application)
4. Examine the organization and analysis of data. (Remembering)
5. Analyze the application of statistics in Educational research. (Application)
6. Design and develop the synopsis and thesis writing. (Creation)

Module I: Introduction to Research in Education (13 Lectures)
Meaning and nature of research; Methods of Acquiring knowledge; Types of Research: Fundamental, applied, action research;

Quantitative, Qualitative research; Principles and scope of Research in education; Scientific method and process of research; Preparation of synopsis for any research work in education; Ethics of Research.

Module II: Methods and Designs in Educational Research (14 Lectures)
General steps of research; review of related literature; Concept of Research Design and Types of designs; Methods of Educational Research: Historical, Survey, experimental, case study; Concept of hypotheses, Types and Testing hypotheses, Levels of significance, Fiduciary limits, Type I and Type II Errors.

Module III: Sampling and Tools of Research in Education (16 Lectures)
Concepts of Population and sample; Probability and Non-Probability sampling; Sample size and features of a good sample, Sampling Error; Tools of Research: Achievement Test, Intelligence Test, Observation, Interviews, Questionnaires, Attitude scale; Process of Development of tools; Nature of data and sources of data.

Module IV: Statistics in Educational Research (17 Lectures)
Concept, significance and functions of statistics; Measures of Central Tendency and measures of Variability; Coefficient of correlation: Product moment and rank difference method, Applications of z-test, t-test and f-test, Chi-square, median test, sign test, Report writing.

EDFE0035: PHILOSOPHICAL FOUNDATIONS OF EDUCATION (4-0-0)

COURSE OUTCOMES
CO 1: To inculcate awareness about the nature of philosophy and educational philosophy amomg the students
CO 2: To make the students well aware of the Indian philosophical thoughts in education
CO 3: To make the students well aware of the Western philosophical thoughts in education
CO 4: To make the students learn and understand the contribution of Indian and Western Thinkers in the field of education

Module I: Introduction to Philosophy and Educational Philosophy (15 lectures)
Philosophy: Definition, Concept, Branches of philosophy and its educational implications, Functions of philosophy, Knowledge: Concept, nature, types, theories; Education: Narrow and Wider Meaning, nature, Goals of Education in the 21st century, Relationship between philosophy and Education, Functions of Educational Philosophy.
National values as enshrined in the Indian constitution- socialism, secularism, justice, liberty, democracy, equality, freedom with special reference to education.

Module II: Indian Schools of Thought (15 lectures)
Astika and Nastika; Sankhya, Yoga, Vedanta, Buddhism, Jainism, with special reference to vidya; Dayanand Darshan.
Islamic traditions: its educational aims and methods of acquiring valid knowledge.

Module III: Western Philosophical Thought (15 Lectures)

Some major schools; Naturalism, Idealism, Rationalism, Pragmatism, Realism, Existentialism, Marxism and - Their educational implications with special reference to epistemology, axiology and the process of education.

Module IV: Contribution of Thinkers to the development of Educational thought for Social Change (15 Lectures)
Indian: Vivekananda, Tagore, Gandhi, Aurobindo, J. Krishnamurty, and Savitribai Phule
Western: Paulo Freire, Nel Noddings and Wollstonecraft
Social Philosophy of Education – Freedom, Equality, Democracy and Education.

EDEP0036: FUNDAMENTALS OF EDUCATIONAL PSYCHOLOGY (4-0-0)

COURSE OUTCOMES

CO 1: To make the students aware of the nature of educational psychology
CO 2: To learn about the nature of human development and personality as an important segment of any individual
CO 3: To create understanding about the conceptual framework of learning and intelligence
CO 4: To create awareness among the students about concepts of thinking process and creativity of individuals

Module I: Introduction to Educational Psychology (10 Hours)
Educational Psychology: concept, nature, concerns and scope, methods, and functions of educational psychology

Module II: Human Development and Personality (15 Hours)
Human growth and development: Concept, principle, factors influencing development and their relative role; Theories of growth and development; Piaget, Bruner, Erickson and Kohlberg – their educational implications.
Personality: Concept, Nature, Determinants, Theories: Freud, Carl Rogers, Gordon Allport, Max Wertheimer and Kurt Koffka; Assessment-Projective techniques

Module III: Learning and Intelligence (20 Hours)
Learning: Concept, Theories of Learning: trial and error, classical conditioning, operant conditioning Gagne's theory of learning, Carl Roger's theory of learning and field theory of learning; cognitive view point and information processing; Educational implications of the view points on learning;
Intelligence: Concept, Nature, Intelligence Quotient; Theories: Unitary theory, Two factor theory, SOI Model, Gardner's theory of multiple intelligence, Sternberg's Information Processing theory of intelligence; Assessment of Intelligence; Concept of Social Intelligence , Emotional Intelligence- Concept, Characteristics of an Emotionally intelligent person, Importance of Emotional Intelligence, Emotional Quotient.

Module IV: Problem solving, Thinking, Metacognition and Creativity (15 Hours)
Problem Solving: Meaning and Definition, Steps in Problem Solving, Factors affecting Problem Solving, and Strategies for Problem Solving.

Thinking: Definition and concept, nature, Theories, Tools, Types, Training for Development of thinking.
Metacognition: Concept, Strategies to develop students' Metacognition in the classroom
Creativity: Concept, Nature, Theories, The creative process, Assessment of creativity, Strategies to foster and develop creativity.

EDPC0037: PEACE EDUCATION AND CONFLICT MANAGEMENT (3-0-0)

COURSE OUTCOMES

1. Describe the importance and relevance of peace education (Application)
2. Explain the concept of peace as held by different thinkers and other religious beliefs. (Analysis)
3. Discuss the awareness of the modes and methods for conflict management. (Application)
4. Compare the global issues and peace movements. (Evaluation)
5. Narrate the various methods of conflict Management. (Application)
6. Describe the theories of Peace. (Analysis)

Module I: Understanding peace as a dynamic social reality (16 lectures)

- Basic concepts of Peace and Peace Education; nature, meaning, objectives. Theories of peace – democratic peace and active peace; Role of social organizations: Family, Religion, Mass Media, Community, School
- Some thinkers on harmony: Dalai Lama, Gandhi, Mother Teresa; Concept of peace education; peace teacher, peace method and other enabling practices in an educational setting.

Module II: Conflict management and its methods (7 lectures)

Meaning, types, levels and factors for conflict; methods and modes of conflict resolution - mediation, negotiation, diplomacy, coercive methods; creative peace building, cross cultural methods.

Module III: Global issues and peace movements (7 lectures)

Human rights, population control, non-alignment movement, campaign for nuclear disarmament and role of world organizations in promoting peace.

Module IV: Practicum (30 lecture)

Any two activities to be conducted from the following

1. Field visit to place/organization-government/non-government working towards building peace
2. Exhibition on Peace related themes
3. Strategies to create peace building: Meditation, Yoga, Dramatization, Debate
4. Thematic analysis on documentary based on peace
5. Organise workshop on peace/ awareness programme on social marginalisation.

EDSF0038: SOCIOLOGICAL FOUNDATIONS OF EDUCATION (4-0-0)

COURSE OUTCOMES

CO 1: To make the students aware of the nature of sociology of education and social institutions

CO 2: To understand and summarize the contributions of different theoretical perspectives on better understanding of the society

CO 3: To assess the various aspects of school as a social institution

CO 4: To create awareness about the cross-national perspectives on the sociology of education and modern Indian society

MODULE I: SOCIOLOGY OF EDUCATION (15 lectures)

Concept and nature of sociology of education; Difference between sociology of education and educational sociology; Social institutions and their functions: Social Groups; Social Organization; Social Stratification; Social Change

MODULE II: THEORETICAL PERSPECTIVE OF EDUCATIONAL SOCIOLOGY (15 Lectures)

Theoretical approaches to educational sociology: Standpoint Theory, theory of social learning by Bandura, Conflict Theory, Structural Functionalism, Symbolic Interaction Theory, Theories of Social Movements- Relative Deprivation, Resource

Mobilization, Political Process Theory

MODULE III: SCHOOL AS A SOCIAL INSTITUTION (15 Lectures)
School as a social institution; School as an organization; Social mobility by means of education; Organisational climate types, classroom climate and its impact; Social aspects of education; Role of schools in modern society; Role of modern mass communication media in education

MODULE IV: CROSS-NATIONAL PERSPECTIVES ON THE SOCIOLOGY OF EDUCATION AND MODERN INDIAN SOCIETY (15 Lectures)
Culture - Conceptual understanding of culture, Role of education in cultural context; Education and cultural change; Modern Indian Society: Globalization, Liberalization, Privatization, Modernization, Westernization; Constitutional Provisions; National Integration and International understanding

EDCI0039: CURRICULUM DEVELOPMENT AND INSTRUCTION (3-0-0)

COURSE OUTCOMES
1. Explain the nature of curriculum. (Application)
2. Describe the basis of curriculum development. (Analysis)
3. Distinguish the approaches of curriculum development. (Evaluation)
4. Mention the process of curriculum development. (Application)
5. Frame about the assessment of curriculum. (Remembering)
6. Distinguish the Factors influencing curriculum implementation. (Understanding)

Module I: Understanding curriculum (6 lectures)
Contemporary definition of curriculum; curriculum criteria, curriculum goals and values, basic principles of curriculum and

instruction Brainstorming session on the issues and trends of school/college curriculum

Module II: Philosophical underpinnings of curriculum (15 lectures)
Curriculum types and Models of teaching: Social, Information Processing, Personalist, and Behavioral,
Child-Centered, Society-Centered, Knowledge-Centered, or Eclectic; Goals and Philosophies of Education across changing education paradigms - Idealism, Realism, Perennialism, Essentialism, Experimentalism, Existentialism, Constructivism and Reconstructivism
Analysis of the philosophical underpinnings of the present day curriculum

Module III: Approaches to curriculum development (10 lectures)
Tagore, Gandhi, Krishnamurthy, Plato, Dewey, Montessori, Don Bosco, Freire.
Detailed discussion on the pedagogical approach of one of the above thinkers

Module IV: Curriculum development frameworks in 21st Century (6 lectures)
NCTE Framework for 21st Century Curriculum and Assessment; UNESCO - A Futures Perspective in the Curriculum, Learning Environment, Skills, Assessment, Professional Development; Curriculum and Future - Concepts from Social Sciences
A review of the NCTE framework for 21st century Curriculum and Assessment

Module V: Curriculum development and assessment (8 lectures)
Developing a curriculum document: Approach and organization, stages of curriculum development, guidelines of statutory bodies with regard to curriculum development – UGC, NCTE, NCF; Curriculum integration: disciplines, media and technology; evaluating and assessing a curriculum; Models of curriculum; Curriculum implementation - Factors influencing curriculum implementation

EDJG6002: JOURNALING - A TECHNIQUE FOR PERSONAL AND ACADEMIC GROWTH (1-0-2) – Practicum

COURSE OUTCOMES

1. Recall one's life experiences. (Remembering)
2. Explain clearly and specifically one's life experiences. (Understanding)
3. Develop the skill of writing. (Application)
4. Analyze life experiences at a conscious level and enhance reflective thinking. (Analysis)
5. Synthesize one's thoughts in an organized manner and create a new piece of writing. (Creation)

Journaling is a strategy for making sense of experiences. The objective of journaling is to develop in students a reflection that can be described as an inner dialogue with oneself whereby a person calls forth his or her own experiences, beliefs, and perceptions about an idea; informing and transforming functions of knowledge; and a conscious and systematic mode of thought. This is to nurture in future educational leaders a sense of reflective practice.
Each student is required to maintain a reflective journal, using the Visible Thinking Routine (Harvard), as a critical structure for guiding their journal writing. The students are to submit the journal every Friday. Journaling has to be done six days of the week. At the end of the semester, the student will be awarded a grade/marks after assessing the learning.

EDES6003: EDUCATIONAL SEMINAR I (0-0-2) – Practicum

COURSE OUTCOMES

1. Develop higher cognitive abilities to respond to new knowledge, critical thinking, and keen observation of research conducted. (Understanding & Evaluation)
2. Develop the abilities to seek clarification, defend the ideas of others, and presenteffectively. (Application & Creation)
3. Develop the feeling of tolerance, co-operation, and respect of the ideas and feelings ofothers. (Understanding)
4. Acquire good manners of putting questions and answering the questions of others effectively and develop emotional abilities. (Analysis & Application)

During the course of the programme, students are expected to present a series of seminars which will address fundamental intellectual, conceptual and practical issues in current educational philosophy and application. They may also deal with other relevant topics such as use of ICT in education, design of new and innovative curricula, methodological issues in education, etc. Students will be assisted through guest lectures, discussions, field work in education related institutions and active engagement with faculty members. During these interactions students will be provided with an opportunity to explore how best to bring new interdisciplinary scholarship, technology and critical thinking into the development of the chosen seminar area. They will also consider alternative pedagogic strategies, teaching techniques and technologies. Students will prepare and present a final paper based on these seminars. The course will be evaluated on the basis of the seminars and the final paper.

EDDI6005: DISSERTATION PHASE-I (0-0-2)

COURSE OUTCOMES

1. Develop the skill to prepare the Research Proposal. (Application)
2. Apply the skill in collection of data in the field. (Application)
3. Develop the ability to analyze the data. (Analysis)
4. Ability to write the report in standard academic formats. (Creation)

Every student shall undertake a research project work under the supervision and guidance of a faculty member. The students are expected to complete the literature review and present a research proposal during the first phase. The dates, mode and components of evaluation and the weightages attached to them shall be published by the department at the beginning of the semester.

EDDI6007: DISSERTATION PHASE-II (0-0-4)

COURSE OUTCOMES

1. Develop the skill to prepare the Research Proposal. (Application)
2. Apply the skill in collection of data in the field. (Application)
3. Develop the ability to analyze the data. (Analyzing)
4. Ability to write the report in standard academic formats. (Application)

The students of the final semester will have to compile their research study in the form of a dissertation. Each dissertation has to be systematically structured following proper methodology of educational research. To set the dissertations in a standardized pattern the supervisor should ensure that it follows proper sequence containing following aspects:

Preliminary section

1. Title page
2. Approval sheet
3. Acknowledgments
4. Table of contents
5. List of tables (if any)
6. List of figures (if any)

Main body

1. Introduction
    - Conceptual framework of the theme
    - Some relevant studies
    - Rationale/Justification of the study
    - Statement of the problems
    - Operational terms
    - Statement of the study
    - Objectives of the study
    - Hypotheses
    - Delimitation of the study
2. Review of related literature
3. Method and Procedure of the study
    - Procedures used
    - Methods of gathering data
    - Description of data gathering tools
4. Presentation and Analysis of Data
    - Texts
    - Tables
    - Figures

- Statistical treatment
- Analysis of data gathered and interpretations

5. Conclusion
   - Brief restatement of problems and procedures
   - Major findings and conclusion
   - Educational implications
   - Recommendations for further research

Reference section

1. References (APA sixth edition)
2. Appendix

The supervisor will help students to understand the detailed steps of writing a dissertation. He/ she will ensure that the dissertation is prepared keeping in view Of Intellectual Property Rights, maintenance of research ethics and avoidance of plagiarism. Phase I of the course is carried out in the 3rd semester where the students will work on research proposal, literature review and the first part of the data collection. In the 4th semester they will complete data collection, analysis, and preparation of a research report (Phase II). Students are required to make a presentation of the dissertation submitted to the department on the date set in the academic calendar for the same.

EDIN6008: INTERNSHIP (0-0-3)

COURSE OUTCOMES

1. To acquaint the students with the total environment of the school.(Remembering)
2. To learn about the functioning of the school.(Understanding)
3. To observe the administrative and managerial activities.(Remembering)
4. To observe the morning assembly and teaching work in the classroom for having an ideaof teaching work.(Analysis)
5. To prepare lesson plans and teaching aids for conducting classes.(Application)
6. To observe and participate in the co-curricular activities and extracurricular activities.(Application)
7. To organize the co-curricular and extracurricular activities. (Creation)
8. To understand the behaviour of teachers, students, principal, headmaster and othersupporting staff. (understanding)

Activities to be performed:

I. Organization/ observation of morning assembly.
II. Classes to be taught during the day by preparing lesson plans.
III. Unplanned classes to be taken during the day if some teachers are on leave. Observing the class of an effective/ good teacher.
IV. Participating/ organizing co-curricular activities. Participating/ organizing extracurricular activities. Any other specific events of the day.
V. Undertaking action research or case study.
VI. On the basis of daily reports the students are to prepare the final report on the schoolInternship Programme.

EVALUATION:

	Stock of daily reports and Action research	30
	Preparation of final report	10
	Lesson plans	20
	Teaching aids developed	10
	Presentation of final report and viva voce	30
		100

EDES6009: EDUCATIONAL SEMINAR II (1-0-1) – Practicum

COURSE OUTCOMES

1. Develop higher cognitive abilities to respond to new knowledge, critical thinking, and keen observation of research conducted. (Understanding & Evaluation)
2. Develop the abilities to seek clarification, defend the ideas of others, and presenteffectively. (Application & Creation)
3. Develop the feeling of tolerance, co-operation, and respect of the ideas and feelings ofothers. (Understanding)
4. Acquire good manners of putting questions and answering the questions of others effectively and develop emotional abilities.(Analysis & Application)

Following the previous course of Educational Seminar-I, in the present course of the programme the students are expected to present a series of seminars which will address fundamental intellectual, conceptual and practical issues in current educational philosophy and application. They may also deal with other relevant topics such as use of ICT in education, design of new and innovative curricula, methodological issues in education, etc. Students will be assisted through guest lectures, discussions, field work in education related institutions and active engagement with faculty members. During these interactions students will be provided with an opportunity to explore how best to bring new interdisciplinary scholarship, technology and critical thinking into the development of the chosen seminar area. They will also consider alternative pedagogic strategies, teaching techniques and technologies. Students will prepare and present a final paper based on these seminars. The course will be evaluated on the basis of the seminars and the final paper.

EDTP6010: TEACHING PRACTICE (1-0-1) - Practicum

COURSE OUTCOMES

1. Understand the concept and purpose of teaching practice (Understanding)
2. Develop skill of preparing lesson plan (Creating)
3. Practice various teaching skills in classroom situations (Application)

Module I: Concept of Teaching Practice (10 Lectures)

Introduction to Teaching Practice, Concept of teaching practice Objectives of teaching practice, Concept of Lesson Plan, significance of lesson plan, Approaches for preparing lesson plan, Format of lesson plan, Teaching skills and Micro Teaching

Module II: Preparation of Lesson Plan (20 Lectures)

Preparation of Lesson Plan and Presenting lesson plans, Preparing 10 lesson plans for Secondary / Senior Secondary / UG students Delivering four (4) Lesson Plans in Secondary / Senior Secondary / UG Classes One lesson plan for final practice teaching

Evaluation Scheme:

Internal Assessment	: 40 Marks (Based on Test)
External Assessment	: 60 Marks
Record	: 20 Marks
Final Teaching practice	: 20 Marks
Viva	: 20 Marks

Suggested Readings

EDEP6016: EXPERIMENTS IN EDUCATIONAL PSYCHOLOGY

(2 Credits- 60 hours) (L-T-P:0-0-3)

Course Objective:

To help students gain experiential learning of the practical application of the theoretical concepts of psychology to understand human beings

Course outcomes:

CO1: Understand the concept and importance of experiments in educational psychology (Compression)
CO2: Apply the steps of psychological testing in administering the psychological tool. (Application)
CO3: Documenting the entire procedure and then writing the report. (Skill)
CO4: Use inferences drawn from data to make predictions about individuals and thereby improve the teaching leaning process. (Analysis)

MODULE I: INTRODUCTION TO EXPERIMENTS IN EDUCATIONAL PSYCHOLOGY

- Experimental psychology- concept and importance in the understanding of human behaviour
- Steps to be followed while conducting an psychological experiment/ test
- Writing and reporting

MODULE II:

a. PSYCYCHOLOGICAL EXPERIMENT (WITHOUT APPARATUS): ANY TWO

1. Personality- Rorschach Ink blot test/ Thematic Apperception Test (TAT)
2. Intelligence- Cognitive ability test, Raven's progressive matrices
3. Individual differences- Differential ability test

b. PSYCHOLOGICAL EXPERIMENT (WITH APPARATUS): ANY TWO

1. Learning- Paired associate learning
2. Individual difference- Finger dexterity test
3. Intelligence- Matching familiar figure, Koh's pass along test
4. Creativity- Passi test of creativity

Scheme of Evaluation: (100 Marks)

Psychological Experiment with apparatus:	15 Marks
Psychological Experiment without apparatus:	15 Marks
Practical book:	10 Marks
Practical Examination, Reporting & Viva Voce:	60 Marks
Total	**100 Marks**

SWCA6010: COMPUTER APPLICATION FOR SOCIAL SCIENCES (1-0-1) - Practicum

COURSE OUTCOMES

1. Describe the application of the basics of Word Processing. (Applying)
2. Illustrate the basics of Excel Worksheet. (Applying)
3. Explain the basics of PowerPoint Presentation tools. (Analyzing)
4. Work out data analysis in research using Statistical Analysis Packages. (Applying)
5. Identify and describe the practical aspects of Computer Applications. (Evaluating)

Module I: Basics of Microsoft Office Word Processing (7 lectures)

Word Processing: Meaning, Features, advantages, Structure of a word Processor window, creating document, opening, saving document, Printing, Find and replace, Creating table, Mail Merge-Maindocument data source and merging.

Module II: Basics of Microsoft Office Excel Worksheet (8 lectures)

Worksheet Package: Cells, rows, columns, Range, Structure of a worksheet window, creating, opening and saving, Printing a worksheet document, creating tables, charts, data analysis using formulae in worksheet.

Module II: Basics of Microsoft Office PowerPoint Presentation (5 lectures)

Presentation Package; creating presentations in a presentation package, text tables, charts, Animation, running slide show, saving the slides, Printing the presentations.

Module IV: (Practicum) Using Statistical Packages for Data Analysis (10 lectures)

Qualitative Data Analysis, Quantitative Data Analysis. Statistical Packages for Data Analysis: Statistical Package for Social Sciences (SPSS), Analysis of moment structures (AMOS)

Suggested Readings

EDSL0200: SERVICE LEARNING (A COMMUNITY-UNIVERSITY ENGAGEMENT PROGRAMME) (1-0-1)

COURSE OUTCOMES

1. Learn the concept of service learning and community engagement. (Remembering)
2. Understand the importance of service learning and community engagement fordeveloping the skills of addressing real life issues in one's own community. (Understanding)
3. Develop the ethics of civic participation. (Applying)
4. Develop an understanding of the importance of communication skills in interacting with community members. (Understanding)
5. Be exposed to and empathize with people who are less fortunate than they are, economically, socially, academically, medically etc. (Applying)
6. Organize awareness programmes, rallies, campaigns, social service etc. (Analysing)

7. Develop the skills of problem solving and reflective thinking. (Analysing)
8. Realize one's potentiality to make a difference in the life of their community members.(Evaluating)
9. Understand and experience the system of inequality that exists in the Educationalsystem. (Evaluating)
10. Applying the pedagogical concepts learned in class in the educational institutions of thecommunity. (Creating)

Module I: Service Learning and Community- University Engagement

Concept of service learning and community-university engagement; History of service learning in the context of Indian Universities; Principles for an effective service learning; Principles of a good service learning pedagogy; Models of Service learning: Project Model, Charity Model, Social Justice Model.

1. Programs of Service learning: Community Engagement, Field Education, Volunteerism, Internship.
2. Benefits of Service learning:For Students, Academic enhancement, Personal/ Professional Growth, Understanding Diversity, Civic learning, Critical reflection, For the University, For the community.
3. Service learning: A means to Inclusive Education: Experiential Learning, Expo populations, Challenge to comfort zones, Reflection sure to diverse on Experiences, Personal growth, Professional growth.

Module II: Practices for Service Learning and Community- University Engagement

By collaborating with the Community Members, Village Panchayats, Parents, Educational Institutions (Heads, Teachers and Students), Anganwadis, Balwadis etc. and following the mentioned Models and Programs of Service Learning students can be engaged with the community welfare in the following ways: (**Any….**)

1. Creating awareness among community members regarding Early childhood care andnutrition.
2. Creating awareness among community members about parenting.
3. Self-participatory internship in a school of one's own choice.
4. Creating awareness among school children and community members and providing
5. training in developing one's life skills.
6. Providing teachers training in pedagogy.
7. Providing training to school teachers in the use of ICT for enhancing students' learning.
8. Providing training to teachers in the preparation of teaching aids by using availablecommunity resources.
9. Creating awareness on Mental Health and strategies for its sustenance.
10. Creating awareness on the importance of Physical health and ways of maintaining one's
11. health.
12. Creating awareness on the importance of education and ways of creating a conduciveenvironment for proper learning.
13. Creating awareness on AIDS.
14. Creating awareness on Population explosion- its effects and ways of population control.
15. Creating awareness on life skills and ways to develop one's life skills.

VALUE ADDED COURSES

EDES6011: EDUCATION FOR SUSTAINABLE DEVELOPMENT (1-0-1)

Objective:

To sensitize students about the growing issues surrounding the globe and make them aware of the most humanitarian and sustainable ways of addressing these issues

Course outcomes:

CO1: *Awareness about the concept of Sustainable Development.*
CO2: *Justify the concept of Education for Sustainable Development and the role of Education in Sustainable Development.*
CO3: *Evaluate the utility and prevalence of sustainable development within self and in the community.*

MODULE I: INTRODUCTION TO SUSTAINABLE DEVELOPMENT (4 hours)

- Concept of Sustainable Development: Its 5 Ps (People, planet, prosperity, peace, and partnership)
- Sustainable Development Goals (SDG)- 17

MODULE II: CURRICULAR FRAMEWORK FOR EDUCATION FOR SUSTAINABLE DEVELOPMENT (4 hours)

- Concept of Education for Sustainable Development (ESD)
- Importance of Education for Sustainable Development
- Pedagogical approaches in ESD
- Contribution of education in the achievement of SDGs

MODULE III: PRACTICAL IMPLICATIONS OF ESD (22 hours) (Any two)

- Design posters and organize awareness rally on any one of the SDGs
- Visiting neighboring areas to collect community related stories/ activities towards the realization of Sustainable Development Goals.
- Surveying ADBU campus on its sustainability norms
- Prepare a photo album on the issues of SDGs

EDHW6013: EDUCATION FOR HEALTH AND WELLNESS

Credits: 2

Total Marks: 50 - Internal: 40 % (20 Marks) Total Hours: 30 External: 60% (30 Marks)

Course objectives

After completing the course, students will be able;

1. To acquire the knowledge, about health and physical education
2. To acquire the knowledge about health and safety education
3. To understand the nature of injuries and providing first aid
4. To develop the skills for organising games and sports in educational institution.
5. To acquire the knowledge about yoga

Module-I: concept of Health Education

a. Meaning, Definition, objectives of health education
b. Nutrition, Malnutrition, Personal Hygiene, Health education in schools, Health Services.
c. Food and Nutrition: Meaning, classification, constituents of food, vitamins and their deficiency, Balanced Diets, Diets for obesity and under Weight

Module-II Introduction to Physical & Yoga Education & Wellness Studies

a. Meaning, Definition, Objectives and scope of Physical education
b. Physical fitness: Meaning, definition, components, and benefits
c. Games and sports
d. First Aid: Road Accident, water accident, fire accident
e. Yoga Education: Meaning, Definition and uses of yoga for focussed mind.
f. Selected Asanas and Pranayama: Physical exercises
g. Dimensions of Wellness & Mindfullness.

Practicum:

a. Preparation of first aid kit
b. Health awareness programme
c. Demonstration of Asanas and Pranayama
d. Organizing games
e. Writing about the eminent performers in games and sports

DEPARTMENT OF ENGLISH

VISION

To be a centre of excellence in learning, teaching and research in the areas of language and literature by imparting personalized education, inculcating human values and thereby contributing to nation building.

MISSION

- To develop critical thinking, creative writing and interpretive ability
- To foster professionalism to face the competitive world by developing language and communicative skills and by maintaining creative literary activity
- To generate sensitivity to culture and ethical issues
- To develop human potential to its fullest by mentoring and upholding human and spiritual values
- To prepare individual to become responsible citizens of tomorrow

PROGRAMME OUTCOMES- MA ENGLISH

PO1: Critical Thinking: Apply theoretical knowledge to make a critical analysis, intervene using innovative frameworks and evaluate and follow up.

PO2: Effective Communication: Engage in inter and intra personal communications, behavioural change communication and proficiency in information Communication Technology.

PO3: Scientific Temper: To build essential skills of life including questioning, observing, testing, hypothesizing, analysing and communicating.

PO4: Effective Citizenship: Demonstrate empathetic social concern and engage in service learning and community engagement programmes for contributing towards achieving local, regional and national goals.

PO5: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions and accept responsibility for them.

PO6: Environment and Sustainability: Participate and promote sustainable development goals.

PO7: Gender Sensitization and Social Commitment: To imbibe Gender sensitivity and the sense of social responsibility for self and community for the benefit of the society at large.

PO8: Self-directed and Life-long learning: Engage in continuous learning for professional growth and development.

PROGRAMME SPECIFIC OUTCOMES

PSO1: To critically analyse and evaluate the writers of English literature across different ages and continents, their theories, perspectives, models and methods.

PSO2: To enhance competence in critically analyzing scholarly work in the areas of English language teaching, literary research and translation.

PSO3: To develop the technical skills and ethical decision-making appropriate for the holistic professional development in the field.

LIST OF COURSES

1.1 Chaucer to Elizabethan Period - Poetry, Drama and Romance
1.2 Literary and Social History of England-Chaucer to Elizabethan Period
1.3 Shakespearean Drama I- Comedy and History Plays
1.4 Rhetoric and Prosody
1.5 T.S. Eliot
1.6 Thomas Hardy
1.7 Media Literacy
1.8 Leadership and Social responsibility
1.9 Gender Studies
1.10 English Language Teaching
1.11 Seminar and Presentation I
2.1 Restoration to Romantic Period-Poetry and Drama
2.2 Literary Criticism-Plato to F.R. Leavis
2.3 Shakespearean Drama II-Tragedy and Tragi-comedy
2.4 Approaches to Language and Literary Research

2.5 Classics in Translation
2.6 Indian Women Writers
2.7 Environment and Disaster Management
2.8 Peace Education and Conflict Management
2.9 Introduction to Social Psychology
2.10 North-East Indian Literature in English
2.11 Seminar and Presentation II
3.1 Victorian to Post-modern Period- Poetry, Drama and Fiction
3.2 Post-colonial Literature-Poetry, Drama and Fiction
3.3 American Literature-Poetry, Drama and Fiction
3.4 Literary and Critical Theory
3.5 Gender and Literature

EGET0007: ENGLISH LANGUAGE TEACHING (3-0-0) (CREDITS: 03)

Course Outcomes:

1. Define the vast body of Language teaching methodologies (Remembering)
2. Demonstrate the different approaches to teaching of English as a second language (Understanding)
3. Apply theoretical assumption as well as practical language teaching skills while dealing with second language learners in the classroom (Applying)
4. Analyse the specific issues such as the First and Second Language acquisition, Mother tongue interference in learning a foreign language, TG Grammar, Psychological and Sociological perspectives in Language learning, Role of technology in

language learning (Analysing)

5. Compare and estimate the utility and feasibility of different language teaching methodologies and techniques in different language teaching- learning situations with proper forms of testing (Evaluating)
6. Design as well as adapt on the syllabuses of second language teaching and constructing lesson plans for dealing with language learners of different linguistic backgrounds (Creating)

Module I: Introduction to English Language Teaching (10 lectures)
Introduction, Fundamental concepts of Language Teaching, Historical Perspective of ELT, Language Pedagogy. Elements of the Structure of English Language.

Module II: Methods and Approaches of Teaching English (20 lectures)
Theoretical aspects of Language Acquisition and Learning; Language Skills assessment; Psychological approach to language teaching in a bilingual/ multilingual context; Use of Technology in Language Teaching; Educational Technology; Testing and Evaluation.

Module III: Grammar and Practical Language Skills (10 lectures)
Parts of Speech; Articles and Prepositions; Degrees of Comparison; Direct and Indirect Speech; Sentence patterns; Letter Writing; Report Writing; Reading Comprehension; Listening and Speaking; English Speech Sounds – Vowels and Consonants, Stress and Intonation patterns; Language Games; Vocabulary Expansion; Telephonic Conversation; Teaching English for Academic and Business Purpose.

Module IV: Language through Literature (5 lectures)
Role of Literature in Language Learning; Teaching of Literature; Use of Language Model.

Suggested Readings

1. Ray Mackay, *A Basic Introduction to English Language Teaching*; Oxford, 2018.
2. Penny Ur, *A Course in English language Teaching*, CUP.2010.

EGLS0020: LINGUISTICS AND STYLISTICS I (3-0-0) (Credits: 03)

Course Outcomes

1. Define the key concepts of Linguistics. (Remembering)
2. Illustrate the differences between Stylistics and Linguistics. (Understanding)
3. Identify and explain the different levels of language. (Applying)
4. Analyse Linguistics and Traditional Grammar. (Analysing)
5. Recommend Stylistics as an interdisciplinary field of study. (Evaluating)
6. Discuss the different branches of Stylistics. (Creating)

Module I: Introduction to Linguistics (35 lectures)

Definition of Language and its characteristics, Definition, Scope and Goal of Linguistics, Linguistics and Traditional Grammar, Langue and Parole, Competence and Performance, Synchrony and Diachrony, Syntagmatic and Paradigmatic, Sign, Signifier and Signified, Language and Society, Dialect and Idiolect, Standard Language, Register and Style, Bilingualism and Multilingualism, Pidgin and Creole, Language maintenance, Language Shift and Language Death

Module II: Introduction to Stylistics (10 lectures)

Definition, Nature and Scope of Stylistics, Stylistics, Linguistics and Literary Criticism, Major Thinkers in Stylistics, Objectives of this discipline, Stylistics and levels of language, Stylistics and Style, Different branches of Stylistics, Stylistics as an interdisciplinary field

Suggested Readings

1. Toolan, Michael. *Language in Literature: An Introduction to Stylistics.* Routledge, 1998.
2. Simpson, Paul. *Stylistics.* Routledge, 2014.
3. Lyons, John. *Language and Linguistics.* Cambridge University Press, 1981.
4. Bradford, Richard. *Stylistics.* Routledge, 1997.
5. Carter, Ronald and Paul Simpson. *Language, Discourse and Literature: An Introductory Reader in Discourse Stylistics.*

Routledge, 1998.

EGIW0023: INDIAN WRITING IN ENGLISH – POETRY, DRAMA & FICTION (4-0-0) (CREDITS: 04)

Course Outcomes

1. Define the literature produced in India in English. (Remembering)
2. Illustrate and comment on poetry, drama, short stories and novels produced in India in their various socio-cultural contexts. (Understanding)
3. Identify and explain the various critical theories involved in the production of various indigenous texts. (Applying)
4. Analyse the techniques, style of writing and contribution of various writers to the Indian English literary tradition. (Analysing)
5. Evaluate the Indian writings in English and their representation of the Indian ethos on a global forum and critically interpret the evolution of English language in India (Evaluating)
6. Discuss the selected literary works and find out the commonalities in terms of themes and issues. (Creating)

Module I: Selected Poetry (10 lectures)

a. "Philosophy": Nissim Ezekiel
b. "The Looking Glass": Kamala Das
c. "A River": A.K. Ramanujan
d. "A Poem for Mother": Robin Ngangom
e. "Indian Summer": Jayanta Mohapatra

Module II: Selected Drama & Short Story (15 lectures)

a. *Dance Like a Man*: Mahesh Dattani
b. "The Road to Salvation": Munshi Premchand

Module III: Selected Fiction (20 lectures)

a. *Coolie*: Mulk Raj Anand
b. *Palace of Illusions* : Chitra Banerjee Divakaruni

Module IV: Selected Travel Writing and Non-fiction (15 lectures)

a. *In an Antique Land*: Amitav Ghosh
b. "Language and Spirit" Foreword to *Kanthapura*: Raja Rao

Suggested Readings

1. George, K.M.(Ed), *Contemporary Indian Short Stories in English and Modern Indian Literature.* Sahitya Akademi, 1992.
2. Deshpande, G.P. (Ed.) *Modern Indian Drama*: An Anthology. Goodreads, 2000.
3. Naik, M.K. *A History of Indian English Literature.* Sahitya Akdemi, 1982.
4. Dattani, Mahesh. *Dance Like a Man. Penguin, 2006*

EGSA0024: SOUTH-ASIAN LITERATURE (4-0-0) (CREDITS: 04)

Course Outcomes

1. Define the South Asian literary milieu. (Remembering)
2. Outline the literary, social, political and cultural dynamics of these texts. (Understanding)
3. Apply the knowledge from these texts to assess the socio-cultural aspect of these areas. (Applying)
4. Examine the texts with reference to the classic literary texts that they have studied earlier. (Analysing)
5. Evaluate the overall political and social implications of the area as suggestive in these texts. (Evaluating)
6. Discuss the emotions and aspirations of the writers from South Asia reflected in their writings. (Creating)

Module I: Introduction (20 lectures)

Geo-political conditions, Historical background of South Asian Literature, Imperialism, Colonialism, Nationalism,Orientalism, De-colonization, Specific issues with reference to history, politics and linguistic inventiveness in the literature of South-Asian countries.

Module II: Selected Poetry (10 lectures)

a. 'Love', 'Marriage', 'Children', 'Work', 'Joy and Sorrow' and 'Houses' from *The Prophet*: Khalil Gibran
b. Selected poems from 'Masnavi': Rumi

Module III: Selected Fiction (30 lectures)

a. *Ice Candy Man*: Bapsi Sidhwa
b. *The Kite Runner*: Khaled Hosseini
c. *The Bones of Grace*: Tahmima Anam

Suggested Readings

1. Mukherjee, Surjit. *Translation as Recovery*. Orient Longman, 2018.
2. Narasimhaiah, C.D. *East and West Poetics at Work.* Sahitya Academy, 1994.
3. Walsh, W. *Commonwealth Literature*. Oxford University Press, 1973.

EGLS0025: LINGUISTICS AND STYLISTICS II (3-0-0) (CREDITS: 03)

Course Outcomes

1. Define the role of language in the contemporary world. (Remembering)
2. Interpret and stylistically appreciate works of literature. (Understanding)
3. Apply sound, word and sentence structure in transcribing a word or analysing sentence. (Applying)
4. Analyse the structure of a word or sentence linguistically and stylistically and read the various genres critically. (Analysing)
5. Assess and evaluate the structure of language using linguistic and stylistic tools. (Evaluating)
6. Compose phonetically using stress and intonation patterns. (Creating)

Module I: Phonology, Morphology, Syntax and Semantics: Basic Concepts (35 lectures)

Organs of Speech, Vowel and Consonant Sounds, Syllable and Word-Stress, Sentence stress and Intonation, Phonetic and Phonemic transcription, Phonological structure of English language, Morphological structure of English language, Phonemes, Morphemes, Allomorphs and Morphs, Inflectional and Derivational Morphology, Word formation processes in English language, Syntactic Structure of English language, Immediate Constituent Analysis, Semantic level of language, Word-Meaning relations: Synonym, antonym, homonym, hyponym, meronym and polysemy. Layers of Meaning: Deep and Surface Structure

Module II: Reading in Stylistics (10 lectures)

Language and Literature, Levels of language at work, Sentence styles: development and illustration, Interpreting patterns of sound, Techniques of speech and through presentation, Dialogue in drama, Style in poetry: an exploration, A sociolinguistic model of narrative, Exploring metaphors in different kinds of texts, Style variation in narrative, Stylistics and media, An application of cognitive stylistics in poetry, Literature as discourse, Stylistic appreciation of poetry/prose

Suggested Readings

1. Balasubramanian, T. A.*Textbook of English Phonetics for Indian Students*. Macmillan, 1981. Crystal, David. *Linguistics*. Penguin, 1990.
2. Hudson, R.A. *Sociolinguistics*. Cambridge UP, 1980.

EGLC0028: LITERARY CRITICISM: PLATO TO F.R. LEAVIS AND SELECT TWENTIETH CENTURY PERSPECTIVES (4-0-0) (CREDITS: 04)

Course Outcomes:

1. List out the characteristics of a tragic hero according to Aristotle. (Remembering)
2. Compare between Plato and Aristotle's theory of mimesis. (Understanding)
3. Apply the twentieth century perspectives in literary research (Applying)
4. Analyse critically a selected text in the field of Literary Criticism. (Analysing)
5. Explain Coleridge's theory of Imagination. (Evaluating)
6. Discuss the contributions of I A Richards in the field of Literary Criticism. (Creating)

Module I: Literary Criticism: Key Ideas and Concepts – Plato to Dryden (10 lectures)

Plato: Views on Poetry, Theory of Mimesis; Horace: Observations on drama; Longinus: Ideas On the Sublime, Sources of Sublimity in Literature; Philip Sidney: Ideas on "An Apology for Poetry"; John Dryden: ideas (classical, modern, French and English drama) from "An Essay on Dramatic Poesy"

Module II: Literary Criticism and Theory: Key Ideas and Concepts – Johnson to F. R. Leavis and Select Twentieth Century Perspectives (20 lectures)

Samuel Johnson: Views on Shakespeare,; William Wordsworth: Views on Poetry, Poetic Diction;; John Keats: Negative Capability, Egotistical Sublime; Matthew Arnold: The Touchstone Method, High Seriousness, Grand Style; I. A. Richards: The Referential and Emotive Uses of Language, Statement and Pseudo-Statement; Tenor and Vehicle, Stock Response; F.R. Leavis: Enactment, Literary Criticism and Philosophy; Russian Formalism, New Criticism, Marxism and Psychoanalysis

Module III: Selected Critical Texts (30 lectures)

a. *Poetics* : Aristotle
b. *Biographia Literaria* (Chapter 13) : Samuel Taylor Coleridge
c. " Tradition and the Individual Talent ": T. S. Eliot

Suggested Readings

1. Culler, Jonathan. *Literary Theory: A Very Short Introduction*.
2. Abrams, M.H. *A Glossary of Literary Term*s.
3. Cuddon, J.A. *The Penguin Dictionary of Literary Terms and Literary Theory.*

EGSD0029: SHAKESPEAREAN DRAMA (4-0-0)

Course Outcomes

1. Define drama as a literary genre (Remembering).
2. Explain the significant stages in the making of Shakespearean plays-tragedy, comedy, tragic-comedy and history plays (Understanding).
3. Apply the substance of the given criticism in the given plays (Applying).
4. Analyse the content of the given critical readings and their applicability in the given plays (Analysing).
5. Evaluate the theme, plot, literary techniques, characteristic features and creative energy of Shakespeare through the given plays (Evaluating).
6. Compile the content, style and the literary aspects of the given Shakespearean texts (Creating).

Module I: Tragedy and Tragi-comedy (25 lectures)

a) *Hamlet*
b) *Winter's Tale*

Module II: Comedy and History Plays (25 lectures)

a) *The Tempest*
b) *Julius Caesar*

Module III: Shakespearean Criticism (10 lectures)

a) Dollimore. Jonathan. "Introduction: Shakespeare, Cultural Materialism and New Historicism." Political Shakespeare: Essays in Cultural Materialism, edited by Jonnathan Dollimore and Alan Sinfield, Manchester University Press, 1994
b) Neill, Michael. "Post-colonial Shakespeare? Writing Away from the Centre." Post-Colonial Shakespeare, edited by Ania Loomba and Martin Orkin, Routledge, 2002

Suggested Readings List:

1. Texts prescribed in the Course.
2. Bloom, Harold, *Elizabethan Drama*. Infobase Publishing, New York.
3. Dutton, Richard and Howard, Jean. *A Companion to Shakespeare's Works*, Vol.II. Blackwell, Oxford.
4. Greenblatt, Stephen. *Tyrant: Shakespeare on Power*. Vintage, 2019.

EGIL0030: INTRODUCTION TO LINGUISTICS (4-0-0)

Objectives:

The aim of this paper is to introduce the students to the different branches of linguistics and its scope. The course will enable the students to have a better understanding of the philosophical and theoretical perspectives governing the studies in languages.

Course Outcomes:

CO 1: Define the basic concepts of linguistics. (Remembering)
CO 2: Understand the theoretical perspectives governing linguistic studies. (Understanding)
CO 3: Identify the levels of language structure. (Applying)
CO 4: Analyse the course of development of language with reference to traditional grammar approaches. (Analysing)
CO 5: Examine the basic phonological and morphological patterns of languages. (Evaluating)
CO 6: Summarize the course of development of language studies. (Creating)

Module I: Theoretical perspectives (30 Hours)

a) Origins of language; the nature of human language; language and cognitive development- the critical period; Language acquisition- Behaviourist Approach, Innateness Hypothesis, Stages in Language acquisition; Sapir-Whorf Hypothesis.
b) Structuralism- the influence of Prague School; American Structuralism; key concepts of structural linguistics- Sign, signifier

and signified, langue and parole, synchrony and diachrony, paradigmatic and syntagmatic relations.

c) Historicism; Functionalism; Generativist approach and Universal Grammar; Cognitive approach and Usage-based theories in linguistics.

Module II: Branches of Linguistics and its key concepts (30 Hours)

a) The branches of linguistics and its scope; the development of grammar- descriptive and prescriptive grammars; language universals.

b) Phonetics and Phonology: The organs of speech, articulatory phonetics, phonemes (IPA) and allophones, phonetic and phonemic transcription; distinctive features and suprasegmental phonology, phonological structure.

c) Morphology: Free and bound morphemes- prefix, suffix, infix and circumfix; content words and function words; inflectional and derivational morphology; word formation processes.

Suggested Readings List:

1. Balasubramanian, T. *A Textbook for English Phonetics for Indian Students*, Macmillan, New Delhi. 2000.
2. Wood, F. T. *An outline history of the English language*, Macmillan, New Delhi. 1941.

EGWL0033: WORLD LITERATURE SINCE 20TH CENTURY

Credits: 02 (2-0-0)

Objective: The course aims to introduce the students to literature across the world. The students are expected to develop an understanding of cultural exchange processes as represented through literature from different parts of the world, along with the ability to relate the ideas and contexts of socio-economic development to the historic development of the nations through various literary texts.

Course Outcomes:

1. To *acquaint* with the major literary concepts/movements to comprehend and interpret the prescribed texts of World Literature.
2. To *develop* a consciousness of the illusions pertaining to national identity and the status of an individual in a given geographical area.
3. To *construct* ideas on multiculturalism, disconnect from native land and the challenges face by people in various diaspora contexts.

Module 1: Conceptual background (5 hours)

David Damrosch. "What is World Literature?" in *World Literature Today.*

Module 2: 20th Century World Literature (12 hours)

Fiction:

1. Maxim Gorky: *Mother* (Chapter 1 and 2)
2. Gabriel Garcia Marquez: "A Very Old Man with Enormous Wings"
3. Kunzang Choden: "The Woman Who Lost Her Senses"

Poetry:

1. Yehuda Amichai: "Half the People in the World"

Module 3: Contemporary World Literature (13 hours)

Fiction:

1. Haruki Murakami: *Kafka on the Shore* (Chapter 1-4)
2. Jhumpa Lahiri: "Hell-heaven"
3. Ama Ata Aidoo: "Diplomatic Pounds"

Poetry:

1. Khairani Borokka: "Money for Your English"

Suggested Readings:

1. Damrosch, David." What Is World Literature?". *World Literature Today*, Vol. 77, No. 1, 2003, pp. 9-14. : https://www.jstor.org/stable/40157771

EGAA0034: ARTS AND AESTHETICS

3 credits: 3-0-0

Course Objectives

The objective of this course is to make the students understand the aesthetic concepts from various Western and Indian Philosophies along with their contextual relevance. A philosophical exploration is expected to enhance our understanding of the significance of art and aesthetics in the global culture.

Course Outcomes

CO1: *Remembering* the historical understanding on Western and Indian Aesthetics
CO2: *Understanding* the aesthetic concepts from various Western and Indian philosophers
CO3: *Analyzing* the contextual relevance of aesthetic theories

Module I: Nature of Aesthetics (10 hours)

Definitions of art
Art as Expression
Art and Society
Art and Aesthetics

Module II: Art and Aesthetic Experience (15 hours)

Introduction to Western and Eastern Aesthetics
Immanuel Kant on "Disinterested Delight"
Bharata Muni's "Rasa Theory"

Abhinavagupta on "Rasa"

Module III: Aesthetics and Philosophical Aesthetics (15 hours)
Arindam Chakrabarti: Introduction to *The Bloomsbury Research Handbook of Indian Aesthetics and the Philosophy of Art*, Bloomsbury, 2016.
Renaissance art and Humanism- A study on the works of Albrecht Durer and Leonardo Da Vinci

Suggested Readings

1. Chen, Jingran. "An Analysis of the Multiple Meanings of Art During the Renaissance." *Journal of Education, Humanities and Social Sciences*, 2009.
2. Guo, Zhaodi, and Lin Zhang. "Wisdom and Knowledge: The Outline of Eastern and Western Aesthetic Spirits." *Frontiers of Philosophy in China*, vol. 7, no. 1, 2012, pp. 90–111. *JSTOR*, http://www.jstor.org/stable/44259373.
3. Kant, Immanuel. *The Critique of Judgment (Theory of the Aesthetic Judgment & Theory of the Teleological Judgment)*. Czechia Good Press, 2024.
4. Nanay, Bence. *Aesthetics: A Very Short Introduction*. Oxford UP, 2019.
5. Pande, Suresh Chandra. *The Concept of Rasa With Special Reference to Abhinava Gupta*. Indian Institute of Advanced Study, 2018.

EGCS0035: CULTURAL STUDIES
Credit: 3-0-0

Objectives: The course will introduce the students to the basic ideas and theoretical developments under the broader research area of Cultural studies, adding critical perspectives to their understanding. The course will introduce the key ideas, theories and methodologies for practical application of the ideas within popular sites of culture production.

Course Outcomes:
1. To *familiarize* the student to the multi-faceted dynamics of culture, the process of culture production and cultural products
2. To *identify* the core debates within cultural studies.
3. To *develop* habits of independent learning through critical analysis.

Module 1: Origins, Aims and Scope of Cultural Studies (17 hours)
Culture: Definition, Popular culture, culture and power, sites of culture production, product and spaces of culture consumption
Origins of Cultural studies: Early trends, Birmingham Centre for Contemporary Cultural Studies, Stuart Hall's ideas and contribution, Scopes

Module 2: Methods and Methodologies of Cultural Studies (18 hours)
Methods: 'Circuit of Culture' (Representation, Identity, Production, Consumption, Regulation), Language and Discourse, Cultural Materialism, Postcolonialism and Cultural Studies, Media culture and cultural studies.

Module 3: Critical Text (10 hours)

Hall, Stuart. "Encoding/Decoding"

Suggested Readings

1. Nayar, Pramod K. *An Introduction to Cultural Studies*, Second Edition, Viva Books, 2023
2. Williams, Raymond. *Culture and Society 1780-1950*, Anchor Books, 1960
3. Amin, Ash and Nigel Thrift. *Cities: Reimagining the Urban*, London Polity, 2002.
4. Beck, Ulrich. *Risk Society: Towards a New Modernity*, Tr. Mark Ritter, Sage, 1992.

5. Bhaba, Homi K. *The Location of Culture*, Routledge, 1995.
6. Hall, Stuart. "Encoding/decoding." In Stuart Hall, Dorothy Hobson, Andrew Love, and Paul Willis (eds.), *Culture, Media, Language*, pp. 128–38. London: Hutchinson, 1980.

EGFS0036: FILM STUDIES
(3-0-0)

Objectives: This paper enables students to gain skills in the field of cinema via the appreciation of its features as a medium. The course is practically oriented to encourage students to acquire the competence necessary to become engaged viewers/critics/reviewers.

Course/Learning Outcomes

At the end of the course students will be able to:

CO1: *Define* the specific features of composition that help create films. (Remembering)
CO2: *Explain* the different methodologies of film analysis. (Understanding)
CO3: *Write* film reviews to generate a repertoire of analyses and interpretations. (Application)

Module I: Introduction to Film Studies (15 Hours)

History of world cinema; Western cinema; Non-western cinema; Art and Technique of film; Script writing; Language of Cinema; Mise en scene; Cinematography; Editing; Sound; Types of cinemas; Different movements of cinema

Module II: **Film Genres (15 Hours)**

Analysis of film scripts; Definition of various film genres; Taxonomies of film genre; Story Idea; Theme; Structure; Film genre as economic strategy; Film genre as Cognition; Rethinking film genres

Module III: Film Criticism (15 Hours)

Critical analysis of films; Different film theories; Classical Film Theories; Post-classical film theories Tools of film criticism; Semiotic approaches; Structuralist approaches, Contextual approaches; Film reviews

Suggested Readings

1. Corrigan, Timothy. *A Short Guide to Writing About Film*. Pearson, 2014.
2. Dix, Andrew. *Beginning Film Studies.* Viva, 2010, pp. 9-100. New Delhi.
3. Nelmes, Jill, editor. *An Introduction to Film Studies*. Routledge, 2003, pp. 152-69. London.
4. Richardson, Michael. "Film Criticism." *The International Encyclopaedia of Surrealism*, 2020.
5. Raghavendra, M. K. *Locating World Cinema: Interpretations of Film as Culture.* Bloomsbury Publishing, 2020. India.
6. *The Language and Style of Film Criticism*. Taylor & Francis, 2011. United Kingdom.

Suggested Films

1. Aamis: Ravening. Directed by Bhaskar Hazarika, 2019.

EGPP6003: PROJECT PHASE I (1-0-1) (CREDITS: 02)

Course Outcomes
1. Define academic writing, research paper and publication. (Remembering)
2. Identify research topics for sustained and rigorous investigation so that original write-ups can be developed. (Understanding)
3. Estimate and expand their abilities to absorb, synthesize and construct arguments in a close-knit community. (Applying)
4. Analyse the various works of literature to write research reports and papers. (Analysing)
5. Evaluate critically through reading, research, discussion and composition around a particular topic/ theme or subject. (Evaluating)
6. Compose write-ups for scholarly journals by doing analysis of textual evidence. (Creating)

Module I: Conceptualizing, Planning and Preparing a Research Paper (15 lectures)
- Introduction to academic/ research writing
- Avoiding Plagiarism in research
- Selection of a research topic
- Developing an outline of the research paper
- Choosing an appropriate title for the research paper
- Writing an abstract
- Review of Literature
- Developing an argument
- Bringing a critical interpretation into writing
- Drawing inferences/ framing a conclusion
- MLA Handbook 8th Edition
- Referencing and Citation
- Bibliography

Module II: Practical- Writing and editing a Research Paper (15 Lectures)

- Draft of the abstract
- Draft of the literature review
- First draft of the research paper
- Second draft of the research paper
- The final research work

Suggested Reading

EGSP6006: SEMINAR AND PRESENTATION

Credit: 02 (1-1-0)

Objectives:

- To enable the students to identify and expand their abilities to absorb, synthesize and construct arguments in research.
- To assess various works of literature to write research reports and papers.
- To compose write-ups for scholarly journals by doing analysis of textual evidence.

Course Outcomes

1. *Identify* research topics for sustained and rigorous investigation so that original write- ups can be developed. (Applying)
2. *Develop* critical reading, research, discussion and composition around a particular topic/ theme or subject. (Creating)

Module I: Introduction to Seminar and Steps of Seminar (5 hours)

a) Introduction to Seminar
b) Research Methodology
c) Formulating a Research Paper
d) Tips and Techniques of a Good Presentation : Presentation - how to present a seminar paper; mode of presentation: essay-type presentation, paper presentation, power point (ppt.) presentation

Module II: Practical (25 hours)

a) Two presentations per period on predetermined and allotted topics
b) Each will be allotted 10-15 minutes for presentation.
c) Followed by a discussion and commentary on the paper presented.

Suggested Readings

1. Correa, Delia Da Souza & Owens, W.R. The Handbook to Literary Research. Routledge. 2009
2. Kothari, C. R. & Gaurav Garg. Research Methodology: Methods and Techniques. New Age. 2019

DEPARTMENT OF MASS COMMUNICATION

VISION:

To be a centre of excellence in teaching, learning and research committed to mould ethical and socially responsible media professionals and entrepreneurs who can deliver professional content for diverse media platforms.

MISSION:

The Department of Mass Communication seeks to:

- Achieve excellence in teaching, learning and research.
- Promote critical thinking and problem-solving skills.
- Equip learners by combining the theoretical aspects with creative innovation and entrepreneurship practices.
- Mould ethical and socially responsible media professionals and entrepreneurs.
- Provide knowledge base and consultancy services to the community in the field of media and communication.

M.A. MASS COMMUNICATION

The M.A Mass Communication programme of Assam Don Bosco University is a two-year (four semesters) programme consisting of theory and practical components, taught and learned through a combination of lectures, hands-on training, seminar, guest lecture, industry-academia interface and project execution. The programme offers specialization in the area of Print Media, Electronic Media and Communication for Development.

PROGRAMME OUTCOMES – MA MASS COMMUNICATION

PO 1: **Critical Thinking**: Gain conceptual and theoretical knowledge and learn to critically think and analyze the dynamics and contemporary phenomenon of mass communication.

PO 2: **Scientific Temper:** Develop logical and creative thinking for the solutions in Print media, electronic media and Communication for development.

PO 3: **Effective Communication**: Develop the communication skills, theoretical and practical knowledge among the students in print, digital and development communication.

PO 4: **Social Interaction**: Elicit views of others, mediate disagreements and help reach conclusions in group settings.

PO 5: **Ethics**: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO 6: **Effective Citizenship**: Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through service learning and social commitment.

PO 7: **Environment and Sustainability**: Understand the environment issues and promote sustainable development goals.

PO 8: **Self-directed and Life-long Learning**: Engage in higher studies, research and professional work and be a life- long learner in context of media studies.

PROGRAMME SPECIFIC OUTCOME: MA MASS COMMUNICATION

PSO 1: **Understanding Communication and its Concepts:** An ability to define the meaning, purpose of communication and demonstrate the theoretical knowledge in the field of mass communication.

PSO 2: **Application of Knowledge**: Apply communication skills and practices in context of social and cultural milieu of the North-eastern region.

PSO 3: **Developing Critical Aptitude:** An ability to test and analyze research findings by demonstrating critical thinking and problem-solving skills.

PSO 4: **Enhancing Professional Skills:** An ability to develop professional skills and use in the field of print media, electronic media and development communication.

PSO 5: **Creating Multimedia Content:** An ability to create media programmes for varied media audience needs.

DETAILED SYLLABUS
MA MASS COMMUNICATION

MCRC0026: RURAL COMMUNICATION (3-0-0)

COURSE OBJECTIVES

CO1 Define the meaning and concept of community and rurality (Remembering)CO2 Explain the role of communication in rural development (Understanding) CO3 Apply communication channels for rural development (Applying)
CO4 Analyse the social, economic, political and cultural framework of rural communication (Analysing)CO5 Evaluate the need for media and communication for rural development (Evaluating)
CO6 Design communication programme for rural development (Creating)

Module 1: Rural Communication and Participation (9 Lectures)

Community and Rurality: Concept and Definition, Meaning of Rural Communication, Communication Structure in Rural Settings-Folk and Traditional Media, Radio in Rural Communication, Community Media for Participatory Communication, Media and Communication Habits among Rural Communities, Media Penetration and Changing Rurality, Rural Communication Channels - Village Meetings; Village Market; Village fair, ICT and Rural Governance.

Module 2: Documenting Development in Rural Settings (9 Lectures)

Role of Communication in Rural Development, Documenting and Analysing Rural Development, Communication Agenda, Rural Health and Communication, Crisis and Natural Disaster Communication, Communicating Education and Agriculture, Communication and Extension Activities in Rural Settings.

Module 3: Evaluating Communication Needs in Rural Areas (9 Lectures)

Media and Communication Awareness among the Rural Mass, Assessing the Urban-Rural Divide, Communication Divide-Knowledge and Infrastructure, Need for Media and Communication Literacy, Communication Research in Rural Context-Participatory Action Research-Survey, Natural Resource Management, and Human Rights.

Module 4: Channelizing Development in a Rural Context (9 Lectures)

Contextualising Paulo Freire in the Process of Rural Development and Rural Communication, Context Specific Communication-Local Culture, Tradition, Language and Folk-Art Forms, Intercommunity Communication, Utilising Intra- community Communication Channels, Disseminating Community Specific Information and Disbursing Local Knowledge, Participatory Action and Rural Development.

Module 5: Practicum (9 hours)

As part of this module, students are required to conduct community outreach programmes in rural areas on issues of rural development or design communication programmes for rural development.

Suggested Readings

1. Communication for Rural Development, M. Acunzo, 2014, FAO
2. Communication for Development: Theory and Practice for Empowerment and Social Justice, 3rd Edition, Srinivas RajMelkote, Sage India
3. Communication Efficiency and Rural Development in Africa: The Case of Cameroon, Emmanuel K. Ngwainmbi, 1994, University Press of America
4. Community Communications: The Role of Community Media in Development. F. J. Berrigan, F. J, 1979. UNESCO
5. Framework on Effective Rural Communication for Development, R. D, Castello, 2006, FAO
6. Pedagogy of the Oppressed, P. Freire, 1970, Continuum
7. Strategic Communication for Rural Development. World Bank, F. M. Santucci, 2005

MCML0027: MEDIA LITERACY (3-0-0)

COURSE OBJECTIVES

1. Define the concept, meaning and characteristics of the media industry (Remembering)
2. Explain the functions of communication (Understanding)
3. Choose appropriate media channels for effective communication (Applying)
4. Distinguish different types of media (Analysing)
5. Assess the emerging trends in the communication industry (Evaluating)

Module 1: Introduction to Media Literacy (12 Lectures)

Understanding media landscape, Meaning and definition, Importance of Media literacy, Media audience, media literacy approach, Types and Role of Media, Ownership Pattern and Control of Mass Media, Communication and Information Industry, Information Society, New Media Culture.

Module 2: Digital Media (7 Lectures)

Information and Communication Technology (ICT), Digital file types: documents, picture, video and audio, Editing Software: Print, Audio and video, creating digital media content with mobile phone.

Module 3: Computer Mediated Communication (8 Lectures)

Internet, Websites, online social media, User Generated Content in social media, SEO, Blogging, Live Streaming, E- Governance, Digital Marketing.

Module 4: Convergence Media (7 Lectures)

E-newspaper and web-edition, Internet and Satellite radio, TV: Internet Television, YouTube Channel, MOJO, Interactive Learning, IT Act, 2000.

Module 5: Confronting Issues (10 Lectures)

Digital divide, Cyber Security, Cyber Crime, Cyber Bullying, Digital Privacy and Piracy, Digital investigation, Misinformation and Disinformation, Propaganda and fake news, Physical and emotional effects of Digital Media.

Suggested Readings

1. Beginners' Guide to Journalism: Effective Guide to Write Well, Influence People and Remain in News, Roy Barun, 2019,V&S Publishing
2. Convergence in Broadcast and Communications Media, John Watkinson, 2001, Routledge
3. Handbook of Journalism and Mass Communication, Virbala Aggarwal, 2012, Concept Publishing Company Ltd.
4. How the Web Was Won, Paul Andrews, 1999, Broadway
5. Media Literacy, James W. Potter, 2013, Sage Publications
6. Navigating Social Journalism: A Handbook for Media Literacy and Citizen Journalism, Martin Hirst, 2018, Routledge.
7. Theories of the Information Society, F. Webster, 2014, Routledge.
8. The Rise of the Network Society, Manuel Castells, 2009, Wiley-Blackwell

MCID0032: INVESTIGATIVE AND DATA DRIVEN JOURNALISM (3-0-0)

COURSE OUTCOMES
1. Define the meaning and concept of investigative and data journalism (Remembering)
2. Demonstrate how to conduct news investigation (Understanding)
3. Plan and execute investigative news reporting methodically and ethically (Applying)
4. Analyse different sets of data and information (Analysing)
5. Assess the risk involved in investigative reporting (Evaluating)

Module 1: Basics of Investigative Journalism (10 Lectures)
Concept, meaning and definition of Investigative Journalism, types and history, Sources, Research, Fact checking and editing, Role of investigative reporting in a democratic society, Trends in Investigative Reporting, Investigative techniques,

Case studies, Associations of Investigative Journalists, The soul of the investigative reporter, ethics of investigativereporting.

Module 2: Digital Investigation (8 Lectures)
Understanding Digital Investigation, Computer Assisted Reporting, Web research and data collection, Data Literacy, Data Mining Tools, Open-Source Intelligence Tools (OSINT), Social Media Auditing, Online Fact Checking and Verification.

Module 3: Data Journalism (8 Lectures)
Concept, meaning, definition of Data Journalism, Data-driven Storytelling, Data Acquisition, Data Analytics, Reporting with Data, Public, Private and Open-Source Database, Overcoming Information Overload.

Module 4: Tools and Techniques of Data Driven Journalism (8 Lectures)

Analysis and Design, Tools and Techniques, Challenges with Data: Finding and Cleaning, Statistical Tools and Methods, Open-Source Software.

Module 5: Practicum (11 hours)
Develop an investigative pitch/plan for a major investigative story, Data Visualisation, Online Fact Checking, and Social Auditing.

Suggested Readings

1. Computer-Assisted Reporting: A Practical Guide, Brant Houston, 2003, Routledge
2. Data Literacy: A User's Guide, David Herzog, 2015, Sage Publication
3. Data Smart: Using Data Science to Transform Information into Insight, John Foreman, 2013 Wiley
4. Data Journalism: Past, Present and Future, John Mair, Richard Keeble and Megan Lucero, 2017, Theschoolbook.com

MCRM0034: MEDIA AND COMMUNICATION RESEARCH METHODOLOGY (4-0-0)

COURSE OBJECTIVES

1. Define meaning, scope, objectives and significance of media research (Remembering)
2. Demonstrate appropriate methods for collecting and analysing research data (Understanding)
3. Apply research methods related to the disciplinary areas of communication and media (Applying)
4. Assess and appraise relevant literature (Evaluating)
5. Conduct research, write research reports and projects (Creating)

Module 1: Meaning and Objectives of Research (15 hours)

Media Research – Meaning; Scope; Objectives and Significance, Research Process, Formulation of Research Problem, Literature Survey, Research Design, Collection of Data, developing a Questionnaire, Aids for Writing Research Reports – Bibliography; Footnote and Reference; Synopsis and Abstracts, Writing of Report; Summary; Executive Summary; Conclusion and Recommendation.

Module 2: Research Methods and Applications (20 hours)

Techniques of Data Collection – Observation; Questionnaire and Interview; Content Analysis, Qualitative Methods - Field Experiments; Ethnography; Focus Groups; Case Studies, Quantitative Research Methods - Experimental Research; Survey Research; Content Analysis, Audience Research in Print and Electronic Media.

Module 3: Statistical Applications in Communication Research (25 hours)

Statistics – Definitions; Uses and Limitations, Classification and Tabulation of Data, Univariate and Bivariate, Diagrammatic and Graphical Presentations, Sampling - Types of Sampling; Guiding Principles of Sampling, Test of Hypothesis – Basics; Probability distribution; normal distribution; t-test; Chi- square test; Measures of Central Tendencies, Measure of Variability, Correlation - Computation of Product Moment; Correlation Coefficient; Spearman's Rank; Coefficient Correlation, Scaling Techniques – Arbitrary; Thurstone; Likert-Scale.

Suggested Readings

1. Communication research for Development: The ISRO Experience, Binod C. Agarwal and S.R. Joshi and Arbind Sinha, 1986,New Delhi: Concept Publishing Company.
2. Media Research Techniques, Asa A. Berger, 1998, Thousand Oaks: Sage Publication.
3. Media Analysis Techniques, Asa A. Berger, 1998, Beverly Hills: Sage Publications. 1998.
4. MLA Handbook for Writers of Research Papers, Joseph Gibaldi and Achtert S. Walter, 1994 New Delhi: Affiliated East-West Press Pvt. Ltd.
5. Research Methodology Methods and Techniques, R. C Kothari, C.R, 2019, New Age International Publishers

MCAV0039: AUDIO-VIDEO EDITING (3-0-0)

COURSE OUTCOMES

1. Identify the importance of Sound and Sound SFX (Remembering)
2. Understand the techniques of audio recording and editing (Understanding)
3. Execute video and audio tracks with effects (Applying)
4. Differentiate between the different techniques of Video Editing (Evaluate)
5. Plan, design and create digital video projects incorporating audio and video elements (Creating)

Module 1: Audio Editing (20 Hours)

Configuration of a PC for sound recording, Motherboards, Processor, Sound Card, Graphic card, Monitors, Recorders: Analog, Digital, Tape Based & Tapeless, Digital Audio Workstations (DAW's), Set up an audio editing software, The user interface, Waveform editing, Effects, Audio Restoration, Mastering, Sound design, Creating and recording files, Multitrack sessions, Multitrack session editing, Automation, Video soundtracks, The essential sound panel, The multitrack mixer, Creating music

with sound libraries, Recording and output in the multitrack editor.

Module 2: Video Editing (25 Hours)
Installing video editing software, Optimizing performance of system and software, Performing non-linear editing, Understanding the user interface of the software, Setting up a project, Importing media, organizing media, Mastering the essentials of video editing- using the source monitor; viewing video on a second monitor; using a numerical keyboard; editing from the project panel; navigating the timeline panel; using essential editing commands; setting the duration for still images, Working with clips and markers, Adding transitions, Advanced editing techniques- performing four-point editing; changing playback speed; replacing clips and footage; nesting sequences; multi-camera editing, Putting clips in motion, Editing and mixing audio, Adding video effects, Colour correction and colour grading, Compositing techniques, Creating graphics, Exporting the timeline.

Suggested Readings:

1. Adobe Audition: Operation Manual, 2021, Adobe Press
2. Adobe Premiere Pro: Operation Manual, 2021, Adobe Press
3. Film Art: An Introduction, David Bordwell and Kristin Thompson, 2003, McGraw-Hill (first published 1979)
4. Film Editing: Great Cuts Every Filmmaker Should Know, Gael Chandler, 2009 Michael Wiese Productions
5. Grammar of the Edit Roy Thompson, Christopher J. Bowen, 2014, Focal Press (first published January 1st 2009)
6. In the Blink of an Eye: A Perspective on Film Editing, Walter Murch, August 1st 2001, Silman-James Press
7. Mixing Audio, Bob Katz 8. Mixing Audio, Roey Izhak, 2007, Focal Press
8. Modern Recording Techniques, David Miles Huber, 2005, Focal Press (first published in 1986)
9. Practical Recording Techniques, Fifth Edition 2009, Elsevier

MCTV0040: TELEVISION AND VIDEO PRODUCTION (3-0-1)

COURSE OUTCOMES
1. Identify different genres of television production (Remember)
2. Understand the intricacies and nuances of screenwriting (Understanding)
3. Distinguish various equipment and tools required for television and video production (Analyse)
4. Assess the importance of cinematography in television and video production (Evaluate)
5. Produce television programmes for various audiences (Creating)

Module 1: Writing for Television: (10 Lectures)
Preparing to Think Visually: Diving Into the Screenwriter's Mind, Approaching Screenwriting as a Craft - Mise-en-Scene; Breaking Down the Elements of a Story, Structure of Story & Screenplay: Beginning, Middle, End; Dynamics of Characterization: Character Building, Constructing Dynamic Dialogues, Finalizing the Script: Maintaining an Audience's Trust, Turning Your Story into a Script, Rewriting Your Script, Adaptation and Collaboration: Two Alternate Ways to Work; Intro to Storyboarding/Visual Storytelling & Storyboards; Storyboarding Techniques: Drawing the components of the storyboard, Indicating motion in the storyboard.

Module 2: Genres and Audience (15 Lectures)
Nature of drama in television: Various shows, formats and genres, telecast patterns, audience viewership performance, Building the story, herd culture, Creating niche television programming: Importance of niche content, niche content channels, Differentiation of infotainment, edutainment, entertainment, lifestyle genres, Differentiation of genres, Specialty of different genres, popularity of genres, content on demand.

Module 3 Television and Video Formats (10 Lectures)
Digital Recording Formats SD, HD, 2K, 4K - Editing and compression - Digital sampling and storage - Technical formats of video- PAL, NTSC, SECAM, Digital television formats- ATSC, DVB, ISDB, DTMB, IPTV, Recording formats; "Time Code" in Video Recording.

Module 4: Lighting Equipment and Techniques (15 Lectures)
Understanding of colour, use of colour, Capturing the emotion; Role of light, Lighting techniques - Concept of lighting various planes; Understanding Various types of lights; Lighting accessories, grey card, Metering, Colour temperature meter, Camera

filters, Types of lighting - Studio lighting for three cameras set up, Outdoor lighting, Lighting for documentary, Mood Lighting & Colour Lighting Theory and Practice.

Module 5: Lenses, Camera Movements and Techniques (10 Lectures)
Lenses: Type of Lenses, Power of Lenses, Understanding the shot requirement and usage of a lens, Lens and perspective: Depth of Field, Depth of focus, Focus pulling; Camera Movements, Camera angles, Usage and need of Track and trolly, Crane, Jimmy Jib, Poll Cam, Managing Movements, Single camera Setup, Multi camera setup and Continuity Exercise.

Suggested Readings

1. Before You Shoot: A Guide to Low Budget Film and Video Production, Helen Garvey, 1995, Shire Press
2. Breaking into Film by Kenna McHugh, 1998, Peterson Nelnet Co
3. Camera Terms and Concepts, David Elkins, 1993, Focal Press
4. Fundamentals of Film Directing, David K. Irving, 2010, McFarland & Company
5. How not to write a screenplay: 101 common mistakes most screenwriters make by Denny Martin Flinn, 1999, Lone Eagle
6. Motion Picture Camera and Lighting Equipment, David Samuelson, 1986, Focal Press (first published 1977)
7. Screen Adaptation: A Scriptwriting Handbook, Kenneth Portnoy, September 8th 1998, Routledge (first published 1998)
8. Screenplay: The Foundations of Screenwriting, Syd Field, 2005, Delta (first published 1979)
9. The Camera Assistant, Doug Hart, 1995, Routledge
10. Writing, Directing, and Producing Documentary Films and Videos, Alan Rosenthal, 2007, Southern Illinois University Press(first published in 1990)

MCSM0041: SOUND FOR MEDIA (3-0-1)

COURSE OUTCOMES:
1. Define the key terms related to sound (Remembering)
2. Explain the basic principles of sound production (Understanding)
3. Develop sound recording skills for visual media (Applying)
4. Distinguish between analogue sound and digital sound (Analysing)
5. Assess the acoustic quality of a room for sound production (Evaluating)
6. Produce audio programmes (Creating)

Module 1: Introduction to Sound (15 Lectures)
Understanding sound, Human hearing process, Air pressure, Characteristics of sound: wavelength; amplitude; frequency; phase, Components of sound: pitch; volume; timbre; harmonics; rhythm; tempo; attack; sustain and decay, Propagation of sound waves, Mono and stereo sound, Hi-fi vs low-fi sound, Sound perspective, Sound texture, Natural sound: Ambience; speech; dialogue etc., Sound creation: studio sound; inventing sounds and sound creation in software.

Module 2: Analogue and Digital Sound (17 Lectures)
Meaning of analogue and digital, Analogue sound, Characteristics of analogue sound: phase; frequency response; signal- to-noise ratio, Digital sound, Characteristics of digital sound: sampling; quantization; bit rate; dither; jitter, Compression and audio codec: audio file types/formats; open and proprietary formats, file compression.

Module 3: Sound Recording (15 Lectures)
Microphones: construction and polar pattern, recording practices: location recording; studio recording; equipment for location recording; equipment for studio recording, Music and Sound effects, Creating soundscape, Off-screen; on-screen and non-diegetic sound, Sound for video: news stories; documentaries; internet videos, Audio cable and connectors.

Module 4: Studio Acoustics (13 Lectures)
Meaning and definition of acoustics, Studio acoustics, Noise sources, Sound isolation, Sound absorption, Noise control: acoustic treatment; technical requirement for construction of studio.

Suggested Readings:

1. Digital Audio, Dobrian Christopher (n.d.), Retrieved from https://music.arts.uci.edu/dobrian/digitalaudio.htm
2. Sound Design: The Expressive Power of Music, Voice and Sound Effects in Cinema, Sonnenschein David, 2001, Michael Wiese Productions.

3. The Sound Effects Bible: How to Create and Record Hollywood Style Sound Effects, Viers Ric, 2008, Michael Wiese Productions.
4. Transmedia Directors: Artistry, Industry and New Audiovisual Aesthetics, Vernallis Carol, 2020, Bloomsbury Academic.

MCPC0042: POLITICAL COMMUNICATION (3-0-0)

COURSE OBJECTIVES:

1. Define the key terms in political communication (Remembering)
2. Understand the different techniques of political communication (Understanding)
3. Critically analyse the relationship between media and politics (Analysing)
4. Develop a critical understanding of the role of communication in politics (Evaluating)

Module 1: Introduction to Political Communications (15 Lectures)

Political Communication: Concept, Theoretical Approaches, Theories and Political communication paradigm, Channels of Political Communication, communication and civic engagement.

Module 2: Media and Politics (15 Lectures)

Media Coverage of Politics, Framing, Opinion Polls, Election Coverage, Political Advocacy, The transmission of political information (Print/TV/SM), Media Bias, Campaign Advertising & Political Participation, Case Studies.

Module 3: Media, Power and Ideology (15 Lectures)

Constructing Ideology: Consensus as ideology; manufacturing consent; Ideology & hegemony, Identity formation and political mobilization, State and Information, Political process and Governance in India, Gauging Public Opinion, Public Opinion and Public Policy, Political Polarization.

Suggested Readings:

1. Media, Markets and Democracy, E Baker, 2004, Cambridge University Press
2. Necessary illusions: Thought control in democratic societies, N. Chomsky, 1995, House of Anansi.
3. The Press and American Politics, 3rd Edition, Richard, Davis, 2001, Prentice Hall. Ch. 2-3, pp. 25-86
4. Mediated Politics: Communication in the Future of Democracy, Robert M Entman, (Eds), 2001, Cambridge University Press
5. Manufacturing Consent: The Political Economy of the Mass Media, Edward,Herman and N. Chomsky, 1998, PantheonBooks
6. A Virtuous Circle: Political Communications in Post industrialist Societies, Pippa Norris, 2000, Cambridge University Press.

MCNR043: NEWS REPORTING AND EDITING (3-0-1)

COURSE OUTCOMES

1. Define the meaning and concept of news reporting and editing (Remembering)
2. Understand the organisational structure of a newsroom (Understanding)
3. Develop editing skills for the print media (Applying)
4. Differentiate between news reporting and editing (Analysing)
5. Assess the quality of an editor in publishing a newspaper (Evaluating)
6. Design print media publications (Creating)

Module 1: News Gathering Process (15 lectures)

Principle of News Reporting, Elements of Reporting, Types of Reporting, Role and Importance of Sources, Cultivating, Verifying

and Dealing with Sources of News, Attribution, Qualities of a good Reporter, Ethical aspects of Sourcing news & Reporting, Risk in reporting.

Module 2: Different Formats of News Report (15 lectures)
Factual and Routine news, Analytical News, Interpretative & Descriptive News, Investigative News and research based or in-depth news, Sequential News, Breaking News.

Module 3: The Editing Process (15 lectures)
Structure of a Newsroom, Editorial desk, Functions of Editorial Desk, Nature and need for editing, Principles of Editing, Role, objectives and tools of editing; process of editing; Editing symbols; language in editing; Objectives of copy editing; editing agency copies; handling wire and correspondents' copy; Ensuring News value and other criteria; Checking facts, language, style, clarity & simplicity; Editing/revising press releases and handouts; Relevant graphics for copy, Style sheets and house styles; Photo Editing; Newsroom terminology in electronic editing; Magazine editing, Headline Writing: Principles, types and techniques.

Module 4: Practicum (15 hrs)
News editing: Hard news, soft news, Opinion and Analytical Pieces), News selection and placement; Preparing dummies; Graphics; Use of editing software; Photo editing and caption writing; Production of Lab Journal.

Suggested Readings:

1. News Writers' Handbook by M L Stein, Susan F Paterno, R Christopher Burnett, 2006, Blackwell Publications
2. Practical Newspaper Reporting, David Spark and Harris Geoffrey, 1997, Routledge Publishers
3. Writing and Reporting News: A Coaching Method by Carole Rich, 1993, CENGAGE Publications.
4. News Writing, George Hough, 2006, Kanishka Publishers
5. The Unwritten Rules of Copy Editing, 2nd Edition, Dominic Gettins, 2006, Kogan Page Publications
6. Reporting for Journalists. Chris Frost, 2001, Routledge
7. News Agencies: From Pigeon to Internet, PTI Style Book, M Shrivastava, 2007, New Dawn Press, Modern Journalism: Reporting and Writing, Diwakar Sharma, 2005, Deep and Deep Publications
8. Feature Writing for Journalists. Sharon Wheeler, 2009, Routledge Publications.

MCHE0044: HEALTH AND ENVIRONMENT COMMUNICATION (3-0-1)

COURSE OUTCOMES
1. Define the key terms in health and environment communication (Remembering)
2. Explain different models and approaches of health and environment communication (Understanding)
3. Develop communication strategy for public health and environment protection (Applying)
4. Examine the role of media in social change (Analysing)
5. Assess the situation for communication intervention (Evaluating)
6. Report news on health and environmental issues (Create)

Module 1: Health Communication (15 Lectures)
Introduction to Health Communication: Meaning of health communication, Conceptions of health, Health Communication issues, illness and well-being, Ethics of Health Communication, Health communication in public health, Enhancement of the quality of life, soliciting co-operation from stakeholders, Facilitating adoption process.

Module 2: Theories and Approaches to Health Communication (15 Lectures)
Health communication theories, Health Communication approaches and action areas: Persuasive approaches, Cultural perspectives, Emotional perspectives, public relations and public advocacy, Community mobilization, Planning, implementation and evaluation of public health communication campaign - Health communication planning process, Situation analysis and audience profile, Identifying programme objectives and strategies.

Module 3: Environment Communication (15 Lectures)
Environment journalism: emergence, rise of environment activism, role of the state, developments in India, relevant laws, UN

initiatives, environment protection and the role of Media, Environmental journalism today, Skills for environmental journalism.

Module 4: Environmental Communication and Challenges (15 Lectures)
Media theory basics for the environmental journalist: Objectivity, Framing-News values, Agenda setting, Advocacy journalism, the media as environmental watchdog, Challenges for investigative environmental journalism. Writing an environment feature, environment research.

Suggested Readings:

1. Communicating Health: A Culture-centered Approach, Mohan J Dutta, 2008, Polity
2. Communication, Media and Environment, A Hansen, 2011, Routledge
3. Environment Journalism, H Bodker and I Neverla (Eds), 2013, Routledge
4. Health Communication – From Theory to Practice, Renata Schiavo, 2007, Wiley
5. Health Communication: Richard K Thomas,2006, Springer
6. Health Communication: Strategies and Skills for A New Era, Claudia Parvanta, 2018, Jones and Bartlett Publishers
7. Journal of Health Communication, Tailor & Francis
8. Risk Communication and Public Health, Peter Bennet and Kennet Calman, 2001, Oxford Medical Publications
9. The Routledge Handbook of Environment and Communication, 2015, Routledge.

MCPM0045: PROGRAMME MANAGEMENT (3-0-0)

COURSE OUTCOMES
1. Understand the meaning and concept of project proposal writing (Understand)
2. Identify the principles and approaches of programme management (Analyse)
3. Undertake critical review of C4D projects (Evaluate)
4. Prepare development project management plans and programmes (Creating)

Module 1: Project Formulation and Appraisal (15 Lectures)
Overview of project management, Feasibility and technical analysis, Market and demand analysis, Economic and financial analysis, Formulation of Detailed Project Report (DPR).

Module 2: Project Planning, Writing and Scheduling (15 Lectures)
Meaning and concept of project planning, Need assessment and project feasibility, Rationale, Project components: Executive summary, Statement of need, Project goals, Project description, Budgeting, Organizational information, Materials and equipment, Human resources, Project costing and financing, organisation structures in project.

Module 3: Project Implementation, Budget and Results (15 Lectures)
Project team and competencies, Coordination and communication, Review Mechanism, Tracking project milestones, Report writing, production and supervision of key inputs, capacity strengthening activities/training, team building activities, Advance and contingency planning, Fund management, project-life-cycle, Results-based Management - outputs, outcomes and higher-level goals or impact, Cost-Benefit Analysis (CBA), Sensitivity Analysis, Project management information system, material and equipment,, financial aspects, project Sustainability, Closing a project, Reviewing a project.

Suggested Exercise
Literature Review, Case Study, Field Survey, Project Writing, Project Reviews, PRA

Suggested Readings:

1. Gower Handbook of People in Project Management (Project and Programme Management Practitioner Handbooks), Lindsay Scott and Dennis Lock, 2013, Routledge
2. How to change the world: Social Entrepreneurs and the Power of New ideas, 2004, David Bornstein, OUP USA
3. Integrated Planning Process: Project Design & Proposal Writing, American Red Cross, 2006
4. IDRC. 2010. Resource Mobilisation a Practical Guide for Research and Community Based Organization http://www.idrc.ca/EN/Programs/Donor_Partnerships/Documents/ Donor-partnership-guide-hyperlinked.pdf

5. Impact Assessment of ICT-for Development Projects: A Compendium of Approaches, Richar Heeks and Alemayehu Molla,2009, IDRC. http://www.sed. manchester.ac.uk/idpm/research/publications/wp/di/documents/di_wp36.pdf

MCSA0046: SITUATION ANALYSIS FOR COMMUNICATION STRATEGY (3-0-1)

COURSE OUTCOMES

1. List the basic models and steps of communication strategy planning (Remembering)
2. Understand the techniques of development communication planning (Understanding)
3. Assess the situation for development communication and intervention (Evaluating)
4. Examine the role of media in socio-economic development and social change (Analysing)
5. Prepare develop communication strategy and plans (Creating)

Module 1: Socio-Ecological Framework and Situation Analysis

Underlying causes of development problems, Socio-Ecological Framework, Situation Assessments: Motivation- Opportunity-Ability (MOA) Model, Case and project feasibility study, SWOT Analysis. Participatory Approach: PRA, Community Mapping, Social Auditing, Transect walk, Auto-photography.

Module 2: Literature Review and Formative Research

Research on current knowledge, attitudes, experiences, practices and beliefs among the participants groups, Understanding Local knowledge, Formative Research, Participatory Research, Participatory Rural/Urban Appraisal (PRA), Participatory Learning and Action (PLA), Most Significant Change (MSC), Appreciative Inquiry, Case study on C4D.

Module 3: Synthesising, Analysing and Reporting Data

Data synthesis, reporting, identifying long-term goals, determining preconditions needed to achieve the goals, linking interventions to results, identifying indicators of results and producing a narrative to summarize changes, issues and challenges.

Suggested Readings:

1. Communication for Development and Civil Society, V.S. Gupta, 2004, Concept
2. Information and Communication Technology: Reinvesting Theory and Action (2Volumes), Kiran Prasad, 2009, BRPC
3. Media, Communication and Development: Three Approaches, Linje Manyozo, 2012, Sage
4. Participatory Communication: Working for Change and Development, S.A. White, 1994, Sage
5. Participatory Communication Paolo Mefalopulos and Thomas, Tufte, 2009, World Bank Working Papers
6. Participatory Communication for Social Change (Communication and Human Values), Jan Servaes, Tom Jacobson andShirley a White, 1996, Sage Publications
7. Participatory Video: Images that Transform and Empower, A Shirley White, 2003, Sage India

MCCA0047: PLANNING MODELS AND COMMUNICATION APPROACHES (3-0-1)

COURSE OUTCOMES

1. Identify the steps in communication strategy development (Remembering)
2. Explain the basic principles and development planning models (Understanding)
3. Analyse the relevance of theoretical frameworks of communication for development (Analyse)

4. Critically analyse the key components of communication strategies (Evaluate)
5. Design and implement C4D programmes (Creating)

Module 1: C4D Planning Models (20 Lectures)
Understanding communication planning, Planning Models: ACADA Model, P-Process, COMBI Model and Integrated Communication, Individual Level Behavioural Change Models: Persuasion Model, Health Belief Model, Stages of Trans-theoretical Model, Issues and Challenges of Social and Behaviour Change Communication (SBCC).

Module 2: Communication Approaches (20 Lectures)
Defining Objectives: Programme Objectives, Behavioural Objectives and Communication Objectives, Dialogue-based approaches, Participatory communication, Communication Plan, Audience Mapping, Segmentation, Channels, Message design–Human-Centric Design (HCD), Message appeal, Message Testing, Material production and Toolkits.

Module 3: Communication Intervention and Strategy (20 Lectures)
Identifying key stakeholders, Preparation of Partnership Plan, Management Plan, Operation Guidelines, Levels of Intervention: Macro, Mezzo and Micro levels, Establishing objectives at multiple levels, Key steps leading to change, Logical Frame, Communication strategy: Advocacy: Effective advocacy, Media Advocacy, Celebrity Advocacy, Legal Advocacy & Executive/Legislative and Regulatory Advocacy), Social Marketing, Entertainment Education, Peer Education, Capacity and Capability Strengthening, Project Implementation, Feedback and Review.

Suggested Readings:

1. Community Dialogue Toolkit - Supporting Local Solutions to Local Challenges, https://ccednet-rcdec.ca/en/toolbox/community-dialogue-toolkit-supporting-local-solutions-local
2. Celebrity Advocacy and International Development (Rethinking Development, Dan Brockington, 1st Edition, 2014, Routledge
3. Hands-on Social Marketing: A Step-by-Step Guide, Kline Nedra Weirnriech, 1999, Sage
4. Media, Communication and Development: Three Approaches, First Edition, Linje Manyozo, 2012, Sage Publications
5. Methods to support human-centric design, M. Maguire, 2001, International Journal of Human-Computer Studies, 55(4),pp.587-634
6. Social Marketing-Changing Behaviour for Good, Nancy R. Lee and Philip Kotler, 2015, Sage Publications
7. The Limits of Media Advocacy, Communication, Culture and & Critique 3(1):44-65
8. Theory and Principles of Public Communication Campaign, C.K. Atkin and R.E Rice, 2012, Sage
9. The Role of Message Tailoring in the Development of Persuasive Health Communication Messages, in Christina Beck,Editor, Communication Year Book 33, S.M. Noar, G.G Harington and R.S. Aldrich, 2009
10. Writing Health Communication: An Evidence Based-Guide, Charles Abraham and Marieke Kools, 2011, Sage
11. Writing a communication strategy for development programmes, UNICEF, 2007, https://sites.unicef.org/cholera/Chapter_7_communications/UNICEF_Writing_a_Comm_Strategy_for_Dev_Progs.pdf

MCMC0048: MEDIA AND CULTURAL STUDIES (4-0-0)

COURSE OBJECTIVES
1. Describe the key concepts of cultural and media studies (Remembering)
2. Understand the cultural dynamics of society with the help of contemporary theory (Understanding)
3. Examine the role of media in mediation of social identity (Analysing)
4. Assess the diverse media and cultural practices (Evaluating)

Module 1: Media and Culture (15 Lectures)
Concept of Culture - meaning; dimensions, Basic theoretical framework - Critical Cultural Theory; Frankfurt School; Chicago School, Mass media and postmodern culture, Culture industries, Popular and mass culture, Multiculturalism and subcultures, Mediated culture, cultural hybridity.

Module 2: Media and Society (15 Lectures)

Media Manufacturing of Culture, Pluralism and Counter-Culture, Mediated Culture, Media & Margins, Media influence on culture, Gender; culture and space, Media and gender.

Module 3: Media, Culture and Identity (15 Lectures)
Identity and Culture, Mediated Identity, Gender, Body and the Culture of Modernity, Contesting Cultures, Techno-Culture, Cyberculture, Media Representations, Under-Representation, Gendered Representation, Visual Pleasure, Internet as a Cultural Platform.

Suggested Readings:
1. Cultural Studies: Texts and Contexts, First Edition, Prantik Banerjee, 2021, Dattsons
2. Communication as Culture, James W. Carey, 2008, Routledge
3. Media and Culture: An Introduction, Campbell, Richard, Martin, Christopher R, and Fabos Bettina, 2011
4. Media and Cultural Studies: Key Works, Gigi Meenakshi Durham and Douglas M. Kellner (eds.), 2006, Blackwell
5. Questions of Cultural Identity, Stuart Hall and Paul Du Gay (ed), 1996, Sage Publications
6. Representation: Cultural Representations and Signifying Practices - Vol. 2 (Culture),1997, Stuart Hall, Sage
7. Sociology of Indian Culture, D.P. Mukerji, 1979, Rawat Publishers
8. What is Cultural Studies? A Reader., John Storey (Ed), John Storey, 2009, Hodder Education

MCBJ0050: BUSINESS JOURNALISM (3-0-0)

COURSE OBJECTIVES
1. Describe the key terms related to business and finance (Remembering)
2. Understand different forms of business journalism (Understanding)
3. Write business news articles (Creating)

Module 1: Introduction to Business and Financial System (15 Lectures)
Basic knowledge of financial system and institutions, Gathering, distribution and allocation of revenue vis-à-vis Central Government and State Governments; finance commission/department, Central and State budgets: budget-making exercise, how to read a budget, concept of zero deficit budget, importance of Public Accounts Committee, Introduction to Tax Laws, Essential Commodities Act, MRTP, FERA, SEBI, RBI, IMF, Industry Bodies and other Financial Regulatory Bodies, Economic Policies.

Module 2: Basics of Business Journalism (15 Lectures)
Business journalism: Global and Indian context, types of business journalism, media and new trends in business journalism, international money market and new information technology, commercial database, ethics in business reporting – business journalism, servant or watchdog.

Module 3: Writing Business News (15 Lectures)
Sources of news on business, finance and industry – governments, chambers of commerce and industries, corporate, trading and industrial executives, share markets, commodities markets, money markets etc. Government policy decision, company reports, RBI reports; analysis of decisions, reports and statements, Data visualisation tools and presentation, ethics in business journalism.

Suggested Readings
1. Business Newspapers: Economic Times, Financial Express, Business Standard, Observer of Business and Politics, BusinessLine.
2. Business Journalism: A Critical Political Economy Approach, 1st Edition, Ibrahim Seaga Shaw, 2015, Routledge
3. Indian Economic Yearbook, National, Agarwal, A.N. & Verma H.O. New Delhi
4. Business Journalism: How to Report on Business and Economics, 1st Edition, Keith Yayes, Apress
5. Periodicals: Business India, Business World, Business Today, The Economist, Dalal Street Journal, Advertising & Marketing(A & M), Far Eastern Economic Review, EPW
6. Reporting Technical Information, Kennet Houp & Thomas Pearsall, 1984, Macmillan
7. Writing About Business: The New Knight-Bagehot Guide to Economics and Business Journalism, Revised Edition, TerriThomson, 2000

MCPM0051: PROJECT MONITORING AND EVALUATION (3-0-1)

COURSE OUTCOMES

1. Identify the data-gathering techniques of communication projects (Remembering)
2. Describe the project monitoring and evaluation processes (Understand)
3. Undertake critical analysis of evaluation data (Analyse)
4. Prepare monitoring and evaluation plans, write reports and communicate findings (Create)

Module 1: Programme Monitoring, Evaluation and Promotion (20 Lectures)

Concept of project Monitoring and Evaluation (M&E), Project cycle, Distinction between M&E, evaluation and impact evaluation, Role of logic models, M&E Plan, Different types of evaluations, Monitoring Outcomes and Assumptions, Measurement of progress, Indicators of change, Impact assessment, Stakeholder Analysis Networks Analysis, Social Support & Recognition, Positionality and ethics, Outcome mapping, Strengths and weaknesses, Promotion of changed/adapted behaviour/results, Testimonial Reminders, Repetition.

Module 2: Data-gathering and Analysis (20 Lectures)

Quantitative and qualitative approaches, survey, community dialogues, interviews, data analysis, use of statistical tools, Baseline Data, Information Management, interpretation, data visualisation, assessing validity and reliability and determining generalisability of the data, Learning and accountability.

Module 3: Reporting and Documentation of M&E Data (20 Lectures)

Interpretation of M&E data, understand its uses, data preparation, documentation, Types of Records: Process, Narrative and Summary, Problem-oriented Recording, formulating recommendation, Reporting Project Progress and Findings, practicum, Reflective practice - Learning Lessons, Adapting the Plan, Continuous Improvement Communicating the Results.

Suggested Readings:

1. Can we know better? Reflections for development, Chambers, R, 2017, Rugby: Practical Action Publishing
2. How Change Happens, 2016, Oxford: Oxford University Press
3. Outcome Mapping: Building Learning and Reflection into Development Programs, Earl, S., Carden, F. and Stymulo, T., 2001,IDRC
4. Program Evaluation theory and Practice 2nd Edition, D.M. Mertens and Wilson, A. T., 2019, The Guildford Press
5. Planning, monitoring and evaluation in development organisations: sharing training and facilitation experiences, De Coninck, J. 2008, Sage
6. Ten Steps to a Results-Based Monitoring and Evaluation System, Kusek, J. Z. and Rist, R. C, 2004, The World Bank
7. The use and abuse of the logical framework approach, O. Bakewell and A Garbutt, 2005, Sida
8. The 'Most Significant Change' (MSC) Technique: A Guide to Its Use, R. Davies and J Dart, 2005

MCDM0052: DIGITAL MEDIA (3-0-0)

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective: *The objective of the course is to provide a comprehensive overview of digital media, focusing on its development, impact, and role in contemporary society. Students will explore the global and national contexts of digital media, examining its influence on communication practices, media industries, and society.*

Course Outcomes:

At the end of this course students will be able to:

CO 1 Analyse the evolution, impact and societal implications of digital media. (Analysing)

CO 2 Examine the role of digital media in transforming communication practices. (Applying)

CO 3 Discuss key issues emerging from recent development in digital media. (Understanding)

Module 1: Digital Media and Society (6 Lectures)
Internet as a medium of communication, Types of internet based communication, Forms of computer mediated communication, Virtual communities, Evolution and development of digital media, Medium specifics trends, Effects of digital media, Evolution and development of ICT, Growth and diffusion of ICT, Digital divide and Digital (In)Equality, ICT policies of India, Regulatory body, IT Laws and Rules, Agencies involved in cybersecurity

Module 2: Social Media in Indian Scenario (10 Lectures)
History; definitions and types of Social media, Social media in India, Use of social media, Social media and interactivity, Content sharing, Social media tools and engagement, Fake news on social media, types and characteristics of social media audience, Marketing and social media audience

Module 3: Application of Digital Media (10 Lectures)
Online activism: Definition; Technology and activism; Characteristics of online activism; Online activism and social change, Democracy and digital media: Elections; political parties; politics; Citizen journalism, ICT for development: Education; Health; E-governance; Entrepreneurship, Artificial Intelligence

Suggested Readings

1. Castells, M. (2004). *The Network Society: A Cross-Cultural Perspective* (Edward Elgar, 2004).
2. Fuchs, C., and Sandoval, M. (Eds.). *Critique, Social media and the Information Society* (Routledge, 2006).
3. Gerbaudo, P. *Tweets and the Streets: Social Media and Contemporary Activism.* (Pluto Press, 2018).
4. Lievrouw, L., and Livingstone, S. *Handbook of New Media* (Sage, 2006).
5. Manovich, L. *The Language of New Media* (MIT press, 2001).

MCFA0053: FILM APPRECIATION (3-0-1)

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective: *The objective of the course is to provide a comprehensive understanding of film as an art form, cultural product, and means of communication. The course explores the aesthetic, technical, historical, and cultural dimensions of cinema, with a focus on global, national (Indian), and regional (Northeast Indian) contexts.*

COURSE OUTCOMES:
At the end of this course students will be able to:

CO 4 Explain the origin and growth of cinema. (Understanding)
CO 5 Analyse films by using established film theories and film genre. (Analysing)
CO 6 Create well-structured film reviews and critical essays. (Create)

Module 1: Growth and Development of Cinema (6 Lectures)
Meaning of cinema, Beginnings of cinema, Silent Era to Studio era, Indian Cinema: Beginning of cinema in India; Arrival of sound to Post-independence era; Cinema and the Nation

Module 2: Social Context and Film Form (10 Lectures)
Classical Hollywood cinema, German Expressionism, Italian Neo-realism, French New Wave, Indian New Wave and Parallel Cinema, Third Cinema

Module 3: Alternative Visions (10 Lectures)
Auteur theory, Feminist film theory, Queer theory, Film genre: Genre theory; Western film, Film noir, Gangster film

Module 4: Indian Cinema (10 Lectures)
Growth of Bollywood, Liberalisation and Indian Cinema, Overview of Northeast India cinema: Historical development; Key filmmakers; Themes and narratives; Contemporary trends

Module 5: Film Culture (9 Lectures)
Evolution of censorship, Film criticism and cinephilia, Film festivals; Events and communities

Suggested Readings

6. Bordwell, D., & Thompson, K. *Film Art: An Introduction* (McGraw-Hill Education, 2012).
7. Gokulsing, K. Moti & Dissanayake. *Handbook of Indian Cinemas* (Routledge, 2018)
8. Monaco, J. *How to Read a Film: Movies, Media, and Beyond*. (Oxford Univ. Press, 2009).
9. Nichols, B. *Engaging Cinema: An Introduction to Film Studies*. (W. W. Norton & Company, 2010).
10. Ray, Satyajit. *Our Films Their Films* (Orient Publishers, 1993).
11. Stam, Robert. *Film Theory: An Introduction* (Blackwell Publishers, 2000).

MCTP6015: TECHNIQUES OF PHOTOGRAPHY AND IMAGE EDITING (0-0-2)

COURSE OUTCOMES

1. Show working knowledge of digital SLR cameras (Remembering)
2. Demonstrate an understanding of composition and image design process (Understanding)
3. Apply image editing and output techniques (Applying)
4. Analyse and critique one's own artistic output (Analysing)
5. Determine safe and responsible work practices (Evaluating)
6. Create photographic work of acceptable standard (Creating)

Description:
To equip the learners with skills and knowledge about the art of digital photography, to enable the learners to professionally handle DSLR cameras, understand technical concepts from the different shooting modes to aperture and shutter speed; and apply composition techniques from finding effective backgrounds to rule of the thirds., To provide hands-on training on outdoor photography as well as studio photography.
Recommended Assignments:

Suggested Practicum:
Street photography, Landscape photography, Action Photo story, Cityscapes, Studio portrait, Building a Photography portfolio.

Suggested Readings

1. Basics of Digital Images. OIT Academic Computing, PDF.
2. Fundamentals of Photo Composition, Paul R. Comon, Sterling Publications.
3. The DSLR Cinematography Guide, R. Koo, Creative Commons, e-book.
4. Langford's Basic Photography, Michael Langford, Anna Fox and Sawdon Rechard Smith, Focal Press.
5. Understanding Exposure, Bryan Peterson, Amphoto Books.
6. Mastering Digital Cameras, Al Judge, Createspace Independent Pub.

MCJG6016: JOURNALING (0-0-1)

COURSE OUTCOMES

1. Demonstrate the ability to explore different options for handling daily experiences (Understanding)
2. Develop self-awareness, self-learning and communication skills (Applying)
3. Apply contextual and experiential learning in their everyday lives (Applying)
4. Improve creativity and imagination (Creating)

Description
During these 30 hours of the Course, students are required to maintain a daily reflective journal, using the Visible Thinking Routine as a critical structure for guiding their journal writing. Students are required to do journaling once a week and submit the journal to the assigned faculty member every Friday for analysis. Grades will be awarded for this course on the basis of the journal entries and a presentation at the end of the semester.

Suggested Readings

1. The principal's role in mentor programs, B. Brock, 1999, London: Kogan Pag.

2. Visible thinking: Unlocking causal mapping for practical business results, J. M. Bryson, 2004, Chichester, J. Wiley.
3. Journaling During Research, Kay Debra Logan, 2005, Library Media Connection; Vol. 23 Issue 6, p12
4. Journaling: Telling your professional "story," D. Miller, 2003, Library Media Connection
5. Social Behaviour and Personality, Hung-Yuan Lin and Chi-Hsian Chiang, 2013, In international journal, Volume 41, Number1, 2013, pp. 113-122(10) Scientific Journal Publishers.

MCDI6017: DISSERTATION PHASE – I (0-0-2)

Description

Through this practicum students will be taught the different methods for conducting academic research. It will also teach students to conduct review of literature, prepare synopsis outline, format or structure of report. They will also learn how to add Appendices, such as references to sources of data, instruments of data collection; give Bibliography and footnotes.

The Exercise:

During this 60-hours course, students will have to choose a research topic of their choice, conduct a literature review with bibliography, and develop a research proposal which will be submitted in partial fulfilment for the requirement of Master's degree in Mass Communication. Students will also write and present a research paper.

Recommended Readings

1. Introduction to Mass Communication Research, Natziger, Ralph O. and David M. White. Baton Rouge: Louisiana StateUniversity Press, 1981.
2. Mass Media research: An Introduction, Wimmer, Roger D. and Joseph R. Dominick. Belomnt: Wadsworth.
3. MLA Handbook for Writers of Research Papers, Joseph Gibaldi and Walter S. Achtert New Delhi: Affiliated East-West PressPvt. Ltd., 1994.
4. Research Methods – The Basics, Nicholas Walliman, Routledge, 2011
5. Research Methodology Methods and Techniques, C.R Kothari
6. Research Methods in Social Sciences, O.R Krishnaswamy
7. Research Methods in Mass Communication, Stempel, Guido H. (III) and Bruce H. Westley (Ed). Englewood Cliffs: Prentice- hall Inc, 1981
8. Writing Your thesis, New Delhi: Sage Publications, 2008

MCAV6018: AUDIO-VIDEO PRODUCTION (0-0-2)

COURSE OBJECTIVES

1. Show awareness of safe and responsible work practices (Remembering)
2. Demonstrate an understanding of the audio-video production process (Understanding)
3. Experiment with different types of audio and video production tools (Applying)
4. Develop competency in editing and output techniques (Creating)
5. Create different formats of audio and video programmes (Creating)

The Exercise:

Basics of audio editing, Basics of video editing, Principles of scripting, Audio recording techniques and equipment, Radio Talk show, Radio Commercials, Studio recording, Outdoor recording, Hands-on training on Camera techniques and accessories, Framing and Shot sizes, Lighting techniques for video, Commercials, Video Interview, Live recording techniques.

Suggested Readings

1. Single-Camera Video Production, Robert B Musburger and Michael R. Ogden, 2014, Focal Press
2. Techniques of Radio Production, Robert Mcleish, 2015, Focal Press
3. The Videomaker Guide to Digital Video and DVD Production, Stephen Muratore and Matt York, Focal Press.
4. Video Production Handbook, Jim Owens, 2011, Routledge
5. Writing for Radio and Television in India, Krishnan K. Kedia, Cyber Tech Publications.

MCDP6019 DISSERTATION PHASE – II (0-0-2)

Project Description

During this practicum course students will complete data collection, analysis, preparation of research report and submit the final dissertation. The dissertation has to be systematically structured following proper methodology of communication research. Phase - I of the course is carried out in the 2nd Semester where students work upon research proposals, literature review and research methodology. Students will have to ensure that the dissertation is preparedkeeping in view Intellectual Property Rights, maintenance of research ethics and avoidance of plagiarism. Students are required to make a presentation of the dissertation submitted to the department on the date set by the department.

Suggested Readings:

1. Research Methodology: Methods and Techniques, 4th Edition C.R. Kothari and Gaurav Garg, 2019, New Age InternationalPublishers
2. Methodology of Research in Social Sciences, O.R. Krishnaswamy and M. Ranganatham, 2016, Himalaya Publishing House
3. Writing Your Thesis, Paul Oliver, 2014, Sage Publications, New Delhi
4. Research Methods in Mass Communication, III Stempel, Guido H. and Bruce H. Westley, 1988, Prentice-Hall.
5. Mass Media Research: An Introduction, Roger D. Wimmer and Dominick R. Joseph, 2005, Wadsworth Publishing Co. Inc.
6. Writing Successful Reports and Dissertations (Student Success) 1st Edition, Lucinda Becker, 2014, Sage Publications

MCIP6020 INTERNSHIP (5 Credits – 90 hours)

Description

Students will undertake 4-weeks internships in media and communication organizations during the winter vacation between third semester and fourth semester. They will discuss the choice of media and communication organization with their respective mentors and obtain the consent of the head of the department. Before going for the internship, an *Internship Agreement Contact* form from the concerned organization will be submitted by the student to their respective mentors. After completion each student will submit a copy of the *Internship Completion Certificate* to their mentors from the designated authority of the concerned media and communication organization.

The final evaluation will be on the basis of the following criteria:

a. Journal – 30%
b. Portfolio and Presentation – 50%
c. Written evaluation by the employer – 20%

Journal: Each student will keep a daily journal with an entry for each day spent doing work for the internship. This journal should be e-mailed to the mentor at the beginning of each work week. In this journal the students should summarize the activities and assignments on which the student worked. The student should also keep track of the number of hours for each week.

Portfolio: At the end of the internship, each student is required to prepare a professional portfolio that contains examples of the students' work during the internship. The portfolio will additionally contain a written evaluation of the media organization, employer evaluation of the student, a copy of the internship completion certificate, a one-page summary of the internship.

Employer Evaluation: At the end of the internship the supervising employer will be asked to submit a written evaluation of the student's performance.

Student Evaluation: At the end of the internship the student will be asked to submit a written evaluation of the employer.The department will issue the following to the students:

a. Internship Application Form – to be submitted to the mentor prior to internship.
b. Internship Agreement Contract – to be submitted to the mentor prior to internship.
c. Student Evaluation of the Internship – to be included in the portfolio
d. Employer Evaluation of Intern – to be included in the portfolio

Last date of Internship: To be notified by the department

Portfolio Submission and Presentation: To be notified by the department

MCFP6021 FINAL PROJECT(5 Credits – 90 hours)

Project Description:

Each student is required to submit a project based on her/his area of specialization or any other relevant areas of Journalism and Mass Communication/Advertising/Public Relations etc. They are required to choose the topic of their Final Project in consultation and supervision of the teacher/Mentor of the department and duly approved by the Head of the Department. The Final Project has to be submitted (two printed in bound form and a soft copy) as per the schedule duly notified by the department.

Suggested Project:

Designing and publication of newspapers/magazines/publicity posters/brochure

Project Evaluation Criteria

- Project activity assessment: 20%
- Evaluation of final project: 60%
- Viva-Voce: 20%

Last date of project submission: To be notified by the department

Portfolio Submission and Presentation: To be notified by the department

VALUE ADDED COURSES

MCCS6122 COMMUNICATION SKILLS (1-0-1)

COURSE OBJECTIVES

1. Identify the different styles of communication (Remembering)
2. Understand how to develop effective speaking skills (Understanding)
3. Evaluate various communication needs (Evaluating)
4. Develop professional oral & written communication skills (Applying)

Module 1: Basics of Communication (5 Lectures)

Essentials of effective Communication, Types & techniques of communication: Verbal & Non-Verbal Communication, Communication in organization, Communication Network in an Organization: Personal Communication, Internal Operational Communication, External Operational Communication.

Module 2: Oral Communication (13 Lectures)

Language in Communication, Phonetics, Spelling, Pronunciation, and Accent, Speech Drills, Oral Communication Skills: Seeking and giving information/suggestions/advice, Offering and responding to offers, Requesting and responding to requests, Congratulating people, Expressing condolences, Asking questions and responding politely, Apologizing and forgiving, Giving instructions, Seeking and giving permission, Expressing opinions, Group discussion, Seeking explanations, Expressing sympathy, Reading Skills: Skimming and Scanning, Levels of Reading, Reading Comprehension, Academic Reading Tips, Listening and speaking skills, Contextualised speaking.

Module 3: Written Communication (12 Lectures)

Writing Skills, Elements of Writing: Sentence, Phrases and Clauses, Forms of Written Communication, Formal & Informal Writing, Letter Writing, Notices, Summary, Note-making, Job application, Preparing a CV/Resume and Effective Profiling, Preparation of Cover letters, preparing for and Facing a Job Interview, Preparing a Presentation, Preparing Agenda and Minutes for Meetings, Writing Notices and Memos, Drafting an E-mail, Correspondence with Government Authorities/institutions, Office Orders, Enquiries and Replies, audience analysis.

Suggested Readings:

1. Business Communication, Meenakshi Raman and Prakash Singh, 2012, Oxford University Press
2. Oxford English Grammar, Sydney Greenbaum, 1996, Oxford University Press
3. Effective Technical Communication, M. Ashraf Rizvi,2005, Tata McGraw Hill
4. Business Communication, Anjanee Sethi & Bhavana Adhikari, Tata McGraw Hill
5. Working in English, Leo Jones,2001, Cambridge University Press
6. Speaking Personally, Gillian Porter Ladousse,1983, Cambridge University Press
7. Communication Skills. Leena Sen, 2007, PHI Learning
8. English phonetics and phonology paperback with audio CDs (2): A practical course, P. Roach, 2009, Cambridge university press.

DEPARTMENT OF PSYCHOLOGY

VISION

To be a centre of excellence in teaching, learning, research and in the practice of psychological counselling, thereby promoting community mental health and psychosocial competence in order to foster cohesion in the society.

MISSION

1. Department of psychology and counselling Assam Don Bosco University seeks to:
2. Achieve excellence in teaching, learning, research, practice and extension activities.
3. To nurture and develop the counselling skills of the students.
4. To prepare competent counsellors who are socially committed and culturally sensitive and are bound by the ethics of the profession.
5. To create an environment committed to promoting the application of science of psychological counselling to real world situation.

PROGRAM OUTCOMES – MSC PROGRAMME

PO 1: Critical Thinking: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

PO 2: Effective Communication: To build on effective inter and intra personal communications skills including empathy. Open mindedness, mutual respect, Confidence, effective listening, non-verbal communication, clarity and concision.

PO 3: Scientific Temper: To build essential skills of different ways of life including questioning observing, physical reality, testing, hypothesizing, analyzing and communicating

PO 4: Effective Citizenship: Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO 5: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO 6: Environment and Sustainability: Building a contemporary state of art model using the theories of social sciences for sustainable development of the campus/environment.

PO 7: Gender Sensitization and Social Commitment: To bring about a change in behavior and attitude and to instill empathy in the students to raise awareness about the gender equality concerns and to imbibe the sense of social responsibility for self and community to envisage ethical framework, obligation to work and cooperate with other individuals and organizations for the benefit of the society at large

PO 8: Self-Directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes

PROGRAM SPECIFIC OUTCOMES – MSC PSYCHOLOGY

PSO 1: Knowledge and Attitude: To develop budding counselling psychologists who will be able to understand and demonstrate behavior, have attitudes in the basic areas of professional counseling.

PSO 2: Research and Analytical Skills: Will be able to demonstrate competence in analysis and critically anlayse scholarly work in areas of research, consultancy and counseling practice.

PSO 3: Application: To equip students with knowledge in the fundamentals of psychology and counseling so that they

PSO 4: understand the application of the field relating to different issues in psychology.

PSO 5: Core Competency Skills: To enhance the core counseling skills, such as active listening, empathy, unconditional positive regard, congruence and so on and empowering the process of human development.

PSO 6: Ethics: To demonstrate the technical skills and ethical decisions appropriate for the holistic professional development in the field.

MSc PSYCHOLOGY –DETAILED SYLLABUS

PCSP0006: INTRODUCTION TO SOCIAL PSYCHOLOGY

(3 Credits – 45 hours)

Course Outcomes

1. Define the basic concepts of social psychology in different contexts. (Remembering)
2. Explain different concepts of social processes, social influence, group dynamics and group influence. (Understanding)
3. Apply the theoretical concepts of social psychology into real life settings. (Applying)
4. Analyze the difference between social perception and social cognition as well as prejudice, stereotype, discrimination. (Analyzing)
5. Compare different types of groups and their functional systems. (Evaluating)
6. Discuss various social problems in light of the theoretical concepts of social psychology. (Creating)

Module I: Introduction (8 hours)

Social Psychology - Definition, Nature, Origin and Development, Social Psychology in Indian context.

Module II: Social Processes (12 hours)

Social perception or cognition, interpersonal attraction, social motives, social learning, socialisation and social roles, pro-social behaviour, aggression and violence.

Module III: Social Influences (12 hours)

Persuasion, attitude, prejudice, discrimination and stereotypes - nature and differences among them. Factors in the formation of attitudes, measuring attitudes, factors in attitude change.

Module IV: Group Dynamics and Group Influence (13 hours)

Formation of groups, structure and functions, types, group communication, group norms, conformity behaviour, co-operation and competition, social facilitation, leadership, group effectiveness, decision making, problem solving, group conflict and resolution.

Suggested Readings

1. Baron, R., A., Byrne, D., Social Psychology, New Delhi: Prentice Hall,10th Edition (2006).
2. Mc David and Harai, Social Psychology; Individuals, groups, societies, Harper and Row (1968).
3. Moghaddam, F.M., Social Psychology: Exploring Universals Across Cultures, Freeman and Company (1997).
4. Dalal, Ajit K., A. Misra, Girishwar (Eds)., New Directions in Indian Psychology, Social Psychology, New Delhi: Sage(2001).
5. Eckes, Thomas and Trautner, Hanns M. (Eds.), The Developmental Social Psychology of Gender, Mahwah: Lawrence Erlbaum Associates, Publishers (2000).
6. Hogg, Michael A. and Cooper, Joel (Eds), The Sage Handbook of Social Psychology, Concise Student Edition, Los Angeles: Sage (2007).
7. Misra, Girishwar (Ed.), Applied Social Psychology in India, New Delhi: Sage (1990).
8. Pandey, Janak (Ed.), Psychology in India Revisited – Developments in the Discipline, Vol. 3: Applied Social and Organisational Psychology, New Delhi: Sage (2001)
9. Sharan, A.K. Social Psychology, New Delhi: Commonwealth Publishers (1999).
10. Linda steg, Abraham p. Buunk, applied social psychology: Understanding and managing social problems

PCEC0013: EASTERN APPROACHES TO PSYCHOLOGY AND COUNSELLING

(3 Credits-45 Hours)

Course Outcomes

1. Define the basic terms related to the different eastern approaches of psychology. (Remembering)
2. Classify among Indian/Chinese/Japanese approaches to psychology. (Understanding)
3. Make use of the appropriate Indian/Chinese/Japanese approaches to psychology in applied settings. (Applying)

4. Examine ancient and contemporary eastern approaches of psychology. (Analysing)
5. Recommend the suitable approach in applied settings. (Evaluating)
6. Develop a clear understanding of eastern and western approaches to Psychology. (Creating)

Module I: Introduction (7 hours)
Definitions, nature, differentiation of concepts-eastern, indigenous and Indian psychology; relationship between culture and psychology, emergence of non-western and indigenous perspectives to psychology.

Module II: Major Schools of Indian and Eastern Psychology (20 hours)
Indian approaches to Psychology-Upanishads, Sankhya, Dvaitha and Advaitha schools; current areas of research in Indian psychology. Chinese approaches to psychology - Taoism and Confucianism, Japanese approaches to Psychology -Morita and Naikan therapies.

Module III: Self and Consciousness (10 hours)
Viewpoints of Upanishads, Bhagavadgita, Buddhism and Jainism and other Eastern schools of thought.

Module IV: Indian and other Eastern Approaches to Health and Wellbeing (8 hours)
Yoga, Ayurveda, goals of life-concept of purusharthas, personality development-concept of Ashramas

Suggested Readings

1. Bankart, C. P. (1996). Talking cures: A History of Western and Eastern Psychotherapies. Pacific
2. Grove, CA: Brooks/Cole.
3. Ajaya, S. (1983). Psychotherapy East and West. Honesdale (PA): Himalayan International Institute.
4. Berry, J. W., Poortinga, YpeH. And Pandey, J. (1997). Handbook of cross-cultural psychology, T" Edition, Vol.1 Theory and method. Boston: Allyn and Bacon. (Chapters3,4and8byJ.G.Miller,D. Sinha, P.M. Greenfield)
5. Jones-Smith, E. (2012). Theories of counselling and psychotherapy: An integrative approach.
6. Thousand Oaks, CA: Sage.
7. Garg, Pulin K. K. and Parikh, I. J. (1995). Crossroads of culture: a study in the culture of transience, New Delhi: Sage.
8. Kakar.S.(1982). Shamans, mystics and doctors: A psychological enquiry into India and its healing traditions. Bombay: Oxford University Press.
9. Paranjpe, A. C. (1998). Self and identity in modern psychology and Indian thought. New York: Plenum.
10. Dunn, B. R., Hartigan, J. A., and Mikulas, W. L. (1999). Concentration and mindfulness meditations: Unique forms of consciousness? Applied Psychophysiology and Biofeedback, 24 (3), 147-165.

PCTP0020 THEORIES OF PERSONALITY

(4 Credits- 60 hours)

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:
1. Define personality. (Remembering)
2. Explain the rationale behind the theories of personality. (Understanding)
3. Identify the impact of environment and genetics in development of personality. (Applying)
4. Analyse modifications of self in perceiving environment. (Analysing)
5. Assess the relation between cultural and personality. (Evaluating)
6. Compare and contrast various perspectives of personality. (Creating)

Module I: Introduction to Personality (10 hours)
Definition and Nature of personality; Trait and Type Theories of Personality; Determinants of personality: Biological and socio-

cultural- Hans Eysenk, Gray and Cloninger.

Module II: Classical approaches to Personality Development (20 hours)
Pre- Freudian (Structuralism- any two theorists; Functionalism- any two); Psychoanalytic; Post Freudian (Erikson; Eric Fromm); Neo- Freudian (Adler; Horney; Jung); Ego Psychology (Anna Freud; Hartmann; Rapapport)

Module III: Learning, Cognitive and Humanistic-Existential Approaches (20 hours)
Learning Approaches: Bandura
Cognitive Approaches: Rotter, Mischel
Humanistic–Existential Approaches: Frankl, Rollo May, Maslow, Rogers.

Module IV: Assessment of Personality (10 hrs)
Projective Tests- Ink blot test, Thematic Apperception Test, Sentence Completion TestObjective Tests; MMPI-II, 16PF, EPQ

Suggested Readings
1. Atkinson, R. L., Atkinson, R. C., Smith, E. E., Bem, D. J. and Hilgard, E. R. (1990).
2. Introduction to Psychology. New York: H. B. J. Inc.
3. Sternberg, R. J. (2010). Cognitive Psychology. New York: Cengage Learning
4. Passer, M.W. and Smith, R.E.(2010). Psychology: The Science of Mind and Behavior. New Delhi: Tata McGraw-Hill.

PCMH0021 CONCEPTS OF MENTAL HEALTH AND ILLNESS-I

(4 Credits - 60 hours)

COURSE OUTCOMES
1. Define mental health and illnesses and list categories of mental illness as specified in DSM and ICD (Remembering)
2. Classify and categorise mood disorders, obsessive compulsive and related disorders, anxiety disorders(Understanding)
3. Apply diagnostic criteria of mood disorders, obsessive compulsive and related disorders, anxiety disorders to diagnose individuals with mental illnesses and select the appropriate psychological intervention for different childhood, adolescent and adult mental health related issues (Apply)
4. Analyse the distinction between normality and abnormality. Distinguish clinical features of different mental illnesses. (Analysing)
5. Evaluate Bio Psycho Social models and other models of mental health and illness. (Evaluate)
6. Create a management plan for patients on the basis of clinical features, diagnosis criteria and therapist competence. (Creating)

Module I: Introduction (10 hours)
Definition of mental illness and mental health. Historical review and changes in the concept of mental illness and mental health. Introduction to classification systems (DSM and ICD)

Module II: Models of Psychopathology (15 hours)
BioPsychosocial, Psychoanalytic, Behavioristic, Cognitive- Behavioral, Humanistic, Diathesis-Stress Model

Module III: Mood Disorders (Symptoms, Etiology and Treatment (15 hours)
Unipolar Depressive Disorders in different population. Bipolar and Related Disorders in different population.

Module IV: Anxiety and Related Disorders (Symptoms, Etiology and Treatment) (10 hours)
Phobias in different population: specific phobia and social phobia. Generalised Anxiety Disorders in different population. Obsessive Compulsive and Related Disorders in different population: Obsessive Compulsive Disorder, Body Dysmorphic Disorder, Hoarding Disorder, Trichotillomania

Module V: Somatic Symptoms and Dissociative Disorders (Symptoms, Etiology and Treatment) (10 hours)
Somatic Symptom Disorder, Functional Neurological Disorder, Factitious Disorder, Dissociative Disorder: Dissociative Identity Disorder, Depersonalisation Disorder, Derealisation Disorder

Suggested Readings

1. Diagnostic and Statistical Manual of Mental Disorders (DSM-5), 2013 American Psychiatric Association.
2. Robert C.Carson, James N. Butcher, Susan Mineka, Jill M. Hooley, Abnormal Psychology, Pearson 13th edition,
3. Sarason, Irwin G. a. Sarason Barbara R. Abnormal Psychology. The Problem of Maladaptive Behaviour. New Delhi: PHI Learning Private Limited, 11th Edition, (2009).
4. Ahuja, Niraj, A Short Textbook of Psychiatry,New Delhi: Jaypee, 6th Edition, (2006).
5. Antony, John D., Mental disorders, Encountered in Counselling, A Textbook of clinicalPsychology Based on DSM IV, Dindigul: Anugraha Publications, (2006).
6. Chaube, S.P., Developmental Psychology, New Delhi: Neelkamal, (2007).
7. Gilbert, Paul, Psychotherapy and Counselling for Depression, Los Angeles: Sage, 3rd Edition (2007).
8. Humphrey, Geraldine M. A. Zimpfer David G. Counselling for Grief and bereavement. 2nd Edition. Los Angeles: Sage, (2008).
9. Korchin, Sheldon, J., Modern Clinical Psychology, Principles of Intervention in the Clinic and Community. New Delhi: CBS Publishers and Distributors, (1986).
10. Kumar Updesh and Mandal Manas K. (Eds)., Suicidal Behaviour, Assessment of People-at- Risk. Los Angeles: Sage, (2010).
11. Patel, Vikram. Where There is No Psychiatrist. A mental health care manual. Glasgow: Gaskell, (2003).
12. Patel, Vikram A. Thara. R. (Eds.). Meeting The Mental Health Needs of Developing Countries. NGO Innovations in India. New Delhi: Sage, (2003).

PCRM0022: RESEARCH METHODOLOGY AND STATISTICS IN SOCIAL SCIENCE

(4 Credits- 60 hours)

COURSE/LEARNING OUTCOMES

1. Define the basic concepts of research and recognize the philosophical foundations of research. (Remembering)
2. Understand the steps in conducting research and the major research designs. (Understanding)
3. Analyse the collected data in research using different statistical measures. (Analysing)
4. Apply research design, tools and statistical measures to carry out research in social sciences. (Applying)
5. Compare natural and social sciences as well as the different approaches and research designs most commonly used in social sciences research. (Evaluating)
6. To create a research proposal using indicating appropriate research design method of data collection and statistical computation. (Creating)

Module I: Introduction to Research (10 hours)

Philosophical Foundations of Research. Natural and social science research-characteristics and scientific attitude. Scope of social science research-basic and applied research; Ethical concerns in Counselling research.

Module II: Research designs, approaches and types (12 hours)

Research designs: Descriptive, Exploratory, and Experimental: meaning, scope, characteristics, application in social work setting. Research Approaches: Qualitative and Quantitative Research: meanings, scope, methods, steps, sampling, data collection, analysis, interpretation and reporting. Strengths and weaknesses.

Evaluative research: Programme and projects evaluation: concept, types, steps, reports. Participatory research and action research: concepts, scope, application and steps.

Module III: Steps in Research Process (20 hours)

Problem Formulation: Identifying research issue, formulating research topic and problem, review of literature (library work), theoretical framework, formulating objectives, clarifying concepts, variables- conceptual and operational, formulating hypothesis.

Population and Sampling: Inclusion and exclusion criteria of population, the logic of sampling size and techniques: probability and non-probability sampling.
Tools for data collection: Levels, types of measurements, reliability, and validity of tools.
Constructing tools for data collection: questionnaire, interview schedule, scales. Quantification of qualitative data.
Sources, collection, and analysis of data: Secondary and primary sources. Data collection, data editing, coding, mastersheet, analysis, report writing, using computer for data analysis: coding, analysis- graphs and results.
Professional report writing

Module IV: Introduction to Statistics (18 hours)
Statistics: Definitions, uses, and limitations. Classification, and tabulation of data, univariate and bivariate, diagrammatic and graphic presentations. Measures of central tendencies, Mean, Median, and Mode and their uses. Measures of variability range, variance, and standard deviation.
Correlation: Meaning and computation of coefficient of correlation as product moment, Spearman's Rank Correlations, interpretation of correlations.
Test of Hypotheses: Basics, Probability distribution, normal distribution. t-test, Chi-Square test and ANOVA.

Suggested Readings

1. Ahuja, R. (2001). *Research Methods*, Jaipur:Rawat.
2. Alston, M. Bocoles, W., (2003). Research in Social Workers: An Introduction to the Methods (Indian ed.), Jaipur:Rawat.
3. Baker, T. L. (1994). *Doing Social Research*, Singapore: McGraw Hill.
4. Goode, W. J. and Hatt, P. K. (1981). *Methods in Social Research*, Singapore: McGraw Hill.
5. Gupta, S. C. (1997). *Fundamentals of Statistics*, Delhi: Himalaya Publishing House.
6. Gupta, S.P. (1997). *Statistical Methods*, New Delhi: Sultan Chand and Sons.
7. Jacob, K.K., Methods and Fields of Social Work in India, Asia Publishing, Bombay, 1996
8. Kothari, C. R. (2004). *Research Methodology: Methods and Techniques*, (2nd ed. reprint), New Delhi: New AgeInternational.
9. Laldas, D.K. (2000). *Practice of Social Research*, Jaipur: Rawat.
10. Mikkelsen, B. (2005). *Methods for Development Work and Research-A New Guide for practitioners,* New Delhi: Sage.
11. Sarantakos, S. (2005). Social Research, New York: Palgrave Macmillan.

PCCP0023 COGNITIVE PSYCHOLOGY

(4 Credits-60 Hours)

Course Outcomes

1. Define the basic concepts of cognitive psychology, identify major theoretical foundations and recognize the historical background of cognitive psychology. (Remembering)
2. To understand the relationship between mind, brain and behaviour. (Understanding)
3. To analyse the scope and application of cognitive psychology. (Analysing)
4. To use measures of cognitive psychology in research and practice. (Applying)
5. To evaluate different cognitive methods, tools and their appropriate applicability. (Evaluation)CO6 To develop an understanding of the scope and application of cognitive psychology. (Creating)

Module I: Introduction to Cognitive Psychology (10 Hours)
Definition, history of cognitive psychology and emergence of cognitive science, current trends.
The Brain and Cognition: Basic neuroanatomical principles, modern techniques for exploring cognition (EEG, fMRI, PET), cognitive experiments, Emotional Intelligence, Artificial Intelligence.

Module II: Memory Processes (15 Hours)
Sensory Memory, Short Term and Long-Term Memory- types, coding and retrieval;Working Memory: Nature, Theories,

Educational Applications.

Semantic and Episodic Memory: Semantic vs Episodic Memory; Level of Processing and Hierarchical Network model.
Prospective Memory: Types and Common Failures of Prospective Memory in Everyday life. Forgetting: Incidental and Motivated

Forgetting.

Module III: Attention & Perception (20 Hours)
Basic Concepts of Attention: Divided Attention, Selective Attention, Visual Attention and Auditory Attention. Bottleneck and Capacity theories, Automatic and Controlled Processing, Brain and Attention.
Modularity of Perception: Visual Perception (Form and Pattern), Space Perception and Cognition, Auditory Perception, Multimodal Perception, Synesthesia, Perception and Action.
Subliminal Perception; Gestalt Approach of Perceptual Organisation, Time Perception: Fourth Dimension, Pattern Recognition: Bottom Up and Top-Down Approach, Perceptual Learning, Depth Perception.

Module IV: Thinking, Problem Solving and Decision Making (15 Hours)
Types of thinking, Components of thinking: images, concepts, Creativity.Decision Making: Complex, Uncertain Decision Making; Human Problem Solving: Strategies and Heuristics.

Suggested Readings

1. Galotti, K.M. (2013). Cognitive Psychology In and Out of the Laboratory (5th ed.). Sage Publications Inc.
2. Kellogg, R.T. (2007). Fundamentals of Cognitive Psychology. Sage Publication.
3. Matlin, M. W. (2006). Cognition. John Wiley & Sons, Inc.
4. Riegler, G.L.R. (2008). Cognitive Psychology: Applying the Science of the Mind. Pearson Education.
5. Jahnke, J.C., & Nowaczyk, R.H. (1998). Cognitive Psychology. Prentice Hall.
6. Matlin, M. W. (1995). Cognition. Prism Book.
7. Reed, K.S. (2000). Cognition: Theory and Applications. Wadsworth.

PCGP0024: GENERAL PSYCHOLOGY

(3 credits – 45 hours)

Course/Learning Outcomes
1. Define psychology, name the different fields of psychology, list the different areas in which psychology is applicable. (Remembering)
2. Understand how the visual and auditory systems work. (Understanding)
3. Apply the theories of learning to modify behavior and application of different strategies for memory improvement. (Applying)
4. Analyse the strengths and weaknesses of the important theories of psychology. (Analysing)
5. Evaluate the contribution of psychology in different fields. (Evaluating)
6. Create a basic idea of personality and the important theories of personality. (Creating)

Module I: Introduction to Psychology (6 hours)
Introduction - Definition, nature, history, scope, purpose, and sub-fields of psychology Applications of psychology - stress and stress management, coping, well-being, resilience

Module II: Biological Basis of Behavior (10 hours)
Nervous System: Neuron and its structure, types of nervous system,Endocrine system: Hormones and their functioning Sensory systems: Structure and function of eye and ear.

Module III: Cognitive Processes (11 hours)
Learning: Classical Conditioning, Operant Conditioning, Latent, Insight, Observational learning.
Memory: Models of memory - Atkinson & Shiffrin, and Craik and Lockhart, Mnemonics, Forgetting - decay and interference
Intelligence: Spearman's, Sternberg's, and Gardner's theories of intelligence

Module IV: Conative and Affective Processes (10 hours)
Emotion: Definition and theories of emotions (James-Lange, Cannon-Bard and Schachter-Singer).
Motivation: Motivational Cycle, types of motives (sociogenic and psychogenic), theories of motivation (Content theories: Maslow, and Herzberg's 2 factor theory; Process theories: Bandura's self-efficacy theory, and Vroom's expectancy theory).

Module V: Theories of Personality (8 hours)
Trait & Type approaches, Psychoanalytic, Neo-Freudian (Jung, Adler), Existential (Frankl), and Humanistic theories (Rogers).

Suggested Readings:

1. Baron, R. A. & Misra, G. (2014). *Psychology (5th ed.,),* New Delhi: Pearson Education.
2. Ciccarelli, S. K., White, J. N., and Misra, G. (2018). *Psychology*, New Delhi: Pearson Education.
3. Morgan, C. T., King, R. A., Weisz, J. R., and Schopler, J. (2017). *Introduction to Psychology (7th ed.,)*. New Delhi: Tata McGraw-Hill.
4. Nolen-Hoeksema, S., Fredrickson, B. L., Loftus, G. R. and Lutz, C. (2015). *Atkinson and Hilgard's Introduction to Psychology (16th ed.,)*. New York: Harcourt Brace Jovanovich.

PCCM0025: CONCEPTS OF MENTAL HEALTH AND ILLNESS-II

(4 Credits – 60 Hours)

Course Outcomes

1. Define mental illnesses. (Remembering)
2. Classify and categorise developmental disorders, schizophrenia, personality disorders, substance related disorders,eating disorders and neurocognitive disorders. (Understanding)
3. Apply diagnostic criteria categorise developmental disorders, schizophrenia, personality disorders, substance related disorders, eating disorders and neurocognitive disorders to diagnose individuals with mental illnesses. (Applying)
4. Analyse the distinction between normality and abnormality. Distinguish clinical features of different mental illnesses. (Analysing)
5. Explain the causal factors of mental health and illnesses. (Evaluating)
6. Create a management plan for patients on the basis of clinical features, diagnosis criteria and therapist competence. (Creating)

Module I: Introduction (10 hours)
Causal Factors of abnormal behavior: Causes and Risk Factors for Abnormal BehaviorClinical Assessments and diagnosis and treatment

Module II: Developmental Disorders (Symptoms, etiology and treatment) (15 hours)
Intellectual Disability
Autism Spectrum DisordersADHD
Learning Disabilities

Module III: Major Psychological Disorders (Symptoms, etiology and treatment) (15 hours)
Schizophrenia Spectrum Disorders
Personality Disorders

Module IV: Substance related and eating disorders (Symptoms, etiology and treatment) (10 hours)
Substance Related Disorders
Eating Disorders

Module V: Neurocognitive and Sexual Disorders (Symptoms, etiology and treatment) (10 hours)
Delirium
Dementia
Sexual dysfunctions

Suggested Readings:

PCBP0026: BIO-PSYCHOLOGY

(3 Credits- 45 hours)

COURSE OUTCOMES

At the end of this course students will be able to:

1. Identifying biological bases of behavior. (Remembering)
2. Associating the role of the nervous system with behavior and emotions. (Understanding)
3. Examining the impact of bio chemicals in behavior and mental health at a conceptual level. (Applying)
4. Mapping the biological markers of individual difference. (Analyzing)
5. Reflecting on genetic and chromosomal bases of psychopathology. (Evaluating)
6. Develop conclusions on biological assessment of behavior. (Creating)

Module I: Introduction to Bio-psychology (7 hours)

History and scope; Major theoretical perspectives: Rene Descarte, Phinaes Gage, Charles Darwin. Nature versus Nurture controversy; Sub disciplines and allied fields; Methods in Bio Psychology.

Module II: Neurons and Genetic bases of behavior (10 hours)

Structure of neuron; Nerve impulse and Synaptic transmission; Neurotransmitters; Types of neuron.
Genetic bases of behavior: Structure of a gene, DNA and Chromosomes, Types and Functions of Genes, Genotype and Phenotype.

Module III: Nervous System (10 hours)

Central Nervous System: Brain and Spinal Cord.
Peripheral Nervous system: Division; Role of nervous system in controlling behavior.

Module III: The Endocrine System and behavior (10 hours)

Endocrine glands; Hormones; Role of endocrine system on emotions and behavior.

Module IV: Neuropsychological diseases (8 hrs)

Parkinson's disease, Huntington's disease, Alzheimer's disease, Chromosomal anomalies.

Suggested Readings:

1. Carlson, N. R. (2012). Foundations of physiological psychology. (Sixth Edition). Delhi: Pearson Education.
2. Passer, M.W. and Smith,R.E.(2010).Psychology:TheScienceofMindandBehaviour.NewDelhi: Tata McGraw-Hill
3. Breedlove, S. M., Rosenzweig, M. R., & Watson, N. V. (2007) Biological Psychology: An introduction to behavioral, cognitive, and clinical neuroscience, 5th Edition. Sinauer Associates, Inc., Sunderland, Massachusetts.
4. Green, S. (1995). Principles of biopsychology. UK: Lawrence Erlbaum Associates Ltd.
5. Pinel, J. P. J. (2011). Biopsychology, 8th Edition. Pearson Education, New Delhi.

PCPT0027: PSYCHOLOGICAL TESTING

(4 Credits - 60 hours)

Course Outcomes

1. Define the basic concepts of psychological testing. (Remembering)
2. Classify the group and individual techniques of psychological testing. (Understanding)
3. Make use of different statistical concepts in data analysis. (Applying)
4. Examine the results of the statistical data analysis. (Analysing)
5. Recommend the suitable tool for data collection/interview in applied settings. (Evaluating)
6. Test the psychometric properties of a tool and develop a psychological tool using appropriate norms of toolconstruction. (Creating)

Module I: Introduction to Psychological Testing (9 hours)

History of Psychological Testing; Definition and Purpose and relevance of Psychological testing, Types of tests, Principles, Applications and Issues, Ethical and Social Considerations in Testing

Module II: Test Construction (15 hours)

Steps in test construction, Item Writing: types of items, General guidelines for item writing, Characteristics of a good psychological test:Objectivity, Standardization, Reliability:Meaning,Types of Reliability and Factor influencing Reliability. Validity: Meaning,Type of validity and Factors influencing validity. Norms: Norm referenced and criterion referenced tests, Types of Norms and Test Scales.

Module III: Assessment of Cognitive Abilities (13 hours)

Measurement of Intelligence:Types of Intelligence tests, Individual intelligence tests, Other broad range intelligence tests, Group intelligence tests, Psychological issues in intelligence testing Longitudinal studies, Problems in cross cultural testing

Module IV: Assessment of Personality (13 hours)

Measurement of Personality: Meaning and Purpose,Tools of Personality Assessment, Measurement of Interests, Values and Attitudes,Projective Techniques:Meaning and Types of Projective Techniques, Classification and Evaluation of Projective Techniques

Module V: Assessment of Aptitude and Achievement (10 hours)

Aptitude and Achievement:Distinction between Aptitude and Achievement Tests, Types of Aptitude tests, Types and selection of standardized Achievement Tests, Achievement test batteries.

Suggested Readings

1. Anastasi, A. and Urbina, S.Psychological testing. N.D.: Pearson Education (1997)..
2. Kaplan, R.M. and Saccuzzo, D.P.Psychological Testing: Principles, Applications, and Issues. Australia: Thomson Wadsworth (2007).
3. Gregory, R.J.Psychological testing: History, principles and applications. New Delhi: Pearson Education (2005).
4. Singh, A.K.Tests, Measurements and Research Methods in Behavioural Sciences. Patna: BharatiAiken, L.R., and Groth Marnat, G. (2006). Psychological Testing and Assessment. Boston, MA: Pearson (12th ed.) (2006).

PCHT0028: HEALTH PSYCHOLOGY

(3 Credits 45 hours)

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

1. Define the basic terms related to the field of health psychology. (Remembering)CO2 Learn the approaches to changes in health behavior(Understanding)
2. ake use of psychological research methods, theories, and principles to enhance biopsychosocial approaches forhealth promotion and illness prevention. (Applying)
3. Examine the stressors and its impact on the etiology and course of many health related problems. (Analyzing)
4. Estimate the management of various health related disorders. (Evaluating)
5. Devise policies of health care delivery system beneficial to the public. (Creating)
6. Develop awareness about the stressful impact of disabling/life-threatening illness on the patient and their familymembers as well as the health care providers. (Creating)

Module I: Introduction to Health Psychology (10 Hours)

Definition and emergence of health psychology. Need for health psychology. Research in health psychology: Experiments, Correlational Studies, Prospective and Retrospective Designs, Role of Epidemiology

Module II: Models of Health Behavior (8 Hours)

Health Belief Model, Cognitive Behavioral Approaches, Transtheoretical Model of Behavior Change

Module III: Health conditions and its Psychological Management (15 Hours)

Post Traumatic Stress Disorder, Cancer, COVID-19, Pain

Module IV: Heath Care Services (12 Hours)

Health Care Delivery System: Developing vs. Developed nations. Patient-Provider Communication and Patient in Hospital Setting: Adults, children and children with special needs. CAM treatment (Prayer, Meditation, Guided Imagery) and Placebo Effect. Wellbeing of healthcare providers.

Suggested Readings

1. Taylor, S. E. Health Psychology (8th Edition). New York: McGraw Hill. (2012).
2. Ghosh, M. Health Psychology-Concepts in Health and Well-being. New Delhi: Dorling Kindersley (India) Pvt. Ltd. (2015).

PCFP0029: FOUNDATIONS OF COUNSELLING PSYCHOLOGY

(4 Credits, 60 Hours)

Course Outcomes

1. Define the basic concepts of counselling psychology, identify major theoretical foundations and recognize thehistorical background of counselling psychology. (Remembering)
2. To understand the professional therapist-client relationship in a therapeutic setting. (Understanding)
3. To analyse the scope and application of counselling psychology. (Analysing)
4. To use the therapeutic skills of counselling psychology in practice. (Applying)
5. To evaluate different counselling models, therapeutic skills and their appropriate applicability. (Evaluation)
6. To develop an understanding of counselling skills, therapies and ethical guidelines of counselling practice. (Creating)

Module I: Introduction (10 Hours)
Meaning, Definition & Goals, Historical Background, Mental health development & the guidance movement, Difference between Counselling and other associated helping professions (psychotherapy, psychiatry, social work, guidance), Modern Trends in Counselling.

Module II: Counselling Process (10 Hours)
Settings for counselling, Steps in counselling, Therapeutic relationship: The importance of relationship, components of relationship, Facilitative conditions for the counselling relationship.

Module III: Counselling Approaches & Therapeutic Techniques (25 Hours)
Psychodynamic Approach: Psychoanalytic, Adlerian approach. Humanistic Approach: Existential, Client-Centered, Gestalt Therapy. Behavioural Approach: Operant-Conditioning, Classical-Conditioning.Cognitive Approach: Cognitive Therapy, Rational emotive therapy.
Other Approaches: Narrative Therapy, Expressive Therapy, and Biofeedback.

Module IV: Counselling Practice (15 Hours)
Ethical Issues: Professional Codes, Divided loyalties, Areas of ethnical difficulty, Legal considerations. Conception of a professional Counsellor, Academic preparation, practical skills.
Special Areas in Counselling: Family group consultation – Counselling with families, children as well as parents, Adoption, Marriage & Pre-marital Counselling.
Counselling diverse population: Gender, counselling for geriatric clients, the ethnic minorities, and the physically challenged.

Suggested Readings
1. Ladany, N. & Inman, A. (2008) Handbook of Counseling Psychology, (4th ed.). John Wiley & Sons.
2. Warters, J. (1964): Techniques of Counselling, (2nd ed.), MacGraw Hill Book Company.
3. Steffler, B. (Ed.) (1965): Theories of Counselling, New York: MacGraw Hill Book Company.

PCCY0030: CHILD AND YOUTH COUNSELLING

(4 Credits- 60 hours)

Course/Learning Outcomes
1. Define the basic concepts and goals of child counseling (Remembering)
2. Understand the specific issues faced by children and youth, especially pertaining to education, and career. (Understanding)
3. Apply the skills and techniques of counselling in child and youth-counselor relationship (Applying)
4. Compare and contrast among the major learning styles models and theories in counseling (Analyzing)
5. Appraise the significance of the child-counsellor relationship, and major theories in the counseling process.(Evaluating)
6. Build on the traditional views of learning styles models and improve counselling skills. (Creating)

Module I: Introduction (12 hours)
Definitions and goals of counseling for children and youth; Children and Youth-counsellor relationship, attributes of a counsellor, historical background and contemporary ideas about counselling

Module II: Academic Development (12 hours)
Learning-styles: VAK Model, Kolb's Experiential Model, MBTI Pattern, Honey and Mumford Model, Hemispheric Dominance Model, Gregorc Model, Gardner's Multiple Intelligence Model.
Study skills: reading, writing and note-making skills, studying skills and study habits, time management
Cognitive issues: causes and factors affecting attention, concentration, remembering, forgetting, experimental evidences and cognitive training

Module III: Major Theories in Counselling Children (14 hours)
Learning, Behavioural, Cognitive Behavioural Modification, Expressive therapy (play, art and drawing, drama, metaphor, storytelling)

Module IV: Counselling Children with specific problem (12 Hours)
Children and trauma: child abuse (physical, sexual, emotional), HIV/ AIDS, specific issues in educational settingsTechniques of assessment: Cumulative record, Anecdotal Record, Case Study, Sociometry

Module V: Career Counselling (10 hours)
Basic aspects: Nature, scope and importance of career counselling, role of counselor in career preparation, career decision making, career exploration techniques
Career development theories: Holland, Ginzberg, and Super
Career counselling with diverse population: children, adolescents, college students, women and adults.

Suggested Readings

PCDR0031: DISABILITY STUDIES AND REHABILITATION PSYCHOLOGY

(4 Credits - 60 hours)

COURSE OUTCOMES
1. Define the concept of rehabilitation and list the methods of assessment and interventions for various disabilities (Remembering)
2. Illustrate the scope of rehabilitation psychology (Understanding)
3. Plan assessments and interventions for various learning, intellectual and physical disabilities and apply the models of rehabilitation in practice (Applying)
4. Analyse the general functions of rehabilitation psychology (Analysing)
5. Compare and conclude on the prevention and early intervention for various disability (Evaluating)
6. Modify the flaws in the successful implementation of various acts related to disability (Creating)

Module I: Introduction (15 hours)
Definition and models of disability. Definition and functions of rehabilitation (general and specific functions). Historical background of Rehabilitation Psychology. Behavioral problems and adaptive behavior

Module II: Cognitive and Academic disability (18 hours)
Intellectual Disability: review of terminology, diagnostic criteria, causes, prevalence, prevention, assessments, intervention and rehabilitation.
Learning disabilities: diagnostic criteria, types, causes, prevalence, prevention, assessments, intervention and rehabilitation.

Autism Spectrum Disorder: diagnostic criteria, types, causes, prevalence, prevention, assessments, intervention and rehabilitation.
Psychotic disorders: diagnostic criteria, types, causes, prevalence, prevention, assessments, intervention and rehabilitation.

Module III: Physical Disability (15 hours)
Hearing impairment: types, causes, prevalence, prevention, assessments, intervention and rehabilitation. Visual impairment: types, causes, prevalence, prevention, assessments, intervention and rehabilitation. Orthopaedic impairment: types, causes, prevalence, prevention, assessments, intervention and rehabilitation.

Module IV: Legal issues (12 hours)
The Mental Health Act, 2017: historical background and challenges. RPWD Act, 2016: historical background and challenges. RCI Act, 1992 : historical background and challenges. National Trust Act, 1999: historical background and challenges. Issues of certification

PCAT0032 ADDICTION AND TRAUMA COUNSELLING

(3 Credits- 45hours)

COURSE OUTCOMES
1. Define substance related disorders according to the classification of DSM 5/ICD-10. (Remembering)
2. Compare and contrast different psychological interventions for addiction related psychological disorders.(Understanding)
3. Categorize the sources of trauma and trauma intervention. (Analysing)
4. Apply psychological interventions and techniques on trauma victims. (Applying)
5. To evaluate the effectiveness of Psychodynamic approach, CBT, MET, Group intervention in dealing with substance addiction. (Evaluating)
6. Create need based and behavioral management plan for patients with addiction and trauma survivors. (Creating)

Module I: Addiction Counselling (8 hours)
Definition, DSM-V diagnostic category – classification of drugs of abuse, stages of addiction

Module II: Treatment Methodology (15 hours)
Psychodynamic approaches, cognitive-behavioural therapies, motivational enhancement therapy. Problem-oriented treatment, solution-focused treatment, group therapy, family therapy and community based interventions.

Module III: Psychological Trauma (12 hours)
Introduction to Trauma: Definition, types of trauma, historical context of trauma, theoretical contexts of trauma counselling. Ethical perspective on trauma work, trauma and supervision.

Module IV: Trauma Intervention (10 hours)

Assessment in psychological trauma: Methods and intervention, models for trauma intervention, strategies and techniques for counselling survivor of trauma.

Suggested Readings

1. Rasmussen, S. (2000). Addiction treatment: Theory and Practice. London: Sage.2) DSM-V (2013)
2. Wright, H. N. (2003). *The new guide to crisis and trauma counseling*. Gospel Light Publications.

PCMF0033: MARRIAGE AND FAMILY COUNSELLING

(4 Credits – 60 hours)

Course Outcomes

1. Define the basic concepts of marriage and counselling. (Remembering)
2. Classify different developmental and emotional issues in different family life stages. (Understanding)
3. Identify the classical schools of marriage and family counselling. (Applying)
4. Analyse the Bowen's intergenerational approach. (Analysing)
5. Explain different therapeutic approaches of marriage and family counselling. (Evaluating)
6. Discuss the processes of counselling couples with special issues/problems. (Creating)

Module I: Introduction (10 lectures)

Historical evolution of Family and Marriage therapy; Goals of Family therapy; current trends in Family therapy; Fundamental concepts in Family therapy(Cybernetics and Systems theory, Social Constructivism) Stages of marriage, Divorce and remarriage, Marriage and Divorce: Role of Family Courts.

Module II: Family Across a Lifespan (16 lectures)

The family life cycle, stages of family life cycle. Key developmental and emotional issues in different stages: Young adulthood. Newly married, Child bearing, Families with preschool children, Families with school age children. Families with teenage children, Launching stage, Middle aged adult, Retirement

Module III: Classical Schools (12 lectures)

Bowen's Intergenerational Approach; Structural Family Therapy; Strategic Family Therapy; Experiential and Humanistic Family Therapies; Psychoanalytic and Cognitive Behavioural Family therapy.

Module IV: Recent Developments (12 lectures)

Postmodernism, Feminist and contextual work, Solution focused therapy, Narrative therapy, Integrative models. Application and evaluation of Family therapy. Skill development: Genograms. The stages of Family therapy: Planning; Assessment; Disengaging or recontracting.

Module V: Counselling Couples with Special Issues (10 lectures)

Treating sexual abuse and physical abuse issues in family; Counselling of alcoholics and drug-addicts; Counselling the terminally ill and patients with HIV/AIDS.

PCFC0034 FOUNDATION OF CLINICAL PSYCHOLOGY

(4 Credits-60 hrs.)

Course Outcomes

1. Definition of clinical psychology, acquire knowledge and understanding the philosophical roots and historical events that have shaped the field of clinical psychology (Remembering)
2. Explore the underlying philosophical assumptions, individual contributors, and various forces that served to shape the emerging field of clinical psychology (Understanding)
3. Demonstrate familiarity with scientific, ethical, legal, and practice-oriented issues in the field (Applying)
4. Acquire a basic understanding of western (and, to an extent, Indian) philosophical thought, to articulate a philosophyof their own, and apply that philosophy to their professional work in field of clinical Psychology (Applying)
5. Think critically about the science of psychology, analyse psychological theory, research, and practice in a historicalcontext, and develop ideas, critiques, and conclusions of their own (Analysis)
6. Adapt and develop a basic understanding about assessment and interventions in the context of clinical psychology (Creating)

Module-I- (12 hours) Basic Introduction to Clinical Psychology

Definition, Historical background: Early & Recent history; Nature and scope of the discipline: Theory and research; Developing a professional identity: Education & training, professional activities, ethical issues and employment settings.

Module – II (12 hours) Major theoretical models in clinical psychology

The role of theory; and theoretical models; Psychodynamic; Cognitive-Behavioural; Humanistic; Family systems.

Module- III (18 hours) Diagnostic Techniques

Nature and purpose of clinical interview, mental status examination; Observing behaviour, clinical judgement; communication strategies, diagnosis and assessment, Behavioural assessment, Psychological Assessment: Cognitive and Personality Assessment and case study

Module- IV (18 hours) Competencies in Clinical Psychology

The core competencies: Assessments, Evaluation, Formulation, Intervention, Communication/consultation, and service delivery, Therapeutic Models (Behavioural approaches, cognitive therapy and cognitive-behaviour therapy, Psychodynamic therapy, Systemic and group approaches, Eclectic and integrative approaches)

Suggested Readings

1. Hecker, J. E., & Thorpe, G. L. (2011). Introduction to Clinical psychology: Science,
2. practice, and ethics, 4th ed. India: Dorling Kindsley.

PCPG0035: PSYCHODIAGNOSTICS

(4 Credits: 60 hours)

COURSE OUTCOMES

1. Define the concept of assessment (Remembering)
2. Gather the significance and scope of psychological assessment in diagnosis and intervention (Understanding)
3. Apply various approaches of assessment in practice (Applying)
4. Estimate the appropriate assessments for different population as per the diagnoses. (Analysing)
5. Assess the socio-cultural factors in various assessments aiding in the diagnoses. (Evaluating)
6. Design psychopathology formulation which will impede the process of effective therapeutic sessions. (Creating)

Module I: Introduction to psychological assessment (15 hours)

Traditional approaches to assessment. Stages in psychological assessment. DSM 5 and ICD-10: Similarities and differences. Screening and Diagnostic tools

Module II: Clinical Interviewing (15 hours)

Types of Clinical Interview. Rapport formation and communication strategies. Diagnostic Interviewing. Interviewing with children and cultural issues

Module III: Intellectual and Neuropsychological assessment (15 hours)

Theories of intelligence, issues and controversies. Tests batteries: WAIS, WISC, MISIC, BKT. Approaches to neuropsychological assessment. Test batteries: Halstead-Reitan, Luria-Nebraska, PGI-BBD, AIIMS Comprehensive Neuropsychological Battery

Module IV: Behavioral and Personality Assessment (15 hours)

Development of Behavioral Assessment. Functional Analysis and other methods of behavioral assessments (Questionnaires, Self-monitoring, Analogue techniques etc.). Objective methods of personality assessments: MMPI-2, MCMI-III, EPQ-R. Projective methods of personality assessments: Rorschach, TAT, Projective drawings

PCRP0036 FORENSIC PSYCHOLOGY

(3 credits – 45hours)

Course Outcomes

1. Define forensic psychology and the role of a Forensic Psychologist. (Remembering)
2. Illustrate on the nature of crime. (Understanding)
3. Examine the social, psychological theories of crime. (Analysing)
4. Apply the methods of forensic psychological investigation. (Applying)
5. Explain the concept of Juvenile delinquency, sexual offenders and serial offenders. (Evaluating)
6. Create an idea about the importance of Forensic psychological assessment into practice. (Creating)

Module I: Introduction (11 hours)

Meaning, nature and definition of Forensic Psychology, Historical background, training of a Forensic psychologist, Ethical concerns in Forensic Psychology.

Module II: Theories of crime (12 hours)

Need for scientific understanding of crime, psychoanalytical conceptualization of crime, Eysenck's biosocial theory of crime social learning theory of crime, frustrated induced criminality, Neuropsychological theories of crime

Module III: Juvenile offenders and Sexual offenders (10 hours)

Nature and definition of Juvenile offenders, sexual offenders and serial offenders, Social risk factors, Psychological risk factors, family background, Intelligence and delinquency

Module IV: Forensic Psychological Investigation methods (12 hours)

Methods in Forensic Investigation-Polygraph, Brain electrical Oscillations Signature, Narcoanalysis, Applicability of Rorschach Inkblot Test, MMPI-II, Draw-a-Person Test in forensic settings.

Suggested readings

PCPC0037: PSYCHOTHERAPY

(4 Credits – 60 hours)

Course Outcomes

1. Define psychotherapy. (Remembering)
2. Classify and categorise major disorders with respect to psychotherapy. (Understanding)
3. Apply psychotherapeutic concepts and constructs to diagnose and intervene individuals with mental illnesses.(Applying)
4. Analyse the distinction among different types of psychotherapy. (Analysing)
5. Evaluate the applicability different types to psychotherapy to mental health and illnesses. (Evaluating)
6. Create a psychotherapeutic intervention plan for patients on the basis of clinical features, diagnosis criteria andtherapist competence. (Creating)

Module I: Introduction (8 hours)

Historical background of psychotherapy; Principles and goals of psychotherapy; Professional training and ethics in clinical practice

Module II: Psychodynamic Psychotherapy (10 hours)

Psychoanalysis: Background and basic principles Psychoanalytic theory since Freud
Psychodynamic psychotherapy in contemporary clinical psychology

Module III: Humanistic, Experiential and Family Therapies (12 hours)

Humanistic psychotherapy
Eclectic treatment combinationsFamily therapy
Group therapy

Module IV: Cognitive Behavioural Interventions (15 hours)
Behaviour therapy techniques
Cognitive modification procedures
Cognitive behaviour therapy: specific applications in various psychological disordersDialectic Behaviour therapy

Module V: Relaxation Therapies (15 hours)
Progressive muscular relaxation
Autogenic training
Biofeedback
Eye Movement desensitization and reprocessing

Suggested Readings:

PCNP0038: NEUROPSYCHOLOGY

(3 Credit-45 hours)

Course outcomes (COs)
1. Define the basic concepts of Neuropsychology and naming different biological systems involved in Neurologicaldisorders. (Remembering)
2. Explain the neuropsychological basis of human behaviour. (Understanding)
3. Identify the difference and relation among brain structures, neurological and endocrine systems. (Applying)
4. Classify the sub-systems of the central nervous system of the brain. (Analysing)
5. Compare different neuropsychological systems causing Neuro-pathology. (Evaluating)
6. Discuss the major theoretical perspective, develop the awareness of the neuropsychological basis of behaviour andcan able to formulate rehabilitation. (Creating)

Module-I: Foundation of neuropsychology (15 hours)
Brief history of Neuropsychology, Role of neuropsychology in clinical practice, Early Hypothesis, Localization theory, integrated theory of brain functions,
Major structures and functions of human Brain: Cerebral cortex, Frontal, temporal, parietal and occipital lobes functions and syndromes, Neuro-transmitters.

Module-II: Brain Damage and Neuroplasticity (12 hours)
Causes of Brain damage, Neuropsychological diseases (Stroke, Tumours, Epilepsy, Dementia, Traumatic Brain injury), Animal models of human neuropsychological diseases, Neuro-plastic responses to nervous system damage: Degeneration, Regeneration, Reorganization, and recovery, Neuroplasticity.

Module-III: Neuropsychological Assessments and Diagnosis (12 hours)
General Considerations in Neuropsychological testing, Rationale of the neuropsychological examination, appropriate referrals for neuropsychological evaluation, Psychometric issues in neuropsychological assessment:

Preliminary screening of neuropsychological functioning: Orientation (Arousal), Sensation and Perception, Attention/Concentration, Motor Skills, Verbal Functions/Language, Visuo-spatial Organization, Memory, Judgment/Problem Solving.

Module-IV: Neuro-Psychological Rehabilitation (6 hours)
Basic concepts and models of Neuropsychological rehabilitation (Cognitive, Behavioural, Emotional and Psychosocial),Challenges

ethics and guidelines of Neuro-psychological rehabilitation.

Suggested Readings:

1. Boller, F. &Grafman, J, (1988) Handbook of neuropsychology. New York: Elsevier.

PCPG6018 PERSONAL GROWTH I (P/NP)

(2 Credits - Workshop and assignment mode)

Course Outcomes

1. Understand the basic principles of psychology (Remembering)
2. Understand personality traits, values, skills and interests. (Understanding)
3. Gain self-awareness and emotional awareness (Applying)
4. Set specific, achievable short- and long-term goals (Analysing)

Module I: Introduction (15 lectures)

Self esteem, Self awareness, Emotional well being, Self-Motivation

Module II: Introduction (15 lectures)

Critical thinking, Personality development, Communication styles

Suggested Readings

Psychology of Success: Finding Meaning in Work and Life, 5th Edition, Denis Waitley, 2010, McGraw-Hill

PCFA6019: PSYCHOLOGICAL FIRST AID (P/NP)

(2 Credits - Workshop and assignment mode)

Course Outcomes

1. Remember the basic concepts of psychological first aid. (Remembering)
2. Understand the steps of psychological first aid. (Understanding)
3. Gain self-awareness and awareness about emergency care. (Applying)
4. Plan specific, achievable remedial measures (Analysing)

Module I: Introduction (15 lectures)

Definition, Phases, emergency psychological care, mental hygiene.

Module II: Introduction (15 lectures)

Critical thinking, planning emergency psychological intervention.

Suggested Readings

Psychology of Success: Finding Meaning in Work and Life, 5th Edition, Denis Waitley, 2010, McGraw-Hill.

PCRP6020 RESEARCH PROJECT PHASE I (4 Credits)

Course outcomes

1. Knowledge of the major theoretical approaches and findings in psychology. (Remembering)
2. Demonstrate knowledge about the research methods used in psychology,. (Understanding)
3. Apply the knowledge for preparing research design, and data analysis. (Applying)
4. Critically analyse information related to the study of behaviour and mental processes, and use the critical assessmentin forming conclusions and arguments. (Analysing)
5. Present and defend opinions by making judgments about information, validity of ideas, or quality of work based on aset of criteria. (Evaluating)
6. Develop the understanding of how to prepare a research proposal. (Creating)

Every student shall undertake a research project work under the supervision and guidance of a faculty member. The student may choose the topic of research and start the preliminary work by the end of the second semester. The students are expected to complete the Literature Review followed by a Literature Review presentation and the Proposal presentation during the Phase I. Students are expected to complete the data collection before the fourth semester.

In Phase II, students are expected to complete the data collection, data analysis and interpretation, and submission of final report. Submission of final copy of the dissertation will be followed by presentation of the research and viva voce examination.

The thesis is to be submitted to the department before the date notified. The mode and components of evaluation of Phase I and Phase II of the research project and the weightages attached to them shall be published by the Department at the beginning of the semester. There shall be a viva voce examination on the research project.

PCSI6021 SUPERVISED INTERNSHIP I

(4 Credits)

Course outcomes

1. Remembering the personal integrity, accountability, professional deportment and concern for the welfare of others. (Remembering)
2. Understanding of Psychological disorders, empathy, reflective practice, and self-care. (Understanding)
3. Applying scientific, theoretical, contextual approach to the discipline (Applying)
4. Analyse the symptom severity and clinical features of disorders. (Analysing)
5. Determine ethical and Legal guidelines of practice (Evaluating)
6. Develop effective work skills, including cognitive and expressive skills, self-directed learning & continuing education. (Creating)

Module I: Introduction

Analysing the situation: Need of counselling, space for counselling, information to clients, documentation, organizing supervision.

Module II: Internship

Taking in clients: first interview, documentation of the case, definition of counselling goals, building the counselling relationship, process of counselling, using skills of counselling, concluding counselling, documentation of the whole counselling process, evaluation; working in a team–role of counselling, resources and challenges, role in the team, case management: discussion, supervision. Evaluation of the internship will be based on the documentation, reports from the organisation, report of the supervisor and the presentation and the viva voce examination of the student at the end of the period of Internship.

Module III: Phases of Supervised Internship

The Supervised Internship is divided into two phases; Phase I and Phase II. Each of these phases consists of 45days (100 hours) of intensive practical learning programs in counselling setting under trained supervisors. The phases of the internship spread across the 3rd and 4th semester of Masters Degree program. The total credit for the supervised internship is divided equally across the final year semesters of the Master's Degree program.

PCIP6022 SUMMER INTERNSHIP (Pass/Non-Pass)

Students are required to undergo a summer internship of two weeks' during the semester break between the second and third semesters. It is a P/NP course and shall be recorded in the third semester. The Summer Internship gives students an opportunity to apply the theories and principles that they have learnt in class room courses to the "real world" of social service agencies, medical institutions, the criminal justice system, business, and industry. During the internship, students can explore career interests, develop professional skills, learn how community organizations work and expand their clinical and interpersonal skills. The summer internship enriches the students' academic experience while making a valuable contribution to the community and utilizing the vacation optimally.

Course Outcomes

1. Define the clinical features of psychological disorders. (Remembering)
2. Demonstrate fundamental knowledge and comprehension of the major concepts, theoretical perspectives, historical trends, and empirical findings in psychology. (Understanding)
3. Develop Scientific reasoning and critical thinking, including effective research methodology in solving problemsrelated to behavior and mental processes. (Applying)
4. Analyse ethically and socially responsible behaviors for professional and personal settings, including development ofvalues that build diverse communities. (Analysing)
5. Determine their basic area of interest to work further/specialize in clinical setting. (Evaluating)
6. Develop the competence in writing case studies, and interpersonal communication skills. (Creating)

PCST6023 STUDY TOUR (Pass/Non-Pass)

COURSE OUTCOMES

1. Define mental illnesses and rehabilitation. (Remembering)
2. To understand counselling in real life setting. (Understanding)
3. To apply theoretical principles in order to understand the functioning of various mental health settings (Applying)
4. Distinguish clinical features of different mental illnesses. (Analysing)
5. Explain the importance of different models of mental health and illnesses in assessment. (Evaluating)
6. Develop practical knowledge about different psychological practice and rehabilitation setting. (Creating)

Module I: Introduction

During the programme the students shall undertake a study tour, along with the faculty members, to a place approved by the department. The places are to be so chosen as to be of educational benefit to students. During the tour, the focus shall be to visit and interact with NGOs, hospitals, state/national/ international organisations involved in psychological counselling.

Module II: Documentation and Evaluation

A report of the learning outcomes shall be submitted to the department at the end of the tour. The Study Tour shall be a Pass/No Pass course.

PCPP6026: PSYCHOLOGICAL ASSESSMENT-I (PRACTICUM-I)

(2 credits – 60 hours)

Course/Learning Outcomes

1. Define the important concepts of psychology research, and assessment techniques. (Remembering)
2. Understand the importance and steps associated with planning and conducting an experiment. (Understanding)
3. Apply the basic concepts of research and assessment techniques in measuring important psychological constructs associated with positive psychology. (Applying)
4. Categorize different types of intelligence assessment techniques. (Analyzing)
5. Evaluate the importance of different types of assessment techniques and measurement tools. (Evaluating)
6. Design and conduct an experiment. (Creating)

Module I: Introduction to Practicum (9 hours)
Primary modes of psychological enquiry: Experimental method, Observation, Survey, and InterviewPsychometric Properties: reliability, validity, standardization, sources of error

Module II: Experiment (14 hours)
Memory drum or Maze learning (offline)/serial positioning effect or cluster learning (virtual): Basic concepts, purpose, development, administration, scoring, interpretation

Module III: Positive Psychology - I (12 hours)
General well-being scale or psychological well-being: Basic concepts, purpose, development, psychometric properties, administration, scoring, interpretation

Module IV: Positive Psychology - II (12 hours)
Brief-cope or Coping appraisal or behavior questionnaire: Basic concepts, purpose, development, psychometric properties, administration, scoring, interpretation

Module V: Intelligence tests (13 hours)
Binet-Kamat Test of Intelligence (offline)/Draw-a-person (online): Basic concepts, purpose, development, psychometric properties, administration, scoring, interpretation

Suggested Readings

1. Aiken, L. R (2006). *Psychological Testing and Assessment* (12th ed.). Boston: Allyn and Bacon.
2. Baumgardner, S. R., and Crothers, M. K. (2010). *Positive psychology*. Upper Saddle River, N.J.: Prentice Hall.

PCPP6027: PSYCHOLOGICAL ASSESSMENT-II (PRACTICUM-II)

1. Define the basic terms related to aptitude, personality, projective techniques, positive emotions, posttraumaticgrowth and clinical rating scales.
2. Classify the various types of psychological tests on the basis of their use. (Understanding)
3. Make interpretations and draw conclusions based on the norms given in the manual. (Applying)
4. Examine the details of the rating scale/ test, the aim, applications, procedure of administration and results.(Analysing)
5. Estimate the purpose and importance of each of these tests. (Evaluating)
6. Test the administrator's decision-making process to select a particular test for assessment of a given psychological condition. (Creating)

Module II: Assessment of Personality: Projective Tests (20 Hours) (Offline/Online Classes):
House Tree Person Test (HTP)/ Picture Completion Test (PCT)/Human Figure Test: Basic concepts, psychometric properties of the test, administration, scoring, results and interpretation.

Module III: Assessment of Positive Emotion (10 Hours) (Offline/Online Classes):
Positive and Negative Affect Schedule (PANAS)/Multidimensional Emotional Questionnaire (MEQ): Basic concepts (Definition, Protective Factors of Mental Health & Resilience), psychometric properties of the test, administration, scoring, results and interpretation.

Module IV: Assessment of Posttraumatic Growth (10 Hours) (Offline/Online Classes):
Posttraumatic Growth Inventory: Basic concepts (Definition, Barbara Fredrickson's Broaden-Build Theory), psychometric properties of the test, administration, scoring, results and interpretation.

Module IV: Clinical Assessment Scales (20 Hours) (Offline/Online Classes):

Beck's Depression Inventory/State-Trait Anxiety Inventory: Basic concepts, psychometric properties of the test, administration, scoring, results and interpretation.

PCFW6028: FIELD WORK

(2 Credits)

Course Outcomes

1. Define counselling and mental illnesses (Remembering)
2. Understand the value of supervision (Understanding)
3. Apply the theoretical principles to individuals at various setups (Applying)
4. Distinguish clinical features of different mental illnesses. (Analysing)
5. Evaluate the models of mental health and illness. (Evaluate)
6. Create a management plan for patients on the basis of clinical features, diagnosis criteria and therapist competence. (Creating)

Module I: Introduction

The field work practice in the second semester shall focus upon the area of concentration chosen by the students. The students will be placed in the field for a minimum of eight days. The fieldwork setting shall be NGO's, hospitals, clinics and schools. The students are expected to apply all the skills and techniques of counselling whenever applicable depending upon the organization and their service. The students should be involved in the activities of the institution and fulfil the responsibilities as requested by the agency supervisor

Module II: Record and Documentation

Students shall prepare a daily report of the fieldwork activities and submit it to the concerned faculty supervisor. The faculty supervisor shall provide the necessary feedback and guidance to the students.

Module III: Evaluation

At the end of the semester the students shall submit a summary report of the cases taken and activities done during their placement. The students shall also appear for the viva voce examination at the end of the semester.

PCPR6029: PRACTICUM-III

(2 credits – 60 hours)

Course/Learning Outcomes

1. Define the basic concepts of disability, intelligence and personality assessment. (Remembering)
2. Extend the theoretical knowledge of disability, personality and intelligence theories and assessment techniques into practice. (Understanding)
3. Make use of the important measurement tools to learn administration and scoring. (Applying)
4. Examining test scores and interpretation of results. (Analyzing)
5. Evaluate the importance of personality, intelligence and disability assessment. (Evaluating)
6. Construct conclusion from the results of psychological assessment. (Creating)

Module 1: Disability Assessment (20 hours)
Indian scale for assessment of autism (ISAA)/WHO Disability Assessment Schedule (WHODAS 2.0): Basic concepts, purpose, development, psychometric properties, administration, scoring, interpretation

Module 2: Intelligence (20 hours)
Bhatia battery of performance test of intelligence (offline) or Vineland Social Maturity scale (online): Basic concepts, purpose, development, psychometric properties, administration, scoring, interpretation

Module 3: Personality assessment (20 hours)
Rorschach Inkblot Test (offline) or Eysenck Personality Inventory (online): Basic concepts, purpose, development, psychometric properties, administration, scoring, interpretation.

(*Note.* Owing to the importance of Rorschach in psychological testing if it is not possible to conduct this practical due to the mode of conduction of classes, the department will try to make sure that students have the knowledge of this test by conducting workshop on this topic.)

Suggested Readings

PCPR6030: PRACTICUM-IV

(2 Credits, 60 hours)

COURSE/LEARNING OUTCOMES (COs)
At the end of this course students will be able to:
1. Define the basic terms related to cognitive functioning, personality, projective techniques and clinical rating scales & choose a suitable method of psychological test to administer on a subject (Remembering)
2. Classify the various types of psychological and neuropsychological tests on the basis of their use. (Understanding)
3. Make interpretations and draw conclusions based on the norms given in the manual. (Applying)
4. Examine the details of the rating scale/ test, the aim, applications, procedure of administration and subject results. (Analysing)
5. Recommend the use of a suitable psychological assessment for a particular disorder. (Evaluating)
6. Test the administrator's decision making process to select a particular test for assessment of a givenpsychological disorder. (Creating)

Module I: Neuropsychological screening and test batteries for assessing cognitive functioning and rule out neuropathology (20 hours)
Introduction to Neuropsychological assessments; importance and purpose; various types of Neuropsychological tests; administration, scoring, results and interpretation the tests
The Bender Visual-Motor Gestalt Test (BVGT) (Online/offline)/Rey-Osterrieth complex figure Test (ROCF) (Online/offline
Gesell Drawing test of intelligence (Online/offline)/Mini Mental Status Examination (MMSE)PGI- BBD battery (offline)

Module II: Assessment of personality (22 hours)
Objective and Projective tests for assessing personality and psychopathology. Definition of Personality; Measurement of Personality; Various types of Personality tests, administration, scoring, results and interpretation.
Minnesota Multiphasic Personality Inventory -2 (MMPI-2) (offline)Sacks sentence completion test (SSCT) (online/offline)
Thematic Apperception Test, other techniques (TAT) (online/offline)

Module-III (18 hours)
Rating scales for assessing the severity of Psycho-pathology and Evaluation of Impairment
Introduction to Clinical Rating Scales; Purpose of various rating scales; administration, scoring, results and interpretation;
Hamilton Anxiety Rating Scale (HAM-A) (Online/offline)
Hamilton Depression Rating Scale(HDRS) (Online/offline)Barratt Impulsiveness scale (BIS) (offline/Online)

Note: A total of 6 practical were decided for the MSc 4th semester practicum course instead of 9 in both online/offline mode. A combination of online and offline mode of practicum mentioned in the syllabus should be included under the 6 practical (Syllabus has clearly mentioned practical to be conducted in the online/offline mode of classes).

VALUE-ADDED COURSES

PCSO6034: SCHOOL PSYCHOLOGY

(2 credits- 30 hours)

Course Outcomes

1. Gain knowledge about the concept of School Psychology. (Remembering)
2. Understanding the process of school counseling. (Understanding)
3. Analyze the needs of school children in the new digital world. (Applying)
4. Apply principles and concepts of counseling in school set up. (Analyzing)
5. Evaluate the gaps in the current scenario. (Evaluating)
6. Create a comfortable environment for children in need of intervention. (Creating)

Module 1: Introduction (5 hrs)
Historical background of school psychology, Definition nature and scope of School Psychology, Role of a School Psychologist as a Professional

Module 2: Guidance and Counseling in School setting (15 hrs)
Definitions, Ethics and Legal aspects, Characteristics of an effective counselor, Basic Counseling Skills- Active listening, reflecting, paraphrasing, questioning, confronting, Counseling process- Building, maintaining and terminations counselor's relationships.

Module 3: Tools and Techniques Practice (10 hrs)
Objective tools: Checklist, rating scales, self report inventories and other standardized tools.
Subjective Tools: Observation, anecdotal records, cumulative Records, Interview and case history

Techniques for group intervention: Group tasks, Group discussion, debriefing and interpretation, summary making.
Techniques for individual intervention: role plays, individual assignments, feedback charts
Importance of Record Keeping

DEPARTMENT OF PUBLIC ADMINISTRATION

VISION:
Our unwavering commitment is to emerge as a distinguished centre of excellence in the domain of Public Administration, embodying unparalleled standards in learning, teaching, and research. Through the provision of bespoke experiences, we strive to instill profound human values, ultimately fostering nation-building.

MISSION:
- Strive for academic excellence by delivering high-quality education, research, and practical training in Public Administration, fostering a deep understanding of theoretical frameworks and practical applications.
- Cultivate and nurture visionary leaders with the skills to navigate complex public sector challenges, promoting effective governance and upholding the highest standards of ethical conduct in public service roles.
- Encourage cutting-edge research initiatives that address contemporary societal issues, while fostering strong ties with the community and relevant stakeholders to drive positive societal development.
- Provide a personalized learning environment, catering to individual needs and aspirations, maximizing student potential for growth, success, and lifelong learning in the field.
- Enhance global awareness and prepare students to contribute effectively in an interconnected world, while dedicating efforts to contribute significantly to nation-building through competent and socially responsible public administrators driving positive change and sustainable development.

MA PUBLIC ADMINSTRATION -PROGRAM OUTCOMES (POs)

PO 1: Academic Excellence: Strive for academic excellence by delivering high-quality education, research, and practical training in Public Administration, fostering a deep understanding of theoretical frameworks and practical applications.

PO 2: Leadership Development: Cultivate and nurture visionary leaders who possess the skills and knowledge to navigate complex public sector challenges, promoting effective governance and public service.

PO 3: Research and Innovation: Encourage and support cutting-edge research initiatives that contribute to the advancement of knowledge in Public Administration, generating innovative solutions for contemporary societal issues.

PO 4: Personalized Learning: Provide a personalized and student-centric learning environment, catering to individual needs and aspirations, thereby maximizing the potential for growth and success.

PO 5: Ethical and Responsible Governance: Emphasize the importance of ethical conduct and responsible governance practices, preparing graduates to uphold the highest standards of integrity in their public service roles.

PO 6: Community Engagement: Foster strong ties with the community and relevant stakeholders, encouraging collaboration and knowledge exchange, resulting in a positive impact on societal development.

PO 7: Comprehensive Approach: Foster an interdisciplinary perspective and global awareness, promoting lifelong learning among students and faculty, to produce competent and socially responsible public administrators who can drive positive change, sustainable development, and contribute significantly to nation-building efforts in an interconnected world.

MA PUBLIC ADMINSTRATION -PROGRAMME SPECIFIC OUTCOMES (PSOs)
PSO 1: To foster a comprehensive comprehension of governance structures, processes, and institutions at the local, national, and international levels.
PSO 2: To enable students to gain an in-depth understanding and analytical proficiency in one of the specialized areas, including Human Rights, International Relations, or Public Policy, empowering them to address complex challenges within their chosen field.
PSO 3: To develop and enhance technical skills necessary for comprehensive professional advancement within their respective areas of specialization. This will equip graduates to make well-considered and responsible decisions in their professional endeavours.
PSO 4: To create avenues for sharing the outcomes of academic and disciplinary learning, encouraging students to engage in scholarly research and publish research materials that contribute to the advancement of knowledge in the field.

PAEG0015: ENVIRONMENTAL GOVERNANCE

Credits: -3 (45 lectures) (45 hours)

COURSE OUTCOMES

At the end of this course students are able to:

1. Understand the concept of Global Environmental Governance (Remembering & Understanding)
2. Understand the Development and Environmental issues in India (Understanding)
3. Analyze the Impact of urbanization on Environment (Analyzing)
4. Evaluate the Urban Environmental Governance in India (Applying)

Module – I (10 hours)

Development – Environment Discourse; Global Environmental Governance

Module – II (15 hours)

Development and Environmental issues in India; Environmental Policy in India; Role of Judiciary in Environmental governance in India; Civil Society and Environmental protection in India

Module-III (10 hours)

Urban Environmental governance and politics in India; Impact of urbanization on Environment and Public Health.

Module –IV (10 hours)

Urban Environmental Governance: Major initiatives; Environmental politics in Urban India; Environmental Protection and Peoples right.

Suggested Readings

1. Ajith Sankar- Environmental Management
2. Bruckmeier, Karl - Global Environmental Governance: Social-Ecological Perspectives
3. Arild Vatn- Environmental Governance: Institutions, Policies and Actions
4. J.P. Evans - Environmental Governance
5. Jean-Frederic Morin, Amandine Orsini- Essential Concepts of Global Environmental Governance
6. Frank Biermann, Philipp H. Pattberg - Global Environmental Governance Reconsidered

PACA0016: CITIZENS AND ADMINISTRATION

Credits: -3 (45 lectures) (45 Hours)

COURSE OUTCOMES

At the end of this course students are able to:

1. Understand the Interaction between Citizens and Administration (Remembering & Understanding)
2. Understand the Preconditions for Citizens-centric Administration (Understanding)
3. Analyze the Mechanism for Redressal of Public Grievances (Analyzing)
4. Evaluate the Changing role of Citizens (Applying)

Module – I (10 hours)

Interaction between Citizens and Administration; Citizens' Perception about Administration

Module – II (10 hours)

Preconditions for Citizens-centric Administration; Peoples participation in India

Module-III (10 hours)

Administrative Accountability; Mechanism for Redressal of Public Grievances

Module –IV (15 hours)
Grievance Redressal Mechanism in India; Governance Discourse and the Changing Role of Citizens.

Suggested Readings
1. S. N. Sadasivan - Citizen and Administration
2. Nita Sanghvi - Administration and the Citizen
3. Citizen, Customer, Partner, Engaging the Public in Public Management, by John Clayton Thomas · 2014
4. Citizens and the New Governance: Beyond New Public Management, by Luc Rouban

PADL0017: DECENTRALIZATION AND LOCAL GOVERNANCE

Credits: -3 (45 lectures) (45 Hours)

COURSE OUTCOMES
At the end of this course students are able to:
1. Understand various approaches of decentralization (Remembering & Understanding)
2. Understand the concept of democratic decentralization (Understanding)
3. Analyze the implication of the 73rd and 74th Amendment Acts (Analyzing)
4. Evaluate the role of Peoples participation in Rural and Urban Development (Applying)

Module – I (10 hours)
Decentralization: The concept; the significance of decentralization; Approaches to Decentralization

Module – II (10 hours)
Types of Decentralization; Democratic decentralization and local governance in India

Module-III (10 hours)
Rural local government; Urban local government; Implication of 73rd and 74th Amendment Acts; Critical appraisal

Module –IV (15 hours)
Peoples participation in Rural and Urban development; Major Rural and Urban development programmes.

Suggested Readings
1. Pranab Bardhan, Dilip Mookherjee - Decentralization and Local Governance in Developing Countries – A Comparative Perspective
2. T. R. Raghunandan - Decentralisation and Local Governments: The Indian Experience
3. Rémi de Bercegol - Small Towns and Decentralisation in India: Urban Local Bodies in the Making
4. D. Rajasekhar, M Devendra Babu, R Manjula - Decentralisation in Contemporary India: Status, Issues and the Way Forward
5. Chandan Sengupta, Stuart Corbridge - Democracy, Development and Decentralisation in India: Continuing Debates

PAEG0018: E-GOVERNANCE

Credits: -3 (45 lectures) (45 Hours)

COURSE OUTCOMES

At the end of this course students are able to:

1. Understand Electronic Service Delivery mechanism (Remembering & Understanding)
2. Understand the Models of E-Governance (Understanding)
3. Analyze the Evolution in E-Governance (Analyzing)
4. Evaluate the significance of Technological Infrastructural Preparedness (Applying)

Module – I (10 hours)

Introduction to E-Government and E-Governance: Difference between E-Government and E-Governance; E-Government as Information System; Benefits of E-Government; E-Government Life Cycle; Online Service Delivery and Electronic Service Delivery; Evolution, Scope and Content of E-Governance; Present Global Trends of Growth in E-Governance

Module – II (15 hours)

Models of E-Governance: Introduction; Model of Digital Governance: Broadcasting / Wider Dissemination Model, Critical Flow Model, Comparative Analysis Model, Mobilization and Lobbying Model, Interactive – Service Model / Government-to-Citizen-to-Government Model (G2C2G); Evolution in E-Governance and Maturity Models: Five Maturity Levels; Characteristics of Maturity Levels; Towards Good Governance through E-Governance Models

Module-III (10 hours)

E-Government Infrastructure Development: Network Infrastructure; Computing Infrastructure; Data centres; E-Government Architecture; Interoperability Framework; Cloud Governance; E-readiness; Data System Infrastructure; Legal Infrastructural Preparedness; Institutional Infrastructural Preparedness; Human Infrastructural Preparedness; Technological Infrastructural Preparedness

Module –IV (10 hours)

Case Studies: E-Government Initiatives in USA, UK and India.

Suggested Readings

1. R.P. Sinha- E-governance in India: Initiatives and Issues
2. Prabhu- E-Governance: Concepts and Case Studies
3. Sri Ram Khanna- Digital Drive, E-governance and Internet Services in India: Quality Dimensions
4. Suri, P.K., Sushil - Strategic Planning and Implementation of E-Governance

DEPARTMENT OF SOCIAL WORK
MASTER OF SOCIAL WORK- MSW

VISION

To be a centre of excellence in Social Work teaching, learning, research and practice which promotes commitment to social justice, fosters social consciousness and sensitivity, and upholds the dignity and worth of all.

MISSION

The Social Work Department of Assam Don Bosco University seeks to:

- Promote rights based approaches to development based on the International declaration of human rights
- Achieve excellence in teaching, learning, research, practice, outreach programmes and extension services
- Promote critical thinking and innovative intervention in response to societal and environmental problems
- Mould professionally competent individuals who are sensitive and committed to the values, principles and ethics of social work
- Create and foster an environment of justice and respect for all by promoting social consciousness, courage of conviction, appreciation for diversity and caring for creation.

PROGRAM OUTCOMES – MSW PROGRAMME

PO 1: **Critical Thinking and Professional Judgment:** Apply theoretical knowledge to make a critical analysis, intervene using innovative frameworks and evaluate and follow up.

PO 2: **Effective Communication**: Engage in inter-personnel, behavioral change communication and be proficient in Information Communication Technology.

PO 3: **Gender Sensitization, Social Commitment and Social Interaction**: Work in teams and partnerships at local, national and transnational projects and settings with focus on gender equity and cultural sensitivity

PO 4: **Effective Citizenship**: Engage in service learning and community engagement programmes for contributing towards achieving of local, regional and national goals.

PO 5: **Ethics**: To engage in social work practice as per National Association of Social Worker's ethical framework.

PO 6: **Environment and Sustainability**: Participate and promote World sustainable development goals 2030.

PO 7: **Self-directed and Life-long Learning**: Engage in continuous learning for professional growth and development.

PO 8: **Scientific Temper: -** Gaining aptitude for research for contribution to knowledge enterprise and documentation of social work theory and practice.

PROGRAM SPECIFIC OUTCOMES

PSO 1: **PSO 1: Conceptual clarity:** Students get familiarized and attain conceptual clarity in social work theories, perspectives, models, methods and processes of social work practice.

PSO 2: **PSO2: Attaining procedural skills:** Students attain knowledge of different steps of doing a work/intervention as per local, national and international protocols- norms, legal bindings and regulations.

PSO 3: **PSO3: Strategic intervention skills**: Learn what should be done when, and how it should be done when it comes to social work interventions in the fields of children, women, families, community development, health and mental health, development projects, and other welfare activities.

PSO 4: **PSO4: Attitudinal change:** Working with the personal self for meaningful and enriching social work professional career.

SWEM0038: ENVIRONMENT STUDIES AND DISASTER MANAGEMENT(3-0-0)

(3 Credit- 45 hours)

Course Outcome:

- Understand the interrelatedness of human life and environment (Understanding)
- Develop an understanding of problems arising out of environmental degradation and globalization (Analysing)
- Understand the roles of State in disaster management (Evaluating)
- Study the role of social work practice in tracking environmental issues and disaster management (Creating)

Module I: Environment and Sustainable Development (11 hours)

Concepts: Environment and Ecology; the Interrelatedness of living organisms and natural Resources; Global Environmental Crisis and its linkages to the development process. Global warming, Environmental politics and resource development regimes; Sustainable development: Management and Conservation changes

Module II: The State and the Environment (11 hours)

State of India's Environment: Waste Management; Pollution – Air, Water, Soil, Noise; Laws Related to environment; Social Work and Environment: Environment Education, Environment Ethics, Promotion Environment Movements, Environment Management – EIA.

Module III: Concept of Disaster and Models of Disaster Management (11 hours)

Disaster: Definition, Natural and Human made disasters; multiple causes and effects; Stages of disaster; Development and Disaster; Preventive Measures; Models of Disaster: Crunch Model and Release Model

Module IV: Roles of Organizations in Disaster Management (12 hours)

Disaster Management and Phases. Pre-disaster: Prevention, Preparation, Education, Vulnerability and Preparedness. Actual Disaster: Contingency, Short Term and Long Term Plans, Search, Relief, Rescue, Recovery and Restoration. Post Disaster: Rehabilitation and Commemorations; Role of Social Workers and Voluntary Agencies: Role of Social Work Professionals at different levels

SWPF0040: SOCIAL WORK PRACTICE WITH INDIVIDUALS AND FAMILIES(3-0-0)

(3 Credits – 45 hours)

Course Outcomes:

- Introduce the concept of social casework as a method of social work practice and the tools used in Casework. (Remembering, Understanding & Applying)
- Introduce the approaches to Case work. (Remembering, Understanding & Applying)
- Introduce Casework process and the techniques used. (Understanding, Applying, Analyzing & Evaluating)
- Discuss the application of social casework in different settings. (Understanding, Analyzing, Evaluating & Creating)

Module I: Introduction to Nature and Development of Social Casework (11 hours)

Social Casework: Meaning, Nature, Assumptions, Principles, Ethics and Process of Social Casework; Tools – Observation, Listening, Relationship, Interview, Home Visit, Collateral Visit, Family group conferencing; Casework and Counseling, Casework and Psychotherapy

Module II: Approaches to Casework Practice (11 hours)

Diagnostic and Functional approach; Psycho-social approach; Problem solving approach; Task centered approach; Client centered approach; Pearlman approach

Module III: Process and technique of social casework (11 hours)

Phases of casework intervention: Intake, Problem identification, Diagnosis of the problem, Treatment, Assessment, Monitoring and Evaluation, Termination/ Follow up; Techniques of Casework Intervention -Supportive Techniques, Enhancing Resources Techniques; Casework recording: Types and Principles of recording

Module IV: Social Casework Practice (12 hours)

Application of Social Case Work in different settings and Clientele groups- Casework with Children, Correctional Settings, Clinical Settings, Geriatric Care, the Terminally Ill people, and Crisis Situations; Discussion of Case Records in different Agency Settings, Relations of Casework with other methods of social work.

SWRS0042: SOCIAL WORK RESEARCH AND STATISTICS(3-0-0)

(3 Credits- 45 hours)

COURSE OUTCOMES

- Define and show social science research and social work research and the application of statistics in social work practice. (Remembering)
- Explain and discuss social work research as a method of social work and it application in addressing social issues. (Understanding)
- Apply the knowledge, skills for interpretation, documentation and presentation of results of social work research and statistics in carrying out applied research in addressing social issues. (Applying)
- Analyze various social issues and use research methods, strategies and data to suggest solutions.(Analyzing)
- Assess relevant research methods and techniques in carrying out social work research. (Evaluating)
- Create critical methods to carry out research in social work practice and suggest solutions to social issues. (Creating)

Module I: Introduction to Social Work Research (7 hours)

a. Research and Social Work Practice- Philosophical Foundations of Research.
b. Natural and social science research - characteristics and scientific attitude.
c. Social work research as a social research - relevance, ethics and values. Scope of social work research - basic and applied research.

Module II: Research designs, approaches and types (7 hours)

a. Research designs: Descriptive, Exploratory and Experimental: meaning, scope, characteristics, application in social work setting.
b. Research Approaches: Qualitative and Quantitative Research: meanings, scope, methods, steps, sampling, data collection, analysis, interpretation and reporting. Strengths and weaknesses.
c. Evaluative research: Programme and projects evaluation: concept, types, steps, reports.
d. Participatory research and action research: concepts, scope, application and steps.

Module III: Steps in Research Process (12 hours)

a. Problem Formulation: Identifying research issue, formulating research topic and problem, review of literature (library work), theoretical framework, formulating objectives, clarifying concepts, variables - conceptual and operational, formulating hypothesis.
b. Population and Sampling: Inclusion and exclusion criteria of population, the logic of sampling size and techniques: probability and non-probability sampling.
c. Tools for data collection: Levels, Types of measurements, reliability and validity of tools. Constructing tools for data collection: questionnaire, interview schedule, scales. Quantification of qualitative data.
d. Sources, Collection and Analysis of Data: Secondary and primary sources. Data collection data editing, coding, master sheet, analysis, report writing. Using a computer for data analysis: coding, analysis- graphs and results.

Module IV: Introduction to Statistics (12 hours)

a. Statistics: Definitions, Uses and Limitations. Classification and tabulation of data, univariate and bivariate, diagrammatic and graphical presentations. Measures of central tendency, Mean, Median and Mode and their uses; Measures of variability - range, variance and standard deviation.
b. Correlation: Meaning and computation of coefficient of correlation as product moment, Spearman's Rank Correlations, interpretation of correlations.
c. Test of Hypotheses: Basics, Probability distribution, normal distribution. t-test, Chi-Square Test

Module V: Application of Statistics and Reporting Research (7 hours)

a. Application of Statistics in Social Work Research.
b. Ethical guidelines in social work research.
c. Professional writing.
d. Introduction to software packages for statistical analysis.

SWPM0059: PROJECT CYCLE MANAGEMENT AND RESOURCE MOBILISATION(3-0-0)

(3 Credits- 45 hours)

Course Outcomes

- Understand the importance and process of planning, methodology for planning and formulating projects using the Logical Framework Analysis (Remembering and Understanding)
- Develop an understanding of the problems and issues faced by the poor and the marginalized (Creating)
- Develop an insight into the different strategies and approaches commonly adopted by Development Organisations for Project Management (Applying and Analysing)
- Learn Skills to develop project proposals, implement, monitor and evaluate project, enhance process documentation and reporting skills (Evaluating and Creating)

Module I: Overview (7 hours)
Concept of Results Based Management; Planning and its importance for PCM; Overview of Project Cycle Management: Identification, Design, Implementation, Monitoring, Evaluation, Identification of the best practices.

Module II: Project Identification (8 hours)
Needs assessment: Situational analysis; Capacity assessment: Human, Social, Natural, Physical, Economic and Cultural; Stakeholders analysis, types: Primary and Secondary Stakeholders and mapping of Stakeholders; Importance of Stakeholder participation and different levels of participation

Module III: Project Design (10 hours)
Problem Tree analysis; Objective Tree analysis and formulation of objectives; Hierarchical results: Impact, outcome, Outputs, Inputs; Assumptions, Indicators, Means of Verification; Activities and scheduling; Budget preparation

Module IV: Monitoring and Evaluation (10 hours)
Concept and definition of monitoring and evaluation; Difference in Monitoring and Evaluation; Learning the lessons; documentation and reporting; PERT and Critical Path Method (CPM) of Monitoring

Module V: Resource Mobilization (10 hours)
Internal and External Resources; Fundraising – principles, sources, ethics, methods and their implications. International sources for Funding – Concept note; application, procedure and FCRA, record keeping, documentation and legal compliance

Suggested Readings

VALUE ADDED COURSES

SWAW6015: ACADEMIC WRITING, RESEARCH PROPOSAL DEVELOPMENT AND DISSERTATION WRITING COURSE (15-0-15)

(2 credits -30 hours)

Course Outcomes

- Remember the concepts and meaning related to academic and professional writing. (Remembering)
- Understand the different components, stages and steps of academic writing, research proposal development and dissertation writing. (Understanding)
- Able to apply the skill of professional and academic writing into practice. (Applying)
- Able to analyse different types of writing in professional life. (Analyzing)
- Able to review and evaluate writing styles in keeping with the framework of different professional and academic writing. (Evaluating)
- Able to write academic articles, develop research proposal, dissertations and professional reports. (Creating)

Module 1: Introduction to academic writing and publication (8 hours)

Academic writing – academic writing, citations, referencing – APA, MLA, Chicago etc., peer review process and types – single blind, double blind, open peer review; publishing in journals (Indexed and UGC CARE List), edited books and books; authorship and ethics of publication.

Module 2: Research Proposal Development, Presentation and Approval (14 hours)

Research proposal – Background of study, review or literature, statement of the problem/research concern, significance of the study, rationale of the study, research hypotheses, research questions, research objectives, definition of terms, research methodology – design, population, sampling, tools and techniques of data collection, sources of data, analysis, interpretation and representation of data, ethical concerns of research (Academic Integrity and Ethical Review Board), likely outcomes, limitation of the study and research timeline. Process of research proposal approval – presentation, feedback, revision, re-presentation and approval. The role of research guide in research process.

Module 3: Dissertation Writing, Presentation and Defense (8 hours)

Dissertation writing - scientific setting, sections of research dissertation, declarations and consent forms, chapterisation, annexures and reference. Drafts, mentoring by guide, printing, final submission, presentation, defense and viva voce examination.

SWRB6014: RESULTS BASED MANAGEMENT OF PROJECTS AND PROGRAMMES (15-0-15)

(2 Credits 30 hours)

Course Outcomes:

- Understand the importance and process of Result based management of projects and programmes and formulating projects using the Logical Framework Analysis
- Develop an understanding of the problems and issues faced by the poor and the marginalized

- Develop an insight into the different strategies and approaches commonly adopted by Development Organisations for Project Management
- Learn Skills to develop project proposals, implement, monitor and evaluate project, enhance process documentation and reporting skills

Module I: Overview (5 hours)
Overview of Results based Management and Project Cycle Management: Identification, Design, Implementation, Reviewing, Monitoring, Evaluation, Learning the lesions

Module 2: Project Identification (5 hours)
Project Identification :(Situational Analysis and Problem Tree Analysis)

Module 3: Project Design (10 Hours)
Capacity assessment: human, social, natural, physical, economic, cultural: Stakeholder analysis: user groups, interest groups, beneficiaries, decision makers; Primary and Secondary stakeholders: Identifying appropriate stakeholders for participation; levels of participation: Logical Framework Approach:

Module 4: Monitoring and Evaluation (4 Hours)
Methods and process of Monitoring and Evaluation

Module 5: Resource Mobilisation (6 Hours)
Internal and External Resources; Fundraising – principles, sources, ethics, methods and their implications. International sources for Funding – Concept note; application, procedure and FCRA, record keeping, documentation and legal compliance

SWLS6017: Life Skills for competency development (15-0-15)

(2 Credits 30 hours)

Objectives:
The basic objective of the course is to introduce the students to the:

- Basic concepts and core life skills and its application
- Strategies for developing personality and competency
- Practice life skills for self-enrichment and well-being

Module 1: INTRODUCTION TO LIFE SKILLS [6 hours]

- Definition and importance of life skills
- Evolution and development of the concept of life skills:
  - Report of the Education Commissions of UNESCO: Faure Report and Delors' Report
  - UN Inter-Agency Report
  - Hamburg Declaration
  - Dakar Framework: Quality education and life skills

Module 2: CORE LIFE SKILLS: SOCIAL SKILLS, THINKING AND COPING SKILLS [12 hours]

- **Self-Awareness and Empathy**
  - Self-awareness: self-concept, self-image, self-esteem; techniques for self-exploration: Jo-Hari window, SWOT analysis
  - Empathy: sympathy, empathy & altruism; practising empathy
- **Effective Communication and Interpersonal Relationship**
- Effective communication: types and elements of communication; barriers of communication; presentation skills; questioning skills
- Interpersonal relationship: building, sustaining and ending relationships; factors affecting relationships; conflict resolution
- **High order thinking skills: Critical & Creative thinking**
  - Critical thinking: Process; strategies to enhance critical thinking
  - Creative thinking: Stages of creative thinking; strategies to enhance creative thinking
- **Problem Solving & Decision Making**
  - Problem solving: concept, stages in problem solving; models in problem-solving
  - Decision Making: process; models of decision making; decision making in a group
- **Coping Skills: Coping with Emotions and Stress**

- Coping with emotions: concept and types of emotions; coping with negative emotions and cultivating positive emotions
- Coping with Stress: concept and meaning; types and sources of stress, strategies to manage stress

Module 3: LIFE SKILLS FOR PERSONALITY DEVELOPMENT AND PRACTICUM [12 hours]

- **Life Skills for Personal Effectiveness**
  - Values: Punctuality, honesty, loyalty, dependability, reliability, integrity, respect, Constitutional values
  - Building self-confidence and self-motivation
  - Goal setting: types, steps, personal vision and goal
  - Time management
- **Topics prescribed for workshop/Skill lab**
  - Group discussion
  - Team building and team work
  - Facing interviews
  - Creativity
  - Leadership
  - Self-expression
  - Self-branding

SWCD6019: INTRODUCTION TO COMMUNICATION FOR DEVELOPMENT (C4D) FOR SOCIAL WORK(15-0-15)

(2 Credits 30 Hours)

Course description

This course will introduce students to the field of communication for development (c4d). C4d is an evidence-based process that utilizes a mix of communication tools, channels and approaches to facilitate participation and engagement with children, families, communities, networks for positive social and behaviour change in both development and humanitarian contexts. It draws on learnings and concepts from the social, behavioural and communication sciences.

This course will bring together ideas of activists/professionals and academicians in the field to cover the theoretical and practical components of the subject. The students will learn the theory, history and practice of communication for development and its application for social and behaviour communication through puppet-making, or street-play or grassroots' comics. The students will be assessed while showcasing their skills in a community setting.

Learner objectives

- Understand, define and describe key theories around communication, development, culture, behaviour and social change
- Learn from organizations/practitioners/activists who effectively use different media techniques for disseminating development results, awareness-raising and public debate; and
- Showcase the skills of communication for development and social change in a community setting.

Participants

The course is open to everyone pursuing post-graduate study programme at assam don bosco university. A maximum of 30 students will be able to enroll in the course per batch.

Module 1: principles and concepts in communication for development (5 hours)

Introduction to c4d, planning, implementation and management of c4d projects

Module 2: behavior and social change theories in c4d (5 hours)

Behavior and social change theory in c4d, interpersonal-level change theories, community-level change theories, theory-led c4d research and planning

Module 3: c4d research, monitoring, and evaluation (5 hours)
Research, monitoring and evaluation concepts; participatory research; the c4d research, monitoring and evaluation framework

Module 4: presentation of a c4d project in a community setting (15 hours)
The learners will work in groups on a communication for development and social change project (using puppetry/street play/grassroot comics) and present it in a community setting.

Course outcomes

1. the learner is able to state the meaning and applications of communication for development in social work practice and research. (remembering)
2. The student is able to explain the uses of communication for development and its use in social work practice.(understanding)
3. the learner is able to apply the knowledge and skill of communication for developmentfor intervention projects aimed at social change. (applying)
4. the student is able to analyse and adopt appropriate media for carrying out communication for development applications in appropriate contexts. (analysing)
5. the learner is able to assess the appropriate use of communication for development to find participatory solutionsto different social and cultural issues affecting communities. (evaluating)
6. the learner is able to design and execute a communication for developmentproject for social and behaviour change communication. (creating)

PRACTICUM

SWFR6008: CONCURRENT FIELDWORK I (6 credits):200 hours of Fieldwork in 15 weeks(0-0-16)

Expected Outcomes:

- Students are exposed to the community and community issues
- The students understand the dynamics and issues in the community and become aware of the sensitivities of people while working with them.
- Students get a close feel of the community and community settings
- They also get a firsthand experience of the programmes and projects implemented in the communities by NGOs and government agencies and the impact that these have on the community.
- Understand the tension between tradition and change that the communities in the region are likely to experience, and how it is handled.

Process

The field work practice in the first semester consists of orientation visits, lab sessions for skills training and placement.

- In the first semester, the focus of field work is the community.
- The students are placed in communities and in NGOs, Service Organizations and Government Agencies working with communities, and in those settings where they can be.
- They also interact with the agency personnel and the community members
- They, with the help of the agency and the field work supervisor, identify an issue and work on it following the principles of community organization. The students are expected to be creative and innovative in assisting the agency and community in whatever way possible.
- Normally a student spends fifteen hours over two days per week in field work. However, keeping in mind the peculiar situation of transport and communications in the region and the expenses involved, the field work practice may be arranged in other convenient ways as the department deems fit.
- After each session of field work the students write a report of their activities and submit to the concerned field work supervisor. The supervisor conducts individual and group field work conferences regularly.
- At the end of the semester the student submits a summary report for the semester and an external viva voce examination is conducted.

SWFW6009: CONCURRENT FIELD WORK II (0-0-16)

(6 credits- 200 hours of fieldwork in 15 weeks)

Expected Outcome:

Ensures that the student understands the way these institutions and agencies function and practice the skills of working with individuals and different groups.

Process

- The field work practice in the second semester will consist of lab sessions for skills training and placement. The focus will be on the practice of Social Case Work and Group works.
- The students shall be placed in NGOs, Government Departments, Service Organizations and Communities working with individuals and families, and in those settings where they can be exposed to issues related to individuals and groups. Normally a student spends fifteen hours over two days per week in field work.
- The student is expected to complete 5 cases in casework and follow up one group with at least 5 sessions.
- Besides this, the student shall be involved in the activities of the institution and fulfill the responsibilities that are asked of him/her by the agency/ field supervisor.
- After each session of field work the students shall write a report of their activities and submit to the concerned field work supervisor. The supervisor shall conduct individual and group field work conferences regularly.
- At the end of the semester the student shall submit a summary report for the semester and an external viva voce examination is conducted.

SWCA0047/SWCA6010: COMPUTER APPLICATIONS FOR SOCIAL SCIENCES (Lab)(0-0-2)

(2 Credits- 30 hours)

Course Outcome:

- Learn the basic computer applications; those are useful for a social worker. (Remembering)
- Learn and do data analysis for research using a Statistical Analysis Package. (Applying)

Module I (7 hours)
Word Processing: Meaning, Features, advantages; Structure of a Word Processor window; Creating document, saving opening and printing, find and replace. Creating table; Mail merge - main document, data source and merging

Module II (8 hours)
Spreadsheet Package: Cell, rows and columns; Range, structure of a spreadsheet window; Creating, saving opening and printing a spreadsheet, creating tables, charts; data analysis using formulae in a spreadsheet.

Module III (5 hours)
Presentation package: Creating presentations in a presentation package, text, tables, charts, Animation, running slide show, saving the slides, printing presentations; Internet and browsing, E-Mail, blogging, use of Internet in Research

Module IV (10 hours)
Data analysis using statistical software packages.

SWFW6010: CONTINUOUS FIELD WORK I (0-0-200)
(6 credits; 200 hours of Fieldwork in one month)

Expected Outcome:
- The students focus on their Area of Concentration / Specialization .
- Enable the students to become more proficient in the field and apply relevant skills and techniques in handling real situations.
- Opportunities to implement programmes

The process
1. The students shall be placed in the field for twenty five days of consecutive field work.
2. The field work settings shall be Communities, NGOs, Service Organizations, Hospitals, Clinics and Governmental Agencies.
3. The students will identify Organisations or Communities which will be approved by the Department.
4. The students are expected to apply all the methods of social work such as Social Casework, Group Work, Community Organization, Research and Administration, wherever applicable depending upon the organization and their services.
5. The students shall be involved in the activities of the Institution and fulfill the responsibilities as requested by the Agency Supervisor.
6. The students shall prepare a daily report of the field work activities implemented and share them through e-mail with the concerned Faculty Supervisor at the end of each day.
7. The Supervisor shall provide the necessary feedback and guidance to the students by also making personal visits if possible, to the field where they are placed.
8. At the end of the continuous field work placement, the students shall submit a consolidated or summary report highlighting the main activities implemented and the major learning from the field placement.
9. Every student shall also appear for an external viva voce examination at the end of the semester.

SWCF6012: CONTINUOUS FIELD WORK II (0-0-200)
(6 credits: 200 hours fieldwork in one month)

Expected Outcome:
- The students focus on their Area of Concentration / Specialization.
- Enable the students to become more proficient in the field and apply relevant skills and techniques in handling real situations.
- Opportunities to implement programmes

The process
- The students shall be placed in the field for twenty five days of consecutive field work.

- The field work settings shall be Communities, NGOs, Service Organizations, Hospitals, Clinics and Governmental Agencies.
- The students will identify Organisations or Communities which will be approved by the Department.
- The students are expected to apply all the methods of social work such as Social Casework, Group Work, Community Organization, Research and Administration, wherever applicable depending upon the organization and their services.
- The students shall be involved in the activities of the Institution and fulfill the responsibilities as requested by the Agency Supervisor.
- The students shall prepare a daily report of the field work activities implemented and share them through e-mail with the concerned Faculty Supervisor at the end of each day.
- The Supervisor shall provide the necessary feedback and guidance to the students by also making personal visits if possible, to the field where they are placed.
- At the end of the continuous field work placement, the students shall submit a consolidated or summary report highlighting the main activities implemented and the major learning from the field placement.
- Every student shall also appear for an external viva voce examination at the end of the semester.

SWIN6013: INTERNSHIP (0-0-200)

Pass/No Pass (200 hours fieldwork in one month)

Process

- After the Examinations at the end of the 4th Semester or as per the prevailing socio-political situations, the students shall be placed with an NGO or Agency for a period of not less than one month for practical experience and application of their skills.
- While Internship is not credited, it is mandatory for the completion of the MSW programme.
- The students shall contact an agency of his/her choice and get the choice of agency approved by the department.
- Students shall endeavor to choose an agency that is primarily in tune with their AOC and which has credentials in the concerned field.
- At the end of every week the student shall send a brief report to the supervisor and at the end of the internship a summary report shall be submitted.
- The summary report shall contain the short description of the agency, the social service skills applied in his/her work and the student's learning outcome.
- The report shall be submitted in the format prescribed by the department and shall be submitted together with the certificate from the agency confirming his/her internship in a prescribed format.

SWRP6020: RESEARCH PROJECT PHASE I

(3 credits)

Every student shall undertake a research project work which has bearing on his/her AoC under the supervision and guidance of a faculty member. The preliminary work may begin at the end of the second semester. The students are expected to complete the Literature Survey followed by a Synopsis presentation during the Phase I. The dates, the mode and components of evaluation and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester.

SWRP6021: RESEARCH PROJECT PHASE II

(3 credits)

Every student shall undertake a research project work which has bearing on his/her AoC and present a written thesis on the research work under the supervision and guidance of a faculty member. The preliminary work may begin at the end of the second semester. The students are expected to complete the data collection before the fourth semester. The thesis is to be submitted to the department before the date notified. The mode and components of evaluation and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester. There shall be a viva voce examination on the research project.

SWSL0200: PARTICIPATORY SERVICE LEARNING-RURAL PRACTICUM (30-0-50)

Credits: 2 (30 Hours)

Course Outcomes

- Understanding the meaning and objectives of service learning and participatory approach to social development (Remembering and Understanding)
- Learn and apply various methods, techniques and strategies for participatory rural/urban mapping, development and communication (Applying)
- Appraising the spatial, temporal and relational aspects of communities in the village/urban settings by application of

participatory learning, action and reflection (Evaluating)
