CO1: Recall the history, scope and significance of refugee studies (Remembering)

CO2: Explain the trends and status of refugees in Asia and Africa (Understanding)

CO3: Identify the impact of Refugee crisis in the host states (Applying)

CO4: Examine the Responses to Refugee situations and strategies of Negotiations (Analyzing)

Module I: Refugee Crises: Conceptual analysis & Contemporary Dimensions (15 Hours)

Definition, history and overview, global scale, scope and significance of refugee studies, spatial mobility in social theory,

international law and conventions for refugees

Module II: Refugee Crises: Case Studies (10 Hours)
Causes, trends and status of refugees in Asia and Africa: Palestinian, Afghan, Rohingya, Libyan and Syrian refugees, Status of refugees in host states

Module III: **Impact of Refugee Crises (10 Hours)**
Attitude of host states, Impact on society, politics and economy of host states, case studies: Europe and West Asia

Module IV: Response to Refugee Situations: Role of Humanitarian Actors (20 Hours)
National, Regional and International Actors: UNHCR, UNRWA, Red Cross, Red Crescent, NGOs, achievements, failure and challenges

Module V: Strategies of Negotiations and Solutions (15 Hours)
Issue of citizenship and identity in a globalized world, questions of repatriation, rehabilitation and resettlement, Urgent needs

PAFP307T: FOREIGN POLICY OF INDIA

(4 Credits - 60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course students are able to:
CO1: Recall the principles and Phases of Indian Foreign Policy. (Remembering)
CO2: Explain India's engagement with Super Powers and International Institutions. (Understanding)
CO3: Identify the various determinants of India's Policy towards its Neighbours. (Applying)
CO4: Examine the role of India in relation to Major International Issues. (Analyzing)

Module I: Foreign policy of India: An Overview (15 hours)
Legacies- Strategic Thinkers- Determinants- Principles- Structure and Process- Phases of Indian Foreign Policy

Module II: India's engagement with Superpowers and International Institutions (15 hours)
USA- Russia- China- EU- UN- SAARC- ASEAN- G-77- G- 20- BRICS- BIMSTEC

Module III: India and its Neighbours (15 hours)
Policy towards Immediate and Extended Neighbours- Defence- Energy Security- Trade; cyber security

Module IV: India and major International Issues (15 hours)
UNSC Reform- Terrorism- Maritime Security- International Migration- Palestine Problem-Environmental Governance- Military Intervention- Nuclear Issue

Suggested Readings

PACG406T: CHINA AND GLOBAL SYSTEM

(3 Credits - 45Hours) (L-T-P: 3-0-0)

Course Outcomes
At the end of this course students are able to:
CO1: Explain China's foreign policy and world view. (Understanding)
CO2: Identify Salient aspects of China's relations with US, Russia, EU and Japan. (Applying)
CO3: Examine issues of China's engagement with regions. (Applying)
CO4: Appraise the Rise of China in relation to Global. (Evaluating)

Module I: Rise of China and the debate on Asian Century (10 Hours)
a) Theoretical Explanations
b) China's Foreign policy and World view- Peaceful Rise and State power
c) China's perspectives on Asian Century

Module II: China and Global powers (10 Hours)
a) US- China relations
b) Russia- China relations
c) EU-China relations
d) Japan – China

Module III: Chinas engagement with the regions (15 Hours)
a) OBOR
b) Neighbourhood policy – South Asia- East Asia and South East Asia
c) Territorial disputes: Maritime disputes; South China Sea Boundary dispute; India China border dispute

Module IV: Rise of China and Global Governance (10 Hours)
a) United Nations
b) Climate Change negotiations
c) BRICS- SCO
d) Global Commons

MINOR COURSES IN PUBLIC POLICY

PASP105T: POLICY MAKING – STRUCTURES AND PROCESSES

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course, students would be able to:
CO1: Recall the basic concepts of Public Policy. (Remembering)
CO2: Explain the role of different institutions involved in policy making in India. (Understanding)
CO3: Identify various techniques and approaches of policy formulation. (Applying)
CO4: Examine the impact of globalization in policy making. (Analyzing)

Module I: Introduction to Public Policy (15 Hours)

Meaning, Nature, Scope and Significance; Public Policy and Public Administration, Policy Cycle

Module II: Policy Making Structures (15 Hours)

Inter-Governmental Relations; Role of Legislature; Role of Executive; Role of Judiciary; Role of Bureaucracy; Challenges in Policy Making

Module III: Policy Making Strategies (15 Hours)

Techniques of Policy Formulation; Approaches/ Models of Policy Making; Agencies involved in Policy Making; Informal Channels of Policy Making.

Module IV: Public Policy and Globalization: (15 Hours)

Impact of Globalization on Public Policy Making Process; Public Policy and LPG, International Organizations influencing Policy Making; Role of Private Sector in Public Policy Making

Suggested Readings

PAIC208T: PUBLIC POLICY IMPLEMENTATION

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course the students are able to:
CO1: Explain the Concept and processes of policy implementation. (Understanding)
CO2: Identify the role played by different agencies in implementing policies. (Applying)
CO3: Examine the role played by stakeholders in policy implementation. (Analyzing)
CO4: Appraise Policy Implementation through case studies. (Evaluating)

Module I: Policy Implementation System (15 Hours)

The Concept of Policy Implementation; Approaches/ Models of Policy Implementation; Constraints of Policy Implementation

Module II: Agencies in Policy Implementation (15 Hours)

Policy Implementors; Political Executives in Policy Implementation; Permanent Executives in Policy Implementation; Relationship between Political and Permanent Executives in Policy Implementation Process

Module III: Stakeholders of Policy Implementation (15 Hours)

Role of Citizens; Role of Civil Societies; Role of Media and other relevant interest groups and actors

Module IV: Case Studies in Policy Implementation (15 Hours)

Suggested areas- Education, Health, Tribal Development, Weaker Sections. Evaluation and Feedback: Monitoring and Social Audit

Suggested Readings

1. Bidyut Chakrabarty and Prakash Chand, Public Policy: Concept, Theory and Practice, Sage Publications India Pvt Ltd, 2016.

PAIE308T: POLICY EDUCATION, IMPACT AND EVALUATION

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course students are able to:
CO1: Recall the basics of policy education. (Remembering)
CO2: Explain the use of the tools and techniques of policy monitoring and evaluation. (Understanding)
CO3: Identify the role of different institutions in policy evaluation. (Applying)
CO4: Examine the policy impact through case studies. (Analyzing)

Module I: Introduction to Policy Education (15 Hours)

Policy Education as an emerging discipline; Importance of Policy Education; Policy Education for Policy Implementation; Public Policy and Experiential Learning.

Module II: Monitoring, Evaluation and Review (15 Hours)

Methods and Approaches of Evaluation; Evaluation standards and Ethics; Approaches to Policy Monitoring; Policy Monitoring and Policy Outcomes; Importance of Policy Review, Strategies for Policy Review.

Module III: Policy Evaluation Institutions (15 Hours)
NITI Aayog, DMEO, Comptroller and Auditor General of India, Social Audit

Module IV: Policy Impact: Case Studies (15 Hours)
Poverty reduction, empowerment of women, environmental protection, educational development, Tribal Development

Suggested Readings
1. Bidyut Chakrabarty and Prakash Chand, Public Policy: Concept, Theory and Practice, Sage Publications India Pvt Ltd, 2016.

PASP309T: STATISTICS FOR PUBLIC ADMINISTRATION RESEARCH

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes
At the end of this course students are able to:
CO1: Explain the significance of Statistics and Measures of Central Tendency along with measures of dispersion.
CO2: Illustrate the Bi-variate Relationship in Correlational analysis.
CO3: Discuss the elements of Probability Theory.
CO4: Examine and illustrate the Test of Hypothesis in the statistical analysis through Parametric and Non-Parametric Testing Techniques.

Module I: Introduction to Statistics (15 Hours)
Concept, nature, significance and scope of statistics; General field of statistics: descriptive and inferential statistics; Measure of central tendency: mean, weighted mean, median and mode
Measures of dispersion: variance, standard deviation and coefficient of variation

Module II: Determining the Bi-variate Relationship (10 Hours)
Correlation analysis: Karl Pearson and Spearman's Rank correlation methods; Regression analysis: simple linear regression

Module III: Probability Theory(15 Hours)
Basic terminologies: combination, event and its type; sample space; Approach to probability: classical, relative frequency and subjective approaches; Laws of probability: additional rule, multiplication rule, conditional probability; Theoretical probability distribution: binomial, and normal distribution.

Module IV: Test of Hypothesis (20 Hours)
Introduction to the test of the hypothesis; concept and significance; Basic terminologies: null and alternative hypothesis, one-tailed and two-tailed test, type-I and type-II errors; Steps in the test of hypothesis; Test of significance of large sample: mean (single and double sample), population proportion (single and double sample); Test of significance of small Sample: mean (independent and dependent), sample correlation coefficient, the test of significance of two sample variances, Parametric and non-parametric test, chi-square test (goodness of fits and test of independence attribute); Kruskal Wallis Test: the test of significance of more than two sample means.

PAPP310T: PUBLIC POLICY IN INDIA

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes

CO1: To develop the understanding of public policy through its meaning, nature and significance. (Understanding)
CO2: To gain knowledge about various approaches of public policy. (Remembering)
CO3: To analyze the role of various policies for protecting women and children. (Analysing)
CO4: To evaluate the role of social policy and planning through various institutions in India. (Evaluating)

Module I: Introduction to Public Policy (15 Hours)

Meaning, Nature and Scope of Public Policy; Significance of Public Policy; Types of Policy; Public Policy and Public Administration; Policy Cycle

Module II: Approaches to Public Policy (15 Hours)

The Process Approach; The Logical Positivist Approach; The Phenomenological Approach; The Participatory Approach; The Normative Approach.

Module III: Social Policies in India (15 Hours)

Children's Policy in India for juvenile justice, child labour restraint and child marriage prevention; Critical Review of Governmental & Non-Governmental Efforts, Social Legislations and Women's Rights in India: Marriage Acts; Divorce Acts; Prevention of Domestic Violence; Prevention of Sexual Harassment at Workplace.

Module IV: Social Policy and Planning (15 Hours)

Role of Media Advocacy, Accountable Governance, Corporate Social Responsibility in India; Role of Important Institutional Machineries -NITI Aayog, National Commissions for Women, SCs, STs, Backward Classes, Evaluation of Social Policy in India.

Suggested Readings

PAIC407T: INSTITUTIONS & COMPLEXITIES IN PUBLIC POLICY PROCESS

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes

At the end of this course students are able to:
CO1: Explain the role of different institutions in policy making process. (Understanding)
CO2: Identify the issues involved in policy design. (Applying)
CO3: Examine the factors behind complexities in policy implementation. (Analysing)
CO4: Appraise the impact of conditions in policy evaluation and analysis. (Evaluating)

Module I: Institutions in Public Policy Process (15 hours)
Inter-governmental relations; The role of the legislature; The role of political and permanent executives; the role of judiciary; planning machinery at the central, state, and local levels.

Module II: Complexities in policy formulation (15 hours)
Identifying issues in agenda-setting; Faulty policy design- reasons and effects; inadequate collaborative policymaking

Module III: Complexities in policy implementation (15 hours)
Key factors behind policy failure; Policy failure and the policy-implementation gap; local contextual realities

Module IV: Complexities in Policy evaluation and analysis (15 hours)
Changing conditions and needs; Issues of cost-benefit analysis; Complexities in the analysis of outcomes of public policy

Suggested Readings

PAHT404T: HUMAN TRAFFICKING IN INDIA

(3 Credits – 45 Hours) (L-T-P: 3-0-0)

Course Outcomes
At the end of this course, students would be able to:
CO1: Understand various forms, types and indicators of human trafficking. (Understanding)
CO2: Demonstrate understanding of the theoretical perspectives of human trafficking. (Understanding)
CO3: Identify the anti-human trafficking efforts in India. (Applying)
CO4: Examine the national and international anti-human trafficking frameworks in policy intervention. (Analysing)

Module I: Introduction (10 hours)
History, Nature, and magnitude of human trafficking in India; Forms and types of human trafficking; Indicators of Human Trafficking; Vulnerability in Human Trafficking; Human trafficking and Sex work

Module II: Theoretical Perspectives of Human Trafficking (10 hours)
Inter-disciplinary Approach; Feminist Approach; Stigma, exclusion and push-pull theory from Sociological Approach; Neo-liberal Approach

Module III: Anti-Human Trafficking efforts in India (10 hours)
Anti-Human Trafficking Units; Rescue, Re-integration, and Repatriation of the Trafficked survivors; Modus operandi and low conviction rate of the traffickers; Shelter homes for the trafficked survivors

Module IV: National and International Policies on Human Trafficking (15 hours)
Constitution of India and Human Trafficking; Legal provisions in India; International Legal provisions; Palermo protocol of the UN; Critique of the policies; Case studies

Suggested Readings

PARM405T: RESEARCH METHODOLOGY

(2 Credits – 30 Hours) (L-T-P: 2-0-0)

Course Outcomes

At the end of this course students are able to:
CO1: Explain the key concepts in research methods, Research Process and Research Design. (Understanding)
CO2: Identification and mastery of the necessary skills to use research tools to undertake research study (Applying)
CO3: Evaluate governmental policy or programme/projects on the basis of primary and secondary data (Evaluating)

Module I: Foundations of Public Administration Research (15 Hours)

Key concepts in research methods; Meaning and types of research; Research process – Defining research problem, steps of research and application of research methods in Public Administration; Hypothesis; Research Design: Concept and importance; Types of research designs

Module II: Scientific Method, Measurement and Sampling Techniques (15 Hours)

Concept of scientific method; Basics of sampling and types of sampling, Data Collection, Processing and Analysis, Data analysis and Report writing

Suggested Readings

MINOR COURSES IN HISTORY

PAHI108T: HISTORIOGRAPHY, EARLY CIVILIZATIONS, ANCIENT TO MEDIEVAL INDIAN HISTORY

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes

CO1: Recall the various Sources for understanding pre-history, proto history and megalithic Cultures (Remembering)
CO2: Show the economic conditions of society, contribution of Educational institutions, art and literature and major political thinkers in Post Mauryan Period. (Understanding)
CO3: Identify the major Political Developments in North India, Agriculture and Urban Economy, religious movement and Philosophies in Late 8^{th} – 13^{th} Century (Applying)
CO4: Identify the emergence of regional kingdoms in the late 17^{th} and 18^{th} centuries. (Applying)

Module I: An Over-view of Sources and Pre-history up to Impact of Iranian and Macedonian invasions (15 Hours)

a) Archaeological Sources, Literary Sources, Indigenous sources and Foreign Accounts
b) Pre-history and Proto-history, Megalithic Cultures,
c) Expansion of Aryans in India, Period of Mahajanapadas and Iranian and Macedonian invasions and their impact

Module II: Post Mauryan Period, Vakatakas and Vardhanas and Regional states (15 hours)

a) Early State and Society in Eastern India, Deccan and South India, Polity and administration, Economic conditions, Contribution of educational institutions, Literature, scientific literature, art and architecture, Growth of Vaishnava and Saiva religions.
b) Institutions of temple and temple architecture; Arab conquest of Sind; Alberuni, Local Government; Growth of art and architecture, religious sects, Institution of temple and Mathas, Agraharas, education and literature, economy and society.
c) Themes in Early Indian Cultural History: Languages and texts, major stages in the evolution of art and architecture, major philosophical thinkers and schools, ideas in Science and Mathematics.

Module III: India from Late 8th – 13th Century (15 hours)

a) Major political developments in Northern India and the Peninsula and Cultural Traditions in India, 750-1200: Village economy and society, Agriculture and urban economy, the status of the Brahman and the new social order, Condition of women, Indian science and technology, Skankaracharya and Vedanta, Ramanuja and Vishishtadvaita, Madhva and Brahma-Mimansa, Literature in Sanskrit and in the newly developing languages, Kalhan's Rajtarangini, Alberuni's India and Khalji Revoluiton.
b) Political Developments and Economy in 15th & 16th Century: Rise of Provincial Dynasties: Bengal, Kashmir (Zainul Abedin), Gujarat, Malwa, Bahmanids, The Vijayanagra Empire, Lodis, The Sur Empire: Sher Shah's administration, Portuguese Colonial enterprise, Bhakti and Sufi Movements.
c) The Fifteenth to early seventeenth Century – Society and Culture: Regional cultural specificities, Literary traditions, Provincial architecture, Society, culture, literature and the arts in Vijayanagara Empire; Establishment of Jagir and Mansab systems under Akbar, Rapuput Policy, Evolution of religious and social outlook, theory of Sulh-i-kul and religious policy, Religious policies of Jahangir, Shahjahan and Aurangzeb

Module IV: Late 17th Century Crisis and Revolts to 18th Century (15 Hours)

Late 17th Century Crisis and Revolts , The Ahom Kingdom, Shivaji and the early Maratha Kingdom, Factors for the decline of the Mughal Empire, The regional principalities: Nizam's Deccan, Bengal, Awadh, Maratha ascendancy under the Peshwas, Emergence of Afghan Power, Battle of Panipat 1761, State of politics, culture and economy on the eve of the British conquest

Suggested Readings

PAMH210T: MODERN INDIAN HISTORY

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes

CO1: Recall the important events leading establishment of British Colonial Rule. (Remembering)
CO2: Show the Economic, Social, religious and Cultural impact of British Colonial Rule. (Understanding)
CO3: Identify the various responses to the British Rule in India. (Applying)
CO4: Identify the impact of Politics of Separatism, Consolidation as a Nation and Economic & Political Changes. (Applying)

Module I: European Penetration into India (15 Hours)

a) The Early European Settlements; The Portuguese and the Dutch; The English and the French East India Companies; Their struggle for supremacy; Carnatic Wars; Bengal - The conflict between the English and the Nawabs of Bengal; Siraj and the English; The Battle of Plassey; Significance of Plassey.

b) British Expansion in India: Bengal – Mir Jafar and Mir Kasim; The Battle of Buxar; Mysore; The Marathas; The three Anglo-Maratha Wars; The Punjab, Annexation & Consolidation of the Lushai Hills.

c) Early Structure of the British Raj: The early administrative structure; From diarchy to direct control; The Regulating Act (1773); The Pitt's India Act (1784); The Charter Act (1833); The voice of free trade and the changing character of British colonial rule; The English utilitarian and India.

Module II: Impact of British Colonial Rule (15 Hours)

a) Economic Impact of British Colonial Rule: (a) Land revenue settlements in British India; The Permanent Settlement; Ryotwari Settlement; Mahalwari Settlement; Economic impact of the revenue arrangements; Commercialization of agriculture; Rise of landless agrarian labourers; Impoverishment of the rural society. (b) Dislocation of traditional trade and commerce; De -industrialisation; Decline of traditional crafts; Drain of wealth; Economic transformation of India; Railroad and communication network including telegraph and postal services; Famine and poverty in the rural interior; European business enterprise and its limitations.

b) Social and Cultural Developments: The state of indigenous education, its dislocation; Orientalist-Anglicist controversy, The introduction of western education in India; The rise of press, literature and public opinion; The rise of modern vernacular literature; Progress of science; Christian missionary activities in India.

c) Social and Religious Reform movements in Bengal and Other Areas: Ram Mohan Roy, The Brahmo Movement; Devendranath Tagore; Iswarchandra Vidyasagar; The Young Bengal Movement; Dayanada Saraswati; The social reform movements in India including Sati, widow remarriage, child marriage etc.; The contribution of Indian renaissance to the growth of modern India; Islamic revivalism – the Feraizi and Wahabi Movements.

Module III: Indian Response to British Rule (15 Hours)

a) Various Peasant Movements and Tribal Uprisings leading to the birth of Indian nationalism: Peasant movements and tribal uprisings in the 18th and 19th centuries including the Rangpur Dhing (1783) , the Kol Rebellion (1832), the Mopla Rebellion in Malabar (1841-1920), the Santal Hul (1855), Indigo Rebellion (1859-60), Deccan Uprising (1875) and the Munda Ulgulan (1899-1900); The Great Revolt of 1857 - Origin, character, causes of failure, the consequences; The shift in the character of peasant uprisings in the post-1857 period; the peasant movements of the 1920s and 1930s.
b) Factors leading to the birth of Indian Nationalism; Politics of Association; The Foundation of the Indian National Congress; The Safety-valve thesis relating to the birth of the Congress; Programme and objectives of Early Congress; the social composition of early Congress leadership; the Moderates and Extremists; The Partition of Bengal (1905); The Swadeshi Movement in Bengal; the economic and political aspects of Swadeshi Movement; The beginning of revolutionary extremism in India.
c) Rise of Gandhi; Character of Gandhian nationalism; Gandhi's popular appeal; Rowlatt Satyagraha; the Khilafat Movement; the Non-cooperation Movement; National politics from the end of the Non-cooperation movement to the beginning of the Civil Disobedience movement; the two phases of the Civil Disobedience Movement; Simon Commission; The Nehru Report; the Round Table Conferences; Nationalism and the Peasant Movements; Nationalism and Working class movements; Women and Indian youth and students in Indian politics (1885-1947); the election of 1937 and the formation of ministries; Cripps Mission; the Quit India Movement; the Wavell Plan; The Cabinet Mission.
d) Constitutional Developments in the Colonial India between 1858 and 1935 and Other strands in the National Movement
    i. The Revolutionaries: Bengal, the Punjab, Maharashtra, U.P, the Madras Presidency, Outside India.
    ii. The Left; The Left within the Congress: Jawaharlal Nehru, Subhas Chandra Bose, the Congress Socialist Party; the Communist Party of India, other left parties.

Module IV: Politics of Separatism, Consolidation as a Nation and Economic Development & Political Change (15 Hours)

a) Politics of Separatism; the Muslim League; the Hindu Mahasabha; Communalism and the politics of partition; Transfer of power; Independence.
b) Consolidation as a Nation; Nehru's Foreign Policy; India and her neighbours (1947-1964); The linguistic reorganisation of States (1935-1947); Regionalism and regional inequality; Integration of Princely States; Princes in electoral politics; the Question of National Language.
c) Caste and Ethnicity after 1947; Backward castes and tribes in post-colonial electoral politics; Dalit movements.
d) Economic development and political change; Land reforms; the politics of planning and rural reconstruction; Ecology and environmental policy in post - colonial India; Progress of science.

Suggested Readings

PAWH211T: WORLD HISTORY
(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Course Outcomes
CO1: Recall the important ideas and events brought about enlightenment, modern Politics and Industrialisation (Remembering)
CO2: Show the rise of Nationalism, Imperialism, colonialism, Revolution and Counter Revolution (Understanding)
CO3: Identify the various causes and consequences of World Wars, Power Blocs, Non-alignment and End of Colonial Rule (Applying)
CO4: Identify the factors constraining Development, unification of Europe, disintegration of Soviet Union and rise of unipolar world. (Applying)

Module I: Enlightenment, Origins of Modern Politics and Industrialization (15 Hours)

a) Enlightenment and Modern ideas: Major ideas of Enlightenment: Kant, Rousseau; Spread of Enlightenment in the colonies; Rise of socialist ideas (up to Marx); spread of Marxian Socialism.
b) Origins of Modern Politics: European States System; American Revolution and the Constitution; French revolution and aftermath, 1789-1815; American Civil War with reference to Abraham Lincoln and the abolition of slavery; British Democratic Politics, 1815-1850; Parliamentary Reformers, Free Traders, Chartists.
c) Industrialization: English Industrial Revolution: Causes and Impact on Society; Industrialization in other countries: USA, Germany, Russia, Japan; Industrialization and Globalization.

Module II: Nation-State System, Imperialism and Colonialism and Revolution & Counter-Revolution (15 Hours)
a) Nation-State System: Rise of Nationalism in 19th century; Nationalism: state-building in Germany and Italy; Disintegration of Empires in the face of the emergence of nationalities across the world.
b) Imperialism and Colonialism: South and South-East Asia; Latin America and South Africa; Australia; Imperialism and free trade; Rise of neo-imperialism.
c) Revolution and Counter-Revolution: 19th Century European revolutions; The Russian Revolution of 1917-1921; Fascist Counter-Revolution, Italy and Germany; The Chinese Revolution of 1949

Module III: World Wars; Post World War II & Liberation from Colonial Rule (15 Hours)
a) World Wars: 1st and 2nd World Wars as Total Wars: Societal implications; World War I: Causes and consequences; World War II: Causes and consequence
b) The World after World War II: Emergence of two power blocs; Emergence of Third World and non-alignment; UNO and the global disputes.
c) Liberation from Colonial Rule: Latin America-Bolivar; Arab World-Egypt; Africa-Apartheid to Democracy; South-East Asia-Vietnam

Module IV: Factors Constraining Development, Unification of Europe, Disintegration of Soviet Union and Rise of Unipolar World (15 Hours)
a) Factors constraining development: Latin America, Africa
b) Unification of Europe: Post War Foundations: NATO and European Community; Consolidation and Expansion of European Community; European Union.
c) Disintegration of Soviet Union and the Rise of the Unipolar World: Factors leading to the collapse of Soviet communism and the Soviet Union, 1985-1991; Political Changes in Eastern Europe 1989-2001; End of the cold war and US ascendancy in the World as the lone superpower.

Suggested Readings
1. A Short History of the World, H.G. Wells, Fingerprint Publishing, 2015
2. Mastering Modern World History, Norman Lowe, Palgraves Master Series (2013)
3. History of the World, Arjun Dev and Indira Arjun Dev, Orient Blackswan (2009)
4. History of the Modern World, Dr. Hukam Chand Jain, Jain Prakashan Mandir (2022)

5. A History of the Modern World: An Outline, Ranjan Chakrabarti, Primus Books (2013)

SKILL ENHANCEMENT COURSES

Semester	Category	Course Code	Course Name	Credits
1	S E Course 1	PAOH106L	Office, Home Management and Secretarial practice	3
2	S E Course 2	PACO107L	Corporate Communication	3
3	S E Course 3	PAES209L	Ethics & Self Awareness	3

PAOH106L: OFFICE, HOME MANAGEMENT AND SECRETARIAL PRACTICE

(3 Credits – 15+60 Hours) (L-T-P: 1-0-2)

Course Outcomes

At the end of the Course, students will be able:

CO1: To demonstrate the functioning of the office management, filing and indexing systems, secretarial practices, and meeting procedures. (Understanding)

CO2: To acquire Proficiency in using tools and techniques in office management, filing, and indexing systems and secretarial practices. (Applying)

Module I: Theory (15 Hours)

Modern managerial tools for office management; Modern office record management; Modern filling and indexing systems; Modern Secretarial practices and meeting procedures.

Module II: Practical (60 hours)

The practice of modern managerial tools for office management; The practice of modern office record management; The Practice of modern filling and indexing systems; Practicing Data Entry Operations and Typing; Organising mock organisational meetings: preparation of notices and correspondences, agendas, Resolutions, Minutes, and confirmation of the Minutes and holding meetings.

Suggested Readings

1. Hislop, Donald, Rachelle Bosua, and Remko Helms. *Knowledge management in organizations: A critical introduction*. Oxford university press, 2018.
2. Shark, Alan R. *Technology and public management*. Taylor & Francis, 2022.
3. Read, Judith, and Mary Lea Ginn. *Records management*. Cengage Learning, 2015.
4. Smith, Kelvin. *Public sector records management: A practical guide*. Ashgate Publishing, Ltd., 2007.
5. Chowdhury, Gobinda G. *Introduction to modern information retrieval*. Facet Publishing, 2010.
6. Price, Leah. *Literary secretaries/secretarial culture*. Routledge, 2017.

PACO107L: CORPORATE COMMUNICATION

(3 Credits – 15+60 Hours) (L-T-P: 1-0-2)

Course Outcomes

At the end of the Course, students will be able:

CO1: To demonstrate skills in modern corporate communication. (Understanding)

CO2: To acquire Proficiency in using modern tools and techniques in corporate communication (Applying)

Module I: Modern corporate Communication tools: (15 Hours)

Social intranet, all-in-one employee communication tools, Task/ project management software and tools, Instant messaging, Newsletters, Voice & video conferencing tools (like Cisco Webex Meetings, Go To Meeting, ZOOM; SKYPE, Google Meet, and Microsoft Teams), Document collaboration tools (like Google Workspace), ERP, Knowledge centre tools, File sharing tools, Employee directory software, Internal blogs, videos & updates, Analytics, Discussion forums, Email management tools, Communication tools for the social media content (like Buffer or Hootsuite).

Module II: Practical (30 Hours)

Practising Modern Corporate Communication tools

Suggested Readings

1. Wrench, Jason S., ed. *Workplace communication for the 21st century: Tools and strategies that impact the bottom line*. ABC-CLIO, 2013.
2. Patterson, Kerry, et al. *Crucial conversations tools for talking when stakes are high*. McGraw-Hill Education, 2012.
3. Sullivan, Jay. *Simply said: Communicating better at work and beyond*. John Wiley & Sons, 2016.
4. Fine, Debra. *The Fine Art of Small Talk: How to Start a Conversation, Keep It Going, Build Networking Skills--and Leave a Positive Impression!*. Hachette UK, 2023.

PAES209L: ETHICS AND SELF AWARENESS

(3 Credits – 15+60 Hours) (L-T-P: 1-0-2)

Course Outcomes:

At the end of the Course, students will be able:
CO1: To demonstrate knowledge of Ethics and Self Awareness. (Understanding)
CO2: To Make Use of Skills and values in the practice of Ethics and Self Awareness. (Applying)

Module I: Introduction - Ethics and Self-Awareness (15 Hours)

Ethical theories; Moral principles and strategies for weighing competing values and interests; Essence, determinants, and consequences of ethics in-human actions; Self-awareness – techniques

Module II: Practical (60 Hours)

Ethics Tournaments; Signing Honor Codes; Self-awareness – activities

Suggested Readings

1. Singer, Peter. *Practical ethics*. Cambridge university press, 2011.
2. Thompson, Mel. *Understand Ethics: Teach Yourself: Making Sense of the Morals of Everyday Living*. Hachette UK, 2010.
3. Rachels, James, and Stuart Rachels. *The Elements of Moral Philosophy 7e*. McGraw Hill, 2012.
4. Tugaleva, Vironika. *The art of talking to yourself: Self-awareness meets the inner conversation*. Soulux Press, 2017.
5. Holiday, Ryan. *Ego is the Enemy*. Elex media komputindo, 2019.
6. Williams, Ron. *Learning to lead: The journey to leading yourself, leading others, and leading an organization*. Greenleaf Book Group, 2019.

INTERNSHIPS

Semester	Category	Course Code	Course Name	Credits
2	Internship	PAIN109I	Internship	4
4	Internship	PAIN212I	Internship	4
5	Internship	PAIN311I	Internship	2

PAIN109I/PAIN212I: INTERNSHIP (Exit of 1st Year or 2nd Year)
(4 Credits: 120 Hours)

The student will carry out a field Internship as per the need of the Organization with a specific Objective since he or she will exit after 1st year or 2nd Year of UG Programme. The Internship will be of 1 month duration with follow up of the supervisors allotted as per as specialization. The student will need to sort out the Organisation with due permissions of the Department/University authorities and submit a preliminary plan for approval. The plan of activities undertaken during the Internships would be areas related to Public Administration, Public Policies, Rural Development, Urban Development etc with specific objectives and Mission and Vision of the Organisation. The student will submit a final report of the Internships with supportive documents and signature of the Organization where he/she has undertaken the Internships within 10 days after the Internship is over.

Time duration: 1 Month/30 days
Final Report: Within 10 days after the Internship is over (Hard Copy in Hard/Spiral Bound), 30-40 Pages
Marks: 100

PAIN311I: INTERNSHIP (At the end of 4th Semester and evaluated in 5th Semester)
(2 Credits-60 Hours)

The student will carry out a field Internship as per the need of the Organization with a specific Objective at the end of 4th Semester and Evaluated in the 5th Semester of UG Programme. The Internship will be of 1 month duration with follow up of the supervisors allotted as per as specialization. The student will need to sort out the Organization with due permissions of the Department/University authorities and submit a preliminary plan for approval. The plan of activities undertaken during the Internships would be areas related to Public Administration, Public Policies, Rural Development, Urban Development etc with specific objectives and Mission and Vision of the Organisation. The student will submit a final report of the Internships with supportive documents and signature of the Organization where he/she has undertaken the Internships within 10 days after the Internship is over.

Time duration: 1 Month/30 days
Final Report: Within 10 days after the Internship is over (Hard Copy in Hard/Spiral Bound), 30-40 Pages

RESEARCH PROJECT /DISSERTATION

BA PUBLIC ADMINISTRATION (Honours)				
Semester	**Category**	**Course Code**	**Course Name**	**Credits**
7	Research Project/Dissertation	PCDI409P	Research Project Phase I	6
8	Research Project/Dissertation	PCDI410P	Research Project Phase II	6
BA PUBLIC ADMINISTRATION (Honours) with Research				
Semester	**Category**	**Course Code**	**Course Name**	**Credits**
7	Research Project/Dissertation	PCDI411P	Dissertation I	18
8	Research Project/Dissertation	PCDI412P	Dissertation II	20

BA PUBLIC ADMINISTRATION (Honours)

PADI408P: Research Project Phase I

(6 credits – 180 hours) (L-T-P: 0-0-12)

The Research project is divided into two phases, taking place during Semester VII and Semester VIII, known as Research Project Phase-I and Research Project Phase-II, respectively. The primary objective of this course is to enhance students' independent critical thinking abilities and improve their oral and written communication skills by incorporating a research project alongside a strong academic foundation. The research project aims to achieve valuable learning outcomes with long-term impacts, preparing undergraduates for their future professional endeavours.

During the first phase of the research project, students are required to select a suitable study topic within their area of specialization. They must effectively articulate and formulate a research question related to their chosen topic. Additionally, students need to gather relevant literature pertaining to their research topic and, if applicable, develop research hypotheses. Proper planning of the research design is essential, including considerations for sampling, observational, statistical, and operational designs.

PADI409P: Research Project Phase II

(6 credits – 180 hours) (L-T-P: 0-0-12)

The Research project spans across two semesters, Semester VII and Semester VIII, referred to as Research Project Phase-I and Research Project Phase-II, respectively. In Phase-I, students select a research topic and begin their work. Phase-II serves as a continuation of Phase-I, where students refine their research project and prepare it for presentation.

During Phase-II, students are required to compile relevant data, analyze and interpret it, and, if applicable, test any hypotheses. By analyzing and interpreting the collected data, the student (researcher) will draw logical conclusions and propose appropriate recommendations for the research problem. The final outcome should be a well-structured project report that the students will defend in front of a panel of examiners.

BA PUBLIC ADMINISTRATION (Honours) with Research

PADI410P: DISSERTATION I

(18 Credits -540 Hours) (L-T-P: 0-0-36)

The students will have to submit a dissertation, which will be assessed by External Examiners appointed by the University. The dissertation work will be spread over two semesters, namely Semester VII and Semester VIII, referred to as Dissertation Phase-I and Dissertation Phase-II, respectively. The total dissertation carries 38 credits, with 18 credits assigned to Semester VII and 20 credits to Semester VIII.

The main objectives of the course are to enhance students' presentation skills and develop their academic writing abilities. Additionally, the course aims to enable students to apply the statistical research training they have received during the taught portion of the program. This application will involve designing an appropriate research strategy and methodology to conduct their research.

During Dissertation Phase-I, students are expected to come up with a research idea independently. By the end of Semester VII, they must defend a research proposal based on this idea, presenting it as a Synopsis.

Structure of Dissertation Phase-I

Sl. No.	Tentative Stages to be completed
1.	Research idea or concept note, i.e., Statement of the Problem
2.	Review of Literature
3.	Research Methodology Sampling, Sample size determination, Selection of sample, Analytical tools to be used, Questionnaire preparation, Preliminary exploration of data i.e. Pilot Survey
4.	a) Synopsis Presentation b) Submission of Modified Synopsis to the Department
5.	Students have to collect all the required data during the semester

PADI411P: DISSERTATION II

(20 Credits -600 Hours) (L-T-P: 0-0-40)

The students need to submit a dissertation, which will be evaluated by External Examiners chosen by the University. The dissertation work will be divided into two phases: Dissertation Phase-I in Semester VII and Dissertation Phase-II in Semester VIII. These phases account for a total of 38 credits, with 18 credits in Semester VII and 20 credits in Semester VIII.

The primary objective of the course is to refine the students' dissertations during Phase-I, while also teaching them how to apply statistical and scientific tools to their research. They will also learn research ethics. In Dissertation Phase-II, the students will conduct data analysis, write the dissertation, and defend it before the end of the semester.

The dissertation must encompass original research questions (if any), a critical review of relevant literature, use of analytical tools to address the research questions, data analysis, and interpretation. Following all guidelines provided by the University, the students must submit the completed dissertation. Throughout this process, the students will receive guidance from a designated supervisor from the department.

Structure of Dissertation Phase-II

Sl. No.	Tentative Stages to be completed
1.	Validation of data, data entry and preliminary analysis of data (drawing graphs, trend lines, making tables etc.)
2.	Main data analysis and interpretation
3.	Dissertation writing, Proof reading, and Plagiarism checking
4.	Submission and Viva Voce

DEPARTMENT OF PHILOSOPHY

PROGRAMME: BACHELOR OF ARTS in PHILOSOPHY (BA)
Degree: BA PHILOSOPHY (HONOURS) MINORS IN ENGLISH AND PSYCHOLOGY

VISION:

To be a centre of excellence in teaching, learning, and research that is committed to moulding ethically and socially responsible graduates with deeper knowledge about God, the world, and the human person in his or her social setting, which is religiously, culturally, economically, linguistically, and ethnically diverse.

MISSION:

The Department of Philosophy seeks to:

- Promote critical thinking by training students to analyse, evaluate, and interpret societal events, which aims at the integral development of students.
- Search for and find true values and meanings with a coherent and cogent exposition of one's philosophical convictions.
- Provide the students with a worldview that ensures a holistic vision of reality by engaging them with the multi- cultural and multi-linguistic traditions of northeast India and its people.
- Inculcate among the students true human values that promote and appreciate each other's differences.

PROGRAMME OUTCOMES (PO)

PO 1: **Critical Thinking**: Choose informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organisational, and personal) from different perspectives.

PO 2: **Effective Communication**: Speak, read, write, and listen clearly in English and one Indian language, and make meaning of the world by connecting people, ideas, books, media, and technology.

PO 3: **Social Interaction**: Discuss the views of others, mediate disagreements, and help reach conclusions in groupsettings.

PO 4: **Effective Citizenship**: Demonstrate empathetic social concern and equity-centred national development, as well as the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO 5: **Ethics**: Analyse different value systems, including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO 6: **Environment and Sustainability**: Assess the issues of environmental context and sustainable development. PO 7: **Self-directed and Life-long Learning**: Develop the ability to engage in independent and life-long learning in the broadest context of socio-technological changes.

PO 7: **Enhancing Abilities and Skills:** To acquire hands-on competence in skills and abilities that will enhance the learning process.

PROGRAMME SPECIFIC OUTCOMES (PSO)

PSO 1: **Demonstrating Comprehensive Acquaintance with the Subjects:** To explain and analyse with alacritythe various issues in philosophy, English, and psychology.

PSO 2: **Developing Philosophical Thinking:** To assess the thoughts and writings of different philosophers, psychologists, and literary writers, both Western and Indian, analytically

PSO 3: **Building a Multi-disciplinary Worldview:** To develop familiarity with knowledge of concepts andnotions regarding disciplines other than philosophy, English, and psychology.

PSO 4: **Creating Social and Cultural Sensibilities:** To appraise and estimate the complexities of the social and cultural sensibilities of people by engaging in a variety of philosophical discourses.

PYAM100T: ANCIENT AND MEDIEVAL WESTERN PHILOSOPHY

(4 Credits – 60 Hours)

Course Objectives

The course intends to expand the discursive and reasoning skills of the students. It assists the students in their development of problem-solving experience in at least one of the main areas of philosophy. Ancient Greek Philosophy arose in the 6th century BCE and its influence is noticed in the later part of continental philosophy. Alfred North Whitehead would say that the philosophy after Plato is only a footnote to Plato's philosophy. Ancientthinkers have dealt with philosophy, ethics, metaphysics, ontology, biology, logic, rhetoric and aesthetics.Medieval Christian thinkers made use of Greek philosophy to interpret Christian theology and arrive at a coherentChristian philosophy.

Course Outcomes

CO 1: Outlines the basic philosophies of different schools of Greek and Medieval Philosophy (understanding)
CO 2: Analyses the various issues that the Ancient Greek and Medieval thinkers were grappling with (analysing)
CO 3: Develops the techniques for solving problems in at least one of the main areas of philosophy (applying)
CO 4: Improves critical thinking and analytical skills (creating)

Module 1: The Origin and Development of Early Greek Thought (10 hours)

The problem of substance: Thales, Anaximander, Anaximenes, Pythagoras
The Problem of Change: permanence and change – Heraclitus and Eleatic School
The Theory of Atomism: Democritus - metaphysics and cosmology, psychology, theory of knowledge, theologyand ethics

Module 2: Problems of Knowledge and Conduct (8 hours)

The Age of the Sophists Socrates and Socratic School

Module 3: The Age of Greek Systems (15 hours)

Plato: dialectic and theory of knowledge, the doctrine of Ideas, philosophy of nature, the doctrine of immortality, ethics and politics
Aristotle: philosophy and sciences, logic, metaphysics, the four causes, theology, psychology, ethics and politics

Module 4: The Ethical Period (12 hours)

Epicureanism stoicism sceptism Neoplatonism

Module 5: The Rise of Medieval Philosophy (15 hours)

The Patristic Period: Early Fathers of the Church, St Augustine
Scholasticism: meaning, characteristics, faith and reason, John Scotus Erigena, St Anselm, Peter Abelard The Golden Age of Scholasticism: St Thomas Aquinas and John Duns Scotus; Nominalism: William of Occam and Roger Bacon

Suggested Readings

1. Frederick Copleston, A History of Philosophy, vol. I, New York: Image Books, 1985.
2. History of Philosophy without any Gaps, https://historyofphilosophy.net/series/classical-greek-philosophy.
3. T.Z. Lavine, From Socrates to Sartre: The Philosophic Quest, New York: Bantam Books, 1989.
4. Krishna P. Bahadur, The Geeks: Their Philosophy, History and Culture, New Delhi: Ess Ess Publications,1989.
5. Frank Thilly, A History of Philosophy, Allahabad: Central Book Depot, 1981.

PYVU103T: VEDIC AND UPANISHADIC PHILOSOPHY

(4 Credits – 60 Hours)

Course Objectives

The course intends to offer the students basic knowledge of the culture, religion, and philosophy of ancient India so that they can have a genuine appreciation of India's rich heritage and be legitimately proud of being Indians. Hence, the course makes a survey of the origin and development of Indian culture, religion, and philosophy from the Indus Valley civilization to the Upanishadic period. The earliest available texts of religion and philosophy in India are the Vedas. These texts are studied from such different angles as religion, philosophy, scripture and religious experience. A short survey of the principal characteristics of the Brahmanas and Aranyakas introduces an integrated approach to the Upanishads.

Course Outcomes

CO 1: Explains in detail the ancient Indian Scriptures particularly the Vedas and the Upanishads (understanding)
CO 2: Builds a brief survey of the developments of the religion and philosophy of Ancient India (applying)
CO 3: Outlines the Indian traditions, value systems, social life and belief systems (understanding)CO4: Appraises the philosophy impeded in the Sruti literature (evaluating)

Module 1: Fundamental Beliefs of Hinduism (10 hours)

Cosmic Order (Rta) The Theory of Dharma The Theory of Karma
The Theory of Rebirth (Punarjanma) The Theory of Liberation (Mukti)

Module 2: Purusharthas, Varnasramas, Asramadharma (10 hours)

Purusharthas: artha, kama, dharma and moksha Varnasramas: Brahmins , Kshatriyas, Vyasyas and Sudras
Asramadharma: brahamacarya, grahastha, vanaprastha and sanyasa

Module 3: The Historical Development of the Hindu Philosophy (10 hours)

The Indus Valley civilization The Vedic Age: the Four Vedas
The Brahmanic period, the Aranyaka period and the Upanishadic period

Module 4: Philosophy and Religion of Vedas (10 hours)

The origin and development of the idea of the divine in the Vedas and Upanishads: nature worship, polytheism, henotheism/kathanotheism, monotheism, monism and absolutism
The creation theories in Vedas: Purushasukta (Rig Veda 10. 90), Nasadiyasukta (Rig Veda 10.129), Hiranayagarbhasukta (Rig Veda 10. 121) and Visvakarmasukta (Rig Veda 10.82)
The Theory of Law and Sacrifice (yajna)

Module 5: The Philosophy of the Upanishads (20 hours)

The Principal Upanishads Sreyas and Preyas
The Atman Brahman Identity
Mahavakyas: Tattvamasi, Ahambrahamasmi, Ayamatmabrahama, Sarvamkhalvidam Brahma) The Pancikarana/Trivrittikarana
The Concept of the Human Person
The Concept of Transmigration and Liberation
Four Levels of the Existence of Atman (jagrat, svapana, sushupti and turiya)

Suggested Readings

1. K.P. Bahadur, The Wisdom of the Upanishads, New Delhi: Sterling Publishers, 1989.
2. H.D. Griswold, The Religion of the Rigveda, Delhi: Motilal Banarsidas, 1971.
3. Hiriyanna, Outlines of Indian Philosophy, Delhi: Motilal Banarsidas Publishers, 1993.

4. Robert Ernest Hume, The Thirteen Principal Upanishads, Delhi: Oxford University Press, 1983.

PYSI200T: SYSTEMS OF INDIAN PHILOSOPHY

(4 Credits – 60 Hours)

Course Objectives

This paper aims at an in-depth study of the orthodox systems in Indian philosophy, which, on the one hand, provided a philosophical and scientific foundation to the Vedic teachings, and, on the other, developed into independent schools of philosophy. They began to philosophize using human reason as well as revelation to address the perennial questions that confronted them. This was a departure from the traditional exegetical type of doing philosophy.

Course Objectives

CO 1: Outlines the salient features of Indian Classical Philosophy (understanding)
CO 2: Illustrates the philosophies of Nyaya, Vaiseshika, Samkhya, Yoga and Purva Mimamsa (understanding)
CO 3: Appraises the contributions of Classical Indian Philosophy to later thinking in India (evaluating)
CO 4: Develops a genuine appreciation for the various philosophical issues Indian Schools (creating)

Module 1: General Characteristics of Indian Philosophy (10 hours)

The unity of moral and spiritual outlook among the systems
Philosophy springs from Spiritual disquiet at the existing order of things Belief in an eternal moral order in the universe
The universe as a moral stage
Ignorance as the reason for bondage and knowledge as means to liberation Sadhanas for liberation

Module 2: The Philosophy of Vaiseshika System (10 hours)

Vaiseshika as a system of pluralism, atomism and realism
The Padarthas: substance, quality, action, universal, particular, inherence and negationThe theory of atomism
The creation and destruction of the universe

Module 3: The Philosophy of Nyaya System (10 hours)

The Theory of Perception: definition of perception, modes of perception, types of perception, types of contact(sannikarsha)
The Theory of Reasoning: terms of inference, limbs of syllogism, types of inference, fallaciesComparison
Verbal Testimony: types of verbal testimony, conditions of meaningful sentenceThe theory of causality (Asatkaryavada)
Proofs for the existence of God

Module 4: The Philosophy of Samkhya (10 hours)

The Theory of Causality (Satkaryavada) The Concept of Prakriti
The Concept of Purusha The Concept of Gunas The Evolution of Prakriti The Concept of Liberation

Module 5: The Yoga Philosophy (10 hours)

Definition and Importance of Yoga The Levels of the Mind (cittabhumi) The Eight Limbs of Yoga; The Yoga Categories

Module 6: The Philosophy of Early Mimamsa (10 hours)

The Purva Mimamsa: a way of interpreting scriptural texts
The Philosophy of Kumarila Bhatta: theory of cognizedeness, theory of anuaplabdhi, theories of svathapramana and partathahaparmana, theory of vivaritakhyati
The Philosophy of Prabhakara: theory of triputi, theory of svathapramana and svatahapramana, theory of akhyati

Suggested Readings

1. S. Dasgupta, History of Indian Philosophy, vol.1, New Delhi: Motilal Banarsidas, 1992.
2. Erich Frauwallner, History of Indian Philosophy, Delhi: Motilal Banarsidas, 1984.
3. Raju Puligandla, Fundamentals of Indian Philosophy, New York: Abingdon Press, 1975.
4. A.K. Warder, Outline of Indian Philosophy, Delhi: Motilal Banarsidas, 1986.
5. Heinrich Zimmer, Philosophies in India, Delhi: Motilal Banarsidas, 1990.

PYMW201T: MODERN WESTERN PHILOSOPHY

(4 Credits – 60 Hours)

Course Objectives

The main objective of this course is to acquaint the students with knowledge about modern Western philosophy, which is marked by the revolt against authority, love for humanism, emphasis on the awakening of the reflective spirit, and demand for freedom of thought, feeling, and action. The students will study the thinkers of this period who refused to accept blindly the dictates of religion and tradition but searched for certain foundations of life and realities. Philosophy is thus based on human reasoning rather than on faith.

Course Outcomes

CO 1: Outlines the salient features of Modern Western Philosophy (understanding)
CO 2: Illustrates the philosophies of Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, Kant and Hegel (understanding)
CO 3: Appraises the contributions of Modern Western Philosophy to Contemporary Western Thought (evaluating)
CO 4: Develops a genuine appreciation for the various philosophical issues raised in the modern period (creating)

Module 1: Beginnings of Modern Philosophy (5 hours)

Francis Bacon: reform of science, inductive method, the programme of philosophy, philosophy of man, metaphysics, theology; Salient Features of Modern Philosophy

Module 2: Continental Rationalism (15 hours)

Rene Descartes: Cartesian method, classification of sciences, the criterion of knowledge, proofs for the existence of God, the existence of the external world, body-mind relation and the theory of innate ideas
Benedict Spinoza: rationalism, method, the universal substance, attributes of god, the doctrine of modes, the human mind, ethics and politics; Blaise Pascal: wager argument

Module 3: The British Empiricism (10 hours)

John Locke: origin of knowledge, nature and validity of knowledge, limits of knowledge, metaphysics, ethics, freewill and political philosophy
George Berkeley: the rejection of abstract ideas, *esse est percipii*, the world of spirits, knowledge of ideas, spirits, and relations, refutation of dualism, atheism and scepticism
David Hume: the origin of human knowledge, the relation of cause and effect, the validity of knowledge, knowledge of the external world, denial of soul-substance

Module 4: Rationalism in Germany (5 hours)

G W. Leibniz: the doctrine of force, the doctrine of monads, theology, ethics, logic and theory of knowledge Christian Wolff: Mysticism and Romanticism

Module 5: Critical Philosophy of Immanuel Kant (15 hours)

Kant's problem, the problem of knowledge, the transcendental method, the theory of sense perception, the theory of understanding, the validity of the judgement, unity of self-consciousness, knowledge of thing-in-itself, the impossibility of metaphysics, practical reason, moral theology and ethics

Module 6: German Idealism (10 hours)

Johann Gottlieb Fichte Friedrich Wilhelm Schelling
Georg Wilhelm Hegel: the problem of philosophy, dialectical method, thought and being, logic and metaphysics, philosophy of nature, philosophy of mind, religion and philosophy

Suggested Readings

1. Frederick Copleston, A History of Philosophy. Vol. I. New York: Image Books, 1985.
2. Will Durant, The Story of Philosophy. New York: Pocket Books, 1976.
3. T.Z. Lavine, From Socrates to Sartre: The Philosophic Quest. New York: Bantam Books, 1989.

4. Archana Roy, Western Philosophy from Descartes to Kant. New Delhi: Gitanjali Publications, 1994.
5. Bertrand Russel, A History of Western Philosophy. London: Unwin, 1984.
6. Frank Thilly, A History of Philosophy. Allahabad: Central Book Depot, 1981.

PYCS202T: CLASSICAL AND SYMBOLIC LOGIC

(Credits: 5 – 75 Hours)

Course Objectives

This course introduces students to the fundamentals of deductive, inductive, and symbolic logic. Students will learn basic logical concepts and common argumentative forms, which help them to know the merits of good arguments, recognise their presence or absence in argumentative discourse, and exhibit them in their writing and speech.

Course Outcomes

CO 1: Shows the various modes of arguments both deductive and inductive (remembering)
CO 2: Contrasts the valid and the invalid reasoning in Indian and Western Logic (understanding)
CO 3: Constructs truth tables using symbols (applying)
CO 4: Changes the ordinary language into symbolic language by using the quantification theory (creating)

Module 1: Logic and Language (5 hours)

Introduction – the subject matter of Logic - deduction and induction, function and uses of language - language makes things possible - various functions of language

Module 2: Propositions and Terms (10 hours)

Terms: types of terms, distribution of terms, denotation and connotation of terms, contradictory terms Propositions: traditional classification of propositions and modern classification of propositions Aristotelian Square of Opposition
Immediate Inference: Conversion, Obversion, Contraposition and Inversion

Module 3: Syllogisms (10 hours)

The Three Laws of Thought
Structure of Syllogism - Figures and Moods of Syllogism General Rules of Syllogism - Deductive Fallacy
Types of Syllogisms Determination of Valid Moods.

Module 4: Nyâya Logic (5 hours)

Elements of Indian Inference – Terms – Fallacy - Conclusion

Module 5: Methods of Induction (10 hours)

Analogical reasoning, causal reasoning, science and hypothesis, probability, types of induction

Module 6: Introducing Symbolic Logic (10 hours)

What is Symbolic Logic?
Truth Functions: negation, conjunction, alternation (or disjunction), conditional (or material implication), biconditional (or material equivalence), Sheffer's Stroke function.
Interdefinability of different truth functions.

Module 7: Truth Tables (10 hours)

Truth trees method. Alternational (or disjunctional) and conjunctional normal forms as decision procedures. Use of these methods for (a) deciding consistency (contingency), inconsistency (contradiction), and validity (tautology) of propositions. (b) showing implication and equivalence between propositions and (c) showing validity/invalidity of truth-functional argument.

Module 8: Quantification Theory (5 hours)

Syllogistic and the method of antilogism.
Translating Ordinary Language into the Language of Quantification.

Suggested Readings

1. Basson & O'Connor, An Introduction to Symbolic Logic, Oxford: University Tutorial Press, 1962.
2. Bergmann, Merrie, Moor James and Jack Nelson, The Logic Book, 4th edition, New York: McGraw Hill, 2004.

PYWP203T: CONTEMPORARY WESTERN PHILOSOPHY

(Credits: 5 – 75 Hours)

Course Objectives

The course provides the students with basic knowledge in the main areas of contemporary philosophy, which were developed in the 19th and 20th centuries in the West. Several traditions of philosophizing sprang up during this period. Without entering into postmodernism, this course familiarizes the students with the thoughts of contemporary Western thinkers.

Course Outcomes

CO 1: Explains the main areas of contemporary philosophy (understanding)
CO 2: Summaries the life and thought of different philosophers of this period (Understanding)
CO 3: Appraises the human situations of freedom, anxiety, dread and death in the quest for authenticity (evaluating).
CO 4: Improves students' critical thinking and analytical skills (creating)

Module 1: Introduction (10 hours)

Contemporary Western Philosophy
Anglo-American Traditions and Continental Traditions Characteristics of Existentialism

Module 2: Analytic Tradition (10 hours)

Gottlob Frege Bertrand Russell Ludwig Wittgenstein
Logical Positivism: Moritz Schlick, A. J. Ayer

Module 3: Phenomenology (10 hours)

Edmund Husserl Merleau-Ponty
Process Philosophy: Alfred Whitehead

Module 4: Existentialism (15 hours)

Soren Kierkegaard Martin Heidegger Jean-Paul Sartre

Module 5: Pragmatic Tradition (10 hours)

C. S. Peirce William James, John Dewey
W. V. O. Quine

Module 6: Hermeneutic Tradition (10 hours)

Hans Georg Gadamer Paul Ricoeur

Module 7: Structuralism and Post-structuralism (10 hours)

Ferdinand de Saussure Levi Strauss

Suggested Readings

PYPB204T: PHILOSOPHY OF BEING

(Credits: 4 – 60 Hours)

Course Objectives

Among the different branches of philosophy, metaphysics helps students discover the core of philosophical knowledge that influences all other branches. Metaphysics, as the summit of human knowledge in the natural order, plays the role of guiding human knowledge and activity in the light of its basic principles, and the knowledge of the natural order paves the way for the knowledge of the supernatural order. It is the most general and fundamental of all the disciplines. It aims to identify the nature and structure of all there is. Central to this discipline is the explanation of the relationship between Being and beings, of one and many.

Course Outcomes

CO 1: Defines the basic concepts in metaphysics (remembering)
CO 2: Demonstrates the first principles of being and knowing (understanding)
CO 3: Develops the notion of being (applying)
CO 4: Compares the concept of being at various levels of existence (evaluating)

Module 1: Introducing Metaphysics (10 hours)

Etymology, definition and nature of metaphysics; a brief history of metaphysics: Indian and Western; the starting point of metaphysics (10 hours)

Module 2: Notions, Principles, Methods and Categories (10 hours)

Fundamental notions and principles in metaphysics; methods of metaphysics; basic categories: Indian and Western

Module 3: Metaphysical Structure of Finite Being (16 hours)

Being and essence; substance and accidents, matter and form, act and potency

Module 4: Metaphysical Nature of Finite Being (8 hours)

Supposit and person; spirituality and immortality of the person

Module 5: Metaphysical Properties (8 hours)
Modes of Being: analogy of being; transcendentals: oneness, truth, goodness and beauty

Module 6: Metaphysical Problems (8 hours)
The problem of one and many; the problem of evil

Suggested Readings
1. Ando Takatura, Metaphysics: A Critical Survey of its Meaning, The Hague: Martinus Nijhoff, 1963.
2. Henry J. Koren, An Introduction to the Science of Metaphysics, London: Herder Book Co. 1960.
3. M. Hiriyanna. The Essentials of Indian Philosophy, Bombay: Blackie and Son, 1973.
4. Henry Renard, The Philosophy of Being, Milwaukee: The Bruce Publishing Company, 1953.
5. T.M.P. Mahadevan, Invitation to Indian Philosophy, New Delhi: Arnold Heinemann Publishers, 1979.

PYPK300T: PHILOSOPHY OF KNOWLEDGE
(Credits: 5 – 75 Hours)

Course Objectives
The philosophy of knowledge investigates the grounds of human knowledge. It deals with the nature, sources, and limits of human knowledge. This course has the objective of initiating students of philosophy into various theories of knowledge. There are four components of a knowledge situation: the knower, the known, the means of knowledge, and the knowledge itself. The knowledge of an object is produced in the subject by a certain medium.Hence, the students need to study in detail the source or how one tries to know the object and then evaluate whether the knowledge obtained is valid or invalid. Such an approach warrants one to look into the various conditions of knowledge on the one hand, and on the other, we need to evaluate whether knowledge is possible.

Course Outcomes
CO1: Explains the history of Indian and Western epistemological traditions (understanding)
CO2: Identifies the various sources of knowledge, theories of truth, possibilities of knowledge and justification of knowledge (applying)
CO3: Develops the mental faculties to steer clear of opinions and beliefs from true knowledge (creating)
CO4: Discusses contemporary issues in the philosophy of knowledge such as relativism, foundationalism, coherentism, reliabilism, contextualism, etc. (creating)

Module 1: Definition and Nature of Epistemology (10 hours)
Concepts and definitions: knowledge, knower, means of knowledge, the object of knowledge, scepticism, foundationalism, certainty; A brief history of epistemology: Indian and Western

Module 2: Knowledge and Belief (10 hours)
Theories of belief: belief as a mental act, belief as a mental state, belief as a behavioural disposition
Four conditions of knowledge: truth condition, belief condition, justification condition, MM Gettier's counter-example and the condition of justification without falsity

Module 3: Sources of Knowledge (15 hours)
Perception Inference Comparison Verbal testimonyPostulation
Non-cognition

Module 4: Theories of Truth (15 hours)
The correspondence theory of truth: theories of evidence - external and internal
The coherence theory of truth
The pragmatic theory of truth - Dewey, William James and Charles Pierce
Deflationary theory of truth, redundancy theory, performative theory and pro-sentential theory of truth

Module 5: Epistemic Justification (10)
Foundationalism, Coherentism, Reliabilism, Contextualism
The notion of certitude: logical certitude, ontological certitude, physical certitude, moral certitudehermeneutics

Module 6: Theory of Knowledge in Indian Thought (15 hours)
The Vedic period
The doctrine of atman in the Upanishadic period
Systematic speculations (the absolute vs. the synthetic view of knowledge)

Suggested Readings
1. B. Carr and D.J. O'Connor, Introduction to the Theory of Knowledge, Sussex, 1982.
2. D.M. Datta, Six Ways of Knowing, The University of Calcutta. 1998
3. Everson Stephen, ed., Epistemology, Cambridge, 1989.
4. Keith Lehrer, Theory of knowledge, London, 1990.
5. Paul K. Moser, The theory of knowledge: A Thematic Introduction, Oxford: Oxford University Press, 1998.
6. John L. Pollock, Contemporary Theories of Knowledge, New Jersey: Rowman and Littlefield Publishers, 1986.

PYGR301T: PHILOSOPHY OF GOD AND RELIGION
(Credits: 5 – 75 Hours)

Course Objectives
The course aims to describe, analyse, and evaluate the role of religion in the lives of humans since the earliest times and to discover, through rational interpretation of religion, the truth of religious beliefs (especially in God) and the value of religious attitudes and practices in the human quest for growth and fulfilment.

Course Outcomes
CO1: Outlines a rational interpretation of religious truths (understanding) CO2: Develops a series of arguments for the existence of God (applying)
CO3: Examines the possibility of meaningful religious discourse (evaluating)
CO4: Evaluates the role of religion in the life of humans since the earliest times (evaluating)

Module 1: Introduction (10 hours)
Shift from Theodicy to Philosophy of God Objects of Philosophy of God and ReligionPhilosophy of God and Theology

Module 2: Methods in the Study of Religions (10 hours)
Towards a definition of religion
Nature, necessity and Scope of comparative religions
Possibility of and the need for the study of comparative religionsCommonality and differences among religions

Module 3: Knowing God (10 hours)
Meanings of meaning - Meaning vis à vis reference - Indirect and direct reference - negative way, positive way, and way of eminence
Faith and reason as two modes of God-talk - trust in the ability of reason - critique of reason as capable of reachingGod - between rigorous proofs and complete non-rationality
'Both-And': modal language and model language.

Module 4: Rationality for God's Existence (10 hours)
Pre-philosophical arguments: phenomenological approach, the argument from common human consent, natural desire for perfect happiness.
Philosophical Arguments: the ontological arguments (St Anselm, Descartes, Leibniz), the cosmological arguments (St Thomas, Samuel Clarke), the teleological arguments (St Thomas, William Paley).

Module 5: Challenges to the Existence of God (10 hours)
God and Problem of Evil - faith solutions, philosophical motifs, process solution.God and Atheism Auguste Comte: the religion of humanity Friedrich Nietzsche: Prophet of atheistic humanismAlbert Camus: God as surety for suffering Jean-Paul Sartre: God as self-contradiction.

Module 6: Issues in Religions (10 hours)
Incarnation, prophet hood, death, re-birth, after-life, eschatology, liberation

Module 7: Religious Hermeneutics (10 hours)
Religion and moral value Religion and social values Religion and science Possibility of universal religion

Suggested Readings

1. Edgar Brightman, A Philosophy of Religion, New York: Greenwood Press, 1969.
2. William Lane Craig, Philosophy of Religion: A Reader and Guide, Edinburgh: Edinburgh University Press,2002.
3. Brian Davies, The Philosophy of Religion, Oxford: Oxford University Press, 2000.
4. Stephen T. Davis, ed., Encountering Evil: Live Options in Theodicy, Atlanta: John Knox Press, 1981.
5. John Hick, Arguments for the Existence of God, New York: Herder and Herder, 1971.

PYPM302T: POSTMODERNISM
(Credits: 4 – 60 Hours)

Course Objectives
As postmodern philosophy questions the importance of power relationships, personalization, and discourse in theconstruction of truth and worldviews, the students are provided with ample opportunities for critical thinking. Theorigin of postmodernism can be placed in the closing decades of the twentieth century, when it was first apparentlyconceived in the visual arts, and then spread to other areas, including philosophy and theology. The term is at once fashionable and elusive but has become a catchword in art, architecture, philosophy, literature, film and music. It has become a powerful concept that can no longer be ignored. It implies a shattering of innocent confidence in thecapacity of the self to control destiny. It shatters all trust in global strategies of social planning and undertakes a radical critique of the philosophical systematization of grand theories or meta-narratives paving the way for a celebration of pluralism in all spheres of life.

Course Outcomes
CO1: Explains the origin, growth and development of the postmodern philosophy (understanding)
CO2: Develops the philosophies of prominent postmodern thinkers (applying)
CO3: Evaluates postmodern philosophy about postmodern literature, films, music and culture (evaluating)
CO4: Compiles the influences that postmodernism on contemporary thought (creating)

Module 1: Introduction (10 hours)
Preliminary clarification of postmodernismOrigin of postmodernism
Characteristics of the modern age
General nature and traits of postmodernism
The transition from modernism to postmodernism Postmodernism as a break with the past Philosophical characteristics of postmodernism

Module 2: Heralds of Postmodernism (15 hours)
Friedrich NietzscheMartin Heidegger Emmanuel Levinas

Module 3: Postmodern Activists (15 hours)
Michael Foucault Jean Francois Lyotard Jacques Derrida

Module 4: Postmodern Feminists (10 hours)
Luce Irigaray Julia Kristeva Judith Williamson

Module 5: Postmodern Thinkers of India (10 hours)
Homi K. Bhabha Gayatri Spivak Jayanta Mahapatra

Suggested Readings

PYHP304T: PHILOSOPHY OF THE HUMAN PERSON AND MIND

(Credits: 4 – 60 Hours)

Course Objectives

The course aims to challenge and stimulate students philosophically to raise the fundamental question, "Who am I?" and to have clarity about human existence and nature by critically and creatively investigating metaphysical and epistemological questions regarding human subjectivity. Human existence is fundamentally co-existence and pro-existence. We are rooted in nature, formed by nurture, and sustained by God; we act upon the world, build upthe community, and move towards God.

Course Outcomes

CO1: Explains the metaphysical and epistemological questions regarding human subjectivity (understanding)
CO2: Outlines the role of gender issues in understanding the human person (understanding)
CO3: Examines the fundamental questions about Human Person (analysing)
CO4: Elaborates the various human faculties that distinguish humans from other beings (creating)

Module 1: Introducing the Philosophy of the Human Person and Mind (10 hours)

After defining what the philosophy of the human person and mind is, the module deals with its distinguishing characteristics vis-à-vis other branches of anthropology and psychology and investigates the scope and methods ofenquiry. the module also examines briefly the development of the topic in the historical context. both the Eastern and Western course of development is examined for a synthesis of the concept of the human person.

Module 2: Evolution of Life and Human Person (10 hours)

The origin and evolution of life and the human person are studied from scientific, philosophical and religious perspectives. Directed evolution as proposed by Teilhard de Chardin is given importance as a synthesis of scientific, philosophical and religious views.

Module 3: Intellect and Will (15 hours)

Although there are several functions that human bodies perform and are common to all animals, human beings are uniquely endowed with intellect and will. The intellect is an immaterial cognitive faculty that strives actively towards intelligibility and

the will is the capacity to choose between the good and the evil that is known by the intellect. The nature of human knowledge with special reference to sense knowledge and intellectual knowledge, the relationship between intellect and will, acts of will, and freedom of will are explored in this unit. These two faculties reside in a spiritual coordinating substance: the soul. The origin, nature and immortality of the human soul are studied especially from a scholastic point of view.

Module 4: Human Person as Inter-Subjective (15 hours)
Human nature is inter-subjective and social and we belong to a community. This aspect of the human person is fundamental because all the species-specific characteristics such as language, culture, work and play have a social dimension. *Homo sapiens* are also *homo loquens, homo fabiens* and *homo ludens* and they are constitutive of being human.

Module 5: Gender Issues and Human Person (10 hours)
It studies gender relations, gender issues, and gender as a structuring principle in human societies. Feminist points of view are presented to foster co-responsibility, mutual respect and partnership of women and men for building up a gender-just society.

PYSN305T: PHILOSOPHY OF SCIENCE AND NATURE
(Credits: 4 – 60 Hours)

Course Objectives
Philosophy of Science and Nature intends to initiate students into bridging between philosophy, nature, and scientific developments. Apart from introducing students to various scientific paradigms, they are given opportunities to approach those theories from a critical philosophical angle to understand the basic vision of reality that is unveiled and also approach science from a holistic and integral angle. Philosophy began with wonder at the reality that was obvious to human eyes, yet its origin, makeup and growing up during the times gone by have surprised most thinkers. It is different from science as well as myth. The goal of all three is to explain reality, but the methods and courses that they hold on to are quite different. There is a slow development from myth to philosophy and then to science. Myths are not existentially true and meaningful; philosophy tries to be factually true and meaningful by rational investigation. Science attempts to be factually true and does not directly influence existential meaning. Myths provide us with intuitive and existential meaning. Philosophy gives us rational meaning. Science shows us empirical facts.

Course Outcomes
CO1: Shows the role philosophy plays in understanding nature and scientific developments (remembering)
CO2: Outlines the various scientific paradigms in understanding the universe (understanding)
CO3: Identifies the various philosophical and scientific theories that explain matter (applying) CO4: Proposes the prospects of the philosophy of science and nature (creating)

Module 1 Introduction to Philosophy of Science and Nature (8 hours)
Introduction; Pre-Socratic and Socratic Understanding of Nature Pre-Copernican Philosophy of Science and Nature Philosophy of Science and Nature in the Middle Ages

Module 2 Philosophy of Science and Nature During the Renaissance (15 hours)
Revolution and its Philosophical ImplicationsMechanical Philosophy of Nature Contributions made by Copernicus and others Isaac Newton and Classical Mechanics: the concept of forceOther schools and their implications.

Module 3 Philosophy of Science and Nature in the Modern Period (15 hours)
Contemporary Philosophy of Science
Logical Positivism: basic ideas, clarifying of terms, implications and critique. Historicism: basic ideas, persons, implications and critique
Historical Realism: basic ideas, persons, implications and critique

Module 4 Philosophy of Science and Nature in the Contemporary Period (15 hours)
Contemporary Philosophy of Nature
Relativistic Revolution: scientific-philosophical implications Quantum Mechanics and its philosophical implications Finite / Infinite Nature of the universe
Scientific theories on the origin and end of the universe

Module 5 The Future of Philosophy of Science and Cosmology (7 hours)
A virtual journey - our journey in science and nature The novel challenges: ecological crisis vs human greed Mechanization of the human mind and thinking patterns

PYHS306T: HETERODOX SYSTEMS IN INDIA

(Credits: 4 – 60 Hours)

Course Objectives

The study of heterodox systems in India helps the students foster an understanding of Indian schools that oppose the authority of the Vedas. It enables the students to interpret diverse atheistic and theistic beliefs and practices and to foster an understanding of diverse systems of thought. Due to their universal outlook and philosophical relevance, Buddhism and Jainism have received increasing attention, even in the Western world. This course offers students an alternative thinking pattern,

different from the main line of Hindu thought.

Course Objectives
CO1: Explains the Materialistic Philosophy of India (understanding)
CO2: Examines the origin and development of the Heterodox Systems of India (analysing)
CO3: Compares the Buddhist and Jaina Philosophies in understanding human beings, the world and God(evaluating)
CO4: Assess the contributions of the Buddhist and the Jain thought to the Indian Society (evaluating)

Module 1: The Carvaka Philosophy (10 hours)
The origin and scope
The Carvaka epistemologyThe Carvaka metaphysics The Carvaka ethics

Module 2: The Jaina Philosophy of Knowledge (10 hours)
Introduction - origin and history
The Jaina theory of knowledge: nature and kinds of knowledgeThe Jain theory of judgement: syadvada, saptabhanginaya

Module 3: Jaina Metaphysics (10 hours)
The Jaina conception of substance Classification of substance
The concept of the soul
The inanimate substances: matter, space, time, dharma and adharma

Module 4: Jaina Ethics and Religion (5 hours)
Bondage of the soulLiberation
Jainism as a religion without a God

Module 5: The Ethical Teachings of Buddhism (10 hours)
Origin and history of Buddhism – Buddha, Hinayana, Mahayana
The teachings of Buddhism: the four noble truths, the eightfold path to liberation
The philosophical implications of Buddha's teachings: theory of dependent origination, theory of karma, theory of universal change, theory of the non-existence of the soul

Module 6: The Buddhist Schools of Philosophy (15 hours)
The Madhyamika School of PhilosophyThe Yogacara School of Buddhism
The Sarvastivada school of Buddhism - sautrantika and vaibhashika schools

Suggested Readings
1. Ashok Kumar Chatterjee, Yogacara Idealism, Delhi: Motilal Banarsidass, 1999.
2. Dakshinaranajan Shastri, A Short History of Indian Materialism, Calcutta: Book Company,1930.

PYFR307P: PROJECT WORK BASED ON FIELD STUDY
(Credits: 4 – 60 Hours)

Course Objectives
Project-based learning, especially field study, helps students to assess and to deepen the quality of acquiredknowledge. It offers the students the possibility of learning beyond the classroom setting.

Course Outcomes

CO1: Identifies the subjects and helps draw correlations between subjects and surroundings, and how the surroundings may influence the behaviour (applying).

CO2: Outlines in-depth information on subjects because they are observed and analysed for a long period (understanding).

CO3: Influences the researcher to fill the gaps in data which can be understood by conducting in-depth primary research (evaluating).

CO4: Combines theory and practical research study by qualitatively analysing the data (creating)

The students are expected to carry out field research during the semester break after 6th semester on themes about the relevance, usefulness, popularity and application of philosophy, Psychology or English Literature in seminaries, colleges or universities under the guidance of a faculty using research tools such as interviews, focus groups, surveys and observation.

The following steps are to be followed while conducting the field study:

Identify and acquire researchers in the field: It is essential to acquire researchers who are specialized in the field of research. Moreover, their experience in the field will help them undergo further steps of conducting field research.

Identify the topic of research: The researcher works on identifying the topic of research. The researchers are responsible for deciding what topic of research to focus on based on the gaps observed in the existing research literature.

Identify the right method of research: After fine-tuning the research topic, researchers define the right method to approach the aim and objectives of the research.

Visit the site of the study and collect data: Based on the objectives, the observations begin. The researcher goeson the field and starts collecting data either by visual observation, interviews or staying along with the subjects and experiencing their surroundings to get an in-depth understanding.

Analyze the data acquired: The researcher undergoes the process of data analysis once the data is collected. **Communicate the results**: The researchers document a detailed field study report, explaining the data and itsoutcome. Giving the field study a suitable conclusion.

The field research should be for a minimum duration of 60 hours which can be extended depending upon the convenience and requirement of the student and the organisation respectively. The rest of the hours are allotted for completing the Project Report. However, the entire duration of the course should not exceed 120 hours.

The Project Report must be in a spiral bind. It should be accompanied by a recommendation letter from the department and a certificate of authentication from a competent authority from where the research was carried out. The Contents of the Report must include:

1. Introduction.
2. Need of the study
3. Objectives of the study
4. Significance of the study
5. The methodology which was undertaken for the study
6. Description of the work done
7. Learning Outcomes
8. Feedback from the target audience/community members
9. Geotagged photographs

The assessment will be done as follows:

There would be a presentation (PPT) and Viva-Voce Examination during the 7th semester.

The Assessment for the project work based on field study will have the following components:

a) Report: 40 marks
b) Seminar Presentation: 30 marks
c) Viva-Voce Examination: 30 marks

PYET400T: ETHICS
(Credits: 5 – 75 Hours)

Course Objectives
This course aims at introducing the students to the philosophical need for Ethics starting with a brief discussion ofMoral law and how the human person in his or her process of growth intuits ethical principles. Discussions aboutthe dynamics of morality are undertaken to show how on the one hand new situations call for new responses froma moral point of view and on the other hand certain fundamentals of ethics remain the same in so far as there is something of a common human nature adequately understood. It seeks to respond to some of the important challenges to ethics as a philosophical discipline. Thus, we attempt to look at Indian as well as Western traditions. We, then, shall explore the chief ideas of virtue ethics in various philosophical thoughts and religious traditions. Italso aims to understand the important aspects of human rights and the moral importance of duties then proceed with a discussion on current ethical questions. Living in social groups is an essential characteristic of humans. Sociality and individuality are not opposite poles but are related to each other. Therefore, the right knowledge of society with its institutions is essential. We also make a critical look at the political philosophy and moral questionsarising out of it. By the end of the course, the students are oriented to gain a detailed understanding of the philosophical issues involved in many contemporary debates in the public sphere as well as developing moral reasoning skills and application of those skills to contemporary social and political issues.

Course Outcomes
CO1: Explains the nature and principles of human behaviour (understanding)
CO2: Summarises the history of Indian and Western traditions on ethics (understanding)
CO3: Develops the foundations of human behaviour (applying)
CO4: Discusses the various ethical issues in contemporary times and the challenges that legislations of liberalnations pose. (creating)

Module 1: Introduction to Ethics (10 hours) Nature, scope and subject matter of Ethics Challenges and importance of ethics
Ethics in the History of Indian Philosophy Ethics in the History of Western PhilosophyKinds of ethics
Relation with other disciplines

Module 2: Human Conduct and Responsibility (10 hours)
Human acts Emotions, moods and desiresKnowledge
Freedom and determinism Levels of willing and not willing
Modifiers of Responsibility: Ignorance, Strong Emotions, Fear, Force, habitThe indirect voluntary
Principle of doubt effect

Module 3: Criteria for Morality (10 hours)
The objective criterion of morality: eternal law, natural law, divine positive lawThe subjective criterion of morality: conscience

Module 4: Virtue (10 hours)
Definition Moral virtues Cardinal virtues

Module 5: The Objective Good in Moral Life (10 hours)
Good, pleasure, convention, consequencesIntuition, reason, law, freedom
Situation ethics; Love, habit, happiness

Module 6: Ethical Issues Related to Human Life (10 hours)
Bio-Ethics: body care, abortion, suicide, mutilation, euthanasia, artificial birth control and sterilization.
Sexual Ethics: rape, masturbation, pre-marital sex, homosexuality, lesbianism, sodomy, bestiality, fornication,adultery and incest
Medical Ethics: what is medical ethics; duties of physicians, duties of nurses, patient and doctor relationship,cloning, stem cell; Hippocratic oath

Module 7: Social Ethics (15 hours)
Personal Ethics: relation to self; relation to the world; relation to others; relation to God; situation ethics
Societal Ethics: liberation ethics, human rights; rights of workers, strikes, social justice, alcoholism, substance abuse, punishments and capital punishment
Business Ethics: what is business ethics; patent rights, consumer protection and bribe War and Peace: self-defence, just war theory, nuclear war, peace and non-violence Global Issues: HIV/AIDS, poverty, corruption, child labour and militancy

PYVP401T: VEDANTA PHILOSOPHY

(Credits: 5 – 75 Hours)

Course Objectives

This course makes the students familiar with the philosophy and spirituality of the Vedanta Schools of Philosophy. It is an introduction to various schools of Vedanta highlighting the history, the context of their origin, the authors and the main teaching of these schools. The focus is on interactive learning where the students will engage themselves in a rigorous and analytical examination of the key ideas present in these schools of Philosophy. The Vedanta Philosophy is an interpretation and exposition of the *Jnanakhanda* section of the Upanishads. The primarythrust of the systems is to delve into the Nature of the self, and its relation to the Ultimate Reality. The systems also speak about the nature of the world in which we live. In the process, the systems deal with how a seeker having lived in this mundane world, attains his liberation (*Moksha*) Vedanta philosophy, though, is an exposition of the *Brahmasutrabhashyas, Upanishads* and *Bhagavad Gita*, each one of them is different in their viewpoints.

Course Outcomes

CO1: Outlines the richness of the philosophy and spirituality embedded in the Vedantic texts (understanding).
CO2: Evaluates the Metaphysics, Epistemology, Ethics, and Means of Liberation proposed in Vedantic thought(evaluating)
CO3: Discuss the contributions of great thinkers like Shankara and Ramanuja for the resurgence of Hinduism (creating)
CO4: Assesses the subtle nuances that differentiate diverse schools of Vedanta (evaluating)

Module 1: Introduction (10 hours)

Origin, Meaning and Purpose of Vedanta Philosophy

Module 2: Advaita Philosophy of Shankara (20 hours)

Life, Works, Influences, Brahman and Atman, Knowledge, Maya, World, Liberation

Module 3: Visishtadvaita Philosophy of Ramanuja (15 hours)

Life, Works, Influences, Brahman and Atman, Knowledge, Maya, World, Way of Devotion

Module 4: Dvaia Philosophy of Madhava (10 hours)

Life, Works, Influences, Brahman and Atman, Maya

Module 5: Other Schools of Vedanta Philosophy (10 hours)

Dvaita Advaita of Nimbarka Suddha Advaita of Vallabha Achintya Bhedabheda of Chaitanya

Module 6: The Vaishnavite Philosophy of Srimat Shankerdev (10 hours)
Life, Works, Influences, Understanding of God, Way of Devotion

Suggested Readings

1. S. Dasgupta, History of Indian Philosophy, 5 vols., Delhi: Motilal Banarsidas, 1975.
2. Subodh Kapoor, The Systems of Indian Philosophy, New Delhi: Cosmo Publications, 1987.

PYCI404T: CONTEMPORARY INDIAN PHILOSOPHY

(Credits: 5 – 75Hours)

Course Objectives

This course aims at allowing the students to absorb the new spirit of philosophising that emerged due to the mushrooming of different philosophical movements in contemporary India. It allows them to get a feel for the newreligious and social outlook that has emerged over time in India. The students would imbibe the spirit of opennessand determination shared by contemporary philosophers in India. The main philosophical movements were the Bhakti, Sufi, and Reform movements. The Bhakti movement brought about revolutionary changes in the moral, social, and political perspectives of the people of India. It underscored the need to stand for unity among the religions. The Sufi movement emphasises man's role in enhancing social unity, cultural synthesis, and communal harmony. Reform movements impel us to look at religion critically and scientifically. In the 19th century, after the reform movements, India produced some eminent thinkers who, through their ideas, philosophical and political, shaped the minds of millions and contributed to the nation-building process.

Course Outcomes

CO1: Explains in-depth the philosophical ramifications of events like the Bhakti, Sufi and Reform Movements(understanding)
CO2: Analyses the political, social and philosophical movements of India from the 19th century (analysing)
CO3: Assesses the philosophical thoughts of contemporary Indian thinkers like Gandhi, Vivekananda, K.CBhattacarya, Radhakrishnan, Aurobindo, Tagore, and others (evaluating)
CO4: Estimates the influences of ancient philosophy on contemporary Indian thought (creating)

Module 1: Bhakti Movement (15 hours)
Introduction
History of the Bhakti Movement
Nature and Characteristics of the Bhakti Movement
Leaders of Bhakti Movements: Ramanuja, Ramananda, Kabir, Namdeva, Gurunanak, Chaitanya, Tulsi Das, Guru Ramdas, Tukaram
Bhakti movement in South India: Nayanmars, Alwars, Basava Women leaders: Akkamahadevi, Janabai, Mirabai, Bahinabai
Implications of the Bhakti Movement: ethical and Philosophical

Module 2: Sufi Movement in India (15 hours)
Roots of Sufism
History and Development of SufismSufism in India
Interaction between Hindu and Muslim saints

Module 3: Reform Movement in India (15 hours) Modern reform movement: the historical context Brahma Samaj: the universalistic reform movementArya Samaj: the nationalistic reform movement
19th Century Hindu universalism: Ramakrishna Paramahamsa, Ramkrishna Mission (Vivekananda), ISKCONMovement
The Guru movements: Osho, Satya Sai Baba,

Module 4: The Philosophy of Contemporary Thinkers (30 hours)
Vivekananda: the concept of God, the concept of the world, the concept of Maya, the concept of the human person, freedom and karma, liberation and the means of liberation, his idea of religion
Aurobindo: His idea of integral yoga, Involution and evolution, levels of reality, the destiny of human being Mahatma Gandhi: life, political ideas - Satyagraha, ahimsa, Sarvodaya, religion, the concept of God
B.R. Ambedkar: social philosophy, political ideas and socio-political criticism, economic ideals and social development, religious criticism and social transformation
S. Radhakrishnan: metaphysics, epistemology, religion and ethics, social and political philosophy

Suggested Readings
1. D.R. Bali, Modern Thought, New Delhi: Sterling Publishers, 1988.
2. Basant Kumar Lal, Contemporary Indian Philosophy, New Delhi: Sterling Publishers, 1983.
3. T.M. Mahadevan, and V. Saroja. Contemporary Indian Philosophy, New Delhi: Sterling Publishers, 1983.
4. Glyn Richards, ed., A source-Book of Modern Hinduism, London: Curzon Press, 1985.

PYPB405T: THE PHILOSOPHY OF THE BHAGAVAD GITA
(Credits: 5 – 75 Hours)

Course Objectives
The objective of this course is to make the students familiar with the philosophy and spirituality of the Bhagavad Gita. This course is an introduction to the Bhagavad Gita, highlighting the history, the context of the text, the author, and the main teaching of the text. The focus is on interactive learning, where the students will engage themselves in a rigorous and analytical examination of the key ideas present in the Bhagavad Gita. It gives answers to many existing philosophical dilemmas. The text highlights some important issues, like the nature of the self and the nature of the non-self, the different paths to liberation, the purpose of incarnation, the true nature of God, and the different qualities of a good person as well as a bad person. Hence, this text helps a student further reflect on Indian philosophy. The Bhagavad Gita is a spiritual classic. Though it is not a sruti text, it is highly regarded by devout Hindus and accepted by many other seekers of truth. This text helps the students delve deep into Indian spirituality. A text-based study of the Gita enables the students to understand and appreciate its rich spiritual and philosophical wealth.

Course Outcomes
CO1: Outlines the richness of the philosophy and spirituality embedded in the Gita (understanding)
CO2: Develops an appreciation for the Metaphysics of the Bhagavad Gita, particularly the Nature of God, the Nature of the true self, different paths to liberation, and the status of liberation (applying)
CO3: Evaluates the ethical values present in the Gita (evaluating)
CO4: Examines the leadership and management qualities Krishna and make them relevant in the present context(analysing)

Module 1: Introduction to the Bhagavad Gita (15 hours)
History, general context and author of the text The immediate context of the Bhagavad Gita The dilemma of Arjuna
Arjuna is a representative of every human person in crisis

Module 2: Main Philosophical Ideas in the Bhagavad Gita (15 hours)
The true nature of self
The true nature of the world Different Paths to Liberation The purpose of the incarnation

Module 3: Krishna as a Model of Leadership (10 hours)
Kirshna's type of leadership and management Educative transformative leadership
The distinction between normal work and nishkama karma

Module 4: The Qualities of Persons with Sattva Guna and Tamas Guna (10 hours)
Qualities of people with demonic nature

Result of entertaining demonic qualities and living in delusion How to guard oneself against taking the road of demonic nature: Qualities of people with divine qualities, and final success for them

Module 5: Text-based Study (25 hours)
The text of the Bhagavad Gita will be critically explained for an in-depth understanding of its philosophy.

Suggested Readings
1. Keya Maitra, Philosophy of the Bhagavad Gita: A Contemporary Introduction.
2. M.K. Gandhi, The Gospel of Selfless Action.
3. Shri Aurobindo, Bhagavad Gita and its Message.
4. Swamy Krishnananda, The Philosophy of Bhagavad Gita.

EGGE106T: GENERAL ENGLISH I

(Credits: 4 - 60 Hours)

Course Objectives

The objective of this course is to acquaint the students with language and literature and to whet their appetite for the same. The students are led to a gradual discovery of the three genres: fiction drama and poetry. They are expected to undertake an in-depth analysis of the texts. They are also encouraged to closely examine the various themes and motifs and to have a contextualized reading of the texts. If this exercise is taken seriously the students will acquire the skill to communicate effectively. The outcome will be the ability to critically evaluate and appreciate a particular work.

Course Outcomes

CO 1: Shows familiarity with vocabulary and phraseology (remembering)
CO 2: Illustrates the use of the language effectively in reading, writing and speaking (understanding)
CO 3: Develops the ability to the ability to critically evaluate and appreciate a particular piece of writing (applying)
CO 4: Tests the knowledge of English grammar (creating)

Module I: Selected Novels (15 hours)

Anita Desai - Fasting Feasting
Jane Austen - Sense and Sensibility

Module 2: Selected Dramas (15 hours)

Oscar Wilde - The Importance of Being Earnest.Henrik Ibsen - A Doll's House
Harold Pinter - The Birthday Party

Module 3: Selected Poems (18 hours)

Kamala Das - My Mother at Sixty Six John Donne - Death Be Not Proud
William Wordsworth - The World is Too Much with Us Dante Gabriel Rossetti - The Blessed Damozel

Module 4: Basic English Grammar (12 hours)

Grammar I Grammar II

Suggested Readings

1. Anita Desai, Fasting Feasting.
2. D.G. Rossetti, The Blessed Damozel.
3. Das & Mohanty, Literary Criticism: A Reading, Oxford University Press.
4. Edward Albert, A History of English Literature, Oxford University Press.
5. Harold Pinter, The Birthday Party.
6. Henrik Ibsen, A Doll's House.
7. Jane Austin, Sense and Sensibility.
8. John Donne, Death Be Not Proud.
9. Kamala Das, My Mother at Sixty Six.
10. M.H. Abrahams, A Glossary of English Terms, Bangalore: Macmillan Publishers India.
11. Oscar Wilde, The Importance of Being Earnest.
12. William Wordsworth, The World is Too Much With Us.
13. Wren & Martin, English Grammar.

PCGP100T: GENERAL PSYCHOLOGY

(Credits: 4 – 60 Hours)

Course Objectives

This introductory course in psychology gives a brief historical sketch of the science of psychology and a glimpse into the methods used in psychology. It also provides knowledge about the various psychological processes that every human being experiences. The paper also has several practicals.

Course Outcomes

CO 1: Explains the developments and methods in psychology (understanding)
CO 2: Outlines the biological foundations of behaviour, and processes underlying sensation, perception, cognition,memory and motivation (understanding)
CO 3: Evaluates the different psychological processes and behaviours (evaluating)
CO 4: Proposes practicals based on the processes discussed theoretically thus offering the students a hands-on experience (creating)

Module 1: Introduction to Psychology (10 hours)

Definition and Goals of Psychology, Role of a Psychologist in Society
Modern Perspectives: Biological, Psychodynamic, Behaviouristic, Gestalt, Cognitive, Cross-Cultural, Humanistic and Evolutionary
Methods: Experimental, Observation, Questionnaire and Inventories, Interview, Clinical Case Study

Module 2: Biology and Behaviour (10 hours)

Neurons: structure of neurons, neural impulses, synapses and neurotransmitters nervous system: central and peripheral nervous systems
Cerebral Cortex: structure and psychological importance in thought and language, the significance of left and right brain, split brain.
Effects of Hormones on Behaviour

Module 3: Sensory-Perceptual Processes (10 hours)

Sensation: basic concepts and processes in sensation
Types of Senses (An Overview): visual, auditory, gustatory, olfactory, tactile, vestibular, kinaesthetic and organic senses
Sensory Adaptation: advantages and disadvantages, integration of senses, sensory thresholds Perception: understanding perception, gestalt laws of organization
Different Process of Perception
Correlates of Perception: awareness, set, motives, needs, learning and attention Illusion: subliminal perception, extra-sensory perception

Module 4: Memory and Forgetting (10 hours)

Basic Processes: encoding, storage, retrieval Sensory Storage: iconic memory and echoic memory
STM-working memory, serial position curve, rehearsal, chunking
LTM-Units of Memory: declarative, procedural, semantic, episodic memory
Associative Models: explicit and implicit memory, retrieval cues, state-dependent and context-dependent memory, tip-of-the-tongue phenomena, flashbulb memory levels of processing, constructive processes in memory, schemas Forgetting: decay theory, interference theory, prospective memory, absence of retrieval cues, memory dysfunctions Improving Memory: mnemonic strategies

Module 5: Learning and Cognitive Processes (10 hours)

Attention: definition, characteristics, selective attention and divided attention process of thinking, Types: Reasoning-types, problem-solving, decision making, creative thinking, concept formation
Classical Conditioning: basics of conditioning, operant conditioning Language and thinking, imagery and thinking
Cognitive Learning: latent learning, observational learning, insight learning

Module 6: Motivation and Emotion (10 hours)
Motivation: meaning, approaches-instinct, drive reduction, arousal, incentive, cognitive, humanistic Maslow's Need Hierarchy: types, physiological motivation (hunger, thirst, sex, maternal drive), psychological motivation (achievement, affiliation, power, parenting)
Emotion: meaning, the physiological basis of emotions
Theories-James Lange Theory, Cannon-Bard Theory, Cognitive Theory Emotional Expression

Suggested Readings

1. R.S. Feldman, Understanding Psychology, 4th ed., New Delhi: McGraw Hill, 2006.
2. Atkinson Hilgard, Introduction to Psychology, Oxford: IBH Publishing, 1975.
3. King Morgan, Weiss and Schopler, Introduction to Psychology, 7th ed., New Delhi: McGraw Hill, 1989.

EGGE207T: GENERAL ENGLISH II

(Credits: 4 – 60 Hours)

Course Objectives
The course intends to broaden the mental horizons of the students by unfolding before them the philosophy, wit, and wisdom that is contained in the selected literary works. It helps in the correction of taste, that is, the ability to distinguish between the excellent and the mediocre. The course assists the students in bringing the necessary literary gravitas to their academic pursuits.

Course Outcomes
CO 1: Shows familiarity with vocabulary and phraseology in written English (Remembering).
CO 2: Illustrates the use of the language effectively in selected short stories and essays (understanding).
CO 3: Develops the ability to articulate thoughts and ideas meaningfully coherently and cogently with certain lexical elegance (applying).
CO 4: Tests the knowledge of the English language and composition (creating).

Module 1: Selected Short Stories (20 hours)
The Happy Prince - Oscar Wilde The Necklace - Guy de Maupassant
The Open Window - Hector Hugh Munro The Last Leaf - O. Henry

Module 2: Selected Essays (20 hours)
The Origin of Species - Charles Darwin of Studies - Francis Bacon

Module 3: Language and Composition (20 hours)

Suggested Readings

1. Charles Darwin, The Origin of Species.
2. Das & Mohanty, Literary Criticism: A Reading. Oxford University Press.
3. Edward Albert, A History of English Literature, Oxford University Press.
4. Francis Bacon, Of Studies.
5. Guy de Maupassant, The Necklace.
6. Hector Hugh Munro, The Open Window.
7. M.H. Abrahams, A Glossary of English Terms, Bangalore: Macmillan Publishers India.
8. O. Henry, The Last Leaf.
9. Oscar Wilde, The Happy Prince.
10. Wren & Martin, English Grammar and Composition.

PCDP200T: DEVELOPMENTAL PSYCHOLOGY

(Credits: 4 – 60 Hours)

Course Objectives

Developmental psychology is a branch of psychology that seeks to provide a general introduction to various developmental concepts across the different stages of life, with the nature versus nurture debate as a concurrent theme. It focuses on advancing knowledge of the processes of change for individuals across the lifespan. Topics of research interest include developmental theories, methods of investigating life-span change, as well as such processes as cognition, memory, theories of mind, identity, risk-taking, social relationships, and problem behaviour.

Course Outcomes

CO 1: Explains human development from conception till adulthood (understanding)
CO 2: Develops topics such as biological beginnings, development and change across infancy, childhood, adolescence and adulthood (applying)
CO 3: Compares the psychological ramifications at the various stages of human development (analysing)
CO 4: Proposes healthy psychological growth of a human person (creating)

Module 1: Introduction (10 hours)

Concept of Human Development: introduction, meaning, stages of lifespan development
Aspects of human development: physical, social, cognitive, moral principles of human Development (Balte) Factors influencing human development: ecological factors, hereditary factors
Theories of human development: Erickson, Piaget, Vygotsky (Dialectical), Kohlberg Biological Beginnings of Development
Genetic Foundations: genetic processes and genetic principles; chromosomal and gene-linked abnormalities

Module 2: Pre-natal Development and Infancy (10 hours)

Prenatal development: course of prenatal development; teratogens and prenatal environment, heredity, environment and individual differences
Infancy: characteristics of Infancy
Physical, motor development, emotional development, language development new-born reflexes and their adaptive value: (optical, Palmer, Babinsky, Moro, sucking, rooting, swimming, walking, placing), the importance of assessing new-born reflexes

Module 3: Childhood (10 hours)

Subdivisions of childhood, characteristics of each period
Aspects of development: physical development, cognitive development, language development, emotional development, psychosocial development

Module 4: Puberty and Adolescence (10 hours)

Puberty: meaning, biological changes (sexual maturation, growth spurt, secondary sexual characteristics) Reactions to physical changes
Adolescence: characteristics of adolescence Marcia's stages of development of personal identity
Development of a career stage in vocational planning influences vocational planning Adolescent relationships: family, peers, adult society

Module 5: Adulthood (20 hours)

Subdivisions, characteristics of each stage Early adulthood
Vocational Adjustment: choosing an occupation, stability of vocational selection foundations of intimate relationships: friendship, love, sexuality
Marriage: marital adjustment and conditions influencing it Parenthood: adjustment to parenthood
Middle adulthood occupational adjustment: stable and unstable patterns, preparation for retirement Psychosocial changes: coping with midlife crisis
Changes in relationships: marriage, relationship with maturing children, ageing parents, siblings, grandparenthood, friendships; late adulthood
Primary and secondary ageing, theories of ageing
Psychosocial aspects: models of coping, models of successful ageing, lifestyle and social issues (work retirement and leisure)
Personal relationships: relationship with adult children, siblings, great-grandparenthood Aspects of death: biological, socio-cultural aspects, psychological aspects, patterns of grieving

Suggested Readings

EGAE309T: ALTERNATIVE ENGLISH I

(Credits: 4 – 60 Hours)

Course Objectives

The study of literature has to be discursive. This course presupposes a movement on the part of the students to engage in more serious literature to be able to identify the technique and craft of different authors. It intends to take the students to a higher level of appreciation for the work. It will also set in motion a preparedness for seriousresearch.

Course Outcomes

CO1: Shows familiarity with vocabulary and phraseology in written English (Remembering).
CO2: Illustrates the use of the language effectively in selected poems, dramas and novels (understanding).
CO3: Develops the ability to articulate thoughts and ideas meaningfully coherently and cogently with certain lexical elegance (applying).
CO4: Tests the knowledge of the English language and composition (creating).

Module I Introduction to Poetry (20 hours)

Key terms, concepts and literary devices Selected Poems:
P.B Shelley- Ode to the West WindNissim Ezekiel - The Professor
William Butler Yeats - The Second ComingMatthew Arnold – The Dover Beach

Module 2: Introduction to Drama (20 hours)

Key Terms and Concepts
Selected Dramas: George Bernard Shaw- Candida and Oliver Goldsmith - She Stoops to Conquer

Module 3: Introduction to Novel (20 hours)

Key terms Selected Novels:
George Orwell, The Animal Farm
Earnest Hemingway, The Old Man the Sea

Suggested Readings

1. Das & Mohant, Literary Criticism: A Reading. Oxford University Press.
2. Earnest Hemingway, The Old Man and the Sea.
3. Edward Albert, A History of English Literature, Oxford University Press.
4. George Bernard Shaw, Candida.
5. George Orwell, The Animal Farm.
6. M.H. Abrahams, A Glossary of English Terms, Bangalore: Macmillan Publishers India.
7. Matthew Arnold, The Dover Beach.
8. Ezekiel Nissim, The Professor.
9. Oliver Gold Smith, She Stoops to Conquer.
10. P. B. Shelley, Ode to the West Wind.
11. William Butler Yeats, The Second Coming.
12. Wren & Martin, English Grammar.

PCPP300T: THEORIES OF PERSONALITY AND POSITIVE PSYCHOLOGY

(Credits: 4 – 60 Hours)

Course Objectives

Understanding the theories of personality helps understand the behaviour patterns of individuals. It is important for the well-balanced psychological growth of an individual. Positive psychology, on the other hand, is the scientific study of what makes life worth living, focusing on individual and societal well-being. It acquaints the students with positive subjective experiences, positive individual traits, and positive institutions. It aims to improvethe quality of life.

Course Outcomes

CO1: Explains the inner dynamics of human nature (understanding)
CO2: Demonstrates the uniqueness and the immense value of every person (understanding)
CO3: Identifies the various forces – both environmental and hereditary – that shape human personality (applying)
CO4: Examines the various theories of personality (analysing)

Module 1: Freud's Classical Psychoanalytical Theory (15 hours)

The structure of personality: The Id, the Ego and the SuperegoThe dynamics of personality: psychic energy and instincts
The stages of development: oral, anal, genital, phallic, latency period, etc.
Contemporary Psychoanalytical Theory: Erikson's concept of the life cycle and eight stages of humandevelopment

Module 2: Jung's Analytical Theory (10 hours)

Analytical psychology versus psychoanalysis
The structure of personality: the ego, the personal unconscious and complexes, the collective unconscious The Archetypes: persona, anima and animus, shadow, self

Module 3: Social Psychological Theories (10 hours)

Adler's five major contributions to personality theory; the five major sources of his thought: inferiority feelings and compensation, striving for superiority, family, order of birth and personality, style of life
Fromm's analysis of human loneliness and isolation the basic conditions of human existence and the specific needs; the five character types; the problem of human beings' relations to society; humanistic communitarian socialism as the perfect society
Horney's strategies for coping with basic anxiety; the ten 'neurotic' needs; moving towards people, moving awayfrom people, and moving against people

Module 4: Organismic Theory (10 hours)

The principal features of the organismic theory
Kurt Goldstein: the structure of an organism; the dynamics of the organism; the development of the organism Andras Angyal: the structure of the biosphere; the dynamics of the biosphere; the development of personality Maslow's humanistic psychology as the "third force," the human potential movement, the hierarchy of motives, characteristics of self-actualized persons and peak experiences

Module 5: Rogers' Person-Centred Theory (10 hours)

The structure of personality: organism and self; congruence and incongruence the dynamics of personality the development of personality

Module 6: Constitutional Psychology (10 hours)

Spranger's six types of personalities: theoretical, economic, aesthetic, social and power-politics typesKretschmer's three types of physiques and the corresponding personality types
Sheldon's Atlas of men and Atlas of women

Module 7: Eastern Psychology (15 hours)

Eastern psychologies and Western personality theories
Abhidhamma theory: unhealthy and healthy factors; personality types, means to healthy personality; concentration and altered states of consciousness

Suggested Readings

PYRM402T: RESEARCH METHODOLOGY

(Credits: 2– 30 Hours)

Course Objectives

The objectives of the course in Research Methodology include an understanding of the research process and acquiring the attitudes and skills essential for research, developing skills for interpretation, documentation and presentation of results of the research, the process of report writing and publication, and basic statistics.

Course Outcomes

CO1: Identifies the various components involved in research (applying).
CO2: Outlines the basics in Statistics (understanding).
CO3: Illustrates the different steps involved in the research process (understanding).

Module 1: Introduction to Research (5 hours)

Philosophical Foundations of Research; Natural and social science research- characteristics and scientific attitude. Scope of social science research

Module 2: Research designs, approaches and types (8 hours)

Research designs: Descriptive, Exploratory and Experimental: meaning, scope, characteristics, application in a social work setting.
Research Approaches: Qualitative and Quantitative Research: meanings, scope, methods, steps, sampling, data collection, analysis, interpretation and reporting. Strengths and weaknesses.
Evaluative research: Programme and project evaluation: concept, types, steps, reports.

Module 3: Steps in Research Process (12 hours)

Problem Formulation: Identifying the research issue, formulating the research topic and problem, reviewing the literature (library work), theoretical framework, formulating objectives, clarifying concepts, and variables- conceptual and operational, and formulating hypothesis.
Population and Sampling: Inclusion and exclusion criteria of population, the logic of sampling size and techniques: probability and non-probability sampling.
Tools for data collection: Levels, Types of measurements, reliability and validity of tools. Constructing tools for data collection: questionnaire, interview schedule, scales. Quantification of qualitative data.
Sources, Collection and Analysis of Data: Secondary and primary sources. Data collection data editing, coding, master sheet, analysis, report writing. Using a computer for data analysis: coding, analysis- graphs and results.
Professional report writing

Module 4: Introduction to Statistics for Research (5 hours)

Statistics: Definition, Uses and Limitations. Classification and tabulation of data, univariate and bivariate, diagrammatic and graphic presentations. Measures of central tendencies, Mean, Median and Mode and their uses. Measures of variability range, variance and standard deviation.

PCSP400T: SOCIAL PSYCHOLOGY

(Credits: 3– 45 Hours)

Course Objectives

The course seeks to give comprehensive knowledge about the psychological ramifications that follow from the factthat a human being is a social animal. Social psychology is the study of how individual or group behaviour is influenced by the presence and behaviour of others. The major question social psychologists ponder is this: How and why are people's perceptions and actions influenced by environmental factors, such as social interaction?

Course Outcomes

CO1: Explains the psychological ramifications of human beings considered social beings (understanding)
CO2: Demonstrates the processes such as social relationships and problem behaviour (understanding)
CO3: Evaluates the role of society in the growth of a human person (evaluating)
CO4: Discusses concepts such as motivation, self-concept, attitude and conflict (creating)

Module 1: Introduction (15 hours)

Definition and History of social psychology
Theories: motivational, learning, cognitive, decision-making, interdependence, socio-cultural, evolutionary, and mid-range theories

Module 2: Social Perception (15 hours)

Self-concept: beginning, formation; self: schemas and multicultural perspectives self-presentation: false modesty, self-handicapping, impression management self-esteem: development and consequences perceiving persons: attribution logic, integration, confirmation bias

Module 3: Positive Social Relations (10 hours)

Pro-Social behaviour: origin, helping, influences (personal, interpersonal and situational), receiving help interpersonal attraction and affiliation: characteristics of the individual, others and situational influences

Module 4: Negative Social Relations (10 hours)

Perceiving Groups: stereotypes, prejudices (individual differences and reducing prejudice) Aggression: origin, influences (social and situational), forms, prevention and control

Module 5: Social Influences (10 hours)

Attitudes: formation, attitude and behaviour, attitude change
Group: formation, function (roles, status, norms and cohesiveness), productivity, groupthink, conflict and conflictresolution

Suggested Readings

PYMT102L: BASICS IN MOTOR MECHANICS/TAILORING AND PLUMBING

(Credits: 3 - 90 Hours)

Course Objectives

The course intends to offer hands-on training to the students in skills. In this skill enhancement course, the students are acquainted with two skills, namely, motor mechanics (for boys) and tailoring (for girls) and plumbing (for bothboys and girls). The students will have 45 hours of theory classes and 45 hours of practicum.

Course Outcomes

CO 1: Demonstrates basic skills in motor mechanics, tailoring and plumbing (understanding)
CO 2: Shows the basic safety practices in motor mechanics, tailoring and plumbing (understanding)
CO 3: Identifies the basic errors in motor mechanics, tailoring and plumbing (applying)
CO 4: Analyses the basic operations in motor mechanics, tailoring and plumbing (analysing)

Module 1: Basics in Motor Mechanics/Tailoring (25 hours of theory and 25 hours of practicum)

Motor Mechanics: aggregates and components of a vehicle, hand tools and special tools, workshop calculations, terms and terminologies, components of a vehicle.

Tailoring: machine classification, needle anatomy, industrial sewing machine, cleaning of the sewing machine, sewing machine motors, threads, safety tips, sewing fundamentals, exercise, stitch and seam classification, sewingand fabric defects, recognising garment parts, sewing methods and garment construction.

Module 2: Basics in Plumbing (20 hours of theory and 20 hours of practicum)

Plumbing tools, piping materials and fittings, plumbing fixtures, designing plumbing systems, preparing for plumbing system installation, installing water supply piping, installing fixtures, faucets, and appliances.

Suggested Readings

1. Automobile Repair, New Delhi: Don Bosco Tech Society.
2. Modern Plumbing (Seventh Edition), ISBN 9781605252360.
3. Sewing Machine Operator, New Delhi: Don Bosco Tech Society.

PYOA104L: BASICS IN OFFICE AUTOMATION

(Credits: 3 – 90 Hours)

Course Objectives

This skill enhancement course in office automation is aimed at teaching the students digital concepts as well as various other skills that they will need to succeed in the modern workplace. The course offers an added advantage to students while applying for jobs in various sectors, be they governmental or non-governmental. The students will have 45 hours of theory classes and 45 hours of practicum.

Course Outcomes

CO 1: Defines the various computer programmes that are employed for office management (remembering)
CO 2: Explains the various uses of computers in office management (understanding)
CO 3: Develops typing skills, designing and publishing using computer software (applying)
CO 4: Discusses office procedures and the various devices used in a modern office (creating)

Module 1: Computer Science and Operating System (10 hours of theory and 10 hours of practicum)
Typing Skills, Basics of Computer, Programming, Windows

Module 2: Personal Computer Software Tools (10 hours of theory and 10 hours of practicum)
MS Word, MS Excel, MS PowerPoint

Module 3: Designing and Publishing software (15 hours of theory and 15 hours of practicum)
PageMaker, Photoshop and Corel Draw

Module 4: Office Procedures and the Devices Engaged in Modern Office (10 hours of theory and 10 hours of practicum)
Photocopier, Risograph, Scanners, Laminating Machine, etc.

Suggested Readings
1. Course on Computer Concepts. Kolkata: BPB Publication.

PYBE205L: BASICS IN ELECTRICAL AND ELECTRONICS

(Credits: 3 – 90 Hours)

Course Objectives
The course intends to offer hands-on training to the students in skills. In this skill enhancement course, the students are acquainted with two skills, namely, electrical and electronics. The students will have 45 hours of theory classesand 45 hours of practicum.

Course Outcomes
CO 1: Demonstrates basic skills in electrical and electronics (understanding)
CO 2: Shows the basic safety practices in electrical and electronics (understanding)
CO 3: Identifies the basic errors in electrical and electronics (applying)
CO 4: Analyses the basic operations in electrical and electronics (analysing)

Module 1: Basics in Electricals (25 hours of theory and 25 hours of practicum)
Basic tools & safety: introduction to electricity, safety precautions, elementary first aid, identification of different hand tools with their specifications-care and maintenance of hand tools, ohms law, resistance electric signs & symbols
Electrical Wires: identification of various types of wires used for house wiring, motor winding in electrical appliances, their uses and sizes
Electric Accessories & Meters: common electric accessories and fixtures with their specifications installation of different types of electric meters and instruments (portable type panel/board type)function and uses of ampere meter, voltmeter, energy meter, wattmeter, megger
Protective Devices: Understanding of fuses and circuit breakers (Kit-Kat Type, H.R.C. Fuse, Cartridge Fuse, M.C.B. ELCB) earthing: the purpose of earthing, methods of earthing (plate & pipe earthing)
Complete house-wiring layout, Splitting load wire by NEC I.E.E. rules, multi-storeyed system, fault finding and troubleshooting.

Module 2: Basics in Electronics (20 hours of theory and 20 hours of practicum)
Basic technical know-how in fitting, assembling, repairing and maintaining electronic equipment such as computers, televisions, solar panels, UPS, inverters and mobiles.
Domestic Appliances: working principles and circuits of common domestic equipment and appliances: calling bell, buzzer, alarms, electric iron, heater, light. electric kettle, heater/immersion heater, hot plate, oven, geyser, cooking range, mixer, washing machine, motor pump set, etc.

Suggested Readings
1. Charles K. Alexander, Matthew N.O. Saidiku, Fundamentals of Electrical Circuits, Tata McGraw Hillcompany.
2. R.L. Boylestad and Louis Nashelsky, Electronic Devices and Circuits, 9th edition, PEI/PHI 2006.

INTERNSHIPS (Conducted after 4th Semester and evaluated in 5th Semester)

Semester	Category	Course Code	Course Name	Credits
5	Internship	PYIN303L	Teaching in Schools	2

PYIN303L: TEACHING IN SCHOOLS

Course Objectives

This course is intended to acquire practical know-how in teaching and the art of accompanying children. It provides a compelling reason to learn, teaches the skills of civic participation and develops an ethic of service and civic responsibility. It increases motivation and retention of academic skills as specific learning goals are tied to community needs. The students are expected to spend some days in schools that are assigned to them. They will be engaged in teaching and in other co-curricular activities that are beneficial to the children.

Course Outcomes

CO1: Develops familiarity with the social and economic situation of the localities where the internships are carriedout (applying).
CO2: Extends the facilities of learning and teaching techniques to lesser privileged children (understanding)
CO3: Evaluates the teaching abilities or social sensibilities of students (evaluating)
CO4: Improves the intellectual and psychological well-being of the children as well as the beneficiaries of socialwork (creating)

The students have to undergo the internship during the semester break after the 4th semester. They are expected tokeep a daily report of the activities that they carry out and the learning outcomes during the entire period of the internship. The faculty members will supervise them during this period. After completing their internship, they need to produce a certificate of completion from the headmasters or principals of the concerned schools.

The internship should be for a minimum duration of 30 hours which can be extended depending upon the convenience and requirements of the student and the school respectively. The rest of the hours are allotted for completing the Report. However, the entire duration of the course should not exceed 60 hours.

The Report must be in a spiral bind. It must be accompanied by a certificate of authentication from the headmaster/principal of the school in which the candidate underwent the internship. The Report must contain a detailed description of the activities performed, learning outcomes, feedback from the target group and Geotagged photographs.

The assessment will be based on the presentation (PPT) and Viva-Voce Examination after the completion of theinternship.

The Assessment for the internship will have the following components:

a) Report: 40 marks
b) PPT Presentation: 30 marks
c) Viva-Voce Examination: 30 marks

RESEARCH PROJECT/DISSERTATION

BA Philosophy (Honours)				
Semester	**Category**	**Course Code**	**Course Name**	**Credits**
7	Research Project/Dissertation	PYDI403P	Dissertation Based on Themes in Philosophy or Psychology	6
8	Research Project/Dissertation	PYDI406P	Comprehensive Evaluation of Dissertation and Philosophy (Viva-Voce)	6

PYDI403P: DISSERTATION BASED ON THEMES IN PHILOSOPHY OR PSYCHOLOGY
Credits: 6

Course Objectives
Dissertations are an important method of demonstrating that the students can identify a topic of concern to the field, and read, understand and incorporate the relevant literature into a new research question to be investigated. It involves active research, coming up with a question, following a defined methodology and engaging with the work of other researchers. It is a rite of passage within education and shows that the students can 'do' what they have been studying.

Course Outcomes
CO1: Develops descriptive, analytic and synthetic skills in writing (remembering).
CO2: Demonstrate a sense of originality, self-discipline and hard work (understanding)
CO3: Assumes a thorough knowledge of the subject matter under research (analysing)
CO4: Shows that the researcher can undertake independent work and, depending on the final result, move to a highstandard in terms of quality (understanding)

- One thesis, not exceeding 18,000 words, on a specialised subject during the seventh semester
- Registration for the thesis will be done during the sixth semester.
- The student selects the theme and a guide (promoter) among the faculty members in consultation with the HoD, Department of Philosophy.
- The scheme of the thesis (with a minimum of 300 words) has to be submitted for approval before thecompletion of the sixth semester.
- The scheme shall include the relevance of the theme, methodology, titles, an outline of the chapters, and a working bibliography.
- The departmental meeting shall approve the schemes of the theses in the sixth semester itself.
- The students will be allotted 180 class hours during the seventh semester for the completion of the thesis.
- The thesis shall be submitted at least one month before the end of the seventh semester.
- The thesis should be typewritten in the format prescribed by the Department of Philosophy.
- Three bound copies of the thesis are to be submitted to the office.
- The thesis will be evaluated by the respective guide (promoter). There will also be a public defence of thethesis for 30 minutes in the eighth semester.

The Assessment for the dissertation will have the following components:
a. Evaluation of the guide (promoter): 60 marks
b. Viva-Voce Examination: 40 marks

PYDI406P: COMPREHENSIVE EVALUATION OF DISSERTATION AND PHILOSOPHY (VIVA-VOCE)
Credits: 6

Course Objectives
The purpose of the comprehensive evaluation is for students to demonstrate mastery of knowledge in philosophy,the subject in which they are majoring. It also gives the students opportunities to exhibit their familiarity with research. The comprehensive evaluation of dissertations and philosophical subjects consists of a viva voceexamination.

Course Outcomes
CO1: Develops systematic and critical philosophical thinking (applying)
CO2: Examines the extent of philosophical knowledge acquired during the course of study (analysing)
CO3: Evaluates the capacity of a candidate for a comprehensive understanding of things (evaluating).
CO4: Assesses the internalising capacity of the intellectual inputs (evaluating).

The students shall have a comprehensive viva voce examination at the end of the eighth semester. The students will be allotted 180 class hours for the examination. The duration of the viva voce examination will be an hour before two panels (2x2) of four examiners, which can be held in two different phases. In the first phase, the candidates will appear before the first panel, and they will be asked to present in brief the findings of the dissertationprepared in the seventh semester, and questions based on them will be asked. In the second phase, before the two-member panel, the candidates will be examined for 30 minutes on the principal courses in philosophy. This will also last for 30 minutes. Both panels will evaluate the performance of the candidates out of 100, and the average is taken for the final reckoning. The comprehensive viva voce examinations will carry a weightage of 6 credits.

DEPARTMENT OF HOSPITALITY AND HOTEL ADMINISTRATION

PROGRAMME: BACHELOR OF SCIENCE in HOSPITALITY AND HOTEL ADMINISTRATION (BSC)

DEGREE: BSC HHA (HONOURS)/ BSC HHA (HONOURS) WITH RESEARCH

VISION

To develop design and deliver research-based personalized education that equips students to become global hospitality professionals. Our aim is to impart knowledge, skills and abilities to the students through the holistic approach for nurturing them as dependable human leaders. We do develop our students to interface with stakeholders and to deliver hospitality Professionals that add to the financial, intellectual, environmental, ethical, cultural and social growth of the nation

MISSION

The mission of this department is to be a leading hospitality institution imparting quality education of global excellence leading to hospitality ready professionals carrying ethical and social values.

PROGRAMME OUTCOMES (PO)

PO 1: Critical Thinking: Demonstrate professional aptitude, critical thinking, problem solving skills, and leadership skills needed for all sectors in the hospitality industry.
PO 2: Effective Communication: Speak, read, write and listen clearly in person and through electronic media in English and in one more foreign language.
PO 3: Social Interaction: Elicit views of others, mediate disagreements and help reach conclusions in the organizational and operational structure of hospitality industry.
PO 4: Effective Citizenship: Demonstrate awareness and understanding necessary for social concern and equity towards national development.
PO 5: Ethics: Apply ethical standards in the professional field and accept responsibility for them.
PO 6: Environment and Sustainability: Understand the issues of environmental contexts and sustainable development.
PO 7: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the field of hospitality management.

PROGRAMME SPECIFIC OUTCOMES (PSO)

PSO 1: Conceptual skills: Proficient in the core functional and support areas of hospitality sectors to plan and coordinate business related events.
PSO 2: Management skills: Manage structures and finance of the industry, as well as disaster management.
PSO 3: Problem solving skills: Develop legal awareness for handling real-life challenges of hospitality industry.
PSO 4: Entrepreneurial skills: Achieve necessary skills to become a hospitality entrepreneur.

LIST OF COURSES

1.1: Introduction to Food & Beverage service
1.2: Introduction to gastronomy & hygiene practices
1.3: **Multidisciplinary**
1.4: **Ability Enhancement**
1.5: Introduction to room division
1.6: **Common value added**
1.7: **Common value added**

2.9: Restaurant Ethics & Menu planning Practical
2.10: Culinary & Baking skills Practical
2:11: *Vocational Training* **
3.1: In room dinning & beverages
3.2: Indian Gastronomy
3.3: Room reports & surface cleaning
3.4: **Multidisciplinary**
3.5: **Ability Enhancement**
3.6: Introduction to Marketing
3.7: In room dinning & beverages Practical
3.8: Indian Gastronomy Practical
3.9: Room reports & surface cleaning Practical
4.1: Bar operation & Outlet Management
4.2: Quantity Food Production
4.3: Front Office Management
4.4: Housekeeping supervision and Budgeting
4.5: **Ability Enhancement**
4.6: Bar operation & Outlet Management Practical
4.7: Quantity Food Production Practical
4.8: Front Office Management Practical
4.9: Housekeeping supervision and Budgeting Practical
4.10: *Vocational Training* **
5.1: Restaurant Planning & Management
5.2: Garde Manger & Confectionary
5.3: Revenue Management & Budgeting
5.4: Advance Housekeeping Management
5.5: Field Project/ Apprenticeship
5.6: Restaurant Planning & Management Practical
5.7: Garde Manger & Confectionary Practical
5.8: Revenue Management & Budgeting Practical
5.9: Advance Housekeeping Management Practical
6.1: Training & Development – Food & Beverage service
6.2: Training & Development – Gastronomy
6.3: Training & Development – Room divisions
6.4: Training report presentation
6.5: Eco – Gastronomy – North East Indian regions
6.6: Eco – Gastronomy – North East Indian regions Practical

4 YEAR UG Degree (Honours)

7.1: Modern Trends in Gastronomy – I / Modern Trends in Front Office –I
7.2: Modern Trends in Food & Beverage service –I / Modern Trends in Housekeeping – I
7.3: Basics of Tourism
7.4: Research Methodology
7.5: Project Phase –I / Dissertation Phase – I
7.6: Modern Trends in Gastronomy – I Practical / Modern Trends in Front Office –I Practical
7.7: Modern Trends in Food & Beverage service –I Practical / Modern Trends in Housekeeping – I Practical
8.1: Modern Trends in Gastronomy – II / Modern Trends in Front Office –II
8.2: Modern Trends in Food & Beverage service –II / Modern Trends in Housekeeping – II
8.3: Organizational Behaviour
8.4: Project Phase –II / Dissertation Phase – II
8.5: Modern Trends in Gastronomy – II Practical / Modern Trends in Front Office –II Practical
8.6: Modern Trends in Food & Beverage service –II Practical / Modern Trends in Housekeeping – II Practical

4 YEAR UG Degree (Research)

7.1: Research Methodology
7.2: Dissertation Phase – I
8.1: Dissertation Phase – II

Note: ** These courses are only applicable if the student opts out from the program after 1st, 2nd or 3rd year.

HAFB100T: INTRODUCTION TO FOOD & BEVERAGE SERVICE

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s)

The objective of the course is to learn the basic knowledge about the departmental structures and outlets in the food & beverage service sector.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the Food and Beverage Industry and Service Areas. (Understand)
CO 2: Identify and demonstrate types and usage of food and beverage service equipments (Knowledge)
CO 3: Analyze types of Attributes required becoming a Food and Beverage Service Personnel. (Analyze)
CO 4: Develop, understand and demonstrate the different types of menus provided by different food outlets and their service techniques. (Create)

Module I: THE HOTEL & CATERING INDUSTRY (07 hours)

a. Introduction to the Hotel Industry and Growth of the hotel Industry in India
b. Role of catering establishment in the travel/tourism industry
c. Types of F&B operations (Types of different F&B Outlets)
d. Classification of Commercial, Residential/Non-residential
e. Welfare Catering - Industrial/Institutional/Transport such as air, road, rail, sea, etc.
f. Structure of the catering industry - a brief description of each

Module II: DEPARTMENTAL ORGANIZATION & STAFFING (08 Hours)

a. Organization of F&B department of the hotel
b. The principal staff of various types of F&B operations
c. French terms related to F&B staff
d. Duties & responsibilities of F&B staff
e. Attributes of a waiter
f. Inter-departmental relationships (Within F&B and other departments)

Module III: FOOD SERVICE OUTLETS & ANCILLARY DEPARTMENTS (8 hours)

a. Specialty Restaurants
b. Coffee Shop
c. Cafeteria
d. Fast Food (Quick Service Restaurants)
e. Grill Room
f. Banquets
g. Bar
h. Vending Machines
i. Discotheque
j. Pantry
k. Food pick-up area
l. Store
m. Linen room
n. Kitchen stewarding

Module IV: F & B SERVICE EQUIPMENTS (06 Hours)

a. Familiarization & Selection factors of - Cutlery - Crockery - Glassware - Flatware – Hollowware- All other equipment used in F&B Service
b. French terms related to the above

Suggested Readings

HAFB101L: INTRODUCTION TO FOOD & BEVERAGE SERVICE PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):
The objective of the course is to learn the table layouts and identifications of basic tools and hygiene practices required in food & beverage service sector.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Discuss the principles of basic hygiene practices and body language in the department (Understand)
CO 2: Identify the process of laying tables arranging things in order. (Knowledge)
CO 3: Analyze & demonstrate service of water and serving plates (Analyze)
CO 4: Analyze & explain care and maintenance procedures of different equipment (Analyze)
CO 5: Develop & familiarize with different tools of F&B service. (Create)

Practical:
1. Hygiene and Etiquettes in Restaurant
2. Mis- En –Place and Mis- En –Scene activities
3. Identification of F&B Tools, types of equipment, Cutlery, Crockery, Glass & Chinaware, Flatware, Hollowware, Table Appointments, Linen, etc
4. Care and Maintenance of various Tools, a type of equipment, Flatware, Hollow wares.
5. Side board Organization and its importance
6. Laying & Relaying of Table.
7. Rules for Laying Cover, Various types of Napkin folds
8. Importance of Body Language and Dinning etiquettes.
9. Carrying a Salver/Tray, Plates, Glasses & other types of equipment
10. Service of Water
11. Handling the Service Gear
12. Clearing an Ashtray, and precautions to be taken care of for handling operation.

HARM102T: RESTAURENT ETHICS & MENU PLANNING

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s):
The objective of the course is to learn different types of menu's & controlling procedures required in food & beverage service sector.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Explain the different types of breakfast and other meals and their service techniques (Understand)
CO 2: Identify and demonstrate the different types of menus provided by different food outlets. (Knowledge)
CO 3: Analyze and understand the different aspects of control methods used in food and beverage departments (Analyze)
CO 4: Analyze & classify the different types of Cigars and cigarettes. (Analyze)
CO 5: Develop & illustrate customer care and situation handling (Create)

Module I: TYPES OF MEALS & MENU (7 hours)
a. Breakfast-Introduction, Types, Service Methods,
b. Brunch, Lunch, Hi-Tea, Dinner, Supper, and others
c. Introduction to menu; Types-Ala Carte & Table D'hôte
d. Ala carte and TDH setups
e. Menu Planning, considerations, and constraints, Menu Terms
f. French Classical Menu- 11, 13, and 17 courses separately
g. Classical Foods & its Accompaniments with Cover
h. Indian regional dishes, accompaniments, and service

Module II: PREPARATION FOR SERVICE (7 hours)

a. Organizing Mise-en-scene
b. Organizing Mise en place
c. TYPES OF FOOD SERVICE – silver service, pre – plated service, Cafeteria service, room service, buffet service, gueridon service, lounge service

Module III: SEQUENCE OF SERVICE & Food & Beverage Terminology (05 hours)
a. Handling Table reservation
b. KOTs & BOTs Duplicate & Triplicate System, Computerized K.O.T's
c. The sequence of Food Service
d. Table Clearing Process
e. Billing Methods, Payment methods, and Cash

Module IV: CUSTOMER CARE AND HANDLING SITUATIONS (05 hours)
a. Unavailability of Table/reservation
b. Wrong Order Taking, Handling Unavailability of Food items
c. Handling Special Requests
d. Order Delays, Spillages, Return Food
e. Lost and found properties
f. Illness
g. Drunken Guest, Unethical appearance of Guest
h. Dealing with children and Infants
i. Handling specially able, Old age guest

Module V: TOBACCO & (06 hours)
a. History
b. Processing for cigarettes, pipe tobacco & cigars
c. Cigarettes – Types and Brand names
d. Pipe Tobacco – Types and Brand names
e. Cigars – shapes, sizes, colors, and Brand names
f. Care and Storage of cigarettes & cigars

Suggested Readings
1. Singaravelavan R. Food & Beverage Services, Oxford Publications, 2011.
2. LillicrapDennis R., Food & Beverage Service, Hodder Arnold Publication, 2006.
3. Prasad, Vara, Krishna R. Gopi, Food & Beverage: F&B Simplified, Pearson, 2013.
4. Andrioli, Sergio, Douglas, Peter, Professional Food Service, Heinemann Professional, 1990.

HARM103L: RESTAURENT ETHICS & MENU PLANNING PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):
The objective of the course is to learn different types of menu services, KOT analysis, and service of hot and cold non – alcoholic beverages.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Discuss the different types of breakfast and other meals layout and tray set up with service techniques sequence (Understand)
CO 2: Understand and demonstrate the different types of service provided in restaurants as per types of menus provided in 5-star hotels in different food outlets. (Understand)
CO 3: Identify different aspects of the control method used in restaurants (Knowledge)
CO 4: Analyze Food and beverage departments by using KOT (Analyze)
CO 5: Develop & demonstrate service of cold & hot non-alcoholic beverages. (Create)

PRACTICAL

1. Writing a Menu
2. Breakfast Table Lay-out.
3. TDH & A la Carte Cover lay-out.
4. Receiving the guests
5. Sequence of Service
6. Taking an Order of Food & Making a KO T.
7. Table Service, Practice of meet greets and repeats.
8. Clearing, Crumbing, Presenting the bill
9. Service of Cold & Hot - Non-Alcoholic Beverages, Cigar and cigarettes

HADB200T: IN- ROOM DINNING & BEVERAGES

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s)

The objective of the course is to learn the concept of wine and beers and other fermented beverages and the service procedures for room service department.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Explain the operation of the room service department. (Understand)
CO 2: Understand the concepts of wine making process, viticulture wine-based beverages. (Understand)
CO 3: Identify & describe the beer production procedure and classify beer. (Knowledge)
CO 4: Analyze and classify other fermented beverages (Analyze)
CO 5: Develop suggestive selling techniques & demonstrate order taking procedure (Create)

Module I: IN-ROOM DINING SERVICE (5 hours)

a. Introduction, general principles, and types care to be taken while dealing with active and passive guest
b. The cycle of Service, scheduling, and staffing
c. Forms and Formats
d. Order Taking, Suggestive Selling, breakfast cards
e. Time management- the lead time from order taking to clearance

Module II: ALCOHOLIC & NON-ALCOHOLIC BEVERAGES (10 Hours)

a. Definition & Classification of Alcoholic Beverages
b. Introduction to fermented beverages
c. Classification (Nourishing, Stimulating and Refreshing beverages)
d. Tea - Origin & Manufacture - Types & Brands
e. Coffee - Origin & Manufacture - Types & Brands
f. Juices and Soft Drinks
g. Cocoa & Malted Beverages - Origin & Manufacture

Module III: BEERS (05 hours)

a. Introductions to beer
b. A brief introduction to Beer Production
c. Types and Brands – Indian and International

Module IV: WINE (05 Hours)

a. Introduction,
b. Grapes (Varieties) viticulture vinification,
c. Classification,
d. Wine making, Storage, Brand Names.

Module V: AROMATIZED BEVERAGES & SAKE (08 Hours)

a. Definition, Types- Wine based & spirit-based
b. Usage and storage
c. Introduction, definition, manufacturing, Storage & Brands of SAKE

Suggested Readings

1. Singaravelavan R. Food & Beverage Services, Oxford Publications, 2011.
2. Jana A & Srivastava P. United Colors of Alcohol, TRIDENT, 2015.
3. Albert W.A. Schmid & Laloganes John P. The Beverage Manager's Guide to Wines, Beers, and Spirits, Pearson. 2011.

HAIG202T: INDIAN GASTRONOMY

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn the history & cooking techniques of Indian foods and its regional variations.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Explain the history & Heritage of Indian Regional Gastronomy (Understand)
CO 2: Discuss the various Regional & specialty cooking in Indian Cuisines (Understand)
CO 3: Identify & explain the knowledge on Dum cooking and Tandoor Cooking (Knowledge)
CO 4: Analyze the History and cooking of Indian Sweets (Analyze)
CO 5: Develop & explain the kitchen layout and functioning of Indian kitchen organization (Create)

Module I: Basics of Indian Cuisine (6 hours)
a. Introduction to Indian cuisine
b. Masalas: classical blends, varieties and composition
c. Indian herbs and spices
d. Introduction to basic gravies of India
e. Factors affecting the varieties in Indian regional cuisine

Module II: Indian kitchen layout & Organization (04 hours)
a. Duties and responsibilities of Indian kitchen brigade
b. Different Indian kitchen layouts
c. Equipments used in Indian volume catering establishments

Module III: Regional cuisine in India (10 hours)
a. Northern India: Kashmir, Punjab, Rajasthan
b. Eastern India : Bengal, Assam, Tripura, Mizoram, Nagaland, Manipur, Arunachal Pradesh, Meghalaya
c. Western India: Gujarat, Maharashtra
d. Southern India: Tamil Nadu, Kerala, Andra Pradesh, Telangana
e. Central India: Madhya Pradesh, Uttar Pradesh, Bihar

Module IV: Gastronomic specialties and cooking in India (04 hours)
a. Indian street foods – Introduction , types
b. Festival cooking – Introduction, types, importance
c. Dum Cooking – Introduction, Origin, equipments used & classical dishes
d. Tandoor - Introduction, Origin, equipments used & classical dishes

Module V: Indian Mithai (06 hours)
a. Introduction
b. Regional variation in Indian Mithai – Ingredients, technique, types
c. Classical dishes – Names & description.

Suggested Readings:
1. Food Production Operations: Parvinder S Bali , Oxford Publication
2. Prashad Cooking With Indian Masters, J. Inder Singh Kalra .
3. A Taste Of India, Madur Jaffery, Great Britain Pavilion Books Ltd.

HABO204T: BAR OPERATIONS & OUTLET MANAGEMENT

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the layout, work scenario, and various cocktails prepared in Bar's of food outlets and the concept of function catering.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand and describe the layout of functional areas (Understand)
CO 2: Identify the concepts of function catering in the hotel industry. (Knowledge)
CO 3: Understand the gueridon service origin, specialty and their preparation. (Understand)
CO 4: Analyze & Illustrate bar operations (Analyze)
CO 5: Develop and demonstrate different Cocktail preparations (Create)

Module I: PLANNING & OPERATING VARIOUS F&B OUTLET (10 hours)

a. The physical layout of functional and ancillary areas, Objective of a good layout
b. Steps in planning, Factors to be considered while planning
c. Calculating space requirement
d. Various set ups for seating
e. Planning staff requirement
f. Menu planning, Constraints of menu planning
g. Selecting and planning of heavy-duty and light equipment
h. Requirement of quantities of equipment required like crockery, Glassware, Cutlery - steel or silver, etc.
i. Planning Décor, furnishing fixtures, etc.

Module II: FUNCTION CATERING (06 Hours)

a. Banquets
b. Banquet protocol
c. Informal banquet
d. Buffets

Module III: GUERIDON SERVICE (08 hours)

a. History of gueridon
b. Definition
c. General consideration of operations
d. Advantages & Dis-advantages
e. Types of trolleys
f. Factor to create impulse, Buying – Trolley, open kitchen
g. Gueridon equipment
h. Common preparations, flambé dishes, Carving, Salad making, etc., Trolley service - Beverages, Starters, Desserts, etc.

Module IV: BAR OPERATIONS (06 Hours)

a. Types of Bars
b. Cocktail
c. Dispense
d. Area of Bar
e. Front Bar
f. Back Bar
g. Under Bar (Speed Rack, Garnish Container, Ice well, etc.)
h. Bar Stock
i. Bar Control
j. Bar Staffing
k. Opening and closing duties

Module V: COCKTAILS & MIXED DRINKS (07 hours)

a. Definition and History
b. Classification
c. Recipe, Preparation, and Service of Popular Cocktail

Suggested Readings

HABO205L: BAR OPERATIONS & OUTLET MANAGEMENT PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):

The objective of the course is to learn the briefing standards of hospitality sector and demonstrate the skills of serving alcoholic beverages including cocktails.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Explore the set up tray and trolley lay up for room service (Understand)
CO 2: Analyze & demonstrate the knowledge for taking orders (Knowledge)
CO 3: Analyze & demonstrate service standards for serving Beer, Wines and cold & hot non-alcoholic beverages. (Analyze)
CO 4: Create & Explain the importance of conducting briefing and de-briefing. (Create)

Practical

1. Understanding Room Service Amenities, Room Service equipments
2. Room Service Tray & Trolley Lay-out.
3. Functional Layouts for room service
4. Role play: Knocking & opening the guest door, wishing the guest, placing tray, checking order, presenting the bill, greeting
5. at the exit.
6. Order taking on the telephone
7. Set-up for In Rooms.
8. Conducting Briefing/De-Briefing.
9. Taking an Order & Service of Beer, Other Fermented & Brewed Beverages.
10. Taking an order & Service of –Sparkling, Aromatized, Fortified, Still Wines. Order of service (starting with wine approval
11. from the host, wrapping the bottle with the napkin, etc.)
12. Opening different types of wine bottles. (Different types of corkscrews)
13. Use of different glasses, holding & carrying glasses
14. Set up a table with a Prepared Menu with wines.

HAQF206T: QUANTITY FOOD PRODUCTION

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the concept of bulk cookery and various types of menus associated with bulk cookery

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:
CO 1: Explain the requirement of equipments for volume feeding. (Understand)
CO 2: Discuss the concepts of bulk cooking and banqueting menus. (Understand)
CO 3: Identify & conceptualize all aspects regarding the institutional and industrial catering (Identify)
CO 4: Analyze, evaluate, analyze and interpret theoretical and practical skills of usage of different commodities in the kitchen (Analyze)
CO 5: Develop & explain the quantity purchase system. (Create)

Module I: QUANTITY FOOD PRODUCTION EQUIPMENTS (08 hours)
a. Equipment required for mass/volume feeding
b. Heating and cooling equipment
c. Care and maintenance of equipment
d. Modern developments in equipment manufacture

Module II: MENU PLANNING (10 Hours)
a. Basic principles of menu planning-recapitulation
b. Points to consider in menu planning for various volume feeding outlets such as Industrial, Institutional, Mobile Catering Units
c. Planning menus for School/ College students, Industrial workers, Hospitals, Outdoor parties, Theme dinners, Transport facilities, cruise lines, airlines, railway
d. Nutritional factors

Module III: INDENTING (08 hours)
a. Principles of Indenting for volume feeding
b. Portion sizes of carious items for different types of volume feeding
c. Modifying recipes for indenting for large scale catering

Module IV: PLANNING (08 Hours)
Principles of planning for quantity food production concerning Space allocation, Equipment selection, and Staffing

Module V: VOLUME FEEDING (10 Hours)
a. Institutional and industrial Catering
b. Hospital Catering,
c. Highlights of Hospital Catering for patients, staff, visitors Diet menus, and nutritional requirements
d. Off-Premises Catering, Problems associated with off-premises catering
e. Reasons for growth and development Menu Planning and Theme Parties
f. Concept of a Central Production Unit
g. Mobile Catering
h. Characteristics of Rail, Airline (Flight Kitchens and Sea Catering)
i. Quantity Purchase & Storage Introduction to the purchasing system

HAFO208T: FRONT OFFICE MANAGEMENT

(2 Credit – 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn the property management system and front desk operations along with the responsibilities of night auditor.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Explain and describe the entire property management system and the importance of computer in front office. (Understand)
CO 2: Identify and apply the entire check-in and check-out procedure of guest. (Knowledge)
CO 3: Analyze the process of settling bills of the guests, accounting procedures, handling front office cash and foreign exchange. (Analyze)
CO 4: Develop and analyze the idea about the night auditing and the job responsibilities of the night auditor. (Create)

Module I: PROPERTY MANAGEMENT SYSTEM (08 hours)

a. Importance of Computer in Front Office
b. Introduction to PMS
c. PMS application in Front Office (Reservation, Front Desk, Room, Cashier, Night Audit, set up, Reporting, back-office Module)
d. Different PMS systems

Module II: CHECK-IN AND CHECK-OUT PROCEDURE (12 Hours)

a. Check-in Procedure in different situations like: - guest having confirmed reservation, Walk-in Guest, Group/crew, Scanty Baggage Guest, International Travelers, Club floor guest
b. Check out activity at various desks: - Bell Desk, lobby, Reception, Cashier
c. Different Methods of Settlement: -Cash, Credit Card, Cheques, Travel's cheques, Bill to company, Combined settlement method, checking of mini bar and taking of guest feedback.
d. Check out options: - On Desk Express Check out, Self-Check out
e. Forms & Formats

Module III: MANAGING CASH & CREDIT (08 Hours)

a. Front office Accounting Cycle
b. Credit control process in various cases: - guest pay by Credit Card, Travel agent voucher, airline, Scanty baggage, Credit control during the stay, credit facility to companies, check-in tour group. Problems may arise in credit control
c. The process required in cash Control
d. Handling Foreign Exchange

Module IV: NIGHT AUDITING (08 Hours)

a. Importance of Night Auditing,
b. Duties & Responsibility of Night Auditor
c. Common Revenue Centers of a Hotel
d. Basis steps involved in preparing Night Audit: - Complete posting, reconcile room status discrepancies, verify room rates, verify no show reservations, Cash Deposit, Clear & Back up the system, Distribute report
e. Vouchers/Folios/Ledgers/Allowances/Reports

Objective(s):

The objective of the course is to learn & demonstrate various forms and formats required to maintain in front desk .

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss in-depth understanding of planning and operating a restaurant. (Understand)
CO 2: Identify the different concepts of catering operations. (Knowledge)
CO 3: Understand menu management and material management. (Understand)
CO 4: Analyze & illustrate inventory control. (Analyze)
CO 5: Develop the budget of the department. (Create)

Module I: RESTAURANT PLANNING (10 hours)

a. The physical layout of functional & ancillary areas
b. Objectives of a good layout,
c. Steps in planning
d. Factors to be considered while planning, calculating space requirements
e. Various set-ups for sitting,
f. Planning staff requirements,
g. Menu planning
h. Selection of equipment, lighting, fixtures, crockery, cutlery, etc.

Module II: MENU MANAGEMENT (08 Hours)

a. Introduction, Types of Menus, Menu Planning Considerations & Constraints
b. Menu Costing and Pricing
c. Menu Merchandising, Menu Engineering
d. Menu Fatigue, Menu as an In-House Marketing Tool.

Module III: MATERIALS MANAGEMENT (04 Hours)

a. Introduction, Necessity & Function and Techniques
b. Classification and Technology used in materials management.

Module IV: INVENTORY & BUDGETARY CONTROL (14 hours)

a. Importance, objectives, methods, levels & technique
b. Perpetual inventory, monthly inventory, pricing of commodity, comparison of physical and perpetual inventory
c. Introduction, Objective
d. Budgetary Control Process, Stages in the preparation of Budgets
e. Budgeting for F&B Operations,
f. Variance Analysis.

HARP301L: RESTAURENT PLANNING & MANAGEMENT PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):

The objective of the course is to learn how to prepare duty roasters, layouts of different types of food outlets and Managerial skills to manage them.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand the layout plan for different food outlets. (Understand)
CO 2: Identify & analyze staff requirements and make a duty roaster for implementation. (Knowledge)
CO 3: Analyze & explain and demonstrate operations of the restaurant, bar, and special events (Analyze)
CO 4: Develop the skills to familiarize with different cocktails and preparation methods. (Create)

Practical

1. F&B Staff Organization-Class Room Exercise (Case Study method)
2. Developing Organization Structure of various Food & Beverage Outlets
3. Determination of Staff requirements in all categories
4. Making Duty Roster
5. Preparing Job Description & Specification
6. Conducting Briefing & Debriefing
7. Restaurant, Bar, Banquets & Special Events
8. Drafting Standard Operating Systems (SOPs) for various F & B Outlets
9. Supervising Food & Beverage operations
10. Preparing Restaurant Log
11. Designing & setting the bar
12. Preparation & Service of Cocktail & Mixed Drinks

HAGC302T: GARDE MANGER & CONFECTIONARY

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn different layout and procedures require maintaining the standards in garde Manger and confectionary sections of commercial kitchens.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the layout and use of equipment in the larder section of the kitchen. (Understand)
CO 2: Understand the preparation of charcuterie. (Understand)
CO 3: Identify, compare and translate between appetizer and garnishes (Knowledge)
CO 4: Analyze the basic icing and topping terms with special reference to patisserie (Analyze)
CO 5: Develop & illustrate different sandwiches with making and storing methods (Create)

Module I: LARDER & CHARCUTIERIE (06 hours)

a. Layout & equipment
b. Terms & larder control
c. Duties and responsibilities of the larder chef
d. Sausages & forcemeats
e. Brines, cures & marinades

f. Ham, bacon & gammon
g. Galantines & pate

Module II: APPETIZERS & GARNISHES (08 hours)
a. Classification of Appetizers
b. Examples of Appetizers
c. The historic importance of culinary Garnishes
d. Explanation of different Garnishes

Module III: SANDWICHES (08 Hours)
a. Parts of Sandwiches
b. Types of Bread
c. Types of filling – classification
d. Spreads and Garnishes
e. Types of Sandwiches
f. Making of Sandwiches
g. Storing of Sandwiches

Module IV: CAKE (06 Hours)
Introduction, types of bases, flavors, garnishes, tools and equipment & commodities

Module V: ICINGS & TOPPINGS (04 hours)
Varieties of icing, Using of Icings Difference between icings & Toppings

Suggested Readings

HAGC303L: GARDE MANGER & CONFECTIONARY PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):
The objective of the course is to learn & demonstrate various preparations of garde manger and confectionaries.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Demonstrate various types of sandwiches, sausages, forcemeats (Understand)
CO 2: Identify & relate different desserts (Knowledge)
CO 3: Analyze, explain and demonstrate the different bakery & confectionary-making procedures with the temperature required. (Analyze)
CO 4: Create various types of appetizers of various cuisines. (Create)

Practical
1. Various preparations of sandwiches
2. Various preparations of sausages
3. Various preparations of forcemeats
4. Various preparations of desserts from world cuisine.
5. Different varieties of Bread
6. Different varieties of Chocolate,
7. Different varieties of Meringues,

8. Different varieties of Frozen Dessert.
9. Various preparations of Appetizers – Indian cuisine
10. Various preparations of Appetizers – French cuisine
11. Various preparations of Appetizers – Italian cuisine
12. Various preparations of Appetizers – Chinese cuisine

SUGGESTED MENU:

Exp 1 (sandwiches) BLT Chicken Club Cheese Potato Grilled Pinwheel sandwich Ribbon sandwich	**Exp 2(Sausages)** Breakfast sausages Cajun Sausages Hot Italian sausages	**Exp 3 (Forcemeats)** Chicken & bellpapper roulade Chicken & Spinach terrine Prawn & garlic Pate'	**Exp 4 (Desserts)** Tiramisu Crepe Allemande Chocolate Mousse Lamingtons

HARB304T: REVENUE MANAGEMENT & BUDGETING

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn the yield management and the concept of room revenue used in the front desk sectors of hospitality.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the Yield Management, its concept, rates, and different booking horizons and Statistical representations. (Understand)

CO 2: Identify the budgeting and forecasting and to analyze room revenue. (Knowledge)

CO 3: Create & describe and implement role plays of guest complaint handling. (Create)

Module I: YIELD/REVENUE MANAGEMENT (09 hours)

a. Yield in hotel industry
b. Methods of measuring hotel performance/yield
c. Elements and benefits of yield management
d. Challenges in Yield management
e. Yield management strategies
f. Measuring Yield

Module II: FORECASTING (07 Hours)

a. Concept of forecasting
b. Benefits of forecasting
c. Data/ records required for forecasting room availability

Module III: BUDGETING (07 hours)

a. Types of budget & budget cycle
b. Making front-office budget

c. Factors affecting budget planning
d. Capital & operations budget for front office
e. Refining budgets, budgetary control
f. Forecasting room revenue

Module IV: GUEST COMPLAINT HANDLING / PROBLEM SOLVING (07 hours)
a. Types of complain
b. Process, thumb rules
c. Common complaints / problems
d. Situation handling

Suggested Readings
1. Colin Dix &Chirs Baird, Front office operations, Pearson, 2006.
2. James Bardi, Hotel Front office management, John Wiley & Sons, 2011.
3. Sudhir Andrews, Front Office: A Training Manual, Tata McGraw Hill, 2011

HARB305L: REVENUE MANAGEMENT & BUDGETING PRACTICAL

(2 credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):
The objective of the course is to learn & demonstrate different SOP's and files and formats regarding memberships, budgets & guest complains required in front desk of hospitality sector.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Explain the techniques of room up selling, enrollment in loyalty membership programs and maintain guest history (Understand)
CO 2: Identify & handle guest complain and different situations in front office. (Knowledge)
CO 3: Analyze & Construct operating budget, calculate staff requirements and allocate duties accordingly. (Analyze)
CO 4: Develop & implement all the SOP's of front office and list about different countries and their capitals, currency, flags chart etc. (Create)

PRACTICAL
1. Up selling of Rooms
2. Enrollment in loyalty membership programs
3. Role play on handling guest complain
4. Handling of inebriated guest, guest with special care, guest involved in inappropriate activity
5. Role of telephone operator in different situation
6. Maintaining guest history
7. Capitals, currencies, airlines and flags chart
8. Preparing operating budget for front office operation
9. Calculating staff requirement
10. Preparing duty rota's
11. Evaluation of SOP's

HAPR306T: TRAINING & DEVELOPMENT: FOOD & BEVERAGE SERVICE

(4 Credits – 60 hours) (L-T-P: 4-0-0)

Objective(s):
The objective of the course is to learn the importance and future prospects of industrial exposure training in food & beverage service sector of hospitality.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Discuss the basics of training in Food & Beverage service (Understand)
CO 2: Analyze the skills development through training (knowledge)
CO 3: Develop & identify the future prospectus through training & development in Food & Beverage service (Create)

Module – I: Introduction to Training (10 hours)
a. Importance & objective of training in food & beverage service
b. Benefits, Future prospectus of training in food & beverage service
c. Areas to cover: room dinning, banquets, bar, etc.

Module – II: Types of Trainings (10 hours)
a. Orientation
b. In House
c. Mentorship
d. External training

Module – III: Challenges & Opportunities (10 hours)
a. Challenges: Initial phase of training
b. Opportunities: After the completion of training
c. Case studies of at least 4 renowned successful professionals from Food & Beverage service

Module – IV: Development (10 hours)
a. Initial vs. After training
b. Enhancement of : skills, communication, confidence, motivation
c. Balance between theoretical & practical knowledge
d. Company culture's: knowledge, do's and don't
e. Team work : Importance, efficiency, flexibility
f. Entrepreneurship skills

Module – V: Experience (12 hours)
a. Talent through training
b. Problem solving ability
c. Safety & security
d. Types of clients & behaviour

Suggested Readings
1. Debra F. Cannon, Catherine M. Gustafson, Training & development for the hospitality Industry, Amer Hotel and Motel Association, 2002.

HALB307L: TRAINING & DEVELOPMENT: GASTRONOMY

(4 Credits – 60 hours) (L-T-P: 4-0-0)

Objective(s):
The objective of the course is to learn the importance and future prospects of industrial exposure training in gastronomy sector of hospitality.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Discuss the basics of training in gastronomy (Understand)

CO 2: Analyze the skills development through training (knowledge)
CO 3: Develop & identify the future prospectus through training & development in gastronomy (Create)

Module – I: Introduction to Training (10 hours)
a. Importance & objective of training in gastronomy
b. Benefits, Future prospectus of training in gastronomy
c. Areas to cover: different sections in the commercial kitchens

Module – II: Types of Trainings (10 hours)
a. Cutting skills
b. Cooking skills
c. Re chauffe cooking
d. Hygiene & Sanitation

Module – III: Challenges & Opportunities (10 hours)
a. Challenges: Initial phase of training in commercial kitchen
b. Opportunities: After the completion of training
c. Case studies of at least 4 renowned successful professionals from gastronomy

Module – IV: Development (10 hours)
a. Initial vs. After training
b. Enhancement of : skills, communication, confidence, motivation, patience
c. Balance between theoretical & practical knowledge of gastronomy
d. Kitchen culture's: knowledge, do's and don't
e. Team work : Importance, efficiency, flexibility
f. Entrepreneurship skills

Module – V: Experience (10 hours)
a. Talent through training
b. Problem solving ability
c. Safety & security
d. Types of clients & behaviour
e. Improvement in Cooking
f. Knowledge of cuisines

HAPR306L: TRAINING REPORT PRESENTATION

(4 Credits – 120 hours) (L-T-P: 0-0-4)

Objective(s):
The objective of the course is to prepare the training report which was learned during Industrial exposure training and also completes the log book.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Understand and analysis to the practical experience and actual working environment for developing their skills and capabilities, as well as enhancing their intellectual and emotional persona. (Understand)
CO 2: Identify & integrate classroom theory with workplace practice. (Knowledge)
CO 3: Analyze & gain an understanding of administrative functions and company culture. (Analyze)
CO 4: Develop skills to demonstrate various activities of all the core departments. (Create)

Module I - TRAINING EXPOSURE SUMMERY (50 hours)
The 22 weeks of industrial training would be divided by the hotel for the four key areas of Food Production, Food and Beverage Service, Accommodation Operation, and Front Office Operations and student has to collect information's which will be needed to them during compiling of the training report.

Module 2 - TRAINING REPORT (40 hours)
a. During the training report the students has to complete the training report which will includes the details of the training organization, there USP, facilities of the various department.
b. The outcome and experience they gain from the training .

Module 3 - LOG BOOK (30 hours)
During the training the student has to duly sign the log book from the departmental authorities as a proof of there experience and learning skills from the specific department.

HAGT400T: MODERN TRENDS IN GASTRONOMY – I

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the modern advancement in the gastronomy sector and the benefits of research & development.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss and describe various global cuisines and modern aspects on gastronomy. (Understand)
CO 2: Identify and learn the benefits of gastronomic tourism (Knowledge)
CO 3: Analyze the concept of production management and its importance (Analyze)
CO 4: Develop skills and illustrate the research & product development in gastronomy and other modern trends (Create)

Module I: Global cuisine (14 hours)

a. Introduction – Italian, French, Mexican, Moroccan, Lebanese, Chinese, Thai, Japanese, Mediterranean.
b. Ingredients used, cooking techniques and specialty
c. International recipe and there description
d. Importance of global cuisine & ingredients – Health & sustainability

Module II: Ancient Grains & Super foods (06 hours)

a. Introduction – Ancient grains
b. Types , description, cooking techniques – Ancient grains
c. Health benefits from ancient grains
d. Introduction – Super foods
e. Types , description, cooking techniques – Super foods
f. Health benefits from Super foods

Module III: Gastronomic Tourism (8 hours)

a. Introduction, history & features
b. Types & categories
c. Benefits of gastronomic tourism
d. Gastronomic tourism – Designing
e. New trends in Gastronomic tourism

Module IV: Production Management (5 hours)

a. Kitchen organization
b. Allocation of Work Job Description, Duty Roasters
c. Production Planning, Production Scheduling
d. Production Quality & Quantity Control
e. Forecasting Budgeting, Yield Management

Module V: Research & Product development (06 hours)

a. Testing new equipment - Commercial and small equipments used in kitchen
b. Developing new recipes – Impact of modern trends, Themes, location, clients etc.
c. Food Trails – based on costing, nutritional value, calorie count, portion sizes

HAFO402T: MODERN TRENDS IN FRONT OFFICE – I

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the green practices and modern technologies used for the better services in the modern era of front desk procedures and data's for record keeping

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the quality of service as per their expectation with the help of various modern tools. (Understand)
CO 2: Explain the various technologies which have added to the modern techniques of Front Office functions. (Knowledge)
CO 3: Illustrate and examine the new concepts of vacation and accommodation ownerships. (Analyze)
CO 4: Identify the various implementations of green practices in Front Office (Create)

Module I: QUALITY SERVICE IN FRONT OFFICE (12 hours)

a. Lodging as a guest service business, developing a quality culture
b. Role of Manager in quality, determining guest service expectation,
c. Planning guest service process – recognizing basic concerns
d. Determining and delivering guest service expectations
e. EGQ and NPS
f. Recording Feedback
g. Post Departure Guest Relation

Module II: DIGITALIZATION (06 Hours)

a. Specialized mobile apps
b. AI and Hotel Chat boats
c. Self-check-in Desk Technology

Module III: TIMESHARE & VACATION OWNERSHIP (10 Hours)

a. Definition and types of timeshare options
b. Difficulties faced in marketing timeshare business
c. Advantages & disadvantages of timeshare business
d. Exchange companies -Resort Condominium International, Intervals International
e. How to improve the timeshare / referral/condominium concept in India- Government's role/industry role

Module IV: MODERN ACCOMODATION CONCEPTS (06 Hours)

a. Benefits of Modern accommodation concepts
b. Examples of new conceptual hotels -Smart Hotels, Bunker Hotels, Tree House, Zostel, Under water Hotels, Glass Hotels etc.

Module V: GREEN PRACTICES (06 Hours)

a. Implementation of 3 R's (Reduce, Reuse, Recycle)
b. Eco-Bells
c. Contactless Check-in
d. No paper policy

HAFO403L: MODERN TRENDS IN FRONT OFFICE – I (PRACTICAL)

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):

The objective of the course is to demonstrate the modern procedures of working environment of a digitally equipped front desk area of an hospitality sector.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Apply techniques of self-check-in & check-out procedures and express check-in & check-out procedure. (Understand)
CO 2: Demonstrate handling of various situations like bomb threats and suicide threats. (Knowledge)
CO 3: Analyze guest feedback and ensuring guest satisfaction with the use of technology.(Analyze)
CO 4: Evaluate post departure procedures and credit limit criteria. (Create)

PRACTICAL

1. Self-Check-in Procedure
2. Express check-in procedure
3. Self-Check-out Procedure
4. Express check-out procedure
5. Role play on handling bomb threat
6. Role play on handling suicide threat
7. Record online guest feedback and utilization of it in future
8. Ensuring Guest Satisfaction with the help of technology
9. Post departure procedure
10. Monitoring guest credit limits

HAFS404T: MODERN TRENDS IN FOOD & BEVERAGE SERVICE –I

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the modern advancements and concepts introduced in the food & beverage service the hospitality sector

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the modern concepts of service area and their implementations (Understand)
CO 2: Identify new concepts of outlets and tourism through beverages in global scenario (Knowledge)
CO 3: Analyze different aspects of digitalization in service sector (Analyze)
CO 4: Develop the skills and illustrate the benefits & modern aspects through sustainability in beverage sector (Create)

Module I: Beverage Pre Mix (6 hours)
a. Definition, classification, Importance
b. Uses and benefits
c. Popular brands – Name, country of origin, description

Module II: Modern theme outlets (8 hours)
a. Types & classifications
b. Utilization of space
c. Lighting effects & design consideration
d. Advantages & utilization of various entertainment facilities

Module III: Beverage Tourism (9 hours)
a. Types & categories
b. Benefits of beverage tourism
c. New trends in beverage tourism

Module IV: Digitalization in Food & Beverage service (9 hours)
a. Impact of digitalization on service Industry
b. E – commerce
c. Latest trends and techniques of digital advancements in service industry

Module V: Sustainability in Food & Beverage services (9 hours)
a. Sustainable packaging & its importance
b. Energy efficient equipments
c. Food waste & recycling
d. Sustainable CSR practices

Suggested Readings
1. Saamia Bukhani Restaurant refined: Exploring trends in the restaurant industry, 2020
2. Sally Everett, Food & drink tourism: Principles and Practice, 2016
3. Mariam Garcia Martinez, Open innovation in the Food & Beverage Industry, 2013
4. Gabriela Ionescu, Sustainable Food & Beverage Industries: Assessments and Methodologies, 2021

HAFS405L: MODERN TRENDS IN FOOD & BEVERAGE SERVICE - I PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):
The objective of the course is to demonstrate the newly developed products and concepts which are the USP of modern food & beverage service sector of hospitality.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Demonstrate the beverage pre mix for making cocktails and Mocktails. (Understand)
CO 2: Identify & analyze the layout plan for different modern food outlets for implementation. (Knowledge)
CO 3: Analyze, explain and demonstrate digitalization in beverage sector (Analyze)
CO 4: Develop the skills to familiarize with different concepts of sustainability & digitalization in beverage sector (Create)

Practical
Expt. 1: F&B Staff Organization-Class Room Exercise (Case Study method)
Expt. 2: Developing Organization Structure of various modern Food & Beverage Outlets
Expt. 3: Develop modern concepts for beverage tourism
Expt. 4: Create demo iternary for beverage tourism
Expt. 5: Preparing Job Description & Specification for modern F&B outlets
Expt. 6: Conducting Briefing & Debriefing

Expt. 7: Restaurant, Bar, Banquets & Special Events
Expt. 8: Drafting Standard Operating Systems (SOPs) for various modern F & B Outlets
Expt. 9: Supervising Food & Beverage operations in various modern F&B outlets
Expt. 10: Preparing concepts for digital supports and benefits from social media
Expt. 11: Designing & drafting Standard Operating Systems (SOPs) for sustainable movement in beverage sector
Expt. 12: Preparation & Service of Cocktail & Mixed Drinks based on pre mix.

HAHK406T: MODERN TRENDS IN HOUSEKEEPING – I
(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):
The objective of the course is to learn the new developments and technological advancements in housekeeping sector of hospitality

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Describe the importance of eco friendly products and practices (Knowledge)
CO 2: Identify the modern trends of hospitality housekeeping (Understand)
CO 3: Illustrate software usage in housekeeping (Apply)
CO 4: Advertise the different modern day housekeeping practices (Analyze)

Module I – Eco Practices in Housekeeping (07 hours)
a. Introduction
b. Types of eco friendly practices
c. Importance of eco friendly practices
d. Sustainable cleaning products

Module II – Hygiene & Sanitation (07 hours)
a. Modern theory of hygiene & sanitation in guest rooms and public areas
b. Importance of hygiene & sanitation
c. International standards
d. Modern equipments used for hygiene & sanitation

Module III – Eco friendly amenities & products (08 hours)
a. Energy conservation products
b. Ozone treatment
c. Toiletries
d. Eco friendly chemicals
e. Recyclable amenities

Module IV – Modern Technologies in Housekeeping (07 hours)
a. IT amenities
b. Uses of latest software in housekeeping
c. Forecasting GRA requirement
d. Modified intercom telephone systems
e. Daily housekeeping scheduling

Module V – Case Study (07 hours)
a. Case study 1
b. Case study 2
c. Case study 3

Suggested Readings:

1. Mayola Fernandes, Modern practices Implemented in Housekeeping by 5 – star hotels, 2020
2. Pralay Ganguli, Housekeeping management in hotel & service Industry, 2019
3. Ellen Sandbeck, Green Housekeeping, 2008.

HAGY408T: MODERN TRENDS IN GASTRONOMY –II

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the new offbeat cuisines of India and importance of media and opportunities in Entrepreneurships in modern gastronomic sector.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the concept and idea of new Indian cuisines and new developments in food industry (Understand)
CO 2: Identify the factors which leads to sustainability (Knowledge)
CO 3: Analyze the importance of media in food industry (Analyze)
CO 4: Develop your skills and illustrate the importance and challenges in food entrepreneurships. (Create)

Module I: Offbeat cuisines of India (10 hours)

a. A detailed study on – Uttarakhandi, Kathiawadi, Parsi , Mappila, Adivasi, Melenadu & Konkani cuisine
b. Traditional preparation methods

c. Utensils and accompaniments

Module II: Modern trends & developments (09 hours)
a. Lab grown meats
b. Plant based dairy products
c. Super foods
d. Micro greens
e. Edible flowers
f. Immune boosting foods
g. Meal kits
h. Seaweed consumption
i. Micro dose

Module III: Sustainability in gastronomy (08 hours)
a. Sustainability – Definition, importance, impacts on environment
b. Sustainable food cycle
c. Sustainable food cultivation & climate change- crops, livestock, marine
d. Role of NGO's, government and non government sector in sustainable food movements

Module IV: Media Importance in Gastronomy (09 hours)
a. Types of media benefits the gastronomy
b. Role of social media in gastronomy
c. Food photography
d. Food advertising
e. Food styling

Module V: Food entrepreneurship (08 hours)
a. Opportunities and challenges in food entrepreneurship
b. Food business opportunities in India
c. Research and development in food business

Suggested Readings
1. RDN Frye, Amanda, Barbara Scheule, Introductory Food, 2019
2. Signe Rousseau, Food and social media, 2012
3. Valentina Marinescu, Food nutririton and media, 2021

HAFR410T: MODERN TRENDS IN FRONT OFFICE – II
(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):
The objective of the course is to learn the modern rules, licenses & green certifications of newly developed concepts of front desk and hospitality sector.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Analyze the concept of home stay and find out about the licenses and rules and regulations to be followed in India. (Understand)

CO 2: Explain the various new technologies in reference to concierge of front office. (Knowledge)

CO 3: Summarize the various certifications which can be obtained for green practices in hotel industry and analyze the SOP's adopted towards safety and security of guest. (Analyze)

CO 4: Discuss various case studies on modern trends in front office and determine its implications and impact on hotel industry. (Create)

Module I: HOMESTAY (06 hours)

a. Concept of Homestay
b. Classification of Homestay
c. Homestay licenses, rules & Regulations in India

Module II: HIGH-TECH CONCIERGE TECHNOLOGY (06 Hours)

a. Virtual Tour
b. AI in Concierge
c. Examples of Hi-tech Concierge Technologies adopted by hotels worldwide

Module III: INTERNATIONAL CERTIFICATION OF GREEN PRACTICES (08 Hours)

a. Eco-leaf rating
b. Green Globe
c. Green Key
d. Nordic Swan rating
e. LEEDS

Module IV: MODERN SAFETY AND SECURITY IN FRONT OFFICE (08 Hours)

a. Modern Equipment used in Front Office
b. Key handling/ Safe Deposit
c. SOP of handling suspicious guest
d. SOP of handling single lady traveler
e. Change of SOP for guest handling post Covid-19

Module V: CASE STUDY (08 Hours)

Case Studies on various examples in relation to Front Office Trends

Suggested Readings

1. Adam harris, Richard Castle, Kristy Espat and more.,More Reservations, happier guest: The ultimate guide for the Modern hotelier,Cloudbeds, 2022

HABS412T: MODERN TRENDS IN FOOD & BEVERAGE SERVICE –II

(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the modern advancements in beverage outlets and new trending concepts of beverages.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the concepts of modern advancements in beverage outlets and trends (Understand)
CO 2: Identify & analyze the marketing strategies in beverage sector (Knowledge)
CO 3: Analyze and develop skills on modern trends in cocktails and Mocktails (Analyze)
CO 4: Develop the skills and illustrate the entrepreneurship options in beverage sector (Create)

Module I: Innovation's in Beverage sector & outlets (08 hours)

a. Robotics service innovation
b. Companion beverage bars
c. Advance beverage productions
d. Artificial Intelligence

Module II: Modern trends & developments in beverages (07 hours)

a. Herbal & Botanical flavours in beverages
b. Sober trend – Low and non alcoholic drinks
c. Functional drinks
d. Alternative spirits
e. Fermented beverages & teas

Module III: Marketing strategies in Food & Beverage (08 hours)

a. Customer loyalty programs
b. Digital presence in social media
c. Paid media promotions
d. Search engine optimization

Module IV: Modern cocktail & Mocktail trends (08 hours)

a. Canned cocktails & Mocktails
b. Throw back cocktails
c. Two spirit cocktails
d. Modern garnish techniques

Module V: Beverage entrepreneurship (07 hours)
a. Opportunities and challenges in beverage entrepreneurship
b. Beverage business opportunities in India
c. Research and development in beverage business

Suggested Readings
1. Sally Everett, Food & drink tourism: Principles and Practice, 2016

Objective(s):
The objective of the course is to learn the modern advancements in rooms division and new trending concepts of rooms and the management skills.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Describe the importance of employee training (Knowledge)
CO 2: Identify the modern trends of hospitality housekeeping (Understand)
CO 3: Point out software utility in housekeeping (Analyze)
CO 4: Reframe the outsourcing process (Analyze)

Module I – Training & Motivation (08 hours)
a. Training methods
b. Disease and infection control
c. Covid sanitation training
d. Fire safety training and drills

Module II – Modern laundry operations (05 hours)
a. Eco friendly chemicals
b. Optimization of laundry settings
c. Outsourcing laundry practices
d. Water treatment
e. Recycling water

Module III – Safety & Security (08 hours)
a. Modern technologies for security
b. Uses of AI for guest security
c. Usage of IP cameras for face tracking
d. Modern guest security practices
e. International standards

Module IV – Outsourcing Services (08 hours)
a. Importance
b. Different outsourcing services
c. Cost efficiency
d. Outsourced employment

Module V – Case Study (06 hours)

HAGH104T: BASICS OF GASTRONOMY & HYGIENE PRACTICES

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn the basic and introductory knowledge of gastronomy sector of hospitality.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the hygiene and skills required in workplace**.** (Understand)
CO 2: Identify and analyze basic food commodities and their preparations (Knowledge)
CO 3: Analyze the basic knowledge of baking and breads. (Analyze)
CO 4: Demonstrate the safety procedures in handling kitchen equipment's (Create)
CO 5: Develop the operation flow of the food production department (Create)

Module I: INTRODUCTION TO GASTRONOMY & HIERARCHY (08 hours)

a. Attitudes, behavior & personal hygiene in the kitchen
b. Uniforms & protective clothing
c. Aims and objectives of cooking food
d. Various textures & consistencies
e. Classical & Modern Brigade
f. Duties and responsibilities of various chefs

Module II: METHODS OF COOKING FOOD (05 hours)

a. Methods of Cooking: Roasting, Grilling, Frying, Baking, Broiling, Poaching, Boiling
b. Principles of each of the above
c. Care and precautions to be taken
d. Selection of food for each type of cooking

Module III: Introduction to Bakery (05 hours)

a. Introduction & types of ovens
b. Basic bakery ingredients – uses, importance
c. Different types of breads – Description, country of origin

Module IV: COMMODITIES & TERMS USED IN GASTRONOMY (06 Hours)

a. Cuts & classification of vegetables
b. Classification of fruits
c. Egg cookery
d. Stocks & its uses
e. Thickening & Raising agents
f. List of culinary terms & their explanation

Module V: Food Hygiene (05 Hours)

a. Food & its relation to health
b. Food allergy and precautions
c. General Principles of Food Hygiene
d. Food Hazards & risk
e. Types (Infections and intoxications) & its preventive measures
f. HACCP (Basic Principle and implementation)

(2 Credits: 60 hours) (L-T-P: 0-0-2)

Objective(s):

The objective of the course is to demonstrate the basic and introductory kitchen tools of commercial kitchen & basic cuts of vegetables.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the usage of kitchen tools (Understand)
CO 2: Identify the safety principles at the food production area (Knowledge)
CO 3: Analyze commonly used raw material (Analyze)
CO 4: Analyze & demonstrate basic cuts of vegetables (Analyze)
CO 5: Develop & demonstrate basic bread preparations (Create)

Practical

Expt. 1: Familiarization and Understanding kitchen equipment and tools
Expt. 2: Understanding Personal Hygiene and Kitchen Hygiene & its importance.
Expt. 3: Understanding kitchen layouts, kitchen knife, and hand tools
Expt. 4: Identification of commonly used raw material
Expt. 5: Basic hygiene practices& Importance of Kitchen Uniform.
Expt. 6: Various Safety practices to be observed in the kitchen
Expt. 7: Basic cuts of vegetables
Expt. 8: Methods of Cooking
Expt. 9: Various classical preparation of Egg.
Expt. 10: Preparation of Stock, Soup & Sauces
Expt. 11: Fire Fighting
Expt. 12: Basic bread preparations

HACB106T: CULINARY & BAKING SKILLS
(2 Credits: 30 hours) (L-T-P: 2-0-0)

Objective(s):
The objective of the course is to learn & develop theoretical skills of various kinds of soup, sauces & stocks and various kinds of meat & fish cookery.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Discuss the basic recipes and outline the different Soups and Sauces preparations (Understand)
CO 2: Identify different food commodities. (Knowledge)
CO 3: Analyze the various processes of cooking methods required for fish & meat cookery (Analyze)
CO 4: Develop & illustrate meat and fish cookery (Create)
CO 5: Identify various types of bakery & confectionary items (Knowledge)

Module I: Soups (05 hours)
a. Definition, Importance, classification – Broth, Bouillon, puree, cream, velouté, chowder, bisque, consommé
b. Cold soups
c. International soups
d. Garnishes and accompaniments

Module II: Sauces (04 hours)
a. Definition, Importance, classification of sauces and mother sauces
b. Derivatives of mother sauces
c. Contemporary & Proprietary sauces
d. Difference between sauce and gravy

Module III: FISH COOKERY (04 hours)
a. Introduction to fish cookery
b. Classification of fish with examples
c. Cuts of fish with menu examples
d. Selection of fish and shellfish
e. Effects of heat on the cooking of fish

Module IV: MEAT COOKERY (06 hours)
a. Introduction to meat cookery
b. Cuts
c. Variety meats
d. Poultry
e. Menu examples of each

Module V: Basic Bakery & confectionary (05 hours)
a. Muffins – Introduction, types
b. Cookies & Doughnuts – Introduction, types
c. Pastries- Types and uses

Module VI: Food commodities (06 hours)
a. Nuts – classification & uses
b. Fruits – classification & uses
c. Herbs – types & uses
d. Pulses & cereals – types and uses.

HACB107L: CULINARY & BAKING SKILLS PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s)

The objective of the course is to demonstrate the basic kitchen preparation such as soups, sauces and basic recipes of meats, fish & poultry and easy to prepare food items in commercial kitchens.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand the uses of different kitchen equipment & commodities. (Understand)
CO 2: Identify, demonstrate and explain cuts of fish and meat (Knowledge)
CO 3: Identify, demonstrate basic preparation of sauces & soups (Knowledge)
CO 4: Analyze & illustrate cuts of poultry (Analyze)
CO 5: Create & demonstrate different preparations of cookies, muffins, doughnut and pastries (Create)

PRACTICAL

Expt. 1: Familiarization and Understanding kitchen equipment and tools
Expt. 2: Cuts of fish with menu examples
Expt. 3: Cuts of Meat with menu examples
Expt. 4: Various preparation of cookies, muffins, doughnut and pastries
Expt. 5: Cuts of Poultry with menu examples
Expt. 6: To illustrate the various uses of kitchen commodities in food preparations.
Expt. 7: To demonstrate various derivatives of sauces and their uses.
Expt. 8: To demonstrate various soups and there garnishes.
Expt. 9: To demonstrate various cuts of fruits and there uses.
Expt. 10: To demonstrate various uses of nuts in gastronomy.
Expt. 11: To demonstrate various uses of pulses & cereals.
Expt. 12: To demonstrate the uses of various herbs and spices.

HARS210T: ROOM REPORTS & SURFACE CLEANING

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s)

The objective of the course is to learn the importance and procedures of cleaning different kinds of surfaces and formats & reports generated by room divisions.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the different room status and the reports & formats used by room division. (Understand)
CO 2: Identify the guest services provided by room division and the procedures followed. (Knowledge)
CO 3: Analyze, recall and describe the entire room reservation system of the hotel (Analyze)
CO 4: Develop & illustrate cleaning procedures for different surfaces (Create)

Module I: ROOM STATUS AND REPORTS USED IN ROOM DIVISION (10 hours)

a. Occupied, Vacant
b. Out Of Order / Out Of Service
c. Occupancy Report
d. d)Arrival Report
e. Managers Flash
f. Discrepancy Report
g. Turn away report
h. Say over list, expected arrival list, Expected departure list
i. other forms and formats

Module II: GUEST SERVICES (05 Hours)

a. Handling Guest Mail
b. Keys and keys Handling
c. Guest Paging
d. Safety Deposit Lockers
e. Wakeup call
f. Room Movement
g. Lost and Found

Module III: ROOM RESERVATION (05 hours)

a. Importance, Functions, Different Channels & sources, and Types of reservation.
b. Cancellations and Amendments
c. Handling Individual & Group reservations
d. Various Forms & Formats

Module IV: CARE AND CLEANING OF DIFFERENT SURFACES (10 Hours)

a. Metals
b. Glass
c. Leather, Leatherettes, Resins
d. Plastic
e. Ceramics
f. Wood
g. Wall finishes
h. Floor finishes

Suggested Readings

COURSE CODE: ROOMS REPORTS & SURFACE CLEANING PRACTICAL

(2 Credits- 60 hours) (L-T-P: 0-0-2)

Objective(s):

The objective of the course is to learn & demonstrate the importance and procedures of cleaning different kinds of surfaces and formats & reports generated by room divisions.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Familiarize with different room status and the reports used in room division (Understand)

CO 2: Analyze & Demonstrate, role play on – room reservation, key handling, wakeup call, telephone handling and lost and found. (Analyze)

CO 3: Create & demonstrate on different surface cleaning – glass, metal and wood (Create)

PRACTICAL

Expt. 1: Identification of room status and outline of various reports generated in room division – room status report, arrival report, discrepancy report, occupancy report

Expt. 2: Handling room reservation

Expt. 3: Role play of key handling and safety deposit locker

Expt. 4: Role play of Room Movement

Expt. 5: Role play of handling guest wakeup call

Expt. 6: Role play of handling guest telephone at control desk

Expt. 7: Role play on lost and found

Expt. 8: Cleaning of different surfaces - Glass cleaning, Metal Cleaning, Wood Cleaning

Expt. 9: Practical involving following activities- Scrubbing, polishing, wiping, washing, rinsing, swabbing, mopping, sweeping, brushing, buffing

Expt. 10: Practical involving following activities- Scrubbing, polishing, wiping, washing, rinsing, swabbing, mopping, sweeping, brushing, buffing

HASB212T: HOUSEKEEPING SUPERVISION & BUDGETING

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn the supervision skills and budget control methods used in the housekeeping department of hospitality sector.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the basic contents of housekeeping and guestrooms (Understand)

CO 2: Analyze the supervision process of housekeeping (Analyze)

CO 3: Develop & reframe the budgetary control methods (Create)

Module – I: Standard Contents of a Guestroom (08 hours)

a. Guestroom furniture

b. Furniture arrangement

c. Guestroom fixture and fittings

d. Beds, mattresses and bedding
e. Soft furnishing
f. Guestroom accessories
g. Placement of guest supplies

Module – II: Supervision in Housekeeping (07 hours)
a. Role of a supervisor
b. Specific functions of supervisors
c. Importance of a supervisor

Module – III: Housekeeping Control Desk (07 hours)
a. Coordination with other departments
b. Handling telephone calls
c. Paging systems and methods
d. Situation handling
e. Room move / Room shift

Module – IV: Budgeting for housekeeping expenses (08 hours)
a. Types of budget
b. Housekeeping expenses
c. Budget planning process
d. Income statement of the rooms division
e. Controlling expenses
f. Inventory control and stock – taking
g. Purchasing

HASB213L: HOUSEKEEPING SUPERVISION & BUDGETING PRACTICAL

(2 Credits – 60 hours) (L-T-P: 0-0-2)

Objective(s):
The objective of the course is to learn & demonstrate the skills required to understand the function of chambermaid's trolley and cleaning agents & equipments.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Developing skills for the loading of a chambermaid's trolley (Understand)
CO 2: Identify & explain a guestroom layout (Knowledge)
CO 3: Analyze & understand the usage of cleaning agents and equipment (Analyze)

Practical
1. Familiarising guest room amenities
2. Identification of housekeeping equipment (Manual / Mechanical)
3. Familiarising with chambermaid's trolley
4. Cleaning of different surfaces
5. Practical involving following activities- Scrubbing, polishing, wiping, washing, rinsing, swabbing, mopping, sweeping, brushing, buffing
6. Stain removal

7. Practical activities involving the usage of cloths and their types, abrasives, polishes, chemical agents, and commercially available products

(2 Credits: 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn various aspects of decorations required in rooms & focused areas and causes & prevention aspects of safety and security.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss the basics of ancillary activities (Understand)
CO 2: Analyze the security systems of a hotel (knowledge)
CO 3: Develop & identify the decorations of the department (Create)

Module – I: Linen and Laundry (05 hours)

a. The linen and laundry room
b. Storage, exchange, par stock, linen control, laundry process
c. Dry cleaning
d. Handling guest laundry
e. Uniforms and sewing room

Module – II: Safety and Security (08 hours)

a. Work environment safety
b. Potential hazards in housekeeping
c. Fire prevention and fire safety
d. First aid
e. Crime prevention
f. Medical emergencies
g. Scanty baggage
h. Lost and found

Module – III: Interior designing (07 hours)

a. Basic types of design
b. Elements and principles of design
c. Design for physically challenged
d. Color and lighting
e. Flooring
f. Carpets and floor maintenance
g. Window and window treatment

Module – IV: Flower Arrangement (04 hours)

a. Flower arrangement basics
b. Designing flower arrangement
c. Japanese / oriental flower arrangement
d. Common flowers and foliages

HANE312T: ECO GASTRONOMY: NORTH EASTERN INDIA

(2 Credits: 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn the concept of importance of gastronomy towards the economy and ways to improve the economy through various sustainable gastronomic practices.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Discuss and describe various aspects of eco gastronomy. (Understand)
CO 2: Identify and learn the benefits of eco gastronomic (Knowledge)
CO 3: Analyze the concept of geo gastronomy in North Eastern India (Analyze)
CO 4: Develop skills and illustrate the research & product development in eco gastronomy for North Eastern India (Create)

Module – I: Introduction (05 hours)

a. Definition, Importance, benefits
b. Five dimensions of taste as per eco gastronomy
c. Fundamental categories of eco gastronomy
d. Eco gastronomy vs. Gastronomy

Module – II: Eco Gastronomy in North East (8 hours)

a. Tribal cooking techniques
b. Importance of ethnic cuisine
c. Sustainability in cultivation and farming
d. Ethnic foods in festivals

Module – III: Challenges of Eco Gastronomy in North east (07 hours)

a. Junk & fast foods
b. Urbanization and busy lifestyles
c. Competition among local producers

d. Food habits of teenagers

Module – IV: Future Development of Eco Gastronomy in North East (08 hours)

a. Gastronomic tourism
b. Slow food movements
c. Green Gastronomy
d. Awareness and campaign's

HABT408T: BASICS OF TOURISM

(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the basic knowledge about the tourism sector in hospitality with its different aspects.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Contextualize tourism within broader cultural, environmental, and economic dimensions of society. (Knowledge)
CO 2: To outline the resources of tourism and different aspects of tour operations. (Understand)
CO 3: Explain the diverse nature of tourism, including culture and place, global/ local perspectives, and experience design and provision. (Understand)
CO 4: Examine the different elements of geography and the relationship with tourism. (Analyze)
CO 5: Illustrate the tour operations (Apply)

Module I: CONCEPT OF TOURISM (06 hours)

a. Origin, objectives, Elements, Scope & Nature of tourism
b. Job opportunities and employment generation in the tourism Industry

Module II: TOURISM PRODUCTS AND RESOURCES (08 hours)

a. Architectural heritage
b. Culture & Fairs and festivals of India
c. Natural and other tourism resources

Module III: TOUR OPERATIONS (08 hours)

a. Meaning & Definition
b. Types of Tourists: Inbound, Outbound & Domestic.
c. Tour Packaging–definition,componentsofatourpackageTypesofPackageTour:IndependentTour,InclusiveTour,
d. Escorted Tour, Business Tour
e. Guides & escorts– The ire-role and function Qualities required to be a guide or escort

Module IV: ITINERARY PLANNING (08 hours)

a. Steps to planning a Tour, Planning Route map
b. Transport booking–reservation,
c. Accommodation–Reservation & Food facilities
d. Tour Costing

Module V: SOCIO-ECONOMIC IMPACT OF TOURISM (07 hours)

a. Impact of tourism on culture
b. People to people contact enhancement
c. Environmental hazards

HARM409T: RESEARCH METHODOLOGY

(2 Credits: 30 hours) (L-T-P: 2-0-0)

Objective(s):

The objective of the course is to learn the basic knowledge about the research work and different approaches, process and methods of data collection in research work.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand the idea of conducting a research (Explain)
CO 2: Analyze the different approaches of a research process (Analyze)
CO 3: Explain the research concepts (Understand)
CO 4: Define the different methods of data collection and different research designs (Knowledge)

Module I – Introduction to Research (06 hours)

a. Define research
b. Objectives of research
c. Types of research
d. Significance of research
e. Research process
f. Criteria's of a good research

Module II – Defining Research Problem (04 hours)

a. Research problem
b. Selecting the problem
c. Necessity of defining the problem
d. Techniques involved in defining a problem

Module III – Research Design (05 hours)

a. Meaning of research design
b. Need for research design
c. Features of a good design
d. Concepts of research design
e. Principles of research design

Module IV – Sampling Design (04 hours)

a. Census and sample survey

b. Steps in sample design
c. Criteria's of selecting a sampling procedure
d. Types of sample design

Module V – Data Collection (05 hours)
a. Collection of primary data
b. Observation method, interview method, questionnaire
c. Methods of data collection
d. Collection of secondary data
e. Primary data vs. Secondary data

HAOB410T: ORGANIZATIONAL BEHAVIOUR

(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):
The objective of the course is to learn the basic knowledge about the behaviors & approaches of employees and employers towards an organization.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Understand the organizational theory and structure (understand)
CO 2: Identify behavioural and individual perspectives (Knowledge)
CO 3: Analyze focus group behaviour (Analyze)
CO 4: Reframe different cultures and developments in an organization (Evaluate)

Module – I: Organizational theory (10 hours)
a. Introduction to organization
b. Organization theory
c. Organization structure
d. Effectiveness of organizational structure

Module – II: Organizational behaviour and individual perspective – I (08 hours)
a. Overview of organizational behaviour
b. Individual behaviour and learning
c. Perception
d. Attitudes and values

Module – III: Organizational behaviour and individual perspective – II (08 hours)
a. Personality and emotions
b. Stress management
c. Motivation
d. Job design and Job satisfaction

Module – IV: Group behaviour (06 hours)
a. Group formation and structure
b. Communication
c. Conflict management
d. Team building and leadership
e. Power and politics

Module – V: Organizational culture and development (10 hours)

a. Organizational culture and climate
b. Organizational change
c. Organizational development
d. Emerging trends in organizational behaviour

(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the history and classifications of hotel sector of hospitality and the organizational chart along with duties and responsibilities of various levels in room divisions.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand the history of the Hospitality Industry and the core areas of rooms division and analyze its co-ordination with other departments. (Understand)

CO 2: Analyze the classification of hotels and the different types of guest rooms and accommodations. (Analyze)

CO 3: Develop the layout of front office/housekeeping, organizational chart, duties & responsibilities and personality traits of room division staff. (Create)

Module I: INTRODUCTION TO HOSPITALITY INDUSTRY & ROOMS DIVISION (06 hours)

a. Hospitality and its origin
b. Hotels, their evolution, and growth
c. A brief introduction to hotel core areas with special reference to Rooms Division
d. Coordination with other departments

Module II: CLASSIFICATION OF HOTELSAND HOTEL ROOMS (12 Hours)

a. Size
b. Star
c. Location & clientele
d. Ownership basis
e. Independent hotels
f. Management contracted hotel
g. Chains
h. Franchise/Affiliated
i. Supplementary accommodation
j. Time shares and condominium
k. Types of Guest Rooms

Module III: LAYOUT AND ORGANIZATIONAL CHART OF ROOM DIVISION (12 hours)

a. Layout of Front Office and Housekeeping department – Small, Medium & Large hotels
b. Organizational Chart of Housekeeping and Front Office – Small, Medium & Large hotels
c. Duties and responsibilities of staff
d. Personality Traits

Suggested Readings

1. Manoj Kr. Yadav, A Professional Guide to Rooms Division Operations, John Wiley & Sons,2019
2. Colin Dix & Chirs Baird, Front office operations, Pearson, 2006.
3. James Bardi, Hotel Front office management, John Wiley & Sons, 2011.
4. Raghubalan, G. Hotel Housekeeping Operation, and Management, Oxford University Press, 2007.
5. Sudhir Andrews, Front Office: A Training Manual, Tata McGraw Hill, 2011

HAIR108L: INTRODUCTION TO ROOMS DIVISIONS PRACTICAL

Objective(s):

The objective of the course is to learn the identification of various rooms along with hygiene standards and importance of communication and etiquettes.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand the importance of hygiene standards and basic manners required for guest services. (Understand)
CO 2: Identify different equipment and furniture used in room division (Knowledge)
CO 3: Analyze & implement communication (verbal & non-verbal) for various guest services. (Analyze)
CO 4: Develop different types of guest rooms and identify the supplies and their positions. (Create)

PRACTICAL

1. Basic Manners, Grooming & Hygiene Standards, its importance,
2. Room Division Communication (verbal/non-verbal) - Body language, Gestures, Facial expression, eye contact, voice
3. Identification of equipment and furniture used in rooms division.
4. Telephone etiquettes, Dialogues
5. Welcoming Guest
6. Escorting, Message handling
7. Familiarization with guest room.
8. Guest Room Supplies and Position
9. Layout of different types of guest room
10. Team Building

HAFA109L: FUNCTIONAL AREAS & CLEANING AGENTS

(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn the basic concepts of rooms divisions which are very necessary for day to day smooth function in room division.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand the basic functional areas of room division and outline the layouts of the areas. (Understand)
CO 2: Identify & recall and describe the entire guest cycle. (Knowledge)
CO 3: Analyze & elaborate on the basic concept of tariff decisions, pricing of rooms and meal plans. (Analyze)
CO 4: Develop & analyze the different types of cleaning techniques, cleaning equipments and cleaning agents along with their care and maintenance. (Create)

Module I: FUNCTIONAL AREAS & CLEANING AGENTS (8 hours)

a. Hotel Entrance, Lobby
b. Bell Desk
c. Reception Desk, Cashier
d. d)Concierge
e. Reservation
f. Telephone Operator
g. Housekeeping Control Desk
h. Linen Room, Uniform Room
i. Laundry
j. Florist Room
k. Layout of the areas

Module II: TARIFF (06 Hours)

a. Room tariff, Tariff fixation / calculating room tariff

b. Types of room tariff: Rack rate, discounted rates.
c. Meal Plan and its type
d. Forms & Format/ Tariff Card/Brochure

Module III: GUEST CYCLE (06 hours)
Pre-arrival, Arrival, Stay, Departure & Post Departure

Module IV: CLEANING AND CLEANING AGENTS USED IN HOTELS (10 Hours)
a. Principles of cleaning, hygiene, and safety factors in cleaning
b. Methods of organizing cleaning
c. Frequency of cleaning daily, periodic, special
d. Design features that simplify cleaning
e. Types of cleaning equipment
f. Types of cleaning agents
g. General Criteria for selection
h. Use, Care, and Storage
i. Distribution and Controls

Suggested Readings
1. Manoj Kr. Yadav, A Professional Guide to Rooms Division Operations, John Wiley & Sons, 2019
2. James Bardi, Hotel Front office management, John Wiley & Sons, 2011.
3. Sudhir Andrews, Front Office: A Training Manual, Tata McGraw Hill, 2011
4. Raghubalan, G. Hotel Housekeeping Operation, and Management, Oxford University Press, 2007.

HAFA109L: FUNCTIONAL AREAS & CLEANING AGENTS PRACTICAL

Objective(s):
The objective of the course is to learn & demonstrate the use and maintenance of various cleaning agents & equipments and role play on various situations based on room divisions.

COURSE / LEARNING OUTCOMES:
At the end of this course student will be able to:
CO 1: Understand the different equipment and cleaning agents used in room division (Understand)
CO 2: Analyze the care and maintenance of cleaning equipment and cleaning agents (Knowledge)
CO 3: Analyze different functional areas of room division. (Analyze)
CO 4: Create & Demonstrate, role play on – bell desk operation, concierge operations, handling telephone & few cleaning procedure along with the forms and formats required to be filled (Create)

PRACTICAL
Expt. 1: Identification of equipment used in functional areas of room division
Expt. 2: Care and maintenance of the equipment
Expt. 3: Familiarization of cleaning agents according to classification
Expt. 4: Layout the various functional areas of room division – laundry, linen room, lobby
Expt. 5: Role play of bell desk operations
Expt. 6: Role play of Paging
Expt. 7: Role play of concierge operations
Expt. 8: Role play of handling telephone
Expt. 9: Room attendant trolley set up
Expt. 10: Fill forms and formats

HAIM214L: INTRODUCTION TO MARKETING

(3 Credits: 45 hours) (L-T-P: 3-0-0)

Objective(s):

The objective of the course is to learn & demonstrate the use and maintenance of various cleaning agents & equipments and role play on various situations based on room divisions.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand the concept of marketing (Understand)
CO 2: Identify the consumer buying behavior (Knowledge)
CO 3: Analyze the market segmentation process (Analyze)
CO 4: Develop an understanding about marketing components (Create)

Module – I: Introduction to Marketing (07 hours)

a. Introduction
b. Market & Marketing
c. Marketing process
d. Concepts of marketing
e. Functions of marketing
f. Importance of marketing
g. Market orientations

Module – II: The Marketing Process (08 hours)

a. Introduction
b. 4P's of marketing
c. Modern components of marketing mix (3P's)
d. Developing an effective marketing mix
e. Market planning
f. Market implementation and control

Module – III: Consumer Buying Behaviour (06 hours)

a. Introduction
b. Characteristics
c. Types of buying decision behavior, Henry Assael Model, Consumer & buying decision
d. Process
e. Buyer decision process for new products
f. Buying motives & behavior models

Module – IV: Business Buyer Behaviour (07 hours)

a. Introduction
b. Characteristics of business markets
c. Difference between consumer and business buyer behavior
d. Buying situation in industrial / business market
e. Buying roles in industrial marketing
f. Factors that influence business buyers
g. Steps in business buying process

Module – V: Segmentation, Targeting & Positioning (08 hours)

a. Introduction
b. Concepts of market segmentation
c. Benefits of market segmentation
d. Requisites of effective market segmentation
e. Process of market segmentation
f. Bases of segmenting consumer markets
g. Targeting, Market positioning, Advertising and sales promotion
h. Sales force management

Suggested Readings:

1. Kotlar, Phillip, Marketing Management, Prentice Hall, New Delhi
2. Stanton, Etzel, Walker, Fundamentals of Marketing, Tata-McGraw Hill, New Delhi
3. Saxena, Rajan, Marketing Management, Tata-McGraw Hill, New Delhi
4. McCarthy, E.J, Basic Marketing: A managerial approach, Irwin, New Delhi

INTERNSHIPS

Semester	Category	Course Code	Course Name	Credits
2	Internship	HABV110I	Basic Vocational Training	4
4	Internship	HASV215I	Specialization Vocational Training	4

VOCATIONAL TRAINING –I **

Note: If the student wants to discontinue the program of "B.sc in Hospitality & Hotel Administration" after 1st year of study, then the student have to undergo a vocational training to get the "certificate" in the same program.

HABV110I: BASIC VOCATIONAL TRAINING

(4 Credits – 120 hours) (L-T-P: 0-0-4)

Objective(s):

The objective of the course is to complete the training program of 2 months and prepare the training report which was learned during the training exposure and also completes the log book.

COURSE / LEARNING OUTCOMES:

At the end of this course student will be able to:

CO 1: Understand and analysis to the practical experience and actual working environment for developing their skills and capabilities, as well as enhancing their intellectual and emotional persona. (Understand)
CO 2: Identify & integrate classroom theory with workplace practice. (Knowledge)
CO 3: Analyze & gain an understanding of administrative functions and company culture. (Analyze)
CO 4: Develop skills to demonstrate various activities of all the core departments. (Create)

Module I - TRAINING EXPOSURE SUMMARY (50 hours)

The 08 weeks of vocational training would be from any two key areas of hospitality such as Food Production, Food and Beverage Service, Accommodation Operation, and Front Office Operations and student has to collect information's which will be needed to them during compiling of the training report.

Module 2 - TRAINING REPORT (40 hours)

a. During the training report the students has to complete the training report which will includes the details of the training organization, there USP, facilities of the various department
b. The outcome and experience they gain from the training

Module 3 - LOG BOOK (30 hours)

During the training the student has to duly sign the log book from the departmental authorities as a proof of their experience and learning skills from the specific department.

Minor/Honours/Value Added Courses (Optional)				3	0	0	3	

Exit Options for Civil Engineering

Semseter V and VI – B.E. Vocational (44 credits to be obtained in 5th and 6th semester)

(Additional Credits required = 6 to 8 Credits)

1. Advance Concrete Technology. (2-0-4) = 3 Credits)
2. Air and Noise pollution control engineering (3-0-0 = 3 credits)
3. Introduction and Application of AI, ML and IOT for Civil Engineering (3-0-0 = 3 Credits)
4. Construction Management and Safety (3-0-0) - 3 Credits)

Semester VII (Fourth year)								
Type	**Type of Course/Category**	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**	**Page**
Theory	Professional Core		Robotics and Automation	2	0	0	2	
	Professional Elective course		Program Elective Course – 4	3	0	0	3	
			1. Ground Improvement techniques					
			2. Traffic Engineering & Management					
			3.Structural Dynamics					
	Multidisciplinary Open Electives Courses - 3		Multidisciplinary Open Electives Courses – 3 Repair & Rehabilitation of Structures.	3	0	0	3	
Practical	Internship		Internship	0	0	24	12	
Theory	Mandatory –Non-credit Audit Course		Disaster Preparedness & Planning	3	0	0	0	
TOTAL CREDITS				**11**	**0**	**24**	**20**	
Minor/Honours/Value Added Courses (Optional)				3	0	0	3	

Semester VIII (Fourth year)								
Type	**Type of Course/Category**	**Course Code**	**Course Name**	**L**	**T**	**P**	**Credits**	**Page**
Theory	Program Elective Course -5		Program Elective Course – 5 1. Earth quake Engineering 2. Design of hydraulic Structures 3. Rain water harvesting	3	1	0	4	
	Program Elective Course -6		Program Elective Course – 6 1. Bridge Engineering 2. Urban Transportation Planning 3. Ground water Engineering	3	1	0	4	
	Program Elective Course -7		Program Elective Course -7 1. Elements of Geoinformatics 2.Environmental Geotechnology 3. Pre stressed concrete	3	0	0	3	
	Multidisciplinary Open Electives Courses - 4		Multidisciplinary Open Electives Courses – 4 Introduction to Finite Element Analysis	3	0	0	3	
	Project		Project	0	0	8	4	
	TOTAL CREDITS			**12**	**2**	**8**	**18**	
Minor/Honours/Value Added Courses (Optional)				3	0	0	3	

TOTAL CREDITS – 167

B.TECH (MINOR / HONOURS / RESEARCH) ADDITIONAL 18 CREDITS

List of Courses for Honours and Minors

Minor courses offered from Civil Engineering Department

Sl. No.	Course Name	Credits	Link
1	Basic Construction Materials	3	https://nptel.ac.in/courses/105/106/105106206/ https://nptel.ac.in/courses/105/102/105102088/
2	Geographic Information System	3	https://nptel.ac.in/courses/105/107/105107155/ https://nptel.ac.in/courses/105/107/105107206/
3	Geomorphology	3	https://nptel.ac.in/courses/105/107/105107200/
4	Maintenance and Repair of Concrete Structures	3	https://nptel.ac.in/courses/105/106/105106202/
5	Remote Sensing-Principles and Applications	3	https://nptel.ac.in/courses/105/101/105101206/ https://nptel.ac.in/courses/105/103/105103193/ https://nptel.ac.in/courses/105/107/105107201/ https://nptel.ac.in/courses/105/108/105108077/ https://nptel.ac.in/courses/105/107/105107160/
6	Strategies for Sustainable Design	3	https://nptel.ac.in/courses/124/106/124106157/
8	Introduction to Civil Engineering Profession	2	https://nptel.ac.in/courses/105/106/105106201/
9	Architectural Conservation and Historic Preservation	2	https://nptel.ac.in/courses/124/105/124105003/
10	Safety in Construction	2	https://nptel.ac.in/courses/105/102/105102206/
11	Natural Hazards	2	Https://nptel.ac.in/courses/105/104/105104183/
12	Mechanics of Solids	3	CVSM0050
13	Introduction to Fluid Mechanics	2	CVFM0049
14	Structural Engineering	3	CVSE0058
15	Surveying & Geomatics	2	CVSG0051
16	Construction Engineering & Management	3	CVCM0063
17	Engineering Economics, Estimation & Costing	4	CVEC0064

List of courses offered for Honours in Civil Engineering

Domain 1: ENVIRONMENTAL ENGINEERING

Sl. No.	Course Name	Credits	Link
1	Plastic Waste Management	2	https://nptel.ac.in/courses/105/105/105105184/
2	Electronic Waste Management	1	https://nptel.ac.in/courses/105/105/105105169/
3	Applied Environmental Microbiology	3	https://nptel.ac.in/courses/105/107/105107173/
4	Water and Wastewater Treatment	3	https://nptel.ac.in/courses/105/105/105105178/
5	Water Supply Engineering	3	https://nptel.ac.in/courses/105/105/105105201/
6	Environmental Remediation	3	https://nptel.ac.in/courses/105/107/105107181/
7	Environmental Chemistry and Microbiology	3	https://nptel.ac.in/courses/102/105/102105087/
8	Applied Environmental Microbiology	3	https://nptel.ac.in/courses/105/107/105107173/
9	Integrated Waste Management for a Smart City	3	https://onlinecourses.nptel.ac.in/noc21_ce46/preview -3rd semester students
10	Wastewater Treatment and Recycling	3	https://onlinecourses.nptel.ac.in/noc21_ce49/preview -5th Sem students

Domain 2: CONSTRUCTION TECHNOLOGY

Sl. No.	Course Name	Credits	Link
1	Land Scape Architecture and Site Planning-Basic Fundamentals	2	https://nptel.ac.in/courses/124/105/124105001/
2	Maintenance and Repair of Concrete Structures	3	https://nptel.ac.in/courses/105/106/105106202/
3	Basic Construction Materials	3	https://onlinecourses.nptel.ac.in/noc21_ce10/preview
4	Safety in Construction	2	https://nptel.ac.in/courses/105/102/105102206/
5	Development and Application of Special Concrete	3	https://nptel.ac.in/courses/105/104/105104206/
6	Principles of Construction Management	2	https://nptel.ac.in/courses/105/104/105104161/
7	Construction Methods and Equipment Management	2	https://nptel.ac.in/courses/105/103/105103206/
8	Concrete Technology	3	https://nptel.ac.in/courses/105/102/105102012/ https://nptel.ac.in/courses/105/104/105104030/ https://nptel.ac.in/courses/105/106/105106176/

LIST of VALUE-ADDED COURSES offered by the DEPARTMENT

1. Computer Aided Drafting
2. Building Modeling and Analysis using STAAD-Pro
3. Training on Modeling and Analysis using ABACUS
4. Detailing and Drafting of Concrete Reinforcement
5. Soil modelling with the finite element program PLAXIS 2D (INTRODUCED in AUTUMN 2023)
6. Design of Flexible pavement as per IRC:37-2018

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

PROGRAMME: BACHELOR OF TECHNOLOGY (BTECH) - COMPUTER SCIENCE AND ENGINEERING

PROGRAMME: BTECH (HONOURS) - ELECTRONICS AND COMMUNICATION ENGINEERING

For B.Tech (Honors) in Electronics and Communication Engineering, students will have to earn extra 18 Credits in addition to the regular BTECH courses

There are two domains for BTECH (Honors) in ECE for a student to opt for.

BTECH (HONOURS): (IOT AND SENSOR TECHNOLOGY)						
Type	**Type of Course/ Category**	**Course Code**	**Course Name**	**L-T-P**	**Credits**	**Page**
Theory	Semester IV					
	EC/DC	ECST0114	Sensor Technology	3-1-0	4	
	Semester V					
	EC/DC	ECBA0115	IoT Basics & Architecture	3-1-0	4	
	Semester VI					
	EC/DC	ECWT0116	Web Technology	3-1-0	4	
	Semester VII					
	EC/DC	ECML0117	Machine Learning	3-1-0	4	
	Semester VIII					
	EC/DC	ECET0118	Embedded Systems and IOT	3-1-0	4	
BTECH (HONOURS): (SIGNAL PROCESSING AND VLSI)						
Type	**Type of Course/ Category**	**Course Code**	**Course Name**	**L-T-P**	**Credits**	**Page**
Theory	Semester IV					
	EC/DC	ECVD0096	VLSI Design Technology	3-1-0	4	
	Semester V					
	EC/DC	ECSV0119	Signal Processing for VLSI	3-1-0	4	
	Semester VI					
	EC/DC	EDDS0120	Advance DSP	3-1-0	4	
	Semester VII					
	EC/DC	ECML0117	Machine Learning	3-1-0	4	
	Semester VIII					
	EC/DC	ECCV0121	Fundamentals of Computer Vision	3-1-0	4	

PROGRAMME: BTECH (MINOR) - ELECTRONICS AND COMMUNICATION ENGINEERING

For BTECH Minor in ECE, a student must earn a **minimum of 18 credits** in addition to the regular BTECH courses, by choosing a combination of courses from the list below:

Type	**Type of Course/ Category**	**Course Code**	**Course Name**	**L-T-P**	**Credits**	**Page**
Theory	Semester III					
	EC/DC	ECDC0122	Digital Circuits	3-1-0	4	
	Semester IV					
	EC/DC	ECSC0123	Semiconductor Devices and Circuits	3-1-0	4	
	Semester V					
	EC/DC	ECFC0124	Fundamentals of Analog Electronic Circuit	3-1-0	4	
			Principles of Communication			
	Semester VI					
	EC/DC	ECIM0125	Introduction to Microprocessor and Microcontroller	3-1-0	4	
	Semester VII					
	EC/DC	ECIC0126	Semiconductor IC Technology	3-1-0	4	
		ECMC0127	Microelectronics: Devices to Circuits			

DEPARTMENT OF MECHANICAL ENGINEERING

BACHELOR OF TECHNOLOGY (BTECH) – MECHANICAL ENGINEERING
*COURSE STRUCTURE (NEP BATCH 2024)

*"Undergraduate Degree Course Structure Based on AICTE Model Curriculum 2024 (Subject to Change)"

SEMESTER I						
Type	**Type of Course/ Category**	**Course Code**	**Course Name**	**L-T-P**	**Credits**	**Page**

SCHOOL OF TECHNOLOGY

DETAILED SYLLABUS

EGTW107T: ENGLISH FOR TECHNICAL WRITING
(2 Credits- 30 hours) (L-T-P: 2-0-0)
[B.Tech All Branches]
EEE/ECE/CSE/AI&ML (1st Semester); CVL/MNE (2nd Semester)
Objective: The student will acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.

Course/Learning Outcomes:
CO1: Define subject-verb agreement in language **(Remembering)**
CO2: Summarise the different processes of word formation in English **(Understanding)**
CO3: Identify erroneous sentence structures **(Applying)**
CO4: Distinguish between antonyms and synonyms **(Analysing)**
CO5: Explain the importance of proper punctuation in language **(Evaluating)**
CO6: Elaborate the different writing styles in language **(Creating)**

Module I: Vocabulary Building (6 hours)
a) The concept of Word Formation
b) Root words from foreign languages and their use in English
c) Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives.
d) Synonyms, antonyms, and standard abbreviations.

Module II: Basic Writing Skills (6 hours)
a) Sentence Structures
b) Use of phrases and clauses in sentences
c) Importance of proper punctuation
d) Creating coherence
e) Organizing principles of paragraphs in documents
f) Techniques for writing precisely

Module III: Identifying Common Errors in Writing (5 hours)
Subject-verb agreement, Noun-pronoun agreement, Misplaced modifiers, Articles, Prepositions,Redundancies, Clichés

Module IV: Nature and Style of sensible Writing (6 hours)
Describing, Defining, Classifying, Providing examples or evidence, Writing introduction and conclusion

Module V: Writing Practices (7 hours)
Comprehension, Précis Writing, Essay Writing

Suggested Readings

1. *Practical English Usage*. Michael Swan. OUP. 1995.
2. *Remedial English Grammar*. F.T. Wood. Macmillan.2007
3. *On Writing Well.* William Zinsser. Harper Resource Book. 2001
4. *Study Writing*. Liz Hamp-Lyons and Ben Heasly. Cambridge University Press. 2006.

EGTW108L: ORAL COMMUNICATION PRACTICE LAB
(1 Credit) (L-T-P:0-0-2)
[B.Tech All Branches]
EEE/ECE/CSE/AI&ML (1st Semester); CVL/MNE (2nd Semester)
Objective: The objective of this practical course is to enhance the basic language skills of the learners that would help them communicative effectively and confidently in different situations. This course primarily emphasizes on improving the learner's pronunciation, intonation and accent to enhance overall speech clarity.

COURSE /LEARNING OUTCOMES
After the completion of this lab course the students will be able to:
CO 1: *List* out the different vowel sounds and consonant sounds (Remembering)
CO 2: *Illustrate* the stress and intonation patterns in language. (Understanding)

CO 3: *Identify* the erroneous pronunciations. (Applying)
CO 4: *Compare* the pronunciation of similar sounding words. (Analysing)
CO 5: *Discuss* the tips for facing an interview. (Evaluating)
CO 6: *Determine* the common patterns in everyday conversations and dialogues. (Creating)

The course involves interactive practice sessions in Language Lab and includes topics as mentioned below:
1. Listening Comprehension
2. Pronunciation, Intonation, Stress and Rhythm
3. Common Everyday Situations
4. Conversations and Dialogues
5. Communication at Workplace
6. Interviews & Speeches
7. Formal Presentations
8. Expressive language in English
9. Practice descriptive/narrative/persuasive passages in English
10. Practice stress and intonation in connected speech
11. Making a request/ Asking for permission
12. Practice words with similar vowel and consonant sounds

Suggested Readings
1. Communication Skills. Sanjay Kumar and Pushp Lata. Oxford University Press. 2011.
2. Exercises in Spoken English. Parts. I-III. CIEFL, Hyderabad. Oxford University Press.

BOBE113T: BIOLOGY FOR ENGINEERING

3 Credits (2L: 1T: 0P)
(For BTech- MNE, CVE in 1st Semester, CSE, EEE, ECE in 2nd Semester)

Course Outcomes
CO1: Recall the biological observations of 18th Century that lead to major discoveries? (Remembering)
CO2: Compare the two, three, four and five kingdom classifications Highlight the criteria for classification (Understanding)
CO3: Apply thermodynamic principles to biological systems. (Applying)
CO4: Analyse biological processes at the reductionist level. (Analysing)
CO5: Examine DNA as a genetic material in the molecular basis of information transfer (Evaluating)

Module 1: Introduction (4 hours)
Importance of Biology: Fundamental differences between science and engineering by drawing a comparison between eye and camera, Bird flying and aircraft; Aspect of biology as an independent scientific discipline. History of Biology: Biological observations of the 18th Century; Examples from Brownian motion and the origin of thermodynamics by referring to the original observation of Robert Brown and Julius Mayor.

Module 2: Classification (5 hours)
Classification and its criteria: Morphological, Biochemical and Ecological; Hierarchy of Classifications, based on (a) cellularity- Unicellular or multicellular (b) ultrastructure- prokaryotes or eucaryotes. (c) energy and Carbon utilization - Autotrophs, heterotrophs, lithotropes (d) Ammonia excretion – aminotelic, uricoteliec, ureotelic (e)Habitata- acquatic or terrestrial (e) Molecular taxonomy- three major kingdoms of life; Organism from different based on classification for the study :1. E.coli, 2. S.cerevisiae, 3. D. Melanogaster, 4.C. elegance, 5. A. Thaliana, 6. M. musculus

Module 3: Genetics and Information Transfer (13 hours)
a) Mendel's laws: Law of segregation and Law of independent assortment, Dominance, Recessiveness; Allele, Gene mapping, Gene interaction, Epistasis ; Meiosis and Mitosis in heredity; Gene – mapping; Genetic disorders in humans; complementation in human genetics.
b) DNA as a genetic material; Structure of DNA- single stranded, double stranded and nucleosomes; Genetic code- Salient features; Gene - complementation and recombination.

Module 4: Biomolecules and Enzymes (14 hours)
a) Biomolecules of life: Micromolecules and Macromolecules- sugars, starch and cellulose; Amino acids and proteins; Nucleotides and DNA/RNA; Two carbon units and lipids. Structure of proteins: Primary, Secondary, tertiary and Quaternary;Proteins as enzymes, transporters, receptors and structural elements.
b) Enzyme classification. Mechanism of enzyme action of any two enzyme. Enzyme kinetics and kinetic parameters; RNA catalysis.

Module 5: Metabolism (5 hours)
Thermodynamics as applied to biological systems. Exothermic and endothermic versus endergonic and exergonic reactions. Key and its relation to standard free energy. Spontaneity. ATP as an energy currency; Glycolysis and Krebs cycle; Photosynthesis; Energy yielding and energy consuming reactions. Energy charge

Module 6: Microbiology (4 hours)
Unicellular organisms; Species and strains. Identification and classification of microorganisms. Microscopy. Ecological aspects of unicellular organisms. Sterilization and media compositions. Growth kinetics.

Suggested Readings
1. Biology: A global approach: Campbell, N. A.; Reece, J. B.; Urry, Lisa; Cain, M, L.; Wasserman, S. A.; Minorsky, P. V.; Jackson, R. B. Pearson Education Ltd
2. Outlines of Biochemistry, Conn, E.E; Stumpf, P.K; Bruening, G; Doi, R.H., John Wiley and Sons
3. Principles of Biochemistry (V Edition), By Nelson, D. L.; and Cox, M. M.W.H. Freeman and Company
4. Molecular Genetics (Second edition), Stent, G. S.; and Calendar, R.W.H. Freeman and company, Distributed by Satish Kumar Jain for CBS Publisher
5. Microbiology, Prescott, L.M J.P. Harley and C.A. Klein 1995. 2nd edition Wm, C. Brown Publishers

PSEP109T: ENIGNEERING PHYSICS
(4 Credits – 60 Hours) (L-T-P: 3-1-0)
(For BTECH MNE, CVE)
Objective: To enhance the fundamental knowledge in Physics and its applications pertinent to diverse areas of Engineering and Technology

COURSE OUTCOMES
At the end of this course students will be able to:
CO1: Comprehend the principles of wave optics. (Understanding)
CO2: Able to solve problems for motion under constraints and friction. (Applying)
CO3: Analyse rotating and translating motion of a rigid body. (Analysing)
CO4: Explain the electromagnetic theory and electromagnetic waves. (Remembering)

Module I: Vector Mechanics of Particles (20 Hours)

Transformation of scalars and vectors under Rotation transformation; Forces in Nature; Newton's laws and its completeness in describing particle motion; Form invariance of Newton's Second Law; Problems including constraints and friction, Potential energy function; F = - Grad V; Conservative and non-conservative forces; Central forces; Conservation of Angular Momentum; Rotating coordinate system: Five-term acceleration formula — Centripetal and Coriolis accelerations; Applications: Weather systems, Foucault pendulum; Harmonic oscillator; Damped harmonic motion; Forced oscillations and resonance.

Module II: Planar Rigid Body Mechanics (10 Hours)
Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion; Angular momentum about a point; Inertia tensor: Dentition and computation, Principal moments and axes of inertia, Parallel and perpendicular axes theorems, Elasticity, Hooke's law, factors affecting elasticity, Poisson's ratio, Relations in elasticity, twisting couple on a wire.

Module III: Wave Optics (15 Hours)
a) Interference and diffraction: Huygen's principle, superposition of two waves, coherent sources, Young's double slit experiment, intensity distribution; Newton's rings and applications. Fresnel and Fraunhofer diffraction,
b) Photonics: spontaneous and stimulated emission, fundamentals of laser action, ruby Laser, He-Ne laser, applications of lasers. Elements of fibre optics, types of optical fibres

Module IV: Electromagnetic Theory and Semiconductor Physics (15 Hours)
a) Electromagnetism: basic idea of divergence and stokes theorems, Gauss's law and its applications, electrostatic potential, Poisson's and Laplace's equation, work and energy, dielectric polarization bound charges, electric displacement (D); magnetic induction (B), magnetic intensity (H), Biot-Savart's Law, Ampere's circuital law; magnetic susceptibility and ferromagnetic, paramagnetic and diamagnetic materials; Faraday's law of electromagnetic induction, displacement current, Maxwell's equations in differential and integral forms.
b) Intrinsic and extrinsic semiconductors, p-n junction diode, Special purpose diodes: metal- semiconductor junction, Zener Diode, LED, Photovoltaic Effect, Solar cell

Suggested Readings
1. Physics (Introduction to Mechanics) with Lab Manual, Khanna Book Publishing Co., Bhattacharya & Nag
2. Physics (Introduction to Electromagnetic Theory) with Lab Manual, Khanna Book Publishing Company, Bhattacharya & Nag.
3. Physics (Oscillations, Waves & Optics) with Lab Manual, Khanna Book Publishing, Bhattacharya & Nag,
4. Physics for Engineers and Technologists, S. Dey, Eastern Book House.
5. Applied Physics for Engineers –Neeraj Mehta (PHI Learning Pvt. Limited)
6. A text Book of Engineering Physics –Dr. M.N. Avadhanulu and Dr. P.G.Kshirsagar (S. Chand and Company Pvt. Limited).
7. Engineering Mechanics, M. K. Harbola.

PSEP110L: ENIGNEERING PHYSICS LAB
(1 credit) (L-T-P: 0-0-2)
(For BTECH MNE, CVE)
Course Outcomes
At the end of this course students will be able to:
CO1: Explain the usage of mechanical and optical systems for various measurements (Understanding)
CO2: Apply the analytical techniques and graphical analysis to the experimental data (Applying)
CO3: Evaluate vernier calipers, various rulers, meters, scales and other measuring devices to acquire measurements within the stated precision (Evaluating)

At least 10 experiments to be performed from the following
1. To determine the frequency of an Electrical maintained tuning fork by Melde's experiments

2. Determination of surface tension by capillary rise method.
3. Determination of wavelength of light by Newton's ring method.
4. Determination of grating element of a diffraction grating.
5. Determination of wavelength of laser source by diffraction grating method.
6. Study of photoemission.
7. Determination of Rigidity modulus by static method.
8. Determination of acceleration due to gravity by Bar pendulum.
9. Determination of thermal conductivity by Lee's method
10. Plotting of characteristic curve of a PN junction diode.
11. Determination of Young's modulus by Searle's method.
12. Study of RC circuit.

PSPT111T: PHYSICS FOR TECHNOLOGISTS

(4 Credits – 60 Hours) (L-T-P: 3-1-0)

(For BTECH CSE, ECE, EEE)

Objective: To enhance the fundamental knowledge in Physics and its applications pertinent to diverse areas of Engineering and Technology

COURSE OUTCOMES

At the end of this course students will be able to:

CO1: Comprehend the principles of wave optics. (Understanding)
CO2: Explain the electromagnetic theory and electromagnetic waves. (Remembering)
CO3: Interpret the concepts and principles in quantum mechanics. (Understanding)
CO4: Analyse the physics of semiconductors and their applications. (Analysing)

Module I: Wave Optics (18 Hours)

a) Interference and diffraction: Huygen's principle, superposition of two waves, coherent sources, Young's double slit experiment, intensity distribution; Newton's rings and applications. Fresnel and Fraunhofer diffraction, Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and under-damped oscillators
b) Photonics: spontaneous and stimulated emission, fundamentals of laser action, ruby Laser, He-Ne laser, applications of lasers. Elements of fibre optics, types of optical fibres, numerical aperture. Principles of holography.

Module II: Electromagnetic Theory (14 Hours)

a) Electromagnetism: basic idea of divergence and stokes theorems, Gauss's law and its applications, electrostatic potential, Poisson's and Laplace's equation, work and energy, dielectric polarization bound charges, electric displacement (D); magnetic induction (B), magnetic intensity (H), Biot-Savart's Law, Ampere's circuital law; magnetic susceptibility and ferromagnetic, paramagnetic and diamagnetic materials; Faraday's law of electromagnetic induction, displacement current, Maxwell's equations in differential and integral forms.
b) Electromagnetic waves: Electromagnetic energy densities, Electromagnetic wave equations for E and B, transverse nature and speed of electromagnetic waves.

Module III: Quantum Physics and Applications (14 Hours)

a) Quantum physics: historical overview; particle aspect of radiation – blackbody radiation, photoelectric effect, Compton scattering; wave aspect of particles – de Broglie's hypothesis, matter waves; Heisenberg's uncertainty principle; transition from deterministic to probabilistic states of a system – wave functions, probability density, superposition principle; observables and operators, expectation values. Schrodinger wave equation.
b) Application of quantum mechanics: solutions of one-dimensional problem, infinite deep potential well – energy eigenvalues, eigenfunctions, potential barrier – tunneling.

Module IV: Semiconductor Physics (14 Hours)

a) Free electron theory, density of states and energy band diagrams, Kronig-Penny model (to introduce origin of band gap), energy bands in solids, E-k diagram, direct and indirect bandgaps, types of electronic materials: metals, semiconductors, and insulators, density of states, occupation probability, Fermi level, effective mass, phonons.
b) Intrinsic and extrinsic semiconductors, dependence of Fermi level on carrier- concentration and temperature (equilibrium carrier statistics), carrier generation and recombination, carrier transport: diffusion and drift, p-n junction, Special purpose diodes: metal- semiconductor junction, Zener Diode, LED, Photovoltaic Effect, Solar cell

Suggested Readings

1. Physics for Engineers and Technologists, S. Dey, Eastern Book House.
2. Applied Physics for Engineers –Neeraj Mehta (PHI Learning Pvt. Limited)
3. A text Book of Engineering Physics –Dr. M.N. Avadhanulu and Dr. P.G.Kshirsagar (S. Chand and Company Pvt. Limited).
4. Optics, A. Ghatak, Tata Mcgraw Hill.

5. Introduction to Electrodynamics, D. J. Griffiths, Pearson, Prentice Hall.
6. Concepts of Modern Physics, A. Beiser, McGraw Hill.
7. Quantum Mechanics, L. I. Shiff, McGraw Hills.
8. Quantum Mechanics, E. Merzbacher, Wiley.
9. Quantum Mechanics, G. Aruldas, PHI learning.
10. Classical Mechanics, H. Goldstein, Addison-Wesley.
11. Semiconductor Optoelectronics: Physics and Technology, J. Singh, McGraw Hill.
12. Semiconductor Devices: Physics and Technology, S. M. Sze, Wiley.
13. Semiconductor Optoelectronic Devices, P. Bhattacharya, Prentice Hall of India.

PSPT112L: PHYSICS FOR TECHNOLOGISTS LAB

(1 credits) (L-T-P: 0-0-1)
(For BTECH CSE, ECE, EEE)
COURSE OUTCOMES
At the end of this course students will be able to:
CO1: Explain the usage of mechanical and optical systems for various measurements (Understanding)
CO2: Apply the analytical techniques and graphical analysis to the experimental data (Applying)
CO3: Evaluate vernier calipers, various rulers, meters, scales and other measuring devices to acquire measurements within the stated precision (Evaluating)

At least 10 experiments should be performed from the following
1. To determine the frequency of an Electrical maintained tuning fork by Melde's experiments
2. Determination of surface tension by capillary rise method.
3. Determination of wavelength of light by Newton's ring method.
4. Determination of grating element of a diffraction grating.
5. Determination of wavelength of laser source by diffraction grating method.
6. Study of photoemission.
7. Determination of Rigidity modulus by static method.
8. Determination of acceleration due to gravity by Bar pendulum.
9. Determination of thermal conductivity by Lee's method
10. Plotting of characteristic curve of a PN junction diode.

PSPH113T: PHYSICS

(2 credits-30 Hours)
(For BTECH AIML)
Objective:
This course will help the students to familiarize with Ultrasonics, SHM, Oscillations, Wave motion, diffraction, polarization, laser, fiber optics and holography concepts.

Course outcomes:
After completion of course, students would be able to:
CO 1. Understand latest developments in certain areas of Physics which have important applications for societal needs.
CO 2. Understand lasers and fibre optics which have important applications for societal needs.
CO 3. Understand latest developments in certain areas of Physics which have important applications for societal needs.
CO 4. Develop capability to tackle problems in general and in the various areas covered in the course.

Module I: Ultrasonics & SHM
Production, detection and uses of ultrasonics, reverberation, Sabine's formula (no derivation), Review of basic kinematics (displacement, velocity, acceleration, time period and phase of vibration) and dynamics (restoring force and energetics) of simple harmonic motion, differential equation of SHM, superposition of two SHM in one dimension, charge oscillations in LC circuits

Module II: Oscillations
Damped Oscillations: Concept and cause of damping, differential equation of a damped oscillator and different kinds of

damping, Methods of describing damping of an oscillator - logarithmic decrement, relaxation time, quality factor, band width. Series LCR circuit as a damped oscillator. Forced Oscillations: States of forced oscillations, differential equation of forced oscillator – its displacement, velocity and impedance, behavior of displacement and velocity with driver's frequency, Power, bandwidth, Quality factor and amplification of forced oscillator, resonance in forced oscillators, forced oscillations in series LCR circuit

Module III: Wave Motion and interference
Wave equation and its solution, characteristic impedance of a string, reflection and transmission of waves on a string at a boundary, reflection and transmission of energy, the matching of impedances, Division of wave front and amplitude; Fresnel's biprism, Newton's rings, Michelson interferometerand its applications for determination of λ and dλ.

Module IV: Diffraction & Polarization
Fresnel and Fraunhofer diffraction, qualitative changes in diffraction pattern on moving from singleslit to double slit, plane transmission grating, dispersive power & resolving power of a grating, Methods of polarization, analysis of polarized light, quarter and half wave plates, double refraction.

Module V: Lasers, Fibre Optics and Holography
Elementary idea of LASER production, spontaneous emission, stimulated emission, Einstein's coefficients, Helium-Neon, Ruby and semiconductor lasers, applications of lasers. Basics of optical fibre - its numerical aperture, coherent bundle, step index and graded index fibre, material dispersion, fibre Optics sensors, applications of optical fibre in communication systems, Holography: Basic principle, theory and requirements.

Suggested Readings

1. Engineering Physics by A.B. Bhattacharya, Khanna Publishing House, 2020.
2. Physics for Engineers by N.K. Verma, Prentice Hall India, 2017.
3. Physics of Vibrations and Waves by H.J.Pain, 5th Edition, Wiley, 2006.
4. Optics by Ajoy Ghatak, McGraw Hill Education India, 2017.

PSPH114L: PHYSICS LAB
(1 credit-30 Hours)
(BTECH AIML)

Laboratory/ Practical
1. To find the wavelength of sodium light using Fresnel's biprism.
2. To determine the wavelength of He-Ne laser using transmission grating.
3. To determine the slit width using the diffraction pattern.
4. To determine the wave length of sodium light by Newton's rings method.
5. To determine the wave length of sodium light using a diffraction grating.
6. To find the specific rotation of sugar solution using a Bi-quartz Polarimeter.
7. To design a hollow prism and used it find the refractive index of a given liquid

MAMT113T: MATHEMATICS I
(4 Credits) (3L: 1 T: 0P)
(For BTech CSE, CVE, MNE, EEE, ECE)
Objectives: The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate differentiation and integration. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

Course Outcomes
At the end of this course students will be able to:
CO 1: To apply differential and integral calculus to notions of curvature and to improper integrals. Apart from some other applications they will have a basic understanding of Beta and Gamma functions. (Applying)
CO 2: The fallouts of Mean value theorems that is fundamental to application of analysis to Engineering problems. (Analysis)
CO 3: Find the concepts of convergence of sequence and series for real numbers. (Remembering)
CO 4: Classify various functions of several variables that are essential in most branches of engineering. (Understanding)

Module 1: Single-variable Calculus (Differentiation): (10 hours)
Rolle's Theorem, Mean value theorems and applications; Extreme values of functions; Linear approximation; Indeterminate forms and L'Hospital's rule. Curvature, evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

Module 2: Sequences and series: (10 hours)
Limits of sequence of numbers, Calculation of limits, Infinite series; Tests for convergence; Power series, Taylor and Maclaurin series; Taylor theorem, convergence of Taylor series, error estimates.

Module 3: Multivariable Calculus (Differentiation): (10 hours)
Limit, continuity and partial derivatives, directional derivatives, gradient, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers.

Module 4: Multivariable Calculus (Integration): (10 hours)
Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes, Centre of mass and Gravity (constant and variable densities); Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds; Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Gradient, curl and divergence, Theorems of Green, Gauss and Stokes.

MAMT115T: MATHEMATICS I

(4 Credits) (3L: 1T: 0P)

BTech (AI ML)

Objective:

To make the students well versed with the concepts of linear algebra. The students should also be able to solve calculus and vector calculus-based problems.

COURSE OUTCOMES:

After completion of course, students would be able to:
CO 1: Recall and analyse the idea of basic algebra. (Remembering and analysing)
CO 2: Understand and apply calculus and multivariate calculus. (Understanding and applying)
CO 3: Understand and apply vector calculus. (Understanding and applying)
CO 4: Understand and apply differential equations. (Understanding and applying)

Module 1: Linear Algebra (12 Hours)
Vector spaces, Subspaces, basis and dimension, linear transformations, representation of transformations by Matrices, linear functionals, transpose of linear transformations, canonical forms. Linear functionals and adjoints, Bilinear forms, symmetric bilinear forms, skew symmetric bilinear forms

Module 2: Vector Calculus (8 Hours)
Applications. Integrals of Vector Functions: Line integrals, Green's formula, path independence, Surface integral: definition, evaluation, Stoke's formula, Gauss-Satoransky divergence theorem.

Module 3: Calculus & Multivariate Calculus (12 Hours)
Continuity and differentiability of a function of single variable, statement of Rolle's Theorem, Lagrange's mean value theorem and applications. Double and Triple Integrals: Calculations, Areas, Volumes, change of variables. Integral Calculus: Definite Integrals as a limit of sums, Applications of integration to area, volume, surface area, Improper integrals. Functions of several variables: Continuity and differentiability, mixed partial derivatives, local maxima and minima for function of two variables, Lagrange multipliers.

Module 4: Differential Equations (8 Hours)
Ordinary Differential Equations: First order linear equations, Bernoulli's equations, Exact equations and integrating factor, Second order and Higher order linear differential equations with constant coefficients

Alternative NPTEL/SWAYAM Course (if any):
NPTEL Course Name: Basic calculus for Engineers, Scientists and Economists
Instructor: Prof. Joydeep Dutta; IIT Kanpur

MAAI116T: MATHEMATICAL CONCEPTS FOR AI

(3L: 1T: 0P 4 Credits)
(BTech (AI ML)
Objective:
This course should help the students understand the basic mathematical background of AI. Also, the students should be able to apply statistics and probability to analyse various datasets.

COURSE OUTCOMES
After completion of course, students would be able to:
CO 1: To understand the mathematical background of AI. (Understanding)
CO 2: Understand and apply calculus. (Understanding and applying)
CO 3: Relate the essential tool of matrices and linear algebra in a comprehensive manner. (Analysing)
CO 4: Apply the concept of probability and statistics in real life and apply hypothesis testing on different datasets. (Applying)

Module 1: Equations, Functions and Graphs (8 Hours)
Introduction to linear equations, Intercepts and slopes, System of equations, Exponentials, radicals and logarithms, Polynomials, Polynomial operations, Factorizations, Introduction to quadratic equations, Functions

Module 2: Derivatives and Optimizations (8 Hours)
Rate of change, Introduction to limits, Continuity, finding limits, Differentiability, Derivative rules and operations, using derivatives to analyse functions, Second order derivatives, Optimization functions, Multivariate differentiation

Module 3: Vectors and Matrices (12 Hours)

Introduction to vectors, Vector addition, vector multiplication, Introduction to matrices, matric multiplication, properties of matrices, types of matrices, Matrix division, solving system of equations with matrices, Matrix transformations, Eigen values and eigen vectors, rank of matrix; Echelon form, Normal form, Gauss-Jordan method, Gauss elimination method, Linear Dependence and Independence; Eigenvalues and eigenvectors; Orthogonal transformation; Diagonalization of matrices; Cayley-Hamilton Theorem, rank-nullity theorem.

Module 4: Probability and Statistics (12 Hours)
Basic rules and axioms events, sample space, dependent and independent events, conditional probability, Random variables- continuous and discrete, expectation, variance, distributions- joint and conditional, Bayes' Theorem, Popular distributions- binomial, Bernoulli, Poisson, exponential, Gaussian.
Fundamentals of Data: Collection, Summarization, and Visualization; Sampling and Sampling Distributions, Central Limit Theorem; Methods of Estimation, Unbiased estimators; Confidence Interval Estimation: Z-interval, t-interval; Hypothesis Testing, Types of Errors, Rejection Region Approach and p-value Approach.

Alternative NPTEL/SWAYAM Course (if any):
NPTEL Course Name: Essential Mathematics for Machine Learning
Instructor: Prof. Sanjeev Kumar, Prof. S. K. Gupta, IIT Roorkee

Suggested Readings

MAMT114T: MATHEMATICS II

(3L: 1 T: 0P 4 Credits)
(For BTech CSE, CVE, MNE, EEE, ECE)
Objective:
The objective of this course is to familiarize the prospective engineers with techniques in matrices, ordinary differential equations and complex variables. It aims to equip the students to deal with advanced level of mathematics and applications that would be essential for their disciplines.
Course Outcomes

At the end of this course students will be able to:
CO 1: Determine the essential tool of matrices and linear algebra in a comprehensive manner. (Understanding)
CO 2: Recall the effective mathematical tools for the solutions of differential equations that model physical processes. (Remembering)
CO 3: Use the tools of differentiation and integration of functions of a complex variable that are used in various techniques dealing engineering problems. (Applying)
CO 4: Analysis complex techniques applied to diverse problem-solving situations in engineering and other mathematical contexts. (Analysing)

Module 1: Matrices (12 hours)
Determinant, Inverse of a matrix, Linear Systems of Equations; System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Rank of a Matrix; Echelon form, Normal form, Gauss-Jordan method, Gauss elimination method, Linear Dependence and Independence; Eigenvalues and eigenvectors; Orthogonal transformation; Diagonalization of matrices; Cayley-Hamilton Theorem, rank-nullity theorem.

Module 2: First and higher order ordinary differential equations: (12 hours)
Exact linear and Bernoulli's equations. Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type. Second order linear differential equations with variable coefficients: Euler-

Cauchy equations, solution by variation of parameters; Power series solutions: Legendre's equations and Legendre polynomials, Bessel's equation and Bessel's functions of the first kind and their properties.

Module 3: Complex Variable – Differentiation: (8 hours)
Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.

Module 4: Complex Variable – Integration: (8 hours)
Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy Integral formula (without proof), Liouville's theorem and Maximum-Modulus theorem (without proof); Taylor's series, zeros of analyticfunctions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof),

Suggested Readings

MAMT117: MATHEMATICS II

(4 credits-60 Hours)
(BTECH AIML)
Objective:
To make the students understand the behaviour of various series. They should also be able to calculate probabilities and statistics of different datasets.

Course Outcomes
After completion of course, students would be able to:
CO 1. Understand the behavior of series and their applications.
CO 2. Understand number system and its applications.
CO 3. Understand the concept of probability and apply in real life.
CO 4. Understand and apply the concept of statistics.

Module I: Sequences and Series
Limit of a sequence, monotone and Cauchy sequences and properties of convergent sequences, examples. Infinite series, positive series, tests for convergence and divergence, integral test, alternating series, Leibnitz test.

Module II: Functional Series
Pointwise and uniform convergence, basic aspects of Power series, Fourier series

Module III: Math Foundation
Statements, Quantifiers, Operation on sets and functions, Relations, Proofs.

Module IV: Number System
Countability of algebraic numbers, Transcendental numbers and construction of Liouville's number, Equivalence classes, construction of real numbers (using Cauchy sequences), Fermat's little theorem and using it for Miller-Rabin primality test, Wilson's theorem and Primitive root theorem.

Module V: Probability
Sample space and events, definitions of probability, properties of probability, conditional probability. Random variables: distribution functions, discrete and continuous random variables, moments of random variables, conditional expectation, Chebyshev inequality, functions of random variables. Special Distributions: Bernoulli, Binomial, Geometric, Pascal, Poisson, Exponential,Uniform, Normal distributions, Limit Theorems: Law of large numbers

Suggested Readings

CHCY118T: CHEMISTRY I

4 Credits (3L: 1T: 0P)
(BTech- CSE, CVE, MNE, ECE and EEE)
Objective:
The objective of the Chemistry II is to acquaint the students with the basic phenomenon/concepts of chemistry, the student faces during course of their study in the industry and Engineering field. The student with the knowledge of the basic chemistry will understand and explain scientifically the various chemistry related problems in the industry/engineering field. The student will able to understand the new developments and breakthroughs efficiently in engineering and technology. The introduction of the latest (R&D oriented) topics will make the engineering student upgraded with the new technologies.

Course Outcomes
At the end of this course students will be able to:
CO1: Recall fundamental concepts of 10+2 level of physical, organic and inorganic chemistry.*(Remembering)*
CO2: To distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques. *(Understanding)*
CO3: To analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces. *(Analysing)*
CO4: To rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity bulk properties and processes using thermodynamic considerations. *(Applying)*
CO5: To list major chemical reactions that are used in the synthesis of molecules. *(Evaluating)*

Module I: Atomic and Molecular Structure
Schrodinger equation, Particle in a box solutions and their applications for conjugated molecules and nanoparticles, Forms of the hydrogen atom wave functions and the plots of these functions to explore their spatial variations, Molecular orbitals of diatomic molecules and plots of the multicentre orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomic, Pi-molecular orbitals of butadiene and benzene and aromaticity, Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures

Module II: Spectroscopic techniques and applications
Principles of spectroscopy and selection rules, Electronic spectroscopy, Fluorescence and its applications in medicine, Vibrational and rotational spectroscopy of diatomic molecules, Applications, Nuclear magnetic resonance and magnetic resonance imaging, surface characterization techniques, Diffraction and scattering

Module III: Intermolecular forces and potential energy surfaces

Ionic, dipolar and van Der Waals interactions, Equations of state of real gases and critical phenomena, Potential energy surfaces of H_3, H_2F and HCN and trajectories on these surfaces.

Module IV: Use of free energy in chemical equilibria (6 lectures)
Thermodynamic functions: energy, entropy and free energy, Estimations of entropy and free energies, Free energy and EMF. Cell potentials, the Nernst equation and applications, Acid base, oxidation reduction and solubility equilibria, Water chemistry, Corrosion, Use of free energy considerations in metallurgy through Ellingham diagrams.

Module V: Periodic properties
Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries.

Module VI: Stereochemistry
Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Isomerism in transitional metal compounds

Module VII: Organic reactions and synthesis of a drug molecule
Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings, Synthesis of a commonly used drug molecule.

CHCY119L: CHEMISTRY LAB
1 Credit
(For BTech All Branches)

Laboratory Outcomes: The chemistry laboratory course will consist of experiments illustrating the principles of chemistry relevant to the study of science and engineering. The students will learn:
CO1: To estimate rate constants of reactions from concentration of reactants/products as a function oftime.
CO2: To measure molecular/system properties such as surface tension, viscosity, conductance ofsolutions, redox potentials, chloride content of water, etc.
CO3: To synthesize a small drug molecule and analyze a salt sample.

Choice of 10-12 experiments from the following:

1. Determination of surface tension of a given liquid by stalagmometer.
2. Determination of the composition of the given mixture by viscosity method with the help of Ostwald's Viscometer.
3. Thin layer chromatography.
4. Ion exchange column for removal of hardness of water.
5. Determination of chloride content of water.
6. Colligative properties using freezing point depression. 7. Determination of the rate constant of a reaction.
7. Determination of cell constant and conductance of solutions. 9. Potentiometry - determination of redox potentials and emfs.
8. 10. Determination of sodium hydroxide and sodium carbonate in a mixture. 11. Synthesis of a polymer/drug.
9. 12. Saponification/acid value of an oil. 13. Chemical analysis of a salt.
10. Lattice structures and packing of spheres.
11. Determination of free carbon dioxide in given water sample.
12. Models of potential energy surfaces.
13. Chemical oscillations- Iodine clock reaction.
14. Determination of the partition coefficient of a substance between two immiscible liquids.
15. To measure the Adsorption of acetic acid by charcoal.
16. To determine the alkalinity of given water sample.
17. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

EXPERIMENTS THAT MAY BE PERFORMED THROUGH VIRTUAL LABS:

S. No.	Experiment Name	Experiment Link(s)
1.	Determination of surface tensionand viscosity.	http://pcv-au.vlabs.ac.in/physical-chemistry/Determination_of_Viscosity_of_Organic_Solvents/
2.	Ion exchange column for removalof hardness of water.	http://icv-au.vlabs.ac.in/inorganic-chemistry/Water_Analysis_Determination_of_Chemical_Parameters/
3.	Determination of chloride contentof water.	https://vlabs.iitb.ac.in/vlabs-dev/labs/nitk_labs/Environmental_Engineering_1/experiments/determination-of-chloride-nitk/simulation.html
4.	Colligative properties using freezing point depression.	http://pcv-au.vlabs.ac.in/physical-chemistry/Cryoscopy/

CHCY121T: CHEMISTRY II
3 Credits (3L: 0T: 0P)
(BTech- AIML)
Objective:
The objective of the Chemistry II is to acquaint the students with the basic phenomenon/concepts of chemistry, the student faces during course of their study in the industry and Engineering field. The student with the knowledge of the

basic chemistry will understand and explain scientifically the various chemistry related problems in the industry/engineering field. The student will able to understand the new developments and breakthroughs efficiently in engineering and technology. The introduction of the latest (R&D oriented) topics will make the engineering student upgraded with the new technologies.

Course Outcomes:
At the end of this course students will be able to:
CO1: Recall fundamental concepts of 10+2 level of physical, organic and inorganic chemistry.*(Remembering)*
CO2: To distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques. *(Understanding)*
CO3: To analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces. *(Analysing)*
CO4: To rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity bulk properties and processes using thermodynamic considerations. *(Applying)*
CO5: To list major chemical reactions that are used in the synthesis of molecules. *(Evaluating)*

Module I: Atomic and Molecular Structure
Schrodinger equation, Particle in a box solutions and their applications for conjugated molecules and nanoparticles, Forms of the hydrogen atom wave functions and the plots of these functions to explore their spatial variations, Molecular orbitals of diatomic molecules and plots of the multicentre orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomic, Pi-molecular orbitals of butadiene and benzene and aromaticity, Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures

Module II: Spectroscopic techniques and applications
Principles of spectroscopy and selection rules, Electronic spectroscopy, Fluorescence and its applications in medicine, Vibrational and rotational spectroscopy of diatomic molecules, Applications, Nuclear magnetic resonance and magnetic resonance imaging, surface characterization techniques, Diffraction and scattering

Module III: Intermolecular forces and potential energy surfaces
Ionic, dipolar and van Der Waals interactions, Equations of state of real gases and critical phenomena, Potential energy surfaces of H_3, H_2F and HCN and trajectories on these surfaces.

Module IV: Use of free energy in chemical equilibria (6 lectures)
Thermodynamic functions: energy, entropy and free energy, Estimations of entropy and free energies, Free energy and EMF. Cell potentials, the Nernst equation and applications, Acid base, oxidation reduction and solubility equilibria, Water chemistry, Corrosion, Use of free energy considerations in metallurgy through Ellingham diagrams.

Module V: Periodic properties
Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries.

Module VI: Stereochemistry
Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Isomerism in transitional metal compounds

Module VII: Organic reactions and synthesis of a drug molecule
Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings, Synthesis of a commonly used drug molecule.

Suggested Readings
9. AICTE's Prescribed Textbook: Chemistry – I with Lab Manual, Khanna Book Publishing.
10. Engineering Chemistry, by Manisha Agrawal.
11. University chemistry, by B. H. Mahan
12. Chemistry: Principles and Applications, by M. J. Sienko and R. A. Plane
13. Fundamentals of Molecular Spectroscopy, by C. N. Banwell
14. Engineering Chemistry (NPTEL Web-book), by B. L. Tembe, Kamaluddin and M. S. Krishnan
15. Physical Chemistry, by P. W. Atkins
16. Organic Chemistry: Structure and Function by K. P. C. Volhardt and N. E. Schore, 5th Edition
http://bcs.whfreeman.com/vollhardtschore5e/default.asp

CO 5	M	H				M	M

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

CSPS100T: PROGRAMMING FOR PROBLEM SOLVING
(3 credits-45 Hours)
(For BTech CSE, CVE, ECE, EEE, MNE)

Course Outcomes

1. Define and describe various terms and concepts of C programming language (Remembering)
2. Compare and interpret information based on their understanding of the concepts of C language syntax, data types, control statements, functions, pointers, arrays, structures, files, graphics and hardware programming using C. (Understanding)
3. Solve problems using standard algorithms and translate pseudo-codes into C programs and implement them. (Applying)
4. Analyze their skills for choosing the right data structure, function, data types and develop logic to solve various instancesof problems. (Analyze)
5. Combine the various concepts and ideas learnt in C to plan, propose and develop a product. (Creating)
6. Evaluate various algorithms used for searching, sorting etc., in terms of correctness and computation cost. (Evaluate)

Module I (8 Hours)
Introduction to Programming, Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.), and Idea of Algorithm: steps to solve logical and numerical problems. Types of Algorithm: Sequentially executed, Conditional Based, repetitive structure, Representation of Algorithm: Flowchart/Pseudo code with examples, from algorithms to programs; source code, variables (with data types) variables and memory, locations, Syntax and Logical Errors in compilation, object and executable code.

Module II (12 Hours)
Operators, precedence of operators, Arithmetic expressions, Conditional Branching and Loops, Writing and evaluation of conditionals and consequent branching, Iteration and loops.

Module III (5 Hours)
Arrays, Arrays (1-D, 2-D), Character arrays and Strings

Module IV (5 Hours)
Basic Algorithm Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required)

Module V (8 Hours)
Functions (including built in libraries), Parameter passing in functions, call by value, passing arrays to functions: idea of call by reference, Recursion.

Module VI (7 Hours)
Structures, Defining structures and Array of Structures, Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling.

Suggested Readings

1. Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill

2. E. Balaguruswamy, Programming in ANSI C, Tata McGraw-Hill
3. Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, Prentice Hall of India

CO5				H		
CO6	L			H		

CSPS101L: PROGRAMMING FOR PROBLEM SOLVING LAB

(2 credits)

(For BTech CSE, CVE, ECE, EEE, MNE)

Course Outcomes

1. Relate the programming logic (Remembering)
2. Illustrate the theoretical concepts learnt in C programming language. (Understanding)
3. Apply existing algorithms in writing programs using C language and also do graphics programming. (Applying)
4. Analyze their skills for choosing the right data structure, functions, data types and develop logic to write programs in C.(Analyzing)
5. Evaluate the sorting and searching algorithms through implementation in terms of correctness and computation cost.(Evaluating)
6. Combine the various concepts and ideas leant in C to plan, propose and develop a product. (Creating)

CO5	M	L		H		
CO6			H		H	M

CSPP102T: PROBLEM SOLVING AND PROGRAMMING

(3 credits-45 Hours)

(For BTech AIML)

Objective:

To develop logical skills and basic technical skills so that students should be able to solve basic computing problems. The students should be able to learn the basic of any computer programming language.

Course outcomes: After completion of course, students would be able to:

CO 1. Understand real world problems and developing computer solutions for those.
CO 2. Understand the basics of Python.
CO 3. Apply python for solving basic programming solutions.
CO 4. Create algorithms using learnt programming skills

Module I: Introduction to Programming

Evolution of languages: Machine languages, Assembly languages, High-level languages. Software requirements for programming: System softwares like operating system, compiler, linker, loader; Application programs like editor. Algorithm, specification of algorithm. Flowcharts.

Module II: Data Types and Operators, Variables, Sequences and Iteration

Different types of Data types, Expressions, Precedence Rules, Operators- Operators: arithmetic operators, relational operators, logical operations, bitwise operators, miscellaneous operators, Local Variables, Global Variables, List, String, Tuples, Sequence Mutations and Accumulation Patterns.

Module III: Conditional Statements, Loops, Arrays and Strings, User Defined Data Types
If-else statement, For loop, While Loop, Nested Iteration, Concept and use of arrays, declaration and usage of arrays, 2-dimensional arrays, different types of user defined data types

Module IV: Dictionaries and Dictionary Accumulation, Functions/Methods
Dictionary Basics, Operations, Methods, Accumulation, Advantage of modularizing program into functions, function definition and function invocation. Positional Parameter Passing, Passing arrays to functions, Recursion, Library functions.

Module V: File Handling and Memory Management
Concepts of files and basic file operations, Writing/ Reading Data to/from a .csv File, Memory Management Operations

Suggested Readings

1. Programming for Problem Solving, R.S. Salaria, Khanna Book Publishing Co., Delhi.
2. Taming Python by Programming, Jeeva Jose, Khanna Book Publishing Co., Delhi.
3. Learning Python, 5th Edition, by Mark Lutz, O'Reilly Media, Inc., ISBN: 9781449355739
4. Python Crash Course: A Hands-On, Project-Based Introduction to Programming by Eric Matthes, No Starch Press.
5. Programming in Python, R.S. Salaria, Khanna Book Publishing Co., Delhi.
6. https://www.coursera.org/learn/python-basics
7. https://www.coursera.org/specializations/python-3-programming

Alternative NPTEL/SWAYAM Course:

S. No.	Course Name	Instructor	Host Institute
1.	Introduction to Problem Solving andProgramming - Video course	Prof. D. Gupta	IIT Kanpur
2.	Problem solving Aspects and PythonProgramming	Dr.S.Malliga, Dr.R.Thangarajan, Dr.S.V.Kogilavani	Kongu Engineering College

CSPP103L: PROBLEM SOLVING AND PROGRAMMING LAB

(1 credit-15 Hours)
(For BTech AIML)

Laboratory/ Practicals:
1. Write a program that asks the user for their name and greets them with their name.
2. Write a program that asks the user for a number n and gives them the possibility to choosebetween computing the sum and computing the product of 1,…,n.
3. Write a function that checks whether an element occurs in a list.
4. Write three functions that compute the sum of the numbers in a list: using a for-loop, awhile-loop and recursion.
5. Given two strings, write a program that efficiently finds the longest common subsequence.

CSDT104T: DESIGN THINKING

(1 credit-15 Hours)
(For BTech AIML)

Objective:
The objective of this Course is to provide the new ways of creative thinking and Learn the innovation cycle of Design Thinking process for developing innovative products which usefulfor a student in preparing for an engineering career.

Course Outcomes: After completion of course, students would be able to:
CO 1. Compare and classify the various learning styles and memory techniques and Apply themin their engineering education
CO 2. Analyze emotional experience and Inspect emotional expressions to better understand users while designing innovative products
CO 3. Develop new ways of creative thinking and Learn the innovation cycle of Design Thinking process for developing innovative products
CO 4. Propose real-time innovative engineering product designs and Choose appropriate frameworks, strategies, techniques during prototype development
CO 5. Perceive individual differences and its impact on everyday decisions and further Create a better customer experience

Module I: An Insight to Learning

Understanding the Learning Process, Kolb's Learning Styles, Assessing and Interpreting

Module II: Remembering Memory
Understanding the Memory process, Problems in retention, Memory enhancement techniques

Module III: Emotions: Experience & Expression
Understanding Emotions: Experience & Expression, Assessing Empathy, Application with Peers

Module IV: Basics of Design Thinking
Definition of Design Thinking, Need for Design Thinking, Objective of Design Thinking, Concepts & Brainstorming, Stages of Design Thinking Process (explain with examples) **– Empathize, Define, Ideate, Prototype, Test**

Module V: Being Ingenious & Fixing Problem
Understanding Creative thinking process, Understanding Problem Solving, Testing Creative Problem Solving

Module VI: Process of Product Design
Process of Engineering Product Design, Design Thinking Approach, Stages of Product Design,Examples of best product designs and functions, Assignment – Engineering Product Design

Module VII: Prototyping & Testing
What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, **SampleExample**, Test Group Marketing

Module VIII: Celebrating the Difference
Understanding Individual differences & Uniqueness, Group Discussion and Activities to encouragethe understanding, acceptance and appreciation of Individual differences

Module IX: Design Thinking & Customer Centricity
Practical Examples of Customer Challenges, Use of Design Thinking to Enhance Customer Experience, Parameters of Product experience, Alignment of Customer Expectations with Product Design

Module X: Feedback, Re-Design & Re-Create
Feedback loop, Focus on User Experience, Address "ergonomic challenges, User focused design, rapid prototyping & testing, final product, Final Presentation – "Solving Practical Engineering Problem through Innovative Product Design & Creative Solution".

Suggested Readings

1. M. Morris Mano, Computer System & Architecture, Prentice Hall of India, 2002.
2. John L. Hennessy and David A Patterson, Computer Architecture-A quantitative approach,Morgan Kaufmann/ Elsevier, 4th Edition, 2007.
3. Hayes. J.P, Computer architecture and organization by McGraw-Hill Companies, 1998
4. Parallel Computer Architecture: A Hardware/Software Approach David Culler and J.P.Singh with Anoop Gupta, Morgan Kaufmann, 1998.
5. https://onlinecourses.nptel.ac.in/noc20_cs41/preview
6. https://www.coursera.org/learn/introduction-high-performance-computing#syllabus

Alternative NPTEL/SWAYAM Course (if any)

S. No.	Course Name	Instructor	Host Institute
1.	Computer Architecture	Prof. Smruti Ranjan Sarangi	IIT Delhi
2.	Advanced Computer Architecture	Prof.John Jose	IIT Guwahati

CSOP105T: OBJECT ORIENTED PROGRAMMING

(3 credits-45 Hours)
(For BTech AIML)

Objective:
The students should be able to understand the concept of object-oriented programming like classes,constructors, Polymorphism, inheritance, and file handling and open source libraries.

Course Outcomes: After completion of course, students would be able to:
CO 1. Understand the basic concepts of OOPs.
CO 2. Apply different Python library to solve programming problems.

CO 3. Understand the advanced concepts of python and apply for accessing databases and web data.
CO 4. Understand APIs and third-party libraries to be used with Python.

Module I: Introduction to Object Oriented Programming Paradigms
Introduction to various programming paradigms, advantages of OOP, comparison of OOP with Procedural Paradigm, Classes and Objects: Prototyping, Referencing the variables in functions, Inline, static and friend functions. Memory allocation for classes and objects. Arrays of objects, Constructors

Module II: Polymorphism & Inheritance
Overriding Methods, type conversions from basic data types to user defined and vice versa, Base classes and Derived classes, types of inheritance, various types of classes, Invocation of Constructors and Destructors in Inheritance, aggregation, composition, classification hierarchies, metaclass/abstract classes, Unit Testing and Exceptions.

Module III: Python libraries:
Basics of open-source libraries for data prepressing, modelling and visualization.

Module IV: Using Python to Access Web Data
Regular Expressions, Extracting Data, Sockets, Using the Developer Console to Explore HTTP, Retrieving Web Page, Parsing Web Pages

Module V: Using Databases with Python
Using Databases, Single Table CRUD, Designing and Representing a Data Model, Inserting Relational Data, Reconstructing Data with JOIN, Many to Many Relationships.

Suggested Readings
1. How to Think Like a Computer Scientist: Learning with Python, by Allen Downey, JeffElkner and Chris Meyers, SoHo Books, 2009.
2. Mastering Object-Oriented Programming, R.S. Salaria, Khanna Book Publishing Co., Delhi
3. Introduction to Computing & Problem Solving with Python, Jeeva Jose, Khanna BookPublishing, 2019.
4. https://www.coursera.org/specializations/python-3-programming#courses
5. Head First Python by Paul Barry, O'Reilly, 2010.

Alternative NPTEL/SWAYAM Course (if any):

S. No.	Course Name	Instructor	Host Institute
1.	Python For Data Science	Prof. RaghunathanRengasamy	IIT Madras
2.	The Joy of Computing Using Python	Prof. Sudarshan Prof.Yayati Gupta Iyengar	IIT Ropar, IIITDharwad

CSOP109L: OBJECT ORIENTED PROGRAMMING LAB
(1 credit-15 Hours)
(For BTech AIML)

Laboratory/ Practicals:
1. Write a NumPy program to compute the cross product of two given vectors
2. Write a NumPy program to calculate the QR decomposition of a given matrix
3. Write a Pandas program to convert a Panda Module Series to Python list and it's type.
4. Write a Pandas program to convert a NumPy array to a Pandas series
5. Create a Python project to get the citation from Google scholar using title and year ofpublication, and volume and pages of journal.
6. Create a Python project to get total Covid-19 cases, total deaths due to Covid-19, totalCovid-19 patients recovered in the world.

CSDS106T: DATA STRUCTURES
(3 credits-45 Hours)
(For BTech AIML)

Objective:
The students should be able to describe and implement various data structures including lists, arrays, stacks, queues, binary search trees, graphs, hash tables, and matrices. The student will be able to analyze and apply various algorithms for shortest path calculation, sorting and searching applications.

Course Outcomes: After completion of course, students would be able to:
CO 1. Understand the different types of data structure to be implemented using any programming language.

CO 2. Choose the data structures that effectively model the information in a problem and
CO 3. Analyzes the efficiency trade-offs (run time and memory usage) among alternative data structure implementations or combinations.
CO 4. Design, implement, test, and debug programs using a variety of data structures including stacks, queues, hash tables, binary and general tree structures, search trees, and graphs.
CO 5. Apply efficient data structure (linked lists, stacks and queues) to solve a particular problem.

Module I: Introduction and Elementary Data Structures

Introduction: Introduction to Data Structures and data types, Efficient use of memory, Recursion, time and space complexity of algorithms, Big O Notation and theta notations.

Elementary Data Structures: Stacks, queues, Infix, Postfix & Prefix conversions, evaluations of expressions, multiple, stacks and queues, priority queues as heaps, double ended queue, implementation of stacks and queues

Module II: Linked Lists

Singly linked lists, linked stacks and queues, polynomial addition, sparse matrices, doubly linked lists and dynamic storage management, circular linked list, Applications of Stacks, Queues and Linked lists, Garbage collection, Josephus Problem

Module III: Trees

Basic terminology, binary trees, binary tree traversal, representations of binary tree, application of trees, decision tree, game trees, Threaded Trees, Binary Search Tree, AVL tree, B-tree

Module IV: Graph Theory

Graph representations, Graph Traversals, Dijkstra's algorithm for shortest path, Prim's and Kruskal's Algorithm for Minimal Spanning tree

Module V: Sorting and Searching

Searching: Linear search, binary search and hash search. Sorting: Insertion sort, selection sort, bubble sort, quick sort, merge sort, heap sort, and Bucket sort

Suggested Readings

1. Data Structures, R.S. Salaria, Khanna Book Publishing, 2019.
2. Data Structures and Program Design in C By Robert L. Kruse,C.L. Tondo, Bruce Leung,Pearson Education, 2007.
3. Expert Data Structures with C/ 3rd Edition, R.B. Patel, Khanna Book Publishing, 2020.
4. Expert Data Structures with C++/ 2nd Edition, R.B. Patel, Khanna Book Publishing, 2020.
5. Data Structures Using C & C++, By Langsam, Augenstein, Tanenbaum, Pearson Education,1989.
6. Fundamentals of Data Structures, By Ellis Horowitz and Sartaj Sahni, Computer SciencePress, 2011.
7. An introduction to data structures with applications, By J.P. Trembley & P.G. Sorensen,TMH, 2004.

Alternative NPTEL/SWAYAM Course (if any)

S. No.	Course Name	Instructor	Host Institute
1.	Data Structures and Algorithms -Video course	Prof. Naveen Garg	IIT Delhi
2.	Data Structures	Dr.S.Sasikala	University of Madras

CSDS110L: DATA STRUCTURES LAB

(1 credit-30 Hours)

(For BTech AIML)

Laboratory/ Practicals:

1. Implement infix to postfix conversion using Stack
2. Write a program for swaping nodes in a linked list without swapping data.
3. Write a program to reverse a Linked List in groups of given size.
4. Write a program for finding the first circular tour that visits all petrol pumps.
5. Implement Inorder tree traversal without recursion.
6. Write a program to Check whether a given graph is Bipartite or not.

CSDM107T: DISCRETE MATHEMATICAL STRUCTURES

(4 credits-60 Hours)

(For BTech AIML)

Objective:

Students should be able to understand Discrete Mathematical Structures (DMS) for the development of theoretical computer science, problem solving in programming language using Discrete Structure and importance of discrete structures towards simulation of a problem in computer science and engineering.

Course Outcomes: After completion of course, students would be able to:

CO 1. Understand the basics of various discrete structures.

CO 2. Apply applications of discrete structures in Computer Science and Engineering.

Module I: Mathematical Reasoning

Mathematical reasoning, Propositions, Negation, disjunction and conjunction, Implication and Equivalence, Truth tables, Predicates, Quantifiers, Natural deduction, Rules of Inference, Methods of proofs, Resolution principle, Application to PROLOG.

Module II: Set Theory

Paradoxes in set theory, Inductive definition of sets and proof by induction, Peano postulates, Relations, Properties of relations, Equivalence Relations and partitions, Partial orderings, Posets, Linear and well-ordered sets.

Module III: Combinatorics and Functions

Elementary Combinatorics, counting techniques, Recurrence relation, Generating functions, Functions; mappings, Injection and Surjections, Composition of functions, Inverse functions, Special functions, Pigeonhole principle, Recursive function theory.

Module IV: Graph Theory

Elements of graph theory, Euler graph, Hamiltonian path, trees, Tree traversals, Spanning trees, Representation of relations by graphs.

Module V: Groups, Rings, Fields, Discrete Probability

Definition and elementary properties of groups, Semigroups, Monoids, Rings, Fields, Vector spaces and lattices, Introduction, Discrete random variables, Applications to Binary Search Tree.

Suggested Readings

1. K. H. Rosen, Discrete Mathematics and applications, 6th Edition, Tata McGraw Hill 2007.
2. S.B. Singh, Discrete Structures/ 3rd Edition, Khanna Book Publishing, 2019.
3. S.B. Singh, Combinatorics and Graph Theory/ 3rd Edition, Khanna Book Publishing, 2018.
4. C. L. Liu, Elements of Discrete Mathematics, 2nd Edn., Tata McGraw-Hill 2000.
5. J .L. Mott, A. Kandel, T.P .Baker, Discrete Mathematics for Computer Scientists andMathematicians, Second edition, Prentice Hall of India 1986.
6. W. K. Grassmann and J. P. Trembnlay, Logic and Discrete Mathematics, A ComputerScience Perspective, Prentice Hall Inc 1996

Alternative NPTEL/SWAYAM Course (if any):

S. No.	Course Name	Instructor	Host Institute
1.	Discrete Mathematical Structures -Video course	Prof. Kamala Krithivasan	IIT Madras
2.	Discrete Mathematics	Prof.Sudarshan Iyengar, Prof. Neeldhara	IIT Roopar,IIT Gandhinagar

CSMC108T: MODERN COMPUTER ARCHITECTURE

(3 credits-45 Hours)

(For BTech AIML)

Objective:

Students should be able to understand basic principles of Computer Systems. They should be able to understand various logic design techniques and their applications. They should be capable of using high performance computing architecture.

Course Outcomes: After completion of course, students would be able to:

CO 1. Understand the organization of the Control unit, Arithmetic and Logical unit, Memory unit andthe I/O unit.

CO 2. Analyse different computer architectures and their applications.

CO 3. Understand modern design structures of Pipelined and Multiprocessors systems.

CO 4. Understand distributed computing architecture and high-performance computing.

Module I: Basics

Designing combinational and sequential logic, computers registers and instructions, timing, and control, instructions cycle, memory reference instruction, I/O interruption, Adder and Subtractor circuits, Booth Multiplication Algorithm, Pipelining Review, control hazards and the motivation forcaches, cache characteristics and basic superscalar architecture basics,

Module II: Multi-core Architecture
Memory technologies, hierarchical memory systems, the locality principle and caching, direct- mapped caches, block size, cache conflicts, associative caches, write strategies, advanced optimisations, performance improvement techniques, DRAM – organisation, access techniques, scheduling algorithms and signal systems. Tiled Chip Multicore Processors (TCMP), Network on Chips (NoC), NoC router – architecture, design, routing algorithms and flow control techniques, Advanced topics in NoC and storage – compression, prefetching, QoS.

Module III: Distributed Computing Systems and Concurrency
Relation to Parallel Multiprocessors/multicomputer Systems, Distributed and Concurrent Programs, Message Passing vs. Shared Memory Systems, Synchronous vs. Asynchronous Executions, Design Issues and Challenges, Distributed Computing Technologies, Clocks and Synchronization, Coordination and Agreement Algorithms, Global State and Distributed Transactions.

Module IV: High Performance Computing (HPC)
HPC Architecture, Parallel Processing, Parallel Memory Models, Data vs. Task Parallelism, High Throughput Computing, Vectorization, Multithreading.

Module V: High Performance Computing with CUDA
CUDA programming model, Basic principles of CUDA programming, Concepts of threads and blocks, GPU and CPU data exchange

Suggested Readings

1. M. Morris Mano, Computer System & Architecture, Prentice Hall of India, 2002.
2. John L. Hennessy and David A Patterson, Computer Architecture-A quantitative approach,Morgan Kaufmann/ Elsevier, 4th Edition, 2007.

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

EEEL100T: BASIC ELECTRICAL ENGINEERING
(3 Credits – 45 hours) (L-T-P: 2-1-0)
(For BTech CVE and MNE)
Objectives:
• To understand and Analyse basic electric and magnetic circuits.
• To study the working principles of electrical machines and power converters.
• To introduce the components of low voltage electrical installations.

COURSE OUTCOMES
1. Define basic terminologies related to electrical circuits and machines. (Remembering)
2. Explain the working principle, construction, applications of dc machines and ac machines. (Understanding)
3. Explain basics of converters, domestic wiring and Electrical Installations. (Understanding)
4. Implement network theorems to simplify and solve a complex circuit. (Applying)

Module 1: DC Circuits (10 lectures)
Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

Module 2: AC Circuits (15 lectures)
Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, R-L, R-C, R-L-C combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

Module 3: Electrical Machines (10 lectures)
DC Machines: Principle of operation of generators and motors, construction of DC machine, EMF and Torque Equations, Classification and applications of DC machines.
Transformer: Construction and principle of operation of a single-phase transformer, EMF equation, introduction of auto-transformer.
Induction Motor: Classification and applications, Construction and principle of operation of single phase and three-phase induction motor

Module 4: Power Converters (5 lectures)
DC-DC buck and boost converters, duty ratio control. Single-phase and three-phase voltage source inverters; sinusoidal modulation.

Module 5: Electrical Installations (5 lectures)
Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

Suggested Readings
1. J.B. Gupta, "Basic Electrical Engineering", S.K kataria and Sons.
2. P.V. Prasad,S.Sivanagaraju,K.R. Varmah, Chikku Abraham, "Basic Electrical Engineering, Cengage Learning India.

EEEL102T: BASIC ELECTRICAL ENGINEERING
(4 Credits – 60 hours) (L-T-P: 3-1-0)
(For BTech CSE, EEE and ECE)
Objectives:
- To understand and Analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines and power converters.
- To introduce the components of low voltage electrical installations.

Course Outcomes
2. Define basic terminologies related to electrical circuits and machines. (Remembering)
3. Explain the working principle, construction, applications of dc machines and ac machines. (Understanding)
4. Explain basics of converters, domestic wiring and Electrical Installations. (Understanding)
5. Implement network theorems to simplify and solve a complex circuit. (Applying)
6. Interrogate basic DC as well as AC circuits. (Analyzing)

Module I (18 lectures)
Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

Module II (16 lectures)
Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, R-L, R-C, R-L-C combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

Module III (14 lectures)
DC Machines: Principle of operation of generators and motors, construction of DC machine, EMF and Torque Equations, Classification and applications of DC machines.
Transformer: Construction and principle of operation of a single-phase transformer, EMF equation, introduction of auto-transformer.
Induction Motor: Classification and applications, Construction and principle of operation of single phase and three-phase induction motor

Module IV (6 lectures)
DC-DC buck and boost converters, duty ratio control. Single-phase and three-phase voltage source inverters; sinusoidal modulation

Module V (6 lectures)
Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

Suggested Readings
1. J.B. Gupta, "Basic Electrical Engineering", S.K Kataria and Sons.
2. P.V. Prasad, S. Sivanagaraju, K.R. Varmah, Chikku Abraham, "Basic Electrical Engineering, Cengage Learning India.

EEEL101L: BASIC ELECTRICAL ENGINEERING LABORATORY
(1 Credit- 30 hours) (L-T-P: 0-0-2)
Course Outcomes
1. Find different parameters related to basic electrical circuits. (Remembering)
2. Explain the procedure for performing experiments related to DC and AC circuits. (Understanding)
3. Identify various rotating AC and DC machines. (Applying)
4. Compare the theoretical prediction with experimental results. (Analyzing)
5. Check errors and correction of meters by calibration (Evaluating)
6. Construct a circuit to perform a particular experiment. (Creating)

List of experiments:
1. Calibration of a Voltmeter.
2. Calibration of an Ammeter.
3. Calibration of milliammeter as a voltmeter.
4. Calibration of a millivoltmeter as an ammeter.
5. Verification of Thevenin's theorem.
6. Resonance in series RLC circuit
7. Reversal of direction of rotation of 3-phase induction motor by changing phase sequence.
8. Different types of Connections of the transformer.
9. Demonstration of DC and AC machines.
10. Demonstration of LT switchgear.

DEPARTMENT OF CIVIL ENGINEERING

CVGD100T: ENGINEERING GRAPHICS AND DESIGN
3 Credits- 1 L: 0 T: 4P
OBJECTIVE: *The objective of this course is to teach the basics of engineering drawing and drafting to students by free hand sketching as well as computer aided design.*

COURSE/LEARNING OUTCOMES

After completing the course students will be able to:

CO1: Learn to draw letters, scales and curves (Understanding)

CO2: Learn to draw projection of points, lines, scales and solids(Understanding)

CO3: Learn to draw isometric projection of solids(Applying)

CO4: Learn the functionalities and application of AutoCAD software(Understanding)

Module I: (10 hours)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales, Conic sections including the Rectangular Hyperbola (General method only), Cycloid, Epicycloid, Hypocycloid and Involute.

Module II:(15 hours)

Principles of Orthographic Projections-Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes, Projections of Regular Solids: Solids inclined to both the Planes- Auxiliary Views, simple annotation, dimensioning and scale, Sections and Sectional Views of Right Angular Solids: Prism, Cylinder, Pyramid, Cone – Auxiliary Views, development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone, sectional orthographic views of geometrical solids.

Module III: (5 hours)

Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions, Isometric Views of lines, Planes, Simple and compound Solids, Conversion of Isometric Views to Orthographic Views and Vice-versa.

Module IV: (15 hours)

Demonstrating knowledge of the theory of CAD software such as the Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.; Isometric Views of lines, Planes, Simple and compound Solids, set up of the drawing page and the printer, including scale settings, setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically, producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles, Annotations, layering and other functions to create drawings, create, edit and use customized layers; changing line lengths through modifying existing lines (extend/lengthen); Printing documents to paper using the print command; orthographic projection techniques.

Suggested-Readings

DEPARTMENT OF MECHANICAL ENGINEERING

MNWM100L: WORKSHOP/MANUFACTURING PRACTICES

0L:0T:4P 2 Credits

Objectives:

1. To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.
2. To have a study and hands-on-exercise on plumbing and carpentry components.
3. To have a practice on gas welding, foundry operations and fitting
4. To have a study on measurement of electrical quantities, energy and resistance to earth.
5. To have a practice on soldering.

Laboratory Outcomes:
On completion of this laboratory course, students will be able:
CO 1. To fabricate components with their own hands.
CO 2. To relate practical knowledge of the dimensional accuracies and dimensional tolerances possiblewith different manufacturing processes.
CO 3. To design small devices of their interest by assembling different components.

Module I: Manufacturing Methods- casting, forming, machining, joining, advancedmanufacturing methods.
Module II: CNC machining, Additive manufacturing.
Module III: Fitting operations & power tools.
Module IV: Electrical & Electronics.
Module V: Carpentry.
Module VI: Plastic moulding, glass cutting.
Module VII: Metal casting.
Module VIII: Welding (arc welding & gas welding), brazing.

Practicals:
1. Machine shop
2. Fitting shop
3. Carpentry
4. Electrical & Electronics
5. Welding shop (Arc welding + Gas welding)
6. Casting
7. Smithy
8. Plastic moulding & Glass Cutting

Examinations could involve the actual fabrication of simple components, utilizing one or moreof the techniques covered above.

Suggested Readings
1. AICTE's Prescribed Textbook: Workshop / Manufacturing Practices (with Lab Manual) ISBN: 978-93-91505-332
2. Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers private limited, Mumbai**.**
3. Kalpakjian S. And Steven S. Schmid, "Manufacturing Engineering and Technology", 4th edition, Pearson Education India Edition, 2002.
4. Gowri P. Hariharan and A. Suresh Babu," Manufacturing Technology – I" Pearson Education, 2008.
5. Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.

MNDI101L: DESIGN THINKING & IDEA LABORATORY
2 Credits (L-T-P:1-0-2)

Course Objective:
The objective of this Course is to provide the new ways of creative thinking and learn the innovation cycle of Design Thinking process for developing innovative products which useful for a student in preparing for an engineering career.

Course Outcomes (CO):
Students will able to
1. Compare and classify the various learning styles and memory techniques and Apply them in their engineering education
2. Analyze emotional experience and Inspect emotional expressions to better understand users while designing innovative products
3. Develop new ways of creative thinking and Learn the innovation cycle of Design Thinking
process for developing innovative products
4. Propose real-time innovative engineering product designs and Choose appropriate frameworks, strategies, techniques during prototype development
5. Perceive individual differences and its impact on everyday decisions and further create a better customer experience

Module 1: An Insight to Learning
Understanding the Learning Process, Kolb's Learning Styles, Assessing and Interpreting

Module 2: Remembering Memory
Understanding the Memory process, Problems in retention, Memory enhancement techniques

Module 3: Emotions: Experience & Expression
Understanding Emotions: Experience & Expression, Assessing Empathy, Application with Peers

Module 4: Basics of Design Thinking
Definition of Design Thinking, Need for Design Thinking, Objective of Design Thinking, Concepts & Brainstorming, Stages of Design Thinking Process (explain with examples) – Empathize, Define, Ideate, Prototype, Test

Module 5: Being Ingenious & Fixing Problem
Understanding Creative thinking process, Understanding Problem Solving, Testing Creative Problem Solving

Module 6: Process of Product Design
Process of Engineering Product Design, Design Thinking Approach, Stages of Product Design,
Examples of best product designs and functions, Assignment – Engineering Product Design

Module 7: Prototyping & Testing
What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, Sample
Example, Test Group Marketing

Module 8: Celebrating the Difference
Understanding Individual differences & Uniqueness, Group Discussion and Activities to encourage the understanding, acceptance and appreciation of Individual differences

Module 9: Design Thinking & Customer Centricity
Practical Examples of Customer Challenges, Use of Design Thinking to Enhance Customer
Experience, Parameters of Product experience, Alignment of Customer Expectations with Product Design

Module 10: Feedback, Re-Design & Re-Create
Feedback loop, Focus on User Experience, Address "ergonomic challenges, User focused design,
rapid prototyping & testing, final product, Final Presentation – "Solving Practical Engineering

IDEA LAB WORKSHOP

Objectives:
1. To learn the skills associated with the tools and inventory associated with the IDEA Lab.
2. Learn useful mechanical and electronic fabrication processes.
3. Learn necessary skills to create print and electronic documentation for the system/project

Course Contents
1. 3D printing and prototyping technology
2. 3D scanning, point cloud data generation for reverse engineering.
3. User Experience (UX) Design: Design Sprints, Create wireframes using Figma, Create mock-ups in Figma.
4. Electronic component familiarization, Understanding electronic system design flow. Schematic design and PCB layout.
5. Familiarization and use of basic measurement instruments (CRO, FG, Spectrum Analyser)
6. DMM, Signal and Function Generator, Power Supply, Solar Panel, Battery Types and charging.

Suggested Readings

1. E Balaguruswamy (2022), Developing Thinking Skills (The way to Success), Khanna Book Publishing Company
2. AICTE's Prescribed Textbook: Workshop / Manufacturing Practices (with Lab Manual),Veerana D.K., Khanna Book Publishing, 2023.
3. All-in-One Electronics Simplified, A.K. Maini; 2021. ISBN-13: 978-9386173393, Khanna Book Publishing Company, New Delhi.
4. Simplified Q&A - Data Science with Artificial Intelligence, Machine Learning and Deep
5. Learning, Rajiv Chopra, ISBN: 978-9355380821, Khanna Book Publishing Company, New Delhi.
6. 3D Printing & Design, Dr. Sabrie Soloman, ISBN: 978-9386173768, Khanna Book Publishing Company, New Delhi.
7. The Big Book of Maker Skills: Tools & Techniques for Building Great Tech Projects. Chris Hackett. Weldon Owen; 2018. ISBN-13: 978-1681884325.
8. The Total Inventors Manual (Popular Science): Transform Your Idea into a Top-Selling Product. Sean Michael Ragan (Author). Weldon Owen; 2017. ISBN-13: 978-1681881584.
9. Make: Tools: How They Work and How to Use Them. Platt, Charles. Shroff/Maker Media. 2018. ISBN-13: 978-9352137374

BTUH0001: UNIVERSAL HUMAN VALUES I: STUDENT INDUCTION PROGRAM
(P/NP)

The following list presents the topics covered in the Mandatory Student Induction Program conducted in the Assam Don Bosco University School of Technology:

1. Physical activity – Yoga and sports activity (indoor and outdoor)
2. Creative arts through Extra-curricular clubs e.g., music & singing, dance, drama, debating & quiz, art & craft, photography
3. Universal Human Values – group discussions on the following topics:
    a) Aspirations and family expectations
    b) Gratitude
    c) Competition and cooperation
    d) Competition and excellence
    e) Peer pressure
    f) Self-confidence
    g) Relationships in family
    h) Trust and respect
    i) Anger management
    j) Happiness and prosperity
    k) Dealing language barriers – tests on communication skill for future follow up.
    l) Sexual orientation / courting / sexual harassment
4. Literary exposure through Literary Club
5. Proficiency Modules – Psychological tests and orientation, introduction to Co-curricular clubs and innovations.
6. Lectures by eminent people – in-campus invited Guests and over SKYPE
7. Visit to local areas – visit to industry and institutions of repute
8. Familiarization to departments and common facilities
9. Mentoring system – introduction and assignment of mentors
10. Selection / election of Class Representatives for college association
11. Health check-up for all with documentation for future reference
12. Library Orientation, Introduction to ERP and e-Resources, filling up "Online anti-ragging affidavit" by all.

BTUH0002: UNIVERSAL HUMAN VALUES II: UNDERSTANDING HARMONY
(3 Credits – 45 hours)

Objective*: The objective of the course is four fold:*

1. Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
2. Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence
3. Strengthening of self-reflection.
4. Development of commitment and courage to act.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO1: recognize the nature of themselves, and their surroundings (family, society, nature); (understanding)
CO2: identify their responsibility in life, and handle problems with sustainable solutions, while keeping human relationships and human nature in mind. (understanding)
CO3: demonstrate their critical ability and also become sensitive to their commitment towards what they have

understood (human values, human relationship and human society). (applying)

CO4: execute what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction. (applying)

Module I: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education (9 hours)

1. Purpose and motivation for the course, recapitulation from Universal Human Values-I
2. Self-Exploration–what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration
3. Continuous Happiness and Prosperity- A look at basic Human Aspirations
4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority
5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario
6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.
7. Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking

Module II: Understanding Harmony in the Human Being - Harmony in Myself! (8 hours)

1. Understanding human being as a co-existence of the sentient 'I' and the material 'Body'
2. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility
3. Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer)
4. Understanding the characteristics and activities of 'I' and harmony in 'I'
5. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail
6. Programs to ensure Sanyam and Health.
7. Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease

Module III: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship (9 hours)

1. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship
2. Understanding the meaning of Trust; Difference between intention and competence
3. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship
4. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals
5. Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.
6. Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives

Module IV: Understanding Harmony in the Nature and Existence - Whole existence as Coexistence (9 hours)

1. Understanding the harmony in the Nature
2. Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature
3. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space
4. Holistic perception of harmony at all levels of existence.
5. Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

Module V: Implications of the above Holistic Understanding of Harmony on Professional Ethics (10 hours)

1. Natural acceptance of human values
2. Definitiveness of Ethical Human Conduct
3. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order
4. Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems.
5. Case studies of typical holistic technologies, management models and production systems
6. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations
7. Sum up.

Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions eg. Discuss the conduct as an engineer or scientist etc.

Suggested Readings

COMMUNITY ENGAGEMENT COURSES
(SERVICE LEARNING)
THEORY

PROGRAMME: BACHELOR OF COMPUTER APPLICATIONS (BCA) HONOURS/HONOURS WITH RESEARCH

CACE109T: SERVICE LEARNING
(Credit: 2 Hours: 30)

PROGRAMME: BACHELOR OF COMMERCE (BCOM) HONOURS/HONOURS WITH RESEARCH

CMCE111T: SERVICE LEARNING
(Credit: 2 Hours: 30)

PROGRAMME: BACHELOR OF BUSINESS ADMINISTRATION (BBA) HONOURS/HONOURS WITH RESEARCH

MTCE110T: SERVICE LEARNING
(Credit: 2 Hours: 30) (L-T-P: 2-0-0)

Objective*: Service Learning will aim to support the development of basic skills among the students namely, critical and creative thinking, reflection, communication, collaboration, information literacy, and social skills. The emphasis will be on active civic participation. As the students will actively involved in a wide range of experiences, which will benefit both the community at large and the students in particular and in the process the goals of the curriculum shall be achieved*

COURSE/ LEARNING OUTCOMES
After learning this course, the students will be able to:
CO1: define and explain the Service-Learning framework (Remembering)
CO2: explain the nature and types of community engagement work (Understanding)
CO3: identify the need and importance of social responsibility (Applying)

Module I: Concept of Service Learning (8 Hours)
Service Learning – meaning, concept, definition; value based framework of Service Learning; Understanding the core standards of Service Learning such as respect, reciprocity, relevance, and reflection; Elements of Service Learning; Understanding Service Learning – Its philosophy, historical background, purpose, value and theoretical framework; Locating Service Learning within the University context; Principles of Service Learning

Module II: Community Engagement and Community Partnerships (8 Hours)
Community Engagement – concept, meaning, definition and principles; benefits of community engagement, models of community engagement; Civic Engagement, University Community Engagement, Community partnerships – meaning, benefits, Reflection – meaning, definition and implications; Critical inquiry - meaning, definition and implications; Engaged Research - meaning, definition and implications

Module III: Social Responsibility and Communication Basics (8 Hours)
Social Responsibility – meaning, benefits, Socio-economic context – meaning, definition, Social issues – meaning, Understanding of society & social issues; Conflict – meaning, types, Understanding various conflict resolution strategies; Community level partnerships – meaning, significance, types; Social Justice – meaning and implications; Communication – meaning, types, channels of communication, models of communication

Module IV: Identifying the Partners in the Community (6 Hours)
Partners in the community – meaning, types and functions of Community Partners namely, Corporate, Government and PSU Organizations, Panchayats, Community settings, Clinical settings, NGO's, Anganwadi Centres, Self Help Groups, Schools, Business Firms, Community Markets, Weekly Haats

Suggested Readings

MTCE110T: Community Engagement Practice: SERVICE LEARNING PROJECT
(Credits 2-60 hours) (L-T-P: 0-0-2)
***Objective(s)**: Service Learning will aim to support the development of basic skills among the students namely, critical and creative thinking, reflection, communication, collaboration, information literacy, and social skills. The emphasis will be on active civic participation. As the students will actively involved in a wide range of experiences, which will benefit both the community at large and the students in particular and in the process the goals of the curriculum shall be achieved*

COURSE/LEARNING OUTCOMES
CO1: define the different types of research project. (Remembering)
CO2: explain the various steps of designing research project (Understanding)
CO3: construct the questionnaire and schedules (Applying)
CO4: analyse the data for analysis (Analyzing)
CO5: classify the findings in the report (Evaluating)

Instruction and Guidelines for Students
The students should follow the following instruction and guidelines:
a. The field work should be for a minimum duration of 30 hours which can be extended depending upon the convenience and requirement of the student and the organisation respectively.
b. The students have to undergo the field work during the semester break after 2nd semester or after the semester break after 3rd semester.
c. After the completion of the field work, the students must submit the Report.
d. The assessment will done as follows:
There would be a Presentation (PPT) and Viva-Voce Examination towards the end of the 3rd Semester & 4th semester based on which the students would be evaluated.

Structure of Report
The Service Learning Field Work Report must be in spiral bind and should comprise of the following:
a. Recommendation Letter from the Department.
b. Certificate of Authentication from a competent authority like Village Headman, GP member or any renowned person from the community where the student has worked.
c. Internship Diary as per the prescribed format.
d. The Contents of the Report must include:
i. Introduction.
ii. Need of the study
iii. Objectives of the study
iv. Significance of the study
v. Methodology undertaken for the study
vi. Description of the work done
vii. Learning Outcomes.
viii. Feedback from the target audience / community members
ix. Geo tagged photographs

The Assessment for the internship will have the following components:
a Report: 40 marks
b Seminar Presentation: 30 marks
c Viva-Voce Examination: 30 marks

PROGRAMME: BACHELOR OF SCIENCE CHEMISTRY (BSC) HONOURS/HONOURS WITH RESEARCH

CHCE117T: ELEMENTS OF SERVICE LEARNING IN CHEMISTRY

(Credit: 2 Hours: 30)

COURSE OUTCOMES

CO1: Understanding social responsibility of higher educational institutes. (Understanding)
CO2: Identifying problems in the community and where students originated. (Applying)
CO3: Influence to get involved in the local community to gain insight into local issues. (Evaluating)
CO4: Adopt strong leadership skills which allow students to work well in a team. (Creating)

Module I (10 lectures)

Principles of Service learning; classification of service-learning models; difference between service Learning and other community experiences; historical context of University Community Partnership; service learning for an undergraduate chemistry student.

Module II (5 lectures)

Social responsibility of educational institutes; meaning of community university engagement (CUE), engaged teaching, and engaged research.

Module III (15 lectures)

Conceptualisation of the idea of service learning through practical implementations such as (any two) (i) organizing awareness programmes on scientific temper for nearby communities, (ii) participating in demonstrations of scientific experiments for school children to remove the fear of pursuing higher studies in science, (iii) imparting knowledge and guidance to school students for proper understanding of various topics of their chemistry curriculum.

Suggested Readings

1. Service-Learning Essentials: Questions, Answers, and Lessons Learned, B. Jacoby, Jossey-bass.

PROGRAMME: BACHELOR OF SCIENCE MATHEMATICS (BSC) HONOURS/HONOURS WITH RESEARCH

MACE110T: COMMUNITY ENGAGEMENT AND SERVICE LEARNING

(Credit: 2 Hours: 30)

COURSE OUTCOMES

1 Develop understanding on Community University Engagement. (Remembering)
2 Acquire knowledge of the measures taken by HEIs towards community engagement. (Understanding)
3 Analyse a problem pertaining to the community by applying methods of participatory research. (Analysing)
4 Apply various tools of CPBR to address real life issues of the communities. (Applying)
5 Decide a suitable tool to connect with a certain community by identifying the major barriers. (Evaluating)

Module I: (Service Learning and Community University Engagement) (10 lectures)

Definition of Service Learning (SL), goals and objectives of SL. Meaning of community university engagement (CUE), Historical overview of Higher Educational Institutes (HEIs) in India, role played by various commissions in CUE, various policies adopted by University Grants Commission (UGC), objectives and structure of schemes adopted by UGC, measures taken by HEIs towards community engagement.

Module II: (Role of HEI fostering social responsibility) (10 lectures)

Understanding social responsibility of higher education institutes, forms of community engagement, notion of engaged teaching, engaged research, engaged service, meaning of an active citizen. Meaning of Community Based Participatory Research (CBPR), methods and tools associated with CBPR. Skills to utilize CPBR fostering social responsibility especially post emergency like pandemic etc.

Module III: Assignments (10 lectures)

a. Visiting nearby villages to collect data on the percentage of students enrolling into schools per year and represent

thesame using various Mathematical models.

b. To conduct fact finding visits in local areas to address a particular problem by helping the community understandingthe situation employing tools like maps and meetings.

Suggested Readings

Where's the learning in service learning, J. Eyler, D.E. Giles Jr.

PROGRAMME: BACHELOR OF SCIENCE PHYSICS (BSC) HONOURS/HONOURS WITH RESEARCH

PSCE108T: ELEMENTS OF SERVICE LEARNING IN PHYSICS

(Credit: 2 Hours: 30)

COURSE OUTCOMES

1. Explain the meaning of service learning and active learning. (Understanding)
2. Illustrate engaged teaching and engaged research. (Understanding)
3. Organise service learning. (Applying)

Module I: (6 lectures)

Understanding social responsibility of educational institutes; meaning of community university engagement (CUE), engaged teaching, engaged research.

Module II: (9 lectures)

Active learning. Service learning; principles of service learning; classification of service learning models; difference between service Learning and other community experiences; historical context of University Community Partnership; service Learning for an undergraduate physics student

Module III: (15 lectures)

Conceptualisation of the idea of service learning through any two of the following practical implementations: (i) participating in awareness programmes on scientific temper for nearby communities, (ii) taking part in demonstrations of scientific experiments for school children to eradicate the fear of pursuing higher studies in science, (iii) providing guidance to school students for understanding the topics of their physics curriculum, (iv) providing video lectures and/or demonstrations for school students.

Suggested Readings

1. Service-Learning Essentials: Questions, Answers, and Lessons Learned, Barbara Jacoby, Jossey-bass.
2. Where's the Learning in Service-Learning?Janet Eyler and Dwight E. Giles Jr., Jossey-bass.

PROGRAMME: BACHELOR OF ARTS EDUCATION (BA) HONOURS/HONOURS WITH RESEARCH

EDCE106T: SERVICE LEARNING (A COMMUNITY-UNIVERSITY ENGAGEMENT PROGRAMME)

(Credit: 2 Hours: 30)

COURSE OUTCOMES

1. Learn the concept of service learning and community engagement. (Remembering)
2. Understand the importance of service learning and community engagement for developing the skills of addressing real life issues in one's own community. (Understanding)
3. Develop the ethics of civic participation. (Applying)
4. Develop an understanding of the importance of communication skills in interacting with community members.

(Understanding)

5. Be exposed to and empathize with people who are less fortunate than they are,economically, socially, academically, medically etc. (Applying)
6. Organize awareness programmes, rallies, campaigns, social service etc. (Analysing)
7. Develop the skills of problem solving and reflective thinking. (Analysing)
8. Realize one's potentiality to make a difference in the life of their community members.(Evaluating)
9. Understand and experience the system of inequality that exists in the Educationalsystem. (Evaluating)
10. Applying the pedagogical concepts learned in class in the educational institutions of thecommunity. (Creating)

Module I: Service Learning and Community- University Engagement

Concept of service learning and community-university engagement; History of service learning in the context of Indian Universities; Principles for an effective service learning; Principles of a good service learning pedagogy; Models of Service learning: Project Model, Charity Model, Social Justice Model.

1. Programs of Service learning: Community Engagement, Field Education, Volunteerism, Internship.
2. Benefits of Service learning:For Students, Academic enhancement, Personal/ Professional Growth, Understanding Diversity, Civic learning, Critical reflection, For the University, For the community.
3. Service learning: A means to Inclusive Education: Experiential Learning, Expo populations, Challenge to comfort zones, Reflection sure to diverse on Experiences, Personal growth, Professional growth.

Module II: Practices for Service Learning and Community- University Engagement

By collaborating with the Community Members, Village Panchayats, Parents, Educational Institutions (Heads, Teachers and Students), Anganwadis, Balwadis etc. and following the mentioned Models and Programs of Service Learning students can be engaged with the community welfare in the following ways: (**Any….**)

1. Creating awareness among community members regarding Early childhood care andnutrition.
2. Creating awareness among community members about parenting.
3. Self-participatory internship in a school of one's own choice.
4. Creating awareness among school children and community members and providing
5. training in developing one's life skills.
6. Providing teachers training in pedagogy.
7. Providing training to school teachers in the use of ICT for enhancing students' learning.
8. Providing training to teachers in the preparation of teaching aids by using availablecommunity resources.
9. Creating awareness on Mental Health and strategies for its sustenance.
10. Creating awareness on the importance of Physical health and ways of maintaining one's
11. health.
12. Creating awareness on the importance of education and ways of creating a conducive environment for proper learning.
13. Creating awareness on AIDS.
14. Creating awareness on Population explosion- its effects and ways of population control.
15. Creating awareness on life skills and ways to develop one's life skills.

PROGRAMME: BACHELOR OF ARTS ENGLISH (BA) HONOURS/HONOURS WITH RESEARCH

EGCE108T: SERVICE LEARNING- LANGUAGE COMMUNICATION

(Credit: 2 Hours: 30)

Course Outcomes

1. Describe the nature of Service Learning and the principles of Community University Engagement (Remembering)
2. Understand the importance of engagement with nearby communities and develop a mutual partnership in terms of the sharing of knowledge with the local communities (Understanding)
3. Apply the principles of Community University Engagement in the linguistic study of local communities in terms of spoken English and study of speech expressions (Applying)
4. Analyze the linguistic expressions of the communities and the gap of communication in terms of English language. (Analyzing)
5. Evaluate the expressions of the communities and summarize the socio-cultural constructs behind the expressions under Service-learning study. (Evaluating)
6. Design a project report on their understanding of Service learning and involvement with the communities. (Creating)

Module I: Understanding Service Learning (15 lectures)

Introduction to Service Learning; Understanding Community University Engagement; Historical Overview of Community University Engagement in India; Principles of Community University Engagement; Forms of Community University Engagement; Community Based Participatory Research; Social Responsibility of Higher Education Institutions of India

Module II: Interaction with Communities (15 lectures)

Foundations of English grammar; English phonetic symbols (vowels and consonants); Common idioms and phrases in English; Understanding the Key concepts of languages: the socio-cultural context; Exploring differentspeech communities; Learning unique linguistic expressions; Exploring idioms and phrases: the socio-cultural construct that binds them; Basics of translation; Field Visit; Assessment: Assignment writing and Submission

MCCE110T: COMMUNITY MEDIA

(Credit: 2 Hours: 30)

COURSE OUTCOMES

1. Define and explain service learning and participatory approach to social development (Remembering)
2. Classify the different types of community media (Understand)
3. Utilise community media for social change and development (Applying)
4. Analyse storytelling formats and content about development issues (Analyzing)
5. Identify opportunities for discussing development issues using community media (Evaluating)
6. Produce content for community media (Creating)

Module 1: Introduction to Service-Learning (5 Lectures)

Concept of Service Learning— definition, principles, models of different Higher Education Institution Service Learning; Service Learning as a medium of social change.

Module 2: Understanding Community and Community Participation (5 Lectures)

Understanding Community, Participatory approach to social development; Principles of community participation; Participatory Rural Appraisal.

Module 3: Community Media and Community Engagement (5 Lectures)

Understanding Community Media, Types, Purpose, Relevance and Significance, Skills, tools and Techniques of community media, Practices of Community Media, Participatory communication, socio-cultural media, Communication for Social and Behaviour Change, ethical issues.

Module 4: Community Practicum and Learning Activities (15 Lectures)

Internship, Community Mobilisation, Awareness/Advocacy campaign, folk performances, community meetings, rural reporting, community radio programmings, community video, case studies.

PROGRAMME: BACHELOR OF ARTS PSYCHOLOGY (BA) HONOURS/HONOURS WITH RESEARCH

PCCE111T: SERVICE LEARNING

(Credit: 2 Hours: 30)

Module 1: introduction to Service Learning (5 hours)

Nature, Objectives, Historical Overview, Models, Qualities, Role of Higher Education Institutions (HEIs), Benefits, Challenges and Opportunities of Service Learning

Module 2: Social Responsibilities of HEIs (5 hours)

Understanding Social Responsibilities of HEIs, Community-University Engagement, Engaged Teaching, Research and Service, Principles for Community Engagement, Forms of Community Engagement, Community Based Participatory Research.

Module 3: Understanding Rural Society (5 hours)
Rural Life Style, Rural Society, Rural Economy and Livelihood, Rural Institutions (Traditional Rural Organisations, Self-Help Groups, Panchayati Raj Institutions), Rural Development Programmes (Sarva Siksha Abhiyan, Beti Bachao Beti Padhao, Swatchh Bharat, Ayushman Bharat, MNREGA etc.).

Module 4: Community Psychology (5 hours)
Definition and Historical Overview of Community Psychology, Principles of Community Psychology, Individual and family wellness, Sense of Community, Respect for Human Diversity, Social Justice and Empowerment, Community Mental Health

PROGRAMME: BACHELOR OF ARTS ECONOMICS (BA) HONOURS/HONOURS WITH RESEARCH

ENCE111T: SERVICE LEARNING

(Credit: 2 Hours: 30)

Objectives:

- *Service-learning is a method of teaching through which students apply their academic skills and knowledge to address real-life needs in their own communities.*
- *Service-learning provides a compelling reason to learn and teaches the skills of civic participation and develops an ethic of service and civic responsibility.*
- *Service-learning increases motivation and retention of academic skills as specific learning goals are tied to community needs.*

COURSE/ LEARNING OUTCOMES

- Students strengthen their ethic of social and civic responsibility.
- Understand problems in a more complex way, including underlying issues.
- Learn how to work more collaboratively with others on real problems.
- Learn about other cultures and respect for cultural differences.
- Observe how decisions are made and how they can impact people's lives.

Module I: Meaning and scope of service learning (15 hours)
Understanding Service Learning - Its philosophy, historical background, purpose, value & theoretical framework; Locating Service Learning within the University context; Principles of Service Learning; Classification of Service Learning Models; Experiential Learning; Reflective Learning; Journaling; Service Learning Pedagogy; Difference between Service Learning and other community experiences ; Historical context of University Community Partnership; Understanding Community & Community Partnership; Ethical understanding of partnership; Understanding the agency of the Community – as co-educators; Community barriers; Understanding of society & social issues.

Module II: Labor Economics (Community research model) (15 hours)
Students work in small groups to produce a report for a career and job resource center. Serving a broad spectrum of labourers in the greater Sonapur area in which they study the effectiveness of vocational training in improving the labor market opportunities for non-college bound youths. Students should also be able to interact with the organization's staff to learn more about the livelihood opportunities and challenges that workers face (specially women) in the labour market. The project includes: field survey, data entry and analysis of field information using appropriate statistical tools.

PROGRAMME: BACHELOR OF ARTS PUBLIC ADMINISTRATION (BA) HONOURS/HONOURS WITH RESEARCH

PACE110T: SERVICE LEARNING

(Credit: 2 Hours: 30)

COURSE OUTCOMES

At the end of this course students are able to:

1. Learn the concept of service learning and community engagement. (Remembering)
2. Understand the importance of service learning and community engagement for developing the skills of addressing

real life issues in one's own community. (Understanding)
3. Develop an understanding of the importance of communication skills in interacting with community members. (Understanding)
4. Be exposed to and empathize with people who are less fortunate than they are, politically, economically, socially, academically etc. (Applying)
5. Organize awareness programmes, rallies, campaigns, social service etc. (Analysing)
6. Develop the skills of problem solving and reflective thinking. (Analysing)
7. Realize one's potentiality to make a difference in the life of their community members. (Evaluating)
8. Understand and experience various political and administrative issues that exist in the Society. (Evaluating)

Module I: Introduction to Service learning (10 hours)
Nature, Objectives, Historical Overview, Models, Qualities, Role of Higher Education Institutions (HEIs), Benefits, Challenges and Opportunities of Service Learning

Module II: Social Responsibilities of HEIs (10 hours)
Understanding Social Responsibilities of HEIs, Community-University Engagement, Engaged Teaching, Research and Service, Principles for Community Engagement, Forms of Community Engagement, Community Based Participatory Research.

Module III: Understanding Rural Society (20 hours)
Rural Life Style, Rural Society, Rural Economy and Livelihood, Rural Institutions (Traditional Rural Organisations, Self-Help Groups, Panchayati Raj Institutions), Rural Development Programmes (Sarva Siksha Abhiyan, Beti Bachao Beti Padhao, Swatchh Bharat, Ayushman Bharat, MNREGA etc.).

Module IV: Practices for Service learning and Community (10 hours)
Internship, Community Mobilization, Awareness/Advocacy campaign, community meetings, rural reporting, case studies

PROGRAMME: BACHELOR OF SCIENCE BOTANY (BSC) HONOURS/HONOURS WITH RESEARCH

BOCE112T: SERVICE LEARNING ON ETHNOBOTANICAL PRACTICES

(Credit: 2 Hours: 30)

Course Outcomes

At the end of this course students will be able to:

CO1: Ability to think critically and analyze what they have learned in the classroom and how to apply their theoretical knowledge in the real world for the betterment of the society (Applying)

CO2: Development of social accountability and greater participation in community services (Applying)
CO3: Development of communication skill, personality skill, decision making ability and other career related skill (Evaluating)
CO4: Awareness about the cultural diversity and their relationship with traditionalplants (Understanding)
CO5**:** Better understand the basic concepts of ethno-botany and their conservation practices (Understanding)
CO6: Recognize the ethno-botanically important plants species (Remembering)

Module I: Introduction to Service learning (10 Hours)
Definitions; Aims and Objectives of Service Learning; Types of Service Learning; Principles of Service Learning; Important tools of Service Learning; Scopes of Service Learning; Benefits of Service Learning; Community based Service Learning and Volunteering Service Learning.

Module II: Introduction to Ethno-botany (10 Hours)
Concepts of Ethno-botany: Definitions, Interdisciplinary; Aims and Objectives of Ethno-botany; Scope of Ethno-botany: Documentation, Preservation, Conservation; Application of Ethno-botany; Concept on Rare Endangered and Threatened (RET) Taxa; Basic concept on the Conservation and Management of native plants; Basic concept on Intellectual Property Right (IPR).

Module III: Orientation Programme (10 Hours)
Lectures from experts; Discussion on various issues related to health and wellness, environment, waste management, education; Videos on community services

Service Learning on Ethno-botanical practices (200 Hours)
Implement of an interaction programme with the local ethnic group to understand their relationships with the native plants; Awareness programme on the conservation and management of rare and medicinal plants; Awareness campaign on the reconstruction of forest in the local community; Fundraise for cultivation of medicinal plants in the community; Creation of medicinal plant garden for recreation and to earn income for livelihood and to help those who are in need; Combat of invasive plants to restored ecosystems in preserve areas for public use.

PROGRAMME: BACHELOR OF PHILOSOPHY (BA) HONOURS (MINORS IN ENGLISH AND PSYCHOLOGY)

CBSL100T: SERVICE LEARNING: THEORY
Duration: 30 Hours

Objectives
Service Learning aims to support the development of basic skills among the students namely, critical and creativethinking, reflection, communication, collaboration, information literacy, and social skills. The emphasis will be on active civic participation. As the students will be actively involved in a wide range of experiences, which will benefit both the community at large and the students in particular and in the process the goals of the curriculum shall be achieved.

Course Outcomes
CO 1: Defines and explain the Service-Learning framework (remembering)
CO 2: Explains the nature and types of community engagement work (understanding)
CO 3: Identifies the need and importance of social responsibility (applying)

Module I: Concept of Service Learning (8 hours)
Service Learning – meaning, concept, definition; value-based framework of Service Learning; Understanding the core standards of Service Learning such as respect, reciprocity, relevance, and reflection; Elements of Service Learning; Understanding Service Learning – Its philosophy, historical background, purpose, value and theoretical framework; Locating Service-Learning within the University context; Principles of Service Learning.

Module 2: Community Engagement and Community Partnerships (8 hours)
Community Engagement – concept, meaning, definition and principles; benefits of community engagement, models of community engagement; Civic Engagement, University Community Engagement, Community partnerships – meaning, benefits, Reflection – meaning, definition and implications; Critical inquiry - meaning, definition and implications;

Engaged Research - meaning, definition and implications.

Module 3: Social Responsibility and Communication Basics (8 hours)
Social Responsibility – meaning, benefits, Socio-economic context – meaning, definition, Social issues – meaning, Understanding of society & social issues; Conflict – meaning, types, Understanding various conflict resolution strategies; Community level partnerships – meaning, significance, types; Social Justice – meaning and implications; Communication – meaning, types, channels of communication, models of communication.

Module 4: Identifying the Partners in the Community (6 hours)
Partners in the community – meaning, types and functions of Community Partners namely, Corporate, Government and PSU Organizations, Panchayats, Community settings, Clinical settings, NGOs, Anganwadi Centres, Self Help Groups, Schools, Business Firms, Community Markets, Weekly Haats

Suggested Readings

CBSL101P: SERVICE LEARNING: PRACTICE

Credits: 2 – 60 Hours

Objectives
Service Learning will aim to support the development of basic skills among the students namely, critical and creative thinking, reflection, communication, collaboration, information literacy, and social skills. The emphasis will be on active civic participation. As the students will be actively involved in a wide range of experiences, which will benefit both the community at large and the students in particular and in the process the goals of the curriculum shall be achieved.

Course Outcomes
CO 1: Defines the different types of research projects (remembering)
CO 2: Explains the various steps of designing a research project (understanding)
CO 3: Constructs the questionnaire and schedules (applying)
CO 4: Analyses the data for analysis (analysing)
CO 5: Classifies the findings in the report (evaluating)

Instructions and Guidelines for Students
The students should keep in mind the following instruction and guidelines:
1. The fieldwork should be for a minimum duration of 30 hours which can be extended depending upon the convenience and requirement of the student and the organisation respectively. The rest of the hours are allotted forcompleting the Report. However, the entire duration of the course should not exceed 60 hours.
2. The students have to undergo the fieldwork during the semester break after 2nd semester.
3. After the completion of the fieldwork, the students must submit the Report.
4. The assessment will be done as follows:
5. There would be a Presentation (PPT) and Viva-Voce Examination towards the end of the 3rd Semester based onwhich the students would be evaluated.

Structure of Report

The Service Learning Field Work Report must be in a spiral bind and should comprise the following:
a. Recommendation Letter from the Department.
b. Certificate of Authentication from a competent authority like Village Headman, GP member or any renowned person from the community where the student has worked.
c. The Contents of the Report must include:
    i. Introduction.
    ii. Need of the study
    iii. Objectives of the study
    iv. Significance of the study

v. The methodology which was undertaken for the study
vi. Description of the work done
vii. Learning Outcomes.
viii. Feedback from the target audience/community members
ix. Geo-tagged photographs

The Assessment for the Service Learning Project will have the following Components

a. Report: 40 marks
b. Seminar Presentation: 30 marks
c. Viva-Voce Examination: 30 marks

VALUE ADDED COURSES

DEPARTMENT OF COMPUTER APPLICATIONS

CARP6051: ROBOTIC PROCESS AUTOMATION (30 HOURS)

COURSE/ LEARNING OUTCOMES

CO1: Explain the RPA Developer enablement journey and an introduce to the role. (Understanding)

CO2: Explain the three constructs that are fundamental in any software process: variables, arguments and control flow. (Understanding)

CO3: Address what selectors are, the UI Explorer, the Property Explorer, Selector types, where to use them and how to fine-tune Selectors when encountering difficult situations. (Remembering)

CO4: Creating UI input and output actions. (Creating)

CO5: Learn about the many email tasks that can be automated to help you save valuable time. Cover an essential aspect of development, identifying and solving bugs in your projects and learn about how to get automation production-ready: how to anticipate, detect and resolve errors in your workflows. (Applying)

Module I: (8 Hours)

RPA Overview: Overview of Robotic Process Automation (RPA), Benefits of RPA in industries and business processes, Introduction to the RPA Developer Role, Variables, Data Types and Control Flow, Version Control, Data Manipulation, Excel and Data Tables, Selectors.

Module II: (22 Hours)

Bot Building: UI Automation, Introduction to Logging in Studio, IMDB Movie Rating, Contact Details, RPA Challenge.
Amazon Data Scraping, Recording Demo.
Calculate Client Hash, PDF Automation, Error and Exception Handling, Debugging.
Email Automation, Connecting Robot to Orchestrator, Publishing workflow to Orchestrator, Orchestrator Demos.

Suggested Readings

1. The Robotic Process Automation Handbook: A Guide to Implementing RPA Systems by Tom Taulli, Publisher: Apress
2. Learning Robotic Process Automation: Create Software Robots and Automate Business Processes with the Leading RPA Tool – UiPath by Alok Mani Tripathi, Publisher: Packt Publishing; 1st edition
3. Robotic Process Automation Projects: Build Real-world RPA Solutions Using UiPath and Automation Anywhere by Arun Kumar Asokan and Nandan Mullakara, Publisher: Packt Publishing Limited

CABC6052: BLOCKCHAIN (30 HOURS)

COURSE/ LEARNING OUTCOMES

CO1: To understand what Blockchain is and why it is used. (Remembering)

CO2: To be able to explain the different components involved within Blockchain. (Understanding)

CO3: To know when and why you may want to use Blockchain within your environment. (Remembering)

Module I: (7 Hours)

Introduction to Blockchain Technology and its Importance; Evolution of the Blockchain Technology,

Module II: (7 Hours)

Elements of a Blockchain, Basic Crypto Primitives – Cryptographic Hash, Digital Signature

Module III: (16 Hours)

Blockchain Consensus I – Permissionless Models, Blockchain Consensus II – Permissioned Models, Smart Contract Hands On I – Ethereum Smart Contracts (Permissionless Model), Blockchain Applications

Suggested Readings

1. Mastering Blockchain: A deep dive into distributed ledgers, consensus protocols, smart contracts, DApps, cryptocurrencies, Ethereum, and more, 3rd Edition, Imran Bashir, Packt Publishing, 2020,
2. Hyperledger Tutorials - https://www.hyperledger.org/use/tutorials
3. Ethereum Development Resources - https://ethereum.org/en/developers

CAAW6053: ADVANCED WEB APPLICATION DEVELOPMENT TECHNIQUES (30 HOURS)

COURSE/ LEARNING OUTCOMES

CO1: Explain the JavaScript and an introduce to the role in client server architecture.(Understanding)

CO2: Explain the importance of data validation and understand the process of data sanitization. (Understanding)

CO3: Address the threat handling mechanism while development. (Remembering)

CO4: Creating User interface, service design pattern, and remote connection. (Creating)

CO5: Learn about the recent trend in web development architecture based on micro service design pattern. Cover an overview of recent trend in management of load balancing and service scalability. (Applying)

Module I: (18 Hours)

JavaScript Overview: Form events, Client Side Validation (Length check, Numeric field check, Alphanumeric field check, Empty Field, special character, password format, All field entry check), Server Side validation (Data sanitization), SQL Injection, Overview of session management, Cross site scripting, URL validation, Importance of Asynchronous JavaScript and XML (Ajax), loading page content using AJAX, Database connection, Back end data update using AJAX.

Module II: (12 Hours)

Micro Service Applicability: Micro Service design pattern, Overview of Service Oriented Architecture, Principles of Web Service, SOAP / RESTful Web Service, Overview of Containerization: Kubernetes with Docker.

Suggested Readings

1. Beginning JavaScript with DOM Scripting and Ajax – Russ Ferguson and Christian Heilmann, Publisher: Apress ; 2nd edition
2. Ajax programming for the absolute beginner, Jerry Lee Ford, Jr. Publisher: Course Technology, 1st Edition
3. Kubernetes Microservices with Docker by Deepak Vohra, Publisher: Apress, 1st Edition

CADV6054: DATA VISUALIZATION (30 Hours)

Objective: The objective of this course is to provide students with practical knowledge and skills in data visualization, using various tools and techniques to transform raw data into meaningful visual representations. The course is designed to be fully hands-on, ensuring that participants gain real-world experience in creating and interpreting data visualizations.

COURSE/ LEARNING OUTCOMES

CO1: Apply data cleaning and transformation techniques to prepare data for visualization (Applying)

CO2: Create and customize a variety of basic and advanced charts using data visualization libraries (Creating)

CO3: Design and develop interactive dashboards and reports using standard data visualization tools (Creating)

Module I: Introduction to Data Visualization and Data Preparation (10 Hours)

Overview of Data Visualization, Importance and benefits, Types of data visualizations, Data visualization process, Visual Encoding, Data Visualization Libraries (Matplotlib, Seaborn, Plotly)

Data Cleaning and Transformation, Handling missing values (filling missing values with zero, mean, mode, and median), Smoothing noisy data (Binning), Detecting and Removing outliers (Standard deviation method), Data normalization and standardization

Module II: Basic and Advanced Visualization Techniques (12 Hours)
Creating Basic Charts - Line charts, bar charts, pie charts, donut charts, scatter plots, line plots, and bar plots, area plots, histograms, Customizing charts, Interactive features and customization
Creating Advanced Charts - Box Plots, Bubble Plots, Violin Plots, Heat Map, Dendrogram, Radar Chart, Venn Diagram, 3D Scatter Plots, Geospatial Visualizations, Maps and geographical data, Visualizing networks and connections, Creating time series plots

Module III: Dashboards and Reports (8 Hours)
Introduction to standard Data Visualization tools, connecting to data sources (connecting to databases and APIs), Creating basic visualizations, Calculations and parameters, Building interactive reports and dashboards (Adding filters, parameters, and calculated fields to dashboards)

Suggested Readings
1. Chen, Min, et al., eds. Foundations of data visualization. Cham, Switzerland: Springer International Publishing, 2020.
2. Healy, Kieran. Data visualization: a practical introduction. Princeton University Press, 2018.
3. Wilke, Claus O. Fundamentals of data visualization: a primer on making informative and compelling figures. O'Reilly Media, 2019.

DEPARTMENT OF COMMERCE

CMII6011: IDEATION TO INNOVATION
(0-0-2) (2 credits – 30 hours)

Objective: The objective of the course is to turn an idea into a start-up by giving students a hands-on, real-life experience creating a start-up with like-minded partners from around the world. The course challenges the students to innovate, overcome obstacles, and grow rapidly with the goal of creating a business worth valuing.

Learning Outcomes
After completing the course, the learners will be able to:
CO1: Articulate the skills and know-how to develop their business idea from the conceptual stage to the marketplace (Applying)
CO2: Evaluate and select models for new ventures (Evaluating)
CO3: Apply both quantitative and qualitative customer and market research (Applying)
CO4: Understand the framework of product development (Understanding)
CO5: Design, evaluate, and implement marketing strategies (Creating)
CO6: Design a scalable business model via real-life experiments and tests in a live marketplace with genuine customer feedback (Creating)

Module 1: Team Formation and Ideation (2 Hours)
Ideation activities (problems submission, discussion, down-selection) Team Formation & Ideation, Introduction to Lean Canvas Model

Module 2: Problem – Solution Fit (3 Hours)
How to Find & Assess Ideas - Introduction to Design Thinking Idea validation & online tools, Idea Development

Module 3: Product - Market Fit analysis and development (4 Hours)
Market: Segmentation, Positioning, Market Info Sourcing, Customer Validation Prototyping & Solution Validation

Module 4: Business Model & Marketing Strategy (5 Hours)
Designing & Validating the Business & Revenue Model Marketing Strategy Development & Marketing Tools Business Model Fine Tuning Marketing Campaign Design: Goals, KPIs, Tracking Customer Engagement Campaign & Minimum Viable Product Launch

Module 5: Financial KPIs & Product Sprint (5 Hours)
Financial KPIs: Calculating, Interpreting & Presenting
Start-up Financial Planning & Budgeting Calculating Financial Metrics & Starting Pitch Preparation

Module 6: Start-Up Funding & Pitch Preparation & Product Sprint (4 Hours)
Funding Alternatives for Start-ups, Designing Your Funding Strategy & Start-up Valuation, Investor Presentation Tips & Tricks , Funding Strategy Design & Pitch Deck Preparation , Compulsory exercises: (7 hours), Preparation of the business model, Prototype development, and The Venture Capitalist pitch

Suggested Readings
The Startup Owner's Manual: The Step-By-Step Guide for Building a Great Company - Steve Blank and Bob Dorf Running Lean: Iterate from Plan A to a Plan That Works (Lean Series) - Ash Maurya

CMSS6012: STATISTICAL SOFTWARE PACKAGES FOR DATA ANALYSIS (0-0-2)
(2 credits – 30 hours)

Objective: This course is designed to familiarize students with some omnibus software packages commonly utilized for statistical analysis in science and industry. Statistical programs include both proprietary and open-source packages.

Learning Outcomes
After completing this course, participants will be able to:
CO1: Create and manage data sets in several software programs (Creating)
CO2: Implementing knowledge and skill at using several software programs to run different forms of statistical analysis (Applying).
CO3: Implementing knowledge and skill at using software programs to create tables, graphs, and figures(Applying).
CO4: Assessing practical interpretation of statistical results for developing decisive insights and to inform decision-making and innovation (Evaluating).

Module 1: Data preparation (8 Hours)
Getting familiar with the interface – SPSS, PSPP, MS Excel; Enter, save data - SPSS, PSPP, MS Excel; Import data from Excel to SPSS/PSPP; Carry out different data preparation processes

Module 2: Exploratory Data Analysis (3 Hours)
EDA for one or more variables; Create charts for one variable; Transform data; Transforming scale into categorical variable

Module 3: Inferential Statistics for the mean and the median (6 Hours)
Descriptive statistics for two or more variables; Creating and editing charts for two or more variables Inferential statistics for the mean and the median; One-sample t-test and sign test, T-test ; Paired-difference t-test ; Power Analysis for t-test

Module 4: ANOVA and simple linear regression (4 Hours)
One-way and two-way ANOVA ; Bivariate linear regression; Power Analysis for ANOVA

Module 5: Multiple linear regression (4 Hours)
Multiple linear regression and correlation; Model building and selection; Interpreting regression coefficients and confidence intervals; Power Analysis for linear regression

Module 6: Inferential statistics for the proportion (5 Hours)
Inferential statistics for categorical variables
One-sample Chi-square; Chi-Squared Test of Independence; Power Analysis for the proportion

Suggested Readings
1. Leech, Nancy L.; Karen C. Barrett; and George A. Morgan. 2014. SPSS for Intermediate Statistics: Use and

Interpretation. 5th Edition. Routledge, New York, USA.
2. Maujis, D. Doing Quantitative Research in Education with SPSS. 2nd Edition.SAGE Publications, California, USA.
3. McCormick, K., J. Salcedo, J. Pock, and A. Wheeler. 2017. SPSS Statistics for Data Analysis and Visualization. John Wiley & Sons, Inc. Indianapolis, IN.

CMAS6013: ACCOUNTING SOFTWARE PACKAGE

Lectures: 10 Hours, Practical Lab: 20 Hours

CO1: Define the basic accounting concept, computerized accounting system and Data Based Management system (Understanding).
CO2: Understand the Preparation of ledgers, Trial balance and other financial statements with SQL (Understanding).
CO3: Application of accounting software (Tally ERP 9) in Voucher entries, preparation of accounts and other financial statements (Application) CO4: Application of Tally ERP 9 software in payroll and voucher entries with GST

Module 1: Basics of Accounting Concept. (5 hours)
Basic accounting concept; journal entries; preparation of books of accounts and ledgers; preparation of trial balance and final accounts of corporate entities; Accounting system; benefits of computerized accounting system and challenges associated with computerized accounting system.

Module 2: Application of SQL (5 hours practical Lab)
Preparation of ledgers; Trial Balance and Report with the help of SQL

Module 3: Tally ERP 9 Fundamentals (2 hours, 7 hours Practical Lab)
Introduction to Tally ERP 9; Features of Tally ERP 9; creating, selecting, altering, deleting and shutting up of company; creating, altering and deleting of group and ledgers, voucher entries; integrating accounts and inventory; Displaying the financial report .

Module 4: Application of Tally ERP 9 in advanced level (3 hours, 8 hours Practical lab)
Activating payroll in Tally; understanding of payroll; pay heads and categories; Attendance entries; salary payment example; pay-sheet and pay-slips. Activating Tally in GST; setting up GST (company level, ledger or inventory level); creating GST masters and generating reports.

Suggested Readings

1. SQL For Beginners: SQL Made Easy; A Step-By-Step Guide to SQL Programming for the Beginner, Intermediate and Advanced User (Including Projects and Exercises) Craig berg
2. Tally.ERP 9 with GST in Simple Steps Paperback; Dreamtech press
3. Learning Tally ERP 9 with GST; Sajee Kurian, Blessing Inc
4. Database Management Systems (DBMS) Rajiv Chopra, S.Chand Publishing
5. Learning SQL ; Alan Beaulieu, O'Reilly Media
6. Ashok K Nadhani, GST Accounting with Tally.ERP9, BPB Publications, New Delhi

CMIT6014: INCOME TAX RETURN FILLING

(2 credits: 30 hours) Lectures: 10 Hours, Practical Lab: 20 Hours

After completion of this course, student should learn to:

CO 1: Understand the basics of income tax laws and regulations.
CO 2: Identify different sources of income and applicable tax deductions and exemptions.
CO 3: Prepare and file income tax returns for individuals and businesses.

Module- 1: Introduction to Income Tax Laws and Regulations (4 hours)
Introduction to Income Tax, Brief about Various Sources of Income (with Illustration)

Module- 2: Introduction to Tax Return Filing (2 hours Lecture 4 hours lab)
Introduction of E Filing of Income Tax Returns, Generation of IT Forms like ITR 01(SAHAJ), ITR 02, ITR 03, ITR 04, ITR 4S(SUGAM), ITR 05 and ITR 06.

Module- 3: Tax Return Filing (2 hours Lecture 12 hours lab)
Practical Exposure to www.incometaxindiaefiling.gov.in portal. How to file Return Electronically on portal with or without Digital Signature Certificate. How to Pay Tax online through Net Banking. How to Generate Challans online and Manual.

Module- 4: Tax Deducted at Source (2 hours Lecture 4 hours lab)
Form 16 B, How to view Tax Credit through 26AS, E Filing TDS Salary Return form 24Q and Challan

Assessment:

- Quizzes and assignments throughout the course to assess understanding and retention of key concepts.
- Final project: Prepare and file a mock income tax return for an individual or business, demonstrating proficiency in income tax return filing procedures.

Suggested Readings:
1. Self Preparation and Filing of Income Tax Returns by Individuals Third Edition: May 2019 by Swatantra Sethi.
2. How to File Salary Income Tax, AY 2019-2020 by CA Rahul Gupta.
3. Fast Track Quick Revision Income Tax for AY 2019-2020 by AS K K Agarwal.4. Tax Saving & Investment guide : Income Tax of India by CA Shammi Prabhakar Singh.

CMCR6015: CUSTOMER RELATIONSHIP MANAGEMENT

(2 Credits: 30 hours) (L-T-P: 1-0-1)

COURSE OUTCOME
CO1 To make the students understand the organizational need, benefits and process of creating long term value for individual customers
CO2 To create awareness about formulation and implementation of various CRM
CO2 To make students recognize CRM impact on sales and marketing strategies

Module 1 Introduction to CRM (5hours lecture, 5 Hours Practical)
CRM meaning, About CRM Software, Origin of CRM, objectives, Component of CRM, benefits of CRM, Approaches, Relationship Based Pricing Schemes, Total Care Program, Reasons for loosing Customer

Module 2 Building Custom Relationship (3hours lecture, 7hours practical)
Customer Acquisition, inputs of customer acquisition, process, requisites for effective customer acquisition, Customer Interactive Management, routes of customer interaction management, factors of customer interaction, Customer Retention, C Retention Strategy, determinants

Module 3 Customer Relationship Process (2hours lecture, 8 hours practical)
CRP meaning, objectives, CRM process Model, 4 C's, steps of CRM process, CRM business transformation, IT and Customer Relation, e-CRM, CRM vs e-CRM, , implementation and integration e-CRM Work

Assessment

- Quizzes and assignments throughout the course to assess understanding and retention of key concepts.
- Assisgnment , Group Discussion and preparation of a project report based on the field visit

E-resource

MTFS6012: FUNDAMENTAL SELLING SKILLS: TECHNIQUES AND APPLICATIONS
2 Credits (30 hours – 4 weeks)

Course Outcomes:
After completion of the course, students will be able to:
CO1: To explain the sales process
CO2: To analyse the relationship between sales and marketing
CO3: To examine the sales force structure and its functioning
CO4: To demonstrate the sales process

Pedagogy:
Students will learn to apply the discussion topics through interactive sessions, assignments, presentations, cases studies and demonstrations throughout the course (4 weeks).

Evaluation:
Weekly Assignments: 4 x10 = 40 marks
Weekly Presentations: 4x5 = 20 marks
Final Assessment (written test) = 40 marks

Module 1: Introduction to Sales Management
Meaning, Evaluation, Importance, Personal selling, Emerging Trends in Sales management, Elementary Study of Sales Organisation, Qualities & Responsibilities Sales Manager, Types of sales Organisations

Module 2: Selling Skills and Selling Strategies
Selling and Business Styles, Sales Funnel and the Sales Model, Selling Process, Sales Pitch and Presentation, Handling Customer Objections and Sales Closing Skills

Module 3: Management of Sales Territory and Sales Quota
Sales Territory Meaning, size, Designing Sales Quota, procedure for dales quota, types of sales quota, recruitment and selection of sales force, training of sales force.

Module 4: Sales Manager and sales person:
Role of sales manager and sales people, functions of sales manager, functions of sales person, types and characteristics of sales manager and sales people, time management for sales manager and sales people.

Module 5: Sales Force Motivation and Compensation
Nature of Motivation, Importance, Process and factors in the motivation, Compensation-meaning, types of compensation plans and evaluation of sales force by performance and appraisal process.

DEPARTMENT OF CHEMISTRY

CHPC6137: PETROLEUM CHEMISTRY
(1-0-1)

Course Outcomes
1. To gain knowledge about the composition of crude petroleum and the refining process. (Remembering)
2. To correlate the quality of fuels with various parameters. (Understanding)
3. Determination of different types of water testing parameters required in thermal power plant. (Applying)
4. Analysing of chemical impurities and their separation techniques. (Analysing)
5. Designing of eco-friendly and sustainable energy source in future. (Evaluating)

Module I: Oil Section (15 Lectures)
Renewable and non-renewable source of energy, Petroleum, Composition of crude petroleum, Hydrocarbon, Distillation (Upper distillation, middle ditillation, Residue distillation), crude distillation unit, Fractional distillation, petroleum refining-applications of various fractions, Cracking, Reforming, Petrol, Diesel, viation turbine fuel, Kerocene, LPG, CNG, LNG, clean fuels, Octane number, Cetane number, Flash point, calorific value, knocking and antiknocking, isomerization, smoke point, Lubricants, viscosity index, cloud point, pore point, Density, Gas chromatography, HPLC.

Module II: Water section (15 Lectures)
Thermal power plant station, concept of zero discharge refinery, Oil content, Effluent treatment plant, boiler, demineralization, uses of cationic and anionic resin during neutralization reaction, requirement of *p*H determination, BOD, COD, TDS, TSS, DO, Microbiological treatment, Scavenger, alkalinity, corrosion monitoring, permanent alkalinity, Total hardness, temporary hardness, silica and phosphate removal process, removal of sulphate, sulphite, ammonia, cyanide, water testing.

Suggested Readings
1. Engineering Chemistry, P. C. Jain and M. Jain, Dhanpat Rai & Sons, Delhi.
2. Industrial Chemistry, B. K. Sharma, Goel Publishing House, Meerut
3. Fundamentals of Petroleum and Petrochemical Engineering, U.R. Chaudhuri, CRC Press, Taylor & Francis group.

CHPA6138: PHARMACEUTICAL CHEMISTRY AND ITS APPLICATIONS
(1-0-1)
Course Outcomes
1. Explanation of the preliminary concept of drug and their classification. (Remembering)
2. To understand the mode of action of different kinds of drugs. (Understanding)
3. Synthesis of simple drug molecules and their purification techniques. (Applying)
4. Extraction of the medicinally active component from a plant source and their characterization techniques. (Analysing)
5. To provide knowledge of computational chemistry in designing drug molecules. (Evaluating)

Module I: Introduction and importance of drug Chemistry (15 Lectures)
Definition of drug, pro-drug, host-receptors interactions in connection to biological response, pharmacokinetics and mechanism of drug action-absorption, distribution, metabolism, and excretion (ADME), Structure activity relationship (SAR and QSAR), drug classification based on mode of action, analgesics and anti-inflammatory drug, COX-2 inhibitors, mode of action of NSAID and SAID, anti-histamine drugs, antidepressant drugs, narcotics, sedative-hypnotics and their mechanism of action, antibiotics, antiviral drugs, anti-bacterial drugs, anti-neoplastic drug, drugs derived from natural origin including plants and bacteria, chemotherapy, nano-drug delivery systems, toxicology, positive and negative aspect of drug chemistry, future scope of drug chemistry.

Module II: Hands on experience on drug chemistry (15 Lectures)
Experimental aspect of drug chemistry: Synthesis of simple drug molecules, various techniques used for purification including crystallization / recrystallization, acid-base purification, column chromatography, quality control / purity determination of drugs using GC-MS, HPLC etc., extraction of active ingredient from various plants in North-eastern region having medicinal importance, procedure for bioactivity test.
Theoretical feature of drug chemistry: Application of computational chemistry in designing of drug molecule, computer simulation to assist in solving chemical problems, drug-DNA interaction study, drug-delivery study.

Suggested Readings
1. An Introduction to Medicinal Chemistry, G. L. Patrick, Oxford University Press.
2. Introduction to Medicinal Chemistry, A. Gringauz, Wiley India Pvt Ltd.
3. Medicinal Chemistry, A. Kar, New Age International Publishers.
4. Medicinal Chemistry: An Introduction, G. Thomas, John Wiley & Sons
5. Computational Chemistry: A Practical Guide for Applying Techniques to Real World Problems, D. C. Young, John Wiley & Sons, Inc.
6. Computational Materials Science: An Introduction, J. G. Lee, CRC press, Taylor & Francis Group.

DEPARTMENT OF MATHEMATICS

MAFG0154: FRACTAL GEOMETRY AND APPLICATIONS
(2-0-0)

COUSE OUTCOMES

1. Explain the basic concepts of fractals and their mathematical constructions. (understanding)
2. Develop fractal dimensions and study their applications. (Applying)
3. Categorize Mandelbrot set and Julia sets, and classify their graphical representation and geometric properties. (Analysing)
4. Interpret random fractals, and study their applications to Health science and Stock markets. (Evaluating and Applying)
5. Demonstrate various chaos, renormalization, universality of chaos, and their significance. (Understanding and Creating)
6. Elaborate various applications in different fields of science and technology. (Creating)

Module I: Regular Fractals and Self-similarity (5 lectures)
Self-similarity, Examples of self-similarity, Fractals, Cantor Set, Koch Curve, Sierpinski gasket, Menger Sponge, Initiators and Generators, Geometry of Plane Transformations, Iterated Function Systems(IFS), Inverse problems, Random IFS, Driven IFS, Architecture.

Module II: Natural Fractals and Dimensions (5 lectures)
Ineffective way to measure, Fractal Dimensions and calculation, Hausdorff measure and dimension, Box counting dimension, Similarity dimension, The Moran formula, other dimensions, Area-Perim, Dim Algebra, Natural Fractals, Manufactured Fractals.

Module III: The Mandelbrot Set and Julia Sets (5 lectures)
Complex iteration, Julia sets, Julia sets of quadratic functions, The Mandelbrot set, Combinatorics of the Mandelbrot set, The boundary of the Mandelbrot set, Scaling in the Mandelbrot set, Complex Newton's method, Universality of the Mandelbrot set, Fractal in arts.

Module IV: Random Fractals and the Stock Market (5 lectures)
Self-similar distributions, Random Cantor set, Brownian motion, Fractional Brownian motion , Diffusion Limited aggregation , Levy Stable processes, Percolation , Bacterial Growth, Galaxy distributions, Internet traffic , Random fractal Cartoons, Stock market surrogates.

Module V: Chaos and Fractals (5 lectures)
Doubling, Introduction to Chaos, Test functions, Graphical iterations, Time series, Histograms, Bifurcation diagrams, Return map, Driven IFS, Kelly plot, Fixed points, Cycles, Period doubling bifurcations, Dust in the Tent map, Tent and Logistic bifurcation diagrams, Tangent bifurcations, Intermittency, Discontinuous bifurcations, Scaling, Universality, Renormalization, Control of chaos, Synchronization of chaotic processes.

Module VI: Fractal Applications (5 lectures)
Fractal growth, Singularities of Electrostatic and gravitational potentials, Fractal Antennas, Fractal in Finance, Self-Affine set and dimension, Application to encoding images, Panorama of Fractals and their uses, Animations, application of fractal geometry to Computer science, Telecommunications, and Medicine .

Suggested Readings

1. A Text by Michael Frame and Amelia Urry, Fractal Worlds, Yale University Press.
2. Fractal Geometry; mathematical foundations and Applications, Kenneth Falconer, John Wiley & Sons Ltd, England.
3. Fractal Geometry and Applications, Michel L Lapidus, A Jubilee of Benoit Mandelbrot,
4. The Fractal Geometry of Nature, Benoit Mandelbrot, W.H. Freeman and Co.
5. Fractal Geometry, Mathematical methods, Algorithms, Applications, A K Evans, Woodhead Publishing.
6. Fractals Everywhere, Michael Barnsley, Dover Books on Mathematics.
7. Chaos and Fractals: New Frontiers of Science, Heinz, Otto Peitgen, Springer and Verlag.

MAML0152: ESSENTIAL MATHEMATICS FOR MACHINE LEARNING
(2-0-0)

COURSE OUTCOMES
1. Comprehend the basic and core concepts of vector space, matrices, matrix decompositions. (Understanding)
2. Apply the concepts statistics and linear algebra in Dimension reductions. (Applying)
3. Gain extensive knowledge of probability and statistics for analysis of data. (Analysing)
4. Apply the fundamentals of calculus to evaluate partial derivatives, gradient and other concepts of vector calculus.(Applying)

Module I: (8 lectures)
Vector Spaces: Definitions and examples, Vector Subspaces: Examples and Properties, Basis and Dimensions, Linear Transformations, MATRIX THEORY- Norms and spaces, eigenvalues and eigenvectors, Special Matrices and their properties, least squared and minimum normed solutions.

Module II: (8 lectures)
Matrix Decomposition Algorithms- SVD: Properties and applications, low rank approximations, Gram Schmidt process, polar decomposition, DIMENSIONS REDUCTION ALGORITHMS and JCF- Principal component analysis, linear discriminant analysis, minimal polynomial and Jordan canonical form

Module III: (8 lectures)
Probability – Basic concepts of probability: conditional probability, Bayes' theorem, independence, theorem of total probability, expectation and variance, few discrete and continuous distributions, joint distributions and covariance.

Module IV: (6 lectures)
Calculus – Basic concepts of calculus: partial derivatives, gradient, directional derivatives, Jacobean, hessian, convex sets, convex functions and its properties.

Suggested Readings
1. Mathematics for Machine Learning, Marc Peter Deisenroth, A. Aldo Faisal, and Cheng Soon Ong, Cambridge University Press.
2. Analysis for Applied Mathematics. W. Cheney, New York: Springer Science Business Media.
3. Linear Algebra Done Right, Third Edition, S. Axler, Springer International Publishing.
4. Numerical Optimization. J. Nocedal and S. J. Wright, New York: Springer Science Business Media.
5. A First Look at Rigorous Probability Theory, Second Edition, J. S. Rosenthal, Singapore: World Scientific Publishing.

MACS6005: COMPUTATIONAL MATHEMATICS WITH SAGE MATH
(2 Credits- 30 Lectures)

COURSE OUTCOMES
1. Learn and understand the basic Python programming language. (Understanding)
2. Understand how to use Sagemath software and its applications. (Understanding)
3. Solve problems in Calculus, Applied Linear Algebra, Numerical Method and differential equations using Sagemath.(Evaluating)

Module I (10 lectures)
Installation of Python; Getting Started with Python Python as an advanced calculator; For loop in Python; While loop in Python; Use of SciPy and SymPy in Python; Classes in Python - Part 01; Classes in Python - Part 02;

Module II (12 lectures)
Solving Equations in SageMath;2d Plotting with SageMath;3d Plotting with Sage Math; Calculus of one variable with Sagemath, Integration with Sage Math; Improper Integral using SageMath; Application of integration using SageMath; Partial derivative with sage math, limit and continuity of real valued functions; working with vectors in sagemath; Solving

systems of linear equation in sage math, vector space in sage math, Matrix Spaces with SageMath; Linear Transformations with SageMath, eigenvalues and eigenvectors with sage math;

Module III (8 lectures)
Finding Roots of algebraic and transcendental equations in SageMath; Numerical solutions of linear equations and numerical integration with sagemath;Solving 1st and 2nd order ODE with SageMath;Euler's Method to solve 1st order ODE with SageMath.

Suggested Readings
1. Computational Mathematics with SageMath, Paul Zimmermann , Siam
2. Mathematical Computational with Sagemath, Paul Zimmermann Alexandre Casamayou Nathann Cohen Guillaume Connan Thierry Dumont
3. An introduction to Sage Programming: With applications to SAGE Interacts for Numerical methods, Razvan A Mezei, Springer

CO 2		H	M
CO 3			H

MACM6004: COMPUTATIONAL SKILL DEVELOPMENT: MATHEMATICA
(2 Credits- 30 Lectures)

COURSE OUTCOMES
1. Learn how to use Mathematica, a powerful coding language in science and engineeringcomputing (Remembering).
2. Apply the application-oriented principle to various real-life problems (Applying)
3. Evaluate simple math computations, modeling and simulation problems, data analysis andprocessing, as well as visualization techniques. (Evaluating)

Module I (10 Lectures)
Introduction to Mathematica and to the Wolfram Language (knowledge-based language, built- in support for real-world entities, Wolfram Alpha and the Wolfram Demonstrations Project), Notebook Interfaces, Text-Based Interfaces, Numerical Calculations: Arithmetic, Exact and Approximate Results, Some Mathematical Functions, Arbitrary-Precision Calculations, Complex Numbers, Getting Used to Mathematica, Mathematical Notation in Notebooks, Defining Variables, Making Lists of Objects, Manipulating Elements of Lists, The Four Kinds of Bracketing in Mathematica, Sequences of Operations.

Module II (10 Lectures)
Lists, strings, rules, patterns and pattern matching, different programming paradigms (procedural, functional and rule-based), Graphics and image manipulation (the 30+ members of the plot family, pixelsand voxels, the built-in image editor)

Module III (10 Lectures)
Linear and polynomial algebra. Exact and numerical optimization. Calculus and differential equations (analytic and numerical solutions of ODEs and PDEs). Plane and solid geometry. Probability and statistics(descriptive statistics, built-in support for 100+ distributions)

Suggested Readings
1. The Mathematica Book, S. Wolfram, 5th edition, Wolfram Media, 2003
2. Mathematica Basic Training Course Li Han Long, Sui Ying Deng, National Defense Industry Press,2016
3. Introduction to Mathematica with Applications, M. Muresan, Springer, 2017

DEPARTMENT OF PHYSICS

PSCP6120: COMPUTATIONAL PHYSICS USING PYTHON
(2-0-0)

Course Outcomes

1. Outline the fundamental elements of Python computing. (Understanding)
2. Estimate the accuracy and speed of a Python code. (Applying)
3. Develop Python code for solving definite integrals and finding derivatives. (Applying)
4. Solve systems of equations using Python arrays. (Applying)
5. Develop optimized numerical solutions of ordinary differential equations. (Applying)
6. Make use of Monte Carlo methods in random processes for solving physical problems. (Applying)
7. Propose computational solutions to physical problems using Python. (Creating)

Module I: Elements of Python programming (9 lectures)
Data types, basic mathematical operations, variables; lists: indexing, slicing, altering, appending and deleting elements, concatenation; tuples and dictionaries; conditional statements; loops: while and for loops, nested-for loops; Python libraries: installing packages, importing packages; NumPy arrays and matrices, example: eigenvalues and eigenvectors; basics of data handling using Pandas; introduction to SciPy; data visualization using Matplotlib and Seaborn.

Module II: Accuracy and speed (2 lectures)
Variables and data ranges; numerical error; program speed.

Module III: Numerical integrals and derivatives (4 lectures)
Fundamental integral evaluation methods: trapezoidal rule, Simpson's rule; error estimation of integrals; Romberg integration; Gaussian quadrature; numerical differentiation: forward and backward differences, central differences, second derivatives, partial derivatives, differentiation error estimation.

Module IV: Solving linear and non-linear equations (6 lectures)
Linear equations: Gaussian elimination, back-substitution, pivoting, LU decomposition, matrix inverse, tridiagonal and banded matrices; nonlinear equations: binary search, Newton's method, secant method

Module V: Numerical solutions of ordinary differential equations (4 lectures)
First-order differential equations with one variable: Euler's method, Heun's method, 4^{th} order Runge-Kutta method; differential equations with multiple variables; second-order differential equations; boundary value problems: shooting method, relaxation method; eigenvalue problems.

Module VI: Random processes (5 lectures)
Random numbers generators and seeds; non-uniform random numbers, Gaussian random numbers; Monte Carlo integration: mean value method, integrals in many dimensions, importance sampling; importance sampling; Markov chain methods.

Suggested Readings

1. Mark E.J. Newman, Computational Physics, Createspace Independent Pub.
2. Rubin H. Landau, Manuel J. Paez and Cristian C. Bordeianu, Computational Physics: Problem Solving with Python, Wiley.
3. Wes McKinney, Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython, O'Reilly Media.
4. David Beazley and Brian K. Jones, Python Cookbook: Recipes for Mastering Python 3, O'Reilly Media.
5. Jake VanderPlas, Python Data Science Handbook: Essential Tools for Working with Data, O'Reilly Media.
6. Duncan M. McGreggor, Mastering Matplotlib, Packt Publishing.

DEPARTMENT OF EDUCATION

EDES6011: EDUCATION FOR SUSTAINABLE DEVELOPMENT (1-0-1)

COURSE OUTCOMES

1. To create awareness about the concept of Sustainable Development. (Remembering)
2. To create skill among the students to find out the sustainability of any economic activity.(Understanding)
3. To create awareness among students about the concept of Education for SustainableDevelopment. (Applying)
4. To create an understanding among the students about the role of Education inSustainable Development. (Analysing)

Module I: Introduction to Sustainable Development (5 Lectures)
Concept of Development**;** Concept of Sustainability**;** Sustainable Development: Its 5 Ps (People, planet, prosperity, peace, and partnership)**;** Sustainable Development Goals- 17

Module II: Curricular Framework for Education for Sustainable DevelopmenT (10 Lectures)
Definition and meaning of Education for Sustainable Development; Principles; Key themes: Climate change, Biodiversity, Sustainable production and consumption, Reduction of poverty; Key Sustainable Competencies to be developed through ESD: Systems thinking Competencies, Anticipatory Competency, normative competency, Strategic competency, Collaboration Competency, Critical thinking competency, Self-awareness Competency and integrated problem Solving Competency; Pedagogical approaches in ESD: Whole- institution approach, Learner centered approach, Action oriented learning, Transformative approach; Teaching techniques for ESD: Simulations, Class discussions, Issue Analysis Techniques, Storytelling.

Module III: Practical Implications of ESD (15 Lectures) (Any two)
Sharing their own stories of struggle/ success with the class
Visiting neighboring areas to collect community related stories/ activities towards the realization of Sustainable Development Goals.
Surveying industries and submitting reports on its sustainability norms. Surveying schools and submitting reports on its sustainability norms.

EVALUATION

	Written test	10
	Attendance	5
	Non- formal	5
	Reports (2)	15+ 15= 30
		50

EDTT6012: TEACHER AND TEACHING SKILLS (1-0-1)

COURSE OUTCOMES

1. To create awareness among the students about conceptual framework of teaching skills.(Remembering)
2. To make the students well aware of the sources of teaching skills. (Understanding)
3. To create awareness about the approaches concerning teaching skills. (Applying)

Module I: Introduction to Teaching and Teacher
Concept of teaching; Structure of teaching; Levels and phases of teaching.

Module II: Concept of Teaching Skills
Meaning of teaching skill**;** Significance of teaching skills for a teacher**;** Sources and identification of teaching skills**;** Social skills for a teacher.

Module III: Micro teaching as an approach
Concept of Micro teaching; Need of micro teaching; Steps of micro teaching; Preparation of micro teaching lesson plan; Teaching practice for teaching skills through micro teaching lesson plans.

Suggested Readings

1. Abraham, P. P. (1974). Effectiveness of Micro Teaching in the development of questioningskill. M.Ed. Dissertation. M. S. University, Baroda.
2. Aggarwal, J.C (2014): Essentials of Educational Technology, Innovation in Teaching-Learning, Vikas Publishing House Pvt. Ltd. New Delhi

EDHW6013: EDUCATION FOR HEALTH AND WELLNESS

Credits: 2
Total Marks: 50 - Internal: 40 % (20 Marks) Total Hours: 30 External: 60% (30 Marks)

Course objectives

After completing the course, students will be able;

1. To acquire the knowledge, about health and physical education
2. To acquire the knowledge about health and safety education
3. To understand the nature of injuries and providing first aid
4. To develop the skills for organising games and sports in educational institution.
5. To acquire the knowledge about yoga

Module-I: concept of Health Education

a. Meaning, Definition, objectives of health education
b. Nutrition, Malnutrition, Personal Hygiene, Health education in schools, Health Services.
c. Food and Nutrition: Meaning, classification, constituents of food, vitamins and their deficiency, Balanced Diets, Diets for obesity and under Weight

Module-II Introduction to Physical & Yoga Education & Wellness Studies

a. Meaning, Definition, Objectives and scope of Physical education
b. Physical fitness: Meaning, definition, components, and benefits
c. Games and sports
d. First Aid: Road Accident, water accident, fire accident
e. Yoga Education: Meaning, Definition and uses of yoga for focussed mind.
f. Selected Asanas and Pranayama: Physical exercises
g. Dimensions of Wellness & Mindfullness.

Practicum:

a. Preparation of first aid kit
b. Health awareness programme
c. Demonstration of Asanas and Pranayama
d. Organizing games
e. Writing about the eminent performers in games and sports

Suggested Readings

1. Nash, T.N. (2006). Health and Physical education. Hyderabad: Nilkamal publishers
2. Prasad, Y.V. (2006). Methods of teaching physical education. New Delhi: Discovering publishing house
3. Chandra, S.S & Krishanan, P. (2005). Health education and physical education. Delhi: Surjeet Publications
4. Mangal, S.K. (2005). Health and physical education. Ludhiana: Tandon Publication

DEPARTMENT OF ENGLISH

EGES0138: EFFECTIVE COMMUNICATION SKILLS (1-0-1) (CREDITS: 02)

Course Outcomes

1. Describe the types of communication. (Remembering)
2. Differentiate from a variety of social functions including greetings, introductions and farewells, making and responding to requests, suggestions, invitations and apologies, conducting simple transactions in shops and offices, asking for and giving directions, etc. (Understanding)
3. Illustrate the daily routines in a series of simple phrases and sentences. (Applying)
4. Categorize the form and function of the basic official correspondences. (Analysing)
5. Evaluate formal and informal writings, preparing reports, letters, memorandum, notices, agenda, minutes etc. (Evaluating)
6. Formulate the rationale of descriptive, narrative, expository and argumentative writing. (Creating)

Module I: Communication and Grammar skills (8 lectures)

Language and communication: Differences between speech and writing, Distinct features of speech, Distinct features of writing, Parts of Speech, Person, Gender, Number, Use of Tense, Aspect and Modals, Degrees of comparison, Sentence types, Negation and Relative Clauses, Narration, Voice change, Proverbs, Vocabulary, Proper use of words, Idioms, Accentuation, Intonation, Understanding Various Englishes.

Module II: Developing Communicative Skills (7 lectures)

Introductory, developmental, transitional and concluding paragraphs: Coherence and cohesion, Descriptive, narrative, expository and argumentative writing, Introduction to soft skills, people and social skills, presentation, interaction and effective communication.

Official letter, Paragraph writing, Note-making, Topic Sentence, Telephonic Conversation, Group Discussion regarding job interview & C. V. Writing, formal and informal writings, reports, handbooks, manuals, letters, memorandum, notices, agenda, minutes.

Module III: Self-Learning (15 lectures)

Practice and drill sessions, online learning via tutorials (link to be provided by the teacher in-charge), self- assessment of progress, submission of assessment reports to the teacher.

Suggested Readings

1. English and Soft Skills. S.P. Dhanavel. Orient BlackSwan 2013
2. Fluency in English - Part II, Oxford University Press, 2006.
3. Business English, Pearson, 2008.
4. Language, Literature and Creativity, Orient Blackswan, 2013.
5. The Cambridge Grammar of the English language. Huddleston and Pullam, CUP,2002.

EGML0028: MYTH IN LITERATURE (2-0-0) (CREDITS: 02)

Course Outcomes

1. Remember some of the recurrent classical myths in literature (Remembering)
2. Understand that myths have strong metaphoric function (Understanding)
3. Understand how the application of the myth in the select texts throws more light in understanding the complex ideas therein (Applying)
4. Co-relate the original story in the myth to the story in the corresponding literature (Analyzing)
5. Rate the potentiality of the myth in leveraging literary ideas (Evaluating)
6. Adopt the myth as vehicle of thought in creative writings (Creating)

Module I: Myth Concepts (7 lectures)

Myth, mythology, mytheme, archetype, archetypal, archetypal criticism, mythopoeia, myth critics

Module II: Recurring Myths (15 lectures)

Myth of: Zeus (Jupiter/Jove), Venus (Aphrodite), Cupid (Eros), Adonais, Hercules, Odysseus, Achilles, Oedipus, Electra, Helen, Diana, Hera, Orpheus and Eurydice, Hades, Leda and Swan, Trojan War

Module III: Myth in Literature-significance of select myth (8 lectures)

Geoffrey Chaucer : Myth of Thisbe and Dido in *Legend of Good Women*
P.B.Shelley : Myth of Adonais in "Adonais"
W.B.Yeats : Myth of Leda and Swan in "Lead and the Swan"

T.S.Eliot : Myth of Phiomela, Cleopatra and Tiresias *The Waste Land*

Suggested Readings

1. Frye, Northrop. "Myth, Fiction and Displacement"
2. Graves, Robert (1955). *The Greek Myth*. Penguin, 1992
3. Matyszak ,Philip. *The Greek and Roman Myths – A Guide to the Classical Stories*. Thames and Hudson, 2010.
4. Powell, Barry B. *Classical Myth*. Oxford University Press, 2020
5. Bahun, Sanja. *Myth, Literature, and the Unconscious*. Routledge, 2013.

DEPARTMENT OF MASS COMMUNICATION

MCCS612: COMMUNICATION SKILLS (1-0-1)

Course Objectives

1. Identify the different styles of communication (Remembering)
2. Understand how to develop effective speaking skills (Understanding)
3. Evaluate various communication needs (Evaluating)
4. Develop professional oral & written communication skills (Applying)

Module 1: Basics of Communication (5 Lectures)

Essentials of effective Communication, Types & techniques of communication: Verbal & Non-Verbal Communication, Communication in organization, Communication Network in an Organization: Personal Communication, Internal Operational Communication, External Operational Communication.

Module 2: Oral Communication (13 Lectures)

Language in Communication, Phonetics, Spelling, Pronunciation, and Accent, Speech Drills, Oral Communication Skills: Seeking and giving information/suggestions/advice, Offering and responding to offers, Requesting and responding to requests, Congratulating people, Expressing condolences, Asking questions and responding politely, Apologizing and forgiving, Giving instructions, Seeking and giving permission, Expressing opinions, Group discussion, Seeking explanations, Expressing sympathy, Reading Skills: Skimming and Scanning, Levels of Reading, Reading Comprehension, Academic Reading Tips, Listening and speaking skills, Contextualised speaking.

Module 3: Written Communication (12 Lectures)

Writing Skills, Elements of Writing: Sentence, Phrases and Clauses, Forms of Written Communication, Formal & Informal Writing, Letter Writing, Notices, Summary, Note-making, Job application, Preparing a CV/Resume and Effective Profiling, Preparation of Cover letters, preparing for and Facing a Job Interview, Preparing a Presentation, Preparing Agenda and Minutes for Meetings, Writing Notices and Memos, Drafting an E-mail, Correspondence with Government Authorities/institutions, Office Orders, Enquiries and Replies, audience analysis.

Suggested Readings

1. Business Communication, Meenakshi Raman and Prakash Singh, 2012, Oxford University Press
2. Oxford English Grammar, Sydney Greenbaum, 1996, Oxford University Press
3. Effective Technical Communication, M. Ashraf Rizvi,2005, Tata McGraw Hill
4. Business Communication, Anjanee Sethi & Bhavana Adhikari, Tata McGraw Hill
5. Working in English, Leo Jones,2001, Cambridge University Press
6. Speaking Personally, Gillian Porter Ladousse,1983, Cambridge University Press
7. Communication Skills. Leena Sen, 2007, PHI Learning
8. English phonetics and phonology paperback with audio CDs (2): A practical course, P. Roach, 2009, Cambridge universitypress.

CO4		H	H

MCCW6123: CREATIVE WRITING (1-0-1)

Course Outcomes

1. Demonstrate understanding on various forms of creative writing (Understanding)
2. Apply the techniques of creative writing for storytelling (Applying)
3. Write contents for various purposes (Creating).

Module 1: Introduction to Creative Writing (10 lectures)

Writing as an Art, Types of writing, Principles of writing, Characteristics of Good Writing, Elements of Writing: Form, Content, Audience, Style & Structure, Meaning of creative writing, Creative process and abilities for writing, Challenges in Creative Writing.

Module 2: Process and Techniques of Creative Writing (10 lectures)

Finding the ideas, sketching the plot, characterization, conflict, climax, resolution, Action Description, Point of View, Dialogue, setting atmosphere, Using technology in process of writing.

Module 3: Writing Exercises (10 Hours)

Content Writing, Reviews writings, Blogging, Feature and Opinion Pieces, Creative Writing, Short Story, Poetry, Fiction, Essay, Adventure Story, Reflective Writing, Persuasive Writing – Commercials, Figurative Writing, Travel Writing.

Suggested Readings

1. Creative Writing – How to Unlock your Imagination, develop your writing skills – and get published, 7th Edition, AdeleRamet, 2007, Howtobooks
2. Creative Writing Course Book, Paul Mills, 2006, Routledge
3. The Cambridge Companion to Creative Writing, South Asian Edition, Morley, 2012, Cambridge University Press
4. The Five Minutes Writer, Margret Geraghty, 2007, HowToBook
5. The Cambridge Introduction to Creative Writing, David Morley, 2007, Cambridge University Press
6. The Psychology of Creative Writing, Scott Barry Kaufman and James C. Kaufman (Ed), 2009, Cambridge University Press
7. Word Power: A guide to creative writing, Julian Birkett, 2016, Bloomsbury Academic India
8. Writing on Both Sides of the Brain: Breakthrough Techniques for People Who Write, Henriette A Klauser, 1987, HarperOne

Course Outcomes	Module 1	Module 2	Module 3
CO1	H	H	
CO2	H	H	
CO3			H

MCEM6124: EVENT MANAGEMENT (1-0-1)

COURSE OUTCOMES

1. Understand the relevance of event management as a professional skill and career option (Understanding)
2. Demonstrate an in-depth understanding of the intricacies of managing an event (Applying)
3. Examine individual and team orientation in event planning and management (Analysing)
4. Plan and organise an event (Creating)

Module 1: Introduction to Event Management (6 lectures)

Concepts and types of events, Understanding and Introduction to the events landscape, Idea generation, Conceptualisation: Techniques/Methods.

Module 2: Event Planning and Administration (8 lectures)

Developing event vision/mission, objectives and goals, Event proposal, Strategic planning techniques: Action Plans; Event Group Sustainability methodologies, Logistics and operations: Use of work plan structures; time-plans; worksheets; Gantt Charts, Legal frameworks: Licenses and Permissions, Event administration strategies, Resource Mobilisation and techniques, financial management.

Module 3: Event Marketing (8 lectures)

Target Group Segmentations: Concepts and Strategies, Strategic and Integrated Marketing Communications for events, Event Branding, Digital marketing and audience building for events, Marketing plan creation; strategies and implementation, Skills for event managers and planners: negotiation and networking skills; image management; leadership.

Module 4: Post Event Documentation and Evaluation (8 lectures)

Documentation: aims; methods and techniques, Event evaluation methodologies, Audience feedback and review

mechanisms, developing event follow-up strategies and action plans, Developing the Event Planners Journal.

Suggested Readings

1. Event Management and Marketing: Theory, Practical Approaches and Planning, 1st Edition, Anukrati Sharma and ShrutiArora, 2018, Bharti Publications
2. Events Management: An Introduction C. Bladen, J. Kennel, 2012, Routledge
3. Event Marketing: How to Successfully Promote Events, Festivals, Conventions and Expositions, Leonard H. Hoyle, 2002,John Wiley and Sons Inc
4. Event Planning, 2nd Edition, J. Allen, 2009, Wiley
5. Event Planning: The Ultimate Guide, J. Allen, 2000, Wiley and Sons.
6. Planning Special Events, J. S. Armstrong, 2001, Josse Bass Wiley
7. Public Relations Campaigns and Techniques, F.R. Matera & R.J. Artigue, 2000, Allyn & Bacon
8. Special Events: A New Generation and the Next Frontier, 6th Edition, J. Goldblatt, 2010, Wiley.

CO4	H	H	H	H

DEPARTMENT OF PSYCHOLOGY

PDSP6117: SCHOOL PSYCHOLOGY
(2 credits- 30 hours)

Course Outcomes

1. Gain knowledge about the concept of School Psychology. (Remembering)
2. Understanding the process of school counseling. (Understanding)
3. Analyze the needs of school children in the new digital world. (Applying)
4. Apply principles and concepts of counseling in school set up. (Analyzing)
5. Evaluate the gaps in the current scenario. (Evaluating)
6. Create a comfortable environment for children in need of intervention. (Creating)

Module 1: Introduction (5 hrs)

Historical background of school psychology, Definition nature and scope of School Psychology, Role of a School Psychologist as a Professional

Module 2: Guidance and Counseling in School setting (15 hrs)

Definitions, Ethics and Legal aspects, Characteristics of an effective counselor, Basic Counseling Skills- Active listening, reflecting, paraphrasing, questioning, confronting, Counseling process- Building, maintaining and terminations counselor's relationships.

Module 3: Tools and Techniques Practice (10 hrs)

Objective tools: Checklist, rating scales, self report inventories and other standardized tools.
Subjective Tools: Observation, anecdotal records, cumulative Records, Interview and case history
Techniques for group intervention: Group tasks, Group discussion, debriefing and interpretation, summary making.
Techniques for individual intervention: role plays, individual assignments, feedback charts
Importance of Record Keeping

Suggested Readings

1. Rao, Ramakrishna & Parnajpe, Anand (2008). Handbook of Indian Psychology. New Delhi: Cambridge University Press India Pvt. Ltd.
2. Thomas, Murray R. (1990) Counseling and Life – Span Development. New Delhi: Sage Publications,

PDCM6118: COMMUNITY MENTAL HEALTH

(2 credits- 30 hours)

Course Outcomes

1. Gain knowledge about the underlying principles of Community Mental Health. (Remembering)
2. Understand current trends of practice and intervention. (Understanding)
3. Apply basic intervention skills in their community projects. (Applying)
4. Analyze gaps in the current functioning of Community Mental Health at regional levels. (Analyzing)
5. Evaluate intervention techniques in multicultural set ups. (Evaluating)
6. Organize awareness programmes for communities. (Creating)

Module 1: Introduction (2 hours)

Basic Principles of Community Mental Health, Counseling Skills, Counseling in Multicultural set up

Module 2: Mental Health Issues (6 hours)

Intellectual disability, Addiction, Developmental disorders, Suicide

Module 3: Identification, Assessment and Intervention (7 hours)

Identification of Mental Health Issues, Assessment of Mental Health Issues, Psycho-education, Evidence Based Practices (Behavior Therapy, Cognitive Behavior Therapy, Rational Emotive Behavior Therapy)

Module 4: Practical (15 hours)

Community Mental Health Projects

Suggested Readings

1. Community Mental Health; Challenges for the 21st century. (2006). Rosenberg, J. & Rosenberg, S. Rotutledge
2. Ethics in Community Mental Health Care. (2002). **Backlar**, Patricia & **Cutler**, David L. (Eds.). Springer US.
3. Community Mental Health and Behavioral-Ecology; A Handbook of Theory, Research, and Practice.(1982). Editors: Jeger, A.M., Slotnick, R.S. (Eds.). Springer US
4. Community Mental Health: Putting Policy Into Practice Globally.(2012).Graham Thornicroft , Atalay Alem, Robert E. Drake, Hiroto Ito, Jair Mari, Peter McGeorge, R. Tara, Maya Semrau (Ed.). Wiley-Blackwell

PCLS6119: LIFE SKILLS EDUCATION

(2 credits-30 hours)

Course Outcomes

1. Choose and gain knowledge about themselves, develop consciousness of self, self-confidence, feelings of mattering, manage personal emotions (Remembering)
2. Able to relate and work with others, practice collaborations, controversy with civility, engage across difference, be committed to ethical action (Understanding)
3. Apply self-knowledge, practice self-worth, congruence, commitment, identify passions and develop common purpose (Applying)
4. Able analyse academic knowledge and integrate into all aspects of living (Analysing)
5. Learn to evaluate and improve upon personal leadership strengths and weaknesses (Evaluating)
6. Create effective change and practice collective efficacy, develop critical thinking/ decision making skills, common purpose and a sense of connectedness within one's communities. (Creating)

Module –I: Introduction (5 hours)

- Definition and Importance of Life Skills
- Livelihood Skills, Survival Skills and Life Skills
- Life Skills Education, Life Skills Approach, Life Skills Based Education
- Life Skills Training - Implementation Models
- Life Skills Education in the Indian Context

Module-II: Social Skills and Negotiation Skills (8 hours)

Introduction

Life Skills: Generic, Problem Specific and Area Specific Skills

• Self-Awareness
  - Definition, Types of Self
  - Self Concept, Body Image, Self Esteem
  - Techniques used for Self Awareness: Johari Window, SWOT Analysis
• Empathy
  - Sympathy, Empathy & Altruism
• Effective Communication
  - Definition, Functions, Models, Barriers
• Interpersonal Relationship
  - Definition, Factors affecting Relationships

Module-III: Coping Skills (5 Hours)

Coping with Emotions

Coping Skills

• Coping & Emotions
  - Definition, Characteristics, Types
  - Classification: Wheel Model, Two-Dimensional Approach
  - Coping Strategies
• Coping with Stress

Definition, Stressors
  - Sources of Stress
  - The General Adaptive Syndrome Model of Stress
  - Coping Strategies

Module-IV: Practical (12 hours)

Life Skills in Specialized Areas

- Peer Education
- Life Skills for Disaster Preparedness
- Life Skills for Corporate Sector
- Life Skills for Special Population
- Life Skills for Geriatric and Palliative Care
- Life Skills in Practice in Educational Settings

PCFA0120: PSYCHOLOGICAL FIRST AID
(2 Credits-30 Hours) (L-T-P: 2-0-0)

Course Objective: To acquire the basic knowledge about the crisis management strategies and immediate intervention techniques.

Course Outcome:

1. Explain the nature and core competencies required for Psychological First Aid. (Understanding)
2. Apply the basic techniques for relaxation and stress management. (Applying)
3. Examine the need for psychological first aid. (Analysing)
4. Evaluate the need for multidimensional crisis intervention. (Evaluating)

Module-I: **Psychological First Aid (5 Hours)**
Definition and History, Defining Psychological First Aid Development of the PFA Concept, PFA -Core Competencies of PFA, Validation of the Johns Hopkins RAPID PFA Model

Module-II: Intervention and Management (10 Hours)
Intervention Tactics to Stabilize and Mitigate Acute Distress, Explanatory Guidance, Anticipatory Guidance, Cognitive Reframing Stress Management, Instillation of a Future Orientation—Hope, Enlisting the Support of Family and Friends Delay Making Any Life-Altering Decisions/Changes Faith-Based Intervention in PFA, Demonstration of the I in RAPID Model

Module-III: Post Traumatic Stress: (7 Hours)
The Need for a Multidimensional Approach, Patient Suicide: Clinical Assessment, Step-Wise Plan for Interventions & Management

Suggested Readings

DEPARTMENT OF ECONOMICS

ENOS6002: INTRODUCTION TO STOCK MARKET
(2-0-0)

Objectives: The goal of this course is to provide students with a comprehensive understanding of the workings of the stock market, including the market structure, trading and settlement procedures, processes, and related components, as well as the regulations governing the stock market and the emerging challenges it faces.

Course Outcomes
CO1: Get an idea of the capital market in India, its working and the use of various financial Instruments. (Remembering & Understanding)
CO2: Applying the various terminology of stock market in the process of trading of stocks. (Applying)
CO3: Get an exposure to the working of the stock market with of practical touch and develop the ability to analyze the risk and profitability in investing on stock market. (Analyzing)
CO4: Enable the students to evaluate investment instruments of the money market and compare the different types of Financial Securities. (Evaluating)

Module I: The Stock Market and its Operation (12 Hours)
Role and Structure of Money and Capital Market; Instruments of Capital Market –Share, Debentures, Equity and Bond; The Stock Market and its Operation; Stock Market Index – The BSE Sensex and the NSE Nifty; Role and working SEBI; Impact of SEBI on Capital Market in India; IDRA and its role in Financial Markets

Module II: Terminology of Stock Market (10 Hours)
Strike Price, Call Option, Put Option; Bull and Bear market; Beta, Delta, Bid, Blue chip stock; Board Lot, Odd Lot ; Out of the Money (OTM), Stock split

Module III: Trading of Stock (13 Hours)
Recent development of stock exchange; Stock trading on BSE and NSE; Stock market trading mechanism; Online stock trading(practical demonstration);OTC exchange; Stock indices in India and abroad-commodity exchange, overviews of derivatives in financial market, basic derivatives operation and trading

Module IV: Commodity and Currency Markets (10 Hours)
Commodity exchanges: evolution and history – role in globalizing economy – governing regulations –price –risk management – commodity exposure – hedge accounting – currency futures – managing exchange rate – carbon markets – weather derivatives – ETFs – Purpose, Importance, types, construction

Suggested Readings

7. System, Prentice Hall, Englewood-Cilffs, New Jersey

ENDA6005: DATA ANALYSIS WITH SPSS/STATA
(0-0-2)

Course Outcomes
CO1: Identify the importance of SPSS in economic analysis. (Applying)
CO2: Analyse the uses of statistical packages for accurate analysis of data. (Analyzing)
CO3: Explain the importance of presentation of data. (Evaluating)
CO4: Discuss the various key aspects of statistical relations and its applicability. (Creating)

Module I: Introduction to Statistical Packages (15 Hours)
MS-Word, MS-Excel, SPSS; Basic Operations – File, Edit, View, Data, Data Set Creation and Management; Evaluation of Data Quality and Data Cleaning; Statistical Analysis using SPSS – Summary, Tabulation and Comparison of Summary Statistics

Module II: Presentation of Data (15 Hours)
Diagrammatic Presentation; One Dimensional – Single, Subdivided, Multiple Deviation; Two Dimensional –Histogram, Pie Diagram; Three Dimensional – Rectangular, Cube; Pictograms and Cartograms; Scatter; Line and Radar Diagrams; Tabular Presentation – Single, Double, Multiple

Module III: Basic Statistics and Statistical Relations (15 Hours)
Frequency; Summation; Maximum; Minimum; Mean; Median; Mode; Standard Deviation; Skewness; Covariance;

Correlation – Bivariate, Partial, Rank, Correlation Matrix; Simple Linear Regression

Suggested Readings:

1. Field, A. (2013): Discovering Statistics Using IBM SPSS Statistics, Sage Publication
2. Field, A. (2017). Discovering statistics using IBM SPSS Statistics (5th Ed.). Thousand Oaks, CA, USA
3. Gupta S.C, Fundamentals of Statistics, Himalaya Publishing House, 2018

ENRC6008*:* RECENT DEVELOPMENTS IN MONETARY POLICY IN INDIA

(2-0-0)

Objective: This course will examine the influence that monetary policy has on some of the most important aspects of the economy, including interest rates, inflation, and the banking sector, among other topics.

Course Outcome (CO):

CO1: To impart a complete and detailed insight of monetary policy in India. (Remembering & Understanding)
CO2: To educate the students about the contemporary policy reforms taken in to design current monetary policy. (Applying)
CO3: To inform and aware the students about the use of various instruments of monetary policy (Analysing & Evaluating).
CO4: To decipher the knowledge among students about the design, implementation and policy assessment of monetary policy practiced by Reserve Bank of India. (Creating)

Module 1: Overview of Monetary Policy (10 Hours)

Overview: Basic concepts, objectives, advantages and disadvantages, design, instruments and implementation of monetary policy in India; Assessment and Evaluation of monetary policy and the role of monetary policy in economic growth in the context of India economy and problems of monetary policy in India

Module 2: Policy Implication of Monetary policy (10 Hours)

Policy implications of monetary policy: Expansionary and Contractionary monetary policy in the context of India; Working of monetary policy with fiscal policy; Major policy reforms in monetary policy in India after 21st century and their impacts on Indian economy: CRR, SLR, Bank Rate, Base Rate, Repo and Reverse Rate.

Module 3: Monetary policy and Indian Economy (10 Hours)

Impacts on various instruments on monetary policy on Indian economy; other instruments, Liquidity Adjustment Facility (LAF), Marginal Standing Facility (MSF) and Market Stabilisation Scheme (MSS); Assessment and Evaluation of monetary policy and the role of monetary policy in economic growth in the context of India economy and problems of monetary policy in India

ENCF6009: CONSUMER DECISIONS AND FINANCIAL LITERACY

(2-0-0)

Course Outcome (CO)

CO1: The course will enable the students to understand the financial instruments and how it performs.
CO2: The course is intended to make sure students will be able to understand the consumer decision over financial matters.
CO3: The course is intended to make the students aware about the different financial services and personal financial management.
CO4: The course will enable the students to be aware about various consumer rights and laws.

Course Content
Module I: Instruments of Finance (10 hrs)
Introduction to Indian financial system; Understanding financial instruments; Types of financial instruments - saving accounts, current account, fixed account, cheques, stocks and mutual funds.

Module II: Consumer Rights and Decision Making (10 hrs)
Financial Decision making; Factors affecting financial decisions; Consumer credit, credit law and Rights; Banking ombudsman law; RTI; Negotiable instrument

Module III: Banking and Consumers (10 hrs)
Different types of banks; Types of bank account; Different types of loans; Personal bankruptcy; Insurance; Digital banking

Suggested Readings
1. Pathak, B., Indian Financial System Markets: Institutions and Service, Pearson Publication, 3rd Edition, 2010
2. Khan M. Y. (1996), Indian Financial Systems, Tata McGraw Hill, New Delhi

DEPARTMENT OF PUBLIC ADMINISTRATION

PACS0022: CIVIL SERVICE IN INDIA
Credits: 3 (45 lectures) (45 Hours)

Course Outcomes
At the end of this course students are able to:
1. Understand the Concept, Significance and Evolution of Civil Services (Remembering & Understanding)
2. Understand the Concept of Bureaucracy and its historical evolution (Understanding)
3. Analyze the Changing Nature of Public Services (Analyzing)
4. Evaluate the Civil Services in the context of Globalisation (Applying)

Module I (10 hours)
Civil Services: Concept, Significance and Evolution of Civil Services; Classification of Civil Services (All India Services, Central Services, State Services and Local Services); Union Public Service Commission and Other Service Commissions

Module II (10 hours)
Bureaucracy: Concept of Bureaucracy – Historical Evolution; Civil Service: Neutrality and Commitment; Relationship between Politicians and Civil Servants

Module III (10 hours)
Public Personnel Administration: Recruitment; Methods and Significance; Training of Public Servants in India- Promotion System in India; Disciplinary Procedure for Civil Servants

Module IV (10 hours)
Civil Services-Citizenry Interface: Civil Society and Administration; Technology and Changing Nature of Public Services; Ethics and Accountability

Module V (05 hours)
Indian Civil Services: Major Issues - Generalists and Specialists Controversy, Civil Services in the context of Globalisation, Civil Service Reforms- IInd ARC Recommendation

Suggested Readings
1. P. N. Parashar- History and Problems of Civil Services in India

2. Yogendra Narain- Civil Services: Challenges And Resolutions
3. Abhay Prasad Singh & Krishna Murari - Constitutional Government and Democracy in India
4. S.K. Das - The Civil Services in India
5. Lohit Matani, Vishal - An Introduction to Civil Services

PAIG0023: INNOVATION IN GOVERNANCE

Credits: 3 (45 lectures) (45 Hours)

Course Outcomes

At the end of this course students are able to:

1. Understand the Institutional Framework for Promoting Innovations (Remembering & Understanding)
2. Understand the Methodological Approach for studying best Practices (Understanding)
3. Analyze the Innovations in Public Services (Analyzing)
4. Evaluate the role of citizen's participation in governmental innovations (Applying)

Module – I (10 hours)

Innovations in Governance: Meaning of innovation in governance; Perspectives and Challenges; Characteristics and Patterns of Innovations; Institutional Framework for Promoting Innovations; Public Governance and Innovations: Administrative Reform to Innovation Discourse

Module – II (10 hours)

Understanding Innovations: Innovation for Achieving a Quality of Life, Methodological Approach for studying best Practices, Capacities for Innovation and Best Practices

Module – III (10 hours)

Innovations in Public Services: Recent trends; Innovation Capacity in Organizations; Leadership and Innovation; Innovations in different sectors: General Administration, Urban Administration, Health Administration, Private Sector, Agriculture, etc

Module – IV (10 hours)

Transferability of Best Practices and Innovations: The Ombudsman against Corruption, Technology and Changing Nature of Organizations, Best Practices of Knowledge Management Framework, Diffusion of Innovation in a Development Context

Module – V (05 hours)

Issue Areas: Originality and Replication of Innovations; Innovation with or Without Improvement; Citizen Participation in Government Innovations; Research in Innovative Governance

DEPARTMENT OF ZOOLOGY

ZGPR6004: PROJECT MANAGEMENT, REPORTING AND DOCUMENTATION (30 HOURS) (P/NP)

Course Outcomes

1. Identify qualities of a successful entrepreneur and develop competencies. (Applying)
2. Construct economically and socially sound business ideas. (Creating)
3. Analyze the potentials of a social catalyst and examine case studies. (Analyzing)
4. Assess plans for effective preparation of Detailed Project Report (DPR) and financials of a DPR. (Analyzing)
5. Develop skills for project implementation and management. (Applying)
6. Define concept of market. (Remembering)
7. Distinguish different methods of Bookkeeping and Accountancy. (Analyzing)
8. Adapt effective plans for preparing accurate project report and practicing positive documentation. (Creating)

Objective	Help the student to understand Entrepreneurship, identification of qualities of a successfulentrepreneur & how to develop it
Module I: Entrepreneurship : Concept and Functions • Who is an entrepreneur? • Entrepreneurial competencies(Initiative, Creativity and Innovation, Risk Taking and Risk Management, Problem Solving,Leadership, Persistence, Quality Performance, • Information Seeking, Systematic Planning, Persuasion and Influencing Others, • Enterprise Launching Competencies, Enterprise Management Competencies) • Functions of an entrepreneur (Promotional functions: Innovation, Risk-taking, • Organisation Building, Discovery of an idea, Detailed Investigation, Assembling the Requirements, Financing the Proposition. Managerial functions: Planning, Organizing, • Staffing, Leadership, Supervision, Communication, Motivation, Controlling. • Commercial Functions : Production, Finance, Marketing, Accounting) • Types of entrepreneur (Innovative Entrepreneur, Imitative Entrepreneur, Fabian • Entrepreneurs, Drone Entrepreneurs) • Entrepreneurship: meaning and definition; types of entrepreneurship; • entrepreneur and entrepreneurship • Difference between entrepreneur and employee	
Objective	Help the students to generate various business ideas and link the best one with them
Module II: Generation of business ideas and linking • EDP: Meaning, Need, Importance of EDP • Necessity of generating ideas • Ways to generate ideas, Area Assessment Survey – Modes (Desk Research, Field • Work, Market Need Based Opportunities, Ideas from Existing Entrepreneurs) • Linking business ideas with the entrepreneur • Methodology of Opportunity Identification & Profiling Business Ideas (Preparation of Personal Profile, Development of OS (decision making) Framework, Snap Investigation of ideas generated, Evaluation in terms of OS (decision making) Framework and Short-listing of Ideas, Pre-feasibility Studies, Errors in Selection, Final Opportunity Selection) • Preparation of business project plan and business project plan execution (Summary of the Project/Project at a Glance, General Information, Details of the Proposed Project, Market Potential, Manufacturing Process, Production Programme/Sales Revenue, Cost of Manufacturing and Profitability Projections)	
Objective	To impart knowledge on social entrepreneurship

Module III: Social entrepreneurship • Who is a social entrepreneur (definition and case study) • Difference between entrepreneurship and social entrepreneurship • Characteristics of social entrepreneur (Social Catalysts, Socially aware, Opportunity- seeking, Innovative, Resourceful, Accountable) • Examples and case study	
Objective	To impart knowledge on preparation of DPR
Module IV: Preparation of Detailed Project Report (DPR) and financials of a DPR • Business plan : key questions • Technical arrangement & Production process (Manufacturing process, Sources of technical know how, plant & machinery, Supplier identification & supplier selection, Raw materials, packaging, land requirement, utilities and manpower, financial viability) and Location selection (Layout, built up area etc). • Product and Market (Product description, Capacity, Market study and market demand, Product mix, Branding, Channels of distribution, Advertising and Promotion etc.) • Project cost and means of finance (Land, site development, building and civil works, plant and machinery cost, other fixed assets, technical knowhow fees, preliminary and preoperative expenses, working capital margin, contingency and escalation) • Income analysis (Capital utilisation and income estimate, Expenditure estimate, Profit estimate, income tax estimate, profitability ratios : TC ratio, cash flow estimate, risk analysis, sensitivity analysis etc.)	
Objective	Impart knowledge on implementing, managing and monitoring the progress of the selected project
Module V: Project implementation and management • Understanding Total Quality Management (Acceptable Quality Level, Benchmarking, Deming Wheel, ISO 9000,Pareto Analysis, Quality Circles, Measures of Central Tendency and Dispersion, Geometric Moving Average, Statistical Process Control etc.) • Goal Oriented Project Planning (Project Planning Matrix and Product Matrix) • Project Activity Planning and Implementation (Gantt Charts, the Programme Evaluation and Review Technique (PERT) andCritical Path Method (CPM) of project scheduling) • Soft skills for launching and managing a project (Creativity and Problem Solving, Interpersonal Communication, Persuasion and Use of Influence Strategy, Negotiation and Networking, Delegation of Authority and Work Effort, Efficiency Orientation As a Trait, Leadership, Concept of risk and risk taking, Legal Requirements, Types of business organisation) • Managing Business Crisis – Starting and Liquidity Crisis	
Objective	To impart the Knowledge of different component of Market
Module VI: Concept of market • Traditional market • Emerging market : E commerce • Analysing the market environment 4 • Researching the market and market survey • Marketing mix • Product mix • Promotion mix • Price mix, method of pricing	
Objective	To impart knowledge on Book Keeping
Module VII: Bookkeeping and Accountancy • Basic concept of Accounting (Management and financial accounting) • Basic books of accounts (Journal, Purchase book, Purchase return book, Sales book, Sales return book, ledger book, Cash book etc.) • Financial statement: Meaning, Importance • Profit and loss account • Balance sheet • Depreciation and adjustment etc. • Interpretation of financial Statement (Liquidity, Current ratio, Profitability ratio, Inventory turnover ratio, Debtors turnover ratio, ROI etc) • Fund flow Analysis	
Objective	To impart knowledge on Documentation and Reporting

Module VIII: Documentation and Reporting
- Why to Document
- What is a Documentation Report
- When and How to prepare the Documentation Report
- Typical format of a Documentation report
- Layout of the Report
- Writing a Report

ZGWP6011: INTRODUCTION TO WILDLIFE PHOTOGRAPHY (30 HOURS, L-T-P: 2-0-0) (P/NP)

Course Outcomes
1. Discuss the history of Photography, moving images and Stock photography Creating)
2. Demonstrate a brief understanding of ethics of journalism, photo journalism and sources (Understanding)
3. Assess the importance of digital technology in photography (Evaluating)
4. To define camera basics and different genres of photography (Remembering)

Learning Objective
1. Through theory and practical assignments, this class provides the students with hands on experiences in photography. Lectures, field studies, guest instructors, student presentation and group work will help you develop the analytical basisand insight to reflect upon and assess the impact of photographs on our ideas of the world.
2. By the end of this course, Students will: Be able to start their career in photography. Will be able to create picture story

/ Photo Essays and understand the conventions and challenges of telling stories through images
3. Gain personal leadership through challenging, intercultural assignments

Objective: This module will help to understand the students about photography basics
Module I: Introduction to photography
Camera Basics, Types of Camera, Operating a Camera, Exposure, Aperture & Shutter Speeds Light Meter, Depth of Field, Choosing Lenses, Types of lens, Lighting, Flash Photography, Filters, Steady Shooting, Composition in wildlife Photography.

Objective: *This module will help to understand the students about different types of photography in details*
Module II: Different genres of photography
Mobile Photography, **Microscopic photography**, **Macro photography, Drone photography, Wildlife Photography**

Objective: Post production is an important part of photography student will learn post-production in this module
Module III: Post Processing
Enhancing Photographs, Organizing the Picture, Quality Control, Intermediate/advanced use of post-production software like Adobe Photoshop, Lightroom etc

Objective: How to earn the livelihood from selling your images internationally
Module IV: Stock Photography
Introduction to Stock Photography, How to contribute to various stock photo agencies. Causes of rejections, SubmittingGuidelines, Meta Data

Objective: This module focuses on photojournalism.
Module V: Ethics in Wildlife Photography
How to prepare for a photo tour (Dress code in wildlife photography, permissions, water bottle, notebook and other accessories) How to remain safe during shooting (How close is too close, keeping antivenom & antiallergen; leach guard, safety of gears used) Ethics in wildlife photography (knowing Schedules of animals in Wildlife (Protection) Act, 1972, not using any bait, not taking any animal out of its habitat without permission, non use of flash, not altering the habitat)

ZGTM6010: TEACHING METHODOLOGY AND CLASSROOM MANAGEMENT (30 HOURS: P/NP)

Course Outcome (CO)

1. Define different concepts of teaching skills (Remembering)
2. Create effective teaching instruction (Creating)
3. Evaluate assessments (Evaluate)
4. Make use of ICT(Analyzing)

Module I: Introduction to Core teaching Skills -Micro- teaching

a) Introduction to Methods, Maxims, Devices and techniques of teaching. Practice teaching on Core teaching Skills in Microteaching mode.
b) Approaches and methods of teaching Science - (i) Lecture, demonstration, explanation, Observation. (ii) Ensuring Problemsolving, laboratory, Project, Heuristic, Discussion for teaching science. (iii) Learning by discovery, group work and team teaching. (iv) Collaborative strategies, provision in heterogeneous classroom.

Module II: Planning and designing for effective instruction in science

a) Design of unit and lesson planning approaches to lesson planning, format of lesson plans
b) Teaching aids and laboratories in science, their necessity and importance.
c) Museum, field trips and excursion, their relevance to science. Preparation of simple aids of Science teaching.

Module III: Evaluation of Learners Progress

a) Concept and importance of assessment & evaluation.
b) Techniques of evaluation (Theory & Practical)
c) Construction of Unit test: Design and blueprint, Item construction, Question wise analysis, Construction of Science question paper including marking scheme.

Module IV: Information and Communication Technology (ICT) Integration in Science teaching

a) Introduction to ICT
b) Importance of ICT in Science teaching.
c) Exploring various ICT tools for Science teaching.
d) Open Education Resources (OER) and its uses in Science teaching.
e) ICT Integration in Science teaching.
f) Exploring FOSS in Science teaching

ZGSE6024: SOFT SKILL & EMPLOYABILITY SKILL DEVELOPMENT
(30 Hours)
Course Outcomes:

CO1: After this course students will be able to develop their personality which is important for their career. (Applying)
CO2: Students will be able learn the different types of communication skill. (Understanding)
CO3: Students will have the skills for time management, interview skills, presentation and public speaking skills (Applying)

Module I: Personality Development: (6 hours)

a) Definition of Personality, types of personality, identification of different types of personalities.
b) Characteristics of different types of personalities and their behaviour
c) How to develop an attractive personality?
d) Personality test and role plays.

Module II: Communication Skill: (6 hours)

a) Interpersonal Skill: Definition of Interpersonal skill, Importance of interpersonal skill, three principles of interpersonal skill.
b) Body Language & Etiquette: Non-Verbal communication, Features of body language; Different types of Body language; Positive & Negative body language; Mobile etiquette and table manners; Personal grooming and self-care.

Module III: Time management: (6 hours)
a) Preference and prioritize work schedule
b) Preparation of To-Do list
c) Eishenhower's matrix of Time management
d) Ways to reduce time management

Module IV: Presentation & Public speaking Skill: (6 hours)
a) Elements of Public speaking skill
b) How to develop self-confidence to overcome stage fear.
c) Step by step guidance to construct a speech for presentation.
d) Do's and Dont's in public speaking and presentation

Module V: Interview Skill: (6 hours)
a) Right ways to prepare for job interview.
b) Difference between Bio -Data, CV, Resume
c) CV Writing skill, Interview skill and Mock Interview

ZGRS6025: FUNDAMENTALS OF GIS AND REMOTE SENSING
(30 HOURS)
Course Overview:
This course aims to provide students with a comprehensive understanding of the fundamental principles and applications of Geographic Information Systems (GIS) and Remote Sensing. Over 30 hours, students will explore key concepts, tools, and techniques used in the geospatial industry, enhancing their skills in spatial data analysis and interpretation.
Course Outcomes:
CO 1: Understanding: Describe the fundamental concepts and components of GIS and Remote Sensing.
CO 2: Analyzing: Evaluate spatial data and imagery to identify patterns and relationships.
CO 3: Applying: Utilize GIS software and Remote Sensing techniques to solve real-world spatial problems.
CO 4: Understanding/Applying: Interpret geospatial data and communicate findings effectively through maps and reports

Module 1: Introduction to GIS (10 Hours)
Basics of Geography, Latitude and Longitude, Map Projections, Map Scale, Spatial Data Types, Geospatial Thinking.
Definition and History of GIS; Applications
Key components and functions of GIS and the interrelationship with maps
Types of spatial data: vector and raster; Data models and structures: points, lines, polygons, and grids.
Coordinate systems and map projections, Basics of spatial analysis and querying

Module 2: Fundamentals of Remote Sensing (10 Hours)
Principles of Remote Sensing: electromagnetic spectrum and energy interactions
Remote Sensing platforms and sensors: satellites, drones, and aerial photography
Types of imagery: multispectral, hyperspectral, and thermal Image acquisition and processing techniques
Interpretation of satellite imagery Applications of Remote Sensing in different domains (Ecology, Agriculture, Urban Planning, Disaster management, etc.)

Module 3: GIS and Remote Sensing Integration and Applications (10 Hours)
Integrating GIS and Remote Sensing data spatial data analysis techniques: overlay, buffer, and spatial statistics
Advanced GIS analysis: network analysis, terrain modelling, and 3D visualization
Image Classification, LULC mapping, Accuracy assessment. Hands-on projects using GIS software (e.g., QGIS, ArcGIS)
Presentation of project findings

HAEM6027: BASICS OF EVENT MANAGEMENT

(2 Credits: 60 hours) (L-T-P: 0-0-2)

Objective(s): The objective of the course is to learn about event management basics which is very beneficial as a value-added course

COURSE/ LEARNING OUTCOMES: At the end of this course student will be able to:

CO 1: Understand the basics of event management, its characteristics and types (Understand)

CO 2: Identify the demand /scopes of events as well as the promotion & creation perspective of events (Knowledge)

CO 3: Analyze and study the competencies /challenges faced by an event manager (Analyze)

CO 4: Develop and create business plan for event company (Create)

Module 1: INTRODUCTION TO EVENT MANAGEMENT (6 hours)

a) Definition of Events
b) Classification/Types of Events
c) Competencies Required: Being an Event Entrepreneur
d) Managing an Event Management Company

Module 2: DESIGNS & DECOR (8 hours)

a) Formation of designs
b) Event Color schemes
c) Types of lighting
d) Flower arrangement – original, artificial & sustainable

Module 3: SELECTION OF EVENT LAYOUTS (4 hours)

a) Function equipment's
b) Table Set – ups

Module 4: PROMOTION & MARKETING (6 Hours)

a) Advertisement tools
b) Marketing campaign
c) Event posters & designs

Module 5: ORGANIZING AN EVENT (6 hours)

a) Venue Site Selection
b) Menu Planning
c) Organizing theme event

Module 6: Assignment: (30 hours)

All the students have to choose one assignment from the given list and have to prepare it in detail under the supervision of the concerned faculty & present it during the end semester lab evaluations:

a) Prepare a list of around 100 events from various social media platforms and categorize them.
b) Plan a theme based destination wedding with all details of color and lighting as per requirement.
c) Construct & design a flower arrangement using artificial and sustainable things.
d) Prepare a written master plan for a special event. The plan should be comprehensive and detailed including at a minimum the following information: title of the event, purpose and goals of the event, description of the target population, plans for marketing and advertising, detailed description of the nature of the event, organizational and staffing arrangements, financial arrangements (expenses and sources of revenue) and a schedule of major tasks and activities to be followed in planning and conducting the event.
e) Construct a menu for wedding/ birthday/theme party as per the number of Pax and do the menu costing to generate profit from the function.
f) Prepare a list of event management companies in your city and interview any one of them. Prepare a list mentioning various decorators, caterers and transporters they are associated with

FIVE YEAR INTEGRATED PROGRAMMES

CONTENTS

REGULATIONS FOR INTEGRATED MASTERS PROGRAMMES

ASSAM DON BOSCO UNIVERSITY REGULATIONS 2024-2025

INTEGRATED MASTERS PROGRAMMES

(Applicable to Five Year Integrated MBA and Integrated MCA)

Subject to the provisions of *NEP 2020 with Multiple Entry and Multiple Exit*, following are the regulations of Assam Don Bosco University concerning Integrated Masters Programmes leading to the award of the Master's Degree in Five year integrated Degree

1.0 Academic Calendar

1.1 Semester**:** Each academic year is divided into two semesters of approximately 90 working days: An Autumn Semester (July – December) and a Spring Semester (January – June). The Autumn Semester shall ordinarily begin in July for students already on the rolls and the Spring Semester shall ordinarily begin in January. However, the first semester (autumn, for newly admitted students) may begin later depending on the completion of admission formalities.

1.2 Summer Term: A summer term is for eight weeks during summer vacation. Internship/apprenticeship/work-based vocational education and training can be carried out during the summer term, especially by students who wish to exit after two semesters or four semesters of study. Regular courses may also be offered during the summer on a fast-track mode to enable students to do additional courses or complete backlogs in coursework.

1.3 The schedule of academic activities approved by the Academic Council for each semester, inclusive of the schedule of continuous evaluation for the semester, dates for the conduct of end-semester examinations, the schedule of publication of results, etc., shall be laid down in the Academic Calendar for the semester.

2.0 Admission

2.1 All admissions to the Integrated Masters Programmes of the University shall be on the basis of merit. There may, however, be provision for direct admission for a limited number of NRI/FN students.

2.2 **Eligibility Criteria**: To be considered for admission to an Integrated Masters Programme a candidate should have passed the Higher Secondary examination of a recognized Board of Higher Secondary Education or an equivalent examination of any University / Board/ or equivalent stage of education corresponding to Level-4 * (cf. 2.1)

2.2.1 Admission will be on the basis of performance of the candidate at the qualifying examination, entrance test and/or personal interview and/or CUET Score any other entrance tests approved by the competent authority.

2.3 Reservation of seats for the programme shall be as per the guidelines laid out in the Statutes of the University (As approved by the competent authority) .

2.4 Admissions shall ordinarily close after a specified period from the date of commencement of the first semester, through a notification. However, in exceptional cases, admission of a candidate after the last date may be recommended to the University with justification, by the School / Departments concerned. Under such an event, this period shall not exceed four weeks from the date of commencement of the first/third semester.

2.4.1 The attendance of such students shall be computed from the date of admission.

2.4.2 Such students may be offered the opportunity of taking part in in-semester assessment modules which may have already been completed.

2.5 All candidates shall be required to satisfy the norms prescribed by the University for Medical Fitness prior to admission.

2.6 **Anti-Ragging Affidavit:** Students and Parents Undertaking Affidavit In compliance of the UGC Regulations, it is compulsory for each student and every parent to submit an online Anti-Ragging undertaking affidavit every academic year. The Link to fill out the online undertaking affidavit by students and parents is :
www.antiragging.in/affidavit_registration_disclaimer.html
www.c4yindia.org/Home/Undertaking

3.0 Programmes of Study

3.1 The University follows an outcome based learning approach following National Higher Education Qualification Framework (NHEQF)*, explicitly defining the course/programme outcomes and programme specific outcomes, in the curriculum for all the Graduate Degree Programmes. (* available at https://www.ugc.gov.in/pdfnews/2990035_Final-NHEQF.pdf)

3.2 The Undergraduate Programme (UG) is structured with multiple exit options of Certificate, Diploma, basic Bachelor' Degree at the completion of first, second and third years respectively. The students who complete four years Undergraduate Programme, either in one stretch or through multiple exits and re-enter would get a Bachelor's Degree with Honours. If the student completes a rigorous research project in their major area(s) of study during the fourth year

of a Bachelor's Degree will be awarded Honours with research.

3.3 Students who successfully complete the entire Five year Programme will be awarded the Integrated Master's Degree.

4.0 Duration of the Programme

4.1 The duration of the Integrated Programme is 5 years or 10 semesters.

4.2 If a student wants to leave after the completion of the first or second year, the student will be given a UG Certificate or UG Diploma, respectively, provided they secure the prescribed number of credits *(as given in Table 1).*

4.3 Students who exit with a UG certificate or UG diploma are permitted to re-enter within three years and complete the degree programme.

4.4 Students may be permitted to take a break from the study during the period of study but the total duration for completing the programme shall not exceed 9 years.

4.5 Students who successfully complete their Bachelor's Degree with Honours, with suitable grades are eligible to enter the doctoral (Ph. D) Programme in the relevant discipline or enter the "Two-semester" Master's Degree Programme. (Ref 11.5)

5.0 Curriculum Components

5.1 The curriculum consists of major courses, minor courses and courses from other disciplines, language courses, skill courses, and a set of courses on Environmental education, understanding India, Digital and technological solutions, Health & Wellness, Yoga education, and sports & fitness. At the end of the second semester, students can decide either to continue with the chosen major or request a change of major. (Ref 7.3)

5.2 The five year Integrated Master's Programme shall follow 4 + 1 year pattern with 8 semesters of the 4 year undergraduate programme in the first four years and the final 2 semesters in the last one year.

6.0 Credit hours and Course structure

6.1 The medium of instruction, as well as examinations and project reports shall be in English except for Modern Indian language courses.

6.2 The course structure and syllabi of the Integrated Masters Programmes shall be approved by the Academic Council of the University. Departmental Boards of Studies (DBOS) shall discuss and recommend the syllabi of all the courses offered by the department from time to time. The proposals from the departments are forwarded to make recommendations to the Academic Council for consideration and approval.

6.3 The workload for a course is quantified in terms of credit hours, which represent the unit of measurement for coursework. A credit indicates the number of hours of instruction required per week over the duration of a semester. Courses may include:

- lecture and tutorial components
- lecture and practicum components
- lecture, tutorial, and practicum components
- only practicum components

6.3.1 A one-credit Lecture/tutorial in a course is equivalent to 15 hours of engagement.

6.3.2 A one-credit course in practicum or lab work or Seminar or Internship or Studio activities or Field practice/projects or Community engagement and service, and fieldwork is equivalent to 30 hours of engagement.

6.4 **Type of Courses and Credit distribution:**

6.4.1 The Integrated Masters Programmes will consist of the following categories of courses and the minimum credit requirements for 3-year UG, 4-year UG (Honours) or UG (Honours with Research) and 5-year Integrated programmes are given below*:*

Table 1: Course Categorization and Credit Distribution for UG/Bachelor's Programme/Integrated Programme

S.No	Broad Category of Course	Minimum Credit Requirement		
		3-year UG	4-Year UG	5-year Integrated PG
1	Major Courses	60	80	92
2	Minor Courses	24	32	32
3	Multidisciplinary Courses	9	9	9
4	Ability Enhancement Courses (AEC)	8	8	8
5	Skill Enhancement Courses (SEC)	9	9	9
6	Common Value Based Courses for all UG	4	4	4
7	Community Engagement (CE)	4	4	4
8	Summer Internship	2	2	2
9	Research Project / Dissertation	-	12	12

10	Mandatory Courses/Audit Courses	-	-	-
11	Discipline Specific Electives	-	-	8
	Total	120	160	200

Note:

- Exit option with UG Certificate (with the completion of courses across semesters 1, 2 and additional 4 credits in skill based vocational courses offered during summer term or internship equal to a minimum of 44 credits)
- Exit option with UG Diploma (with the completion of courses across semesters 1-4 and additional 4 credits in skill based vocational courses offered during first year or second year summer term equal to a minimum of 84 credits)
- Exit option with 3- year UG Degree (with the completion of courses across semesters 1-6 including 2 credits of Internship offered during second year summer term equal to a minimum of 120 credits)
- Students will be awarded UG Degree (Honours) /UG Degree (Honours) with Research in the relevant Discipline (with the completion of courses equal to a minimum of 160 credits)

6.4.2 **Internship/apprenticeship** can be carried out during the summer break mandatorily for students who exit after two semesters or four semesters of study in addition to the skill based courses.

6.4.3 **Audit Courses:** Students who secure a CGPA of at least 8 at the end of the 4th semester may opt to take one audit course per semester from any Department from the 5th semester onwards, provided the course teacher permits the auditing of the course. This shall be done under the guidance of the Departmental Faculty Advisor/mentor. The student is free to participate in the evaluation process for such courses. However, an attendance of 75% is necessary for obtaining a P grade for such courses. When auditing courses are offered by other departments, it shall be the responsibility of the student to attend such courses without missing courses of one's own department and semester.

6.4.4 **Bridge Courses:** The Departments shall make provision for Bridge Courses to facilitate admission of students from varied backgrounds to a programme of their choice.

6.4.5 **Value-added Courses:** Each department shall offer value-added courses. Value-Added courses are part of the curriculum designed to provide necessary skills to increase the employability quotient and equipping the students with essential skills to succeed in life. Certificates will be awarded to those who successfully complete the course.

6.4.6 In addition to the prescribed credit requirement, a student shall have to complete Institutional mandatory courses with Pass grade, as prescribed by the competent academic authority, from time to time, which shall be recorded in the Grade sheet but not taken into account for computing the SGPA and the CGPA.

6.4.7 In addition, students may also opt for additional courses in consultation with their mentors (Cf. 6.4.8). Courses may also be chosen from SWAYAM/NPTEL. Students are required to participate in the evaluation process of such courses. The grades obtained for such courses shall be recorded in the grade sheet, but not taken into account for computing SGPA and CGPA. (Ref. 6.2)

6.4.8 **Faculty Advisor/Mentor:** A faculty advisor/mentor (and a co-mentor to perform the duties of a mentor during the absence of the mentor) shall be assigned for each student. Generally the faculty advisor/mentor shall be assigned by the concerned department, in consultation with the Director of the School concerned. (Faculty advisors/ mentors shall help their mentees to plan their courses of study, advise them on matters relating to academic performance and personality development, and help them to overcome various problems and difficulties faced by them.

6.5 **Academic Bank of Credits (ABC)** a national-level facility for "credit transfer" is created for students to transfer and consolidate the credits earned by them by undergoing courses from any recognized HEIs. The ABC allows for credit redemption through the process of commuting the accrued credits in the Academic Bank Account maintained in the ABC for the purpose of fulfilling the credits requirements for the award of certificate/diploma/degree by the authorized HEIs. Upon collecting a certificate, diploma or degree, all the credits earned till then, in respect of that certificate, diploma or degree, shall stand debited and deleted from the account concerned. The procedure for depositing credits earned, its shelf life, and redemption of credits would be as per UGC (Establishment and Operationalization of ABC scheme in Higher Education) regulations and its amendments, 2021.

7.0 Major and Minor disciplines:

7.1.1 Major discipline is the discipline or subject of main focus and the degree will be awarded in that discipline. Students should secure the prescribed number of credits (about 50% of total credits) through core courses in the major discipline.

7.1.2 Minor discipline helps a student to gain a broader understanding beyond the major discipline. For example, if a student pursuing an Economics major obtains a minimum of 12 credits from a bunch of courses in Statistics, then the student will be awarded B.A. degree in Economics with a Minor in Statistics.

7.2 In order to qualify for an Integrated Master's Degree, a student is required to complete the minimum credit requirements as prescribed by the competent academic authority. (Refer 4.4)

7.3 **Change of Major Discipline:** The University may permit a student to change from one major discipline of study to another after the first two semesters.

7.3.1 Students shall be allowed a change in major discipline provided that the strength of a Programme offering the specific Major discipline should not fall below the existing strength by more than ten percent and should not go above the

sanctioned strength by more than ten percent.

7.3.2 Only those students shall be eligible for consideration of a change of major discipline, who has completed all the credits required in the first two semesters of their studies, in their first attempt. (Ref 6.4.5 for fulfilling any deficient and/or prerequisite courses to be completed)

7.3.3 Applications for a change of major discipline must be made by intending eligible students in the prescribed form. The Office of the Registrar shall call for applications at the beginning of the third semester and the completed forms must be submitted by the last date specified in the notification.

7.3.4 Students may enlist up to two choices of major disciplines, in order of preference, to which they wish to change over. It shall not be permissible to alter the choice after the application has been submitted.

7.3.5 Change of major discipline shall be made strictly in order of merit of the applicants. For this purpose the CGPA obtained at the end of the second semester shall be considered. In case of a tie, the following shall be considered in the given order: the SGPA of the second semester, the SGPA of the first semester, grades obtained by the applicants in the courses of the second semester in an order given in the grade and approved by the Office of the Registrar.

7.3.6 A committee consisting of the Directors and Head of Departments of the concerned School, chaired by the Registrar shall examine the applications and consider them on the basis of the criteria laid out above.

7.3.7 The details of major discipline changes effected shall be notified to the students by the Registrar, within 7 days of the submission of applications.

7.3.8 All changes of major discipline shall be final and binding on the applicants. No student shall be permitted, under any circumstance, to refuse the change of major discipline offered.

7.3.9 All changes of major discipline made in accordance with the above rules shall be effective from the third semester of the applicants concerned. No change of branch shall be permitted after this.

8.0 Transfer of Admission

Transfer of admissions is permissible only for autumn semesters (at the end of second, fourth and sixth semesters for students of other universities and within the University.

8.1 **Evaluation Committee for Multiple entry and Exit:** With the provision of multiple entry and exit, students from other HEIs will be allowed entry to appropriate Level. Evaluation Committee will be set up to see the eligibility of such students who desire to join the University from other HEIs with a lateral entry.

8.1.1 Applications for exit received on or before 31st March after completion of first year/second year/third year, shall be evaluated by the Evaluation Committee.

8.2 The Conditions for transfer admission of students of other Universities

8.2.1 A Candidate migrating from any other University may be permitted to join odd semester of the degree programme provided he/she has passed all the subjects of previous semesters with 4 credits of internship completed. Such candidates must satisfy all other conditions of eligibility stipulated in the regulations of the University.

8.2.2 His/her transfer admission shall be within the intake permitted in the University.

8.2.3 He/she shall fulfill the attendance requirements as per the University Regulation.

8.2.4 The candidate who is migrating from other Universities is eligible for overall SGPA/CGPA or Class and not for ranking. He/ She shall complete the programme as per the regulation governing the maximum duration of completing the programme as per this regulation.

9.0 University Registration

9.1 Candidates who are admitted to a programme shall have to register as bona-fide students with the University as per the University regulations within a period specified by the University, by a formal application routed through the Director of the School concerned.

10.0 Attendance

10.1 To be permitted to appear for the end-semester examination of a particular course, a student is required to have a minimum attendance of 75% for that course.

10.2 Deficiency in attendance up to 10% may be condoned by the Director of the School in the case of leave taken for medical and other grievous reasons, which are supported by valid medical certificates and other requisite documents.

10.3 Some students, due to exceptional situations like their own serious sickness and hospitalization or death of members of the inner family circle (restricted to only father, mother, siblings), may have attendance below 65%. Such students may be given bonus attendance percentage for a particular course based on his/her attendance for that course during the remaining days of the current semester, as given in the following table**:**

Attendance during the remaining days of the current semester	**Bonus percentage available in the current semester**
95% or more	5

90% or more but less than 95%	4
85% or more but less than 90%	3
80% or more but less than 85%	2
75% or more but less than 80%	1

They shall be permitted to appear for the end-semester examination of the course if on the strength of this bonus attendance percentage, they obtain 65% attendance for that course.

10.4 If the sum of the credits of the courses for which a student is unable to appear at the end- semester examinations exceeds 50% of the total credits allotted for the semester, he/she shall not be permitted to appear for the entire end-semester examinations.

10.5 The School may propose to set aside a certain portion of the in-semester assessment marks for attendance. The number of marks and modalities of their allotment shall be made known to the students at the beginning of each semester.

10.6 **Leave**

10.6.1 Any absence from classes should be with prior sanctioned leave. The application for leave shall be submitted to the Office of the Director of the concerned School on prescribed forms, through proper channels, stating fully the reasons for the leave requested along with supporting documents.

10.6.2 In case of emergency such as sickness, bereavement or any other unavoidable reason for which prior application could not be made, the parent or guardian must promptly inform the office of the Director of the concerned School.

10.6.3 If the period of absence is likely to exceed 10 days, a prior application for grant of leave shall have to be submitted through the Director of the concerned School to the Registrar of the University with supporting documents in each case; the decision to grant leave shall be taken by the Registrar on the recommendation of the Director of the concerned School.

10.6.4 The Registrar may, on receipt of an application, also decide whether the student be asked to withdraw from the programme for that particular semester because of long absence.

10.7 It shall be the responsibility of the student to intimate the concerned teachers regarding his/her absence before availing the leave.

11.0 Grading System

11.1 **Three types of courses are offered in the Graduate programmes:**

Graded courses: For the majority of the courses, students shall be assessed and given grades.

Pass/Non-Pass courses: There are some courses for which the students are expected to obtain a P grade to be eligible for the degree.

Audit Courses: A third category of courses are audit courses. These are optional. However, students who opt for these courses must have the required attendance to obtain a P grade in the course.

11.2 Based on the performance of a student, each student is awarded a final letter grade in each graded course at the end of the semester and the letter grade is converted into a grade point. The correspondence between percentage marks, letter grades and grade points is given in the table below:

Marks (x) obtained (%)	**Grade**	**Description**	**Grade Points**
$90 \geq x \leq 100$	O	Outstanding	10
$80 \geq x < 90$	A+	Excellent	9
$70 \geq x < 80$	A	Very Good	8
$60 \geq x < 70$	B+	Good	7
$50 \geq x < 60$	B	Above Average	6
$41 \geq x < 50$	C	Average	5
$x = 40$	P	Pass	4
$x < 40$	F	Fail	0
	AB	Absent	0
	PS	Pass	0
	NP	Not Passed	0
	X	Not Permitted	0

11.2.1 Audit Courses can be graded as 'PS' Pass and 'F' Fail[1] without any credits

11.2.2 In addition, a student may be assigned the grades 'P' and 'F' for pass marks and non- passing marks respectively, for Pass/No-pass courses, or the grade 'X' (not permitted).

11.2.3 A student shall be assigned the letter grade 'X' for a course if he/she is not permitted to appear for the end semester examination of that course due to lack of requisite attendance.

11.2.4 A letter grade 'F' or 'X' in any course implies failure in that course.

11.2.5 A student is considered to have completed a course successfully and earned the credits if she/he secures a letter grade other than 'F', or 'X'.

11.3 At the end of each semester, the following measures of the performance of a student in the semester and in the programme up to that semester shall be computed and made known to the student together with the grades obtained by the student in each course:

11.3.1 The Semester Grade Point Average (SGPA): From the grades obtained by a student in the courses of a semester, the SGPA shall be calculated using the following formula:

$$SGPA = \frac{\sum_{i=1}^{n} GP_i \text{ x } NC_i}{\sum_{i=1}^{n} NC_i}$$

Where, GP_i = Grade points earned in the i^{th} course
NC_i = Number of credits for the i^{th} course
n = the number of courses in the semester

11.3.2 The Cumulative Grade Point Average (CGPA): From the SGPAs obtained by a student in the completed semesters, the CGPA shall be calculated using the following formula:

$$CGPA = \frac{\sum_{i=1}^{n} SGP_i \text{ x } NSC_i}{\sum_{i=1}^{n} NSC_i}$$

Where,
SGP_i = Semester Grade point of the i^{th} semester
NSC_i = Number of credits for the i^{th} semester
n = the number of semesters completed

11.3.3 The CGPA may be converted into a percentage by multiplying CGPA by 10.

11.3.4 Both the SGPA and CGPA shall be rounded off to the second place of decimal and recorded as such. Whenever these CGPA are to be used for official purposes, only the rounded off values shall be used.

11.4 In the case of an audit course, the letters 'P' or 'F' shall be written alongside the course name in the Grade Sheet. Such courses are not taken into account in the calculation of the SGPA or CGPA. However, the award of the degree is subject to obtaining a 'P' grade in all such courses. A student is not required to register again for passing the failed audit courses.

11.5 Only those students who secure CGPA of 7.5 and above in the first six semesters may choose to undertake research in the fourth year

12.0 Assessment of Performance

12.1 A student's performance is evaluated through a continuous system of evaluation comprising tests, quizzes, assignments, seminars, minor projects, major projects and end-semester examinations.

12.2 **Theory Courses**: Theory courses shall have two components of evaluation – in- semester assessment of 40% weightage and an end-semester examination having 60% weightage.

12.2.1 The modalities of the conduct of in-semester assessment and weightages attached to its various components shall be as published by the School at the beginning of each semester.

12.3 **Lab Courses**: Lab courses shall be evaluated on the basis of attendance; assessment of tasks assigned and end semester test/viva voce. The weightage assigned for these components of the evaluation is given in the following table:

Component	Weightage
Attendance	10
Assessment of Tasks Assigned	30
End-semester test / viva voce	60

12.3.1 The modalities of the conduct of evaluation under the heading "Assessment of tasks assigned", its components and the weightages attached to its various components shall be published by the department concerned at the beginning of each semester.

12.3.2 The evaluation of the end-semester test for a lab course may be done on the basis of criteria and weightage to be specified in the question paper, among which are included

- Organisation of the experiment
- Actual conduct of the experiment assigned and accuracy of the result
- Extent of completion
- A comprehensive viva-voce which examines the overall grasp of the subject

12.4 **End Semester examinations**

12.4.1 End-semester examinations for the theory courses, generally of three hours' duration, shall be conducted by the University. The Director of the concerned school and the Examination department shall make the arrangements

necessary for holding the examinations.

12.4.2 In the end-semester examinations, a student shall be examined on the entire syllabus of the courses.

12.4.3 A student shall not obtain a pass grade for a course without appearing for the end- semester examination in that course.

12.5 **Industry Training/Internship Programme**

12.5.1 Departments require students to undergo industry training/internship programmes.

12.5.2 Departments are to notify the students at the beginning of their programmes about the details of industry training/internship.

12.5.3 After the Industry Training/Internship programme, the student shall furnish a certificate from the organisation where he/she underwent the programme as proof of successful completion.

12.5.4 The student shall submit a training/internship report to the department in a format to be laid down by the concerned department. He/she shall also give a seminar to present the learning outcomes of the programme in the presence of the faculty members and students of the department. The student shall be evaluated on the basis of the report, the seminar and interaction during the seminar and grades shall be assigned. These grades shall be given a weightage of two credits in the subsequent semester.

12.6 **Field-based learning/ Minor project/Dissertation:**

12.6.1 Minor project work is conducted during the sixth semester of the programme, and is to be done individually or in groups within the campus/Outside the campus with due permissions.

12.6.2 Each department shall constitute a Departmental Project Evaluation Committee (DPEC) consisting of the Head of the Department, Project Co-ordinator and two senior teachers from the department, with the Project Co-ordinator as the convenor. The DPEC shall co-ordinate the conduct and assessment of the project.

12.6.3 The DPEC shall notify the schedule and modalities for the following stages in the implementation of the project.

- Submission of the topic of the project
- Notification for assignment of project supervisors
- Submission of the synopsis
- Schedule and modality for the submission of weekly activity reports
- Schedule for the seminar presentation of synopsis
- Schedule for Progress Seminars, submission of progress reports and viva voce examination
- Date for the submission of the project report and a brief summary
- Dates for the external evaluation of the project

12.6.4 The DPEC may ask a student to resubmit a synopsis if the same does not get its approval.

12.6.5 The Convener of the DPEC shall submit to the Controller of Examinations a panel of at least three names of external examiners at least three weeks before the external examination. The Controller of Examinations shall appoint the external examiner(s) from this panel. The project supervisor shall be the internal examiner.

12.6.6 Each student shall submit to the DPEC three bound, typed copies of the project report, and prepared according to the prescribed format, after the pre-submission seminar, by the due date. The student shall also submit three copies of a brief summary of the project that shall be forwarded to the concerned examiners.

12.6.7 The DPEC shall make the arrangements necessary to conduct the external evaluation in consultation with the examiner(s) appointed by the University, during the dates notified.

12.6.8 The DPEC shall forward the in-semester assessment marks to the Controller of Examinations by the date specified by the Examination Department.

12.6.9 The end-semester assessment shall have the following components:

- Project implementation: 40 marks
- Seminar presentation: 20 marks
- Viva voce examination: 20 marks
- Project documentation: 20 marks

12.6.10 Those who obtain an 'F' grade for the minor project shall be required to re-enrol for it in the subsequent semesters.

12.7 The evaluation of performance in non-credit courses shall be done by the authorities conducting them and they shall communicate the grades to the Director of the concerned School who shall forward them to the Controller of Examinations.

12.8 The Director of the concerned School shall forward the marks obtained in the in- semester evaluation to the Controller of Examinations within the prescribed time as may be notified.

12.8.1 All evaluated work in a course except the end semester answer scripts shall be returned to the students promptly.

12.9 **Eligibility for appearing in the end-semester examinations:** A student shall be permitted to appear for the end-semester examinations, provided that

12.9.1 A student has not been debarred from appearing in the end semester examinations as disciplinary action for serious breach of conduct.

12.9.2 He/she has satisfactory attendance during the semester according to the norms laid out in the clause 8 of these regulations.

12.9.3 He/she has paid the prescribed fees and any other dues of the university within the date specified.

12.10 **Registration for end-semester Examinations**

12.10.1 The University shall, through a notification, invite applications from students to register for the end-semester examinations.

12.10.2 Students who have registered with the University (vide clause 9) and those who have applied for such registration may apply to appear for the end- semester examinations of the university, in response to the notification issued by the University, provided that they fulfill the eligibility norms as laid down in clause (ref 12.9)

12.10.3 All eligible candidates shall be issued an admit card for the relevant examination and for specified courses. A student who does not have a valid admit card may not be permitted to write the end-semester examinations.

12.10.4 A student who secures an 'F' grade in any course in a semester may register for the end-semester examination for that course in a subsequent semester when that course is offered again, within the maximum period of time allotted for the completion of the programme. The in-semester assessment marks obtained by him/ her in the last semester in which the said course was attended by him/her shall be retained.

12.10.5 Similarly, in case of an 'NP' grade in non-credit courses the student shall have to re-register for it in the appropriate semester of the next academic session.

12.10.6 When a student re-registers for the end semester examination of a course, in accordance with clause 10.10.4 above, the better of the two grades obtained (the old and the new) shall be considered for the calculation of SGPA and CGPA.

12.11 **Conduct of Examinations**: The University shall conduct the end-semester examinations in accordance with the applicable regulations on such dates as are set down in the Academic Calendar or as notified.

12.12 **Declaration of Results**: The University shall declare the results of a semester and make available to the students their grade sheets within the time-frame prescribed by the relevant regulations of the university and specified in the academic calendar.

12.13 The University may withhold the results of a student for any or all of the following reasons

- he/she has not paid his/her dues
- there is a disciplinary action pending against him/her
- he/she has not completed the formalities for University Registration according to the requirement of section 5 of these Regulations.

12.13.1 **Re-examining of answer scripts**

12.13.2 If a student feels that the grade awarded to him/her in a course is not correct, he/she may apply to the University for the re-examining of his/her answer script.

12.13.3 Re-examining of scripts may be of two different categories – scrutiny and re- evaluation.

12.13.4 **Scrutiny:** The activities under this category shall ordinarily be confined to checking correctness of the total marks awarded and its conversion into appropriate letter grades whether any part/whole of a question has been left unevaluated inadvertently correctness of transcription of marks on the tabulation sheet and the grade sheet issued in respect of the course under scrutiny.

12.13.5 **Re-evaluation:** Re-evaluation of the answer script by independent experts in the concerned subject(s).

12.13.6 Application for re-examining of answer scripts

- A student may apply for scrutiny or re-evaluation for one or more courses of the just-concluded end-semester examinations within seven calendar days from the date of publication of its results in the application form prescribed for this purpose.
- He/she shall pay the prescribed fee to the University as notified.
- A student applying for scrutiny/re-evaluation shall expressly state on the application form whether the application made is for Scrutiny or for Re- evaluation. In each case, the student may also request to see his/her answer script.
- All applications for scrutiny/re-evaluation must be routed through the Director of the concerned School.

12.13.7 If in the process of re-examining, the grade obtained in a course changes, the better of the two grades shall be assigned to the course. If there is a change, the new grade shall be recorded and a new grade sheet shall be issued to the student.

12.13.8 Without prejudice to any of the clauses of section 10.14, a student who has been found to have used unfair means during an examination shall not be eligible to apply for scrutiny or re-evaluation of answer scripts.

12.14 **Repeat Examination:** The University shall conduct repeat examination for those with F grade at a different time slot, as set down in the Academic Calendar or as notified. Such students should register for these examinations.

12.15 **Improvement Examination**

12.15.1 After the completion of the entire programme of study, a student may be allowed the provision of improvement examinations. These are to be availed of only once each in the Autumn and Spring semesters that immediately follow the completion of the programme, and within the maximum number of years permissible for a programme.

12.15.2 A student who has taken migration from the University shall not be eligible to appear for Improvement Examination.

12.15.3 A student may not choose more than the number of courses specified below for improvement examinations.

Programme	Number of Courses for Improvement Examinations		
	Autumn Semester	Spring Semester	Total
BCA	4	4	8
BCA	4	4	8

12.15.4 After the improvement examination, the better of the two grades obtained (the old and the new) shall be considered for the calculation of SGPA and CGPA.

12.15.5 If the student improves his/her grades through the improvement examination, new grade sheets and comprehensive transcripts shall be issued to the student.

12.16 **Special Examination**

12.16.1 The University shall conduct Special Examinations to benefit the following categories of students:

12.16.1.1 Students who, on the completion of the final semester, have some 'F' graded courses in the two final semesters, but no 'F' graded courses in any of the previous semesters

12.16.1.2 Students who have only one 'F' graded course in a semester other than the two final semesters and do not have 'F' graded courses in the two final semesters.

12.16.2 The Special Examinations shall ordinarily be conducted each year within a month of the declaration of the results of the Spring Semester.

12.16.3 Students who fail to secure 50% of the credits offered in the final semester shall not be eligible to appear for the special examinations. Such students will be governed by the provisions of clause 10.5 of these regulations. However, this restriction shall not apply in the case of students who are unable to appear in the end semester examinations due to exceptional situations like their own serious illness and hospitalisation or death of members of the inner family circle (restricted to only father, mother, siblings).

12.16.4 Students who have 'X' graded courses only in the last two semesters may be offered the opportunity for participating in a Tutorial Programme which may be conducted during the semester break immediately following the end-semester examinations of the final semester and students who earn 85% attendance for the programme shall be permitted to appear for the Special Examinations. Separate fees shall be charged for the Tutorial Programme.

12.16.5 Students who do not obtain pass grades in any course at the special examinations shall have to apply in the prescribed format and appear for the end-semester examination of these courses when they are scheduled by the University during subsequent relevant end-semester examinations.

13.0 Enrolment (for semesters other than the first)

13.1 Every student is required to enroll for the relevant courses before the commencement of each semester within the dates fixed for such enrolment and notified by the Registrar.

13.2 Students who do not enroll within the dates announced for the purpose may be permitted late enrolment up to the notified date on payment of a late fee.

13.3 Only those students shall be permitted to enroll who have

- Cleared all University, Departmental, Hostel and Library dues and fines (if any) of the previous semester,
- Paid all required University, Departmental and Hostel fees for the current semester, and
- Not been debarred from enrolling on any specific ground.

13.4 No student may enroll for a semester if he/she has not appeared, for whatever reason, in the end semester examinations of the previous semester.

13.5 Students who due to lack of due attendance have been debarred from exams in any semester (including first and second) will have to re-enroll for the same.

14.0 Eligibility for the Award of the Integrated Master's Degree

14.1 A student shall be declared to be eligible for the award of the five –year Integrated Master's Degree for which he/she has enrolled if he/she has

14.1.1 completed all the credit requirements for the degree with grade 'C' or higher grade in each of the mandatory graded courses and grade 'PS' in all mandatory non-graded courses;

14.1.2 satisfactorily completed all the non-credit requirements for the degree viz., Extra Academic Activities, Industry Training, Field Work, Internship Programme, etc. (if any);

14.1.3 Obtained a CGPA of 5.00 or more at the end of the semester in which he/she completes all the requirements for the degree;

14.1.4 Owes no dues to the University, School, Department, Hostels; and

14.1.5 Has no disciplinary action pending against him/her.

14.2 The award of the Graduate Degree must be recommended by the Academic Council and approved by the Board of Management of the University.

14.2.1 Degree will be awarded, to student completes least fifty per cent of the credits from the University awarding the degree or diploma or certificate (https://www.ugc.gov.in/pdfnews/9327451_Academic-Bank-of-Credicts-in-Higher-Education.pdf)

15.0 Termination from the Programme

15.1 If more than the number of years permitted for the completion of a programme have elapsed since the student was admitted, and the student has not become eligible for the award of Degree, the student shall be removed from the programme.

15.2 A student may also be required to leave the Programme on disciplinary grounds on the recommendations of the Students' Disciplinary Committee of the concerned School.

SCHEME OF IN-SEMESTER ASSESSMENT
INTEGRATED MASTER'S DEGREE PROGRAMMES

EVALUATION OF THEORY COURSES

For theory courses, in-semester assessment carries 40% weightage. Different components along with the weightage of each are given in the table below:

Component	Weightage	Remarks
Class Test (Two Class tests of one and a half hour duration)	20	Average of the two marks shall be considered
Assignment (Individual and Group)	10	Group assignments for two courses and individual assignments for the remaining courses
Non-formal evaluation	5	Based on response and interaction in class, quizzes, open book tests, etc.
Attendance	5	For norms regarding attendance cfr. clause 10 of the Regulations for Undergraduate Programmes

There shall be no re-test for In-semester assessment under any circumstance. The original marks of all the In-semester assessment components shall be retained for all further repeat examinations.

ATTENDANCE

Marks for attendance will be given according to the following scheme:

	Marks Allotted	
Attendance Percent (x)	Theory	Lab
75 <= x < 80	2	4
80 <= x < 90	3	6
90 <= x < 95	4	8
95 <= x 100	5	10

EVALUATION OF LABORATORY COURSES/ SKILL ENHANCEMENT COURSES/INTERNSHIPS

All Laboratory courses, Skill enhancement course, internships are evaluated on the basis of attendance; performance of tasks assigned and end semester test/viva voce examination. The distribution of marks within these components will be specified by individual departments along the lines of the break-up given below:

Component	Weightage
Attendance	10
assessment of tasks assigned	30
End Semester Test and/or Viva-Voce Examination	60
Total	100

EVALUATION OF PROJECTS

The guidelines for the conduct and evaluation of Minor and Mini Projects shall be laid down by the Department. The

components of evaluation and allotment of marks may be as follows:

In Semester Evaluation (weightage 60)	**Marks**	**End Semester Evaluation (weightage 40)**	**Marks**
Synopsis	10	Project Implementation	16
Seminar presentation of synopsis (Analysis and Design)	15	Seminar Presentation	8
Progress Seminar (Implementation)	15	Viva Voce Examination	16
Project Documentation	10		
Attendance	10		
Total	60		40

RULES, PROCEDURES AND BEHAVIOURAL GUIDELINES

1. Dress Code and Identity Card

1.1 The dress code of the University consists of shirt / top (of the prescribed colour and material), trousers (of the prescribed colour and material), shoes (black) and socks (dark grey), a belt (black/dark brown, if required) and a tie (blue, with diagonal stripes). Students are required to come to the University following this dress code. The tie will be required to be worn only on formal occasions. An apron (of the prescribed colour) is to be worn in the Chemistry Lab and during Workshop Practice. During winter, students may wear only a blazer and/or a sweater (full sleeve or sleeveless) of the prescribed colour and material.

1.2 The Student Identity Card is to be brought to the University every day and is to be produced whenever asked for. Entry to the University campus shall be only on production of the Identity Card. The Identity Card is also the Library Card.

1.3 All students should wear the ID card around the neck from entry in the morning to exit in the evening.

2. Morning Assembly

2.1 The morning assembly is a daily programme in the university on all class days during which all members, i.e., students, faculty, staff and management meet together. The assembly starts at the prescribed time. During the assembly, important announcements are made and a thought or insight is shared. The assembly is concluded with an invocation to God to bless the activities of the day. Note that any announcement made at the morning assembly is considered as being equivalent to notifying the same in the notice boards. All students should reach the assembly venue before prescribed time. Immediately after assembly all should proceed to the classroom to start class. Any change in procedures will be notified by the concerned School at the beginning of the Semester.

2.2 One of the following prayers may be used to conclude the Morning Assembly:

The Our Father

Our Father, who art in heaven,
Hallowed be thy name, Thy kingdom come, Thy will be done on earth as it is in heaven.
Give us this day, our daily bread
And forgive us our trespasses
As we forgive those who trespass against us. And lead us not into temptation,
But deliver us from all evil, Amen.

Or

Prayer for Peace

Lord, make me an instrument of your peace,
where there is hatred, let me sow love;
where there is injury, pardon;
where there is doubt, faith;
where there is despair, hope;
where there is darkness, light;
where there is sadness, joy;
O Divine Master, grant that I may not so much seek to be consoled as to console;

to be understood as to understand;
to be loved as to love.
For it is in giving that we receive;
it is in pardoning that we are pardoned;
and it is in dying that we are born to eternal life. Amen

3. Punctuality in Attending Classes

3.1 All are expected to be at their respective assembly venues five minutes before assembly time.

3.2 Normally no student shall leave the University before all the classes are over. In case of an emergency, a student may leave with proper written permission from the HOD of the concerned department.

3.3 While all students are encouraged to have their lunch in the University Canteens, students are permitted to take lunch outside the University.

4. Make-up Classes, Leave of Absence and Earned Attendance

4.1 If any student misses any laboratory class due to illness or other grievous problems, he/she is required to meet the concerned teacher for completing the experiments as soon as possible. Such make-up attendance will be taken into consideration at the end of the semester if attendance is less than 75%. At most two make-up attendances may thus be earned by any student.

4.2 Any student who is required to be engaged in a University activity or a pre-planned training and placement activity during class hours, may apply for the grant of an 'earned attendance' from the concerned HODs in the prescribed form available at the Reception. Such applications must be forwarded by the Activity In-Charge. For club related activities, Faculty Advisor of the concerned club will be the Activity In- Charge. In all other cases, Faculty In-Charge or Assistant Faculty In-Charge of Student Affairs will be the Activity In-Charge. Filled up forms shall be submitted preferably before or in case of emergency, immediately after the activity for which earned attendance is to granted.

4.3 Any student going to participate in any activity or competition outside the University must apply to the Faculty In-Charge of student Affairs using the prescribed form which must be forwarded by the Assistant Faculty In-Charge of Student Affairs in consultation with respective Club Advisers. On return, these students must report back to the Assistant Faculty In-Charge of Student Affairs for recording the outcome.

4.4 Any student who is not able to attend classes due to medical or other grievous reasons are required to apply for leave in the prescribed form along with valid medical certificates and other requisite documents, to the Faculty In-charge, students' affairs within seven days of joining back. Such applications must be signed by a parent of the student and forwarded by the mentor of the concerned student and the HOD of the concerned department. Only these students will be considered for condonement of deficiency in attendance.

5. Discipline

5.1 Personal, academic and professional integrity, honesty and discipline, a sense of responsibility and a high degree of maturity is expected of all students inside and outside the campus. Integrity calls for being honest in examinations and assignments, avoiding plagiarism and misrepresentation of facts.

5.2 Indulging in acts of violence, riotous or disorderly behaviour directed towards fellow students, faculty members or other employees of the institution/hostel in the campus or outside is considered to be a serious breach of discipline and will attract penalty.

5.3 Respect for Common Facilities: Care and respect for common facilities and utilities are an essential component of social responsibility. Any willful damage to University property must be made good by the persons concerned. Further, maintaining cleanliness of the classrooms and the entire campus is everyone's responsibility.

5.4 Substance Abuse: Chewing of tobacco, betel nut and the likes, smoking and the use of other addictive substances and alcoholic drinks are strictly prohibited. These should not be brought into or used within the campus of the University. Violation of this norm will lead to stern action.

5.5 Use of Cell Phones: Cell phones may be used in the University lawns, canteens andother open areas. However, the use of cell phones in classrooms and labs are strictly prohibited except when used for teaching/learning purposes with the explicit permission of the teacher concerned. The cell phone of anyone found violating this rule shall be confiscated and his/ her SIM card shall be taken away and retained in the University office for 7 days. If a person violates the norm for a second time, his/her mobile will be confiscated and retained in the University office till the end of the semester.

5.6 Use of Internet: The entire campus is wi-fi enabled and the students may use the Internet freely for educational purposes. Students may also use the Computing Centre for browsing the Net. However, the use of Internet to access unauthorized and objectionable websites is strictly prohibited.

5.7 All cases of indiscipline will be brought before the Students' Disciplinary Committee and the decisions made by the Committee for dealing with such cases shall be final.

6. Class Tests and Examinations

6.1 The conduct of examinations will be governed by the norms of the University.

6.2 The Student Identity Card shall be the Admit Card for the class tests

6.3 During class tests, all students are expected to enter the venue of the class test 15 minutes before the scheduled time of commencement. However, no one will be permitted into the examination hall after 15 minutes of the commencement of the class test and No one will be allowed to leave the examination hall until an hour has elapsed from the commencement of the class test.

6.4 No one is to leave the hall during examination for any purpose, except in case of an emergency.

6.5 Malpractices during class tests and examinations will not be tolerated and will attract stern action.

7. Ragging

Ragging and eve-teasing are activities which violate the dignity of a person and they will be met with zero tolerance. Anti-ragging norms have been given to each student at the time of admission and all students and parents have signed the anti-ragging affidavit. Any case of ragging and eve-teasing must be reported to the anti-ragging squad. All cases of violation of anti-ragging norms will be taken up by the anti-ragging Committee and punished according to the norms.

8. Grievance Redressal

The University has constituted a Grievance Redressal Cell to redress any genuine grievance students may have. Any student having a genuine grievance may make a representation to the Grievance Redressal Cell through his/her mentor. The representation should be accompanied by all relevant documents in support of the genuineness of the grievance.

9. School Association

9.1 The School Association is an association of the representatives of the various stake holders of the School – students, staff, faculty and management. It is the responsibility of the School Association to take charge of organizing most of the co-curricular activities such as the annual festivals, quizzes, debates, competitions and social events.

9.2 A male and a female student are elected by the students of each class as "class representatives" to represent them in the School Association. Class representatives are expected to be outstanding students who are academically competent and having qualities of leadership.

10. Participation in University Activities

10.1 In order to provide opportunities for the holistic development of the human person, a large number of co-curricular and extra-curricular activities are designed and implemented under the banner of the University Association and student clubs. Some of the most important activities are D'VERVE & BOSCOSIADE (intra- University sports and cultural festival during University Week), PRAJYUKTTAM (the inter-University technical festival). All students are expected to take part actively in such activities to showcase their talents, to develop leadership qualities and to gain the experience of working in groups.

10.2 **Training and Placement Activities:** The training and Placement Cell of DBCET has been incorporated with the objective of minimizing the gap between industry and academia and giving the students training and exposure so that they can capitalize on every opportunity for placement. It is the prime responsibility of the cell to look after all matters concerning 'Training to enhance employability' and 'guiding students for placement'. In the first two semesters, students are trained for communication skills development under the department of Humanities and Social Sciences, and personal development programmes under the department of campus ministry. From the third semester onwards, in every semester, students are given systematic training in aptitude tests, communication skills, group discussion, etc. They are also made to undergo mock HR and Technical Interviews. These activities of the training and placement cell find a place in the curriculum as Extra Academic Programmes (EAP) and all students are required to get a P grade for these activities by taking an active part in these activities regularly.

Other departments of the University offer customised services in training and placement of their students.

11. Free Time

Some hours without class may be available for some students during the day. Students are expected to use such 'free time' for visiting the library, meeting teachers and mentors, self- study, carrying out lab or project related activities, etc.

12. Faculty Performance Feedback

In order to improve the teaching and learning process in the University, students will be required to give feedback about the performance of their teachers from time-to-time. All students are expected to participate in the online feedback sessions concerning their teachers with sincerity and responsibility.

13. Mentoring

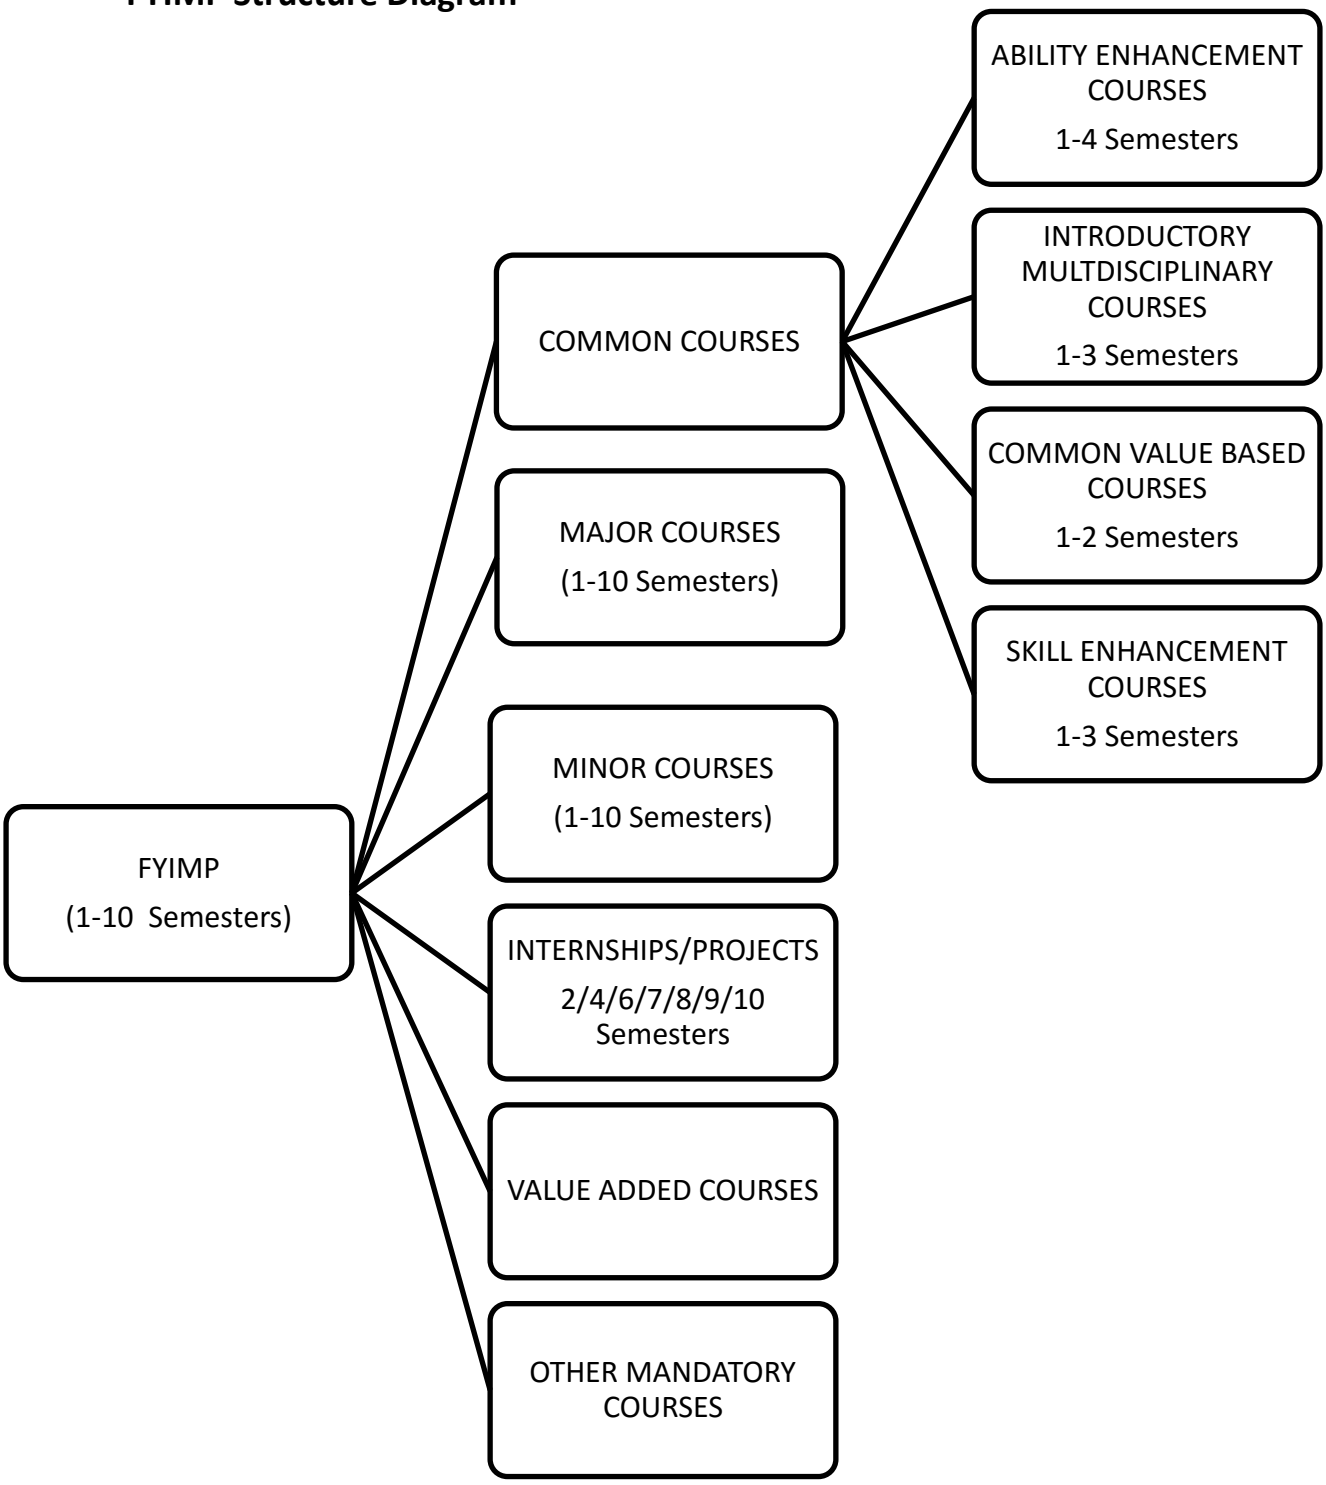
All students are assigned mentors from among the faculty members for their guidance. Directors of Schools in collaboration with the Heads of Departments will take care of assigning mentors. Mentors shall help the students to plan their courses of study, advise them on matters relating to academic performance and personality development, and help them to overcome various problems and difficulties faced by them. Although students should meet their

mentors on a regular basis to get timely help, specific days have been set aside in the calendar for meeting mentors to ensure proper documentation of achievements, activities, shortcomings and problems faced by the students. Every student must meet the mentor during these days.

14. Interaction Meet with Parents

The University organises interaction meetings with parents once a year in which the parents are invited to interact with teachers and management to appraise themselves about the performance of their ward and also to offer their suggestions for the betterment of the institution. It is the responsibility of the students too to invite their parents to come and participate in the event and make the event meaningful.

FYIMP Structure Diagram



INTEGRATED MASTER OF COMPUTER APPLICATIONS (iMCA)

DEPARTMENT OF COMPUTER APPLICATIONS

PROGRAMME: FIVE-YEAR BCA-MCA INTEGRATED PROGRAMME

DEGREE: INTEGRATED MASTER OF COMPUTER APPLICATIONS (iMCA)

VISION:

Imparting advanced knowledge in Computer Applications to develop industry-ready IT professionals, innovative researchers, and visionary entrepreneurs who are adaptive, skilled, and dedicated to societal advancement.

MISSION:

- To prepare students for successful careers in both industry and academia by providing a robust teaching, learning, and advanced research environment.
- To foster the development of highly skilled individuals and entrepreneurs through intensive academia-industry collaboration and exposure to cutting-edge technologies.
- To instil a sense of innovation, ethical responsibility, and commitment to societal development through the application of advanced technologies.

PROGRAM OUTCOMES (POs)

PO1 - Advanced Critical Thinking: Apply advanced critical thinking and problem-solving skills to address complex technical challenges in a dynamic IT landscape.
PO2 - Proficient Communication: Communicate effectively in professional and academic settings, with a focus on articulating complex ideas clearly in both technical and non-technical contexts.
PO3 - Collaborative Innovation: Lead and contribute to collaborative projects that require interdisciplinary skills and innovative thinking to achieve solutions in real-world scenarios.
PO4 - Global Citizenship: Demonstrate global awareness and ethical responsibility, contributing to sustainable development and societal progress through informed decision-making and civic participation.
PO5 - Professional Ethics: Apply ethical principles in professional practices, understanding the broader implications of technology on society and the environment.
PO6 - Environmental Stewardship: Integrate principles of sustainability into the design and development of technology solutions that minimize environmental impact.
PO7 - Life-long Learning and Adaptability: Cultivate a proactive approach to life-long learning and adaptability, essential for thriving in the ever-evolving tech industry.
PO8 - Innovation and Entrepreneurship: Drive innovation and entrepreneurship by identifying opportunities, leveraging emerging technologies, and creating value for the industry and society.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO1 – Knowledge of Computing Expertise: Gain a comprehensive understanding of modern computing systems, including both foundational and emerging technologies, to effectively design and implement complex software solutions.
PSO2 - Innovative Research and Development Skills: Cultivate advanced research skills and the ability to innovate by leveraging state-of-the-art tools and methodologies, contributing to cutting-edge developments in computer applications.
PSO3 - Industry Integration and Professional Competence: Achieve industry readiness through hands-on experience, collaboration with industry experts, and practical exposure to current trends and technologies, ensuring a seamless transition from academia to the professional environment.
PSO4 - Leadership and Entrepreneurial Skills: Develop leadership and entrepreneurial abilities, enabling the creation and management of technology-driven ventures and fostering a culture of innovation and strategic thinking in the industry.

CACL100T: COMPUTER PROGRAMMING IN C LANGUAGE
(2 credits – 30 hours) (L-T-P: 2-0-0)

Objective:
The objective of the course is to learn the concept of C programming language and to solve the problem statement using the C language.

COURSE / LEARNING OUTCOMES
At the end of this course, students will be able to:
CO 1: Define information based on the understanding of the concepts of C language's syntax, data types, control statements, functions, pointers, arrays, structures and pointers in C. (Understanding)
CO 2: Solve problems using standard algorithms, translate pseudo-codes into C programs, and implement them. (Applying)
CO 3: Evaluate the data structure, function, data types, and algorithms used for searching, sorting, solving problem instances, etc. in terms of correctness and computation cost. (Evaluating)
CO 4: Combine the various concepts and ideas learned in C to plan, propose, and develop a product. (Creating)

Module I: Introduction to Algorithms and Programming Languages (8 hours)
Introduction to structured programming and problem-solving methods: algorithms, key features of algorithms, flowcharts,

pseudocode, generation of programming languages, structured programming languages.
Overview of C: introduction to C, basic structure of a C program, compiling and executing C programs, comments, characteristics of a good program, character set, identifiers, keywords, data types, constants, and variables, I/O statements, operators, and expressions, precedence and associativity of operators, type conversion, and typecasting.

Module II: Decision Control Statements, Loops and Functions (8 hours)
Decision Control Statements and Loops: Introduction to Decision Control Statements, Conditional Branching statements, while loop, do-while loop, for loops, Nested Loops, Break and Continue Statements
C Functions: Need for functions, function declaration and definition, user defined and library functions, passing parameters to function, return statement, scope of variables, storage classes, recursive functions.

Module III: Arrays, Strings and Pointers (8 hours)
Arrays and Strings: One-dimensional arrays, passing array to function, multidimensional arrays and their applications, character arrays and string operations.
Pointers: Introduction to pointers, pointer expressions, dynamic memory allocation.

Module IV: Structures and Unions (6 hours)
Structures and Unions: Declaration of structures and simple implementation of structures, unions, enumerated data types.

Suggested Readings
1. Thareja, R., Computer Fundamentals and Programming in C, Oxford University Press, New Delhi.
2. Gottfried, Byron S., Programming with C (Schaum's Outlines Series), Tata McGraw Hill Publishing Company Limited, New Delhi.
3. Kernighan, B.W., and Ritchie, Dennis M., The C Programming Language, Prentice Hall Pvt. Ltd, New Jersey.

E Resources
1. NPTEL SWAYAM Course on- Introduction To Programming In C- By Prof. Satyadev Nandakumar, IIT Kanpur

CO 3	H	H	M	M
CO 4		M	H	H

CACL101L: COMPUTER PROGRAMMING IN C LANGUAGE LAB

(2 credits – 30 hours) (L-T-P: 0-0-2)

Objective
The objective of the course is to learn how to solve problems using c programming language.

COURSE / LEARNING OUTCOMES
At the end of the Lab experiments students will be able to:
CO 1: Interpret information based on their understanding of the concepts of C language's syntax, data types, control statements, functions, pointers, arrays, structures and pointers in C. (Understanding)
CO 2: Solve problems using standard algorithms and translate pseudo-codes into C programs and implement them. (Applying)
CO 3: Apply their analytical skills for choosing the right data structure, function, data types and develop logic to solve various instances of problems. (Analysing)

List of experiments:
1. Introduction to OS: Linux/Unix, Vi editor, file handling, directory structures, creating and editing simple C programs.
2. C programming using variables, assignment and simple arithmetic expressions
3. If else
4. Switch-case statements
5. Break, continue
6. Loops
7. Single and multidimensional arrays
8. Functions and recursion
9. Pointers, address operator, declaring pointers and operations on pointers

Suggested Readings

1. Balagurusamy, E., Computer Fundamentals and C Programming, Tata McGraw Hill Publishing Company Limited, New Delhi.
2. Kanetkar, Y., Let us C, BPB Publication, New Delhi

Mapping of COs to Syllabus:

Course Outcomes	Module I	Module II	Module III	Module IV	Module V	Module VI	Module VII	Module VIII	Module IX

CO 3	L	M	M	M	H	H	H	H	H

CADS102T: DATA STRUCTURES USING C

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The objective of the course is to learn how to create data structures to represent a collection of similar data and solve problems using C language.

COURSE / LEARNING OUTCOMES

At the end of this course, students will be able to:

CO 1: Recall the basic C constructs and familiarize with basic C syntax, also define and outline the relationship between data and operations on these data using different data structures like arrays, linked list, stacks and queues, graphs and trees. (Remembering)

CO 2: Define C constructs for explaining and generalizing these data structures and choosing appropriate algorithms for efficient program design using C syntax. (Understanding)

CO 3: Compute and demonstrate these data structures and algorithms in different real world problem domain (Applying)

CO 4: Review the choice of data structure and algorithms based on the problem domain. (Evaluating).

Module I: Arrays and Lists (13 Hours)

Data Type, Abstract Data Type, Data Structure, Fundamental and Derived Data Types, Array as a data structure, Representation of arrays: single and multidimensional, Address calculation using column and row major ordering; insertion and deletion in arrays; use of arrays for matrix representation and manipulation (addition, multiplication).

Linked List as a data structure; operations on lists; singly linked list (with one or two external pointers), doubly linked list, circular list; use of linked lists for polynomial representation and manipulation (addition and multiplication), and sparse matrix representation and manipulation (inputting, adding, and displaying in matrix form).

Module II: Stacks and Queues (12 Hours)

Stacks and Queues as data structures; implementation of stacks and queues using arrays and linked lists; Circular Queue, Priority Queue; Application of stacks: Conversion of infix (containing arithmetic operators including exponential operator, and parenthesis) to postfix and prefix expressions; evaluation of postfix expression.

Module III: Trees and Graphs (10 Hours)

Binary Trees and General Trees, Representation of trees using linked lists, Binary tree traversal methods, recursive and non-recursive algorithms for traversal methods, Binary search trees (creation, insertion and deletion of a node), Height balanced (AVL) binary trees (construct and traverse an AVL tree), B-tree (construction and traversal of a B-tree of given order)

Introducing Graphs; Graph representation: Adjacency matrix, adjacency lists, incidence matrix; Traversal schemes: Depth first search, Breadth first search

Module IV: Searching and Sorting (10 Hours)

Linear and binary search, Indexed search; Hashing, Hash Functions (division method, mid square method, folding), Basic Sorting algorithms.

Suggested Readings

1. Lipschutz, S., Theory and Problems of Data Structures (International Edition), Schaum's Outline Series, New Delhi: Tata McGraw-Hill.
2. Kanetkar, Y. P., Data Structures Through C Language, New Delhi: BPB Publications.
3. Chattopadhyay, S.; D. G. Dastidar; M. Chattopdhyay, Data Structures Through C Language, New Delhi: BPB Publications.

E Resources

CO 3			H	M
CO 4		M	M	H

CADS103L: DATA STRUCTURES USING C Lab

(1 Credit – 15 hours) (L-T-P: 0-0-1)

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Recall the basic C constructs and familiarize with basic C syntax, also define and outline the relationship between data and operations on these data using different data structures like arrays, linked list, stacks and queues, graphs and trees. (Remembering)

CO 2: Define C constructs for explaining and generalizing these data structures and choosing appropriate algorithms for efficient program design using C syntax. (Understanding)

CO 3: Compute and demonstrate these data structures and algorithms in different real world problem domain (Applying)

CO 4: Review the choice of data structure and algorithms based on the problem domain. (Evaluating).

Solution of problems on-

1. Arrays
2. Stacks and Stack Application, Queues
3. Linked Lists, Circular and Doubly Linked Lists
4. Binary Trees
5. Searching and data modification: Linear search, Binary search, Hashing
6. Sorting Techniques: Selection, Insertion, Bubble Sort.

Suggested Readings

1. Lipschutz, S., Theory and Problems of Data Structures (International Edition), Schaum's Outline Series, New Delhi: Tata McGraw-Hill.
2. Kanetkar, Y. P., Data Structures Through C Language, New Delhi: BPB Publications.
3. Chattopadhyay, S.; D. G. Dastidar; M. Chattopdhyay, Data Structures Through C Language, New Delhi: BPB Publications.

CAIJ200T: INTRODUCTION TO JAVA PROGRAMMING

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The course is designed to impart the knowledge and skill required to solve real-world problems using an object-oriented approach utilizing Java language constructs. This course covers the two main parts of Java i.e. Java Language and Java Library (JDK 5).

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Recall the knowledge of the structure and model of the Java programming language, (Remembering)

CO 2: Explain the use of Java programming language for various programming technologies (Understanding)

CO 3: Develop software in the Java programming language. (Applying)

CO 4: Analyse user requirements for software functionality required to decide whether the Java programming language can meet user requirements. (Analysing)

CO 5: Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (Evaluating)

CO 6: Propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (Creating)

Module I: Java Fundamentals (16 hours)
Genesis, Java Philosophy, Java & Internet, Object-Oriented Programming features, Java Applet and Application, Java Environment and Java Development Kit (JDK) and Java Standard Library (JSL), Tokens, Expressions, Using Data Types, Declarations, Control Flow

Module II: Java Classes, Packages and Interfaces, Java Streams (14 hours)
a) Introduction, Classes, Working with Objects, Packages, Inheritance, Interfaces
b) Data Flow with Java Streams, Input Streams, Output Streams

Module III: Exception Handling in Java and Java threads (10 hours)
a) Introduction, Exception Methods, java.lang Exceptions
b) Introduction, Creating Threads, the Life Cycle of a Thread, Thread Methods, Using Threads, Synchronization of Threads

Module IV: Java Applets (10 hours)
Introduction, Applet Examples, The java.applet.Applet Class, The Five Stages of an Applet's Life Cycle, Methods for Adding UI Components, Methods for Drawing and Event Handling

Module V: Java AWT (10 hours)
Introduction, Swing Component and Container classes, Layout managers (Flow Layout, Grid Layout, Border Layout), Handling events, Adapter classes, Anonymous inner classes, Swing GUI components :JLabel, JTextField, JTextArea, JButton, JCheckBox, JRadioButton, JList, JComboBox, JScrollBar, JScrollPane, JToolTip, JPanel, JFrame, introduction to database connectivity with JDBC.

Suggested Readings
1. Deitel, H. M.; P. J. Deitel, Java: How to Program, New Delhi: Prentice Hall India
2. Schildt, H., The Complete Reference Java 2, New Delhi: Tata McGrawHill
3. Moss, K., Java Servlets, New Delhi Tata McGraw-Hill
4. Russell, Java Programming for the absolute Beginner, New Delhi: Prentice-Hall India
5. Hanagan D., Java Examples in a Nutshell, New Delhi: O' Reilly

CAIJ201L: Introduction to Java Programming Lab

(1 Credit – 15 hours) (L-T-P: 0-0-1)

COURSE / LEARNING OUTCOMES
At the end of the Lab experiments students will be able to:
CO 1: Identify classes, objects, members of a class and relationships among them needed for a specific problem.(Remembering/Evaluating)
CO 2: Write Java application programs using OOP principles and proper Program structuring. (Applying/Understanding)
CO 3: Demonstrate the concepts of polymorphism and inheritance .(Applying)
CO 4: Write Java programs to implement error handling techniques using exception handling.(Applying)
CO 5: Analyse the real world problems and solve using Java programming .(Analysing/ Applying)

List of Experiments
1. Java Fundamentals using Data Types, Declarations, Control Flow
2. Java Classes and Java Packages
3. Java Interfaces and Java Streams

4. Java Exception Handling
5. Java Threads
6. Java Applets
7. Java AWT

CALD202T: DIGITAL LOGIC DESIGN

(3 credits–45 hours) (L-T-P) (2-1-0)

Objectives

This course covers the basic concepts of digital logic. The course includes the fundamental concepts of Boolean algebra and its application for circuit analysis, multilevel gates networks, flip-lops, counters logic devices and synchronous and asynchronous sequential logic and digital integrated circuits.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: To solve conversion among different number systems (Applying)

CO 2: Apply the knowledge of Boolean algebra, Karnaugh-map or tabulation method to minimise Boolean expressions. (Applying)

CO 3: Design and analyse a given combinational/ sequential circuit and determine the corresponding truth table/ state table. (Analysing)

Module I: Number Systems (6 Hours)

Binary, Octal, & Hexadecimal Number Systems and Their Conversions, Representation of Signed Numbers-Floating Point Number, Binary Arithmetic, Representation-of BCD-ASCII-Excess 3 -Gray Code —Error Detecting and Correcting Codes.

Module II: Boolean Algebra, Simplification of Boolean Functions (13 Hours)

Boolean Algebra: Various Boolean operations; Postulates, Theorems, Duality, Boolean functions, Canonical forms, Representation of Boolean expressions using truth tables, logic gates. Boolean expressions minimization using Karnaugh map, Realization of canonical forms from Karnaugh map, Don't Care Conditions - problems using Don't care conditions, benefit of using Don't care conditions. Tabulation method/Quine- Mc Kluskey method, prime implicants.

Module III: Combinational Logic and Sequential Logic (26 Hours)

Digital devices: Logic gates, wired-logic, 8 non-degenerate forms of NOR and NAND, multilevel NAND and NOR gats, buffer, 3-state buffer, high impedance state, Realization of other logic functions using NAND/NOR gates. Drawing logic diagrams for different types of Boolean expression derived from truth tables; A brief introduction to Combinational and sequential circuits. Difference between Combinational and sequential circuits; Arithmetic circuits: Half-adder, Full-adder, Binary Adder, Binary Parallel Adder, BCD Adder, Binary Adder-Subtractor, Half-subtractor, Binary Incrementer, carry propagation, look ahead carry, carry generator, magnitude comparator; Encoders, Decoders, Multiplexers, Demultiplexers

Flip-flops: Different types of flip-flops, Flip-flop excitation tables, characteristic equations, truth tables, Triggering of Flip-flops.

Registers: Registers (Register with Parallel Load), Shift registers

Counters: Asynchronous counters, Synchronous counters; Binary Counter with Par-allel Load, binary Ripple Counter, BCD ripple counter, synchronous binary counter, binary count-up-down counter, BCD synchronous counter.

Suggested Readings

1. M. Morris Mano, Digital Logic and Computer Design, Prentice Hall of India Pvt. Ltd., New Delhi, 1994
2. Thomas L. Floyd, Digital Fundamentals, Fifth Edition, Pearson Education, 2002
3. V. Carl Hamacher, Zvonko G. Vranesic, Safwat G. Zaky, Computer Organization, Fourth Edition, McGraw Hill, 1996

CALD203L: DIGITAL LOGIC DESIGN LAB

(1 Credit – 15 hours) (L-T-P: 0-0-1)

COURSE / LEARNING OUTCOMES

At the end of the experiments students will be able to:

CO 1: Explain the working of the various logic gates. (Understanding)
CO 2: Experiment with different logic gates to solve any given problem. (Applying)
CO 3: Analyse a given logic circuit and point out errors in it. (Analysing)
CO 4: Evaluate the output of a logic circuit for given inputs. (Evaluating)

List of experiments-

1. *Study of the Truth tables of logic gates*
2. *Realization of half/full adder and half/full adder subtractor*
3. *Verify truth table of multiplexer and demultiplexer*
4. *Verify truth table of one bit and four bit comparators*
5. *Verify truth table of flip-flops*
6. *Simulation with VDHL*
7. *Adders*
8. *Subtractors*
9. *Logic gates*
10. *MUX and DEMUX*

Suggested Readings:

1. M. Morris Mano, Digital Logic and Computer Design, Prentice Hall of India Pvt. Ltd., New Delhi, 1994
2. Thomas L. Floyd, Digital Fundamentals, Fifth Edition, Pearson Education, 2002
3. V. Carl Hamacher, Zvonko G. Vranesic, Safwat G. Zaky, Computer Organization, Fourth Edition, McGraw Hill, 1996

CAOS204T: OPERATING SYSTEMS

(3 Credits – 45 hours) (L-T-P: 2-1-0)

Objective

To provide the basic functionalities and services provided by an operating system. This subject provides an overview of process management, memory management, deadlock, file system, input-output systems and protection and security. It gives knowledge on existing common operating systems like UNIX, Linux and Windows.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Define the basic concepts of operating systems and terminology related to operating systems such as processes, threads, files, semaphores, IPC abstractions, shared memory regions. (Remembering)
CO 2: Analyze important algorithms such as Process scheduling and memory management algorithms. (Analysing)
CO 3: Categorize the operating system's resource management techniques, deadlock management techniques, memory management techniques. (Analysing)
CO 4: Discuss and examine the importance of File and I/O system management in operating systems. (Evaluating)

Module I: Introduction to Operating systems (5 Hours)
Definition of Operating Systems, Functions of Operating Systems, Types of Operating Systems: Batch, Multiprogrammed, Time sharing, Multi-Processor, Real-time and Distributed Operating Systems, Operating System Structures, Components and Services, System calls.

Module II: Process Management (10 Hours)
Process Concept-Definition, Process States, Process Control Block, Process Schedulers- Short term, Medium term and Long term schedulers, Scheduling Algorithms - Preemptive and Non-Preemptive, Co-operating process, Threads, Inter-process communication.

Module III: Process Synchronization and Deadlock (12 Hours)
Process Synchronization-the Critical Section Problem, Classical Problems of Synchronization, Semaphores. Deadlocks - Definition of a Deadlock, System model, Characterization, Deadlock Handling-Prevention, Avoidance, Detection and Recovery (Banker's Algorithms and Resource Request Algorithm

Module IV: Memory Management (10 Hours)
Memory Management- Logical and Physical Address Space, Address Mapping, Swapping, Contiguous allocation, Paging, Segmentation, Segmentation with Paging. Virtual memory- Demand paging and its performance, Page replacement algorithms-FIFO and LRU, Thrashing.

Module V: File and I/O System Management (8 Hours)
File management (Systems, Secondary Storage Structure)-File Concepts, Access methods, Directory Structure, Protection and consistency, Recovery.
I/O System Management- Overview of I/O Systems, I/O Interface, Secondary Storage Structure-Disk Structure and Scheduling methods, Disk management, Swap – Space management.

Suggested Readings
1. Abraham Silberschatz and Peter Baer Galvin, "Operating System Concepts", 7th Edition, Pearson Education, 2002.
2. Tannenbaum," Modern Operating Systems", PHI
3. William Stallings, "Operating Systems", 6th Edition, Pearson Education, 2010.
4. Harvey M. Deitel, Operating Systems, Second Edition, Pearson Education Pvt. Ltd.
5. Mandik and Donovan, Operating Systems, Mcgraw Hill.

CAOS205L: OPERATING SYSTEMS LAB
(2 CREDIT-30 Hours) (L-T-P) (0-0-2)

COURSE / LEARNING OUTCOMES
At the end of Introduction to Operating Systems Lab students will be able to:
CO 1: Experiment with *fork()* system call to create a new process.
CO 2: Infer the concepts related to shell programming and their significance. (Understanding)
CO 3: Experiment with various scheduling algorithms (FCFS, SJF and Round Robin). (Applying)
CO 4: Examine the results obtained from page replacement algorithms-(FIFO, LRU), and understand the underlying principles and working of space management concepts. (Analysing)

List of experiments
1. Programs using fork system calls.
2. Shell programming.
3. Programs to simulate process scheduling- FCFS, SJF and Round Robin.

4. Programs to simulate page replacement algorithms-FIFO, LRU.
5. Programs to simulate free space management.

CACA206T: COMPUTER ORGANIZATION AND ARCHITECTURE

(3 Credits – 45 hours) (L-T-P: 3-1-0)

Objective

This course aims to provide the student with the concepts and basic knowledge necessary to understand the organisation and architecture of computing systems.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Recognize and define the basic components and design of a computer, including CPU, memories, and input/output units. (Remembering)

CO 2: Identify and classify the major components of a CPU and discuss, review the operations intrinsic to it. (Understanding)

CO 3: Discover the parameters of performance improvement and use them in predicting the issues in instruction cycle. (Applying)

CO 4: Analyse the mapping techniques of different memory units; instruction sets interpret the different performance trade-offs between them. (Analysing)

CO 5: Summarize the concepts adhered to the principles and architectures of a digital computer system to design and develop new improvised systems. (Create)

Module I: Control Unit (10 Hours)

a. Major Components of a CPU; General Register Organization; Stack Organization (Register Stack, Memory Stack, Reverse Polish Notation); Characteristics of Complex Instruction Set Computer (CISC) and Reduced Instruction Set Computer(RISC)
b. Micro operations, Control Function, Role of Three-State Bus Buffers in Memory Transfers; Arithmetic Microoperations, Logic Microoperations, Shift Microoperations; Microprogrammed Control and Hardwired Control; Control Memory, Control Word, Microinstruction, Microprogram, Mapping of Instructions; Instruction Formats(Three- Address Instructions, Two-Address Instructions and Zero-Address Instructions); Addressing modes.

Module II: Parallel Processing and Multiprocessors (12 Hours)

a. Parallel Processing: Flynn's Classification of computers; Pipelining, Data Dependency,Handling of Branch Instructions, Delayed Load, Delayed Branch; Vector Processing, Supercomputers; Array Processors.
b. Multiprocessors: Tightly Coupled, Loosely Coupled;

Module III: Memory Organization (10 Hours)

Hardware Organization for Associative Memory; Mapping methods for Cache Memory (Associative Mapping, Direct Mapping, Set-Associative Mapping), Write Through, Write Back, Cache Initialization, Cache Coherence; Virtual Memory, Memory management hardware.

Module IV: Input-Output Organization (13 Hours)

Input Output Interface, I/O Bus, Memory Bus, Isolated I/O, Memory-Mapped I/O; Asynchronous Data Transfer, Strobe Control, Handshaking; Modes of Transfer- viz. Direct Memory Access, Programmed I/O, and Interrupt-Initiated I/O; Priority Interrupt (Daisy-Chain Priority, Parallel Priority Interrupt, Priority Encoder); Input-Output Processor; Serial Communication(Character-Oriented Protocol and Bit-Oriented Protocol).

Suggested Readings

1. M. Morris Mano, Computer System Architecture, Third Edition, Prentice Hall of India Pvt. Ltd., New Delhi, 2002.
2. V. Carl Hamacher, Zvonko G. Vranesic and Safwat G. Zaky, Computer Organization, Fourth Edition, McGraw Hill, 1996
3. William Stallings, Computer Organization and Architecture, Sixth Edition, Prentice Hall of India Pvt. Ltd., New Delhi, 2002

E Resources

1. SWAYAM course on Computer Architecture and Organization by Prof. Indranil Sengupta, Prof. Kamalika Datta, IIT Kharagpur
2. SWAYAM course on Computer Architecture by Prof. Smruti Ranjan Sarangi, IIT Delhi

CACA207L: COMPUTER ORGANISATION AND ARCHITECTURE LAB

(2 credits – 30 hours) (L-T-P: 0-0-2)

Objective

This course aims to provide the student with the concepts and basic knowledge necessary to develop the organization and architecture of computing systems.

COURSE / LEARNING OUTCOMES

At the end of the Lab experiments students will be able to:

CO 1: Recall different OPcodes and syntax used in 8086 (Remembering).

CO 2: Illustrate the syntax of 8086 assembly language (Understanding).

CO 3: Choose the appropriate method to Categorize different types of OPcodes and write an 8086 assembly program (Evaluating).

Module I:

Dismantling and assembling a PC along with study of connections, ports, chipsets, SMPS etc.

Module II:

Assembly language programming using IA32(gcc), Introduction of gcc assembly programming, Verification of Instruction Set, Arithmetic operations

Module III:

Addition, Subtraction, Multiplication and Division of two 8-bit numbers.

Multi byte Addition and Subtraction, Multiplication and Division – Signed and unsigned Arithmetic operation, ASCII – arithmetic operation.

Module IV:

Logic operations – Shift and rotate – Converting packed BCD to unpacked BCD, BCD to ASCII conversion.

By using string operation and Instruction prefix: Move Block, Reverse string, Sorting, Inserting, Deleting, Length of the string, String comparison.

DOS/BIOS programming: Reading keyboard (Buffered with and without echo) – Display characters, Strings.

Suggested Readings

1. V. Carl Hamacher, Zvonko G. Vranesic and Safwat G. Zaky, Computer Organization, Fourth Edition, McGraw Hill, 1996
2. William Stallings, Computer Organization and Architecture, Sixth Edition, Prentice Hall of India Pvt. Ltd., New Delhi, 2002

CARD208T: RELATIONAL DATABASE MANAGEMENT SYSTEMS

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The objectives of this course are to give students an in-depth understanding of the relational model for establishing fundamental skills with SQL and the operation of an RDBMS. The course also provides concepts of data modeling, design, and management for solving real problems.

COURSE / LEARNING OUTCOMES:

At the end of this course, students will be able to:

CO 1: Define the terminologies and features related to database systems and also describe the main functions and benefits of each of the database systems. (Remembering)

CO 2: Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. (Understanding)

CO 3: Master sound design principles for the logical design of databases, including the E-R model, EER model, and schema diagrams. (Evaluating)

CO 4: Transform an information model into a relational database schema and use the various types of query languages to implement and use the schema using a DBMS. (Applying)

CO 5: Analyze the concepts used for transaction processing and also the issues and techniques related to concurrency and recovery management. (Analyzing)

Module I (10 hours)

a. Database System – Database, Database System, DBMS, Advantages of using the database system, Functionalities of the database, Data Independence, Data Abstraction

b. Data models - Entity Relationship (ER), Enhanced Entity Relationship (EER), Mapping ER Model to Relational data model, Hierarchical and Network data models, Object Oriented and Object-Relational Data Models

Module II (15 hours)

a. SQL Queries - Relation Query Languages, SQL data types, Data Definition Language (DDL) commands, Data Manipulation Language (DML) commands, Data Retrieval commands, Single-row and Group functions, Multi-table querying (Joins and Subqueries)

b. Query Languages - Relational Algebra, Tuple and Domain Relational Calculus, Relational Database Design: Domain and Data dependency, Armstrong's Axioms, Normal Forms, Dependency Preservation, Lossless design.

Module III (8 hours)

a. Normalization: Concepts of Normalization and Denormalization, First Normal Form, Second Normal Form, Third Normal Form, Fourth Normal Form, and Fifth Normal Form

b. Query Processing and Optimization: Evaluation of Relational Algebra Expressions, Query Equivalence, Query Optimization Algorithms

Module IV (12 hours)

a. Storage Strategies: Indices, B-Trees, Hashing, Transaction processing: Recovery and Concurrency Control, Locking and Timestamp based Schedulers

b. Advanced topics: Web Databases, Distributed Databases, Data Warehouse, and Data Mining.

Suggested Readings

1. Ramez Elmasri and Shamkant B Navathe, Fundamentals of Database Systems, 5th Edition, Pearson Education
2. Abraham Silberschatz, Henry F Korth and S Sudarshan, Database System Concepts, 5th Edition, Mc-Graw Hill.
3. C.J. Date, Introduction to Database Systems, 8th ed., Pearson Education.
4. Bipin Desai, An Introduction to Database System, Galgotia Publication.

E Resources

1. SWAYAM Course on Database Management System by Prof. Partha Pratim Das, IIT Kharagpur
2. SWAYAM Course on Database Management Systems by Dr. K. Arul Deepa, Assistant Professor, Dr.K.Arul Deepa & Dr.P.Velvizhy, Asst. Professor Dept. of IST, Anna University, CEG, Chennai, Anna University, Chennai, Anna University

CARD209L: RELATIONAL DATABASE MANAGEMENT SYSTEMS LAB

(1 credit – 15 hours) (L-T-P:0-0-1)

Objective

The objectives for this course are to give students an in-depth understanding of the relational model for establishing

fundamental skills with SQL and the operation of an RDBMS. The course also provides concepts of data modelling, design and management for solving realistic problems.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Infer database language commands to create simple database
CO 2: Analyze the database using queries to retrieve records
CO 3: Applying PL/SQL for processing database

Module I: SQL Queries (10 hours)

SQL Queries: Data Definition Language (DDL) commands – CREATE, DROP, ALTER and RENAME; Data Manipulation Language (DML) commands – INSERT, UPDATE, and DELETE; Data Retrieval command – SELECT, Single-row Functions – String functions, Numeric Functions, Date-Time Functions, General Functions, Data Type Conversion Functions; Group functions -SUM, AVG, MIN, MAX, COUNT, Multi-table querying (Joins and Subqueries)

Module II: PL/SQL Programming (5 hours)

PL/SQL Programming: PL/SQL Block Structure – DECLARE, BEGIN, END, EXCEPTION, SQL Within PL/SQL, Loops and Decision making statements, Cursor Types – Implicit and Explicit cursors

Suggested Readings

1. Ramez Elmasri and Shamkant B Navathe, Fundamentals of Database Systems, 5th Edition, Pearson Education
2. Abraham Silberschatz, Henry F Korth and S Sudarshan, Database System Concepts, 5th Edition, Mc-Graw Hill.

CACN300T: COMPUTER NETWORK FUNDAMENTALS

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The objective of this course is to make the students understand basic terminologies of computer networks along with their types, mode of communication, models, transmission media, connecting devices. It also emphasizes to make the students aware about network security and basic conception of the World Wide Web.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Define the basic concepts of Computer Networks, its goals and network related terminologies. (Remembering)
CO 2: Explain the concepts of Analog and Digital signals, Electromagnetic spectrum and related concepts on various architecture used in computer networks. (Understanding)
CO 3: Experiment with various Networks concepts such as Types of networks, Topologies, Transmission media. (Applying)
CO 4: Comprehend Network Security Devices, Digital Signature and Internet Basics for designing the network with a suitable topology and network types. (Creating)

Module I: (15 Hours)

Computer Network: Definition, Goals, Applications, Structure, Components, Topology, Types of Topology, Types of Networks (LAN, MAN, WAN, Internet), Broadcast and Point-To-Point Networks, Communications Types (Synchronous, Asynchronous), Modes of Communication, Topology, Client/Server architecture, Network Models, Design issues of the layer, Protocol Hierarchy, ISO-OSI Reference Model (Functions of each layer),Terminology, SAP, Connection Oriented and connectionless services, Peer Entities, TCP/IP model, Layers, Ports, Protocol Stack, Comparison of ISO-OSI and TCP/IP Model

Module II: (15 Hours)

Transmission Media, Classes of Transmission Media, Guided Media: Coaxial Cable, Twisted Pair, Fiber Optics Cable, Connectors, Unguided Media (Wireless), Electromagnetic Spectrum for Wireless Communication, Propagation Methods (Ground, Sky, Lineof-Sight), Wireless Transmission, Radio Waves, Infrared, Microwave, Wireless LANs Architecture, MAC Sublayer, Frame Format,Frame Types, Bluetooth Architecture.

Module III: (15 Hours)

Analog and Digital Signals, Data Encoding, Parallel and Serial Transmission, Network Connectivity Devices, Categories of

Connectivity Devices, Passive and Active Hubs, Repeaters, Bridges, Switches (2-Layer Switch, 3-Layer Switch (Router)), Gateways, Network Interface Cards (NIC), Internetworking Principles, Network Security : Definition, Network Security Requirements and Attacks, Network Security Devices (firewalls, Proxy Server), Encryption and Digital Signatures, Internet Basics, Concept of Intranet and Extranet, Web Server, World Wide Web (WWW) Architecture, Web Documents, Search Engines, Internet Service Providers (ISP).

Suggested Readings

1. Andrew S. Tannenbaum, "Computer Networks", Tata McGraw-Hill Publishing Company Limited New Delhi.
2. Behrouz A. Forouzan, "Data Communications and Networking", Tata McGraw-Hill Publishing Company Limited New Delhi.
3. William Stallings, "Data and Computer Communications", Pearson Education Asia.

E Resources

CACN301L: COMPUTER NETWORK FUNDAMENTALS LAB

(2 credits – 30 hours) (L-T-P: 0-0-2)

COURSE / LEARNING OUTCOMES

At the end of this course, students will be able to:

CO 1: Implement various commands and evaluate the significance of socket programming used in networking. (Understanding)
CO 2: Make client-server communication with optimum algorithm and topology. (Creating)
CO 3: Make a distinctive comparison of various routing algorithms to select the optimum network path for data transfer.(Analysing)

List of Experiments

1. Basic Networking Commands and troubleshooting.
2. Introduction and implementation of LAN Trainer for various topologies and protocols simulation.
3. Programs using TCP Sockets (like date and time server and client, echo server and client, file transfer, etc.)
4. Programs using UDP Sockets (like simple DNS, file transfer, etc.)
5. Program to implement Remote Command Execution.
6. Create HTTP socket for web page upload and download.
7. Perform a case study on the following routing algorithms to select the optimum network path for data transfer.
   a. Shortest path routing
   b. Flooding
   c. Distance vector

CAWT302T: WEB TECHNOLOGIES

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The course provides an introduction to the fundamentals and basic requirements of web technologies. After completion of this course, students should be able to design and implement a website on their own by including client-side and server-side technologies.

COURSE / LEARNING OUTCOMES

On successful completion of the course students will be able to:

CO 1: Recall the various Internet related terminologies and examine the history and growth of Internet. (Remembering)
CO 2: Identify and differentiate the various services provided by the internet. (Understanding)
CO 3: Experiment with various mark-up languages and style sheets to design a static website. (Applying)
CO 4: Experiment with various scripting languages to design a dynamic website. (Applying)
CO 5: Develop and create a website using standard tools and technologies. (Creating)

Module I: Basic Internet-related Terms and Static Web Development (13 Hours)

Basics of Internet – History of Internet and WWW, W3C Recommendations, Internet Connectivity (Dial-up, Leased Line, DSL, WiFi, and VSAT); Requirements for Internet Connectivity; Search Engines, Various Internet Services; Web Portal; Different types of browsers (IE, Firefox, Chrome); URLs, Domain names

Static Web Development: Introduction to XHTML; HTML vs. XHTML, XHTML comments; Basic Tags-XHTML, HEAD, TITLE, BODY; Paragraph Tag, Horizontal Rule Tag, Headings Tags, Blockquote Tag, Lists, Linking, Images, Tables, FONT Tag, PRE, DIV and SPAN tags; other different formatting tags; Forms; Frames

Module II: CSS and XML (12 Hours)

Cascading Style Sheets: Types of Style Sheets-Inline, Embedded, and External; CSS Background properties, text and font properties, Use of CSS for positioning elements, Background, and Text flow, CSS Box Model, CSS Borders and Outlines, Style class and Pseudo-class

XML: Introduction to XML; Structuring Data; XML Namespaces; Document Type Definitions and Schemas; XML Parser; Document Object Model; Extensible Stylesheet Language (XSL)

Module III: Website Design Considerations and JavaScript (12 Hours)

Website Design Considerations: Planning to design a website, sitemaps, top-down vs. bottom-up approach, Creating a Compatible website for different color depths, resolutions, and browser considerations)

DHTML: Introduction to DHTML and JavaScript, Data types, operators, variables, input and output statements, Built-in functions, Arrays, If statement, Switch statement, Looping statements, JavaScript Form Validation, Events in JavaScript.

Module IV: Web Servers and PHP (8 Hours)

1. Web servers: Need of a web server; System Architecture of a Web server; HTTP Request Types; Client-side Scripting versus Server-side Scripting; Accessing Web servers; Various web servers- Microsoft IIS, Apache, NGINX, LAMP, WAMP
2. PHP: Introduction to PHP; PHP Data Types; Control Structures; Functions; Strings; Arrays

Suggested Readings

1. Deitel and Deitel, Internet and World Wide Web: How to Program, 4th Edition, Prentice Hall of India Pvt. Ltd., New Delhi, 2009.
2. E. A. Meyer, CSS The Definite Guide, 3rd Edition, O'Reily.
3. Douglas E. Comer, The Internet Book: Everything you need to know about Computer Networking and how the Internet works, 3rd Edition, Prentice Hall of India Pvt. Ltd., New Delhi
4. R. Lerdorf, K. Tatroe, P. MacIntyre, Programming PHP, 3rd Edition, O'Reily.
5. T. McNavage, JavaScript for Absolute Beginners, Apress, 2010.

E Resources

1. Spoken Tutorial on HTML by Praveen S, IIT Bombay
2. Spoken Tutorial on CSS by Neha Solanki, IIT Bombay
3. Spoken Tutorial on JavaScript by Jayesh K Ramalingaiah
4. Spoken Tutorial on PHP by Kavita Kharad

CAWT303L: WEB TECHNOLOGIES LAB

(2 CREDIT - 30 HOURS)

Objective

The course provides an introduction to the fundamentals and basic requirements of web technologies. After completion of this

course, students should be able to design and implement a website on their own by including client-side and server-side technologies.

COURSE/LEARNING OUTCOMES

At the end of the experiments, students will be able to

CO 1: Experiment with various mark-up languages and style sheets to design a static web site (Applying)
CO 2: Develop and create a dynamic website using scripting languages. (Creating)
CO 3: Summarize and validate a practical solution towards a web application development and also deploy a website of their own. (Evaluating)

Module I: Static Web Designing (10 Hours)

Web Designing: Creating static websites involving various XHTML elements
Cascading Style Sheets: Designing web pages that use CSS for standard formatting

Module II: Dynamic Web Designing (5 Hours)

JavaScript: Designing websites that use JavaScript for creating interactive web pages
PHP: Designing websites that use PHP as server-side scripting language to connect and access the web server

Suggested Readings

1. Deitel and Deitel, Internet and World Wide Web: How to Program, 4th Edition, Prentice Hall of India Pvt. Ltd., New Delhi, 2009.
2. E. A. Meyer, CSS The Definite Guide, 3rd Edition, O'Reily.

CASE304T: SOFTWARE ENGINEERING

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

To provide the ability to analyse a scenario and produce a problem statement. The learners will be able to produce a conceptual solution which includes sample prototypes, domain models, and user stories. The learners will be able to describe the attributes and activities involved in software development process models and testing.

COURSE/LEARNING OUTCOMES

At the end of this course, students will be able to:

CO 1: Relate and examine the life cycle models of software. (Remembering)
CO 2: Interpret and differentiate various software life cycle models(Understanding)
CO 3: Experiment with different software architectures and identify the best feasible one (Applying)
CO 4: Analyse and design the software requirement specification and formulate an effort estimation plan (Analysing)
CO 5: Develop and create various design diagrams and find solutions to problems. (Creating)

Module I (15 Hours)

Problems and solutions: Why software is developed. Problem and vision statements. Goals and objectives. Definitions and paradigms, A generic view of software engineering. Software development life cycle, Role of quality, metrics and measurement, The feasibility study, Software Requirement Analysis and Specifications, work breakdown structure (WBS), Problem Analysis, Creating software requirement specification document (SRS).

Module II (15 Hours)

Process Models: How software is built. The fundamental design concept for data, architectural and procedural designs, Conceptual solutions, Agile concept and User stories. Domain modeling with UML diagrams-Class diagram, Use cases etc, Object oriented design paradigm; Creation of technical design document, The relationship between design and implementation, Coding the procedural design, Good coding style and review of correctness and readability.

Module III (15 Hours)

Strategies of software testing. Types of testing, functional testing, validation and verifications, Test Case Design, Maintenance as part of software evaluation, techniques and procedures for maintenance, Introduction to configuration Management, The concept of CASE, green engineering.

Suggested Readings

1. Sommerville, "Software Engineering", Addison Wesley.
2. Roger S. Pressman, "Software Engineering–A Practitioner's Approach", McGraw Hill Companies.
3. Rajib Mall, Fundamentals of Software Engineering, PHI.

E Resources

4. Udemy course on Complete Software Engineering Course : Build Better Software
5. NPTEL course on Software Engineering By Prof. Rajib Mall, IIT Kharagpur

CASE305L: SOFTWARE ENGINEERING LAB

(1 Credit – 15 hours) (L-T-P: 0-0-1)

COURSE / LEARNING OUTCOMES

At the end of the Lab experiments students will be able to:

CO 1: Implement the software engineering process to develop any software project and formulate an effort estimation plan. (Understanding)
CO 2: Apply software design patterns. (Applying)
CO 3: Maintain the software project by using maintenance plan. (Creating)

Module I (5 Hours)

Identifying the requirements from problem statements.
Estimation of project metrics. Modelling Data Flow Diagrams

Module II (3 Hours)

Development of User stories.
Identifying domain classes from the problem statements

Module III (7 Hours)

Modeling UML use case diagram & capturing use case scenarios
Class diagram, Activity diagram etc.
Designing test suite and testing.

Suggested Readings

1. Lab using IBM RSA tools
2. Virtual lab Weblink: http://vlabs.iitkgp.ernet.in/se/

CACC306T: CLOUD COMPUTING

(4 credits-60Hours) (L-T-P: 4-0-0)

Objective

This course is designed to enable students

- *To get acquaint with the latest computational model, i.e. cloud computing*
- *To understand the basic foundational elements of cloud computing*
- *To study details of Data storage in cloud, big data file handling and parallel computing basics*

- *To get familiarized with popular cloud platforms and applications*

COURSE / LEARNING OUTCOMES

On successful completion of the course students will be able to:

CO 1: Recall and identify the various cloud service models. (Remembering)
CO 2: Understand the basic concepts of Big Data and interpret using Hadoop. (Understanding).
CO 3: Identify and relate security issues with respect to cloud environment. (Applying)
CO 4: Analyse the Quality of Service rendered by various cloud service providers. (Analysis)

Module I: Introduction and Cloud Service Models (15 Hours)

Introduction to Cloud Computing, the Evolution of Cloud Computing, Hardware Evolution, Internet Software Evolution, Server Virtualization, Web Services Deliver from the Cloud, Communication-as-a-Service, Infrastructure-as-a-Service, Monitoring-as-a-Service, Platform-as-a-Service, Software-as-a-Service, Building Cloud Network on amazon web service as VPC.

Module II: Cloud data handling (18 Hours)

Data in the cloud: Relational databases, Cloud file systems: GFS and HDFS, BigTable, HBase and Dynamo. Map-Reduce and extensions: Parallel computing, The Map-Reduce model, Parallel efficiency of Map-Reduce, Relational operations using Map-Reduce, Enterprise batch processing using Map-Reduce, Introduction to cloud development, Example/Application of Map-reduce.

Module III: Security Issues (15 Hours)

Putting security on the spot with questions: Understanding Security Risks, Reducing Cloud Security Breaches, Vulnerability assessment tools, Cloud computing security architecture, Architectural considerations, general issues, Trusted cloud computing, Cloud computing security challenges, Virtualization security management, VM Security recommendations, Secure execution environments and communications in cloud.

Module IV: Quality of Service (QoS) in Cloud (12 Hours)

Issues in cloud computing, implementing real-time application over cloud platform, Issues in Inter cloud environments, Dependability, Dita migration, streaming in cloud, Quality of Service (QoS) monitoring in cloud computing environment, taking virtualization into cloud, develop an application on cloud platform and deploy.

Suggested Readings:

1. John W. Rittinghouse , "*Cloud Computing: Implementation, Management, and Security*", CRC Press
2. Judith Hurwitz, R.Bloor, M.Kanfman, F.Halper, "*Cloud Computing for Dummies*",Wiley India Edition
3. Gautam Shroff, "*Enterprise Cloud Computing*", Cambridge
4. Ronald Krutz and Russell Dean Vines, "*Cloud Security*", Wiley-India
5. Jeffrey Dean, Sanjay Ghemawat, "*MapReduce: Simplified Data Processing on Large Clusters*", OSDI'04: Sixth Symposium on Operating System Design and Implementation,San Francisco, CA, December, 2004.
6. Tim Malhar, S.Kumaraswammy, S.Latif,"*Cloud Security & Privacy*",SPD,O'REILLY
7. Antohy T Velte, et.al,"*Cloud Computing : A Practical Approach*", McGraw Hill,

CAAD307T: ANDROID APPLICATION DEVELOPMENT FUNDAMENTALS

(4 credits-60Hours) (L-T-P: 4-0-0)

Objective

This course is designed to enable students to get a complete understanding of the development of android applications. On completion of this course, students will be able to design, develop, debug and deploy various real-time applications.

COURSE / LEARNING OUTCOMES

CO 1: Interpret the android architecture and configure the development environment (Understanding)

CO 2: Design and build user defined app with different types of menus and views (Applying)
CO 3: Make use of AsyncTask for accomplishing different background task (Applying)
CO 4: Create SQlite database and use views to interact with the database and publishing of application.(Creating)

Module I: Get started (10 Hours)
Get started: Build your first app, Introduction to Android, Create Your First Android App, Layouts, Views and Resources, Text and Scrolling Views.Activities: Understanding Activities and Intents, the Activity Lifecycle and Managing State,Activities and Implicit Intents. Testing, debugging, and using support libraries: The Android Studio Debugger, Testing your App, The Android Support Library

Module II: User experience (13 Hours)
User interaction: User Input Controls, Menus, Screen Navigation, RecyclerView, Delightful user experience: Drawables, Styles, and Themes, Material Design, Providing Resources for Adaptive Layouts Testing your UI: Testing the User Interface

Module III: Working in the background (15 Hours)
Background Tasks: AsyncTask and AsyncTaskLoader, Connect to the Internet, Broadcast Receivers, Services, Triggering, scheduling and optimizing background tasks: Notifications, Scheduling Alarms, Transferring Data Efficiently

Module IV: All about data (22 Hours)
Preferences and Settings: Storing Data, Shared Preferences, App Settings b) Storing data using SQLite: SQLite Primer, SQLite Database, Sharing data with content providers: Share Data Through Content Providers d) Loading data using loaders: Loaders. Permissions, Performance and Security, Firebase and AdMob, Publish

Suggested Readings
1. Android Developer Fundamentals Course – E-book by the Google Developer Training team.
2. The practical workbook: Android Developer Fundamentals Course—Practical's E-book.
3. Slide decks & Videos of lectures for reference provided by Google.

CANS308T: NETWORK SECURITY

(4 credits – 60 hours) (L-T-P:4-0-0)

Objective

The objective of the course is to learn the network security attacks, system vulnerabilities and strategies that can be deployed to increase the efficiency of the network service.

COURSE / LEARNING OUTCOMES

CO 1: Recall and identify the different security attacks, requirements, mechanisms and services in the practical field. (Remembering)
CO 2: Recognize and summarize the core principles of cryptography and cryptanalysis available today, including symmetric and asymmetric encryption, hashing, and digital signatures. (Understanding)
CO 3: Identify and relate themselves with the different vulnerabilities, a system in a network can have. (Applying)
CO 4: Inference and predict the issues of securing computer and information systems. (Analyzing)
CO 5: Construct how malicious code functions, relate the vulnerabilities that make proliferation possible and rewrite methods and practices available for alleviation. (Creating)

Module I: (18 hours)
Security Attacks (Interruption, Interception, Modification and Fabrication), Security Services (Confidentiality, Authentication, Integrity, Non-repudiation, access Control and Availability) and Mechanisms, A model for Internetwork security, Internet Standards, Buffer overflow & format string vulnerabilities, TCP session hijacking, ARP attacks, route table modification, UDP hijacking, and man-in-the-middle attacks.

Module II: (18 hours)

Conventional Encryption Principles, Conventional encryption algorithms, cipher block modes of operation, location of encryption devices, key distribution Approaches of Message Authentication, Secure Hash Functions and HMAC, Public key cryptography principles, public key cryptography algorithms, digital signatures, digital Certificates, Certificate Authority and key management Kerberos, X.509 Directory Authentication Service.

Module III: (12 hours)
Email privacy: Pretty Good Privacy (PGP) and S/MIME.IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations and Key Management.

Module IV: (12 hours)
Web Security Requirements, Secure Socket Layer (SSL) and Transport Layer Security (TLS), Secure Electronic Transaction (SET).Basic concepts of SNMP, SNMPv1 Community facility and SNMPv3. Intruders, Viruses and related threats. Firewall Design principles, Trusted Systems, Intrusion Detection Systems, Ransomware and different types of Ransomware, Methodology of execution of Ransomware.

Suggested Readings

1. Network Security Essentials (Applications and Standards) by William Stallings Pearson Education.
2. Hack Proofing your network by Ryan Russell, Dan Kaminsky, Rain Forest Puppy, Joe Grand, David Ahmad, Hal Flynn Ido Dubrawsky, Steve W.Manzuik and Ryan Permeh, Wiley Dreamtech.
3. Network Security and Cryptography: Bernard Menezes, CENGAGE Learning.
4. Network Security - Private Communication in a Public World by Charlie Kaufman, Radia Perlman and Mike Speciner, Pearson/PHI.
5. Cryptography and network Security, Third edition, Stallings, PHI/Pearson
6. Principles of Information Security, Whitman, Cengage Learning.
7. Cryptography and Network Security, S.Bose , Pearson

E Resources

1. SWAYAM: Introduction to Cyber Security (IGNOU)o https://onlinecourses.swayam2.ac.in/nou24_cs13/preview
2. Cybrary - Free and paid courses on various aspects of network security. Cybrary Network Security
3. SANS Institute - Cybersecurity training and certification programs. SANS Institute
4. Kali Linux Documentation - Resources for using Kali Linux in network security. Kali Linux Documentation
5. OWASP - Resources and tools for improving web application security. OWASP
6. Coursera Network Security Courses - Various courses on network security fundamentals and advanced topics. Coursera Network Security
7. E-Book: Introduction to Cyber Security https://uou.ac.in/sites/default/files/slm/Introduction-cyber-security.pdf

CAPW309P: MINOR PROJECT

(4 credits – 60 hours) (L-T-P: 0-0-4)

Objective

This course aims to provide the student with various practical knowledge on different problem specific system deployment techniques and analysis.

COURSE / LEARNING OUTCOMES

At the end of the Lab experiments students will be able to:

CO 1: Recall different processes involved in software development life cycle (Remembering).
CO 2: Understanding the problem statement and related literature study (Understanding).
CO 3: Analyse end user requirements for identifying system functionality metrics and decide whether developed system can meet end user requirements. (Analysing)
CO 4: Choose an engineering approach to solving problems, starting from the acquired knowledge to visual interpretation. (Evaluating)
CO 5: Propose the use of certain technologies by implementing them in different programming languages to solve the problem statement (Creating).

Module I:
Feasibility study of the problem statement and solution, evaluation of existing system, finding the limitation of existing system

Module II:
Literature study, identification of software and hardware requirement, schedule feasibility, economic and operational feasibility, identification software development metrics

Module III:
Evaluate Design diagrams for solving the problem statement. Identify deployment strategy.

Module IV:
Develop algorithms and implement those using programming languages. Resolve and implement the problem statement through proposed software model and system architecture.

Module V:
Prepare a report to highlight the problem statement, design diagram, technologies deployed, and references used to resolve end user's requirement.

Suggested Readings:
1. Roger S. Pressman, "Software Engineering–A Practitioner's Approach", McGraw Hill Companies.
2. Rajib Mall, Fundamentals of Software Engineering, PHI.

CAFW315T: FULL STACK WEB DEVELOPMENT

2 Credits - 30 Hours (L-T-P: 2-0-0)

***Objective**: To introduce various aspects of full stack web development for deployment of real world application. It also aims to make knowledgeable about the modern web development technologies including front-end, middleware, back-end architectures and systems.*

COURSE OUTCOMES

CO1: Explain the definition and usage of different components under Full Stack web Development for getting familiar with the latest web developer technologies and ecosystems (Understanding)
CO2: Apply the knowledge and skills acquired during the course to address the day-to-day real-world applications. (Applying)
CO3: Know what type of Full Stack Web Development components to adopt for efficient communication and what services through offline and online to be used for problem solving. (Analyzing)

Module I: (10 Hours)
Introduction to DevOps methodologies, HTML5 Semantic, Cascading Style Sheets: syntax, attributes, Introduction to Bootstrap: basic properties, Introduction to JavaScript, Events, functions, RegExp, Objects, AJAX.

Module II: (8 Hours)
Introduction to PHP Laravel framework, Accessing Form Variables, functions, Object - Oriented Concepts & Creating Classes, Attributes, Operations in PHP Laravel framework, Implementing Inheritance in PHP, MVC Concept

Module III: (12 Hours)
Introduction to MongoDB, Collections, Documents in MongoDB, Difference between Mysql and NoSql, queries, aggregation in Mongodb Database, Embedded Document in MongoDb, Django, MEAN / MERN Stack properties, Introduction to ReactJS, Components, Component inter communication, Routing, Hooks, States, Using Routing to create single page app, Introduction to Java Web Development, JDBC, Servlet, JSP, Java Framework, Web Services, Microservices design pattern, Docker, Automation Testing Tools

Suggested Readings
1. The Full Stack Developer: Your Essential Guide to the Everyday Skills Expected of a Modern Full Stack Web Developer, 1st ed. Edition, Kindle Edition, by Chris Northwood

2. Full Stack Web Development For Beginners: Learn Ecommerce Web Development Using HTML5, CSS3, Bootstrap, JavaScript, MySQL, and PHP, By Riaz Ahmed
3. Python API Development Fundamentals: Develop a full-stack web application with Python and Flask, By Jack Chan, Ray Chung, Jack Huang
4. Road to React: Your Journey to Master React.js in JavaScript, By Robin Wieruch

CAFW316L: FULL STACK WEB DEVELOPMENT LAB

2 Credits - 30 Hours (L-T-P: 0-0-2)

***Objective**: To present different facets of full stack web development in preparation for the implementation of practical applications. Additionally, it seeks to educate students on current web development technologies, such as front-end and back-end architectures.*

COURSE/LEARNING OUTCOMES

CO1: Explain the definition and usage of different components under Full Stack web Development for getting familiar with the latest web developer technologies and ecosystems (Understanding)

CO2: Apply the knowledge and skills acquired during the course to address the day-to-day real-world applications. (Applying)

Module I: (10 Hours)

Form validation using RegExp, Bootstrap JS, AJAX, create a PHP Laravel prototype application, MySQL' Privilege System, Creating Databases and Users, Tables, Inserting, Retrieving, Altering and Updating Data, Setting Up a connection & Querying the Database, Integrate with Framework

Module II: (8 Hours)

Mongodb and Components, ReactJS Application for data processing, ReactJS Mongodb connection, user interface development, report generation

Module III: (8 Hours)

Advanced Java Framework, Spring Boot Applications, integrating database operations, Webservice and Microservice, Docker Configuration.

Suggested Readings

1. The Full Stack Developer: Your Essential Guide to the Everyday Skills Expected of a Modern Full Stack Web Developer, 1st ed. Edition, Kindle Edition, by Chris Northwood
2. Full Stack Web Development For Beginners: Learn Ecommerce Web Development Using HTML5, CSS3, Bootstrap, JavaScript, MySQL, and PHP, By Riaz Ahmed
3. Python API Development Fundamentals: Develop a full-stack web application with Python and Flask, By Jack Chan, Ray Chung, Jack Huang
4. Road to React: Your Journey to Master React.js in JavaScript, By Robin Wieruch
5. Modern Full-Stack Development: Using TypeScript, React, Node.js, Webpack, and Docker (First Edition), By Frank Zammetti

CAMD317T: MOBILE APPLICATION DEVELOPMENT

2 Credits - 30 Hours (L-T-P: 2-0-0)

***Objective:** To equip students with the knowledge and skills to design, develop, and deploy Android applications using modern development tools and best practices.*

COURSE OUTCOMES:

At the end of this course students will be able to:

CO1: Understand and explain the fundamentals of Kotlin programming and Android development environments. (Understanding)

CO2: Apply core Android components, including activities, fragments, and UI elements, to build functional mobile applications. (Applying)

CO3: Analyze and troubleshoot Android application lifecycles and app architecture to optimize performance and maintainability. (Analyzing)

CO4: Create and deploy a fully functional Android app to the Google Play Store, adhering to best practices in UI/UX design and coding standards. (Creating)

Module I: Introduction to Mobile Application Development (8 Hours)

Introduction to Mobile Computing: Overview of Mobile Computing, Mobile Platforms and Architectures, Introduction to Android OS and Ecosystem, Android Development Environment: Setting Up Android Studio, Android SDK and Tools Overview, Understanding the Android Project Structure, Emulator vs. Real Device Testing, Basic UI Design: Understanding Android Components: Activities, Views, and Layouts, Designing User Interfaces using XML, Introduction to Material Design Principles, Handling User Input: Buttons, Text Fields, and Events

Module II: Introduction to Kotlin and Core Android Concepts and Components (12 Hours)

Kotlin basics: data types, operators, variables, control structures, and nullable versus non-nullable variables. Functions: functions in Kotlin, including default values for parameters, filters, lambdas, and compact functions. Classes and Objects: classes, objects, and inheritance in Kotlin

Android Activities and Intents: Activity Lifecycle and States, Navigating Between Activities, Implicit and Explicit Intents, Passing Data Between Activities, Fragmentation and Adapters: Introduction to Fragments and Fragment Lifecycle, Using Adapters and RecyclerView for Dynamic Lists, Handling Orientation Changes and Fragment Transactions, Data Persistence: Saving Data using SharedPreferences, Introduction to SQLite in Android, File Handling in Android, Using Content Providers for Data Sharing

Module III: Advanced Android Features and Best Practices (10 Hours)

Networking and Web Services: Introduction to Networking in Android, Making HTTP Requests and Parsing JSON/XML, Integrating RESTful APIs using Retrofit/Volley, Best Practices for Network operations and Security, Notifications and Background Services: Implementing Notifications in Android, Understanding Services and Background Tasks, Using WorkManager for Background Processing, Broadcast Receivers and System Services, Publishing and Maintenance: Preparing an App for Deployment, App Signing and Versioning, Publishing on Google Play Store, Maintaining and Updating Apps

Suggested Readings

1. Bill Phillips, Chris Stewart, and Kristin Marsicano, Android Programming: The Big Nerd Ranch Guide, Big Nerd Ranch Guides, 2017.
2. Dawn Griffiths and David Griffiths. Head First Android Development: A Learner's Guide to Building Android Apps with Kotlin, Third Edition, O'Reilly, 2021.
3. Barry Burd and John Paul Mueller, Android Application Development All-In-One for Dummies, Third Edition, Wiley, 2021.

E Resources

1. Android Developer Documentation (developer.android.com)
2. Complete Study Material provide by Google: https://docs.google.com/presentation/d/1EXRoxyZxMdy4UEJ7YvWgZLEHwOGDE_QmbXkQ543JwnA/edit#slide=id.g8ef83c870c_0_70

Module III			M	H

CAMD318L: MOBILE APPLICATION DEVELOPMENT LAB

2 Credits - 30 Hours (L-T-P: 0-0-2)

Objective: *This course is designed to enable students to get a complete understanding of the android applications development. On completion of this course, students will be able to design, develop, debug and deploy various real-time android apps.*

COURSE OUTCOMES:

At the end of this course students will be able to:

CO1: Apply basic Android development tools and environments to create simple mobile applications. (Applying)

CO2: Demonstrate proficiency in designing and implementing user interfaces using XML and Material Design principles. (Applying)

CO3: Analyze and debug Android applications, focusing on event handling, database management, and API integration. (Analyzing)

CO4: Create and deploy a functional Android application, following best practices for UI/UX design, data management, and app deployment. (Creating)

List of Experiments:

1. Create a "Hello World" app to verify the setup.
2. Design a simple user interface with TextViews, Buttons, and EditTexts.
3. Implement event listeners for buttons to perform actions like showing a toast message or changing text.
4. Design the UI and implement logic to calculate and display the tip based on user input.
5. Create a list of items (e.g., a list of contacts) that users can scroll through.
6. Implement Fragment lifecycles, and demonstrate how to handle complex lifecycle situations, and use logging to help debug and track the state of the app.
7. Implement an app with multiple activities and fragments, including navigation between them.
8. Create a simple app to add, update, delete, and display records in a local database.
9. Build an app that retrieves JSON data from a web service and displays it in the UI.
10. Integrate elements like FloatingActionButton, CardView, and Snackbar into an app.
11. Build an app that allows users to register, log in, and log out using Firebase Authentication.
12. Configure Firebase Cloud Messaging (FCM) to send notifications and create a sample app that receives and displays push notifications.
13. Package, sign, and publish a simple app to the Google Play Store (hypothetical or actual).

Suggested Readings

1. Bill Phillips, Chris Stewart, and Kristin Marsicano, Android Programming: The Big Nerd Ranch Guide, Big Nerd Ranch Guides, 2017.
2. Dawn Griffiths and David Griffiths. Head First Android Development: A Learner's Guide to Building Android Apps with Kotlin, Third Edition, O'Reilly, 2021.
3. Barry Burd, John Paul Mueller, Android Application Development All-In-One for Dummies, Third Edition, Wiley, 2021.

CAPM400T: PYTHON AND MACHINE LEARNING

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The course is intended to give the students an insight into python programming language and its application extended to machine learning techniques in different problems of applications.

COURSE/LEARNING OUTCOMES

At the end of the Python and Machine Learning Lab students will be able to:

1. Understand python basics, data types, flow controls, sequences and functions. (Remembering).
2. Understand the file operations, function programming, data handling using Python and its libraries. (Understanding).
3. Build machine learning programs for designing self-learning solutions to different problems in the real world. (Applying)

4. Experiment with different learning techniques & parameters and conclude the pros and cons of each with respect to different problem domains. (Analysing)

Module I: (15 hours)
Introduction to python, Python basics: Data types and variables, data type conversions, command line argument, data input, Flow control: if, if_elif_else statement, while loop, for loop, break & continue, Python sequences: Range, String, List, Tuple, Dictionary, Set, Shallow and deep copy, Functions and modules: Function, Pass arguments, Arguments with default values and arbitrary arguments, local and global variables, returning single and multiple values from functions, python modules, import statement for importing modules.

Module II: (15 hours)
File operations handling: Reading, writing, manipulations, Exception handling: try, except, finally, raise exception, user defined exception, Python class & objects: Constructors, creating objects, Destructors, Inheritance, Overriding, Overloading, Data hiding, Functional programming: Iterators, Generators, lambda construct, Comprehensions, Map reduce and filter. NumPy: selecting data using slicing, numerical processing with multidimensional array, 2D plotting with matplotlib Pandas: Loading from CSV and other structured formats, 1D and 2D data structures-Series and DataFrame, Normalizing data, dealing with missing data.

Module III: (15 hours)
Introduction to Machine learning: Basic definition, types of learning, linear regression, Decision trees, Probability and Bayes learning, Instance Based Learning: K-Nearest Neighbours Algorithm, K-Means Algorithm, Artificial Neural Network (ANN).

Suggested Readings
1. Python Cookbook-by Alex Martelli, Anna Martelli Ravenscroft, and David Ascher
2. Machine Learning. Tom Mitchell. First Edition, McGraw- Hill, 1997.
3. Introduction to Machine Learning Edition 2, by Ethem Alpaydin.

E Resources
1. Coursera course on IBM Machine Learning with Python.
2. Harvard University course on Machine Learning and AI with Python
3. W3Schools course on Machine Learning
4. Suggested web links: To be provided as and when required for a particular module/topic

CO 4			M

CAPM401L: PYTHON AND MACHINE LEARNING LAB

(2 Credits – 30 hours) (L-T-P: 0-0-2)

Objective

The course is intended to give students hands-on experience on Python and building machine learning systems using Python.

COURSE/LEARNING OUTCOMES

At the end of the Python and Machine Learning Lab students will be able to:
1. Understand Python basics, data types, flow controls, sequences and functions. (Remembering).
2. Understand the file operations, function programming, data handling using Python and its libraries. (Understanding).
3. Build machine learning programs for designing self-learning solutions to different problems in the real world. (Applying)
4. Experiment with different learning techniques & parameters and conclude the pros and cons of each with respect to different problem domains. (Analysing)

List of Experiments
1. Installation of PyCharm and Jupyter. Making the Machine learning environment ready.
2. Practice of loops, iterators, string operations, file handling and classes in Python.
3. Use of Numpy and Pandas for data reading and preprocessing - standard dataset as an example.
4. Writing program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
5. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.

6. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using the standard Heart Disease Data Set. You can use Java/Python ML library classes/API
8. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.

Suggested Readings

1. Python Cookbook-by Alex Martelli, Anna Martelli Ravenscroft, and David Ascher
2. Machine Learning. Tom Mitchell. First Edition, McGraw- Hill, 1997.
3. Introduction to Machine Learning Edition 2, by Ethem Alpaydin.
4. Suggested web links: To be provided as and when required for a particular module/topic.

CADA402T: DESIGN AND ANALYSIS OF ALGORITHM

(3 Credits – 45 hours) (L-T-P: 2-1-0)

Objective

To create analytical skills, to enable the students to design algorithms for various applications and to Analyse the algorithms with the objective to introduce mathematical aspects, design and analysis of algorithms.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Define algorithms, importance of analysis of an algorithm and their asymptotic bounds and relate the different types of problem and their solutions. (Remembering)
2. Explain different design strategies such as brute force, divide and conquer, dynamic programming, greedy and backtracking used for the design of algorithms. (Understanding)
3. Compare and analyse different design strategies of algorithms. (Analysing)
4. Assess various algorithms in terms of correctness, computation cost and memory space used. (Evaluating)

Module I: (11 hours)

1. Basic Concepts of Algorithms: Introduction, Notion of Algorithm, Fundamentals of Algorithmic Solving, Important Problem types, Fundamentals of the Analysis Framework – Asymptotic Notations and Basic Efficiency Classes.
2. Mathematical Aspects and Analysis of Algorithms: Mathematical Analysis of Non- recursive Algorithm, Mathematical Analysis of Recursive Algorithm.

Module II: (12 hours)

Analysis of Sorting and Searching Algorithms: Brute Force – Selection Sort and Bubble Sort – Sequential Search and Brute-force string matching – Divide and conquer – Merge sort – Quick Sort – Binary Search – Binary tree- Traversal and Related Properties – Decrease and Conquer – Insertion Sort.

Module III: (12 hours)

Algorithmic Techniques: Transform and conquer – Presorting – Heaps and Heap sort – Dynamic Programming – Strassen's Algorithm, Warshall's and Floyd's Algorithm – Optimal Binary Search trees – Greedy Techniques – Prim's Algorithm – Kruskal's Algorithm – Dijkstra's Algorithm – Huffman trees.

Module IV: (10 hours)

NP-Complete Problems: The classes P and NP, Languages and problems, NP-completeness of the satisfiability problem. Algorithm Design Methods: Backtracking – n-Queen's Problem – Hamiltonian Circuit problem – Knapsack problem – Traveling salesman problem.

Suggested Readings

1. T.H. Cormen, C.E. Leiserson, R.L. Rivest and C. Stein, Introduction to Algorithms, PHI.
2. A.V.Aho, J.E. Hopcroft and J.D.Ullman, The Design and Analysis Of Computer Algorithms, Pearson Education.
3. Anany Levitin, Introduction to the Design and Analysis of Algorithms, Pearson Education.
4. Sara Baase and Allen Van Gelder, Computer Algorithms - Introduction to Design and Analysis, Pearson Education.

E Resources

CADA403L: DESIGN AND ANALYSIS OF ALGORITHMS LAB

(2 Credits – 30 hours) (L-T-P: 0-0-2)

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Define algorithms, importance of analysis of an algorithm and their asymptotic bounds and relate the different types of problem and their solutions. (Remembering)
2. Explain different design strategies such as brute force, divide and conquer, dynamic programming, greedy and backtracking used for the design of algorithms. (Understanding)
3. Compare and analyse different design strategies. (Analysing)
4. Assess various algorithms in terms of correctness, computation cost and memory space used. (Evaluating)

List of experiments-

1. Prove that Bubble sort algorithm has time complexity (n2) by showing the graph notation.
2. Implement the Dynamic programming technique and Analyse the algorithm showing the graph notation.
3. Implement the Greedy programming technique and Analyse the algorithm showing the graph notation.
4. Implement the Divide and Conquer technique and Analyse the algorithm showing the graph notation.
5. Design a small file compressor and decompressor by using Huffman coding technique

Suggested Readings

1. T.H. Cormen, C.E. Leiserson, R.L. Rivest and C. Stein, Introduction to Algorithms, PHI.

CADS404T: DATA SCIENCE

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The objective of this course is to introduce to the students the fundamental concepts, tools and techniques needed for dealing with various facets of Data Science practice. Being a data scientist mainly requires an integrated skill set such as mathematics, statistics, machine learning, databases, deep learning, along with other branches of computer science. This course will introduce students to this rapidly growing field and equip them with some of its basic principles and tools as well as its general mindset.

COURSE / LEARNING OUTCOMES

At the end of this course, students will demonstrate the ability to

1. Understand the basic concepts and technologies related to Data Science. (Understanding)
2. Interpret data findings effectively to any audience, orally, visually, and in written formats. (Understanding)
3. Obtain, clean/process, and transform data and analyze the transformed data using an ethically responsible approach (Applying and Analyzing)
4. Apply statistical analysis, machine learning and/or deep learning tools and methodologies to solve data science tasks. (Remembering)
5. Formulate and use appropriate models of data analysis to solve hidden solutions to business-related challenges (Creating)

Module I: Introduction to Data Science, Preprocessing, and Data Visualization (12 Hours)

Introduction to Data Science and Data Preprocessing: Why Learn Data Science, Data Analytics Life Cycle, Types of Data Analysis, Introduction to Data Preprocessing, Data Types and Forms, Possible Data Error Types, Various Data Preprocessing Operations.

Data Plotting and Visualization: Introduction to Data Visualization, Basic Data Visualization Tools - Histograms, Bar Charts, Scatter Plots, Line Charts, Pie Charts, Box Plots, Bubble Plots, Heat Map; Advanced Data Visualization Tools - Wordclouds, Waffle Charts, Choropleth Map

Module II: Machine Learning and Deep Learning (20 Hours)

Machine Learning for Data Science: Overview of Machine Learning, Types of Machine Learning, Regression Methods (linear and logistic), KNN Classification, K-means Clustering

Deep Learning for Data Science: Introduction to TensorFlow, Pytorch, Deep Learning Primitives, Activation Functions, Artificial Neural Network, Convolutional Neural Network

Module III: Statistical Data Analysis and Business Analytics (13 Hours)

Statistical Data Analysis: Role of Statistics in Data Science, Kinds of Statistics, Descriptive Statistics (Measures of Frequency, Central Tendency, Dispersion, and Position), z-Test, Probability Theory

Business Analytics: An Overview of Business Analytics, The Business Analytics Life Cycle, Basic Tools Used in Business Analytics, Customer Analytics, and Employee Analytics

Suggested Readings

1. G. Nandi, R. K. Sharma, ***Data Science Fundamentals and Practical Approaches,*** BPB, 1st Edition, 2020.
2. Silberschatz, H. F. Korth, S Sudarshan, Introducing Data Science: Big Data, Machine Learning, and More, Using Python Tools, *1st Edition, Dreamtech, 2016*
3. C. Neil, R. Schutt, ***Doing Data Science: Straight Talk from the Frontline,*** O'Reilly, 1st Edition, 2019

CADS405L: DATA SCIENCE LAB

(2 credits – 30 hours) (L-T-P: 0-0-2)

Objective

The objective of this course is to make the students learn to extract valuable information for use in strategic decision making, product development, trend analysis, and forecasting. Through the practical approaches, quantitative modeling and data analysis techniques can be applied to find the solution of real world business problems, communicate findings, and effectively present results using data visualization techniques. This course will thoroughly introduce students to the rapidly growing field of Data Science and equip them with some of its basic principles and tools for data analysis and decision making.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Apply data visualisation for presenting the output after an in-depth analysis of the given problem
2. Utilise data preprocessing techniques to prepare data for further analysis.
3. Apply standard machine learning and deep learning algorithms to solve real-life problems

Module I: Introduction to Data Preprocessing, and Data Visualization (15 Hours)

Data Preprocessing Operations using Python - Data Cleaning, Data Integration, Data Transformation, Data Reduction, and Data Discretization

Data Plotting and Visualization – Plotting Basic Data Visualization Tools - Histograms, Bar Charts, Scatter Plots, Line Charts, Pie Charts, Box Plots, Bubble Plots, Heat Map; Advanced Data Visualization Tools - Wordclouds, Waffle Charts, Choropleth Map

Module II: Statistical Data Analysis, Machine Learning and Deep Learning (25 Hours)

Statistical Data Analysis using Python: Applying Descriptive Statistics (Measures of Frequency, Central Tendency, Dispersion, and Position), z-Test, Bayesian Probability

Machine Learning and Deep Learning using Python: Applying linear and logistic regression, KNN Classification, K-means Clustering, Artificial Neural Network, Convolutional Neural Network

Suggested Readings

1. G. Nandi, R. K. Sharma, Data Science Fundamentals and Practical Approaches, BPB, 1st Edition, 2020.

CAOR406T: OPERATIONS RESEARCH

(5 credits - 75 hours) (L-T-P: 5-0-0)

Objective

Operations Research can be described as a scientific approach to the solution of problems in the management of complex systems. In a rapidly changing environment, an understanding is sought which will facilitate the choice and the implementation of more effective solutions which, typically, may involve complex interactions among people, materials and money.

Module I: Introduction to Linear Programming (20 hours)

Introduction to linear programming - formulation, graphical method, Simplex method and its applications, initial feasible solution, optimality test, Big M method and Two-Phase method.

Module II: Special topics in Linear Programming (19 hours)

Duality in linear programming, the dual simplex method, the revised simplex method, sensitivity analysis of linear programming, Goal programming, and Integer programming.

Module III: The Transportation Model and The Assignment Model (18 hours)

a. Formulation and solution of Transportation Model, North-west Corner method, Vogel's approximation method, stepping stone method, modified distribution method, degeneracy in Transportation problem, least me transportation problems,
b. Mathematical representation and solution of assignment model, Hungarian method.

Module IV: Sequencing Problem, Replacement Analysis and Queueing Model (18 hours)

Assumptions in sequencing problem, processing of n jobs through one machine, two machines and three machines, processing of two jobs through m machines. Replacement of items whose maintenance and repair cost increase with me, i) ignoring changes in the value of money, ii) value of money changes with me; replacement of items that fail suddenly. Introduction to Queueing Model.

Suggested Readings

1. C. Mohan, "Optimization Techniques" New Age
2. D. S. Hira and P.K. Gupta, "Operations Research" S. Chand
3. J.K. Sarma"Operations Research "Macmillan
4. Taha " Operation Research an introduction" Pearson
5. Billey Gillet "Operations Research" PHI
6. N.G Nair "Operations Research" Dhanpat Rai Publication
7. Pablo Pedvegal "Introduction to Optimisation" New Age.

9	Minor Course 10	-	Blockchain Fundamentals	

CACF110T: CYBERSECURITY FUNDAMENTALS

(4 Credits – 60 Hours) (L-T-P: 4-0-0)

Objective: *The rapid growth of ICT has raised various complex questions which need to be addressed. A need has been felt to address cyber security broadly, as also in sufficient depth so that even students from non-technical streams will develop a more complete picture of the cyber security issues. The aim is to create more aware, responsive and responsible digital citizens, thereby contributing effectively to an overall healthy cyber security posture and ecosystem.*

COURSE OUTCOMES/LEARNING OUTCOMES

CO1: Students would be able to understand the concept of Cyber security and issues and challenges associated with it. **(Understanding)**

CO2: Students, should be able to understand the cyber-crimes, their nature, legal remedies and as to how report the crimes through available platforms and procedures. **(Understanding)**

CO3: Students should be able to appreciate various privacy and security concerns on online Social media and understand the reporting procedure of inappropriate content, underlying legal aspects and best practices for the use of Social media platforms. **(Analyzing)**

CO4: Students would be able to understand the basic concepts related to E-Commerce and digital payments. They will become familiar with various digital payment modes and related cyber security aspects, RBI guidelines and preventive measures against digital payment frauds. **(Understanding)**

CO5: Students will be able to understand the basic security aspects related to Computer and Mobiles. They will be able to use basic tools and technologies to protect their devices. **(Applying)**

Module-I: Introduction to Cyber security (10 Hours)

Defining Cyberspace and Overview of Computer and Web-technology, Architecture of cyberspace, Communication and web technology, Internet, World wide web, Advent of internet, Internet infrastructure for data transfer and governance, Internet society, Regulation of cyberspace, Concept of cyber security, Issues and challenges of cyber security.

Module-II: Cyber-crime and Cyber law (15 Hours)

Classification of cyber-crimes, Common cyber-crimes, cyber-crime targeting computers and mobiles, cyber-crime against women and children, financial frauds, social engineering attacks, malware and ransomware attacks, zero day and zero click attacks, Cybercriminals modus-operandi, Reporting of cyber-crimes, Remedial and mitigation measures, Legal perspective of cyber-crime, IT Act 2000 and its amendments, Cyber-crime and offences, Organisations dealing with Cyber-crime and Cyber security in India, Case studies.

Module-III: Social Media Overview and Security (10 Hours)

Introduction to Social networks. Types of Social media, Social media platforms, Social media monitoring, Hashtag, Viral content, Social media marketing, Social media privacy, Challenges, opportunities and pitfalls in online social network, Security issues related to social media, Flagging and reporting of inappropriate content, Laws regarding posting of inappropriate content, Best practices for the use of Social media, Case studies.

Module IV: E - Commerce and Digital Payments (15 Hours)
Definition of E- Commerce, Main components of E-Commerce, Elements of E-Commerce security, E-Commerce threats, E-Commerce security best practices, Introduction to digital payments, Components of digital payment and stake holders, Modes of digital payments- Banking Cards, Unified Payment Interface (UPI), e-Wallets, Unstructured Supplementary Service Data (USSD), Aadhar enabled payments, Digital payments related common frauds and preventive measures. RBI guidelines on digital payments and customer protection in unauthorised banking transactions. Relevant provisions of Payament Settlement Act,2007.

Module V: Digital Devices Security, Tools and Technologies for Cyber Security (10 Hours)
End Point device and Mobile phone security, Password policy, Security patch management, Data backup, Downloading and management of third party software, Device security policy, Cyber Security best practices, Significance of host firewall and Anti-virus, Management of host firewall and Anti-virus, Wi-Fi security, Configuration of basic security policy and permissions.

Suggested Readings

1. Cyber Crime Impact in the New Millennium, by R. C Mishra , Auther Press. Edition 2010.
2. Cyber Security Understanding Cyber Crimes, Computer Forensics and Legal Perspectives by Sumit Belapure and Nina Godbole, Wiley India Pvt. Ltd. (First Edition, 2011)
3. Security in the Digital Age: Social Media Security Threats and Vulnerabilities by Henry A. Oliver, Create Space Independent Publishing Platform. (Pearson , 13th November, 2001)
4. Electronic Commerce by Elias M. Awad, Prentice Hall of India Pvt Ltd.
5. Cyber Laws: Intellectual Property & E-Commerce Security by Kumar K, Dominant Publishers.
6. Network Security Bible, Eric Cole, Ronald Krutz, James W. Conley, 2nd Edition, Wiley India Pvt. Ltd.
7. Fundamentals of Network Security by E. Maiwald, McGraw Hill

CALE104T: CYBER LAW AND ETHICS

(4 credits – 60 hours) (L-T-P: 4-0-0)

Objective
The course aims to learn about the different cyber threats, law and ethics that are associated with cyberspace.

COURSE/LEARNING OUTCOMES:
At the end of the course, students will be able to:
CO 1: Identify knowledge related to the constitution and its legal issues in cyberspace. (Remembering)
CO 2: Explain the different cybercrimes, and the related cyber laws. (Understanding)
CO 3: Demonstrate the different perspectives of professional ethics and responsibilities of engineers. (Understand)
CO 4: Illustrate the concepts behind Cyber Torts, Intellectual Property Rights and describe the concepts in connection to dispute resolution in cyberspace. (Analyzing)

Module I: (14 Hours)
Constitutional & Human Rights Issues in Cyberspace Freedom of Speech and Expression in Cyberspace, Right to Access Cyberspace – Access to Internet, Right to Privacy, Right to Data Protection, Cyber Crimes & Legal Framework Cyber Crimes against Individuals, Institution and State, Hacking, Digital Forgery, Cyber Stalking/Harassment, Cyber Pornography, Identity Theft & Fraud Cyber terrorism, Cyber Defamation.

Module II: (18 Hours)
Internet and Need for Cyber Laws, Modes of Regulation of Internet, Types of cyber terror capability, Net neutrality, Types of Cyber Crimes, India and cyber law, Cyber Crimes and the information Technology Act 2000, Internet Censorship. Cybercrimes and enforcement agencies, Scope & Aims of Engineering & Professional Ethics - Business Ethics, Corporate Ethics, Personal Ethics. Engineering and Professionalism, Positive and Negative Faces of Engineering Ethics, Code of Ethics as defined in the website of Institution of Engineers (India): Profession, Professionalism, and Professional Responsibility. Clash of Ethics, Conflicts of Interest. Responsibilities in Engineering Responsibilities in Engineering and Engineering Standards, the impediments to Responsibility. Trust and Reliability in Engineering

Module III: (14 Hours)
Cyber Torts Cyber Defamation, Different Types of Civil Wrongs under the IT Act 2000, Intellectual Property Issues in Cyber Space Interface with Copyright Law, Interface with Patent Law, Trademarks & Domain Names Related issues.

Module IV: (14 Hours)
Dispute Resolution in Cyberspace, Concept of Jurisdiction, Indian Context of Jurisdiction, and IT Act, 2000. International Law and Jurisdictional Issues in Cyberspace, Dispute Resolutions.

Suggested Readings
1. Engineering Ethics M. Govindarajan, S. Natarajan, V. S. Senthilkumar Prentice –Hall, 2004
2. Constitution of India, Professional Ethics and Human Rights Shubham Singles, Charles E. Haries, and et al Cengage Learning India 2018
3. Justice Yatindra Singh, Cyber Laws, Universal Law Publishing Co, New Delhi.
4. Verma S, K, Mittal Raman, Legal Dimensions of Cyber Space, Indian Law Institute.
5. Jonthan Rosenoer, Cyber Law, Springer, New York.
6. Sudhir Naib, The Information Technology Act, 2005: A Handbook, OUP, New York.

E Resources
1. SWAYAM Course on Cyber Laws by Vishal Goyal Punjabi University - Patiala

CAET105T: E-COMMERCE TECHNOLOGY

(4 Credits- 60 Hours) (L-T-P: 4-0-0)

Objectives
To enable the student to become familiar with the mechanism for conducting business transactions through electronic means, buildup knowledge on electronic business, online marketing and make the students to devise marketing strategies for concerns engaged in ecommerce and understand the current status of e-business.

COURSE/LEARNING OUTCOMES:
After learning this course, the students will be able to:
CO 1: Interpret the basic concepts and technologies used in the field of E-Commerce. (Remembering)
CO 2: Explain the different regulatory provisions relating to E-Commerce. (Understanding)
CO 3: Develop processes of developing and implementing information systems. (Applying)
CO 4: Define the ethical, social, and security issues of information systems. (Analysing)
CO 5: Evaluate the various online business transactions (Evaluating)

Module I: Introduction (12 Hours)
E – Commerce: Meaning, definition, features, functions of E-Commerce, Scope, Benefits and limitations of E-Commerce – The Internet and India – E-commerce opportunities and challenges for IndustriesTechnology used in E-commerce: The dynamics of world wide web and internet (meaning, evolution and features); Designing, building and launching e-commerce website (A systematic approach involving decisions regarding selection of hardware, software, outsourcing vs. in-house development of a website)

Module II: Electronic Data Interchange (12 Hours)
Benefits of EDI, EDI technology, EDI standards, EDI communications, EDI, EDI Agreements, EDI Security, Business Model, E-business Models Based on the Relationship of Transaction Parties: Business-to-Consumer (B2C), Business to-Business (B2B), Consumer-to-Consumer (C2C), Consumer-to-Business (C2B), E-business Models Based on the Relationship of Transaction Types: Brokerage Model, Aggregator Model, Implementation, Legal Framework for E-Commerce: E-Commerce Legal Framework, Rights and Obligations in the World of E-commerce , Copyrights , Defamation, Privacy, Contracts, Taxation, Signing a contract Electronically ,Domain name and Registration.

Module III: E-payment System (12 Hours)
E-payment Systems: Digital payment Requirements, Digital Token-based E-payment systems, Benefits to Buyers , Benefits to Sellers, Credit card as E-payment system, Mobile payments, smart card cash payment system, Micropayment system, E- Cash,

Risk and e-Payment Systems, Designing e-Payment Systems, E-Retailing, E services.
E-Finance: Areas of Financing, E-Banking, Traditional Banking Vs. E-Banking, Operations in E-Banking, E-Trading, Stock Market trading, Importance and advantages of E-Trading.

Module IV: Security and Encryption: (12 Hours)
E-commerce security environment: dimension, definition and scope of e- security, security threats in the E-commerce environment, technology solutions, business procedures, and public laws , Threats in Computer Systems: Virus, Cyber Crime, Network Security: Encryption, Protecting Web server with a Firewall, Firewall and the Security Policy, Network Firewalls and Application Firewalls, Proxy Server.

Module V: IT Act 2000 and Cyber Crimes (12 Hours)
IT Act 2000: Definitions, Digital signature, Electronic governance, Attribution, acknowledgement and dispatch of electronic records, Regulation of certifying authorities, Digital signatures certificates, Duties of subscribers, Penalties and adjudication, Appellate Tribunal, Offences and Cyber-crimes

Suggested Readings
1. Joseph P. T., E - Commerce – An Indian Perspective
2. Kenneth C. Laudon and Carlo GuercioTraver, E-Commerce,Pearson Education.
3. David Whiteley, E-commerce:Strategy,TechnologyandApplications,McGrawHill Education
4. Bharat Bhaskar, Electronic Commerce: Framework, Technology and Application, 4thEd., McGraw Hill Education
5. Joseph P T, E-Commerce: An Indian Perspective, PHILearning
6. Bajaj K K and Debjani Nag, E-commerce, McGraw HillEducation
7. Chhabra T N, E-Commerce, Dhanpat Rai Co.
8. Madan Sushila, E-Commerce, Taxmann

E Resources
1. Udemy Course on Mastering E-commerce: The Ultimate Course
2. Swayam course on E-Business By Prof. Mamata Jenamani, IIT Kharagpur

CAER210T: ENTERPRISE RESOURCE PLANNING
(4 CREDITS – 60 HOURS) (L-T-P: 4-0-0)

Objective
To help the student understand the conceptual elements of ERP and its theory and implementation. This is especially poignant in view of large number of organizations implementing ERP applications in recent years. The student will appreciate the impact that ERP brings into the daily operations of firms with respect to their productivity, integration, communication, etc.

COURSE / LEARNING OUTCOMES
At the end of this course students will be able to:
CO 1: Recall the conceptual elements of ERP. (Remembering)
CO 2: Demonstrate the Influence of ERP in Large Organizations. (Understanding)
CO 3: Identify the impact of ERP into the daily operations of firms with respect to their productivity, integration, communication etc. (Applying)
CO 4: Analyse the practical side of ERP implementation with different vendors. (Analysing)
CO 5: Discuss and evaluate the best practices of ERP with various case studies and real time examples. (Creating, Evaluating)

Module I: ERP Basics (15 hours)
Evolution and structure of ERP, ERP concepts, growth of the ERP market, conceptual model of ERP, 2-tier and 3-tier architecture, elements in ERP architecture, advantages/benefits of ERP, overview of an enterprise, integrated management information, business modelling, integrated data model ERP and related technologies: Business Process Reengineering (BPR), Management Information Systems (MIS), Decision Support Systems (DSS), Data Warehousing, Data Mining, Online Analytical Processing (OLAP), Supply Chain Management.

Module II: ERP Modules (10 hours)
Item types in ERP, Manufacturing, distribution and Financial requirements, item control module in ERP, Finance module, Manufacturing and Production Planning module, Sales and Distribution module, Plant Maintenance module, Quality Management module, Materials Management module, Capital Requirement Planning module, Purchase Control module, Human Resources modules; concept of Bill of materials, concept of formula management.

Module III: Profiling ERP Vendors (10 hours)
SAP AG: R/3 –, overview of R/3 system, R/3 modules, R/3 and the internet BAAN: Baan ERP modules, Baan ERP Tools
Oracle: Oracle modules – Financials, Human Resources, Projects, Manufacturing, Supply chain.
PeopleSoft: Accounting and control, Treasury Management, Performance Management, Sales and Logistics, Procurement.

Module IV: ERP Implementation Lifecycle (10 hours)
Elements of implementation methodology, Pre-evaluation Screening, Package evaluation, project planning phase, Gap Analysis, Business Process Re-engineering, configuration, Implementation team training, testing, product migration and support, Problems in ERP implementation, cost of ERP.

Module V: Best Practices in ERP (15hours)
Concept of Best Practices, concept of Customer Order Decoupling Point(CODP), Demand Management – Sales and Operations Planning, ERP scenario in India, future directions in ERP. Case studies should also be introduced to highlight situations where ERP projects are implemented, and the success stories/benefits/difficulties of these implementations.

Suggested Readings
1. O'Leary, Daniel E, Enterprise Resource Planning Systems: systems, life cycle, electronic commerce and risk, Cambridge University Press.
2. Alexis Leon, Enterprise Resource Planning, 14th reprint, Tata McGraw Hill, New Delhi 2005
3. Rahul V Altekar, Enterprise Resource Planning (Theory and Practice), Prentice Hall India, New Delhi 2004
4. Alexis Leon, ERP Demystified, Tata McGraw Hill Pub. Co. Ltd, 2000
5. Kent Sandoe, Enterprise Integration, John Wiley and Sons
6. Garg and Venkitakrishnan, Enterprise Resource Planning: Concepts and Practice, 2nd edition, Prentice Hall India
7. Garg and Venkitakrishnan, ERPWARE: ERP Implementation Framework, Prentice Hall India

E Resources
1. Oracle course on Oracle Fusion Cloud Enterprise Resource Planning Training and Certification
2. Udemy course on SAP ERP Fundamentals

CAWD211T: BASICS OF WEB DESIGNING

(3 Credit – 45 Hours) (L-T-P: 3-0-0)

Objective
The objective of the course is to familiarize the students with a discussion on Internet and its growth. It also provides the students a study on the basic services provided by the Internet. A familiarization on the markup languages and scripting language are also being discussed to make the student competent to design websites.

COURSE/LEARNING OUTCOMES
On successful completion of the course students will be able to:
CO 1: Recall the various Internet related terminologies and examine the history and growth of Internet. (Remembering)
CO 2: Identify and differentiate the various services provided by the internet. (Understanding)
CO 3: Experiment with various mark-up languages and style sheets to design a static website. (Applying)
CO 4: Experiment with various scripting languages to design a dynamic website. (Applying)
CO 5: Develop and create a website using standard tools and technologies. (Creating)

Module I: Basics of Internet and XHTML (15 Hours)
Basics of Internet: History of the Internet and the World Wide Web; W3C; Levels of Internet Connectivity; Requirements for Internet Connectivity; Search Engines, Various Internet Services, Web Portal; Different types of browsers; URLs, Domain names,

HTTP and URL
XHTML: Basic HTML Tags – html, head, title, body, paragraph, headings, horizontal, break, image, table, lists, links, and forms. Introduction to XHTML; HTML vs. XHTML, XHTML comments;

Module II: Cascading Style Sheets and JavaScript (18 Hours)
Cascading Style Sheets: Types of Style Sheets - Inline, Embedded, and External; CSS Text properties, font properties, and Background properties; CSS Borders and Outlines, CSS Box Model, Style class and Pseudo-class
JavaScript: Client-side scripting, Introduction to JavaScript, Simple JavaScript code, JavaScript variables, functions, conditions and loops

Module III: Website Design Considerations and Web Servers (12 Hours)
Website Design Considerations: Planning to design a website, use of sitemaps, Creating a compatible website for different color depths, resolutions, and browser considerations, validating a website
Web servers: Need of a web server; System Architecture of a Web server; HTTP Request Types; Client-side Scripting versus Server-side Scripting; Accessing Web servers; Various web servers- Microsoft IIS, Apache, NGINX, LAMP, WAMP, MAMP, XAMPP

Suggested Readings
1. Steven Holzner,"HTML Black Book", Dremtech Press
2. Web Technologies, Black Book, Dreamtech Press
3. Web Applications: Concepts and Real-World Design, Knuckles, Wiley-India
4. Internet and World Wide Web How to program, P.J. Deitel & H.M. Deitel Pearson
5. Douglas E. Comer, The Internet Book: Everything you need to know about Computer Networking and how the Internet works, 3rd Edition, Prentice Hall of India Pvt. Ltd., New Delhi

E Resources
1. Spoken Tutorial on HTML by Praveen S, IIT Bombay
2. Spoken Tutorial on CSS by Neha Solanki, IIT Bombay
3. Spoken Tutorial on JavaScript by Jayesh K Ramalingaiah

CAWR212L: BASICS OF WEB DESIGNING LAB
(1 Credit - 15 Hours) (L-T-P: 0-0-1)

Objective
The course provides an introduction to the fundamentals and basic requirements of web technologies. After completion of this course, students should be able to design and implement a website on their own by including client-side and server-side technologies.

COURSE/LEARNING OUTCOMES
At the end of the experiments, students will be able to
CO 1: Experiment with various mark-up languages and style sheets to design a static web site (Applying)
CO 2: Develop and create a dynamic website using scripting language. (Creating)
CO 3: Summarize and validate a practical solution towards a web application development and also deploy a website of their own. (Evaluating)

Module I: Static Web Designing (10 Hours)
Web Designing: Creating static websites involving various XHTML elements.
Using Style Sheets: Designing web pages that use CSS for standard formatting

Module II: Dynamic Web Designing (5 Hours)
JavaScript: Designing websites that use JavaScript for creating interactive web pages

Suggested Readings
1. Deitel and Deitel, Internet and World Wide Web: How to Program, 4th Edition, Prentice Hall of India Pvt. Ltd., New Delhi, 2009.

2. E. A. Meyer, CSS The Definite Guide, 3rd Edition, O'Reily.
3. Douglas E. Comer, The Internet Book: Everything you need to know about Computer Networking and how the Internet works, 3rd Edition, Prentice Hall of India Pvt. Ltd., New Delhi
4. R. Lerdorf, K. Tatroe, P. MacIntyre, Programming PHP, 3rd Edition, O'Reily.
5. T. McNavage, JavaScript for Absolute Beginners, Apress, 2010.

CAPT310T: BASICS OF PYTHON

(2 Credits – 30 hours) (L-T-P: 2-0-0)

Objective:

The objective of the course is to provide learners with a solid foundation in the fundamentals of the Python programming language. The course aims to equip students with the knowledge and skills necessary to write simple Python programs and understand the core concepts and principles of Python programming.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Learn the syntax, semantics and OOP concepts of Python Programming Language.
CO 2: Comprehend the flow control logic in Python
CO 3: Use Python functions to facilitate code reuse and manipulate strings.
CO 4: Illustrate the process of exception handling, structuring the data using lists, tuples and dictionaries.

Module I: Introduction to Python (8 hours)

What is Python? and history of Python, Unique features of Python, Install Python and Environment Setup, Python Identifiers, Keywords and Indentation, Comments and document interlude in Python, Command line arguments, Getting User Input, Python Data Types, variables

Module II: Control Statements (8 hours)

if-else, if-elif-else, while loop, for loop, break, continue, assert, pass, return
List, Ranges & Tuples in Python
Lists in Python, Understanding Iterators, Generators, Comprehensions and Lambda Expressions, Generators and Yield, Next and Ranges, Understanding and using Ranges, Ordered Sets with tuples
Python Dictionaries and Sets
Introduction to the section, Python Dictionaries, More on Dictionaries, Sets, Python Sets Examples

Module III: Input and Output in Python (8 hours)

Reading and writing text files, writing Text Files, appending to Files and Challenge, Writing Binary Files Manually, Using Pickle to Write Binary Files
Python built in function, Python user defined functions, Python packages functions, Defining and calling Function, The anonymous Functions, Loops and statement in Python, Python Modules & Packages

Module IV: OOP concept in Python (6 hours)

Overview of OOP, The self-variable, Constructor, Namespaces, Creating Classes and Objects, Inheritance, Types of Methods, Instance Methods, Static Methods, Class Methods, Accessing attributes, Built-In Class Attributes, Destroying Objects, Abstract classes and Interfaces, Abstract Methods and Abstract class, Interface in Python, Abstract classes and Interfaces

Suggested Readings

CAPT311L: BASICS OF PYTHON LAB

(2 Credits- 30 Hours) (L-T-P: 0-0-2)

Objective

The objective of the course is to provide learners with a solid foundation in the practical knowledge of Python programming language. The course aims to equip students with the knowledge and skills necessary to write simple Python programs and understand the core concepts and principles of Python programming.

COURSE / LEARNING OUTCOMES

At the end of the lab experiments, students will be able to learn

CO 1: Writing programs in python, Understanding the basic structure of Python programming.
CO 2: Understanding the built – in libraries
CO 3: Implementing the concepts of OOPs in Python

Lists of experiments:

1. if-else, if-elif-else, while loop, for loop, break, continue, assert, pass, return
2. List, Ranges & Tuples in Python
3. Python Dictionaries and Sets
4. Reading and writing text files, writing Text Files, appending to Files and Challenge, Writing Binary Files Manually, Using Pickle to Write Binary Files
5. Constructor, Namespaces, Creating Classes and Objects

CABS312T: BUSINESS STATISTICS

(4 Credit – 60 Hours) (L-T-P: 2-0-0)

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: Recall the key terminology, concepts tools and techniques used in business statistical analysis (Remembering)
CO 2: Understand the use of Graph Theory, Probability and Time-series analysis for management decisions. (Understanding)
CO 3: Apply differential and inferential statistics to solve problems related to statistical analysis (Applying)
CO 4: Apply coorelation and regression analysis to solve problems related to statistical analysis (Applying)

Objective: *The objective of this course is to familiarize the students with basic concepts of Statistics in Business and an in-depth learning of the various statistical techniques. The aim of this course is to impart knowledge to students to improve their logical reasoning ability and interpretation of various business results. The course makes an effort to acquaint the students with the emerging issues in business, trade, and commerce regarding analyzing business facts.*

Module I: Introduction to Statistics, Frequency Distribution, and Graphs (12 Hours)
Introduction to Statistics: Statistics as a Subject of Study, Information and Data, Census data vs. Sample data, Methods of statistical data collection, Statistical Variables: Qualitative and Quantitative
Frequency Distribution and Graphs: Frequency, Stem and Leaf Display, Frequency Distributions, Data Grouping - Discrete and Continuous, Introduction to Graphs, Graph for Qualitative variables, Graph for Quantitative variables, Various types of graphs and diagrams: pictographs, bar diagram, scatter diagram, histogram, pie chart, frequency curve and frequency polygon

Module II: Descriptive and Inferential Statistics (18 Hours)
Descriptive Statistics: Measures of Central Tendency (Median, Mode, Arithmetic Mean, Geometric Mean, Harmonic Mean), Measures of Dispersion, Range, Co-efficient of Range, Quartiles, Inter-Quartile Range and Quartile Deviation, Standard Deviation, Skewness and Kurtosis; Co-efficient of Skewness: Karl Pearson's Coefficient
Inferential Statistics: Hypothesis Testing, Parametric vs. Non-Parametric tests, Parametric Tests (z-test, t-test, Chi-Square test, and F-test)

Module III: Correlation and Regression Analysis (15 Hours)
Correlation Analysis: Introduction to Correlation, Karl Pearson's product moment Co-efficient of Correlation, Positive, negative and zero correlation, Correlation through Scatter diagrams, Interpretation of Correlation Co-efficient, Simple and Multiple Correlation;
Regression Analysis: Regression and the criterion for the Line of Best Fit, Linear Regression, Logistic Regression, Polynomial Regression

Module IV: Probability and Probability Distributions (15 Hours)
Probability and Probability Distributions: Sample space and Events, Simple and Compound Events, Probability and Probability distributions: Normal Distribution, Binomial and Poisson Distribution
Time-Series Analysis: Definition, Overview of Time-Series Analysis, Components of Time-Series, Time-Series Forecasting Models using Stochastic Models (AR, MA, ARMA and ARIMA)

Suggested Readings

CAAI407T: INTRODUCTION TO ARTIFICIAL INTELLIGENCE (L-T-P: 3-0-0)

(3 credits- 45 hours) (L-T-P: 3-0-0)
Objective
The course aims to familiarise the students with concepts of Artificial Intelligence, search techniques and knowledge representation issues. This course also aims to equip the students with knowledge of fuzzy logic and its uses for artificial intelligence, game playing and natural language processing.

COURSE / LEARNING OUTCOMES
At the end of the lab experiments, students will be able to learn
CO 1: Define artificial intelligence and the different techniques of artificial intelligence. (Remembering)
CO 2: Understand the components of AI agents and different problem-solving techniques, various applications of AI techniques in intelligent agents, expert systems, and artificial neural networks. (Understanding)
CO 3: Apply basic principles of AI in solutions that require problem-solving, inference, perception, knowledge representation, and learning. (Applying)
CO 4: Analyze and examine the different approaches to Knowledge Representation, reasoning, problem-solving etc. (Analyzing)

Module I (15 Hours)

What is AI (Artificial Intelligence)? : The foundation of AI problems, the history of AI, the underlying Assumption, and AI techniques Intelligent Agents: Agents and Environments, nature of environments, the structure of Agents Problem-solving Agents, State Space Search & Heuristic Search Techniques, Local Search and Optimization, Adversarial Search, Constrained Satisfaction Problem.

Module II: (12 Hours)
Knowledge Representation and Reasoning Issues: Representations and Mappings, Approaches to Knowledge Representation. Using Predicate Logic: Representation of Simple Facts in Logic, Representing Instance and Isa Relationships, Computable Functions and Predicates, Resolution. Representing Knowledge Using Rules: Procedural Versus Declarative Knowledge, Logic Programming, Forward Versus Backward Reasoning. Symbolic Reasoning Under Uncertainty: Statistical Reasoning: Probability and Bayes' Theorem.

Module III: (10 Hours)
Learning in AI: Supervised, Unsupervised, Linear regression and classification, Decision Trees, Ensemble Learning.

Module IV: (8 Hours)
Recent Advances in AI: Neural Network, Fuzzy Sets and Theory, Expert Systems. Natural Language Processing: Introduction, Syntactic Processing, Semantic Analysis, Discourse And Pragmatic Processing.

Suggested Readings
1. Elaine Rich and Kevin Knight "Artificial Intelligence", 2nd Edition, Tata Mcgraw-Hill, 2005.
2. Stuart Russel and Peter Norvig, "Artificial Intelligence: A Modern Approach", 3rd Edition, Prentice Hall, 2009.

E Resources
1. Harvard University course on Machine Learning and AI with Python
2. Simplilearn course on Professional Certificate Program In Generative AI And Machine Learning

CARM408T: RESEARCH METHODOLOGY

(2 credits- 30 hours) (L-T-P: 2-0-0)

Objective
This course is designed to provide students with the necessary skills and knowledge to determine the information necessary to address an identified research problem (basic or applied) and, using this understanding, develop and use an actionable research proposal. In this process, the students will gain an understanding of relevant approaches and elements of undertaking a research enquiry specifically to provide insights into solving a relevant problem.

COURSE/LEARNING OUTCOMES
At the end of the course students will be able to:
CO 1: Define and tell why research and its methodology are important. (Remembering)
CO 2: Explain the use of methodology in understanding the process of research. (Understanding)
CO 3: Identify the sources of data and apply various data collecting and sampling techniques. (Applying)
CO 4: Justify the use of data preprocessing techniques before analysing data. (Evaluating)
CO 5: Apply statistical analysis to classify, analyse and draw inferences from data. (Analysing/Applying)

Module I: Introduction to Research (15 Hours)
Concept and nature, objectives, criteria of a good research, types of research; features of a good research design; research problem: definition, Components, selection and formulation of research problem; preparation and presentation of research proposal; types of data, methods of data collection; sampling process; methods of sampling; determination of sample size; Report Writing: Essentials of report writing, report format

Module II: Processing and Analysis of Data (15 Hours)
Data Process Operations: Editing, Sorting, Coding, Classification and Tabulation Analysis of Data: Statistical Measure and Their Significance, Central Tendency, Dispersion, Correlation: Linear and Partial, Regression: Simple and Multiple Regression,

Skewness, Time series Analysis, Index Number Testing of Hypothesis: T-test, Z- test, Chi Square, F-test, ANOVA

Suggested Readings

1. Kothari C.R , Research Methodology: Methods and Techniques, New Age International,
2. Srivastava, S. C. : Foundation of Social Research and Economics Techniques, Himalaya Publishing House, 1990.
3. Sharma H.D. and Mukherji S. P: Research Methods in Economics and Business, New York: The Macmillan Company, 1992.
4. Saunders M , Philip Lewis and Adrian Thornhill, Research Methodology for business students, Pearson Education
5. Michael V.P, Research Methodology in Management, Himalaya Publishing House

E Resources

1. NPTEL Swayam Course on Research Methodology by Prof. E. Prasad, IIT Madras
2. NPTEL Swayam Course on Research Methodology by Prof. Soumitro Banerjee, IISER Kolkata

CADV409T: DATA VISUALIZATION

(3 Credits – 45 hours) (L-T-P: 3-1-0)

Objectives:

- Develop skills to both design and visualizations.
- Understand visualization for correlation analysis, distribution analysis and multivariate analysis.
- Understand the components involved in visualization design.
- Understand the type of data impacts the type of visualization.

COURSE/LEARNING OUTCOMES

On successful completion of the course students will be able to:

CO 1: Develop familiarity with the design process to develop visualization methods and visualization systems. (Remembering)
CO 2: Understand the fundamental design principles and different types of data visualization. (Understanding)
CO 3: Apply existing visualization tools and techniques to analyze basic datasets. (Applying)
CO 4: Design and develop various data visualization methods for a given problem. (Creating)

Module I: (10 hours)

Visual Perception and Cognition, visual representation of data, Coordinate Systems and Axes, Gestalt principles, information overloads, Tufte's Principles, Data visualization: Introduction, Types of data visualization, Data for visualization, Aesthetics and Types of data, Applications of Data Science technologies for visualization.

Module II: (10 hours)

Basic Plotting - Line plot, Bar plot, Pie Chart, Scatter Plot, Histogram, Stacked Bar Charts, Sub Plots, Matplotlib, Searborn, Plotly, Seaborn Styles. Applied Visualizations - Box plot, Density Plot, Area Chart, Heat map, Tree map, Graph Networks. Interactive Visualizations and Animation - Dynamic charts, Dynamic maps, Animation types- 2D, 3D, Motion Animation, Animation Principles, Altair Package, Statistical Visualizations.

Module III: (13 hours)

Distribution analysis, describing distributions, distribution patterns, distribution displays, distribution analysis best practices, correlation analysis, describing correlations, correlation patterns, correlation displays, correlation analysis techniques and best practices, multivariate analysis, multivariate patterns, multivariate displays, multivariate analysis techniques and best practices.

Module IV :(12 hours)

Information dashboard, Introduction, Types of Dashboard, dashboard designing, Design Issues and assessment of needs – Considerations for designing dashboard-visual perception, Best practices in Dashboard design. Case Study: Creating a dashboard using Excel.

Time Series Data Visualization - Individual time series data, multiple time series data. Visualizing Trends – Smoothing, Showing Trends with a defined functional form, detrending and time series data decomposition.

Suggested Readings

SKILL ENHANCEMENT COURSES

Semester	Category	Course Code	Course Name	Credits
1	S E Course 1	CAMG111L	Multimedia and Graphics	3
2	S E Course 2	CAIT112L	Introduction to Internet of Things	3
3	S E Course 3	CACV215L	Computer Vision Fundamentals	3

CAMG111L: MULTIMEDIA AND GRAPHICS

(3 Credits – 45 Hours) (L-T-P: 0-0-3)

Objective: This course aims to equip students with hands-on experience in multimedia and graphics through the comprehensive use of open-source tools. The course is designed to develop students' proficiency in image editing, photo manipulation, and digital art creation using GIMP. By exploring advanced techniques in compositing, retouching, and creative design, students will enhance their technical skills and creativity, enabling them to conceptualize and produce visually compelling multimedia projects that effectively address various design challenges and real-world scenarios.

COURSE/LEARNING OUTCOMES

CO 1: Apply advanced image editing techniques to enhance, retouch, and manipulate digital images using GIMP. *(Applying)*
CO 2: Analyze different layers, masks, and blending modes to effectively combine and composite multiple images. *(Analyzing)*
CO 3: Evaluate the effectiveness of various filters, effects, and retouching tools in improving the quality of digital images. *(Evaluating)*
CO 4: Design and create a comprehensive multimedia project, integrating advanced techniques in image editing, compositing, and digital art using GIMP. *(Creating)*

Module I: Introduction to GIMP (15 hours)

GIMP interface: Toolbox, Layers, Brushes, and Navigation; Understanding image file formats and resolutions, Basic tools: Selection tools (Rectangular, Elliptical, Lasso), Move, Crop, and Rotate; Opening resizing, cropping, and rotating an image; Layer operations: Adding, deleting, and merging layers; Adjusting brightness, contrast, and color balance; Using the Levels and Curves tools for image enhancement

Module II: Advanced Image Editing and Photo Manipulation (15 hours)

Introduction to GIMP's built-in filters and effects; Applying blur, sharpen, and noise reduction filters; Creative effects: Drop shadows, glows, and artistic filters; Using Clone tool, Heal tool, and Perspective Clone tool; Adding and formatting text in GIMP; Using the Paths tool for complex selections and text effects.

Module III: Compositing and Advanced Techniques (15 hours)

Combining multiple images into a single composition; Using brushes, patterns, and gradients for digital painting; Customizing brushes and creating textures; Photo manipulation, digital painting, or a poster design.

Suggested Readings

1. Lecarme, Olivier, and Karine Delvare. *The book of GIMP: A complete guide to nearly everything*. No Starch Press, 2013.
2. Peck, Akkana. *Beginning GIMP: from novice to professional*. Apress, 2006.
3. Web Link: https://www.gimp.org/tutorials/

CAIT112L: INTRODUCTION TO INTERNET OF THINGS

3 credits: 45 hours (L-T-P: 0-0-3)

Objective: *This course aims to provide students with practical skills in IoT, focusing on programming with Arduino and networking with ESP8266. Students will learn to interface sensors, control actuators, and configure wireless communication, enabling them to develop and implement IoT projects for real-world applications.*

Course Outcomes:

At the end of the course students will be able to:

CO1: Apply programming on Arduino to interface sensors, control actuators, and manage serial communication, demonstrated through practical exercises such as LED control, sensor data acquisition, and actuator operation. (Applying)

CO2: Examine and configure ESP8266 for wireless communication, analyse network configurations, and assess data transmission using protocols such as TCP/IP, HTTP, and MQTT. (Analysing)

CO3: Plan, design, and implement IoT projects, integrating various components and systems to develop functional prototypes for applications in fields such as healthcare, agriculture, and smart cities. (Creating)

CO4: Critically assess various IoT architectures, components, and communication technologies, and evaluate their suitability for different IoT applications and platforms, considering real-time examples and challenges in the field. (Evaluating)

Module I: Introduction to IoT (8 Hours)

Definitions & Characteristics, IoT Architectures (Physical & Logical Design), Overview of IoT components and IoT Communication Technologies, Various Platforms for IoT, Real time Examples of IoT, Challenges in IOT.

Module II: Arduino Programming and Basics (12 Hours)

Microcontroller fundamental-(architecture, I/O, timers) Arduino IDE: Architecture, Setting up the IDE & Arduino Libraries, basic programming- Data types, variables, operators, Control flow statements, functions, Basics of sensors and actuators, sensor interfacing (analog and digital sensors, data acquisition), Actuator control (relays, motors, servos, PWM), Serial communication (UART), Practical exercises (LED blinking, button control, sensor reading, actuator control)

Module III: Networking with ESP8266 (12 Hours)

Wireless network basics (Wi-Fi, network topologies), Introduction to ESP8266 (hardware, AT commands, firmware modes), Network Configuration- SSID, password, Static IP setup, Web Server Configuration, Sending basic data over Wi-Fi, TCP/IP networking (sockets, client-server model), Communication Protocols in IoT ((TCP/IP, HTTP, MQTT, CoAP), Cloud integration (basic concepts, data upload), practical exercises (web server, data logging)

Module IV: IOT Projects and Application (13 Hours)

IoT project planning and development process, Hands-on projects (like home automation, IoT in health care, agriculture, smart parking etc),project planning, implementation and testing, Troubleshooting and debugging techniques.

Suggested Readings

1. Khan, Jamil Y., and Mehmet R. Yuce, eds. Internet of Things (IoT): systems and applications. CRC Press, 2019.
2. Adrian McEwen and Hakim Cassimally, Designing the Internet of Things, Wiley, 2013.
3. Qusay F. Hassan, Internet of Things A to Z: Technologies and Applications, Wiley-Blackwell, 2018.
4. Peter Waher, Mastering Internet of Things: Design and Create Your Own IoT Applications Using Raspberry Pi 3, Packt Publishing, 2018.

CACV215L: COMPUTER VISION FUNDAMENTALS

(3 Credits – 45 Hours) (L-T-P:0-0-3)

Objective: *The objective of this course is to equip students with a comprehensive understanding of the core principles, techniques, and applications of computer vision. This course aims to introduce students to the fundamental concepts of image processing, feature extraction, object detection, and recognition.*

COURSE OUTCOMES:

By the end of this course, students will be able to:

CO1: Understand the basic principles and techniques used in computer vision. (Understanding)

CO2: Apply image processing methods to extract meaningful features from visual data. (Applying)

CO3: Implement algorithms for object detection, recognition, and tracking. (Analysing)

CO4: Develop computer vision applications using relevant programming tools. (Creating)

Module I: **Introduction to Computer Vision** (**10 Hours)**

Overview of Computer Vision, Image Formation and Camera Models, Image Representation (2D and 3D), Image Acquisition and Pre-processing

Module II: **Image Processing and Feature Extraction** (**10 Hours)**

Basic Image Processing Techniques (Filtering, Edge Detection, Thresholding), Color Spaces and Transformations, Feature Detection (SIFT, SURF, ORB), Feature Matching and Tracking

Module III: **Object Detection and Recognition** (**14 Hours)**

Object Detection Techniques (Haar Cascades, HOG, YOLO), Face Detection and Recognition, Introduction to Deep Learning for Computer Vision (CNNs), Implementing Object Recognition Algorithms

Module IV: Applications and Case Studies (**9 Hours)**

Real-world Applications of Computer Vision (Medical Imaging, Surveillance, Robotics), Case Studies on Successful Computer Vision Projects, Ethical Considerations in Computer Vision, Future Trends in Computer Vision

List of Practical Work:

1. Image Acquisition and Pre-processing: Capture images using a camera or smartphone and apply basic pre-processing techniques like resizing, cropping, and rotation.
2. Image Filtering and Enhancement: Apply various image filtering techniques such as Gaussian blur, median filtering, and sharpening to enhance image quality.
3. Edge Detection: Implement edge detection algorithms like Canny and Sobel to detect edges in images.
4. Color Space Conversion: Convert images between different color spaces (e.g., RGB to Grayscale, RGB to HSV) and analyze the impact on image interpretation.
5. Feature Detection and Matching: Task: Use algorithms like SIFT, SURF, or ORB to detect and match key features between two images.
6. Face Detection: Implement face detection using Haar cascades or other pre-trained models.
7. Object Detection using YOLO: Implement object detection on a video stream using the YOLO (You Only Look Once) algorithm.
8. Building a Simple Image Classifier: Build a basic image classifier using a Convolutional Neural Network (CNN) with a small dataset (e.g., MNIST or CIFAR-10).
9. Image Segmentation: Task: Implement image segmentation techniques such as thresholding, region growing, or using pre-trained models like U-Net.
10. Tracking Moving Objects: Implement object tracking in a video using algorithms like Mean Shift or Kalman Filter.
11. Case Study Implementation: Choose a real-world application of computer vision (e.g., medical imaging, autonomous driving) and implement a simplified version of the solution.

INTERNSHIPS

Semester	Category	Course Code	Course Name	Credits
2	Internship	CAIN107I	Internship	4
4	Internship	CAIN213I	Internship	4
5	Internship	CAIN314I	Internship	2

CAIN107I/ CAIN108I: INTERNSHIP (Exit of 1st Year or 2nd Year)

(4 Credits: 120 hours)

CAIN314I: INTERNSHIP (At the end of 4th Semester and evaluated in 5th Semester)

(2 Credits-60 Hours)

Objectives

The Summer Internship gives students an opportunity to apply the theories and principles that they have learnt in classroom courses to real-life industry work situations. During the internship, students can explore career interests, develop professional skills, learn how community organizations work and expand their clinical and interpersonal skills.

COURSE/ LEARNING OUTCOMES

At the end of the internship, students will be able to:

CO 1: Relate theory and practical with real life examples. (Remembering)
CO 2: Explain the technical processes involved in the industry. (Understanding)
CO 3: Identify the importance of learning the computer technology. (Applying)
CO 4: Analyse application of computer technology into the practical field. (Analysing)
CO 5: Discuss the actual technological advancements in the industry. (Creating)

GUIDELINES:

The students should follow the following instruction and guidelines during the course of the internship:

- The internship should be for a minimum duration of 80 hours which can be extended up to any limit depending upon the convenience and requirement of the student and the organisation respectively.
- The students have to undergo the internship during the Summer/Winter Break.
- The students can undergo an internship at any organisation which is recognised or registered, as applicable, of their choice but the work must be related to computer technology.
- After the completion of the internship, the students must submit the Internship Report which should include the Internship Diary as an Annexure to the Report. The format of the Internship Report and Internship Diary should be in accordance with the one prescribed by the Department.
- There would be a Seminar Presentation (PPT) and Viva-Voce Examination based on which the students would be evaluated for the internship. The Internship report would also be a part of the evaluation.

STRUCTURE OF INTERNSHIP

The Internship Report must comprise the following:

a. Recommendation Letter from the Department.
b. Completion Certificate from the Organisation where the student has worked as an intern.
c. Internship Diary as per the prescribed format.
d. Organisation details (Address, E-mail, Contact Number) including name, contact number and e-mail of the supervisor is mandatory. This should be included as a part of the Internship Diary according to the prescribed format.

The Contents of the Report must include:

a. Introduction.
b. Objectives of the Internship.
c. About the Organisation (Sector, Activities, Operations).
d. Description of the work.
e. Learning Outcomes.

The Assessment for the internship must have the following components:

- Internship Report: 20 Marks
- Internship Diary: 20 Marks
- Seminar Presentation: 30 Marks
- Viva-Voce Examination: 30 Mark

BCA (Honours)

CADI410P: DISSERTATION-I

(6 credits – 180 hours) (L-T-P: 0-0-6)

Objective

This course aims to provide the student with various practical and research based knowledge on different problem specific statement, system deployment techniques and analysis.

COURSE / LEARNING OUTCOMES

At the end of the research project students will be able to:

1. Recall different process involved in software development life cycle (Remembering).
2. Understanding the research problem statement and related literature study (Understanding).
3. Analyse end user requirements for identifying system functionality metrics and decide whether developed system can solve the research problem. (Analysing)
4. Choose an engineering approach to solving problems, starting from the acquired knowledge to visual interpretation. (Evaluating)

5. Propose the use of certain technologies by implementing them in different programming languages to solve the research problem statement (Creating).

Module I: (12 hours)
Research methodology and types, Identification of research problem statement, finding the limitation of existing system

Module II: (12 hours)
Literature study, Identification of software and hardware requirement, schedule feasibility, economic and operational feasibility, identification software development metrics, Identification of development platform, planning for experimental arrangement

Module III: (8 hours)
Prepare Design diagrams/flowchart etc. (as applicable), Identify deployment strategy, identify probable outcome and observation.

Module IV: (15 hours)
Resolve and Implement the problem statement through proposed software model and system architecture.
Write a paper based on overall evaluation and findings during case studies / research project activities.

Module V: (13 hours)
Prepare a report to highlight the problem statement, design diagram, technologies deployed and references used to resolve end users requirement.
Submit a research paper for participation in national/international conferences for a peer review by external editorial committee.

Suggested Readings:
1. Kothari, C. and Garg, G., *Research methodology Methods and Techniques*., NEW AGE International Publishers
2. Roger S. Pressman, "Software Engineering–A Practitioner's Approach", McGraw Hill Companies.
3. Rajib Mall, Fundamentals of Software Engineering, PHI.

CADI411P: DISSERTATION-II

(6 credits – 180 hours) (L-T-P: 0-0-6)

Objective
This course aims to provide the student with various practical and research-based knowledge on different problem-specific statements, system deployment techniques, and analysis.

COURSE / LEARNING OUTCOMES
At the end of the research project, students will be able to:
1. Understanding the research problem statement and related literature study (Understanding).
2. Analyse end-user requirements for identifying system functionality metrics and decide whether the developed system can solve the research problem. (Analysing)
3. Choose an engineering approach to solving problems, starting from the acquired knowledge to visual interpretation. (Evaluating)
4. Solve problems using standard algorithms along with the presentation of probable findings and recommendations (Applying)
5. Propose the use of certain technologies by implementing them in different programming languages to solve the research problem statement (Creating).

Module I: (12 hours)
Research methodology and types, Identification of problem statement, literature study for a solution, evaluation of the existing system, finding the limitation of the existing system

Module II: (12 hours)
Comparative Literature review on recent trends for research problem solving, identification of software and hardware

requirement, schedule feasibility, economic and operational feasibility, identification of software development metrics, Identification of development platform, and planning for experimental arrangement

Module III: (8 hours)
Prepare Design diagrams/flowcharts etc. (as applicable), design test cases, develop a test bed for solving the problem statement, Identify deployment strategy, and identify probable outcomes and observation.

Module IV: (15 hours)
Develop algorithms and implement using programming languages.
Resolve and Implement the problem statement through proposed software model and system architecture.
Write a paper based on overall evaluation and findings during case studies / research project activities.

Module V: (13 hours)
Prepare a report to highlight the problem statement, design diagram, technologies deployed and references used to resolve end users requirement.
Submit a research paper for participation in conference/books/letter/journal for a peer review by external editorial committee.

Suggested Readings

BCA (Honours) with Research

CADI412P: DISSERTATION- I
(18 Credits -540 Hours) (L-T-P: 0-0-18)

Objective
During this phase, the student will start a research project applying the knowledge acquired during the first two semesters and incorporating the recent trends in the chosen area. It should include phases of analyses and design, implementation and reporting. This project is to be executed individually within or outside the campus. The mode and components of evaluation and the weightages attached to them shall be published by the Department during the semester.

COURSE / LEARNING OUTCOMES:
At the end of the research work, students will be able to-
1. Plan and engage in, an independent and sustained critical investigation and evaluation of a chosen research topic relevant to environment and society. (Applying)
2. Systematically identify relevant theory and concepts, relate these to appropriate methodologies and evidence, apply appropriate techniques and draw appropriate conclusions. (Applying and understanding)
3. Systematically analyse and critically evaluate the relevant information sources. (Analysing and evaluating)
4. Formulate a methodology for the problem statement. (Creation).

Module I: Introduction (30 Hours)
Formulation of the problem statement, research question.

Module II: Literature Review(60 Hours)
Literature review, study of the existing systems and their limitations, and comparative study.

Module III: Requirement Analysis and Feasibility Study (60 Hours)
Requirement analysis: Identification of software and hardware requirement, Feasibility study: schedule feasibility, economic and operational feasibility, identification software development metrics, Identification of the development platform, planning for experimental arrangements

Module IV: Design, Dataset Preparation and Methodology Design (60 hours)

Data collection: Dataset collection, dataset description, dataset preprocessing
Prepare Design diagrams/flowchart etc. (as applicable), Identify the deployment strategy, the probable outcome, and the observation. Design a methodology for the given problem statement.

Module V: Documentation (60)
Project report, presentation
Submit a research paper for participation in national/international conferences or journals (peer reviewed) for peer review by an external editorial committee.

Suggested Readings:
1. Kothari, C. and Garg, G., *Research methodology Methods and Techniques*., NEW AGE International Publishers
2. Roger S. Pressman, "Software Engineering–A Practitioner's Approach", McGraw Hill Companies.
3. Rajib Mall, Fundamentals of Software Engineering, PHI.

CADI413P: DISSERTATION- II

(20 Credits -600 Hours) (L-T-P: 0-0-20)

Objective
During this phase, the student will carry forward and complete the work that they started in Phase I. It is expected that the student will publish at least one research paper in a well-known journal to augment their work during this phase. Published papers will carry extra weight during evaluation. The mode and components of evaluation and the weights attached to them shall be published by the Department at the beginning of the semester.

COURSE / LEARNING OUTCOMES:
At the end of the research work, students will be able to-
1. Apply the algorithm formulated in Phase I for model implementation(Application).
2. Compare the results with the existing system to identify its accuracy (Analysis)
3. Evaluate and summarize the outcome which is expected from the research (Evaluating).
4. Create an outcome based on the methodology implemented (Creation)

Module I: Implementation (80 hours)
Implement the proposed methodology using a suitable platform and tools.

Module II: Comparative Analysis (80 hours)
Detailed analysis of the standard techniques applied for decision making.

Module III: Training, Testing and Performance evaluation (60 hours)
Train and test the designed model with the prepared dataset.
Apply evaluation metrics to analyze performance and the accuracy of results.

Module IV: Documentation (80 hours)
Project report, presentation
Submit a research paper for participation in national/international conferences for peer review by external editorial committee.

Suggested Readings:
1. Kothari, C. and Garg, G., *Research methodology Methods and Techniques*., NEW AGE International Publishers
2. Roger S. Pressman, "Software Engineering–A Practitioner's Approach", McGraw Hill Companies.

INTEGRATED MASTER OF BUSINESS ADMINISTRATION (iMBA)

DEPARTMENT OF MANAGEMENT

PROGRAMME: FIVE-YEAR BCA-MCA INTEGRATED PROGRAMME

DEGREE: INTEGRATED MASTER OF BUSINESS ADMINISTRATION (iMBA)

Vision:
The five year BBA-MBA Integrated curriculum strives to grow into a significant position in Management education to create graduates in the field of business and management to become future business leaders, entrepreneurs who are socially responsible professionals capable of adapting into the dynamic corporate world having a globally acceptable vision.

Mission:
To focus on imparting the highest quality education at par with international standards with a strong foundation of management concepts and its applications, for students to excel and enhance their skills in order to make them accepted worldwide as managers.
To develop a strong industry-academia interface for project based learning, internships and placements
The pedagogy designed focus on practical learning through case studies, flipped classrooms, experiential projects, presentations, group discussions, etc enabling students to apply their knowledge in real world scenarios. This hands-on approach prepares the students to understand and interpret the challenges of the business world and enhances their critical thinking, analytical and communication skills.

Programme Outcomes (PO)
On successfully completing the program the student will be able to:
PO 1. Critical Thinking, Business Analysis and Problem Solving:
Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.
PO 2. Effective Communication:
Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.
PO 3. Social Responsiveness and Interaction:
Developing responsiveness to contextual social issues / problems and exploring solutions. Elicit views of others, mediate disagreements and help reach conclusions in group settings.
PO 4. Ethical and responsible citizen:
Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them. : Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.
PO 5. Environment and Sustainability:
Understand the issues of environmental contexts and sustainable development.
PO 6. Leadership and Team work,
Understanding leadership roles at various levels of the organization and leading teams. Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes

Program Specific Outcomes (PSO)
On the successful completion of B.B.A., the students will be able to:
PSO 1: Acquisition of Knowledge, skills and experiential learning in functional areas of management:
Comprehend the various concepts, processes and significance; to develop an insight and analytical abilities and also to develop the ability to provide solutions for effective decision making in practical business problems
PSO 2: Development of managerial skills:
Ability to visualize managerial problems and identify various alternatives to solve them To provide an opportunity for gaining practical understanding of the workplace and develop various leadership and interpersonal skills through internship training and also to make the students industry ready and to enhance critical thinking skills in understanding business challenges related to global business.
PSO 3: Entrepreneurship development skills:
To promote entrepreneurial skills by understanding the fundamentals of new business ventures. Ability to apply contemporary tools and techniques

MTMP100T: MANAGEMENT PROCESS, PRINCIPLES AND PRACTICES

(4 credits-60 Hours) (L-T-P: 4-0-0)

Objective(s)*: The objective of this course is to develop an understanding of the Principles and processes of management covering the basic management functions and challenges in the emerging perspective.*

Course/Learning Outcomes

At the end of the course students will be able to:

CO1: define the meaning of MPP. (Remembering)
CO2: explain the theory of planning and control. (Understanding)
CO3: determine the organisational process. (Applying)

Module I: Introduction to MPP (15 Hours)

Introduction: Concept, Nature, Process and Significance of Management; Managerial Roles (Mintzberg); Development of Management Thought- Classical, Neo -classical, Behavioural and Management Science Approach, System and Contingency Approaches.

Module II: Planning & Control (15 Hours)

Planning and Control: Concept, Process and Types; Planning Tools- Forecasting and Scheduling; Decision -making concept and process; Bounded rationality; Management by objectives; Corporate Planning- Environment analysis and Diagnosis

Module III: Organising (15 Hours)

Organising: Concept, nature, process and significance; Authority and Responsibility relationships Delegation, Decentralisation; Departmentation basis and formats (Project and Matrix); Formal and Informal Organisation; Changing patterns in Organisation structures in the Knowledge economy. Directing- Motivating and Leading People at work.

Module IV: Communication and Decision Making (15 Hours)

Role of communication; Communication media and technology, communication networks - formal vs. informal; barriers to effective communication; communication skills; persuasion in communication; active listening; participative decision making techniques; group vs. the individual; the decision making process

Suggested Readings

1. Joseph L. Massie :Essentials of Management .PHI, New Delhi; 2015
2. James F.Stoner :Management. Pearsons Education, Delhi ; 2020
3. Harold Koontz, Heinz Weihrich: Management. Tata McGraw Hill Pub. Co., Delhi; 2015
4. Amitai Etzioni :Modern Organizations. PHI, New Delhi; 2021
5. Jones, Gareth R. and Jennifer M. George: Contemporary Management. Tata McGraw Hill
6. Charles Hill, W.L. and Steven L.McShane: Principles of Management. Tata McGraw Hill

MTMF107T: ACCOUNTING FOR MANAGERS AND FINANCIAL MANAGEMENT
(Credits: 4- 60 hours) (L-T-P: 4-0-0)

Objective(s)*:* To equip students with a comprehensive understanding of accounting and financial management principles, enabling them to apply financial analysis and decision-making tools for effective managerial control and strategic planning.

Course/Learning Outcomes

After learning this course, the students will be able to:
CO1: define the Fundamental accounting principles and financial management concepts. (Understanding)
CO2: identify the financial statements and interpret financial information for decision-making (Applying)
CO3: analyse the budgeting and financial control systems for effective resource management. (Analyzing)
CO4: evaluate the financial performance of a business and recommend strategies for improvement (Evaluating)

Module I: Financial Accounting

Introduction to accounting: Basic concepts, accounting principles, and the accounting cycle. Financial statements: Balance sheet, income statement, cash flow statement, and their analysis. Ratio analysis: Liquidity, profitability, solvency, and activity ratios. Inventory valuation and management: Inventory systems, valuation methods, and inventory control.

Module II: Cost Accounting

Introduction to cost accounting: Cost concepts, classification, and behavior. Cost-volume-profit analysis: Break-even point, margin of safety, and contribution margin. Job order costing and process costing: Costing systems and procedures. Activity-based costing: Concept, benefits, and implementation.

Module III: Financial Management

Financial management concepts: Goals, scope, and functions. Time value of money: Concepts, calculations, and applications. Capital budgeting: Techniques for evaluating investment proposals. Working capital management: Cash, receivables, and inventory management.

Module IV: Financial Markets and Institutions

Financial markets: Types, functions, and participants. Financial institutions: Commercial banks, investment banks, and financial intermediaries. Risk management: Types of risk, risk assessment, and risk mitigation. Financial instruments: Shares, debentures, and derivatives.

Module V: Budgeting and Financial Control

Budgeting process: Types of budgets, budgeting techniques, and zero-based budgeting. Performance evaluation: Responsibility accounting, variance analysis, and performance measurement. Financial forecasting and planning: Techniques and tools. Cash flow management: Cash budgeting and cash forecasting.

Suggested Readings

1. Horngren, C. T., Datar, S., & Rajan, M. V. (2012). Cost accounting: A managerial emphasis. Pearson.
2. Ross, S. A., Westerfield, R. W., & Jordan, B. D. (2019). Fundamentals of corporate finance. McGraw-Hill Education.

3. Weygandt, J. J., Kimmel, P. D., & Kieso, D. E. (2019). Financial accounting. Wiley.
4. Gitman, L. J., & Joehnk, M. D. (2018). Principles of managerial finance. Pearson.

MTMM200T: MARKETING MANAGEMENT

(Credits: 4 - 60 hours) (L-T-P: 4-0-0)

Objective(s)*: The Objective of the course is to introduce the students to the domain of marketing and to its practical applications.*

Course/Learning Outcomes

At the end of the course students will be able to:
CO1: enumerate the fundamentals of marketing management. (Understanding)
CO2: assess the marketing environment. (Analyse)
CO3: analysing market segmentation. (Analysis)
CO4: examine pricing strategy and distribution channels. (Analysis)
CO5: importance of communication in marketing (Creating)

Module I: Fundamentals of Marketing (8 Hours)

Conceptual Framework of Marketing, Core Concepts of Marketing, Marketing Philosophies, Marketing Myopia, Marketing Practices developed over 21st Century; Different Contexts of Marketing Applications.

Module II: Marketing Environment (10 Hours)

Analysis of marketing environment: Macro and Micro components and their impact on marketing decisions, Macro & Micro environment of Marketing – Industry & Competitor analysis, Developing strategies.

Module III: Market Segmentation and Product Overview (13 Hours)

Consumer buying Model, Market segmentation, Targeting and Positioning, Market and Marketing research and Marketing Information System, Marketing Mix, Product mix strategies, : Product and service concept, Product Lines- Length, Breadth & depth, Product life cycle, New product Development, Brand concept, Brand Equity.

Module IV: Pricing and Distribution Strategies (14 Hours)

Pricing strategies, Price setting, Price determination. Channels of distribution: Types, Designing Distribution Channels, Managing Conflicts and Controls in Channels, Retailing, and Wholesaling, E-Retailing.

Module V: Marketing Communication Mix (15 Hours)

Marketing Communication, Integrated Marketing Communication, Promotional Mix Components- Advertising Vs Promotion, Advertising Vs Publicity, Sales Promotion, Public Relations, Personal Selling and Direct Marketing, Digital Marketing. Emerging issues in marketing, Ethical issues, Green marketing, Consumerism, CSR in marketing, Payment related issues in the cashless era.

Suggested Readings

MTOV201T: ORGANISATIONAL BEHAVIOUR
(4 credits-60 Hours) (L-T-P: 4-0-0)
Objective(s)*: The Objective of the course is to equip students with a comprehensive understanding of individual, group, and organizational behavior, enabling them to analyze organizational dynamics, develop effective interpersonal and leadership skills, and contribute to organizational success.*

Course/Learning Outcomes
At the end of the course students will be able to:
CO1: demonstration of fundamental concepts and theories of organizational behavior. (Understanding)
CO2: assessing the individual and group behavior within organizational contexts (Evaluating)
CO3: assessing the organizational behavior concepts to address real-world organizational challenges (Evaluating)
CO4: categorise the effective interpersonal and leadership skills. (Analysis)
CO5: evaluating the impact of organizational behavior on organizational performance (Evaluating)

Module I: Introduction (10 Hours)
Airline Industry – Scope, Types. Scheduled and Non-Scheduled Flights; Air Cargo Transport – Economic and Social impact; Regulatory Bodies; Key Performance indicators.

Module II: Fundamentals of Aviation Industry (12 Hours)
Airline Profitability, Main Industry, Characteristics of Passenger airlines, Service Industry – Characteristics.

Module III: Organisational Structure (12 Hours)
Airline Alliances, Development of commercial airlines, Deregulation – Impact of Deregulated Airline industry, Organizational Structure, Types of Airline Personnel, Flight crew and Cabin Crew Training, Organizational Culture**.**

Module IV: Airport and services (12 Hours)
Airports – Personnel, Processing Passengers and Freight, Airport Security, Air Navigation Services, Air Traffic Control, Airplanes – Manufacturers – Types of Aircraft.

Module V: Safety and Security (14 Hours)
Air Safety and Security, Role of Regulatory Agencies, Airside Safety, Culture of Safety, Issues in Air safety, Accident and Incident Investigation, Future of Airline Industry

Suggested Readings
1. Andreas Wald, Sven Grossand Hanns Christian Wirtz, Introduction to Aviation Management, published by Routledge
2. Dr Richard Shevell, Fundamentals of Aviation and Aerospace, published by CRC Press in 2018
3. National Research Council, Aviation and the Role of Government, published by National Acaemies Press in 1998
4. Bijan Vasign, Ken Flemming and Thomas Tacker, Introduction to Airport EconmicsL From Theory to Applications, published by Routledge in 2015

Major 5: HUMAN RESOURCES MANAGEMENT

(5 credits- 75 hours) (L-T-P: 5-0-0)

Objective(s): *The objective of this paper is to provide the students with a comprehensive understanding of human resource management principles and practices, enabling them to effectively manage human capital, contribute to organizational success, and foster a positive work environment.*

Course/Learning Outcomes

At the end of the course students will be able to:

CO1: define the nature and strategic role of human resource management in organizations (Remembering)
CO2: describe the human resource issues and challenges faced by organizations (Understanding)
CO3: explain the human resource management concepts and practices to solve organizational problems (Applying)
CO4: analyse the effective human resource policies and strategies (Analyzing)
CO5: evaluate the impact of human resource management on organizational performance. (Evaluating)

Module I: Human Resource Management: An Overview

Evolution of human resource management. Strategic human resource management. Human resource planning and job analysis. Recruitment and selection processes. Legal framework of human resource management

Module II: Human Resource Development

Training and development needs assessment. Training methods and techniques. Performance management and appraisal. Career planning and development. Employee compensation and benefits

Module III: Organizational Behavior

Individual behavior in organizations: Personality, perception, attitudes, and motivation. Group dynamics and team building. Leadership and organizational culture. Organizational change and development. Conflict management and negotiation

Module IV: Employee Relations

Employee communication and engagement. Employee welfare and safety. Industrial relations and collective bargaining. Labor laws and regulations. Grievance handling and disciplinary actions

Module V: Contemporary Issues in HRM

Global human resource management. Diversity and inclusion. Work-life balance. Organizational ethics and social responsibility. Human resource information systems (HRIS).

Suggested Readings

MTCB203T: CONSUMER BEHAVIOUR

(5 credits- 75 hours) (L-T-P: 4-0-0)

Objective(s): The objective of the course is to make the *students understand the different concepts of consumer behavior, role of social and cultural settings on consumer behavior and consumer buying process.*

Course/ Learning Outcomes:

At the end of this course students will be able to:

CO1: define the consumer behaviour. (Remembering)
CO2: explain the models of consumer decision process. (Understanding)
CO3: apply the factors influencing consumer behavior in developing marketing strategies, identify purchase decision and post

purchase behaviour in varied marketing situations (Applying)
CO4: analyse market segmentation and segmentation of consumer markets, (Analysing)
CO5: assess the positioning strategies on buying behaviour. (Evaluating)

Module I: Contemporary Dimensions of Consumer Behaviour (15 Hours)
Consumer Behaviour, Consumer Decision-Making, Models of Consumer Decision –Making, Types of Consumer Buying Behaviour, Factors influencing Consumer Behaviour, Market Segmentation, Segmentation of Consumer markets, Positioning, Differentiation and Marketing Mix, Marketing Research; Consumer Research Process, Types of Research Methods.

Module II: Implications Social and Cultural Settings on Consumer Behaviour (15 Hours)
Influence of culture and Subculture on Consumer Behaviour, Influence of Social Class on Consumer Behaviour, Social Stratification and Marketing Strategy, Group Influence on Consumer Behaviour, Household and Family Influence on Consumer Behaviour, Socialisation of family Members, Family Purchasing Decision-Making and Consumption Related Roles, family Life Cycle.

Module III: Consumer Buying Process (15 Hours)
Stages of Consumer Buying Process, Purchase Decision and Post Purchase Behaviour, Traditional and Contemporary Models of Consumer Behaviour; Case study

Module IV: Advertising as a communication process (20 Hours)
a) Advertising as a tool of communication; Meaning, nature and importance of advertising; Types of advertising; Advertising objectives. Audience analysis; Setting of advertising budget: Determinants and major methods.
b) Major media types-their characteristics, internet as an advertising media, merits and demerits; Factors influencing media choice; media selection, media scheduling, Advertising through the Internet-media devices

Module V: Evaluating communication and sales effects (10 Hours)
Evaluating communication and sales effects; Pre- and Post-testing techniques

Suggested Readings
1. Blackwell, Roger D, Paul W Miniard and James F Engel, Consumer Behaviour, Thomson Learning Inc.,2002.
2. Duhan S.N., GarimaSahni N.K. , Consumer Behaviour, 1st edition, 2016, Kalyani Publishers

MTMD204T: BUSINESS MATHEMATICS & STATISTICS FOR DECISION MAKING

(4 Credits – 60 Hours) (L-T-P: 3-0-0)

Objective(s): *The objective of this course is to familiarize students with the applications of mathematics and statistical techniques in business decision-making*

Course/Learning Outcomes
At the end of this course students will be able to:
CO1: apply matrices in business and economic models (Applying)
CO2: illustrate the use of differentiation in business and economic models. (Applying)
CO3: identify the methods of calculating interest rates (Applying)
CO4: summarize data sets using descriptive statistics (Understanding)
CO5: analyse the relationship between two variables (Analysing)
CO6: determine the trend and seasonality in time series data (Evaluating)

Part – A: Business Mathematics

Module I: Matrices (7 Hours)
Definition of a matrix. Types of matrices; Algebra of matrices. Calculation of values of determinants up to third order; Adjoint of a matrix; Finding inverse of a matrix through ad joint; Applications of matrices to solution of simple business and economic problems

Module II: Differential Calculus (13 Hours)
Mathematical functions and their types – linear, quadratic, polynomial; Concepts of limit and continuity of a function; Concept of differentiation; Rules of differentiation – simple standard forms. Applications of differentiation – elasticity of demand and supply; Maxima and Minima of functions (involving second or third order derivatives) relating to cost, revenue and profit.

Module III: Basic Mathematics of Finance (5 Hours)
Simple and compound interest Rates of interest – nominal, effective and continuous – their interrelationships; Compounding and discounting of a sum using different types of rates

Part – B: Business Statistics
Module IV: Uni-variate Analysis (15 Hours)
Measures of Central Tendency including arithmetic mean, geometric mean and harmonic mean: properties and applications; mode and median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

Module V: Bi-variate Analysis (10 Hours)
Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's co-efficient and Spearman's rank correlation Simple Linear Regression Analysis: Regression equations and estimation. Relationship between
correlation and regression coefficients

Module VI: Time-based Data: Index Numbers and Time-Series Analysis (10 Hours)
Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices. Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares.

Suggested Readings

Major 8: MANAGERIAL ECONOMICS : (5 credits-75 Hours) (L-T-P: 5-0-0)

Objective(s): *The purpose of this course is to apply micro economic concepts and techniques in evaluating business decisions taken by firms. The emphasis is on explaining how tools of standard price theory can be employed to formulate a decision*

problem, evaluate alternative courses of action and finally choose among alternatives. Simple geometry and basic concepts of mathematics will be used in the course of teaching.

Course/Learning Outcome

At the end of this course students will be able to:

CO1: explain the mechanics of supply and demand in allocating goods and services and resources (Remembering)
CO2: illustrate how changes in demand and supply affect markets (Understanding)
CO3: apply the choices made by a rational consumer (Applying)
CO4: interpret the relationships between production and costs (Evaluating)
CO5: discuss key characteristics and consequences of different forms of markets (Creating)

Module I: (20 Hours)

Demand, Supply and Market equilibrium: individual demand, market demand, individual supply, market supply, market equilibrium; Elasticity of demand and supply : Price elasticity of demand, income elasticity of demand, cross price elasticity of demand, elasticity of supply;

Theory of consumer behavior : cardinal utility theory, ordinal utility theory(indifference curves, budget line, consumer choice, price effect, substitution effect, income effect for normal, inferior and giffen goods), revealed preference theory.

Module II: (15 Hours)

Producer and optimal production choice: optimizing behavior in short run(geometry of product curves, law of diminishing marginal productivity, three stages of production), optimizing behavior in long run (isoquants, iso-cost line, optimal combination of resources) Costs and scale : traditional theory of cost (short run and long run, geometry of cost curves, envelope curves), modern theory of cost (short run and long run), economies of scale, economies of scope.

Module III: (20 Hours)

Theory of firm and market organization : perfect competition (basic features, short run equilibrium of firm/industry, long run equilibrium of firm/industry, effect of changes in demand, cost and imposition of taxes) ; monopoly (basic features, short run equilibrium, long run equilibrium, effect of changes in demand, cost and imposition of taxes, comparison with perfect competition, welfare cost of monopoly), price discrimination; monopolistic competition (basic features, demand and cost, short run equilibrium, long run equilibrium, excess capacity) ; oligopoly (Cournot's model, kinked demand curve model, dominant price leadership model, prisoner's dilemma

Module IV :(20 Hours)

Factor Market: demand for a factor by a firm under marginal productivity theory (perfect competition in the product market, monopoly in the product market), market demand for a factor, supply of labour, market supply of labour, factor market equilibrium.

MTEG301T: BUSINESS ETHICS AND CORPORATE GOVERNANCE

(Credits: 5-75 hours) (L-T-P: 5-0-0)

Objective(s): *The objective of this paper is to make the students aware about the importance of ethics in the business, practices of good governance to encourage moral imagination and heightening sensitivity towards the ethical dimension of managerial problems.*

Course/Learning Outcomes

At the end of this course the students will be able to:

CO1: define Business Ethics and best practices of business ethics (Remembering)
CO2: explain the various Corporate Social Responsibilities (Understanding)
CO3: plan the need and importance of corporate and professional responsibility (Applying)
CO4: analyse the corporate governance frameworks (Analyzing)

Module I: (15 Hours)

Business ethics: Introduction, Meaning of ethics, Types of business, ethical issues, why ethical problems occur in business, Ethical dilemmas and principles in business,
Case Study: Personal companies like Tata related to Ethics in Business in Indian context

Module II: (20 Hours)

Corporate governance: concept, need to improve corporate governance standards, Features of good governance, Corporate governance abuses, Role played by regulators to improve corporate governance. Different Approaches to Corporate Governance, Leadership and Corporate Governance, Rights and Privileges of shareholders; Investor's Problem and protection; Board of Directors; Role, Duties and Responsibilities of Auditors, Bank and Corporate Governance.

Case Study: International experience- UK scenario (Cadbury committee; US scenario(Tread way commission, Blue ribbon committee); Indian experience- imperatives, CII code of best practices, Kumar Mangalam Birla, Narayan Murthy committee report.

Module III: (20 Hours)

Moral issues in business: Importance of moral issues and reasoning, Principles of moral reasoning, Quality of work life, implications of moral issues in different functional areas of business like finance, HR and marketing.

Whistle blowing: Kinds of Whistle blowing, Marketing truth and advertising: Marketing, Advertising, Truth and advertising, Allocation of moral responsibility in advertising Trade secrets, corporate disclosure, insider trading: Trade secrets, corporate disclosure, insider trading Accounting, finance Affirmative action, Ethics and Environment

Module IV :(20 Hours)

Corporate Social Responsibility: Meaning, Evolution of Corporate Social Responsibility, Limits of Corporate Social Responsibility, Voluntary Responsibility Vs. Legal requirements, Profit maximization vs. social Responsibility, Socially Responsive Management: Strategies of response, formulating socially responsive strategies, Implementing social responsiveness, Financial incentives for social responsibility, Role of self regulation in discharge of social responsibility.

Case studies on Indian companies like Tata, Godrej etc related to Corporate Social Responsibility

Suggested Readings

1. Crane. A., Business Ethics: Managing Corporate Citizenship and Sustainability in the Age of Globalisation, Taxmann Publishing House.
2. Manuel G Velasquez. Business Ethics: Concept and Cases
3. William H. Shaw, Business Ethics: A Textbook with Cases
4. Tom L. Beauchamp and Norman E. Bowie, Ethical Theory and Business
5. Jill Solomon, Corporate Governance and Accountability

MTPO302T: PRODUCTION AND OPERATIONS MANAGEMENT

(4 credits- 60 hours) (L-T-P: 4-0-0)

Objective(s): This course aims at acquainting the students with the functions of production and operations management and basic issues and tools of managing production and operation functions of an organization. The course also intends to provide the students a system theoretic view on project management and helps develop an understanding on why today's organizations are cultivating a formal project management process to gain competitive advantage.

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO1: define a production system. (Remembering)
CO2: explain the tools and techniques to measure work study, motion study. (Understanding)
CO3: demonstrate the procedure for product development and design. (Applying)
CO4: compute project completion time and Analyse and evaluate project risk management techniques. (Evaluating)

Module I: Introduction and Work Study (15 Hours)

Introduction to Production and operations management- Meaning and scope, subdivisions of work study Method/Motion study and Work Measurement

Module II: Plant Location and layout (15 Hours)

a) Objectives, Locational factors, Economics of plant location
b) Meaning, objectives and types of plant layout and their relevance to mass, batch and job- order production systems.
c) Systematic Layout Planning (SLP) procedure

Module III: Product design and Development and PPC (15 Hours)

a) Meaning of product, Product life cycle (PLC) and Product mix
b) Decisions to be taken during product development and design
c) Procedure for product development and design
d) Value of a product – its meaning, Value Analysis (VA) – its objectives, procedure and example, Simplification and Standardization.
e) Meaning and Objectives of PPC, Effects of types of production

Module IV: Project Management (15 Hours)

a) Project management framework, Project management processes, Cost and Time management, Project integration management, Project risk management, Project Quality management, Project communication management.

Suggested Readings

1. Adam, Ebert, Production and Operations Management, PHI.
2. R. Panneerselvam, Production and Operations Management, PHI.
3. K. Aswathappa & K. Shridhara Bhat, Production and Operations Management, Himalaya Publishing

MTPM303T: BUSINESS POLICY & STRATEGIC MANAGEMENT

(4 Credits-60 Hours) (L-T-P: 4-0-0)

Objective(s): *This course is designed to enhance knowledge on business policy and strategy adopted for managing the business. It will help a student to get broad exposure to understand the business policy and strategic management adopted by different business for their smooth running and facing the competition.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO1: develop an understanding of underlying concepts, tools, frameworks, issues and challenges involved in the area of Business Policy & Strategic Management for Under-graduates.

CO2: achieve development of an understanding of the increasing competition as well as not for profit business policies, strategies and the practice in organizations

CO3**:** explain the different circumstances & situations arising from ever changing strategic situation.

Module I: Introduction to Business Strategy and Formulation (15 Hours)

Introduction & Concept of Strategy, Corporate Policy as a field of study, Nature. Importance, purpose and objective of business policy, Chief Executive job, roles and responsibilities of board of Directors, An overview of strategic management, its nature and process, Formulation of strategy, Environment, environment scanning, environment appraisal, Identifying corporate competence & resource.

Module II: Introduction to Strategic Management (15 Hours)

Corporate Strategy, Persona1 and Ethical Values, Business ethics, Industry structure, Reconciling divergent values, Modification of values, moral components of corporate strategy, community considerations and corporate social responsibility (CSR) .

Module III: Strategic Management Process (15 Hours)

Corporate portfolio analysis, competitor & SWOT analysis, strategic audit & choice, strategic plan, routes to sustainable competitive advantage (SCA)

Module IV: Strategic Planning and Implementation (15 Hours)

Strategy Implementation, Structural implementation, organisational design and change, behavioural implementation, leadership, corporate culture. corporate politics and use of power, functional implementation - financial, marketing. Operation personnel (HR) policies and their integration, strategic evaluation and control

Suggested Readings

1. Wheelen, Thomas L , Hunger, J David & Rangarajan, Krish (2001) Concepts in Strategic Management & Business Policy, Pearson Education.
2. David, Fred R (2005), Strategic Management Concepts & Cases, PHI.
3. Kazmi, A. (2000); Business Policy, McGraw Hill.

MTFI304T: FINANCIAL MARKETS AND INSTITUTIONS

(4 credits – 60 Hours) (L-T-P: 4-0-0)

Objective(s): *The objective of this paper is to introduce students to the different aspects and components of financial Institutions and financial markets and also to introduce them with the emerging application of technologies in the system. The study of the course will enable them to take rational decisions in the growing financial environment.*

Course/Learning Outcomes

At the end of this course students will be able to:

CO1: describe the Indian banking system (Understanding)

CO2: explain the role of regulatory bodies in regulating the system (Understanding)

CO3: analyze the operative system of financial markets in India (Analyzing)

CO4: evaluate the types of debt instruments and their characteristics. (Evaluating)

CO5: elaborate the links between the theories of financial markets (Creating)

Module I: Structure of Indian Financial System (12 Hours)

An overview of the Indian financial system, financial sector reforms: context, need and objectives; major reforms in the last decade; competition; deregulation; capital requirements; issues in financial reforms and restructuring; future agenda of

reforms; Regulation of Banks, NBFCs &FIs, Salient provisions of banking regulation act and RBI Act; Role of RBI as a central banker; Products offered by Banks and FIs: Retail banking and corporate banking products. Universal Banking: need, importance, trends and RBI guidelines.

Module II: Emerging Technologies in Indian Financial System (12 Hours)
Core banking solution (CBS); RTGS, IMPS and internet banking, mobile banking, NBFCs and its types; comparison between Banks and NBFCs; payment bankers such as PayTM, Google Pay etc

Module III: Introduction to Financial Markets in India (12 Hours)
Role and Importance of Financial Markets, Financial Markets: Money Market; Capital Market; Factors affecting Financial Markets, Linkages Between Economy and Financial Markets, Debt Market- role and functions of these markets, Issue of Corporate Securities: Public Issue through Prospectus, Rights Issue, On- Line IPO, Book Building of Shares, Disinvestment of PSU, Employees Stock Options, Preferential Issue of Shares,

Module IV: Secondary Market in India (12 Hours)
Introduction to Stock Markets, Regional and Modern Stock Exchanges, International Stock Exchanges, Comparison between NSE and BSE, Raising of funds in International Markets; Indian Stock Indices and their construction, Factors influencing the movement of stock markets, indicators of maturity of stock markets, Major Instruments traded in stock markets, Myths attached to Investing in Stock Markets. Trading of securities on a stock exchange; Selection of broker, capital and margin requirements of a broker, DEMAT System

Module V: Money Markets & Debt Markets in India (12 Hours)
Money Market: Meaning, role and participants in money markets, Segments of money markets, money market instruments. Role of STCI and DFHI in money market, Debt Market: Introduction and meaning, Market for Government/Debt Securities in India, Secondary market for government/debt securities, over subscription and devolvement of Government Securities, Government securities issued by State Governments, Municipal Bonds, Corporate Bonds vs. Government Bonds

Suggested Readings

MTCL305T: CORPORATE AND BUSINESS LAW

(4 credits-60 Hours) (L-T-P: 4-0-0)

Objective(s): *The objective of this paper is to introduce students to the different aspects of Corporate and Business Law. To introduce them with the relevance and applications of the different laws*

Course/Learning Outcomes

At the end of this course students will be able to:
CO 1: define what a company is and how it is formed. (Remembering)
CO 2: explain the concepts related to the essential documents of companies (Understanding)
CO 3: explain the knowledge regarding administration of a company (Applying)
CO 4: Identify the legal provisions in the partnership business and its Act. (Analysing)

Module I: Introduction (12 Hours)
Introduction of Companies Act, 2013, meaning and characteristics of a company;types of companies including one person company, small company, and dormant company; association not for profit; illegal association; lifting of corporate veil; Registration and Incorporation of company, on-line filing of documents, promoters, their legal position ,pre-incorporation

contract; on-line registration of a company, Tribunal courts like NCLT, NCLAT etc

Module II: Documents of Companies (12 Hours)
Memorandum of association, Doctrine of ultra vires, Articles of association, Doctrine of constructive notice and indoor management, prospector-shelf and red herring prospectus, misstatement in prospectus, book-building; issue, allotment and forfeiture of share, transmission of shares, buyback and provisions regarding buyback; issue of bonus shares.

Module III: Administration and Management of Company (12 Hours)
Classification of directors, women directors, independent director, small shareholder's director; disqualifications, director identity number (DIN); appointment; Legal positions, powers and duties; removal of directors; Key managerial personnel, managing director, manager;
Meetings: Meetings of shareholders and board of directors; Types of meetings, Convening and conduct of meetings, Requisites of a valid meeting, postal ballot, meeting through video conferencing, e-voting.
Committees of Board of Directors- Audit Committee, Nomination and Remuneration Committee, Stakeholders Relationship Committee, Corporate Social Responsibility Committee

Module IV: The Indian Contract Act, 1872 (12 Hours)
a) Proposal- its communication, acceptance and revocation; Agreement vis-à-vis contract, void agreement & voidable contract
b) Consideration – essential elements, exception to rule- No consideration no contract; privity of contract and consideration
c) Capacity to contract; Free consent – coercion, undue influence, misrepresentation, fraud; Mistake – of fact and of law
d) Legality of object – agreements opposed to public policy and in restraint of marriage, trade & legal proceedings; Contingent contracts
e) Performance of contract–liability of joint promisor; Consequences of breach of contract–liquidated damages and penalty
f) Quasi contract; Indemnity guarantee–surety's liability
g) Bailment–Duties and liabilities of bailor and bailee, bailment of pledges;
h) Agency–types of agency, agents duty to principal and vice-versa, ratification and revocation of agent's authority

Module V: The Partnership Act, 1932 (12 Hours)
a) Nature of Partnership; Relation of partners-inter se; Relation of partners to third parties; Incoming and outgoing partners
b) Dissolution of Firm; Registration of Firms-effect of non-registration

Suggested Readings
1. Chadha, Reena& Chadha, Sumant; Corporate Laws, Scholar Publishing House, New Delhi
2. Kuchhal, M.C &Kuchhal, Vivek, Business Law, Vikas Publishing House
3. Kapoor, N.D; Business Law; Sultan Chand & Sons, New Delhi.

MTMP306P: FIELD BASED LEARNING/MINOR PROJECT
(4 credits-60 Hours) (L-T-P: 0-0-4)
Objective(s): *The objective of the minor project is to acquaint the students with the experiential learning through field work / survey on any related areas from the field of management.*

COURSE/LEARNING OUTCOMES
At the end of this course students will be able to:
CO1: define the different types of research project. (Remembering)
CO2: explain the various steps of designing research project (Understanding)
CO3: building questionnaire and schedules (Applying)
CO4: assessing the data for analysis (Analyzing)

CO5: appraising the findings in the report (Evaluating)
CO6: designing a research project report (Creating)

GUIDELINES:

Module I: INTRODUCTION

A. Broad introduction to thesis topic and method. Page or two.
B. Research problem. State broadly, in question form. Give sub-questions. Explain carefully. In one sense, usually the problem is to expand the body of knowledge examined in the literature review.
C. Need for the research. Who will benefit? Discuss applied and scientific contributions.
D. Nominal definitions. Define central terms.
E. Context. Add further info to clarify the research problem.

Module II: THEORY- Literature review

A. Overview. Theoretical foundations
B. Literature. Group articles by ideas. For a given idea, first discuss common strands in the literature, then departures
C. Scope of the study. Theoretical assumptions; discuss limitations they impose.

Module III: METHODS. Outline in a few pages.

A. Introduction. General description of method and design.
B. Design. Experiment, quasi-experiment, survey, and so forth. Detailed description
C. Sample. Universe, population, element, sample design, tolerance, probability.
D. Measurement. Operational definitions. Include, as applicable, detailed discussion of indexes/ scales. Specify methods used to assess validity and reliability.
E. Analysis. Techniques to be used; justification. Nature of relationships expected (e.g., asymmetrical, symmetrical, reciprocal; linear).
F. Methodological assumptions. Discuss limitations they impose.

APPENDICES

A. Schedule. In Gantt Chart form.
B. Facilities. Faculty and staff expertise, library and computer resources, other special facilities contributing to a successful study.
C. Budget.
D. Bibliographic essay. Sources searched (indexes, abstracts, bibliographies, etc.). Strengths and weaknesses of literature.

Module IV: FINDINGS

A. Brief overview.
B. Results of application of method; any unusual situations encountered. Nature of sample.
C. Descriptive analysis. One-way frequency distributions on central variables.
D. Validity/reliability analysis.
E. Tests of hypotheses.

Module V: DISCUSSION

When discussing implications, deal with both the theoretical and the practical. Present only interpretations of the findings, not opinion.

A. Brief overview.
B. Discussion of results of application of method. Implications.
C. Discussion of descriptive analysis. Implications.
D. Discussion of tests of hypothesis. Implications.
E. Post-hoc analysis. Implications.

Module VI: CONCLUSION May include writer's opinion.

A. Summary of entire thesis in a few pages.
B. Conclusions. Refer to lit review.
C. Implications. Speculate about broadest possible consequences, both theoretical and practical. Label speculation clearly.

D. Limitations. Theory, method.
E. Suggestions for future research.

APPENDICES; Bibliographic essay; Questionnaire;Raw data

MTCF400T: CORPORATE FINANCE
(5 Credits - 75 hours) (L-T-P: 5-0-0)
Objective(s): *To acquaint students with the techniques of financial management and their applications for business decision making.*
Course/Learning Outcomes
At the end of this course students will be able to:
CO 1: define the strategic objectives of the organisation for finance function. (Remembering)
CO 2: explain the different sources of corporate finance (Understanding)
CO 3: interpret the impact of risk and cost of capital impact on investment appraisal. (Applying)
CO 4: analyze the factors impacting the cost of capital (Analyzing)
CO 5: evaluate a corporation's capital structure (Evaluating)

Module I: Nature of Financial Management (20 Hours)
Nature of Financial Management: Finance and related disciplines; Scope of Financial Management; Profit Maximization, Wealth Maximization - Traditional and Modern Approach; Functions of finance – Finance Decision, Investment Decision, Dividend Decision; Objectives of Financial Management; Organisation of finance function; Concept of Time Value of Money, present value, future value, and annuity.

Module II: Long -term investment decisions (20 Hours)
Long -term investment decisions: Capital Budgeting - Principles and Techniques; Nature and meaning of capital budgeting; Estimation of relevant cash flows and terminal value; Evaluation techniques - Accounting Rate of Return, Net Present Value, Internal Rate of Return & MIRR.
Concept and Measurement of Cost of Capital: Explicit and Implicit costs; Measurement of cost of capital; Cost of debt; Cost of perpetual debt; Cost of Equity Share; Cost of Preference Share; Cost of Retained Earning; Computation of overall cost of capital based on Historical and Market weights

Module III: Capital Structures (20 Hours)
Capital Structures: Approaches to Capital Structure Theories - Net Income approach, Net Operating Income approach, Modigliani-Miller (MM) approach,Dividend Policy Decision - Dividend and Capital; The irrelevance of dividends: General, MM hypothesis; Relevance of dividends: Walter's model, Gordon's model; Leverage Analysis: Operating and Financial Leverage; EBIT-EPS analysis; Combined leverage.

Module IV: Working Capital Management (15 Hours)
Working Capital Management: Management of Cash - Preparation of Cash Budgets (Receipts and Payment Method only); Cash management technique (Lock box, concentration banking), Receivables Management – Objectives; Credit Policy, Cash Discount, Debtors Outstanding and Ageing Analysis; Costs - Collection Cost, Capital Cost, Default Cost, Delinquency Cost, Inventory Management (Very Briefly) - ABC Analysis; Minimum Level; Maximum Level; Reorder Level; Safety Stock; EOQ (Basic Model), Determination of Working Capital.

Suggested Readings

MTSC401T: SUPPLY CHAIN MANAGEMENT

(5 credits – 75 Hours) (L-T-P: 5-0-0)

Objective(s): *The objective of this paper is to acquaint the students with the concepts and tools of supply chain management and logistics as relevant for an international firm.*

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO1: define the process of supply chain management. (Remembering)
CO2: demonstrate operational purchasing methods and techniques on supplier management (Understanding)
CO3: explain the strategic importance of logistics elements (Understanding)
CO4: apply sales and operations planning, MRP and lean manufacturing concepts. (Applying)
CO5: analyse creation of new value in supply chain for customers & society. (Analysing)

Module I: Basic Framework (15 Hours)

Concept of supply chain management (SCM); SCM and trade Logistics; Business view of SCM; Push and pull of SCM; Decision phases; Impellers and drivers in SCM Process views of SCM, planning and operations; Supply chain modeling; Role of Relationship marketing in SCM; managing relationships with suppliers and customers; Designing strategic distribution network; Factors influencing distribution network.

Module II: Supply Chain and Information Management Systems (15 Hours)

Purchasing Process- Strategic role of purchasing in the supply chain and total customer satisfaction; Types of purchases; Purchasing cycle; Supplier selection and evaluation; Vendor development; Importance of information management; Distribution and sharing of information; Information Technology as a platform for effective and efficient supply chain management

Module III: Logistic System (10 Hours)

Concept, objectives and scope of logistics; System elements; Inbound and Outbound logistics. Reverse inventory, Value added role of logistics, Logistics interface with manufacturer and marketing, Packing, Marking, Just in time concept; Third party logistic outsourcing–challenges and future directions

Module IV: Transportation (20 Hours)

Importance of effective transportation system; Service choices and their characteristics; inter- modal services; Transport cost characteristics and rate fixation; Carrier selection determinants and decision; Structure of Shipping: World seaborne trade; international shipping - characteristics and structure ;Liner and tramp operations; Liner freighting; Chartering-Types, principles and practices; Charter, party agreement; Development in sea transportation-Unitization, containerization, inter and multimodal transport; CFC and ICD; Indian shipping – growth, policy and problems; Ports and port trust; International Air transport: International set up for air transport: Freight rates; India's exports and imports by air – Problems and prospects; Carriage of Goods by sea, sea and combined transport.

Module V: Warehousing and Inventory Management (15 Hours)
Warehousing And Marketing Strategy; Objectives and functions of warehousing; Warehouse Strategies; Material handling equipment and material mobility Warehousing evaluation and requirements
Inventory management-inventory categories, EOQ, LT, ICC; Inventory levels; Material planning and sourcing of procurement; Methods of cost reduction**.**

Suggested Readings
1. Ballau, R.H., Business Logistics Management, Prentice Hall, Englewood Cliffs.
2. Bes, J., Chartering Practices.
3. Bes, J., Dictionary of Shipping and chartering Practices.
4. Christopher, M., Logistics and Supply Chain Management, Prentice Hall.
5. ICAO Journal, New York., various issues
6. Indian Shipping and Transport, Mumbai, Various issues.
7. Murphy, Paul R. and Donald F. Wood, Contemporary Logistics, Prentice Hall.
8. Marks, Daniel, Shipping Cartels.
9. Shapiro, R., Logistics Strategy: Cases and Concepts, West Publishing, St. Paul.

MTSM402T: SERVICES MARKETING
(Credits: 5- 75 Hours) (L-T-P: 5-0-0)
Objective(s): *The objective of this course is to make the students know the service concept, its evolution and growth. To make the students understand Marketing Mix in service marketing and its effective management and to know the service marketing techniques applied in various sectors.*

COURSE/LEARNING OUTCOMES
At the end of this course students will be able to:
CO1: relate the importance of service economy and Services characteristic. (Remembering)
CO2: explain the concept of Service Marketing Mix (Understanding)
CO3: identify the various service deliver gap and developing appropriate solutions (Applying)
CO4: analyse the reasons for service failure (Analysing)

Module I: Introduction to Service Economy (15 Hours)
Emergence of the service economy, Concept and nature of Service, Difference between goods and services, Service marketing Mix, Service Management Trinity

Module II: Service Consumer Behaviour (20 Hours)
Understanding the Service Customer as a Decision Maker, service purchase and risk association, Service Evaluation process, The Service Consumer Decision Process, and The Decision-making Process in the Service Sector, Components of Customer Expectations, Service Satisfaction, Service Quality Dimensions
Module III: Service Delivery Process (20 Hours)
Managing Service Encounters, Common Encounter Situations, Managing Service Encounters for Satisfactory Outcomes, Service Failure, Service Recovery, Process of Service Recovery, Customer Retention and Benefits

Module IV: Delivering Quality Service (20 Hours)
Causes of Service delivery failure – Quality Gaps. The Customer Expectations *versus* Perceived Service gap. Factors and Techniques to Resolve this Gap. Customer Relationship Management. Gaps in Services – quality standards, Factors and Solutions – The Service Performance Gap – Key Factors and Strategies for Closing the Gap. External Communication to the Customers – the Promise *versus* Delivery Gap – Developing Appropriate and Effective Communication about Service Quality

MTCR403T: CORPORATE RESTRUCTURING

(Credits: 5- 75 Hours) (L-T-P: 5-0-0)

Objective(s): *To familiarize the students with various concept and technique that can help in effective corporate structuring in business. Focus will be on the practical application of the concepts learnt.*

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO1: define the concept and function of joint venture (Remembering)
CO2: explain the theories of merger and acquisition (Understanding)
CO3: identify takeover and its types (Applying)
CO4: discover the various techniques of valuation of firms during merger (Analyzing)
CO5: assess the impact of merger on shareholders and different stakeholders (Evaluating)

Module I: Joint Ventures: (15 Hours)

Joint Ventures: Concept & Meaning of Joint Ventures, Need & Types of Joint Ventures, Structures & Problems faced in Joint Ventures, some relevant case study of successful and failed joined ventures.

Module II: Mergers and Acquisitions (20 Hours)

Mergers and Acquisitions: Introduction to mergers, types of mergers, theories of mergers & acquisitions, merger strategy - growth, synergy, operating synergy, financial synergy, diversification; Cross-border mergers and acquisitions, issues and challenges in cross border M&A. Handling cross-culture and taxations issues in cross-border M&A. Analysis of Post-Merger Performance. Demerger, types of demergers, reverse merger, buyback of shares, leverage buy-out strategy, Takeover and its types, takeover strategy, takeover bids, legal framework for mergers and acquisitions, leverages and buyouts; Hostile tender offers and various anti-takeover strategies.

Module III: Mergers and Acquisitions (20 Hours)

Deal Valuation and Evaluation: Factors affecting valuation basics, methods of valuation, cash flow approaches, economic value added (EVA), sensitivity analysis, and valuation under takeover regulation, valuation for slump sale, cost-benefit analysis, and swap ratio determination.

Module IV: Post-Merger Evaluation (20 Hours)

Post-Merger Evaluation: Financial Evaluation of Mergers & Acquisitions, Impact on shareholders' Wealth; Methods of payment and financing options in mergers & acquisitions, financing decision, Merger, Acquisition and Competition law 2002, SEBI (Securities & Exchange Board of India) Takeover Code 2011 and criteria for negotiating friendly takeover.

Suggested Readings

1. Sundarsanam (2006); Creating Value from Mergers and Acquisitions, (1st ed.) Pearson Education
2. Ramanujan. S. (1999); Mergers: The New Dimensions for Corporate Restructuring, McGraw Hill

MMTMR309T: MARKETING RESEARCH

(Credits: 4- 60 Hours) (L-T-P: 4-0-0)

Objective(s): *This course is designed to provide students with the necessary skills and knowledge to determine the information necessary to address an identified research problem (basic or applied) and, using this understanding, develop and use an actionable research proposal. In this process, the students will gain an understanding of relevant approaches and elements of undertaking a research enquiry specifically to provide insights to solving a relevant problem.*

COURSE/LEARNING OUTCOMES
At the end of the course students will be able to:
CO1: define marketing research (Remembering)
CO2: explain sample and sampling design (Understanding)
CO3: identify various data collecting methods and tools (Applying)
CO4: analyse data hypothesis and testing procedures (Analyzing)

Module I: Introduction of Marketing Research: (15 Hours)
Define Marketing Research, Aims and Objectives of Marketing Research. Applications of Marketing Research, Marketing

Information System, Evaluation and Control of Marketing Research, Value of Information in Decision Making, Steps in Marketing Research. Research Design: Formulating the Research Problem, Choice of Research Design, Types of Research Design, Sources of Experimental Errors.

Module II Sample and Sampling Design: (15 Hours)
Some basic terms, Advantages and Limitation of Sampling, Sampling process, Types of Sampling, Types of Sample Designs, Determining the Sample Size, Sampling Distribution of the Mean. Scaling Techniques: The concept of Attitude, Difficulty of Attitude Measurement, Types of Scales, Applications of Scaling in Marketing Research.

Module III: Data Collection: (15 Hours)
Secondary Data, Sources of Secondary Data, Primary Data, Collection of Primary Data, Methods of Data Collection- Observation, Questionnaire, Designing of Questionnaire. Data Processing and Tabulation: Editing, Coding and Tabulation.

Module IV: Data Analysis: (15 Hours)
Testing of Hypothesis, Measurement of Central Tendency, Dispersion, Univariate Analysis, Multiple Regression, Factor Analysis, Cluster Analysis, Multidimensional Scaling, Conjoint Analysis; Interpretation and Report Writing, Types of Research Reports

MMTIP312T: INVESTMENT ANALYSIS & PORTFOLIO MANAGEMENT

(4 Credits-60 Hours) (L-T-P: 4-0-0)
Objective(s): *To learn the basics of investing and decide where to invest with less risk.*

Course/Learning Outcomes
At the end of this course students will be able to:
CO1: define the investment environment, different types of investment vehicles (Remembering)
CO2: explain the logic of investment process (Understanding)
CO3: apply the quantitative methods for investment decision making (Applying)
CO4: analyse the portfolio theory and the process of investment portfolio formation (Analysing)
CO5: analyze relevance of stocks and bonds for the investments (Analysing)

Module I: Basics of risk and return (15 Hours)
Concept of returns, application of standard deviation, coefficient of variation, beta, alpha. Bonds: present value of a bond, yield to maturity, yield to call, yield to put, systematic risk, price risk, interest rate risk, default risk. Yield curve and theories regarding shape of yield curve. Unsystematic risk and non-risk factors that influence yields. Duration and modified duration, immunization of a bond portfolio. Fundamental analysis, Economic analysis, Expected direction of movement of stock prices with macroeconomic variables in the Indian context; Industry analysis: stages of life cycle, Porter's five forces model, SWOT analysis, financial analysis of an industry

Module II: Share valuation (15 Hours)
Dividend discount models- no growth, constant growth, two stage growth model, multiple stages; Relative valuation models using P/E ratio, book value to market value. Technical analysis: meaning, assumptions, difference between technical and fundamental analysis; Price indicators- Dow theory, advances and declines, new highs and lows. Volume indicators- Dow Theory, small investor volumes. Other indicators- futures, institutional activity, Trends analysis: line chart, bar chart, candle chart, point & figure chart. Patterns: head & shoulders, triangle, rectangle, flag, cup & saucer, double topped, double bottomed, Indicators: moving averages. Efficient market hypothesis; Concept of efficiency: Random walk.

Module III: Portfolio analysis (15 Hours)
Portfolio risk and return, Markowitz portfolio model: risk and return for 2 and 3 asset portfolios, concept of efficient frontier & optimum portfolio. Market Model: concept of beta systematic and unsystematic risk. Investor risk and return preferences: Indifference curves and the efficient frontier, Portfolio management services: Passive – Index funds, systematic investment plans. Active – market timing, style investing.

Module IV: Capital Asset Pricing Model (CAPM) (15 Hours)
Efficient frontier with a combination of risky and risk-free assets. Assumptions of single period classical CAPM model. Characteristic line, Capital Market Line, Security market Line. Expected return, required return, overvalued and undervalued assets. Mutual Funds: Introduction, calculation of Net Asset Value (NAV) of a Fund, classification of mutual fund schemes by structure and objective, advantages and disadvantages of investing through mutual funds. Performance Evaluation using Sharpe's Treynor's and Jensen's measures .

Suggested Readings
1. Security Analysis & Portfolio Management, Fischer, D.E. & Jordan, R.J ; Pearson Education.

MTRM406T: RESEARCH METHODOLOGY

(Credits: 2- 30 Hours) (L-T-P: 2-0-0)

Objective(s): *This course is designed to provide students with the necessary skills and knowledge to determine the information necessary to address an identified research problem (basic or applied) and, using this understanding, develop and use an actionable research proposal. In this process, the students will gain an understanding of relevant approaches and elements of undertaking a research enquiry specifically to provide insights to solving a relevant problem.*

COURSE/LEARNING OUTCOMES:

At the end of this course students will be able to:

CO1: Understand the various kinds of research, objectives of doing research
(Understanding & remembering)

CO2: Applying basic knowledge on qualitative research techniques, and adequate knowledge on measurement & scaling techniques as well as the quantitative data analysis. (Generating inferences)

CO3: Analyzing of data analysis-and hypothesis testing procedures (Analysis)

Module I: Introduction: (6 Hours)

Meaning of Research, Objectives of Research, Types of Research, Research Process, Research Problem formulation; Research Design: Features of a good research design; Different Research Designs; Measurement in Research; Data types; Sources of Error

Module II: Measurement and Scaling: (8 Hours)

Primary Level of Measurement- Nominal, Ordinal, Interval, Ratio, Comparative and Non-competitive Scaling Techniques, Questionnaire Design, Sampling Process, Sampling Techniques-Probability and Non-Probability Sampling, Sample Size Decision.

Module III: Data Collection: (10 Hours)

Primary & Secondary Data; Survey Method of Data Collection, Classification of Observation Method; Fieldwork and Data Preparation. Hypothesis: Null Hypothesis & Alternative Hypothesis; Type-I & Type-II Errors; Hypothesis Testing: Z-Test, T-Test, ANOVA, Concepts of Multivariate Techniques.

Module IV: Research Report: (6 Hours)

Meaning, Types and Layout of Research Report; Steps in Report Writing, Tabular & Graphical Presentation of Data, Citations, Bibliography and Annexure in Report, Avoid Plagiarism; Use of Statistical Software to Analysis the Data.

INTERNSHIPS

Semester	Category	Course Code	Course Name	Credits
2	Internship	MTIN106I	Internship	4
4	Internship	MTIN211I	Internship	4
5	Internship	MTIN315I	Internship	2

MTIN106I/MTIN211I: INTERNSHIP (Exit of 1st Year or 2nd Year)
(4 Credits- 120 Hours) (L-T-P: 0-0-4)

Objective(s)
The students are required to undergo an internship in work related to Commerce and Management during the semester break at the end of fourth Semester or fifth Semester. The purpose of this internship is to expose the students to real-life industry work situations. This is an opportunity for the students to learn the application of knowledge that they have acquired from the

classes, in an on-the-job situation.

Course/Learning Outcomes

At the end of this course students will be able to:

CO 1: Identify career alternatives prior to graduation. (Understanding)
CO 2: Translate theory into practice. (Applying)
CO 3: Improve work habits and attitudes towards job success in workplace (Creating)

INTRODUCTION

The field of Management is very practical oriented and requires an in-depth knowledge about both the theoretical and practical aspect of business operations. In the BBA programme the students are made acquainted with the various facets of General Management, Marketing, HR and Finance functions. However, the lessons mostly remain with the limits of classroom discussion. The real practices of business are much more complex and subject to judgement of the manager. This internship is an attempt to enable the students to acquire some learning experiences in the practical field and equip themselves with necessary traits to succeed in the corporate environment.

INSTRUCTION AND GUIDELINES FOR STUDENTS

The students should follow the following instruction and guidelines during the course of internship:

1. The internship should be for a minimum duration of **three weeks for 120 hours** which can be extended up to any limit depending upon the convenience and requirement of the student and the organisation respectively.
2. The students have to undergo the internship at the end of 1st Year or 2nd Year if they choose to leave the programme . Any students willing to undergo internship during the semester classes will not be encouraged and would be completely on his/her own cost of attendance and classes. Further, in such a case, the Department holds full right to reject the internship of such student
3. The students can undergo internship at any organisation which is recognised or registered, as applicable, of their choice but the work must be related to commerce and management.
4. After the completion of the internship, the students must submit the Internship Report which should include the Internship Diary as an Annexure to the Report. The format of the Internship Report and Internship Diary should be in accordance with the one prescribed by the Department. e. There would be a Seminar Presentation (PPT) and Viva-Voce Examination towards the end of the 6th Semester based on which the students would be evaluated for the internship. The Internship report would also be a part of evaluation.

STRUCTURE OF INTERNSHIP

The Internship Report must comprise of the following:

a. Recommendation Letter from the Department.
b. Completion Certificate from the Organisation where the student has worked as intern.
c. Internship Diary as per the prescribed format.
d. Organisation details (Address, E-mail, Contact Number) including name, contact number and e-mail of the supervisor is mandatory. This should be included as a part of the Internship Diary according to the prescribed format.
e. The Contents of the Report must include:
    I. Introduction.
    II. Objectives of the Internship.
    III. About the Organisation (Sector, Activities, Operations).
    IV. Description of the work.

The Assessment for the internship must have the following components:

a. Internship Report: 20 marks
b. Internship Diary: 20 marks
c. Seminar Presentation: 30 marks
d. Viva-Voce Examination: 30 marks

MTIN315I: INTERNSHIP (At the end of 4th Semester and evaluated in 5th Semester)

(2 Credits- 60 Hours) (L-T-P: 0-0-2)

Objective(s)

The students are required to undergo an internship in work related to Commerce and Management during the semester break at the end of fourth Semester or fifth Semester. The purpose of this internship is to expose the students to real-life industry work situations. This is an opportunity for the students to learn the application of knowledge that they have acquired from the classes, in an on-the-job situation.

Course/Learning Outcomes

At the end of this course students will be able to:

MTDI408P: DISSERTATION - 1

(Credits: 5- 75 Hours) (L-T-P: 0-0-75)

Objective: *The basic objective of the project work is to give students an idea of research. In which they need to undertake a field survey for collecting data. Further they need to analyse the data and present a report on the topic in which they have conducted research. The evaluation is done on the basis of the project report, presentation and viva-voce examination.*

Guidelines Related To Project:

The entire project will be carried out in one phase. It includes Introduction and Review of Literature part, Research Methodology, Data Analysis and Interpretation and Findings, suggestions and conclusion part.

Course Outcome

CO1: Define the different types of research project. (Remembering) CO2: Explain the various steps of designing research project (Understanding)
CO3: Building questionnaire and schedules (Applying)
CO4: Assessing the data for analysis (Analyzing)
CO5: Appraising the findings in the report (Evaluating)
CO6: Designing a research project report (Creating)

RESEARCH PROJECT / DISSERTATION-I

(CREDITS: 5- 75 HOURS) (L-T-P: 0-0-75)

Objective: The objective of the course would be to educate the students about the various dimensions of a research-based project work. The students will also be taught about the application of statistical tools through SPSS.

Course Outcomes

At the end of the course students will be able to:
CO1: Define the different types of research project. (Remembering)
CO2: Explain the various steps of designing research project (Understanding)
CO3: Building questionnaire and schedules (Applying)
CO4: Examining the data for analysis (Analyzing)
CO5: Appraising the findings in the report (Evaluating)
CO6: Designing a research project report (Creating)

The Dissertation will comprise of the following:
1. Synopsis: Submission of a write up on a specific area/topic of study
2. Review of Literature: Submission of a specified number of reviews to respective guide
3. Research Methodology: Lecture based on the topic of study
4. Referencing Style: Lecture on referencing style to be followed while submitting report
5. Training on application of Statistical software used in research
6. Submission of Progress Report

Report should comprise of Introduction, Review of Literature, Research Methodology and References. EVALUATION:
A diary is to be maintained by every student to keep a record of meeting with his/her guide. A format of the diary will be circulated at the beginning with the semester.
Evaluation will be done by the respective guide based on timely submission of part-work and quality of work as follows:

Synopsis (30 marks)
Review of Literature (30 marks)
Research Methodology (30 marks)
Publication in Referred Journal: (10 marks)

POST GRADUATE PROGRAMMES

CONTENTS

REGULATIONS FOR PG PROGRAMMES

ASSAM DON BOSCO UNIVERSITY REGULATIONS

POST GRADUATE DEGREE PROGRAMMES

SCIENCE AND TECHNOLOGY

The following are the regulations of the Assam Don Bosco University concerning the Post- Graduate Programmes leading to the award of the Master's Degree in the disciplines of Science and Technology made subject to the provisions of its Statutes and Ordinances.

1.0 Academic Calendar

1.1 Each academic year is divided into two semesters of approximately 90 working days: an Autumn Semester (July – December) and a Spring Semester (January – June). The Autumn Semester shall ordinarily begin in July for students already on the rolls and the Spring Semester shall ordinarily begin in January. However, the first semester (Autumn, for newly admitted students) may begin later depending on the completion of admission formalities.

1.2 The schedule of academic activities approved by the Academic Council for each semester, inclusive of the schedule of continuing evaluation for the semester, dates for the conduct of end-semester examinations, the schedule of publication of results, etc., shall be laid down in the Academic Calendar for the semester.

2.0 Duration of the Programme

2.1 The normal duration of the Post Graduate Programme shall be as per the table given below:

Programme	Number of Semesters	Number of Years
Master of Technology (MTECH)	4	2
Master of Science (MSc)	4	2

2.2 However, students who do not fulfill some of the requirements in their first attempt and have to repeat them in subsequent semesters may be permitted up to 4 more semesters (2 years) to complete all the requirements of the degree.

2.3 Under exceptional circumstances and depending on the merit of each case, a period of 2 more semesters (1 year) may be allowed for the completion of the programme

3.0 Course Structure

3.1 The University follows Outcome Based Education with Choice Based Credit System (CBCS) for all the Post Graduate Degree Programmes. One credit is equivalent to 15 hours of lecture/tutorial or 30 hours of practical. The courses offered for the Post Graduate Degree Programmes are divided into two baskets – Core Courses and Elective Courses.

3.2 Core Courses: Core courses are those in the curriculum, the knowledge of which is deemed essential for students who are pursuing the said Post Graduate Degree Programme.

3.2.1 A student shall be required to take all the core courses offered for a particular programme.

3.2.2 The number of credits required from core courses shall be as prescribed by the competent academic authority.

3.3. Elective Courses: These are courses in the curriculum which give the student opportunities for specialization and which cater to his/her interests and career goals. These courses may be selected by the student and/or offered by the department conducting the programme, from those listed in the curriculum according to the norms laid down by the competent academic authority.

3.3.1 The number of credits which may be acquired through elective courses shall be prescribed by the competent academic authority.

3.3.2 It shall be the prerogative of the department not to offer an elective course which has less than 5 students opting for it.

The schema of categorisation of courses into baskets is as given below:

Core Courses	
Departmental Core (DC)	Core courses which are offered by the department conducting the programme
School Core (SC)	Core courses which are offered by a department other than the department conducting th programme, from within the same School
Institutional Core (IC)	Core courses which are offered by departments of the University from Schools other than the pare School

Elective Courses	
Departmental Elective (DE)	Elective courses which are offered by the department conducting the programme
School Elective (SE)	Elective courses which are offered by a department other than the department conducting th programme, from within the same School
Institutional Elective (IE)	Elective courses which are offered by departments of the University from Schools others than th parent School

***UGC Equivalent Courses**- Core Paper (DC), Ability Enhancement Compulsory Course (IC/SC), Skill Enhancement Course (IE), General Elective (IE/SE), Discipline Specific Elective (DE)

***AICTE Equivalent Courses** - Basic Science Course (IC), Engineering Science Course(IC), Open Elective Course (IC), Humanities and Social Science Courses (IC),Mandatory Course (IC), Professional Core Course (DC), Professional Elective Course (DE)

3.6 In order to qualify for a Post Graduate Degree, a student is required to complete the minimum credit requirements as prescribed by the competent academic authority.

3.7 In addition to the prescribed credit requirement, a student shall have to complete Institutional mandatory courses with Pass grade, as prescribed by the competent academic authority, from time to time, which shall be recorded in the Grade sheet but not taken into account for computing the SGPA and the CGPA.

3.8 **Audit Course:** Students who secure a CGPA of at least 8 at the end of the first may opt to take one audit course per semester from any Department from the second semester onwards, provided the course teacher permits the auditing of the course. This shall be done under the guidance of the Departmental Faculty Advisor/mentor. The student is free to participate in the evaluation process for such courses. However, an attendance of 75% is necessary for obtaining a P grade for such courses. When auditing courses offered by other departments, it shall be the responsibility of the student to attend such courses without missing courses of one's own department and semester.

3.9 In addition, students may also opt for additional elective courses in consultation with their mentors. Students are required to participate in the evaluation process of such courses. The grades obtained for such courses shall be recorded in the grade sheet, but not taken into account for computing SGPA and CGPA.

3.10 It shall be the prerogative of the department to not offer an elective course which has less than 5 students opting for it.

3.11 The medium of instruction shall be English and examinations and project reports shall be in English.

3.12 The course structure and syllabi of the Post Graduate Degree Programmes shall be approved by the Academic Council of the University. Departmental Boards of Studies (DBOS) shall discuss and recommend the syllabi of all the courses offered by the department from time to time before forwarding the same to the School Board of Studies (SBOS). The SBOS shall consider the proposals from the departments and make recommendations to the Academic Council for consideration and approval.

3.13 The curriculum may include industry training and /or fieldwork for a specified time. This is to be satisfactorily completed before a student is declared eligible for the degree. There shall be credit allocation for such industrial training or fieldwork. Normally these activities shall be arranged during convenient semester breaks as shall be determined by the School Board of Studies.

3.14 **Faculty Advisor/Mentor:** A faculty advisor/mentor (and a co-mentor to perform the duties of a mentor during the absence of the mentor) to shall be assigned for groups of students. Faculty advisors/mentors shall help their mentees to plan their courses of study, advise them on matters relating to academic performance and personality development, and help them to overcome various problems and difficulties faced by them.

4.0 Admission

4.1 All admissions to the Post Graduate Degree Programmes of the University shall be on the basis of merit. There may, however, be provision for direct admission for a limited number of NRI/FN students.

4.2 Eligibility Criteria

4.2.1 To be considered for admission to a Post Graduate Degree Programme a candidate should have passed a Bachelor's Degree (or equivalent) programme of a recognised university securing grades/marks as specified in the table below.

4.2.2 Admission will be on the basis of the performance of the candidate at the graduate level, the Post Graduate Entrance Test conducted by the university and/or a personal interview. Candidates for MTECH who have a valid GATE score may be exempted from the entrance test.

Programme	Grade /Marks requirement from qualifying examinations	Entrance Examinations / Personal Interview
MTECH	Completed a Bachelor's Degree programme in the appropriate stream of technology from a recognised university successfully with a minimum CGPA of 6.5 (or equivalent). The Academic Council may establish other eligibility criteria for M Tech in a particular discipline.	Post Graduate Entrance Test of Assam Don Bosco University
MCA	Completed a Bachelor's Degree programme in any stream of a recognised university successfully with a minimum of 50 % marks in the aggregate. In addition, the candidate must have passed Mathematics or equivalent at the higher secondary level or above.	Post Graduate Entrance Test of Assam Don Bosco University
MSc	Completed a Bachelor's Degree programme in Science of a recognised university successfully with a minimum aggregate, specified by the competent academic body.	Satisfactory performance in the Personal Interview

4.3 Reservation of seats for the programme shall be as per the guidelines laid out in the Statutes of the University.

4.4 Admissions shall ordinarily close after a specified period from the date of commencement of the first semester, through a notification. However, in exceptional cases, admission of a candidate after the last date may be recommended to the University with justification, by the School / Departments concerned. Under such an event, this period shall not exceed four weeks from the date of commencement of the first semester.

4.4.1 The attendance of such students shall be computed from the date of admission.

4.4.2 Such students may be offered the opportunity of taking part in in-semester assessment modules which may have already been completed.

4.5 All candidates shall be required to satisfy the norms prescribed by the University for medical fitness prior to admission.

4.6 Candidates may be required to furnish a certificate of good conduct from the institution last attended.

4.7 Bridge Courses: The Departments shall make provision for Bridge Courses to facilitate admission of students from varied backgrounds to a programme of their choice.

4.8 Value-added Courses: Each department shall offer value-added courses, which are optional. Certificates will be awarded to those who successfully complete the course.

4.9 Anti-Ragging Affidavit: Students and Parents Undertaking Affidavit In compliance of the UGC Regulations, it is compulsory for each student and every parent to submit an online Anti-Ragging undertaking affidavit every academic year. The Link to fill out the online undertaking affidavit by students and parents is:
www.antiragging.in/affidavit_registration_disclaimer.html
www.c4yindia.org/Home/Undertaking

5.0 University Registration

5.1 Candidates shall have to register as bona-fide students with the University as per the University regulations within a period specified by the University, by a formal application routed through the Director of the School concerned.

6.0 Attendance

6.1 To be permitted to appear for the end-semester examination of a particular course, a student is required to have a minimum attendance of 75% for that course.

6.2 Deficiency in attendance up to 10% may be condoned by the Director of the School in the case of leave taken for medical and other grievous reasons, which are supported by valid medical certificates and other requisite documents.

6.3 Some students, due to exceptional situations like their own serious sickness and hospitalization or death of members of inner family circle (restricted to only father, mother, siblings), may have attendance below 65%. Such students may be given bonus attendance percentage for a particular course based on his/her attendance for that course during the remaining days of the current semester, as given in the following table:

Attendance during the remaining days of the current semester	Bonus percentage available in the current semester
95% or more	5
90% or more but less than 95%	4
85% or more but less than 90%	3
80% or more but less than 85%	2
75% or more but less than 80%	1

They shall be permitted to appear for the end-semester examination of the course if, on the strength of this bonus attendance percentage, they obtain 65% attendance for that course.

6.4 If the sum of the credits of the courses for which a student is unable to appear at the end- semester examinations exceeds 50% of the total credits allotted for the semester, he/she shall not be permitted to appear for the entire end-semester examinations in view of clause 9.5 of these Regulations.

6.5 The School may propose to set aside a certain portion of the in-semester assessment marks for attendance. The number of marks and modalities of their allotment shall be made known to the students at the beginning of each semester.

6.6 Leave

6.6.1 Any absence from classes should be with prior sanctioned leave. The application for leave shall be submitted to the office of the Director of the concerned School on prescribed forms, through proper channels, stating fully the reasons for the leave requested along with supporting documents.

6.6.2 In case of emergency such as sickness, bereavement or any other unavoidable reason for which prior application could not be made, the parent or guardian must promptly inform the office of the Director of the concerned School.

6.6.3 If the period of absence is likely to exceed 10 days, a prior application for grant of leave shall have to be submitted through the Director of the concerned School to the Registrar of the University with supporting documents in each case; the decision to grant leave shall be taken by the Registrar on the recommendation of the Director of the concerned School.

6.6.4 The Registrar may, on receipt of an application, also decide whether the student be asked to withdraw from the programme for that particular semester because of long absence.

6.7 It shall be the responsibility of the student to intimate the concerned teachers regarding his/her absence before availing the leave.

7.0 Grading System

7.1 Three types of courses are offered in the Post Graduate programmes:

- **Graded courses:** For the majority of the courses, students shall be assessed and given grades.
- **Pass/No-Pass courses**: There are some courses for which the students are expected to obtain a P grade to be eligible for the degree.
- **Audit Courses**: A third category of courses are audit courses. These are optional.

However, students who opt for these courses must have the required attendance to obtain a P grade in the course.

7.2 Based on the performance of a student, each student is awarded a final letter grade in each graded course at the end of the semester and the letter grade is converted into a grade point. The correspondence between percentage marks, letter grades and grade points is given in the table below:

Marks (x) obtained (%)	Grade	Description	Grade Points
90 ≥ x ≤ 100	O	Outstanding	10
80 ≥ x < 90	A+	Excellent	9
70 ≥ x < 80	A	Very Good	8
60 ≥ x < 70	B+	Good	7
50 ≥ x < 60	B	Above Average	6
41 ≥ x < 50	C	Average	5
x = 40	P	Pass	4
x < 40	F	Fail	0
	AB	Absent	0
	PS	Pass	0
	NP	Not Passed	0
	X	Not Permitted	0

In addition, a student may be assigned the grades 'PS' and 'NP' for pass marks and non- passing marks respectively, for Pass/No-pass courses, or the grade 'X' (not permitted).

7.2.1 A student shall be assigned the letter grade 'X' for a course if he/she is not permitted to appear for the end semester examination of that course due to lack of requisite attendance.

7.2.2 A letter grade 'F' or 'X' in any course implies failure in that course.

7.2.3 A student is considered to have completed a course successfully and earned the credits if she/he secures a letter grade other than 'F' or 'X'.

7.3 At the end of each semester, the following measures of the performance of a student in the semester and in the programme up to that semester shall be computed and made known to the student together with the grades obtained by the student in each course:

7.3.1 The Semester Grade Point Average (SGPA): From the grades obtained by a student in the courses of a semester, the SGPA shall be calculated using the following formula:

$$SGPA = \frac{\sum_{i=1}^{n} GP_i \text{ x } NC_i}{\sum_{i=1}^{n} NC_i}$$

Where GP_i = Grade points earned in the i^{th}course
NC_i = Number of credits for the i^{th}course
n = the number of courses in the semester

7.3.2 The Cumulative Grade Point Average (CGPA): From the SGPAs obtained by a student in the completed semesters, the CGPA shall be calculated using the following formula:

$$CGPA = \frac{\sum_{i=1}^{n} SGP_i \text{ x } NSC_i}{\sum_{i=1}^{n} NSC_i}$$

Where SGP_i = Semester Grade point of the i^{th} semester
NSC_i = Number of credits for the i^{th} semester
n = the number of semesters completed

7.3.3 The CGPA may be converted into a percentage by multiplying CGPA by 10.

7.4 Both the SGPA and CGPA shall be rounded off to the second place of decimal and recorded as such. Whenever these CGPA are to be used for official purposes, only the rounded off values shall be used.

7.5 There are academic and non-academic requirements for the Graduate programmes where a student shall be awarded the 'P' and 'NP' grades. Non-credit courses such as Extra Academic Programmes belong to this category. No grade points are associated with these grades and these courses are not taken into account in the calculation of the SGPA or CGPA. However, the award of the degree is subject to obtaining a 'P' grade in all such courses.

7.6 In the case of an audit course, the letters "AU" shall be written alongside the course name in the Grade Sheet. A student is not required to register again for passing failed audit courses.

8.0 Assessment of Performance

8.1 A student's performance is evaluated through a continuous system of evaluation comprising tests, quizzes, assignments, seminars, minor projects, major projects and end-semester examinations.

8.2 Theory Courses: Theory courses shall have two components of evaluation – in- semester assessment of 40% weightage and an end-semester examination having 60% weightage.

8.2.1 The modalities of the conduct of in-semester assessment and weightages attached to its various components shall be as published by the School/Department at the beginning of each semester.

8.3 Lab Courses: Lab courses (Laboratory, Drawing, Workshop, etc.) shall be evaluated on the basis of assessment of tasks assigned and end semester test/viva voce. The weightage assigned for these components of the evaluation is given in the following table:

Component	**Weightage**
Assessment of Tasks Assigned	40
End-semester test / Viva voce	60

8.3.1 The modalities of the conduct of evaluation under the heading "Assessment of tasks assigned", its components and the weightages attached to its various components shall be published by the department concerned at the beginning of each semester.

8.3.2 The evaluation of the end-semester test for a lab course may be done on the basis of criteria and weightage to be specified in the question paper, among which are included

- Organisation of the program/experiment
- Coding, freedom from logical and syntactical errors, and accuracy of the result obtained / conduct of the experiment assigned and accuracy of the result
- Extent of completion
- A comprehensive viva-voce which examines the overall grasp of the subject

8.4 End-Semester examinations

8.4.1 End-semester examinations for the theory courses, generally of three hours' duration, shall be conducted by the University. The Director of the concerned school shall make the arrangements necessary for holding the examinations.

8.4.2 In the end-semester examinations, a student shall be examined on the entire syllabus of the courses.

8.4.3 A student shall not obtain a pass grade for a course without appearing for the end- semester examination in that course.

8.5 Research Seminar

8.5.1 During the course of the Post Graduate programme students may be required to conduct research seminars on a regular basis. The purpose of these research seminars is to encourage the students to conduct literature survey on the recent trends and developments in a chosen area of the discipline.

8.5.2 The literature survey conducted in preparation for these seminars may lead the students to the development of a project model to be executed during the final semesters of the programme.

8.5.3 The Research Seminars shall be evaluated on the basis of a presentation, a report and a viva voce examination.

8.6 The Major Project / Research Project / Dissertation

8.6.1 Students of the Post Graduate Programme shall undertake a Major Project / Research Project / Dissertation during the course of their Post Graduate studies. The Major Project / Research Project / Dissertation (to be referred to as Major Project henceforth) is normally conducted in two phases during the last two semesters of the programme.

8.6.2 The Major Project may be a software project, a research oriented project or research work which leads to a dissertation, as may be relevant to the discipline in which the work is undertaken. If it is a research oriented work, it should expose the students to the current state of research in a chosen area of the discipline and lead to new developments in the area.

8.6.3 The Major Project is to be undertaken individually in the campus or outside as may be specified by the department.

8.6.4 Each department shall constitute a Departmental Project Evaluation Committee (DPEC) consisting of the Director of the School (Chairperson), Head of the Department (Vice Chairperson), Project Co-ordinator and two senior teachers from the department, with the Project Co-ordinator as the convenor. The DPEC shall co-ordinate the conduct and assessment of the project.

8.6.4.1 The DPEC will notify the schedule and modalities for the following stages in the implementation of the project.

- Submission of the topic of the project.
- Notification for assignment of project supervisors.
- Submission of the synopsis
- Schedule for the seminar presentation of synopsis.
- Schedule for Progress Seminars, submission of progress reports and viva voce examination.
- Date for the submission of the project report and a brief summary.
- Dates for the end semester evaluation of the project.

8.6.5 The DPEC may ask a student to resubmit a synopsis if the same does not get its approval.

8.6.6 The project supervisor may be from outside the department or university. Such a supervisor should be approved by the DPEC and jointly supervise a project with a faculty member of the department.

8.6.7 The minimum qualification of a project supervisor shall be laid down by the DPEC in consultation with the Director of the School and authorities of the University.

8.6.8 The Chairperson of the DPEC will submit to the Controller of Examinations a panel of at least three names of external examiners at least three weeks before the end semester examination. The Controller of Examinations will appoint the external examiner(s) from this panel.

8.6.9 Each student shall submit to the DPEC four bound, printed copies of the project report, prepared according to the prescribed format made available, by the due date. The student will submit also three copies of a brief summary of the project that will be forwarded to the concerned examiners.

8.6.10 The DPEC will make the arrangements necessary to conduct the end semester evaluation in consultation with the examiners appointed by the University, during the dates notified.

8.6.11 The project will be evaluated through in-semester and end-semester assessments of equal weightage. The in-semester assessment will be done by the DPEC and the project supervisor. The end-semester assessment will be done by the external examiner(s), the project supervisor and a member of the DPEC appointed by it for the purpose. The weightages attached to their respective evaluations shall be 60:20:20.

8.6.12 The DPEC will forward the in-semester assessment marks to the Controller of Examinations by the date specified by the Examination Department.

8.6.13 Given below are the suggested components of Internal assessment and respective marks assigned:

- Synopsis: 15 marks
- Seminar presentation of the synopsis: 15 marks

- Project implementation: 40 marks
- Pre-submission presentation: 15 marks
- Pre-submission viva voce: 15 marks

8.6.14 Given below are the suggested components of External assessment and respective marks assigned:

- Project implementation: 40 marks
- Seminar presentation: 25 marks
- Viva voce examination: 20 marks
- Project documentation: 15 marks

8.6.15 Publication of papers and registering of patents are encouraged during the Post Graduate programme. Papers published or patents obtained may be awarded extra weightage during the evaluation of the project.

8.6.16 Those who obtain an 'F' grade for the major project will be required to re-enrol for it in the subsequent semester and pay the prescribed fees.

8.7 The Director will forward the marks obtained in the in-semester evaluation to the Controller of Examinations within the prescribed time as may be notified.

8.8 All evaluated work in a subject except the end semester answer scripts will be returned to the students promptly.

8.9 Eligibility for appearing in the end-semester examinations: A student shall be permitted to appear for the end-semester examinations, provided that

8.9.1 A student has not been debarred from appearing in the end semester examinations as disciplinary action for serious breach of conduct.

8.9.2 He/she has satisfactory attendance during the semester according to the norms laid out in section 6 of these regulations.

8.9.3 He/she has paid the prescribed fees or any other dues of the university within the date specified.

8.10 Registration for end-semester Examinations

8.10.1 The University shall, through a notification, invite applications from students to register for the end-semester examinations.

8.10.2 Students who have registered with the University (vide clause 5) and those who have applied for such registration may apply to appear for the end- semester examinations of the university, in response to the notification issued by the University, provided that they fulfil the eligibility norms as laid down in clause 8.9.

8.10.3 All eligible candidates shall be issued an admit card for the relevant examination and for specified courses. A student who does not have a valid admit card may not be permitted to write the end-semester examinations.

8.10.4 A student who secures an 'F' or 'X' grade in any course in a semester may register for the end-semester examination for that course in a subsequent semester when that course is offered again, within the maximum period of time allotted for the completion of the programme. The in-semester assessment marks obtained by him/ her in the last semester in which the said course was attended by him/her shall be retained.

8.10.5 Similarly, in case of an 'NP' grade in Extra Academic Programmes the student shall have to re-register for it in the appropriate semester of the next academic session.

8.10.6 When a student re-registers for the end semester examination of a course, in accordance with clause 8.10.4 above, the better of the two grades obtained (the old and the new) shall be considered for the calculation of SGPA and CGPA.

8.11 **Conduct of Examinations**: The University shall conduct the end-semester examinations in accordance with the applicable regulations on such dates as are set down in the Academic Calendar or as notified.

8.12 **Declaration of Results:** The University shall declare the results of a semester and make available to students their grade sheets within the time-frame prescribed by the relevant regulations of the university and specified in the academic calendar.

8.13 The University may withhold the results of a student for any or all of the following reasons

- he/she has not paid his/her dues
- there is a disciplinary action pending against him/her
- he/she has not completed the formalities for University Registration according to the requirement of section 5 of these Regulations.

8.14 Re-examining of answer scripts

8.14.1 If a student feels that the grade awarded to him/her in a course is not correct, he/she may apply to the University for the re-examining of his/her answer script.

8.14.2 Re-examining of scripts may be of two different categories – scrutiny and re- evaluation.

8.14.3 Scrutiny: The activities under this category shall ordinarily be confined to checking

- correctness of the total marks awarded and its conversion into appropriate letter grades
- whether any part/whole of a question has been left unevaluated inadvertently
- correctness of transcription of marks on the tabulation sheet and the gradesheet issued in respect of the course under scrutiny.

8.14.4 Re-evaluation: Re-evaluation of the answer script by independent experts in the concerned subject(s).

8.14.5 Application for re-examining of answer scripts

- A student may apply for scrutiny or re-evaluation for one or more courses of the just-concluded end-semester examinations within seven calendar days from the date of publication of its results in the application form prescribed for this purpose.
- He/she shall pay the prescribed fee to the University as notified.
- A student applying for scrutiny/re-evaluation shall expressly state on the application form whether the application made is for Scrutiny or for Re- evaluation. In each case, the student may also request to see his/her answer script.
- All applications for scrutiny/re-evaluation must be routed through the Director of the concerned School.

8.14.6 If in the process of re-examining, the grade obtained in a course changes, the better of the two grades shall be assigned to the course. If there is a change, the new grade shall be recorded and a new grade sheet shall be issued to the student.

8.14.7 Without prejudice to any of the clauses of section 8.14, a student who has been found to have used unfair means during an examination shall not be eligible to apply for scrutiny or re-evaluation of answer scripts.

8.15 Repeat Examination: The University shall conduct repeat examination for those with F grade at a different time slot, as set down in the Academic Calendar or as notified. Such students should register for these examinations.

8.16 Improvement Examination

8.16.1 After the completion of the entire programme of study, a student may be allowed the provision of improvement examinations. These are to be availed of only once each in the Autumn and Spring semesters that immediately follow the completion of the programme, and within the maximum number of years permissible for a programme.

8.16.2 A student who has taken migration from the University shall not be eligible to appear for Improvement Examination.

8.16.3 A student may not choose more than the number of courses specified in the table below for improvement examinations.

Programme	**Number of Courses for Improvement Examinations**		
	Autumn Semester	Spring Semester	Total
MCA	3	3	6
MSc	3	3	6
MTECH	2	2	4

8.16.4 After the improvement examination, the better of the two grades obtained (the old and the new) shall be considered for the calculation of SGPA and CGPA.

8.16.5 If the student improves his/her grades through the improvement examination, new grade sheets and comprehensive transcripts shall be issued to the student.

8.17 Special Examination

8.17.1 The University shall conduct Special Examinations to benefit the following categories of students:

8.17.1.1 Students who, on the completion of the final semester, have some 'F' graded courses in the two final semesters, but no 'F' or 'X' graded courses in any of the previous semesters

8.17.1.2 Students who have only one 'F' graded course in a semester other than the two final semesters and do not have 'F' or 'X' graded courses in the two final semesters.

8.17.2 The Special Examinations shall ordinarily be conducted each year within a month of the declaration of the results of the Spring Semester.

8.17.3 Students who fail to secure 50% of the credits offered in the final semester shall not be eligible to appear for the special examinations. Such students will be governed by the provisions of clause 9.5 of these regulations. However, this restriction shall not apply in the case of students who are unable to appear in the end semester examinations due to exceptional situations like their own serious illness and hospitalisation or death of members of inner family circle (restricted to only father, mother, siblings).

8.17.4 Students who have 'X' graded courses only in the last two semesters may be offered the opportunity for participating in a Tutorial Programme which may be conducted during the semester break immediately following the end- semester examinations of the final semester and students who earn 85% attendance for the programme

shall be permitted to appear for the Special Examinations. Separate fees shall be charged for the Tutorial Programme.

8.17.5 Students who do not obtain pass grades in any course at the special examinations shall have to apply in the prescribed format and appear for the end-semester examination of these courses when they are scheduled by the University during subsequent relevant end-semester examinations.

9.0 Enrolment (for semesters other than the first)

9.1 Every student is required to enrol for the relevant courses before the commencement of each semester within the dates fixed for such enrolment and notified by the Registrar.

9.2 Students who do not enrol within the dates announced for the purpose may be permitted late enrolment up to the notified date on payment of a late fee.

9.3 Only those students shall be permitted to enrol who have

- cleared all University, Departmental, Hostel and Library dues and fines (if any) of the previous semester,
- paid all required University, Departmental and Hostel fees for the current semester, and
- not been debarred from enrolling on any specific ground.

9.4 No student may enrol for a semester if he/she has not appeared, for whatever reason, in the end semester examinations of the previous semester.

9.5 A student who fails to obtain 50% of the credits offered in the third and subsequent semesters shall not be permitted to enrol for the next semester and shall have to re-enrol for and attend all the courses of the said semester in the following academic year. Students who due to X grade (lack of due attendance) have been debarred from exams in any semester (including first and second) will have to re-enrol for the same.

10.0 Eligibility for the Award of the Post Graduate Degree

10.1 A student shall be declared to be eligible for the award of the Post Graduate Degree for which he/she has enrolled if he/she has

10.1.1 completed all the credit requirements for the degree with grade 'C' or higher grade in each of the mandatory graded courses and grade 'PS' in all mandatory non-graded courses.

10.1.2 satisfactorily completed all the non-credit requirements for the degree viz., Extra Academic Activities, Industry Training, field work, internship programme, etc. (if any);

10.1.3 obtained a CGPA of 5.00 or more at the end of the semester in which he/she completes all the requirements for the degree;

10.1.4 owes no dues to the University, School, Department, Hostels; and

10.1.5 has no disciplinary action pending against him/her.

10.2 The award of the Post Graduate Degree must be recommended by the Academic Council and approved by the Board of Management of the University.

11.0 Termination from the Programme

11.1 If more than the number of years permitted for the completion of a programme have elapsed since the student was admitted, and the student has not become eligible for the award of Degree, the student shall be removed from the programme.

11.2 A student may also be required to leave the Programme on disciplinary grounds on the recommendations of the Students' Disciplinary Committee of the concerned School.

ASSAM DON BOSCO UNIVERSITY REGULATIONS

POST GRADUATE DEGREE PROGRAMMES

HUMANITIES AND SOCIAL SCIENCES & COMMERCE AND MANAGEMENT

The following are the regulations of the Assam Don Bosco University concerning the Post- Graduate Programmes leading to the award of the Master's Degree in the disciplines of Humanities and Social Sciences & Commerce and Management made subject to the provisions of its Statutes and Ordinances:

The Master's Degree Programmes of Assam Don Bosco University consist of theory and practicum components, taught and learned through a combination of lectures, field work/field visit and research projects.

1.0 Academic Calendar

1.1 Each academic year is divided into two semesters of approximately 18 weeks duration: an Autumn Semester (July – December) and a Spring Semester (January – June). The Autumn Semester shall ordinarily begin in July for students already on the rolls and the Spring Semester shall ordinarily begin in January. However, the first semester (Autumn, for newly admitted students) may begin later depending on the completion of admission formalities.

1.2 The schedule of academic activities approved by the Academic Council for each semester, inclusive of the schedule of continuing evaluation for the semester, dates for end-semester examinations, the schedule of publication of results, etc., shall be laid down in the Academic Calendar for the semester.

2.0 Duration of the Programme

2.1 The normal duration of the Post Graduate Programme in the disciplines of Humanities and Social Sciences & Commerce and Management shall be 4 semesters (2 years).

2.2 However, students who do not fulfil some of the requirements in their first attempt and have to repeat them in subsequent semesters may be permitted up to 4 more semesters (2 years) to complete all the requirements of the degree.

2.3 Under exceptional circumstances and depending on the merit of each case, a period of 2 more semesters (1 year) may be allowed for the completion of the programme

3.0 Course Structure

3.1 The choice based credit system shall be followed for the Masters Degree Programmes. Credits are allotted to the various courses depending on the number of hours of lecture/practicum/Field work assigned to them using the following general pattern:

3.1.1 Lecture: One hour per cycle/week is assigned 1 credit.

3.1.2 Practicum/fieldwork: Two hours per cycle/week is assigned 1 credit.

3.2 The courses are divided into two baskets – core courses and elective courses. (Core courses will include "Core Courses" and "Ability Enhancement Courses" mentioned in CBCS guidelines. Elective Courses will include "Discipline Specific Electives", "Generic Electives", optional "Dissertation or Project", and "Skill Enhancement Courses")

3.3 Core Courses: Core courses are those in the curriculum, the knowledge of which is deemed essential for students who are pursuing the programme.

3.3.1 A student shall be required to take all the core courses offered for a particular programme.

3.3.2 The number of credits required from core courses shall be as prescribed by the competent academic authority.

3.4 Elective Courses: These are courses in the curriculum which give the student opportunities for specialisation and which cater to his/her interests and career goals. These courses may be selected by the student and/or offered by the department conducting the programme, from those listed in the curriculum according to the norms laid down by the competent academic authority.

3.4.1 The number of credits which may be acquired through elective courses shall be prescribed by the Board of studies pertaining to the programme.

3.5 These categories of courses may further be subdivided into departmental, school or institutional, depending on the department which offers the course. The schema of categorisation of courses into baskets is as given below:

***Core Courses**	
Departmental Core (DC)	Core courses which are offered by the department which conducts the programme
School Core (SC)	Core courses which are offered by a department other than the department which conducts the programme, from within the same School
Institutional Core (IC)	Core courses which are offered by departments of the University from Schools other than the parent School

*Elective Courses	
Departmental Elective (DE)	Elective courses which are offered by the department which conducts the programme
School Elective (SE)	Elective courses which are offered by a department other than the department which conducts the programme, from within the same School
Institutional Elective (IE)	Elective courses which are offered by departments of the University from Schools others than the parent School

***UGC Equivalent Courses** - Core Paper (DC), Ability Enhancement Compulsory Course (IC/ SC), Skill Enhancement Course (IE), General Elective (IE/SE), Discipline Specific Elective (DE)

3.6 In order to qualify for a Master's Degree, a student is required to complete the credit requirement as prescribed in the curriculum.

3.7 In addition to the prescribed credit requirement, a student shall have to complete the requirements of Extra Academic Programmes (EAP) as may be prescribed by the Department. Students shall be awarded P/NP grades for the EAP, which shall be recorded in the Gradesheet, but not taken into account for computing the SGPA and the CGPA.

3.8 Students who secure a CGPA of at least 7.5 at the end of the 2nd semester may opt to take one audit course per semester from any Department from the 3rd semester onwards, provided the course teacher permits the auditing of the course. This shall be done under the guidance of the Departmental Faculty Advisor/mentor. The student is free to participate in the evaluation process for such courses. However, an attendance of 75% percentage is necessary for obtaining a P grade for such courses. When auditing courses offered by other departments, it shall be the responsibility of the student to attend such courses without missing courses of one's own department and semester.

3.9 In addition, students may also opt for additional elective courses in consultation with their mentors. Students are required to participate in the evaluation process of such courses. The grades obtained for such courses shall be recorded in the gradesheet, but not taken into account for computing SGPA and CGPA.

3.10 It shall be the prerogative of the department to not offer an elective course which has less than 5 students opting for it.

3.11 The medium of instruction shall be English and examinations and project reports shall be in English.

3.12 The course structure and syllabi of the Post Graduate Degree Programmes shall be approved by the Academic Council of the University. Departmental Boards of Studies (DBOS) shall discuss and recommend the syllabi of all the courses offered by the department from time to time before forwarding the same to the School Board of Studies (SBOS). The SBOS shall consider the proposals from the departments and make recommendations to the Academic Council for consideration and approval.

3.13 The curriculum may include fieldwork / institutional visits / internship for a specified time. These are to be satisfactorily completed before a student is declared eligible for the degree. There shall be credit allocation for such activities. These activities may be arranged during the semester or during convenient semester breaks as shall be determined by the School Board of Studies.

3.14 Faculty Advisor/Mentor: A faculty advisor/mentor shall be assigned for groups of students. Faculty advisors/mentors shall help their mentees to plan their courses of study, advise them on matters relating to academic performance and personality development, and help them to overcome various problems and difficulties faced by them.

PROGRAMME SPECIFIC CURRICULAR ASPECTS

4.0 MASTER OF SOCIAL WORK (MSW)

4.1 Area of Concentration: The third and fourth semesters shall have courses from a chosen Area of Concentration (AoC) from among those offered by the department. The AoC is to be opted for at the end of the second semester and will be confirmed by the department depending on the availability of seats and the aptitude and ability of the student. An AoC will be offered by the department only if a minimum of ten students opt for it. The fieldwork and research project of the third and fourth semesters will be based on the AoC.

4.2 Concurrent and Continuous Fieldwork

Fieldwork shall be an essential part of the course structure in all the semesters of the programme. The field work practice in the first semester shall consist of orientation visits, sessions for skills training and placement. In the first year, the focus of the field work shall be the community and in the second year the focus shall be based on the specialisation chosen by the students. In the first semester,, students shall be placed in communities, NGOs,service organizations and government agencies working with communities, and in those settings where they can be exposed to the community and community issues. The students get a close feel of the community and community settings, understand the dynamics and issues in the community and become aware of the sensitivities of people while working with them. They also get a firsthand experience of the programmes and projects implemented in the communities by NGOs and government agencies and the impact that these have on the community. They shall also interact with the personnel from organisations and the community members to understand the tension between tradition and change that the communities in the region are likely to experience, and how it is handled. They shall, with the help of the organisation and the field work supervisor, identify an issue and work on

it following the principles of community organization. The students are expected to be creative and innovative in assisting the agency and community in whatever way possible.

The field work practice in the second semester will consist of lab sessions for skills training and placement. The focus will be on the practice of social case work and Group works. The students shall be placed in NGOs, and government service organizations and government agencies working with individuals and families, and in those settings where they can be exposed to issues related to individuals and groups.

4.2.1 Normally a student shall spend fifteen hours over two days per week in field work. However, keeping in mind the peculiar situation of transport and communications in the region and the expenses involved, the field work practice may be arranged in other convenient ways as the institution deems fit.

4.2.2 The student is required to submit the report on the field work and the field work diary to the field work supervisor, before the commencement of classes on the first day of class following the field work days. The supervisor shall conduct regular field work conferences

4.2.3 A student is expected to have 100 percent attendance in field work. Any shortage shall be compensated by him/her.

4.2.4 At the end of the semester the student shall submit a summary report of the field work for the semester and a viva voce examination shall be conducted.

4.2.5 The field work practice in the Third and Fourth Semesters shall focus upon the Area of Concentration chosen by the students. The students shall be placed in the field for twenty five days of consecutive field work. The field work settings shall be communities, NGOs, service organizations, hospitals, clinics and governmental agencies. Those students who are specializing in Community Development will either be placed in an urban or rural community setting that is identified by the Department. Students who are specializing in Medical and Psychiatric Social Work will be exposed to either a Medical or a Psychiatric setting.

4.3 Rural Camp

Students shall organise and participate in a rural camp during the first / second semester. The duration of the rural camp shall generally be ten days excluding days of travel.

4.3.1 The objectives of the rural camp are:

- To apply the acquired skills of group work and community organisation in communities.
- To understand and assess the problems faced by the rural population.
- To involve oneself positively in the communities to help to remove some of these problems.

4.3.2 At the end of the camp each student shall submit a written report to the department in a specified format. Performance at the Rural Camp shall be considered for the evaluation of the Field Work during the second semester.

4.3.3 The Rural Camp shall be credited along with the fieldwork of the semester along with which it can be conveniently coupled.

4.4 Study Tour

During the programme the students shall undertake a study tour along with the assigned faculty members to a place approved by the department. The places are to be so chosen as to be of educational benefit to students. During the tour, the focus shall be on visiting and interacting with as many NGOs/ state/national/international organisations involved in developmental work as possible. A report of the learning outcomes shall be submitted to the department at the end of the tour. The Study Tour shall be a Pass/No Pass course.

4.5 Block Placement

After the examinations at the end of the fourth semester, the students shall be placed with an NGO or Agency for a period of not less than one month for practical experience and application of their skills. While the Block Fieldwork is not credited, it is mandatory for the completion of the MSW programme. The student shall contact an agency of his/her choice and get the choice of agency approved by the department. Students shall endeavour to choose an agency that is primarily in tune with their AoC and which has credentials in the concerned field. At the end of every week the student shall send a brief report to the supervisor and at the end of the Block Field Work period a summary report shall be submitted. The summary report shall contain a short description of the Agency, the social service skills applied in his/her work and the student's learning outcomes. The report shall be submitted in a format prescribed by the department and shall be submitted together with a certificate from the agency confirming his/her field work, in a prescribed format.

4.6 Research Project Work

Every student shall undertake a research project work which has bearing on his/her AoC and present a written thesis on the research work under the supervision and guidance of a faculty member. The preliminary work may begin at the end of the second semester. The students are expected to complete the data collection before the fourth semester. The thesis is to be submitted to the department before the date notified. The student shall write a dissertation of the

research thesis and appear for a viva voce examination on the research done. The mode and components of evaluation of the research work and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester.

4.7 Assignments

Assignments are an essential part of learning. The faculty shall engage students in a minimum of one individual and one group assignment per course, per semester. A group assignment shall be accompanied by a common presentation.

5.0 MASTER OF SCIENCE (MSC) PSYCHOLOGY

5.1 Field Work

Students shall take part in field work during the first three semesters in mental health agencies, medical institutions, educational institutions etc., under the supervision of professional counsellors and psychologists, where the student of psychological counselling can get a first-hand experience of the application of the learning derived from the classroom. The field work shall be credited and shall be evaluated using norms laid down by the department.

5.2 Study Tour

During the programme the students shall undertake a study tour, along with the faculty members, to a place approved by the department. The places are to be so chosen as to be of educational benefit to students. During the tour, the focus shall be to visit and interact with NGOs, hospitals, state/national/international organisations involved in psychological counselling. A report of the learning outcomes shall be submitted to the department at the end of the tour followed by a presentation. The Study Tour shall be a Pass/No Pass course.

5.3 Summer Internship

Students are required to undergo a summer internship of two weeks' during the semester break between the second and third semesters. It is a P/NP course and shall be recorded in the third semester. The Summer Internship gives students an opportunity to apply the theories and principles that they have learnt in class room courses to the "real world" of social service agencies, medical institutions, the criminal justice system, business, and industry. During the internship, students can explore career interests, develop professional skills, learn how community organizations work and expand their clinical and interpersonal skills. The summer internship enriches the students' academic experience while making a valuable contribution to the community and utilizing the vacation optimally.

5.4 Supervised Internship

Each student shall perform a supervised internship for a period of 90 days (spread across semester three and four with 45days in each semester) in two organizations which offers counselling help to clients. The supervised internship is a credited course and the report for each internship shall be submitted by the students at the end of each semester followed by a presentation on the same. It shall be the prerogative of the department to propose the number of institutions where a student is expected to perform supervised internship. Supervision shall be provided for by the university in collaboration with the organisation where the student performs the internship. Evaluation of the internship shall be based on the documentation, reports from the organisation, report of the supervisor and the presentation and the viva voce examination of the student at the end of the period of Internship.

5.5 Research Project Work

A research project shall be undertaken during the course of the third and the fourth semesters. The topic of the research shall be so chosen that it will be possible for the student to pursue and complete the research work in the institution/hospital where the student is placed for the supervised internship. The preliminary work may begin at the end of the second semester. The students are expected to complete the data collection before the fourth semester. The thesis is to be submitted to the department before the date notified. The student shall write a dissertation of the research thesis and appear for a viva voce examination on the research done. The mode and components of evaluation of the research work and the weightages attached to them shall be published by the Department/ Institute at the beginning of the semester.

5.6 Assignments

Assignments are an essential part of learning. The faculty shall engage students in a minimum of one individual and one group assignment per course, per semester. A Group assignment shall be accompanied by a common presentation.

6.0 MASTER OF ARTS (MA) EDUCATION

6.1 Specialisations

The Master's Degree Programme in Education offers a number of specialisations, of which a student shall be required to choose a specialization after the completion of the first semester. The department shall have the prerogative of not

offering a specialisation if a sufficient number of students do not opt for it.

6.2 Educational Seminar

During the course of the programme, students are expected to present a series of seminars which will address fundamental intellectual, conceptual and practical issues in current educational philosophy and application. They may also deal with other relevant topics which may be suggested by the department. Students shall be assisted through guest lectures, discussions, field work in education related institutions and active engagement with faculty members. During these interactions students shall be provided with an opportunity to explore how best to bring new interdisciplinary scholarship, technology and critical thinking into the development of the chosen seminar area. They shall also consider alternative pedagogic strategies, teaching techniques and technologies. Students shall prepare and present a final paper based on these seminars. Students shall be evaluated on the basis of the seminars and the final paper.

6.3 Assignments

Assignments are an essential part of learning. The faculty shall engage students in a minimum of one individual and one group assignment per course, per semester. A group assignment shall be accompanied by a common presentation.

6.4 Research Project Work

Every student shall undertake a research project work which has bearing on his/her field of specialisation and present a written thesis on the research work under the supervision and guidance of a faculty member. The Research Project shall be undertaken individually, in two phases during the third and fourth semesters. Students are expected to make presentations to the department at different stages of the research work. The student shall write a dissertation of the research thesis, submit it to the department and appear for a viva voce examination at times to be notified by the department. The mode and components of evaluation of the research work and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester.

6.5 School Visits

The students of the Masters Programme in Education shall be engaged in regular school visits with the purpose of understanding and evaluating the process of teaching, learning and evaluation as well as the exigencies of administration of the school.

6.6 Internship

During the final semester of the programme, a student is required to undergo an internship for a period of one month. The internship provides an opportunity for students to experience the ground reality and connect it with the theoretical and methodological perspectives the student has studied and interiorized. During the internship the student will be monitored and guided by his/her supervisor and faculty members. The student will be required to maintain a journal and at the end of the period of internship, submit a written report and to make a presentation of his/her experiences and learnings at the internship. The student will be required also to submit a report from the head of the institution regarding his/her performance there.

The evaluation of the student shall be based on the level of his/her engagement during the internship in addition to his/her ability to communicate this engagement in the journal, the report and the presentation. The journal and the report are to be submitted within a month of the completion of the internship. The department shall specify the criteria for evaluating the journal, the report and the presentation.

6.7 Journaling

During the 1st semester, students shall maintain a reflective journal, to develop within them a reflection that can be described as an inner dialogue, using visible thinking routine (Harvard), as a critical structure for guiding their journal writing. Journaling has to be done six days a week. At the end, the student will be awarded grade/marks after assessing their learning.

7.0 MASTER OF ARTS (MA) MASS COMMUNICATION

7.1 Specialisations

The Master's Degree Programme in Mass Communication offers a number of specialisations, of which a student shall be required to choose a specialisation after the completion of the first semester. The department shall have the prerogative of not offering a specialisation if a sufficient number of students do not opt for it.

7.2 Media House Visits

During the course of the programme, students shall be required to visit a variety of Media Houses in small groups constituted by the department. The purpose of these Media House Visits shall be to gain exposure to the best practices among the day-to- day activities of the media house. A report of the visit is to be submitted in the format specified within two days of the visit. The Media House visit shall be a graded course and grades shall be awarded on the basis of the written reports of the media house visits.

7.3 Research Project Work

Every student shall undertake a research project work which has a bearing on his/her field of specialisation and present a written thesis on the research work under the supervision and guidance of a faculty member. The Research Project shall be undertaken individually, in two phases during the course of two semesters as shall be laid down in the course structure of the programme. Students are expected to make presentations to the department at different stages of the research work. The student shall write a dissertation of the research thesis, submit it to the department and appear for a viva voce examination at times to be notified by the department. The mode and components of evaluation of the research work and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester.

7.4 Assignments

Assignments are an essential part of learning. The faculty shall engage students in a minimum of one individual and one group assignment per course, per semester. A group assignment shall be accompanied by a common presentation.

7.5 Internship

All students shall undergo an internship involving media related activities of four weeks' duration. The purpose of the internship is to give the students an opportunity to have a hands-on field experience to effectively put into practice the theoretical and practical learning from the programme in an area of interest. Students may undergo their internship in a media house of their choice. The student shall be required to discuss the choice of media house with the department and obtain its consent. Before going for the internship, a Letter of Consent from the concerned media house, in the prescribed format, shall be submitted by the student to the Department. After returning from the internship each student shall have to submit a detailed report in a prescribed format. Each student shall also make a presentation of the internship experience and learning in the Department and submit a certificate of successful completion of the internship from the designated authority of the concerned media house. The schedule of the conduct, report submission and evaluation of the internship shall be as notified by the Department. The components of evaluation of the Internship and their weightages shall be as notified by the department at the beginning of the semester.

7.6 Final Project

As a Final Project the students are required to create a Social Awareness and Community Development oriented multi-media project which shall culminate in a Media Event. The purpose of the final project is to showcase all the skills that the students have acquired during the course of the programme as well as demonstrate their Media and Event Management, and Media Entrepreneurship abilities and at the same time use these skills for the service and upliftment of the community. The Final Project shall essentially be a group project and the number of groups shall be specified by the department. The groups shall perform their activities under the guidance of faculty members who shall be assigned to guide each group. The last dates for the submission of the project proposal and the conduct of the event shall be notified by the Department well in advance. The components of evaluation of the Final Project and their weightages shall be as notified by the department at the beginning of the semester.

8.0 MASTER OF ARTS (MA) ENGLISH

8.1 Specialisations

The Master's Degree Programme in English offers a number of specialisations, of which a student shall be required to choose a specialisation after the completion of the second semester. The department shall have the prerogative of not offering a specialisation if a sufficient number of students do not opt for it.

8.2 Educational Seminar

During the course of the programme, students are expected to present a series of seminars related to English literature. They may also deal with other relevant topics which may be suggested by the department. Students shall prepare and present a final paper based on these seminars. Students shall be evaluated on the basis of the seminars and the final paper.

8.3 Assignments

Assignments are an essential part of learning. The faculty shall engage students in a minimum of one individual and one group assignment per course, per semester. A group assignment shall be accompanied by a common presentation.

8.4 Dissertation

Students will be required to write a dissertation in the 4th semester.

9.0 MASTER OF (MA) PUBLIC ADMINISTRATION

9.1 Specialisations

The Master's Degree Programme in Public Administration offers a number of specialisations, of which a student shall be required to choose a specialisation. The department shall have the prerogative of not offering a specialisation if a sufficient number of students do not opt for it.

9.2 Project Work/Dissertation

The Master's Degree Programme in Public Administration will require students to do Project work in the 3rd and 4th semesters. The mode and components of evaluation of the project work and the weightages attached to them shall be

published by the department at the beginning of the semester.

9.3 Assignments

Assignments are an essential part of learning. The faculty shall engage students in a minimum of one individual and one group assignment per course, per semester. A group assignment shall be accompanied by a common presentation.

9.0 MASTER OF COMMERCE (MCOM)

9.1 Specialisations

The Master's Degree Programme in Commerce offers a number of specialisations, of which a student shall be required to choose a specialisation after the completion of the second semester. The department shall have the prerogative of not offering a specialisation if a sufficient number of students do not opt for it.

9.2 Project Work/Dissertation

The Master's Degree Programme in Commerce will require students to do Project work in the 3rd and 4th semesters. The mode and components of evaluation of the project work and the weightages attached to them shall be published by the department at the beginning of the semester.

9.3 Assignments

Assignments are an essential part of learning. The faculty shall engage students in a minimum of one individual and one group assignment per course, per semester. A group assignment shall be accompanied by a common presentation.

10.0 Admission

10.1 All admissions to the Post Graduate Degree Programmes of the University shall be on the basis of merit. There may, however, be provision for direct admission for a limited number of NRI/FN students.

10.2 Eligibility Criteria

10.2.1. To be considered for admission to a Post Graduate Degree Programme a candidate should have passed a Bachelor's Degree (or equivalent) programme of a recognised university securing 50% of the grades/marks.

10.2.2. Admission will be on the basis of the academic records of the candidate, and taking into consideration his/her performance in any or all of the following:

- Written test
- Group Discussion
- Personal Interview

10.3 Candidates whose results for the qualifying examination are not yet declared may be provisionally admitted provided she/he submits proof of fulfilment of the eligibility criteria by 31 October of the year of provisional admission.

10.4 Bridge Courses: The Departments shall make provision for Bridge Courses to facilitate admission of students from varied backgrounds to a programme of their choice.

10.5 Value-added Courses: Each department shall offer value-added courses, which are optional. Certificates will be awarded to those who successfully complete the course.

10.6 Anti-Ragging Affidavit: Students and Parents Undertaking Affidavit In compliance of the UGC Regulations, it is compulsory for each student and every parent to submit an online Anti-Ragging undertaking affidavit every academic year. The Link to fill out the online undertaking affidavit by students and parents is:

www.antiragging.in/affidavit_registration_disclaimer.html

www.c4yindia.org/Home/Undertaking

11.0 University Registration

11.1 Candidates shall have to register as bona-fide students with the University as per the University regulations within a period specified by the University, by a formal application routed through the Director.

12.0 Attendance

12.1 To be permitted to appear for the end-semester examination of a particular course, a student is required to have a minimum attendance of 75% for that course.

12.2 Deficiency in attendance up to 10% may be condoned by the Director in the case of leave taken for medical and other grievous reasons, which are supported by valid medical certificates and other requisite documents.

12.3 Some students, due to exceptional situations like their own serious sickness and hospitalization or death of members of inner family circle, may have attendance below 65%. Such students may be given bonus attendance percentage for a particular course based on his/her attendance for that course during the remaining days of the current semester, as given in the following table:

Attendance during the remaining days of the current semester	Bonus percentage available in the current semester
95% or more	5
90% or more but less than 95%	4
85% or more but less than 90%	3
80% or more but less than 85%	2
75% or more but less than 80%	1

They shall be permitted to appear for the end-semester examination of the course if on the strength of this bonus attendance percentage, they obtain 65% attendance for that course.

12.4 If the sum of the credits of the courses for which a student is unable to appear at the end- semester examinations exceeds 50% of the total credits allotted for the semester, he/she shall not be permitted to appear for the entire end-semester examinations in view of clause 13.5 of these Regulations.

12.5 The School may decide to set aside a certain portion of the in-semester assessment marks for attendance. The number of marks and modalities of their allotment shall be made known to the students at the beginning of each semester.

12.6 Leave

12.6.1 Any absence from classes should be with prior sanctioned leave. The application for leave shall be submitted to the Office of the Director of the School on prescribed forms, through the Head of the Department, stating fully the reasons for the leave requested along with supporting documents.

12.6.2 In case of emergency such as sickness, bereavement or any other unavoidable reason for which prior application could not be made, the parent or guardian must inform the office of the Director promptly.

12.6.3 If the period of absence is likely to exceed 10 days, a prior application for grant of leave shall have to be submitted through the Director to the Registrar with supporting documents in each case; the decision to grant leave shall be taken by the Registrar on the recommendation of the Director.

12.6.4 The Registrar may, on receipt of an application, also decide whether the student be asked to withdraw from the programme for that particular semester because of long absence.

12.6.5 It shall be the responsibility of the student to intimate the concerned teachers regarding his/her absence before availing of the leave.

13.0 Grading System

13.1 Based on the performance of a student, each student is awarded a final letter grade in each graded course at the end of the semester and the letter grade is converted into a grade point. The correspondence between percentage marks, letter grades and grade points is given in the table below:

Marks (x) obtained (%)	Grade	Description	Grade Points
90 ≥ x ≤ 100	O	Outstanding	10
80 ≥ x < 90	A+	Excellent	9
70 ≥ x < 80	A	Very Good	8
60 ≥ x < 70	B+	Good	7
50 ≥ x < 60	B	Above Average	6
41 ≥ x < 50	C	Average	5
x = 40	P	Pass	4
x < 40	F	Fail	0
	AB	Absent	0
	PS	Pass	0
	NP	Not Passed	0
	X	Not Permitted	0

In addition, a student may be assigned the grades 'PS' and 'F' for pass marks and non- passing marks respectively, for Pass/No-pass courses, or the grade 'X' (not permitted).

13.1.1 A student shall be assigned the letter grade 'X' for a course if he/she is not permitted to appear for the end semester examination of that course due to lack of requisite attendance.

13.1.2 A letter grade 'F' or 'X' in any course implies failure in that course.

13.1.3 A student is considered to have completed a course successfully and earned the credits if she/he secures a letter grade other than 'F' or 'X'.

13.2 At the end of each semester, the following measures of the performance of a student in the semester and in the

programme up to that semester shall be computed and made known to the student together with the grades obtained by the student in each course:

13.2.1 The Semester Grade Point Average (SGPA): From the grades obtained by a student in the courses of a semester, the SGPA shall be calculated using the following formula:

$$SGPA = \frac{\sum_{i=1}^{n} GP_i \text{ x } NC_i}{\sum_{i=1}^{n} NC_i}$$

Where GP_i = Grade points earned in the i^{th}course
NC_i = Number of credits for the i^{th}course
n = the number of courses in the semester

13.2.2 The Cumulative Grade Point Average (CGPA): From the SGPAs obtained by a student in the completed semesters, the CGPA shall be calculated using the following formula:

$$CGPA = \frac{\sum_{i=1}^{n} SGP_i \text{ x } NSC_i}{\sum_{i=1}^{n} NSC_i}$$

Where SGP_i = Semester Grade point of the i^{th} semester
NSC_i = Number of credits for the i^{th} semester
n = the number of semesters completed

13.2.3 The CGPA may be converted into a percentage by multiplying CGPA by 10.

13.3 Both the SGPA and CGPA will be rounded off to the second place of decimal and recorded as such. Whenever these CGPA are to be used for official purposes, only the rounded off values will be used.

13.4 There are academic and non-academic requirements for the programme where a student will be awarded the 'P' and 'NP' grades. All non-credit courses (such as Study Tour and Extra Academic Activities) belong to this category. No grade points are associated with these grades and these courses are not taken into account in the calculation of the SGPA or CGPA. However, the award of the degree is subject to obtaining a 'P' grade in all such courses.

14.0 Assessment of Performance

14.1 A student's performance is evaluated through a continuous system of evaluation comprising tests, quizzes, assignments, seminars, projects, research work, concurrent and block field work performance and end-semester examinations.

14.2 Theory Courses: Theory courses will have two components of evaluation – in-semester assessment of 40% weightage and an end-semester examination having 60% weightage.

14.2.1 The modalities of conduct of in-semester evaluation, its components and the weightages attached to its various components shall be published by the department concerned at the beginning of each semester.

14.3 Practicum/Field Work/Lab: These courses shall be evaluated on the basis of attendance, performance of tasks assigned and an end semester test/viva voce examination. The weightage assigned to these components of the evaluation is given in the following table:

Component	**Weightage**
Attendance	10
Performance of tasks assigned	30
End-semester test / viva voce examination	60

14.4 End-Semester examinations

14.4.1 End-semester examinations, generally of three hours' duration, shall be conducted by the University for the theory courses. However, the Director of the Institute shall make the arrangements necessary for holding the examinations.

14.4.2 In the end-semester examinations, a student shall be examined on the entire syllabus of the courses.

14.4.3 A student shall not obtain a pass grade for a course without appearing for the end- semester examination in that course.

14.5The evaluation of performance in Co-curricular Activities will be done by the authorities conducting them and they will communicate the grades to the Director who will forward them to the Controller of Examinations of the University.

14.6 The Director will forward the marks obtained in the in-semester evaluation to the Controller of Examinations within the prescribed time as may be notified.

14.7 All evaluated work in a subject except the end semester answer scripts will be returned to the students promptly. They should be collected back after the students have examined them, and preserved for a period of one semester.

14.8 Eligibility for appearing in the end-semester examinations: A student will be permitted to appear for the end-semester

examinations, provided that

14.8.1 A student has not been debarred from appearing in the end semester examinations as disciplinary action for serious breach of conduct.

14.8.2 He/she has satisfactory attendance during the semester according to the norms laid out in section 9 of these regulations.

14.8.3 He/she has paid the prescribed fees or any other dues of the university, institute and department within the date specified.

14.9 Registration for end-semester Examinations

14.9.1 The University shall, through a notification, invite applications from students to register for the end-semester examinations.

14.9.2 Students who have registered with the University and those who have applied for such registration may apply to appear for the end-semester examinations of the university, in response to the notification issued by the University, provided that they fulfil the eligibility norms as laid down in clause 14.8.

14.9.3 All eligible candidates shall be issued an admit card for the relevant examination and for the specified courses. A student who does not have a valid admit card may not be permitted to write the end-semester examinations.

14.9.4 A student who secures an 'F' or 'X' grade in any course in a semester may register for the end-semester examination for that course in a subsequent semester when that course is offered again, within the maximum period of time allotted for the completion of the programme. The in-semester assessment marks obtained by him/her in the last semester in which the said course was attended by him/her shall be retained.

14.9.5 Similarly, in case of an 'NP' grade in Extra Academic Programmes the student shall have to re-register for it in the appropriate semester of the next academic session.

14.9.6 When a student re-registers for the end semester examination of a course, in accordance with clause 14.9.4 above, the better of the two grades obtained (the old and the new) shall be considered for the calculation of SGPA and CGPA.

14.10 Conduct of Examinations: The University shall conduct the end-semester examinations in accordance with the applicable regulations on such dates as are set down in the Academic Calendar or as notified.

14.11 Declaration of Results: The University shall declare the results of a semester and make available to the students their grade sheets within the time-frame prescribed by the relevant regulations of the university and specified in the academic calendar.

14.11.1 The University may withhold the results of a student for any or all of the following reasons

- he/she has not paid his/her dues
- there is a disciplinary action pending against him/her
- he/she has not completed the formalities for University Registration according to the requirement of section 6 of these Regulations.

14.12 Re-examining of answer scripts

14.12.1 If a student feels that the grade awarded to him/her in a course is not correct, he/she may apply to the University for the re-examining of his/her answer script.

14.12.2 Re-examining of scripts may be of two different categories – scrutiny and re-evaluation.

14.12.3 Scrutiny: The activities under this category shall ordinarily be confined to checking

- correctness of the total marks awarded and its conversion into appropriate letter grades
- whether any part/whole of a question has been left unevaluated inadvertently
- correctness of transcription of marks on the tabulation sheet and the grade sheet issued in respect of the course under scrutiny.

14.12.4 e-evaluation: Re-evaluation of the answer script by independent experts in the concerned subject(s).

14.12.5 Application for re-examining of answer scripts

- A student may apply for scrutiny or re-evaluation for one or more courses of the just- concluded end-semester examinations within seven calendar days from the date of publication of its results in the application form prescribed for this purpose.
- He/she shall pay the prescribed fee to the University as notified.
- A student applying for scrutiny/re-evaluation shall expressly state on the application form whether the application made is for Scrutiny or for Re- evaluation. In each case, the student may also request to see his/her answer script.
- All applications for scrutiny/re-evaluation must be routed through the Director of the Institute.

14.12.6 If in the process of re-examining, the grade obtained in a course changes, the better of the two grades shall be assigned to the course. If there is a change, the new grade shall be recorded and a new grade sheet shall be issued to the student.

14.12.7 Without prejudice to any of the clauses of section 14.12, a student who has been found to have used unfair means during an examination shall not be eligible to apply for scrutiny or re-evaluation of answer scripts.

14.13 Repeat Examination: The University shall conduct repeat examination for those with F grade at a different time slot, as set down in the Academic Calendar or as notified. Such students should register for these examinations.

14.14 Improvement Examination

14.14.1 After the completion of the entire programme of study, a student may be allowed the provision of improvement examinations. These are to be availed of only once each in the Autumn and Spring semesters that immediately follow the completion of the programme, and within the maximum number of years permissible for the programme.

14.14.2 A student may choose no more than six courses (three in the Autumn semester and three in the Spring semester) for improvement examinations.

14.14.3 After the improvement examination, the better of the two grades obtained (the old and the new) shall be considered for the calculation of SGPA and CGPA.

14.14.4 If the student improves his/her grades through the improvement examination, new grade sheets and comprehensive transcripts shall be issued to the student.

14.15 Special Examination

14.15.1 The University shall conduct Special Examinations to benefit the following categories of students:

14.15.1.1 Students who, on the completion of the final semester, have some 'F' graded courses in the two final semesters, but no 'F' or 'X' graded courses in any of the previous semesters

14.15.1.2 Students who have only one 'F' graded course in a semester other than the two final semesters and do not have 'F' or 'X' graded courses in the two final semesters.

14.15.2 The Special Examinations shall ordinarily be conducted each year within a month of the declaration of the results of the Spring Semester.

14.15.3 Students who fail to secure 50% of the credits offered in the final semester shall not be eligible to appear for the special examinations. Such students will be governed by the provisions of clause 15.5 of these regulations. However, this restriction shall not apply in the case of students who are unable to appear in the end semester examinations due to exceptional situations like their own serious illness and hospitalisation or death of members of inner family circle (restricted to only father, mother, siblings).

14.15.4 Students who have 'X' graded courses only in the last two semesters may be offered the opportunity for participating in a Tutorial Programme which may be conducted during the semester break immediately following the end- semester examinations of the final semester and students who earn 85% attendance for the programme shall be permitted to appear for the Special Examinations. Separate fees shall be charged for the Tutorial Programme.

14.15.5 Students who do not obtain pass grades in any course at the special examinations shall have to apply in the prescribed format and appear for the end-semester examination of these courses when they are scheduled by the University during subsequent relevant end-semester examinations.

15.0 Enrolment (for semesters other than the first)

15.1 Every student is required to enrol for the programme through the designated officer at the commencement of each semester on the days fixed for such enrolment and notified in the Academic Calendar.

15.2 Students who do not enrol on the days announced for the purpose may be permitted late enrolment up to the notified day in the Academic Calendar on payment of a late fee.

15.3 Only those students will be permitted to enrol who have

15.3.1 cleared all University, Institute, Department, Hostel and Library dues and fines (if any) of the previous semester,

15.3.2 paid all required University, Institute, Department and Hostel fees for the current semester, and

15.3.3 not been debarred from enrolling on any specific ground.

15.4 No student may enrol for a semester if he/she has not appeared, for whatever reason, in the end semester examinations of the previous semester.

15.5 A student who fails to obtain 50% of the credits offered in the third and subsequent semesters shall not be permitted to enrol for the next semester and shall have to re-enrol for and attend all the courses of the said semester in the following academic year. Students who due to X grade (lack of due attendance) have been debarred from exams in any semester (including first and second) will have to re-enrol for the same.

16.0 Eligibility for the Award of Degree

16.1 A student shall be declared to be eligible for the award of the degree if he/she has

16.1.1 completed all the credit requirements for the degree with grade 'C' or higher grade in each of the graded courses and grade 'P' in all the non-graded courses.

16.1.2 satisfactorily completed all the non-credit requirements for the degree (if any);

16.1.3 obtained a CGPA of 5.00 or more at the end of the semester in which he/she completes all the requirements for the

degree;

16.1.4 owes no dues to the University, Institute, Department, Hostels; and

16.1.5 has no disciplinary action pending against him/her.

16.2 The award of the degree must be recommended by the Academic Council and approved by the Board of Management of the University.

17.0 Termination from the Programme

17.1 If more than the number of years permitted for the completion of a programme have elapsed since the student was admitted, and the student has not become eligible for the award of Degree, the student shall be removed from the programme.

17.2 A student may also be required to leave the Programme on disciplinary grounds on the recommendations of the Students' Disciplinary Committee of the concerned School.

SCHEME OF IN-SEMESTER EVALUATION

POST GRADUATE DEGREE PROGRAMMES

M.TECH, MCA, MSW, MSC, MA and MCOM

THEORY COURSES

The different components of the scheme of in-semester for the theory courses are given in the table below:

Component	**Weightage**
Class Test (Two class tests of equal weightage)	20
Assignments, Group Presentations/Seminar	10
Non-formal evaluation	5
Attendance	5
Total	**40**

Non-formal Evaluation

Non-formal evaluation may be done using a combination of quizzes, unannounced tests, open book tests, library work reports, class room interaction and participation, etc. The scheme of non- formal evaluation shall be announced by every teacher in the beginning of the semester.

Attendance

Marks for attendance will be given according to the following scheme:

Attendance Percent (x)	**Marks Allotted**
75 <= x < 80	2
80 <= x < 90	3
90 <= x < 95	4
95 <= x 100	5

NB: There shall be no re-test for in-semester Assessment under any circumstance. The original marks of all the in-semester Assessment components shall be retained for all further repeat examinations.

MCA Minor Project

The guidelines for the conduct and evaluation of the MCA Minor Project shall be laid down by the Department. The components of evaluation and allotment of marks will be as follows:

In Semester Evaluation	**Marks**	**End Semester Evaluation (Weightage 40)**	**Marks**
Synopsis	10	Project Implementation	16
Seminar presentation of synopsis (Analysis and Design)	15	Seminar Presentation	8
Progress Seminar (Implementation)	15	Viva Voce Examination	16
Project Documentation	10		
Attendance	10		
Total	60		40

In-Semester Evaluation of MCA Major Project

The in-semester evaluation of the MCA Major Project shall have 60% weightage. The Internal Evaluation of the Major project will be done through two seminar sessions:

Synopsis	:	20
Seminar Presentation of Synopsis (Analysis and Design)	:	30
Progress Seminar (Implementation)	:	30
Project Documentation	:	20

External Evaluation of all Major projects will follow the guidelines laid down in the Regulations.

MSW, MSc Psychology Field Work

The components of evaluation and their weightages for the concurrent/continuous fieldwork are as follows:

Component	Weightage
Field Work Diary	10
Agency Evaluation	15
Faculty Evaluation	20
Attendance	5
Viva Voce Examination	50
Total	100

Practicum

Field Report	:	15
Presentation	:	15
Administration of tests	:	10
Faculty Evaluation	:	10
Viva Voce Examination	:	50

MSW, MSc Psychology Research Project

Phase I

Literature Survey Presentation	:	40
Synopsis Presentation	:	60

Phase II

Examination of Thesis	:	50
Presentation and Viva Voce Exam	:	50

MTECH, MSC (Physics, Chemistry, Mathematics, Biochemistry, Biotechnology, Microbiology, Botany, Zoology)

THEORY COURSES

For theory courses, in-semester assessment carries 40% weightage. Different components along with the weightage of each are given in the table below:

Component	Weightage	Remarks
Class Test (Two Class tests of one and a half hour duration)	20	Average of the two marks shall be considered
Assignments	15	Written Assignments/Seminar on course Topics/ Technical Paper Review
Non-formal evaluation	5	Based on response and interaction in class, quizzes, open book tests, etc.
Total	40	

There shall be no re-test for In-semester assessment under any circumstance. The original marks of all the In-semester assessment components shall be retained for all further repeat examinations.

In-Semester Evaluation of Project (Phase I) / Research Project (Phase I) / Dissertation (Phase I)

The in-semester evaluation of Project Phase I / Research Project (Phase I) / Dissertation (Phase I) shall have 60% weightage. It shall be evaluated in the following seminar sessions having equal weightage:

Seminar 1: Presentation of the synopsis

Synopsis	:	30%
Seminar presentation of the synopsis	:	50%
Viva voce examination	:	20%

Seminar 2: Progress Seminar

Progress report	:	30%
Progress seminar	:	50%

Viva voce Examination	:	20%

In-Semester Evaluation of Project (Phase II) / Research Project (Phase II) / Dissertation (Phase II)

The in-semester evaluation of Project Phase II / Research Project (Phase II) / Dissertation (Phase II) shall have 60% weightage. The in-semester evaluation will be done through two seminar sessions having equal weightage. Each seminar will be evaluated using the following components.

Progress Report	:	30
Progress Seminar	:	50
Viva Voce Examination	:	20

External Evaluation of the project / Research Project / Dissertation shall follow the guidelines laid down in the Regulations.

RULES, PROCEDURES AND BEHAVIOURAL GUIDELINES

1. Dress Code and Identity Card

1.1 The dress code of the University consists of shirt / top (of the prescribed colour and material), trousers (of the prescribed colour and material), shoes (black) and socks (dark grey), a belt (black/dark brown, if required) and a tie (blue, with diagonal stripes). Students are required to come to the University following this dress code. The tie will be required to be worn only on formal occasions. An apron (of the prescribed colour) is to be worn in the Chemistry Lab and during Workshop Practice. During winter, students may wear only a blazer and/or a sweater (full sleeve or sleeveless) of the prescribed colour and material.

1.2 The Student Identity Card is to be brought to the University every day and is to be produced whenever asked for. Entry to the University campus shall be only on production of the Identity Card. The Identity Card is also the Library Card.

1.3 All students should wear the ID card around the neck from entry in the morning to exit in the evening.

2. Morning Assembly

2.1 The morning assembly is a daily programme in the university on all class days during which all members, i.e., students, faculty, staff and management meet together. The assembly starts at the prescribed time. During the assembly, important announcements are made and a thought or insight is shared. The assembly is concluded with an invocation to God to bless the activities of the day. Note that any announcement made at the morning assembly is considered as being equivalent to notifying the same in the notice boards. All students should reach the assembly venue before prescribed time. Immediately after assembly all should proceed to the classroom to start class. Any change in procedures will be notified by the concerned School at the beginning of the Semester.

2.2 One of the following prayers may be used to conclude the Morning Assembly:

The Our Father
Our Father, who art in heaven,
Hallowed be thy name, Thy kingdom come, Thy will be done on earth as it is in heaven.
Give us this day, our daily bread
And forgive us our trespasses
As we forgive those who trespass against us. And lead us not into temptation,
But deliver us from all evil, Amen.

Or

Prayer for Peace
Lord, make me an instrument of your peace,
where there is hatred, let me sow love;
where there is injury, pardon;
where there is doubt, faith;
where there is despair, hope;
where there is darkness, light;
where there is sadness, joy;
O Divine Master, grant that I may not so much seek to be consoled as to console;
to be understood as to understand;
to be loved as to love.
For it is in giving that we receive;
it is in pardoning that we are pardoned;
and it is in dying that we are born to eternal life. Amen

3. Punctuality in Attending Classes

3.1 All are expected to be at their respective assembly venues five minutes before assembly time.

3.2 Normally no student shall leave the University before all the classes are over. In case of an emergency, a student may leave with proper written permission from the HOD of the concerned department.

4. Make-up Classes, Leave of Absence and Earned Attendance

4.1 If any student misses any laboratory class due to illness or other grievous problems, he/she is required to meet the concerned teacher for completing the experiments as soon as possible. Such make-up attendance will be taken into consideration at the end of the semester if attendance is less than 75%. At most two make-up attendances may thus be earned by any student.

4.2 Any student who is required to be engaged in a University activity or a pre-planned training and placement activity during class hours, may apply for the grant of an 'earned attendance' from the concerned HODs in the prescribed form available

at the Reception. Such applications must be forwarded by the Activity In-Charge. For club related activities, Faculty Advisor of the concerned club will be the Activity In- Charge. In all other cases, Faculty In-Charge or Assistant Faculty In-Charge of Student Affairs will be the Activity In-Charge. Filled up forms shall be submitted preferably before or in case of emergency, immediately after the activity for which earned attendance is to granted.

4.3 Any student going to participate in any activity or competition outside the University must apply to the Faculty In-Charge of student Affairs using the prescribed form which must be forwarded by the Assistant Faculty In-Charge of Student Affairs in consultation with respective Club Advisers. On return, these students must report back to the Assistant Faculty In-Charge of Student Affairs for recording the outcome.

4.4 Any student who is not able to attend classes due to medical or other grievous reasons are required to apply for leave in the prescribed form along with valid medical certificates and other requisite documents, to the Faculty In-charge, students' affairs within seven days of joining back. Such applications must be signed by a parent of the student and forwarded by the mentor of the concerned student and the HOD of the concerned department. Only these students will be considered for condonement of deficiency in attendance.

5. Discipline

5.1 Personal, academic and professional integrity, honesty and discipline, a sense of responsibility and a high degree of maturity is expected of all students inside and outside the campus. Integrity calls for being honest in examinations and assignments, avoiding plagiarism and misrepresentation of facts.

5.2 Indulging in acts of violence, riotous or disorderly behaviour directed towards fellow students, faculty members or other employees of the institution/hostel in the campus or outside is considered to be a serious breach of discipline and will attract penalty.

5.3 Respect for Common Facilities: Care and respect for common facilities and utilities are an essential component of social responsibility. Any willful damage to University property must be made good by the persons concerned. Further, maintaining cleanliness of the classrooms and the entire campus is everyone's responsibility.

5.4 Substance Abuse: Chewing of tobacco, betel nut and the likes, smoking and the use of other addictive substances and alcoholic drinks are strictly prohibited. These should not be brought into or used within the campus of the University. Violation of this norm will lead to stern action.

5.5 Use of Cell Phones: Cell phones may be used in the University lawns, canteens andother open areas. However, the use of cell phones in classrooms and labs are strictly prohibited except when used for teaching/learning purposes with the explicit permission of the teacher concerned. The cell phone of anyone found violating this rule shall be confiscated and his/ her SIM card shall be taken away and retained in the University office for 7 days. If a person violates the norm for a second time, his/her mobile will be confiscated and retained in the University office till the end of the semester.

5.6 Use of Internet: The entire campus is wi-fi enabled and the students may use the Internet freely for educational purposes. Students may also use the Computing Centre for browsing the Net. However, the use of Internet to access unauthorized and objectionable websites is strictly prohibited.

5.7 All cases of indiscipline will be brought before the Students' Disciplinary Committee and the decisions made by the Committee for dealing with such cases shall be final.

6. Class Tests and Examinations

6.1 The conduct of examinations will be governed by the norms of the University.

6.2 The Student Identity Card shall be the Admit Card for the class tests

6.3 During class tests, all students are expected to enter the venue of the class test 15 minutes before the scheduled time of commencement. However, no one will be permitted into the examination hall after 15 minutes of the commencement of the class test and No one will be allowed to leave the examination hall until an hour has elapsed from the commencement of the class test.

6.4 No one is to leave the hall during examination for any purpose, except in case of an emergency.

6.5 Malpractices during class tests and examinations will not be tolerated and will attract stern action.

7. Ragging

Ragging and eve-teasing are activities which violate the dignity of a person and they will be met with zero tolerance. Anti-ragging norms have been given to each student at the time of admission and all students and parents have signed the anti-ragging affidavit. Any case of ragging and eve-teasing must be reported to the anti-ragging squad. All cases of violation of anti-ragging norms will be taken up by the anti-ragging Committee and punished according to the norms.

8. Grievance Redressal

The University has constituted a Grievance Redressal Cell to redress any genuine grievance students may have. Any student having a genuine grievance may make a representation to the Grievance Redressal Cell through his/her mentor. The representation should be accompanied by all relevant documents in support of the genuineness of the grievance.

9. School Association

9.1 The School Association is an association of the representatives of the various stake holders of the School – students, staff, faculty and management. It is the responsibility of the School Association to take charge of organizing most of the co-curricular activities such as the annual festivals, quizzes, debates, competitions and social events.

9.2 A male and a female student are elected by the students of each class as "class representatives" to represent them in the School Association. Class representatives are expected to be outstanding students who are academically competent and having qualities of leadership.

10. Participation in University Activities

10.1 In order to provide opportunities for the holistic development of the human person, a large number of co-curricular and extra-curricular activities are designed and implemented under the banner of the University Association and student clubs. Some of the most important activities are D'VERVE & BOSCOSIADE (intra- University sports and cultural festival during University Week), PRAJYUKTTAM (the inter-University technical festival). All students are expected to take part actively in such activities to showcase their talents, to develop leadership qualities and to gain the experience of working in groups.

10.2 **Training and Placement Activities:** The training and Placement Cell of DBCET has been incorporated with the objective of minimizing the gap between industry and academia and giving the students training and exposure so that they can capitalize on every opportunity for placement. It is the prime responsibility of the cell to look after all matters concerning 'Training to enhance employability' and 'guiding students for placement'. In the first two semesters, students are trained for communication skills development under the department of Humanities and Social Sciences, and personal development programmes under the department of campus ministry. From the third semester onwards, in every semester, students are given systematic training in aptitude tests, communication skills, group discussion, etc. They are also made to undergo mock HR and Technical Interviews. These activities of the training and placement cell find a place in the curriculum as Extra Academic Programmes (EAP) and all students are required to get a P grade for these activities by taking an active part in these activities regularly.

Other departments of the University offer customised services in training and placement of their students.

11. Free Time

Some hours without class may be available for some students during the day. Students are expected to use such 'free time' for visiting the library, meeting teachers and mentors, self- study, carrying out lab or project related activities, etc.

12. Faculty Performance Feedback

In order to improve the teaching and learning process in the University, students will be required to give feedback about the performance of their teachers from time-to-time. All students are expected to participate in the online feedback sessions concerning their teachers with sincerity and responsibility.

13. Mentoring

All students are assigned mentors from among the faculty members for their guidance. Directors of Schools in collaboration with the Heads of Departments will take care of assigning mentors. Mentors shall help the students to plan their courses of study, advise them on matters relating to academic performance and personality development, and help them to overcome various problems and difficulties faced by them. Although students should meet their mentors on a regular basis to get timely help, specific days have been set aside in the calendar for meeting mentors to ensure proper documentation of achievements, activities, shortcomings and problems faced by the students. Every student must meet the mentor during these days.

14. Interaction Meet with Parents

The University organises interaction meetings with parents once a year in which the parents are invited to interact with teachers and management to appraise themselves about the performance of their ward and also to offer their suggestions for the betterment of the institution. It is the responsibility of the students too to invite their parents to come and participate in the event and make the event meaningful.

MASTER OF TECHNOLOGY (M TECH) PROGRAMMES

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

PROGRAMME: MASTER OF TECHNOLOGY (MTECH) COMPUTER SCIENCE AND ENGINEERING

SEMESTER I						
Type	**Category**	**Course Code**	**Course Name**	**L-T-P**	**Credits**	**Page**
	Specialization: Data Science

SCHOOL OF TECHNOLOGY

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION

Creating a centre of excellence in teaching, training and research in the field of Computer Science and Engineering, to mould individuals into competent professionals to address local, national and global scientific, technological and social challenges.

MISSION

1. To create professionals sound in the theory and practice of Computer Science and Engineering by providing a learning ambience that promotes innovation and research-based activities.
2. To explore the frontiers of cutting-edge technologies through academia-industry collaboration and continuous learning to solve real-world challenges
3. To inculcate the spirit of self-sustainability through research, consultancy, and development activities.
4. To infuse ethical values, team spirit and a sense of social commitment in individuals for the betterment of the society through technology.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. To prepare the students to have a strong foundation in computer science engineering with impetus to higher studies, consultancy, research and development.
2. To prepare the students to be self-sustainable and proficient to meet the real world challenges ethically and responsibly, in service to socio-economic development of the society.
3. To inculcate the spirit of life-long learning, understanding, and applying new ideas and technologies to provide novel engineering solutions in the rapidly changing environment.

PROGRAM OUTCOMES (MTECH CSE)

PO 1: An understanding of the theoretical foundations and the limits of computing
PO 2: An ability to adapt existing models, techniques, algorithms, data structures, etc. for efficiently solving problems
PO 3: An ability to design, develop and evaluate new computer based systems for novel applications which meet the desired needs of industry and society
PO 4: Understanding and ability to use advanced computing techniques and tools
PO 5: An ability to undertake original research at the cutting edge of computer science & its related areas
PO 6: An ability to function effectively individually or as a part of a team to accomplish a stated goal
PO 7: An understanding of professional and ethical responsibility
PO 8: An ability to communicate effectively with a wide range of audience
PO 9: An ability to learn independently and engage in life¬long learning
PO 10: An understanding of the impact of IT related solutions in an economic, social and environment context.

PROGRAM SPECIFIC OUTCOME (PSO)

Specialisation: Data science

PSO 1: Apply the concept of theoretical knowledge of computer science, data structures, algorithms, mathematical computation and statistical formulae with respect to research methodology.
PSO 2: Develop programs that use data mining techniques on bigdata for clustering, classification and ranking using cloud infrastructure for research.

Specialisation: Internet of Things

PSO 1: Apply the concept of theoretical knowledge of computer science, data structures, algorithms, mathematical computation and statistical formulae with respect to research methodology.
PSO 2: Design and develop code for various sensor-based applications for different sectors that use data collected through IoT deployment.

Specialisation: Information Security

PSO 1: Apply the concept of theoretical knowledge of computer science, data structures, algorithms, mathematical computation and statistical formulae with respect to research methodology.

PSO 2: Design operational and strategic cyber-security strategies, policies, and solutions that use cyber security techniques, information assurance, digital forensics software/tools, encryption, machine learning, and secure coding for securing data.

Semester I												
Courses	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2
Advanced Data structure	M	H									H	M
Advanced Data structure Lab	M	M									H	M
Mathematical foundations of Computer Science	H										M	L
Research Methodology and IPR					M				L		H	
Specialisation: Data Science												
Machine Learning			M	H							M	H
Machine Learning Lab				H							M	H
Recommender System										M		
Data Storage Technologies and Networks					M						M	
Data Science		M		H								M
Distributed Systems			M									
Data Preparation and Analysis	M	M		M							H	M
Specialisation: Internet of Things												
Wireless Access Technology(CSMS0095)	M										M	H
Mobile application and services			H									H
Smart sensor and Internet of Things			M								H	H
Logical and functional programming				H								
English for Research Paper Writing								H			M	

Semester II												
Courses	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2
Advance Algorithms	M	H									M	H
Advance Algorithms Lab	M	M									M	
Soft Computing	M										M	
Mini Project	M	M	M	M	M	H	L	L	L		M	M
Constitution of India						M		M				L
Specialisation: Data Science												
Data Visualization			M								M	M
Data Visualisation Lab			M								M	M
Big Data Analytics				H						M		H
Data Warehouse and Data Mining	M			M								H
Data Security and Access Control				M			L			L	M	M
Web Analytics and Development				H							M	H
Knowledge Discovery	M	M									M	M

Natural Language Processing		M								L	M	L
Specialisation: Internet of Things												
Advanced machine learning			H	M							M	L
Network Security(CSNY0114)	M	H									M	M
Big Data Analytics				H						M	M	H
Sensor Network and Internet of Things	M	M	M									H
Data Visualization			M									M
Data Visualisation Lab			M									M
IoT Application and Communication Protocol					M						M	H
Specialisation: Information Security												
Data Encryption & Compression	M	H									H	M
Data Encryption & Compression Lab	M	H									M	
Steganography & Digital Watermarking	M		H								M	M
Information Theory & Coding	H	M									H	
Security Assessment and Risk Analysis					H					M	M	M
Secure Coding				M							M	
Biometrics				M							M	

Semester III												
Specialisation: Data Science												
Courses	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2
GPU Computing	M										M	M
Cloud Computing	M		H									M
Distributed Databases	M										M	H
Business Analytics				H								H
Dissertation Phase – I		M	M	M		H					M	M
Specialisation: Internet of Things												
IoT and Smart City			H	M							H	M
Emulation and simulation methodology			M	M							M	M
Cloud Computing	M		H									
Business Analytics				H							M	H
Dissertation Phase – I		M	M	M		H					M	M
Specialisation: Information Security												
Data Warehousing & Mining	H										H	L
Web Search & Information Retrieval				M							M	M
Database Security and Access Control	M			H								L
Business Analytics				H							H	M
Dissertation Phase – I		M	M	M		H					M	

Semester IV

Specialisation: Data Science												
Courses	PO1	PO2	PO3	PO4	PO5	PO6	PO 7	PO8	PO9	PO10	PSO1	PSO2
Project Phase II		M	M	M		H					M	H
Specialisation: Internet of Things												
Project Phase II		M	M	M		H					M	H

DETAILED SYLLABUS
THEORY COURSES

CSMF0086: MATHEMATICAL FOUNDATION OF COMPUTER SCIENCE

(3 credits)

Objectives

- To understand the mathematical fundamentals that are prerequisites for a variety of courses like Data mining, Network protocols, analysis of Web traffic, Computer security, Software engineering, Computer architecture, operating systems, distributed systems, Bioinformatics, Machine learning.
- To develop the understanding of the mathematical and logical basis to many modern techniques in information technology like machine learning, programming language design, and concurrency.
- To study various sampling and classification problems.

Course Outcomes

1. Define and Recall the basic notions of discrete and continuous probability (Remembering)
2. Explain the methods of statistical inference, and the role that sampling distributions play in those methods (Understanding).
3. Apply discrete mathematics in formal representation of various computing constructs. (Applying)
4. Analyse the recent trends in distribution functions in various interdisciplinary fields (Analysing)
5. Evaluating the basic notions of Mathematics in the application areas of Computer Science & Engineering (Evaluating).
6. Elaborate the importance of analytical problem solving approach in engineering problems (Creating).

Module I (7 hours)

Probability mass, density, and cumulative distribution functions, parametric families of distributions, Expected value, variance, conditional expectation, Applications of the univariate and multivariate Central Limit Theorem, Probabilistic inequalities, Markov chains

Module II (7 hours)

Random samples, sampling distributions of estimators, Methods of Moments and Maximum Likelihood

Module III (8 hours)

Statistical inference, Introduction to multivariate statistical models: regression and classification problems, principal components analysis, The problem of overfitting model assessment.

Module IV (9 hours)

Graph Theory: Isomorphism, Planargraphs, graphcolorings, Hamilton circuits and Eulercycles. Permutations and Combinations with and without repetition. Specialized techniques to solve combinatorial enumeration problems.

Module V (10 hours)

Computer science and engineering applications: Data mining, Network protocols, analysis of Web traffic, Computer security, Software engineering, Computer architecture, operating systems, distributed systems, Bioinformatics, Machine learning.

Module VI (4 hours)

Recent Trends in various distribution functions in the mathematical field of computer science for varying fields like bioinformatics, soft computing, and computer vision.

Suggested Readings

1. John Vince, Foundation Mathematics for Computer Science,Springer.
2. K. Trivedi. Probability and Statistics with Reliability, Queuing, and Computer Science Applications. Wiley.
3. M. Mitzenmacher and E. Upfal. Probability and Computing: Randomized Algorithms and Probabilistic Analysis.
4. Alan Tucker, Applied Combinatorics, Wiley

CSDT0087: ADVANCED DATA STRUCTURES

(3 credits)

Objectives:

The student should be able to choose appropriate data structures, understand the ADT/libraries, and use it to design algorithms for a specific problem.

- Students should be able to understand the necessary mathematical abstraction to solve problems.
- To familiarize students with advanced paradigms and data structure used to solve algorithmic problems.
- Students should be able to come up with analysis of efficiency and proof of correctness.

Course Outcomes

1. Recall the mathematical background and abstractions for analysis of algorithms. (Remembering)
2. Explain the implementation of symbol tables using hashing techniques. (Understanding)
3. Apply amortized analysis on data structures, including binary search trees, mergeable heaps, and disjoint sets. (Applying)
4. Develop and Analyse algorithms for red-black trees, B-trees and Splay trees. (Analysing)
5. Develop and evaluate algorithms for text processing applications.(Evaluating)
6. Choose suitable data structures and develop algorithms for computational geometry problems. (Creating)

Module I (7 Hours)

Dictionaries: Definition, Dictionary Abstract Data Type, Implementation of Dictionaries.
Hashing: Review of Hashing, Hash Function, Collision Resolution Techniques in Hashing, Separate Chaining, Open Addressing, Linear Probing, Quadratic Probing, Double Hashing, Rehashing, Extendible Hashing.

Module II (5 Hours)

Skip Lists: Need for Randomizing Data Structures and Algorithms, Search and Update Operations on Skip Lists, Probabilistic Analysis of Skip Lists, Deterministic Skip Lists

Module III (7 Hours)

Trees: Binary Search Trees, AVL Trees, Red Black Trees, 2-3 Trees, B-Trees, Splay Trees

Module IV (11 Hours)

Text Processing: Sting Operations, Brute-Force Pattern Matching, The Boyer Moore Algorithm, The Knuth- Morris-Pratt Algorithm, Standard Tries, Compressed Tries, Suffix Tries, The Huffman Coding Algorithm, The Longest Common, Subsequence Problem (LCS), Applying Dynamic Programming to the LCS Problem.

Module V (10 Hours)

Computational Geometry: One Dimensional Range Searching, Two Dimensional Range Searching, Constructing a Priority Search Tree, Searching a Priority Search Tree, Priority Range Trees, Quadtrees, k-D Trees.

Module VI (5 Hours)

Recent Trends in Hashing, Trees, and various computational geometry methods for efficiently solving the new evolving problem

Suggested Readings

1. Mark Allen Weiss, Data Structures and Algorithm Analysis in C++, 2nd Edition, Pearson,2004.
2. M T Goodrich, Roberto Tamassia, Algorithm Design, John Wiley,2002.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V	Module VI
CO 1	M	M				
CO 2	M	H	H			
CO 3	M	M	M	H		
CO 4				H	M	
CO 5				M	H	
CO 6					M	H

CSSC0088: DATA SCIENCE

(3 credits)

Objectives:

- Provide you with the knowledge and expertise to become a proficient data scientist.
- Demonstrate an understanding of statistics and machine learning concepts that are vital for data science
- Produce Python code to statistically analyse a dataset
- Critically evaluate data visualisations based on their design and use for communicating stories from data

Course Outcomes

1. Define the basics of the knowledge and expertise required to become a proficient data scientist. (Remembering)
2. Demonstrate an understanding of statistics and machine learning concepts that are vital for data science. (Understanding)
3. Develop Python code to statistically Analyse a dataset. (Applying)
4. Analyse data visualizations based on their design (Analysing)
5. Evaluate the use of communicating stories from data (Evaluating)
6. Design and develop analytical report (Creating)

Module I (5 Hours)

Introduction to core concepts and technologies: Introduction, Terminology, data science process, data science toolkit, Types of data, Example applications.

Module II (7 Hours)

Data collection and management: Introduction, Sources of data, Data collection and APIs, Exploring and fixing data, Data storage and management, Using multiple data sources

Module III (10 Hours)

Data analysis: Introduction, Terminology and concepts, Introduction to statistics, Central tendencies and distributions, Variance, Distribution properties and arithmetic, Samples/CLT, Basic machine learning algorithms, Linear regression, SVM, Naïve Bayes.

Module IV (10 Hours)

Data visualisation: Introduction, Types of data visualisation, Data for visualisation: Data types, Data encodings, Retinal variables, Mapping variables to encodings, Visual encodings.

Module V (6 Hours)

Applications of Data Science, Technologies for visualisation, Bokeh (Python)

Module VI (7 Hours)

Recent trends in various data collection and analysis techniques, various visualization techniques, application development methods used in data science.

Suggested Readings

1. Cathy O'Neil and Rachel Schutt. Doing Data Science, Straight Talk From The Frontline.O'Reilly.
2. Jure Leskovek, AnandRajaraman and Jeffrey Ullman. Mining of Massive Datasets. v2.1, Cambridge UniversityPress.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V	Module VI
CO 1	M	M				
CO 2	H	M	H			
CO 3			M	H		
CO 4				H	M	
CO 5				M	H	
CO 6					M	H

CSDI0089: DISTRIBUTED SYSTEMS

(3 Credits)

Objectives

To introduce the fundamental concepts and issues of managing a large volume of shared data in a parallel and distributed environment, and to provide insight into related research problems.

Course Outcomes

1. Recall the fundamental concepts and issues of managing a large volume of shared data in a parallel and distributed environment. (Remembering)
2. Explain the distributed system architecture and its application in various fields. (Understanding)
3. Apply network virtualization and analyse pros and cons.(Applying)
4. Analyse design trends in distributed systems. (Analysing)
5. Formulate and evaluate remote method invocation and objects. (Evaluating, Creating)

Module I (8 Hours)

Introduction: Distributed data processing; What is a DDBS; Advantages and disadvantages of DDBS; Problem areas; Overview of database and computer network concepts Distributed database management system architecture: Transparencies in a distributed DBMS; Distributed DBMS architecture; Global directory issues

Module II (10 Hours)
Distributed database design: Alternative design strategies; Distributed design issues; Fragmentation; Data allocation Semantics data control: View management; Data security; Semantic Integrity Control Query processing issues: Objectives of query processing; Characterization of query processors; Layers of query processing; Query decomposition; Localization of distributed data.

Module III (10 Hours)
Distributed query optimization: Factors governing query optimization; Centralized query optimization; Ordering of fragment queries; Distributed query optimization algorithms
Transaction management: The transaction concept; Goals of transaction management; Characteristics of transactions; Taxonomy of transaction models
Concurrency control: Concurrency control in centralized database systems; Concurrency control in DDBSs; Distributed concurrency control algorithms; Deadlock management

Module IV (7 Hours)
Reliability issues in DDBSs; Types of failures; Reliability techniques; Commit protocols; Recovery protocols

Module V (6 Hours)

Parallel database systems: Parallel architectures; parallel query processing and optimization; load balancing

Module VI (4 Hours)
Advanced topics: Mobile Databases, Distributed Object Management, Multi-databases

Suggested Readings
1. Principles of Distributed Database Systems, M.T. Ozsu and P. Valduriez, Prentice-Hall,1991.
2. Distributed Database Systems, D. Bell and J. Grimson, Addison-Wesley,1992.

Mapping of COs to Syllabus

CO 1	H	M				
CO 2	H	H	M			
CO 3		M	H	M		
CO 4				H	M	M
CO 5				M	H	

CSDP0090: DATA PREPARATION AND ANALYSIS
(3 Credits)

Objective
To prepare the data for analysis and develop meaningful Data Visualizations

Course Outcomes
1. List the data gathering and preparation techniques. (Remembering)
2. Explain the techniques as per utilisation. (Understanding)
3. Apply explorative analysis techniques. (Applying)
4. Analyse results after application of explorative analysis techniques. (Analysing)
5. Evaluate the data visualisation outcomes (Evaluating)
6. Formulate efficient techniques for data preparation and analysis. (Creating)

Module I (9 Hours)
Data Gathering and Preparation: Data formats, parsing and transformation, Scalability and real- time issues

Module II (10 Hours)

Data Cleaning: Consistency checking, Heterogeneous and missing data, Data Transformation And segmentation

Module III (12 Hours)
Exploratory Analysis: Descriptive and comparative statistics, Clustering and association, Hypothesis generation

Module IV (14 Hours)
Visualization: Designing visualizations, Time series, Geo located data, Correlations and connections, Hierarchies and networks, interactivity

Suggested Readings

1. Making sense of Data: A practical Guide to Exploratory Data Analysis and Data Mining, by Glenn J. Myatt

Mapping of COs to Syllabus

CO6				H

CSRS0091: RECOMMENDER SYSTEM

(3 Credits)

Objectives:

- To learn techniques for making recommendations, including non-personalized, content-based, and collaborative filtering
- To automate a variety of choice – making strategies with the goal of providing affordable, personal, and high- quality recommendations

Course Outcomes

1. Relate techniques for making recommendations, including non-personalized, content- based, and collaborative filtering (Remembering)
2. Illustrate automation of a variety of choice-making strategies with the goal of providing affordable, personal, and high-quality recommendations. (Understanding)
3. Apply techniques for making recommendations, including non-personalized, content- based, and collaborative filtering (Applying)
4. Analyse the choice-making strategies with the goal of providing affordable, personal, and high-quality recommendations. (Analysing)
5. Evaluate recommender systems on the basis of metrics such as accuracy, rank accuracy, diversity, product coverage, and serendipity. (Evaluating)
6. Design recommendation system for a particular application domain. (Creating)

Module I (8 Hours)

Introduction: Overview of Information Retrieval, Retrieval Models, Search and Filtering, Techniques: Relevance Feedback, User Profiles, Recommender system functions, Matrix operations, covariance matrices, Understanding ratings, Applications of recommendation systems, Issues with recommender system.

Module II (8 Hours)

Content-based Filtering: High level architecture of content-based systems, Advantages and drawbacks of content-based filtering, Item profiles, discovering features of documents, pre- processing and feature extraction, obtaining item features from tags, Methods for learning user profiles, Similarity based retrieval, Classification algorithms.

Module III (8 Hours)

Collaborative Filtering: User-based recommendation, Item-based recommendation, Model based approaches, Matrix factorization, Attacks on collaborative recommender systems.

Module IV (8 Hours)

Hybrid approaches: Opportunities for hybridization, Monolithic hybridization design: Feature combination, Feature augmentation, Parallelized hybridization design: Weighted, Switching, Mixed, Pipelined hybridization design: Cascade, Meta-level, Limitations of hybridization strategies

Module V (5 Hours)

Evaluating Recommender System: Introduction, General properties of evaluation research, Evaluation designs: Accuracy, Coverage, confidence, novelty, diversity, scalability, serendipity, Evaluation on historical datasets, Offline evaluations.

Module VI (8 Hours)

Types of Recommender Systems: Recommender systems in personalized web search, knowledge- based recommender system, social tagging recommender systems, Trust-centric recommendations, Group recommender systems.

Suggested Readings

1. Jannach D., Zanker M. and Fel Fering A., Recommender Systems: An Introduction, Cambridge University Press (2011),

1sted.
2. Charu C. Aggarwal, Recommender Systems: The Textbook, Springer (2016), 1sted.
3. Ricci F., Rokach L., Shapira D., Kantor B.P., Recommender Systems Handbook, Springer (2011),1sted.
4. Manouselis N., Drachsler H., Verbert K., Duval E., Recommender Systems for Learning, Springer (2013), 1st ed.

CSML0092: MACHINE LEARNING

(3 Credits)

Objectives:

- To learn the concept of how to learn patterns and concepts from data without being explicitly programmed in various IOT nodes.
- To design and analyse various machine learning algorithms and techniques with a modern outlook focusing on recent advances.
- Explore supervised and unsupervised learning paradigms of machine learning.
- To explore Deep learning techniques and various feature extraction strategies.

Course Outcomes

1. Relate how to learn patterns and concepts from data without being explicitly programmed in various IOT nodes.(Remembering)
2. Illustrate supervised and unsupervised learning paradigms of machine learning. (Understanding)
3. Design and analyse various machine learning algorithms and techniques with a modern outlook focusing on recent advances. (Applying, Analysing)
4. Examine the Deep learning techniques and various feature extraction strategies. (Analysing)
5. Evaluate the results and compare in a different environment to have best results. (Evaluating)
6. Create applications as per the requirements in a suitable environment. (Creating)

Module I (10Hours) Supervised Learning (Regression/Classification)

Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes, Linear models: Linear Regression, Logistic Regression, Generalized Linear Models, Support Vector Machines, non linearity and Kernel Methods, Beyond Binary Classification: Multi-class/Structured Outputs, Ranking

Module II (7 Hours) Unsupervised Learning

Clustering: K-means/Kernel K-means, Dimensionality Reduction: PCA and kernel PCA, Matrix Factorization and Matrix Completion, Generative Models (mixture models and latent factor models)

Module III (6 Hours)

Evaluating Machine Learning algorithms and Model Selection, Introduction to Statistical, Learning Theory, Ensemble Methods (Boosting, Bagging, Random Forests)

Module IV (8 Hours)

Sparse Modeling and Estimation, Modeling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning

Module V (8 Hours)

Scalable Machine Learning (Online and Distributed Learning) A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference

Module VI (6 Hours)

Recent trends in various learning techniques of machine learning and classification methods for IOT applications. Various models for IOT applications.

Suggested Readings

1. Kevin Murphy, Machine Learning: A Probabilistic Perspective, MIT Press,2012
2. Trevor Hastie, Robert Tibshirani, Jerome Friedman, The Elements of Statistical Learning, Springer 2009 (freely available online)
3. Christopher Bishop, Pattern Recognition and Machine Learning, Springer,2007.

CO 3			H			
CO 4				H	M	
CO 5			M	M	H	M
CO 6						H

CSTN0093: DATA STORAGE TECHNOLOGIES AND NETWORKS

(3 Credits)

Objective

To provide learners with a basic understanding of Enterprise Data Storage and Management Technologies

Course Outcomes

1. Recall the various data storage techniques (Remembering)
2. Explain the basic understanding of Enterprise Data Storage and Management Technologies (Understanding)
3. Experiment with Storage System Architecture (Applying)
4. Analyse the Virtualization Technologies and Storage Area Network (Analysing)
5. Evaluate and deploy an efficient technique for data storage. (Evaluating & Creating)

Module I (7 Hours)

Storage Media and Technologies – Magnetic, Optical and Semiconductor Media, Techniques for read/write Operations, Issues and Limitations.

Module II (8Hours)

Usage and Access – Positioning in the Memory Hierarchy, Hardware and Software, Design for Access, Performance issues.

Module III (7 Hours)

Large Storages – Hard Disks, Networked Attached Storage, Scalability issues, networking issues.

Module IV (8 Hours)

Storage Architecture- Storage Partitioning, Storage System Design, Caching, Legacy Systems.

Module V (10 Hours)

Storage Area Networks – Hardware and Software Components, Storage Clusters/Grids. Storage QoS– Performance, Reliability, and Security issues.

Module VI (5 Hours)

Recent Trends related to Copy data management, Erasure coding, and Software Defined Storage appliances.

Suggested Readings

1. The Complete Guide to Data Storage Technologies for Network- centric Computing Paperback– Import, Mar 1998 by Computer Technology Research Corporation
2. Data Storage Networking: Real World Skills for the CompTIA Storage by Nigel Poulton

CSWA0094: WIRELESS ACCESS TECHNOLOGIES

(3 credits)

Objectives:

- Overview of wireless access technologies, Fixed wireless access networks. Terminal mobility issues regarding wireless access to Internet
- Introduction to various Network topologies, hotspot networks, Communication links: point-to- point, point-to-multipoint, multipoint-to-multipoint.
- To provide an overview of Standards for most frequently used wireless access networks: WPAN, UWB, WLAN, WMAN, WWAN. Network services. Wireless access networks planning, design and installation.
- To get an insight of Wireless networking security issues, Wireless access network exploitation and management, software requirements, link quality control.

Course Outcomes

1. Recall basics of wireless access technologies, Fixed wireless access networks and terminal mobility issues regarding wireless access to the Internet (Remembering)
2. Explain the various Network topologies, hotspot networks and Communication links. (Understanding)
3. Explain the standards for most frequently used wireless access networks. (Understanding)
4. Planning, design and installation of Wireless access networks (Applying)
5. Analyse and get an insight of Wireless networking security issues, Wireless access network exploitation and management, software requirements and link quality control. (Analysing)
6. Estimate the requirements of accessories to establish a network (Evaluating)
7. Establish a network as per requirements. (Creating)

Module I (7 Hours)

Necessity for wireless terminals connectivity and networking. Wireless networking advantages and disadvantages, Overview of wireless access technologies. Narrowband and broadband networks, fixed and nomadic networks. Wireless local loop (WLL), Public Switched Telephone Network (PSTN) interfaces.

Module II (7 Hours)

Fixed wireless access (FWA) networks, frequency bands for different networks. Criterions for frequency bands allocation, Network topologies, hotspot networks. Communication links: point- to-point (PTP), point to multipoint (PMP), multipoint-to-multipoint (MTM).

Module III (9 Hours)

Standards for most frequently used wireless access networks: WPAN (802.15, Bluetooth, DECT, IrDA), UWB (Ultra-Wideband), WLAN (802.11, Wi-Fi, HIPERLAN, IrDA), WMAN (802.16, WiMAX, HIPERMAN, HIPERACCESS),
WWAN (802.20), Other technologies for broadband wireless access, Local Multipoint Distribution Service (LMDS), Multichannel Multipoint Distribution Service (MMDS). Ad Hoc networks, Network services. Services types based on carrier frequency and bandwidth.

Module IV (9 Hours)

Wireless access networks planning, design and installation. Services provision, legislative and technical aspects, Technical and economical factors for network planning: expenses, coverage, link capacity, network complexity and carrier-to-interference ratio (C/I). Base station or access point allocation. Base station and access point equipment. Terminal mobility issues regarding wireless access to the Internet. Wireless networking security issues.

Module V (8 Hours)

Example of laptop or handheld PC wireless connection in real environment. PC wireless interface equipment. Wireless access network exploitation and management, software requirements, link quality control. Business model, wireless network services market, market research and marketing, service providers, wireless data application service providers (WDASP) and their role on the public telecommunication services market, billing systems.

Module VI (8 Hours)

Recent trends in wireless networking and various access mechanisms, new standards of wireless communication.

Suggested Readings

1. M. P. Clark, Wireless Access Networks: Fixed Wireless Access and WLL networks -- Design and Operation, John Wiley & Sons, Chichester
2. D. H. Morais, Fixed Broadband Wireless Communications: Principles and Practical Applications, Prentice Hall, Upper Saddle River
3. R. Pandya, Introduction to WLLs: Application and Deployment for Fixed and Broadband Services, IEEE Press, Piscataway

CSMS0095: MOBILE APPLICATIONS AND SERVICES

(3 Credits)

Objectives

- This course presents the three main mobile platforms and their ecosystems, namely Android, iOS, and PhoneGap/WebOS.
- It explores emerging technologies and tools used to design and implement feature-rich mobile applications for smart phones and tablets.
- It also take into account both the technical constraints relative to storage capacity, processing capacity, display screen, communication interfaces, and the user interface, context and profile

Course Outcomes

1. Relate and explain the emerging technologies and tools used to design and implement feature-rich mobile applications for smartphones and tablets. (Remembering, Understanding)
2. Building the applications for different platform. (Applying)
3. Analyze the technical constraints relative to storage capacity, processing capacity, display screen, communication interfaces, and the user interface, context and profile. (Analyzing)
4. Evaluate the results and compare in different environment to have best outcome. (Evaluating)
5. Create applications as per requirements in suitable environment. (Creating)

Module I (7 Hours)

Introduction: Introduction to Mobile Computing, Introduction to Android Development Environment, Factors in Developing Mobile Applications, Mobile Software Engineering, Frameworks and Tools, Generic UI Development Android User.

Module II (7 Hours)

More on Uis: VUIs and Mobile Apps, Text-to-Speech Techniques, Designing the Right UI, Multichannel and Multimodal Uis, . Storing and Retrieving Data, Synchronization and Replication of Mobile Data, Getting the Model Right, Android Storing and Retrieving Data, Working with a Content Provider.

Module III (9 Hours)

Communications via Network and the Web: State Machine, Correct Communications Model, Android Networking and Web, Telephony Deciding Scope of an App, Wireless Connectivity and Mobile Apps, Android Telephony, Notifications and Alarms: Performance, Performance and Memory Management, Android Notifications and Alarms, Graphics, Performance and Multithreading, Graphics and UI Performance, Android Graphics.

Module IV (9 Hours)

Putting It All Together: Packaging and Deploying, Performance Best Practices, Android Field Service App, Location Mobility and Location Based Services Android Multimedia: Mobile Agents and Peer to-Peer Architecture, Android Multimedia.

Module V (8 Hours)

Platforms and Additional Issues: Development Process, Architecture, Design, Technology Selection, Mobile App Development Hurdles, Testing, Security and Hacking, Active Transactions, More on Security, Hacking Android.

Module VI (5 Hours)

Recent trends in Communication protocols for IOT nodes, mobile computing techniques in IOT, agents based communications in IOT.

Suggested Readings

1. Wei-Meng Lee, Beginning Android™ 4 Application Development, 2012 by John Wiley & Sons

CSSI0096: SMART SENSORS AND INTERNET OF THINGS

(3 Credits)

Objectives

- Able to understand the application areas of IOT.
- Able to realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks.
- Able to understand building blocks of Internet of Things and characteristics.

Course Outcomes

1. Explain the revolution of Internet in Mobile Devices, Cloud & Sensor Networks. (Understanding)
2. Identify the application areas of IOT. (Applying)
3. Examine the building blocks of Internet of Things and their characteristics. (Analyzing)
4. Evaluate the results and compare the performance in different environment. (Evaluating)
5. Construct IoT based products as per requirements for a suitable environment. (Creating)
6. List and explain the different sensors and illustrate their applications in smart devices. (Remembering)

Module I (7 Hours)

Environmental Parameters Measurement and Monitoring: Why measurement and monitoring are important, effects of adverse parameters for the living being for IOT.

Module II (7 Hours)

Sensors: Working Principles: Different types; Selection of Sensors for Practical Applications Introduction of Different Types of Sensors such as Capacitive, Resistive, Surface Acoustic Wave for Temperature, Pressure, Humidity, Toxic Gas etc.

Module III (9 Hours)

Important Characteristics of Sensors: Determination of the Characteristics Fractional order element: Constant Phase Impedance for sensing applications such as humidity, water quality, milk quality Impedance Spectroscopy: Equivalent circuit of Sensors and Modelling of Sensors Importance and Adoption of Smart Sensors.

Module IV (10 Hours)

Architecture of Smart Sensors: Important components, their features Fabrication of Sensor and Smart Sensor: Electrode fabrication: Screen printing, Photolithography, Electroplating Sensing film deposition: Physical and chemical Vapor, Anodization, Sol-gel

Module V (7 Hours)

Interface Electronic Circuit for Smart Sensors and Challenges for Interfacing the Smart Sensor, Usefulness of Silicon Technology in Smart Sensor and Future scope of research in smart sensor.

Module VI (5 Hours)

Recent trends in smart sensor for day to day life, evolving sensors and their architecture.

Suggested Readings

1. Yasuura, H., Kyung, C.-M., Liu, Y., Lin, Y.-L., Smart Sensors at the IoT Frontier, Springer International Publishing.
2. Kyung, C.-M., Yasuura, H., Liu, Y., Lin, Y.-L., Smart Sensors and Systems, Springer International Publishing

CO 6						H

CSLF0097: LOGIC AND FUNCTIONAL PROGRAMMING

(3 credits)

Objectives:

- To further the state of the art on the theoretical and practical aspects of developing declarative programming tools in logic programming for IOT data analysis.
- To introduce basics of functional programming and constraint logic programming for nodes in IOT.
- Introduction into formal concepts used as a theoretical basis for both paradigms, basic knowledge and practical experience.

Course Outcomes

1. Define sensors and relate their data collection technique with various criteria set by the users. (Remembering)
2. Explain the state of the art on the theoretical and practical aspects of developing declarative programming tools in logic programming for IOT data analysis. (Understanding)
3. Experiment with the basics of functional programming and constraint logic programming for nodes in IOT. (Applying)
4. Examine the formal concepts used as a theoretical basis for both paradigms, basic knowledge and practical experience. (Analysing)
5. Evaluate the results and compare in different environments to have best results. (Evaluating)
6. Create IoT based products as per requirements in a suitable environment. (Creating)

Module I (5 Hours)

Proposition Logic: Introduction of logic and Functional Paradigm, Propositional Concepts, Semantic Table , Problem Solving with Semantic Table.

Module II (7 Hours)

Natural Deduction and Axiomatic Propositional Logic: Rules of Natural Deduction, Sequent Calculus, Axiomatic Systems, Meta theorems, Important Properties of AL, Resolution, Resolving Arguments

Module III (7 Hours)

Introduction to Predicate Logic Objects, Predicates and Quantifiers, Functions, First Order Language, Quantifiers, Scope and Binding, Substitution, An Axiomatic System for First Order Predicate Logic, Soundness and Completeness, Axiomatic Semantic and Programming

Module IV (12 Hours)

Semantic Tableaux & Resolution in Predicate Logic: Semantic Tableaux, Instantiation Rules, Problem- solving in Predicate Logic, Normal forms, Herbrand Universes and H-interpretation, Resolution, Unification, Resolution as a computing Tool, Nondeterministic Programming, Incomplete Data Structure, Second Order Programming in Prolog, Logic Grammars: Definite Clause Grammar, A Grammar Interpreter.

Module V (9 Hours)

Lazy and Eager Evaluation strategies: Evaluation Strategies, Lazy Evaluation: Evaluation Order and strictness of function, Programming with lazy evaluation, Interactive functional program, Delay of unnecessary Computation, Infinite Data Structure, Eager Evaluation and Reasoning

Module VI (5 Hours)

Recent trends in logical and functional programming, predicate logics and various evaluation strategies.

Suggested Readings

1. John Kelly, “The Essence of Logic”, Prentice-Hall India.
2. Saroj Kaushik, “Logic and Prolog Programming”, New Age International Ltd

CSDF0098: DIGITAL FORENSICS

(3 Credits)

Course Outcomes

1. Recall the computer forensics related features of relevant legislations. (Remembering)
2. Explain the digital forensics related processes and procedures. (Understanding)

3. Utilize e-discovery tools to gather evidence from computers, mobiles, network, emails and the web. (Applying)
4. Analyse gathered forensics data to conduct an investigation. (Analysing)
5. Criticize digital forensics related case. (Evaluating)
6. Formulate plans for investigating real-world cyber-crimes. (Creating)

Module 1 (8 Hours)
Digital Forensics Science: Forensics science, computer forensics, and digital forensics.
Computer Crime: Criminalistics as it relates to the investigative process, analysis of cyber- criminalistics area, holistic approach to cyber-forensics

Module 2 (7 Hours)
Cyber Crime Scene Analysis: Discuss the various court orders etc., methods to search and seizure electronic evidence, retrieved and un-retrieved communications, Discuss the importance of understanding what court documents would be required for a criminal investigation.

Module 3 (8 Hours)
Evidence Management & Presentation: Create and manage shared folders using operating system, importance of the forensic mindset, define the workload of law enforcement, Explain what the normal case would look like, Define who should be notified of a crime, parts of gathering evidence, Define and apply probable cause.

Module 4 (10 Hours)
Computer Forensics: Prepare a case, Begin an investigation, Understand computer forensics workstations and software, Conduct an investigation, Complete a case, Critique a case, Network Forensics: open-source security tools for network forensic analysis, requirements for preservation of network data.

Module 5 (8 Hours)
Mobile Forensics: mobile forensics techniques, mobile forensics tools. Legal Aspects of Digital Forensics: IT Act 2000, amendment of IT Act 2008

Module 6 (4 Hours)
Recent trends in mobile forensic technique and methods to search and seizure electronic evidence

Suggested Readings
1. John Sammons, The Basics of Digital Forensics, Elsevier
2. John Vacca, Computer Forensics: Computer Crime Scene Investigation, Laxmi Publications

CO5			M		H	
CO6				M		H

CSEH0099: ETHICAL HACKING
(3 Credits)

Course Outcomes
1. Recall the features of various cyber laws related to ethical hacking and the code of ethics for ethical hacking. (Remembering)
2. Explain the terms penetration testing, vulnerability analysis, and malware analysis. (Understanding)
3. Utilize various tools to gather data for penetration testing, vulnerability analysis, and malware analysis. (Applying)
4. Analyse gathered data to discover vulnerabilities. (Analysing)
5. Assess the exploitability of vulnerabilities present in a software or hardware. (Evaluating)
6. Maximize a detected vulnerability to hack a computer, mobile or network. (Creating)

Module 1 (9 Hours)
Introduction to Ethical Disclosure: Ethics of Ethical Hacking, Ethical Hacking and the legal system, Proper and Ethical Disclosure

Module 2 (8 Hours)
Penetration Testing and Tools: Using Metasploit, Using Back Track Live CD Linux Distribution

Module 3 (9 Hours)
Vulnerability Analysis: Passive Analysis, Advanced Static Analysis with IDA Pro, Advanced Reverse Engineering

Module 4 (10 Hours)
Client-side browser exploits, Exploiting Windows Access Control Model for Local Elevation Privilege, Intelligent Fuzzing with Sulley, From Vulnerability to Exploit

Module 5 (5 Hours)
Malware Analysis: Collecting Malware and Initial Analysis, Hacking Malware

Module 6 (4 Hours)
Case study of vulnerability of cloud platforms and mobile platforms & devices.

Suggested Readings
1. Shon Harris, Allen Harper, Chris Eagle and Jonathan Ness, Gray Hat Hacking: The Ethical Hackers' Handbook, TMH Edition
2. Jon Erickson, Hacking: The Art of Exploitation, SPD

Mapping of COs to Syllabus

CO3		M		H		
CO4			H	M		
CO5			M		H	
CO6				M		H

CSID0100: INTRUSION DETECTION
(3 Credits)

Course Outcomes
1. Recall the fundamentals and history of Intrusion Detection in order to avoid common pitfalls in the creation and evaluation of new Intrusion Detection Systems. (Remembering)
2. Explain the different classes of attacks and anomaly detection systems and algorithms. (Understanding)
3. Identify and describe the parts of all intrusion detection systems and characterize new and emerging IDS technologies according to the basic capabilities all intrusion detection systems share. (Applying)
4. Compare alternative tools and approaches for Intrusion Detection through quantitative analysis to determine the best tool or approach to reduce risk from intrusion. (Analysing)
5. Evaluate the security posture of an enterprise. (Evaluating)
6. Formulate a plan to secure an enterprise network using an appropriate intrusion detection system. (Creating)

Module 1 (9 Hours)
The state of threats against computers, and networked systems-Overview of computer security solutions and why they fail-Vulnerability assessment, firewalls, VPN's -Overview of Intrusion Detection and Intrusion Prevention Network and Host-based IDS

Module 2 (8 Hours)
Classes of attacks - Network layer: scans, denial of service, penetration Application layer: software exploits, code injection-Human layer: identity theft, root access-Classes of attackers-Kids/hackers/ sop Hesitated groups-Automated: Drones, Worms, Viruses

Module 3 (8 Hours)
A General IDS model and taxonomy, Signature-based Solutions, Snort, Snort rules, Evaluation of IDS, Cost sensitive IDS

Module 4 (8 Hours)
Anomaly Detection Systems and Algorithms-Network Behavior Based Anomaly Detectors (rate based)-Host- based Anomaly Detectors-Software Vulnerabilities State transition, Immunology, Payload Anomaly Detection

Module 5 (8 Hours)
Attack trees and Correlation of alerts-Autopsy of Worms and Botnets-Malware Detection- Obfuscation, polymorphism-Document vectors

Module 6 (4 Hours)

Email/IM security issues-Viruses/Spam-From signatures to thumbprints to zero day detection- Insider Threat issues-Taxonomy-Masquerade and Impersonation Traitors, Decoys and Deception- Future: Collaborative Security

Suggested Readings

1. The Art of Computer Virus Research and Defense, Peter Szor, Symantec Press ISBN 0-32130545-3
2. Crimeware, Understanding New Attacks and Defenses, Markus Jakobsson and Zulfikar Ramzan, Symantec Press, ISBN: 978-0-321-50195-0 2008

CSMR0101: MALWARE ANALYSIS & REVERSE ENGINEERING

(3 Credits)

Course Outcomes

1. Recall an insight of fundamentals of malware analysis (Remembering)
2. Explain the concept of malware and reverse engineering. (Understanding)
3. Utilize tools and techniques of malware analysis (Applying)
4. Analyse data with respect to Malware and Kernel Debugging (Analysing)
5. Evaluate results from analysed data. (Evaluating)
6. Create an environment to protect malware. (Creating)

Module 1 (11 Hours)

Fundamentals of Malware Analysis (MA), Reverse Engineering Malware (REM)Methodology, Brief Overview of Malware analysis lab setup and configuration, Introduction to key MA tools and techniques, Behavioral Analysis vs. Code Analysis, Resources for Reverse-Engineering Malware (REM) Understanding Malware Threats, Malware indicators, Malware Classification, Examining Clam AV Signatures, Creating Custom Clam AV Databases, Using YARA to Detect Malware Capabilities, Creating a Controlled and Isolated Laboratory, Introduction to MA Sandboxes, Ubuntu, Zeltser's REMnux, SANS SIFT, Sandbox Setup and Configuration New Course Form, Routing TCP/IP Connections, Capturing and Analysing Network Traffic, Internet simulation using INet Sim, Using Deep Freeze to Preserve Physical Systems, Using FOG for Cloning and Imaging Disks, Using MySQL Database to Automate FOG Tasks, Introduction toPython ,Introduction to x86 Intel assembly language, Scanners: Virus Total, Jotti, and No Virus Thanks, Analysers: Threat Expert, CW Sandbox, Anubis, Joebox, Dynamic Analysis Tools: Process Monitor, Regshot, Handle Diff, Analysis Automation Tools: Virtual Box, VM Ware, Python , Other Analysis Tools

Module 2 (6 Hours)

Using TSK for Network and Host Discoveries, Using Microsoft Offline API to Registry Discoveries , Identifying Packers using PEiD, Registry Forensics with Reg Ripper Plugins:, Bypassing Poison Ivy's Locked Files, Bypassing Conficker's File System ACL Restrictions, Detecting Rogue PKI Certificates.

Module 3 (8 Hours)

Opening and Attaching to Processes, Configuration of JIT Debugger for Shell code Analysis, Controlling Program Execution, Setting and Catching Breakpoints, Debugging with Python Scripts and Py Commands, DLL Export Enumeration, Execution, and Debugging, debugging a VMware Workstation Guest (on Windows), Debugging a Parallels Guest (on Mac OS X). Introduction to Win Dbg Commands and Controls, Detecting Rootkits with Win Dbg Scripts, Kernel Debugging with IDA Pro.

Module 4 (8 Hours)

Memory Dumping with Moon Sols Windows Memory Toolkit, Accessing VM Memory Files Overview of Volatility, Investigating Processes in Memory Dumps, Code Injection and Extraction, Detecting and Capturing Suspicious Loaded DLLs, Finding Artifacts in Process Memory, Identifying Injected Code with Malfind and YARA.

Module 5 (7 Hours)

Using WHOIS to Research Domains, DNS Hostname Resolution, Querying Passive DNS, Checking DNS Records, Reverse IP Search New Course Form, Creating Static Maps, Creating Interactive Maps.

Module 6 (5 Hours)
Case study of Finding Artifacts in Process Memory, Identifying Injected Code with Malfind and YARA

Suggested Readings
1. Michael Sikorski, Andrew Honig "Practical Malware Analysis: The Hands-On Guide to DissectingMalicious Software" publisher William Pollock

CO1	H					
CO2		H				
CO3		M	H			M
CO4				H		
CO5			M		H	
CO6				M		H

CSSC0102: SECURE SOFTWARE DESIGN AND ENTERPRISE COMPUTING
(3 Credits)

Course Outcomes
1. Recall the various software vulnerabilities. (Remembering)
2. Explain the software process vulnerabilities for an organization. (Understanding)
3. Apply techniques for successfully implementing and supporting network services on an enterprise scale and heterogeneous systems environment (Applying)
4. Analyse and monitor resources consumption in a software. (Analysing)
5. Evaluate results by interrelating security and software development process. (Evaluating)
6. Create methodologies and tools to design and develop secure software containing minimum vulnerabilities and flaws. (Creating)

Module 1 (8 Hours)
Secure Software Design Identify software vulnerabilities and perform software security analysis, Master security programming practices, Master fundamental software security design concepts, Perform security testing and quality assurance

Module 2 (9 Hours)
Enterprise Application Development Describe the nature and scope of enterprise software applications, Design distributed N-tier software application, Research technologies available for the presentation, business and data tiers of an enterprise software application, Design and build a database using an enterprise database system, Develop components at the different tiers in an enterprise system, Design and develop a multi-tier solution to a problem using technologies used in enterprise system, Present software solution.

Module 3 (8 Hours)
Enterprise Systems Administration Design, implement and maintain a directory-based server infrastructure in a heterogeneous systems environment, Monitor server resource utilization for system reliability and availability, Install and administer network services (DNS/DHCP/Terminal Services/Clustering/Web/Email).

Module 4 (8 Hours)
Obtain the ability to manage and troubleshoot a network running multiple services, Understand the requirements of an enterprise network and how to go about managing them.

Module 5 (8 Hours)
Handle insecure exceptions and command/SQL injection, Defend web and mobile applications against attackers, software containing minimum vulnerabilities and flaws.

Module 6 (4 Hours)
Case study of DNS server, DHCP configuration and SQL injection attack.

Suggested Readings
1. Theodor Richardson, Charles N Thies, Secure Software Design, Jones & Bartlett
2. Kenneth R. van Wyk, Mark G. Graff, Dan S. Peters, Diana L. Burley, Enterprise Software Security, Addison Wesley

Mapping of COs to Syllabus

CO2		H				
CO3		M		H		M
CO4			H	M		
CO5			M		H	
CO6				M		H

CSAA0103: ADVANCED ALGORITHMS
(3 credits)

Course Outcomes
1. Recall different algorithms (Remembering)
2. Explain the applications of various algorithms (Understanding)
3. Apply computer algorithms for different purposes. (Applying)
4. Analyse the complexity/ performance of different algorithms. Categorize the different problems in various classes according to their complexity. (Analysing)
5. Evaluate the different problems in various classes according to their complexity. (Evaluation)
6. Elaborate the recent activities in the field of the advanced data structure. (Creating)

Module 1 (6 Hours)
Sorting: Review of various sorting algorithms, topological sorting
Graph: Definitions and Elementary Algorithms: Shortest path by BFS, shortest path in edge weighted case (Dijkstra's), depth-first search and computation of strongly connected, components, emphasis on correctness proof of the algorithm and time/space analysis, example of amortized analysis.

Module 2 (7 Hours)
Matroids: Introduction to greedy paradigm, algorithm to compute a maximum weight maximal independent set. Application to MST.
Graph Matching: Algorithm to compute maximum matching. Characterization of maximum matching by augmenting paths, Edmond's Blossom algorithm to compute augmenting paths.

Module 3 (8 Hours)
Flow-Networks: Maxflow-mincut theorem, Ford-Fulkerson Method to compute, maximum flow, Edmond-Karp maximum-flow algorithm.
Matrix Computations: Strassen's algorithm and introduction to divide and conquer paradigm, inverse of a triangular matrix, relation between the time complexities of basic matrix operations, LUP-decomposition.

Module 4 (9 Hours)
Shortest Path in Graphs: Floyd-Warshall algorithm and introduction to dynamic programming paradigm. More examples of dynamic programming.
Modulo Representation of integers/polynomials: Chinese Remainder Theorem, Conversion between base-representation and modulo-representation. Extension to polynomials. Application: Interpolation problem.
Discrete Fourier Transform (DFT): In complex field, DFT in modulo ring. Fast Fourier Transform algorithm.Schonhage-Strassen Integer Multiplication algorithm

Module 5 (10 Hours)
Linear Programming: Geometry of the feasibility region and Simplex algorithm NP-completeness: Examples, proof of NP-hardness and NP-completeness.
One or more of the following topics based on time and interest Approximation algorithms, Randomized Algorithms, Interior Point Method,Advanced Number Theoretic Algorithm

Module 6 (5 Hours)
Recent Trends in problem solving paradigms using recent searching and sorting techniques by applying recently proposed data structures.

Suggested Readings
1. "Introduction to Algorithms" by Cormen, Leiserson, Rivest, Stein.
2. "The Design and Analysis of Computer Algorithms" by Aho, Hopcroft, Ullman.
3. "Algorithm Design" by Kleinberg and Tardos.

CSSP0104: SOFT COMPUTING

(3 Credits)

Objectives:

- To introduce soft computing concepts and techniques and foster their abilities in designing appropriate techniques for a given scenario.
- To implement soft computing-based solutions for real-world problems.
- To give students knowledge of non-traditional technologies and fundamentals of artificial neural networks, fuzzy sets, fuzzy logic, genetic algorithms.
- To provide student hand-on experience on MATLAB to implement various strategies.

Course Outcomes

1. Identify and describe soft computing techniques and their roles in building intelligent machines. (Remembering & understanding)
2. Apply fuzzy logic and reasoning to handle uncertainty and solve various engineering problems. (Applying)
3. Analyse genetic algorithms to combinatorial optimization problems. (Analysing)
4. Evaluate and discuss solutions by various soft computing approaches for a given problem. (Evaluating and creating).

Module I (7 Hours)

Introduction to soft computing and neural networks: Evolution of Computing: Soft Computing Constituents, From Conventional AI to Computational Intelligence: Machine Learning Basics

Module II (8 Hours)

Fuzzy logic: Fuzzy Sets, Operations on Fuzzy Sets, Fuzzy Relations, Membership Functions: Fuzzy Rules and Fuzzy Reasoning, Fuzzy Inference Systems, Fuzzy Expert Systems, Fuzzy Decision Making.

Module III (8 Hours)

Neural networks: Machine Learning Using Neural Network, Adaptive Networks, Feed forward Networks, Supervised Learning Neural Networks, Radial Basis Function Networks: Reinforcement Learning, Unsupervised Learning Neural Networks, Adaptive Resonance architectures, Advances in Neural networks

Module IV (5 Hours)

Genetic algorithms: Introduction to Genetic Algorithms (GA), Applications of GA in Machine Learning: Machine Learning Approach to Knowledge Acquisition.

Module V (12 Hours)

Matlab/Python Lib: Introduction to Matlab/Python, Arrays and array operations, Functions and Files, Study of neural network toolbox and fuzzy logic toolbox, Simple implementation of Artificial Neural Network and Fuzzy Logic

Module VI (5 Hours)

Recent Trends in deep learning, various classifiers, neural networks and genetic algorithms. Implementation of recently proposed soft computing techniques.

Suggested Readings

1. Jyh Shing Roger Jang, Chuen Tsai Sun, Eiji Mizutani, Neuro Fuzzy and Soft Computing, Prentice: Hall of India,2003.
2. George J. Klirand Bo Yuan, Fuzzy Sets and Fuzzy Logic: Theory and Applications, Prentice Hall,1995.
3. MATLAB Toolkit Manual.

CSDV0105: DATA VISUALISATION

(3 Credits)

Objectives:

- familiarize students with the basic and advanced techniques of information visualization and scientific visualization,
- to learn key techniques of the visualization process
- a detailed view of visual perception, the visualized data and the actual visualization interaction and distorting techniques

Course Outcomes

1. Recall the basic and advanced techniques of information and scientific visualization. (Remembering)
2. Explain the key techniques of the visualization process. (Understanding)
3. Apply detailed view of visual perception, the visualized data and the actual visualization, interaction and distorting techniques. (Applying)
4. Analyse different visualization techniques and their applicability to different types of data. (Analysing)
5. Compare techniques for visual mapping, geographic data and collaborative visualization. (Evaluating)
6. Create a process to have an understanding of large-scale abstract data. (Creating)

Module I (8 Hours)

Introduction of visual perception, visual representation of data, Gestalt principles, information overloads.

Module II (8 Hours)

Creating visual representations, visualization reference model, visual mapping, visual analytics, Design of visualization applications.

Module III (8 Hours)

Classification of visualization systems, Interaction and visualization techniques misleading, Visualization of one, two and multi-dimensional data, text and text documents.

Module IV (10 Hours)

Visualization of groups, trees, graphs, clusters, networks, software, Metaphorical visualization

Module V (7 Hours)

Visualization of volumetric data, vector fields, processes and simulations, Visualization of maps, geographic information, GIS systems, collaborative visualizations, Evaluating visualizations

Module VI (4 Hours)

Recent trends in various perception techniques, various visualization techniques, data structures used in data visualization.

Suggested Readings

1. WARD, GRINSTEIN, KEIM, Interactive Data Visualization: Foundations, Techniques, and Applications. Natick: A K Peters, Ltd.
2. E. Tufte, The Visual Display of Quantitative Information, Graphics Press

CSBD0106: BIG DATA ANALYTICS

(3 Credits)

Objectives:

- Understand big data for business intelligence. Learn business case studies for big data analytics.
- Understand no sql big data management. Perform map-reduce analytics using Hadoop and related tools

Course Outcomes

1. Describe big data and use cases from selected business domains. (Remembering & Understanding)

2. Applying NoSQL big data management. (Applying)
3. Install, configure, and run Hadoop and HDFS and analyse the data. (Analysing)
4. Perform map-reduce analytics using Hadoop (Evaluating)
5. Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for creating big data analytics. (Creating)

Module I (8 Hours)
What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data, web analytics, big data and marketing, fraud and bigdata, risk and big data, credit risk management, big data and algorithmic trading, big data and healthcare, big data in medicine, advertising and big data, big data technologies, introduction to Hadoop, open source technologies, cloud and bigdata, mobile business intelligence, Crowd sourcing analytics, inter and trans firewall analytics.

Module II (8 Hours)
Introduction to NoSQL, aggregate data models, aggregates, key-value and document data models, relationships, graph databases, schema less databases, materialized views, distribution models, sharding, master-slave replication, peer peer replication, sharding and replication, consistency, relaxing consistency, version stamps, map-reduce, partitioning and combining, composing map- reduce calculations.

Module III (8 Hours)
Data format, Analysing data with Hadoop, scaling out, Hadoop streaming, Hadoop pipes, design of Hadoop distributed file system (HDFS), HDFS concepts, Java Interface, data flow, Hadoop I/O, data integrity, compression, serialization, Avro, file-based data structures

Module IV (8 Hours)

Map Reduce workflows, unit tests with MR Unit, test data and local tests, anatomy of Map Reduce jobrun, classic Map-reduce, YARN, failures in classic Map-reduce and YARN, job scheduling, shuffle and sort, task execution, MapReduce types, input formats, output formats

Module V (7 Hours)
Hbase, data model and implementations, Hbase clients, Hbase examples, praxis. Cassandra, Cassandra data model, Cassandra examples, Cassandra clients, Hadoop integration.

Module VI (6 Hours)
Pig, Grunt, pig data model, Pig Latin, developing and testing Pig Latin scripts. Hive, data types and file formats, HiveQL data definition, HiveQL data manipulation, HiveQL queries.

Suggested Readings

CSDD0107: DATA WAREHOUSING AND DATA MINING

(3 Credits)

Objectives:
- The objective of this course is to introduce data warehousing and mining techniques.
- Application of data mining in web mining, pattern matching and cluster analysis is included to aware students of broad data mining areas.

Course Outcomes

1. List the various data warehousing and data mining techniques. (Remembering)
2. Explain the principles, concepts, functions and various applications of data warehouse. (Understanding)
3. Apply data mining techniques for classification and prediction. (Applying)
4. Perform cluster, periodicity and social network analysis. (Analysing)
5. Evaluate and compare various data mining solutions for a given problem. (Evaluating)
6. Choose appropriate data warehousing and data mining techniques to build real-world systems. (Creating)

Module I (7 Hours)

Introduction to Data Warehousing; Data Mining: Mining frequent patterns, association and correlations; Sequential Pattern Mining concepts, primitives, scalable methods;

Module II (7 Hours)

Classification and prediction; Cluster Analysis – Types of Data in Cluster Analysis, Partitioning methods, Hierarchical Methods; Transactional Patterns and other temporal based frequent patterns,

Module III (8 Hours)

Mining Time series Data, Periodicity Analysis for time related sequence data, Trend analysis, Similarity search in Time-series analysis;

Module IV (9 Hours)

Mining Data Streams, Methodologies for stream data processing and stream data systems, Frequent pattern mining in stream data, Sequential Pattern Mining in Data Streams, Classification of dynamic data streams, Class Imbalance Problem; Graph Mining; Social Network Analysis;

Module V (9 Hours)

Web Mining, Mining the webpage layout structure, mining weblink structure, mining multimedia data on the web, Automatic classification of web documents and web usage mining; Distributed Data Mining.

Module VI (5 Hours)

Recent trends in Distributed Warehousing and Data Mining, Class Imbalance Problem; Graph Mining; Social Network Analysis

Suggested Readings

1. Jiawei Han and M Kamber, Data Mining Concepts and Techniques, Second Edition, Elsevier Publication,2011.
2. Vipin Kumar, Introduction to Data Mining - Pang-Ning Tan, Michael Steinbach, Addison Wesley,2006.

CSDS0108: DATA SECURITY AND ACCESS CONTROL

(3 Credits)

Objective

The objective of the course is to provide fundamentals of database security. Various access control techniques mechanisms were introduced along with application areas of access control techniques.

Course Outcomes

1. Define access control in the database. (Remembering)
2. Explain the purpose and fundamentals of access control. (Understanding)
3. Identify the capabilities and limitations of various access control mechanisms. (Applying)
4. Analyse the data, identify the problems, and choose the relevant models and algorithms to apply. (Analysing)
5. Assess the strengths and weaknesses of various access control models and to Analyse their behaviour. (Evaluating)
6. Design and develop access control mechanisms for enterprise IT infrastructures. (Creating)

Module I (7 Hours)

Introduction to Access Control, Purpose and fundamentals of access control, brief history, Policies of Access Control, Models of

Access Control, and Mechanisms, Discretionary Access Control (DAC), Non- Discretionary Access Control, Mandatory Access Control (MAC). Capabilities and Limitations of Access Control Mechanisms: Access Control List (ACL) and Limitations, Capability List and Limitations.

Module II (8 Hours)
Role-Based Access Control (RBAC) and Limitations, Core RBAC, Hierarchical RBAC, Statically Constrained RBAC, Dynamically Constrained RBAC, Limitations of RBAC. Comparing RBAC to DAC and MAC Access control policy.

Module III (9 Hours)
Biba Integrity model, Clark-Wilson model, Domain type enforcement model, mapping the enterprise view to the system view, Role hierarchies- inheritance schemes, hierarchy structures and inheritance forms, using SoD in real system Temporal Constraints in RBAC, MAC AND DAC. Integrating RBAC with enterprise IT infrastructures: RBAC for WFMSs, RBAC for UNIX and JAVA environments Case study: Multi-line Insurance Company

Module IV (10 Hours)
Smart Card based Information Security, Smart card operating system fundamentals, design and implantation principles, memory organization, smart card files, file management, atomic operation, smart card data transmission ATR, PPS Security techniques- user identification, smart card security, quality assurance and testing, smart card life cycle-5 phases, smart card terminals.

Module V (7 Hours)
Recent trends in Database security and access control mechanisms. Case study of Role-Based Access Control (RBAC) systems.

Module VI (4 Hours)
Recent Trends related to data security management, vulnerabilities in different DBMS.

Suggested Readings
1. Role Based Access Control: David F. Ferraiolo, D. Richard Kuhn, Ramaswamy Chandramouli.
2. http://www.smartcard.co.uk/tutorials/sct-itsc.pdf : Smart Card Tutorial.

CSWD0109: WEB ANALYTICS AND DEVELOPMENT
(3 Credits)

Objective
The course explores use of social network analysis to understand growing connectivity and complexity in the world ranging from small groups to WWW.

Course Outcomes
1. Relate with core research communities, publications, focused on web and social media analytics and research questions engaged. (Remembering)
2. Discuss clickstream data collection techniques, their impact on metrics, and their inherent limitations. (Understanding)
3. Identify and interpret commonly used web metrics (Applying)
4. Analyse and evaluate tasks and techniques used in web analytics. (Analysis/Evaluation)
5. Elaborate the resulting insights to support website design decisions, campaign optimisation, search analytics, etc. (Creating)

Module I (8 Hours)
Introduction – Social network and Web data and methods, Graph and Matrices, Basic measures for individuals and networks, Information Visualization

Module II (8 Hours)
Web Analytics tools: Click Stream Analysis, A/B testing, Online Surveys

Module III (8 Hours)

Web Search and Retrieval: Search Engine Optimization, Web Crawling and indexing, Ranking Algorithms, Web traffic models

Module IV (12 Hours)
Making Connection: Link Analysis, Random Graphs and Network evolution, Social Connects: Affiliation and identity

Module V (9 Hours)
Connection: Connection Search, Collapse, Robustness Social involvements and diffusion of innovation

Suggested Readings

1. Hansen, Derek, Ben Sheiderman, Marc Smith. 2011. Analysing Social Media Networks with NodeXL: Insights from a Connected World. Morgan Kaufmann,304.
2. Avinash Kaushik. 2009. Web Analytics 2.0: The Art of Online Accountability.
3. Easley, D. & Kleinberg, J. (2010). Networks, Crowds, and Markets: Reasoning About a Highly Connected World. New York: Cambridge University Press. http://www.cs.cornell.edu/home/kleinber/networks- book/

CO 5				M	H

CSKD0110: KNOWLEDGE DISCOVERY

(3 Credits)

Objective
To conduct case studies on real data mining examples

Course Outcomes

1. Recall the basic terminologies like learning goals, concept representation, decision tree, computational learning, artificial neural network, classification. (Remembering)
2. Explain different categories of machine learning and machine learning methodologies and illustrate the theory behind designing a learning model. (Understanding)
3. Compare efficiency of different learning algorithms, classify supervised and unsupervised learning goals. (Understanding)
4. Apply different learning algorithms for real life classification problem, sketch the structure of different learning model such as neural network, support vector machine, naive bayes etc. (Applying)
5. Analyse decision tree learning, computational learning, artificial neural network and instance-based learning and how one learning overcomes the drawback in the other. (Analysing)
6. Judge in terms of different complexity which algorithms betters in what situation. (Evaluating).
7. Create and design ensemble-based learning, propose new learning for optimizing real life problems. (Creating)

Module I (7 Hours)
Introduction KDD and Data Mining - Data Mining and Machine Learning, Machine Learning and Statistics, Generalization as Search, Data Mining and Ethics

Module II (8 Hours)
Knowledge Representation - Decision Tables, Decision Trees, Classification Rules, Association Rules, Rules involving Relations, Trees for Numeric Predictions, Neural Networks, Clusters

Module III (9 Hours)
Decision Trees - Divide and Conquer, Calculating Information, Entropy, Pruning, Estimating Error Rates, The C4.5 Algorithm Evaluation of Learned Results- Training and Testing, Predicting Performance, Cross-Validation

Module IV (8 Hours)
Classification Rules - Inferring Rudimentary Rules, Covering Algorithms for Rule Construction, Probability Measure for Rule Evaluation, Association Rules, Item Sets, Rule Efficiency

Module V (6 Hours)
Numeric Predictions - Linear Models for Classification and Numeric Predictions, Numeric Predictions with Regression Trees,

Evaluating Numeric Predictions

Module VI (7 Hours)
Artificial Neural Networks – Perceptrons, Multilayer Networks, The Backpropagation Algorithm Clustering - Iterative Distance-based Clustering, Incremental Clustering, The EM Algorithm

Suggested Readings
1. Data mining and knowledge discovery handbook by Maimon, Oded(etal.)
2. Data Cleansing: A Prelude to knowledge Discovery

CSNL0111: NATURAL LANGUAGE PROCESSING

(3 Credits)

Objectives
The goals for this course are to study:
- algorithms and methods for building computational models of natural language understanding, including syntactic analysis, semantic representations, discourse analysis, and statistical and corpus- based methods for text processing and knowledge acquisition
- issues involved in natural language understanding
- applications that can benefit from natural language processing, such as information extraction, question answering, machine translation, and spoken language understanding. By the end of the course, students will have a good understanding of and appreciation for natural language processing, and have the necessary skills to build natural language processing tools.

Course Outcomes
1. Recall algorithms and methods for building computational models of natural language processing (Remembering)
2. Explain syntactic analysis, semantic representations, discourse analysis, and statistical and corpus-based methods for text processing and knowledge acquisition. (Understanding)
3. Apply the methods of natural language processing. (Applying)
4. Analyse Issues involved in natural language processing. (Analysing)
5. Evaluate and generate applications that can benefit from natural language processing, such asinformation extraction, question answering, machine translation, and spoken language understanding. (Evaluating &creating)

Module I (10 hours)
Introduction to NLP, Knowledge in language processing, Representation and Understanding, Organization of NLP systems, Models and algorithms, Linguistic Essentials

Module II (15 hours)
Grammars and Parsing - Syntactic Processing: Collocations; Regular Expression and Automata; Morphology and Finite-State Transducers; N-grams; Word Classes and Part-of-Speech Tagging; Context-Free Grammars for English; Parsing with Context-Free Grammars: Top-down parsing, Bottom-up parsing; Features and Unification; Lexicalized and Probabilistic Parsing

Module III (10 hours)
Semantic processing: Representing Meaning; Semantic Analysis: Integrating semantic analysis to parsers, Semantic Grammars; Lexical Semantics; Word Sense Disambiguation and Information Retrieval: Selection- Restriction based disambiguation, Machine learning approaches; Dictionary based approaches, Information retrieval

Module IV (7 hours)
Pragmatics: Discourse, Dialogue and Conversational Agents: Dialogue acts, Automatic Interpretation of Dialogue acts; Natural Language Generation: Discourse Planning; Machine Translation: Direct Translations, Translation using Statistical techniques
Module V (3 hours)
NLP Applications and Tools: Sentiment Analysis, Text Summarization, Text Entailment, Machine Translation, Question

Answering, Cross Lingual Information Retrieval (CLIR), NLTK, WordNet

CSNI0112: SENSOR NETWORKS AND INTERNET OF THINGS

(3 credits)

Objectives

- The course gives an overview of various topics related to wireless sensor networks, which are expected to be the basis for the emerging internet-of-things.
- The course covers topics with relation to various sub disciplines of computer science such as hardware, operating systems, distributed systems, networking, security and databases.
- Able to understand wireless sensor network (WSN) specific issues such as localization, time synchronization, and topology control are addressed as well.

Course Outcomes

1. Define the function of sensors. (Remembering)
2. Explain how to connect sensors to the environment. (Understanding)
3. Organize and connect sensors together to have generated output. (Applying)
4. Examine hardware and software level consideration for IoT sensors. (Analyzing)
5. Evaluate results from data. (Evaluating)
6. Creating a real time application. (Creating)

Module I (7 Hours)

Introduction and Applications: smart transportation, smart cities, smart living, smart energy, smart health, and smart learning. Examples of research areas include for instance: Self-Adaptive Systems, Cyber Physical Systems, Systems of Systems, Software Architectures and Connectors, Software Interoperability, Big Data and Big Data Mining, Privacy and Security.

Module II (8 Hours)

IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views. Real-World Design Constraints- Introduction, Technical Design constraints hardware, Data representation and visualization, Interaction and remote control.

Module III (8 Hours)

Industrial Automation- Service-oriented architecture-based device integration, SOCRADES: realizing the enterprise integrated Web of Things, IMC-AESOP: from the Web of Things to the Cloud of Things, Commercial Building Automation- Introduction, Case study: phase one-commercial building automation today, Case study: phase two- commercial building automation in the future.

Module IV (10 Hours)

Hardware Platforms and Energy Consumption, Operating Systems, Time Synchronization, Positioning and Localization, Medium Access Control, Topology and Coverage Control, Routing: Transport Protocols, Network Security, Middleware, Databases.

Module V (7 Hours)

IOT Physical Devices & Endpoints: What is an IOT Device, Exemplary Device Board, Linux on Raspberry, Interface and Programming & IOT Device

Module VI (5 Hours)

Recent trends in sensor network and IOT architecture, Automation in Industrial aspect of IOT.

Suggested Readings

1. Mandler, B., Barja, J., MitreCampista, M.E., Cagá_ová, D., Chaouchi, H., Zeadally, S., Badra, M., Giordano, S., Fazio, M., Somov, A., Vieriu, R.-L., Internet of Things. IoT Infrastructures, Springer International Publishing.

CSAC0113: IOT APPLICATIONS AND COMMUNICATION PROTOCOLS
(3 credits)

Objectives

- Basic introduction of all the elements of IoT-Mechanical, Electronics/sensor platform, Wireless and wireline protocols, Mobile to Electronics integration, Mobile to enterprise integration.
- Open source/commercial electronics platform for IoT-Raspberry Pi, Arduino, Arm Mbed LPC.
- Open source /commercial enterprise cloud platform for IoT-Ayla, iO Bridge, Libellium, Axeda, Cisco fog cloud.

Course Outcomes

1. Define IoT and respective protocols. (Remembering)
2. Explain the functions of different layers of communication protocol. (Understanding)
3. Identify the different functions with respect to different layers. (Applying)
4. Distinguish protocol and functionalities. (Analyzing)
5. Evaluate the sensor collected data in connection to communication layer. (Evaluating)
6. Create applications using different communication protocol. (Creating)

Module I (7 Hours)
Basic function and architecture of a sensor — sensor body, sensor mechanism, sensor calibration, sensor maintenance, cost and pricing structure, legacy and modern sensor network. Development of sensor electronics — IoTvs legacy, and open-source vs traditional PCB design style Development of sensor communication protocols, Protocols: Modbus, relay, Zigbee, Zwave, X10, Bluetooth, ANT, etc. Business driver for sensor deployment — FDA/EPA regulation, fraud/ tempering detection, supervision, quality control and process management Different kind of calibration Techniques: manual, automation, infield, primary and secondary calibration — and their implication in IoT Powering options for sensors: battery, solar, Witricity, Mobile and PoE.

Module II (9 Hours)
Zigbee and Zwave — advantage of low power mesh networking. Long distance Zigbee. Introduction to different Zigbee chips. Bluetooth/BLE: Low power vs high power, speed of detection, class of BLE. Introduction of Bluetooth vendors & their review. Wireless protocols such as Piconet and packet structure for BLE and Zigbee Other long distance RF communication link. LOS vs NLOS links, Capacity and throughput calculation Application issues in wireless protocols: power consumption, reliability, PER, QoS, LOS.

Module III (9 Hours)
PCB vs FPGA vs ASIC design Prototyping electronics vs Production electronics, QA certificate for IoT CE/CSA/UL/IEC/RoHS/IP65 Basic introduction of multi-layer PCB design and its workflow Electronics reliability-basic concept of FIT and early mortality rate Environmental and reliability testing-basic concepts Basic Open source platforms: Arduino, Raspberry Pi, Beaglebone.

Module IV (7 Hours)
Introduction to Mobile app platform for IoT: Protocol stack of Mobile app for IoT, Mobile to server integration, iBeacon in IoS, Window Azure, Linkafy Mobile platform for IoT, Axeda, Xively.

Module V (8 Hours)
Database implementation for IoT : Cloud based IoT platforms, SQL vsNoSQL, Open sourced vs. Licensed Database, Available M2M cloud platform, AxedaXively, Omega NovoTech, Ayla Libellium, CISCO M2M platform, AT &T M2M platform, Google M2M platform.

Module VI (5 Hours)
Recent trends in home automation, IOT-locks, Energy optimization in home

Suggested Readings

1. Olivier Hersent, David Boswarthick, Omar Elloumi, The Internet of Things: Key Applications and Protocols, Wiley-Blackwell.

CSNY0114: NETWORK SECURITY
(3 credits)

Objectives:
- To learn the basics of security and various types of security issues.
- To study different cryptography techniques available and various security attacks.
- Explore network security and how they are implemented in real world.
- To get an insight of various issues of Web security and biometric authentication.

Course Outcomes
1. Recall the basics of security and various types of security issues. (Remembering)
2. Explain the different cryptography techniques available and various security attacks. (Understanding)
3. Apply network security and how they are implemented in the real world. (Applying)
4. Analyse available biometric techniques and how they are used in today's world. (Analysing)
5. Evaluate the security issues on the web and how to tackle them. (Evaluating)
6. Elaborate the various issues of web security and biometric authentication. (Creating)

Module I (6 Hours)
Data security: Review of cryptography. Examples RSA, DES, ECC.

Module II (7 Hours)
Authentication, non-repudiation and message integrity. Digital signatures and certificates. Protocols using cryptography (example Kerberos). Attacks on protocols

Module III (9 Hours)
Network security: Firewalls, Proxy-Servers, Network intrusion detection. Transport security: Mechanisms of TLS, SSL, IPSec.

Module IV (10 Hours)
Web security – SQL injection, XSS, etc. Software security and buffer overflow. Malware types and case studies. Access Control, firewalls and host/network intrusion detection.

Module V (8 Hours)
Other topics: Biometric authentication, Secure E-Commerce (ex. SET), Smart Cards, Security in Wireless Communication.

Module VI (5 Hours)
Recent trends in IOT security, IDS and Biometric.

Suggested Readings
1. W. R. Cheswick and S. M. Bellovin. Firewalls and Internet Security. Addison Wesley, 1994.
2. W. Stallings. Cryptography and Network Security. Prentice Hall, 1999.
3. Schneier. Applied Cryptography. Wiley, 1999

CSAM0115: ADVANCED MACHINE LEARNING
(3 credits)

Objectives:

- To introduce key concepts in pattern recognition and machine learning; including specific algorithms for classification, regression, clustering and probabilistic modeling.
- To give a broad view of the general issues arising in the application of algorithms to analysing data, common terms used, and common errors made if applied incorrectly.
- To demonstrate a toolbox of techniques that can be immediately applied to real world problems, or used as a basis for future research into the topic

Course Outcomes

1. Recall and explain the key concepts in pattern recognition and machine learning; including specific algorithms for classification, regression, clustering and probabilistic modeling. (Remembering, Understanding)
2. Explain the general issues arising in the application of algorithms, commonly used terms, and the common errors made if applied incorrectly. (Understanding)
3. Demonstrate a toolbox of techniques that can be immediately applied to real world problems, or used as a basis for future research into the topic. (Applying)
4. Analyse the Kernel methods for handling high dimensional and non-linear patterns. (Analysing)
5. Evaluate the State-of-the-art algorithms such as Support Vector Machines and Bayesian networks.
6. (Evaluating)
7. Solve real-world machine learning tasks: from data to inference. (Creating)

Module I (7 Hours)

Key concepts, Supervised/Unsupervised Learning, Loss functions and generalization, Probability Theory, Parametric vs Non-parametric methods, Elements of Computational Learning Theory Ensemble Learning, Bagging, Boosting, Random Forest

Module II (7 Hours)

Kernel Methods for non-linear data, Support Vector Machines, Kernel Ridge Regression, Structure Kernels, K ernel PCA, Latent Semantic Analysis

Module III (8 Hours)

Bayesian methods for using prior knowledge and data, Bayesian inference, Bayesian Belief Networks and Graphical models, Probabilistic Latent Semantic Analysis, The Expectation-Maximisation (EM) algorithm, Gaussian Processes

Module IV (9 Hours)

Dimensionality Reduction - CCA, LDA, ICA, NMF – Canonical Variates - Feature Selection vs Feature Extraction

Module V (9 Hours)

Filter Methods - Sub-space approaches - Embedded methods, Low-Rank approaches - Recommender Systems Application areas - Security - Business - Scientific

Module VI (5 Hours)

Recent trends in supervised and unsupervised learning algorithm, dimensional reducibility, feature selection and extraction

Suggested Readings

1. Christopher M. Bishop, Pattern Recognition and Machine Learning.
2. John Shawe -Taylor and Nello Cristianini, Kernel Methods for Pattern Analysis

CSEC0116: DATA ENCRYPTION AND COMPRESSION

(3 Credits)

Course Outcomes

1. List the different encryption techniques adopted in both traditional and modern cryptographic mechanisms. (Remembering)
2. Infer the logic adopted in different cryptographic algorithms, and their countermeasures.
3. (Understanding)

4. Apply the concepts gathered from the fundamentals of cryptographic approaches in solving related problems. (Applying)
5. Analyse the working of the different encryption and compression algorithms. (Analysing)
6. Compare and contrast the working of different data encryption and compression mechanisms.
7. (Evaluating)
8. Choose appropriate encryption and compression algorithms to build real-world systems. (Creating)

Module 1 (8 Hours)
Introduction to Security: Need for security, Security approaches, Principles of security, Types of attacks.
Encryption Techniques: Plaintext, Cipher text, Substitution Vs Transposition techniques, Encryption & Decryption, Types of attacks, Key range & Size.

Module 2 (10 Hours)
Symmetric & Asymmetric Key Cryptography: Algorithm types & Modes, DES, IDEA, Differential & Linear Cryptanalysis, RSA, Symmetric &Asymmetric key together, Digital signature, Knapsack algorithm. User Authentication Mechanism: Authentication basics, Passwords, Authentication tokens, Certificate based & Biometric authentication, Firewall.

Module 3 (9 Hours)
Case Studies of Cryptography: Denial of service attacks, IP spoofing attacks, Secure inter branch payment transactions, Conventional Encryption and Message Confidentiality, Conventional Encryption Principles, Conventional Encryption Algorithms, Location of Encryption Devices, Key Distribution. Public Key Cryptography and Message Authentication: Approaches to Message Authentication, SHA-1, MD5, Public-Key Cryptography Principles, RSA, Digital, Signatures, Key Management.

Module 4 (7 Hours)
Introduction: Need for data compression, Fundamental concept of data compression coding, Communication model, Compression ratio, Requirements of data compression, Classification. Methods of Data Compression: Data compression-- Loss less and Lossy.

Module 5 (10 Hours)
Entropy encoding-- Repetitive character encoding, run length encoding, Zero/Blank encoding; Statistical encoding-- Huffman, Arithmetic & Lempel-Zivcoding; Source encoding-- Vector quantization (Simple vector quantization & with error term); Differential encoding—Predictive coding, Differential pulse code modulation, Delta modulation, Adaptive differential pulse code modulation; Transform based coding: Discrete cosine transform JPEG standards; Fractal compression

Module 6 (4 Hours)
Recent trends in encryption and data compression techniques.

Suggested Readings
1. Cryptography and Network Security by B. Forouzan, McGraw-Hill.
2. The Data Compression Book by Nelson, BPB.
3. Cryptography & Network Security by Atul Kahate, TMH.

CSSW0117: STEGANOGRAPHY AND DIGITAL WATERMARKING

(3 Credits)

Course Outcomes
1. Define the terms Steganography, Steganalysis and Digital Watermarking. (Remembering)
2. Explain the various techniques for Steganography, Steganalysis and Digital Watermarking.
3. (Understanding)
4. Utilize various tools available to perform Steganography. (Applying)
5. Analyse data to detect and extract hidden information. (Analysing)
6. Defend against steganography and digital watermarking attacks. (Evaluating)
7. Develop frameworks for secure communication. (Creating)

Module 1 (8 Hours)
Steganography: Overview, History, Methods for hiding (text, images, audio, video, speech etc.), Issues: Security, Capacity and Imperceptibility, Steganalysis: Active and Malicious Attackers, Active and passive steganalysis.

Module 2 (10 Hours)
Frameworks for secret communication (pure Steganography, secret key, public key steganography), Steganography algorithms (adaptive and non-adaptive),

Module 3 (7 Hours)
Steganography techniques: Substitution systems, Spatial Domain, transform domain techniques, spread spectrum, Statistical steganography, Cover Generation and cover selection, Tools: EzStego, FFEn code, hide 4PGP, Hide and Seek, S Tools etc.)

Module 4 (5 Hours)
Detection, Distortion, Techniques: LSB Embedding, LSB Steganalysis using primary sets, Texture based

Module 5 (10 Hours)
Digital Watermarking: Introduction, Difference between Watermarking and steganography, History,
Classification (Characteristics and Applications), Types and techniques (Spatial-domain, Frequency- domain, and Vector quantization-based watermarking), Attacks and Tools (Attacks by Filtering, Re-modulation, Distortion, Geometric Compression, Linear Compression etc.), Watermark security & authentication.

Module 6 (5 Hours)
Recent trends in Steganography and digital watermarking techniques. Case study of LSB Embedding, LSBSteganalysis using primary sets.

Suggested Readings
1. Peter Wayner, "Disappearing Cryptography–Information Hiding: Steganography & Watermarking", Morgan Kaufmann Publishers, New York, 2002.
2. Ingemar J. Cox, Matthew L. Miller, Jeffrey A. Bloom, Jessica Fridrich, Ton Kalker, "Digital Watermarking and Steganography", Morgan Kaufmann Publishers, New York, 2008.
3. Information Hiding: Steganography and Watermarking-Attacks and Countermeasures by Neil F. Johnson, Zoran Duric, Sushil Jajodia.

CSIT0118: INFORMATION THEORY AND CODING
(3 Credits)

Course Outcomes
1. List the various coding and compression techniques. (Remembering)
2. Explain the working of lossless and lossy compression techniques. (Understanding)
3. Apply encoding techniques to encode data and perform error detection and correction.
4. (Applying)
5. Compare the various coding and compression techniques for text, video and image. (Analysing)
6. Measure information in terms of probability and entropy. (Evaluating)
7. Combine compression and coding techniques to build end-to-end systems. (Creating)

Module 1 (8 Hours)
Information and entropy information measures, Shannon's concept of Information. Channel coding, channel mutual information capacity (BW)

Module 2 (10 Hours)
Theorem for discrete memory less channel, information capacity theorem, Error Detecting and error correcting codes

Module 3 (8 Hours)
Types of codes: block codes, Hamming and Lee metrics, description of linear block codes, parity check Codes, cyclic code, Masking techniques

Module 4 (5 Hours)
Compression: loss less and lossy, Huffman codes, LZW algorithm, Binary Image compression schemes, run length encoding, CCITT group 3 1-DCompression, CCITT group 3 2D compression, CCITT group 42DCompression.

Module 5 (10 Hours)
Convolutional codes, sequential decoding. Video image Compression: CITT H261 Video coding algorithm, audio (speech) Compression. Cryptography and cipher.

Module 6 (4 Hours)
Case study of CCITT group 3 1-DCompression, CCITT group 3 2Dcompression.

Suggested Readings
1. Fundamentals in information theory and coding, Monica Borda, Springer.
2. Communication Systems: Analog and digital, Singh and Sapre, Tata McGraw Hill. Multimedia Communications Fred Halsall.
3. Information Theory, Coding and Cryptography R Bose.
4. Multimedia system Design Prabhat K Andleigh and Kiran Thakrar.

CSRA0119: SECURITY ASSESSMENT AND RISK ANALYSIS

(3 Credits)

Course Outcomes
1. List and define the various Contingency Planning components. (Remembering)
2. Explain the escalation process from incident to disaster in case of security disaster. (Understanding)
3. Plan countermeasures to threats. (Applying)
4. Analyse risks. (Analysing)
5. Recommend contingency strategies including data backup and recovery and alternate site selection for business resumption planning. (Evaluating)
6. Design Incident Response Plan, Disaster Recovery Plan and Business Continuity Plan for sustained organizational operations. (Creating)

Module 1 (8 Hours)
SECURITY BASICS: Information Security (INFOSEC) Overview: critical information characteristics – availability information states – processing security counter measures education, training and awareness, critical information characteristics – confidentiality critical information characteristics–integrity, information states – storage, information states – transmission, security countermeasures -policy, procedures and practices, threats, vulnerabilities.

Module 2 (11 Hours)
Threats to and Vulnerabilities of Systems: definition of terms (e.g., threats, vulnerabilities, risk), major categories of threats (e.g., fraud, Hostile Intelligence Service (HOIS), malicious logic, hackers, environmental and technological hazards, disgruntled employees, careless employees, HUMINT, and monitoring), threat impact areas, Countermeasures: assessments (e.g., surveys, inspections), Concepts of Risk Management: consequences (e.g., corrective action, risk assessment),cost/ benefit analysis of controls, implementation of cost effective controls, monitoring the efficiency and effectiveness of controls (e.g., unauthorized or inadvertent disclosure of information), threat and vulnerability assessment

Module 3 (8 Hours)

Security Planning: directives and procedures for policy mechanism, Risk Management: acceptance of risk(accreditation), corrective actions information identification, risk analysis and/or vulnerability assessment components, risk analysis results evaluation, roles and responsibilities of all the players in the risk analysis process, Contingency Planning/Disaster Recovery: agency response procedures and continuity of operations, contingency plan components, determination of backup requirements, development of plans for recovery actions after a disruptive event, development of procedures for off-site processing, emergency destruction procedures, guidelines for determining critical and essential workload, team member responsibilities in responding to an emergency situation

Module 4 (7 Hours)
Policies and Procedures Physical Security Measures: alarms, building construction, cabling, communications centre, environmental controls (humidity and air conditioning), filtered power, physical access control systems (key cards, locks and alarms) Personnel Security Practices and Procedures: access authorization/ verification(need-to-know), contractors, employee clearances, position sensitivity, security training and awareness, systems maintenance personnel, Administrative
Security Procedural Controls: attribution, copyright protection and licensing, Auditing and Monitoring: conducting security reviews, effectiveness of security programs, investigation of security breaches, privacy review of accountability controls, review of audit trails and logs

Module 5 (8 Hours)
Operations Security (OPSEC): OPSEC surveys/OPSEC planning INFOSEC: computer security – audit, Cryptography-encryption (e.g., point-to-point network, link), cryptography-key management (to include electronic key), cryptography-strength (e.g., complexity, secrecy, characteristics of the key)

Module 6 (3 Hours)
Case study of threat and vulnerability assessment

Suggested Readings
1. Principles of Incident Response and Disaster Recovery, Whitman &Mattord, Course Technology ISBN:141883663X
2. (Web link) http://www.cnss.gov/Assets/pdf/nstissi_4011.pdf

Mapping of COs to Syllabus:

Course Outcomes	Module 1	Module 2	Module 3	Module 4	Module 5	Module 6
CO 1	H	M	L			
CO 2	M	H	M	M		
CO 3		M	H	M	L	
CO 4			M	H	M	
CO 5			L	M	H	M
CO 6				L	M	H

CSCD0120: SECURE CODING
(3 Credits)

Course Outcomes
1. Recall the basics of secure programming. (Remembering)
2. Explain the most frequent programming errors leading to software vulnerabilities. (Understanding)
3. Identify security problems in software. (Applying)
4. Compare the solutions for handling security problems in software. (Analysing)
5. Assess the vulnerabilities present in software. (Evaluating)
6. Design and develop secure programs. (Creating)

Module 1 (10 Hours)
Introduction to software security, managing software security risk, selecting software development Technologies, An open source and closed source, Guiding Principles for software security, Auditing software, Buffet overflows, Access control, Race conditions, Input validation, Password authentication

Module 2 (6Hours)
Anti-tampering, protecting against denial-of-service attack, copy protection schemes, Client-side security, Database security, applied cryptography, Randomness and determinism

Module 3 (8 Hours)
Buffer Overrun, Format String Problems, Integer Overflow, and Software Security Fundamentals SQL Injection, Command Injection, Failure to Handle Errors, and Security Touch points

Module 4 (8 Hours)
Cross Site Scripting, Magic URLs, Weak Passwords, Failing to Protect Data, Weak random numbers, improper use of cryptography

Module 5 (8 Hours)
Information Leakage, Race Conditions, Poor usability, failing to protect network traffic, improper use of PKI, trusting network name resolution

Module 6 (5 Hours)
Case study of Cross Site Scripting, Magic URLs, Weak Passwords Buffer Overflows, Access control, Race conditions

Suggested Readings
1. J. Viega, M. Messier. Secure Programming Cookbook, O'Reilly.
2. M. Howard, D. LeBlanc. Writing Secure Code, Microsoft
3. J. Viega, G. McGraw. Building Secure Software, Addison Wesley

Mapping of COs to Syllabus:

CSBI0121: BIOMETRICS
(3 Credits)

Course Outcomes
1. Define biometrics. (Remembering)
2. Explain the various modules constituting a biometric system. (Understanding)
3. Identify Biometric System Vulnerabilities. (Applying)
4. Compare the various Biometric technologies. (Analysing)
5. Evaluate the challenges and limitations associated with biometrics. (Evaluating)
6. Design security systems incorporating biometrics. (Creating)

Module 1 (7 Hours)
Introduction and Definitions of biometrics, Traditional authenticated methods and technologies.

Module 2 (10 Hours)
Biometric technologies: Fingerprint, Face, Iris, Hand Geometry, Gait Recognition, Ear, Voice, Palm print, On-Line Signature Verification, 3D Face Recognition, Dental Identification and DNA.

Module 3 (6 Hours)
The Law and the use of multi biometrics systems.

Module 4 (11 Hours)
Statistical measurement of Biometric.Biometrics in Government Sector andCommercial Sector.

Module 5 (9 Hours)
Case Studies of biometric system, Biometric Transaction. Biometric System Vulnerabilities.

Module 6 (5 Hours)
Recent trends in Biometric technologies and applications in various domains.Casestudy of 3D face recognition and DNA matching.

Suggested Readings
1. Biometrics for network security, Paul Reid, Hand book of Pearson
2. D. Maltoni, D. Maio, A. K. Jain, and S. Prabhakar, Handbook of Fingerprint Recognition,Springer Verlag,2003.
3. A. K. Jain, R. Bolle, S. Pankanti (Eds.), BIOMETRICS: Personal Identification in NetworkedSociety, Kluwer Academic Publishers, 1999.
4. J. Wayman, A.K. Jain, D. Maltoni, and D. Maio (Eds.), Biometric Systems: Technology,Design and Performance Evaluation, Springer, 2004.

5. Anil Jain, Arun A. Ross, Karthik Nanda Kumar, Introduction to biometric, Springer, 2011.
6. Biometric Systems: Technology, Design and Performance Evaluation, J. Wayman, A.K. Jain, D. Maltoni, and D. Maio.

CO 6					M	H

CSFA0122: FORMAL LANGUAGE AND AUTOMATA THEORY

(3 Credits-45 Hour)

Course Outcomes

1. Define basic terminology like Deterministic and Non deterministic automata, Pushdown Automata, Parse Tree, Regular Languages, Turing Machines etc. (Remembering)
2. Explain the concepts, core terms and tools used in automata theory.(Understanding)
3. Choose the techniques, components and tools of a typical automated machine and apply it in designing new machines. (Applying)
4. Identify which input pattern would be accepted by a Turing Machine, Pushdown Automata, Finite Automata etc. (Applying)
5. Compare and contrast various types of machines in Automata theory and relate it to everyday appliances like washing machines, fans, etc. (Analyzing)
6. Evaluate the correctness, computation cost and complexity for an automation. (Evaluating)
7. Design new automata and Turing machines for given problems by using most appropriate algorithmic strategy considering the problem domain. (Creating)

Module I: Theory of Automata (7 Hours)

Definition of an Automaton, Description of a Finite Automaton, Transition Systems, Properties of Transition Functions, Acceptability of a String by a Finite Automaton, Nondeterministic Finite State Machines, The Equivalence of DFA and NDFA, Mealy and Moore Models, Minimization of Finite Automata.

Module II: Formal Languages, Regular Sets and Regular Grammars (12 Hours)

Definition of formal languages, Chomsky Classification of Languages, Languages and Their Relation, Recursive and Recursively Enumerable Sets, Operations on Languages, Languages and Automata; Regular Expressions, Finite Automata and Regular Expressions, Pumping Lemma for Regular Sets, Application of Pumping Lemma, Regular Sets and Regular Grammars Exercises.

Module III: Context-free Languages (13 Hours)

Context-free Languages and Derivation tree, Ambiguity in Context-free Grammars, Simplification of Context-free Grammars, Normal Forms for Context-free Grammars, Pumping Lemma for Context-free Languages, Decision Algorithms for Context-free Languages Exercises

Module IV: Pushdown Automata Turing Machines and Linear Bounded Automata (13 Hours)

Basic Definitions, Acceptance by pda, Pushdown Automata and Context-free Languages, Parsing and Pushdown Automata; Turing machine Model, Representation of Turing Machine, Language Acceptability by Turing Machines, Design of Turing Machines, Universal Turing Machine and Other Modification, The Model of Linear Bounded Automaton, Turing Machines and Type 0 Grammars, Linear Bounded Automata and Languages, Halting Problem of Turing Machines, NP-Completeness.

Suggested Readings

1. K.L.P. Mishra, N. Chandrasekaran, Theory of Computer Science, BPB Publication, Prentice-Hall of India, Second Edition.
2. H.R. Lewis and C.H.Papadimitriou, Elements of the Theory of Computation, Second Edition, Prentice Hall of India.
3. H.E. Hopcraft and J.D. Ullamn, Introduction to Automata Theory, Languages and Computation, Narosa Publications.
4. J.C. Martin, Introduction to Languages and the Theory of Automata, Tata McGraw-Hill International, 2003..
5. C.H. Papadimitriou, Computation Complexity, Addison-Wesley.
6. Linz Peter, An Introduction to Formal Languages and Automata,Narosa.
7. Kain, Theory of Automata and Formal Language, McGraw Hill.

CO2	H	M		H
CO3		M		H
CO4	H		L	
CO5		M	H	
CO6	H			M
CO7		L		H

CSOS0123: OPERATING SYSTEMS

(3 Credits-45 Hours)

Course Outcomes

1. Elaborate what operating systems are, what they do and how they are designed and constructed. (Creating)
2. Define process concept like process scheduling, inter-process communication, process synchronization and concurrency. (Remembering)
3. Explain different memory management schemes, relate various approaches to memory management and effectiveness of a particular algorithm. (Understanding)
4. Identify different page replacement algorithms to solve problems. (Applying)
5. Explain how the file system, mass storage and I/O are handled in a modern computer system. (Remembering, Understanding)
6. Analyze the mechanisms necessary for the protection and security of computer systems. (Analysing)

Module I: Introduction (5 hours)

Concept of Operating Systems, Generations of Operating systems, Types of Operating Systems, OS Services, System Calls, Structure of an OS - Layered, Monolithic, Microkernel Operating Systems, Concept of Virtual Machine. Case study on UNIX and WINDOWS Operating System.

Module II: Processes (7 hours)

Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching, Thread: Definition, Various states, Benefits of threads, Types of threads, Concept of multithreads, Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time; Scheduling algorithms: Pre-emptive and Non pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

Module 3: Inter-process Communication (7 hours)

Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Strict Alternation, Peterson's Solution, The Producer\ Consumer Problem, Semaphores, Event counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dinning Philosopher Problem etc.

Module 4: Deadlocks (5 hours)

Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock detection and Recovery.

Module 5: Memory Management (10 hours)

Basic concept, Logical and Physical address map, Memory allocation: Contiguous Memory allocation – Fixed and variable partition–Internal and External fragmentation and Compaction; Paging: Principle of operation – Page allocation, Hardware support for paging, Protection and sharing, Disadvantages of paging. Virtual Memory: Basics of Virtual Memory, Hardware and control structures – Locality of reference, Page fault, Working Set, Dirty page/Dirty bit – Demand paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU).

Module 6: (11 hours)

I/O Hardware: I/O devices, Device controllers, Direct memory access Principles of I/O Software: Goals of Interrupt handlers, Device drivers, Device independent I/O software, Secondary-Storage Structure: Disk structure, Disk scheduling algorithms

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free-space management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency and performance.

Disk Management: Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks.

Suggested Readings:

1. Operating System Concepts Essentials, 9th Edition by AviSilberschatz, Peter Galvin, Greg Gagne, Wiley Asia Student

Edition.
2. Operating Systems: Internals and Design Principles, 5th Edition, William Stallings, Prentice Hall of India.
3. Operating System: A Design-oriented Approach, 1st Edition by Charles Crowley, Irwin Publishing
4. Operating Systems: A Modern Perspective, 2nd Edition by Gary J. Nutt, Addison-Wesley
5. Design of the Unix Operating Systems, 8th Edition by Maurice Bach, Prentice-Hall of India
6. Understanding the Linux Kernel, 3rd Edition, Daniel P. Bovet, Marco Cesati, O'Reilly and Associates

CO 6				M	M	H

CSDC0124: DATA COMMUNICATIONS

(3 Credits-45 Hours)

Course Outcomes

1. Recall the fundamentals of data communication and various techniques of communications. Students will also be able to recall the layered structure of computer network. (REMEMBERING)
2. Explain about different network topology and the type of protocol required for different communication technique. (UNDERSTANDING)
3. Develop different network topology using various networking devices. (APPLYING)
4. Compare different networking devices. Students will also be able to analyse different network behaviour depending on performance parameters. (ANALYSING)
5. Evaluation of network performance based on implementation policy, protocol, topology etc. (Evaluating)
6. Construct networks required for organization, depending on availability of hardwares and softwares (CREATING)

Module I (12hours)

Introduction to data communications: A communications model, Data communications, Networking, Protocols and Protocol architecture, Characteristics of data transmission: Concepts and Terminology, Analog and digital data transmission, Transmission impairments. Transmission media: Guided transmission media, Wireless transmission data encoding, Digital data-Digital signals, Digital data- Analog signals, Analog data-Digital signals, and Analog data-Analog signals.

Module II (10 hours)

Data communication interface: Asynchronous and Synchronous transmission, Line configurations, Interfacing. Data link control, Flow control, Error detection, Error control, High-level data link control (HDLC), Other data link control protocols.

Module III (12 hours)

Data communications hardware: Terminals- Introduction, Basic terminal components, Enhanced terminal components, General-purpose terminals, Remote job entry terminals, Transaction terminals, Clustering of terminal devices. Communications processing hardware introduction, Switching processors, Multidrop lines, Multiplexers, Concentrators, Front-end processors.

Module IV (11 hours)

Modems: Network attachment and regulations, Line conditioning and leased lines, Modems and modem circuits. Multiplexing: Frequency-division multiplexing, Synchronous time- division multiplexing: Characteristics, TDM Link control, Digital carrier systems statistical time-division multiplexing: Characteristics.

Suggested Readings

1. William Stallings, Data and Computer Communications, Sixth Edition, Pearson Education Asia.
2. Prakash C. Gupta, Data Communications and Computer Networks, PHI
3. B.A. Forouzan, Data Communications and Networking, TMH.
4. William L. Scweber, Data Communication, McGraw Hill.
5. Tenenbaum, A. S., Computer Networks (Fourth Edition), New Delhi: Prentice-Hall India
6. Larry L. Peterson and Bruce S. Davie, Computer Networks: A systems approach, 3rd Edition, Morgan Kaufmann Publishers.
7. Mary E.S. Loomis, Data Communications, PHI.

CO 6				H

CSSE0127: SOFTWARE ENGINEERING

(3 Credits-45 Hour)

Course Outcome

1. Relate and recall the life cycle models of a software. (Remembering)
2. Classify and differentiate various software complexities. (Understanding)
3. Utilize different software architectures and identify the best feasible one. (Applying)
4. Examine and design any software product. (Analysing)
5. Formulate various design diagrams and find solutions to problems. (Creating)
6. Justify a practical solution towards a software applying development and also deploy a product of their own. (Evaluating).

Module I (7 Hours):

a. The Product and The Process: The Product - Evolving Role of Software, Software (Characteristics, Components and Applications;
b. The Process – Software Engineering A Layered Technology, The Software Process, Software Process Models, The Linear Sequential Model, The Prototyping Model, The RAD Model, Evolutionary Process Models (The Incremental Model, The Spiral Model, The Component Assembly Model, The Concurrent Development Model), The Formal Methods Model, Fourth Generation Techniques;
c. Project Management Concepts – The Management Spectrum (People, The Problem, The Process and The Project);
d. Software Process and Project Metrics – Measures, Metrics and Indicators, Metrics in the Process and Project Domains, Software Measurement, Reconciling Different Metrics Approaches, Metrics for Software Quality;
e. Software Project Planning – Observation on Estimating, Project Planning Objectives, Software Scope, Resources, Project Estimation Technique – Empirical estimation techniques (Expert Judgement Technique, Delphi Cost Estimation), Heuristic estimation techniques (COCOMO Model), Halstead Software Science (An Analytical Technique), The Make-Buy Decision;

Module II (7 Hours)

a. Project Scheduling and Tracking - Basic Concepts, The Relationship between People and Effort, Defining a Task set for the Software Project, Selecting Software Engineering Tasks, Defining a Task Network, Scheduling, The Project Plan;
b. Software Projects Risks, Quality Assurance and Configuration Management: Risk Management- Reactive Vs. Proactive Risk Strategies, Software Risk, Risk Identification, Risk Projection, Risk (Mitigation, Monitoring and Management), Safety Risks and Hazards, The RMMM Plan;
c. Software Quality Assurance - Quality Concepts, The Quality Movement, Software Quality Assurance, Software Reviews, Formal Technical Reviews, Statistical Quality Assurance, Software Reliability, The SQA Plan, The ISO 9000 Quality Standards;
d. Software Configuration Management - Software Configuration Management, The SCM Process, Identification of Objects in the Software Configuration, Version Control, Change Control, Configuration Audit, Status Reporting;
e. System Engineering - Computer Based Systems, Product Engineering

Module III (15 Hours)

a. Analysis and Design: Analysis Concepts and Principles - Requirements Analysis, Communication Techniques, Analysis Principles, Software Prototyping, Specification, Specification Review;
b. Analysis Modeling- The Elements of the Analysis Model, Data Modeling, Functional Modeling and Information Flow, Behavioral Modeling, The Mechanics of Structured Analysis, The Data Dictionary;
c. Design Concepts and Principles - Software Design and Software Engineering, The Design Process, Design Principles, Design Concepts, Effective Modular Design, Design Heuristic for Effective Modularity, The Design Model, Design Documentation;
d. Design Methods - Data Design, Architectural Design, The Architectural Design Process, Architectural Design Optimization, Interface Design, Human-Computer Interface Design, Interface Design Guidelines, Procedural Design;
e. Design For Real Time systems - Real Time Systems;
f. Case studies on diagram - Use case, Class, Activity, Sequence

Module IV (8Hours)

a. Software Testing: Software Testing Methods - Software Testing Fundamentals, Test Case Design, White Box Testing, Basis Path Testing, Control Structure Testing, Black Box Testing, Testing for Specialized Environments;

b. Software Testing Strategies - A Strategic Approach to Software Testing, Strategic Issues, Unit Testing, Integration Testing, Validation Testing, System Testing, The Art of Debugging;
c. Technical Metrics for Software - Software Quality, A Framework for Technical Software Metrics, Metrics for the Analysis Model, Metrics for the Design Model, Metrics for Source Code, Metrics for Testing, Metrics for Maintenance

Module V (7 Hours)

a. Object Oriented Software Engineering: Object Oriented Concepts and Principles - The Object-Oriented Paradigm, Object Oriented Concepts, Identifying the Elements of an Object Model, Management of Object-Oriented Software Projects
b. Object Oriented Analysis - Object Oriented Analysis, Domain Analysis, Generic Components of the Object-Oriented Analysis Model, The OOA Process, The Object Relationship Model, The Object Behavior Model
c. Object Oriented Design - Design for Object Oriented Systems, The Generic Components of the OO Design Model, The Systems Design Process, The Object Design Process, Design Patterns, Object Oriented Programming
d. Advanced Topics In Software Engineering: Cleanroom Software Engineering- The Cleanroom Approach, Functional Specification, Design Refinement and Verification, Cleanroom Testing
e. Software Reuse - Management Issues, The Reuse Process, Domain Engineering, Building Reusable Components, Classifying and Retrieving Components, Economics of Software Reuse
f. Reengineering - Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering, Economics of Reengineering.
g. Computer Aided Software Engineering - Case Definition, Building Blocks of Case, Taxonomy of Case Tools, Integrated Case Environments, The Integration Architecture, The Case Repository

Suggested Readings

1. Roger S. Pressman, Software Engineering A Practitioner's Approach, Fourth Edition, Tata McGraw Hill.
2. Rajib Mall, Fundamentals of Software Engineering, Second Edition, Prentice Hall of India Private Limited.
3. Ian Sommerville, Software Engineering, Sixth Edition, Addison Wesley, Pearson Education.
4. Carlo Ghezzi, Mehdi Jazayeri, Dino Mandrioli, Fundamentals Of Software Engineering, Second Edition, Prentice Hall of India Private Limited, New Delhi, 2002.
5. Jeffrey A. Hoffer, Joey F. George, Joseph S. Valacich, Modern Systems Analysis and Design, Second Edition, Pearson Education.
6. Richard E Fairley, Software Engineering Concepts, Tata McGraw Hill Publishing Company Limited, New Delhi, 1997.
7. Hans Van Vilet, Software Engineering Principles and Practice, Second Edition, John Wiley and Sons, Ltd

CSCD0128: COMPILER DESIGN

(3 credits- 45 hours)

Course Outcomes

1. Recall the application of compiler in program execution (Remembering)
2. Demonstrate the various types of parser and their merits and demerits. It also explains about error handling technique in compiler construction. (UNDERSTANDING)
3. Applying different parsing technique to input string. (APPLYING)
4. Compare and analysis different techniques of parsing. (ANALYSING)
5. Decide which parsing technique will be most suitable for any input given to them. Students will also be able to know how to convert the given grammar to its respective non-left recursive grammar if it requires for certain type of parsing technique. (EVALUATING).
6. Construct intermediate code generation, code optimization, run time environment etc. during compilation.(CREATING)

Module I (9 hours)

Introduction to compiling: Compilers – Analysis of the source program – Phases of a compiler – Cousins of the Compiler – Grouping of Phases – Compiler construction tools – Lexical Analysis. Role of Lexical Analyser –Input Buffering – Specification of Tokens.

Module II (9 hours)

Syntax Analysis: Role of the parser –Writing Grammars –Context-Free Grammars – Top Down parsing – Recursive Descent Parsing – Predictive Parsing – Bottom-up parsing – Shift Reduce Parsing – Operator Precedent Parsing – LR Parsers – SLR Parser – Canonical LR Parser – LALR Parser. Syntax Directed translation: Syntax Directed definition, Construction of syntax trees, Bottom Up Evaluation of S-Attributed Definitions.

Module III (15 hours)

a. Intermediate Code Generation: Intermediate languages – Declarations – Assignment Statements –Boolean Expressions – Case Statements – Back patching – Procedure calls.
b. Code Generation: Issues in the design of code generator – The target machine – Runtime Storage management – Basic Blocks and Flow Graphs – Next-use Information – A simple Code generator – DAG representation of Basic Blocks – Peephole Optimization.

Module IV (12 hours)

Code Optimization and Run time Environments: Introduction – Principal Sources of Optimization – Optimization of basic Blocks – Introduction to Global Data Flow Analysis – Runtime Environments – Source Language issues – Storage Organization – Storage Allocation strategies – Access to non-local names – Parameter Passing.

Suggested Readings

1. Compilers Principles, Techniques and Tools- Alfred Aho, Ravi Sethi, Jeffrey D Ullman, Pearson Education.
2. Introduction to Compiler Techniques- J.P. Bennet, Tata McGraw-Hill.
3. Compiler Construction: Principles and Practice Learning. - Kenneth C. Louden, Thompson.
4. Practice and Principles of Compiler Building with C- HenkAlblas and Albert Nymeyer, PHI.

CO 4		M		
CO 5		M	M	
CO 6			M	H

CSNT0129: COMPUTER NETWORKS

(3 credits- 45 hours)

Course Outcomes

1. Define topology implementing different routing protocols that best suits a real time demand application, network and transport layer. (Remembering)
2. Explain the different network topologies, network, transport and application design issues and the importance of QoS in a network. (Understanding)
3. Solve different problems related to sub-netting, configuring working routing protocols in some model network topology and implement presentation layer security. (Applying)
4. Distinguish TCP from OSI and Analyze different layer protocols, sub-netting application layer security. (Analyzing)
5. Judge which protocol operate in which layer and why. (Evaluating)
6. Formulate the pros, cons and implementation of different IEEE based protocols. (Creating)

Module I (7 hours)

Review of OSI, TCP/IP models, Switching Techniques: Circuit Switching, Switching Techniques: Packet Switching, Multiple Accesses –RANDOM ACCESS-ALOHA, CSMA, CSMA/CD, CSMA/CA, Controlled Access, Channelization.

Module II (9 hours)

X.25, ATM, LAN - Ethernet IEEE 802.3 - IEEE 802.4 - IEEE 802.5 - IEEE 802.11 – FDDI - SONET –Bridges.

Module III (12 hours)

Network Layer: IP addressing methods, Subnetting, ARP, RARP, BOOTP, DHCP – Routing – Distance Vector Routing – Link State Routing – Routers.

Module IV (9 hours)

Transport layer: Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Quality of services (QOS) – Integrated Services.

Module V (8 hours)
Application Layer: Domain Name Space (DNS), EMAIL, Network Security-PLAYFAIR CIPHER, AES, DES, Public key cryptosystem and RSA, Message authentication code using Hash Function, Introduction to Kerberos.

Suggested Readings
1. Andrew S. Tanenbaum , Computer Networks, PHI
2. Larry L. Peterson and Bruce S. Davie, Computer Networks –A system approach.
3. Behrouz A. Forouzan, Data communication and Networking, Tata McGraw-Hill.
4. William Stallings, Data and Computer Communication, Pearson Education.
5. James F. Kurose and Keith W. Ross, Computer Networking: A Top-Down Approach Featuring the Internet, Pearson Education.

CSCG0134: GPU COMPUTING
(3 Credits)

Objectives
The objective of the course is to learn concepts of parallel programming, learn parallel programming with Graphics Processing Units (GPUs), implement programs on GPUs, and learn debugging and profiling of programs written for GPUs.

Course Outcomes
1. Describe the basic concepts of GPUs and parallel programming (Remembering)
2. Explain the hardware and software aspects of GPU (Understanding)
3. Use GPU for applications such as Image Processing, Graph algorithms, Simulations and Deep Learning. (Applying)
4. Analyze GPU programs to detect errors (Analyzing)
5. Evaluate the efficiency of GPU programs (Evaluating)
6. Develop GPU programs including programs for concurrent data structures and programs employing different synchronization techniques (Creating)

Module I (12 Hours)
Introduction: History, Graphics Processors, Graphics Processing Units, GPGPUs. Clock speeds, CPU/GPU comparisons, Heterogeneity, Accelerators, Parallel programming, CUDA Open CL/Open ACC, Hello World Computation Kernels, Launch parameters, Thread hierarchy, Warps/Wave fronts, Thread blocks/Workgroups, Streaming multiprocessors, 1D/2D/3D thread mapping, Device properties, Simple Programs

Module II (7 Hours)
Memory:Memoryhierarchy,DRAM/global,local/shared,private/local,textures,ConstantMemory,Pointers, Parameter Passing, Arrays and dynamic Memory, Multi-dimensional Arrays, Memory Allocation, Memory copying across devices, Programs with matrices, Performance evaluation with different memories

Module III (9 Hours)
Synchronization: Memory Consistency, Barriers (local versus global), Atomics, Memory fence. Prefix sum, Reduction. Programs for concurrent Data Structures such as Worklists, Linked-lists. Synchronization across CPU and GPU
Functions: Device functions, Host functions, Kernels functions, Using libraries (such as Thrust), and developing libraries.

Module IV (7 Hours)
Support: Debugging GPU Programs. Profiling, Profile tools, Performance aspects
Streams: Asynchronous processing, tasks, Task-dependence, Overlapped data transfers, Default Stream, Synchronization with streams. Events, Event-based-Synchronization - Overlapping data transfer and kernel execution, pitfalls.

Module V (5 Hours)
Case Studies: Image Processing, Graph algorithms, Simulations, Deep Learning

Module VI (5 Hours)

Advanced topics: Dynamic parallelism, Unified Virtual Memory, Multi-GPU processing, Peer access, Heterogeneous processing.

Suggested Readings

1. Programming Massively Parallel Processors: A Hands-on Approach; David Kirk, Wen-meiHwu; Morgan Kaufman; 2010 (ISBN:978-0123814722)
2. CUDA Programming: A Developer's Guide to Parallel Computing with GPUs; Shane Cook; Morgan Kaufman; 2012 (ISBN:978-0124159334)

CSCL0135: CLOUD COMPUTING

(3 Credits)

Objectives:

- The student will also learn how to apply trust – based security model to real – world security problems.
- An overview of the concepts, processes, and best practices needed to success fully secure information within Cloud infrastructures.
- Students will learn the basic Cloud types and delivery models and develop an understanding of the risk and compliance responsibilities and Challenges for each Cloud type and service delivery model.

Course Outcomes

1. Basics of cloud computing(Remembering)
2. Understanding cloud computing architecture and cloud computing model(Understanding)
3. Identify security aspects of each cloud model (Applying)
4. Develop a risk management strategy for moving to the cloud (Analysing)
5. Implement a public cloud instance using a public cloud service provider (Evaluating)
6. Apply trust based security model to different layer (Creating)

Module I (8 Hours)

IntroductiontoCloudComputing

Online Social Networks and Applications, Cloud introduction and overview, Different clouds, Risks, Novel applications of cloudcomputing.

Module II (8 Hours)

Cloud Computing Architecture Requirements, Introduction Cloud computing architecture, On Demand Computing Virtualization at the infrastructure level, Security in Cloud computing environments, CPU Virtualization, A discussion on Hypervisors Storage Virtualization Cloud Computing Defined, The SPI Framework for Cloud Computing, The Traditional Software Model, The Cloud Services Delivery Model

Cloud Deployment Models Key Drivers to Adopting the Cloud, The Impact of Cloud Computing on Users, Governance in the Cloud, Barriers to Cloud Computing Adoption in the Enterprise

Module III (8 hours)

Security Issues in Cloud Computing, Infrastructure Security, Infrastructure Security: The Network Level, The Host Level, The Application Level, Data Security and Storage, Aspects of Data Security, Data Security Mitigation Provider Data and Its Security

Identity and Access Management, Trust Boundaries and IAM, IAM Challenges, Relevant IAM Standards and Protocols for Cloud Services, IAM Practices in the Cloud, Cloud Authorization Management

Module IV (8 hours)

Security Management in the Cloud: Security Management Standards, Security Management in the Cloud, Availability Management: SaaS, PaaS, IaaS

Privacy Issues: Privacy Issues, Data Life Cycle, Key Privacy Concerns in the Cloud, Protecting Privacy, Changes to Privacy Risk Management and Compliance in Relation to Cloud Computing, Legal and Regulatory Implications,

U.S. Laws and Regulations, International Laws and Regulations.

Module V (8 hours)

Audit and Compliance: Internal Policy Compliance, Governance, Risk, and Compliance (GRC), Regulatory/ External Compliance, Cloud Security Alliance, Auditing the Cloud for Compliance, Security-as-a-Cloud

Module VI (5 hours)
ADVANCED TOPICS: Recent developments in hybrid cloud and cloud security

Suggested Readings
1. Cloud Computing Explained: Implementation Handbook for Enterprises, John Rhoton, Publication Date: November 2,2009
2. Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance (Theory in Practice),Tim Mather, ISBN-10: 0596802765, O' Reilly Media, September2009

Mapping of COs to Syllabus

CSCL0135: CLOUD COMPUTING

(3 credits)

Objectives:
- The student will also learn how to apply trust-based security model to real-world security problems.
- An overview of the concepts, processes, and best practices needed to successfully secure information within Cloud infrastructures.
- Students will learn the basic Cloud types and delivery models and develop an understanding of the risk and compliance responsibilities and Challenges for each Cloud type and service delivery model.

Course Outcomes
1. The basics of cloud computing(Remembering)
2. Illustrate cloud computing architecture and cloud computing model(Understanding)
3. Identify and apply security aspects of each cloud model (Applying)
4. Analyse a risk management strategy for moving to the cloud (Analysing)
5. Implement and evaluate a public cloud instance using a public cloud service provider (Evaluating)
6. Create a trust based security model to different layer (Creating)

Module I (10 Hours)
Introduction to Cloud Computing
Online Social Networks and Applications, Cloud introduction and overview, Different clouds, Risks, Novel applications of cloud computing.

Module II (11 Hours)
Cloud Computing Architecture Requirements, Introduction Cloud computing architecture, On Demand Computing Virtualization at the infrastructure level, Security in Cloud computing environments, CPU Virtualization, A discussion on Hypervisors Storage Virtualization Cloud Computing Defined, The SPI Framework for Cloud Computing, The Traditional Software Model, The Cloud Services Delivery Model
Cloud Deployment Models Key Drivers to Adopting the Cloud, The Impact of Cloud Computing on Users, Governance in the Cloud, Barriers to Cloud Computing Adoption in the Enterprise

Module III (10 hours)
Security Issues in Cloud Computing, Infrastructure Security, Infrastructure Security: The Network Level, The Host Level, The Application Level, Data Security and Storage, Aspects of Data Security, Data Security Mitigation Provider Data and Its Security
Identity and Access Management, Trust Boundaries and IAM, IAM Challenges, Relevant IAM Standards and Protocols for Cloud Services, IAM Practices in the Cloud, Cloud Authorization Management

Module IV (11 hours)
Security Management in the Cloud: Security Management Standards, Security Management in the Cloud, Availability Management: SaaS, PaaS, IaaS
Privacy Issues: Privacy Issues, Data Life Cycle, Key Privacy Concerns in the Cloud, Protecting Privacy, Changes to Privacy Risk Management and Compliance in Relation to Cloud Computing, Legal and Regulatory Implications,

U.S. Laws and Regulations, International Laws and Regulations.

Module V ((8 hours)
Audit and Compliance: Internal Policy Compliance, Governance, Risk, and Compliance (GRC), Regulatory/ External Compliance, Cloud Security Alliance, Auditing the Cloud for Compliance, Security-as-a-Cloud

Module VI (4 hours)
ADVANCED TOPICS: Recent developments in hybrid cloud and cloud security

Suggested Readings
1. Cloud Computing Explained: Implementation Handbook for Enterprises, John Rhoton, Publication Date: November 2, 2009
2. Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance (Theory in Practice), Tim Mather, ISBN-10: 0596802765,O'Reilly Media, September 2009

CSDD0136: DISTRIBUTED DATABASES

(3 Credits)

Objectives
The objective of course is to provide insight to distributed database, normalization techniques and integrity rules, and to learn about parallel database systems along with object oriented models.

Course Outcomes
1. Describe the concepts related to distributed database, normalization techniques and integrity rules, parallel database systems, and distributed object database management systems. (Remembering)
2. Explain concepts related to distributed DBMS architecture, query processing, transaction management, distributed concurrency control, distributed object database management systems etc. (Understanding)
3. Apply normalization to make efficient retrieval from database and query. (Applying)
4. Analyze design issues and efficiency of query statements. (Analyzing)
5. Choose appropriate distributed database design for a given application. (Evaluating)
6. Create distributed databases, parallel database systems, and object database systems for a given problem. (Creating)

Module I (10 Hours)
Introduction: Distributed Data processing, Distributed database system (DDBMS), Promises of DDBMSs, Complicating factors and Problem areas in DDBMSs, Overview Of Relational DBMS Relational Database concepts, Normalization, Integrity rules, Relational Data Languages, Relational DBMS.

Module II (7 Hours)
Distributed DBMS Architecture: DBMS Standardization, Architectural models for Distributed DBMS, Distributed DBMS Architecture. Distributed Database Design: Alternative design Strategies, Distribution design issues, Fragmentation, Allocation. Semantic Data Control: View Management, Data security, Semantic Integrity Control.

Module III (8 Hours)
Overview of Query Processing: Query processing problem, Objectives of Query Processing, Complexity of Relational Algebra operations, characterization of Query processors, Layers of Query Processing.
Introduction to Transaction Management: Definition of Transaction, Properties of transaction, types of transaction. Distributed Concurrency Control: Serializability theory, Taxonomy of concurrency control mechanisms, locking based concurrency control algorithms.

Module IV (7 Hours)
Parallel Database Systems: Database servers, Parallel architecture, Parallel DBMS techniques, Parallel execution problems, Parallel execution for hierarchical architecture.

Module V (8 Hours)

Distributed Object Database Management systems: Fundamental Object concepts and Object models, Object distribution design. Architectural issues, Object management, Distributed object storage, Object query processing. Transaction management. Database Interoperability: Database Integration, Query processing.

Module VI (5 Hours)
Recent approaches, models and current trends in improving the performance of Distributed Database.

Suggested Readings
1. Principles of Distributed Database Systems, Second Edition, M. Tamer Ozsu Patrick Valduriez
2. Distributed Databases principles and systems, Stefano Ceri, Giuseppe Pelagatti, Tata McGraw Hill.

Mapping of COs to Syllabus

Course Outcomes	Module 1	Module 2	Module 3	Module 4	Module 5	Module 6
CO 1	H	M

CO 3		M	H	L		
CO 4		M	M	H	M	
CO 5			M	H	M	M
CO 6				M	H	L

CSIS0137: IOT AND SMART CITIES

(3 Credits)

Objectives
- Explain the basic methodologies and techniques of the arts and humanities, social sciences, business, and science and technology
- To describe the current practices and future trends about smart city
- Capacity of critique the current practice and provide recommendations

Course Outcomes
1. List the various applications of smart cities (Remembering)
2. Explain the IoT reference architecture, fundamental knowledge of the sustainable and smart city (Understanding)
3. Identify different technologies used for sustainable smart cities (Applying)
4. Analyze the learnt knowledge to conduct a case study in an organized way. (Analyzing)
5. Estimate the ability to present the study clearly to audiences; Demonstration of critical thinking and discovering. (Evaluating)
6. Formulate the methods to design public mobile services aimed at efficiency, cost-saving and participation with attention for e-inclusion (Creating)

Module I (8 hours)
Introduction and Applications: smart transportation, smart cities, smart living, smart energy, smart health, and smart learning.

Module II (9 hours)
IoT Reference Architecture- methods to assist local governments to develop international good e-practice

Module III (8 hours)
Methods to redesign and redefine back and front offices in order to build smarter and transparent governments

Module IV (8 hours)
Methods to design public mobile services aimed at efficiency, cost-saving and participation with attention for e-inclusion

Module V (10 hours)
Methodologies for user involvement, profiling customers and identifying needs; test methodologies to transfer these needs in appropriate services; and test techniques to fit the right channel to the specific services and customers thereby setting a framework for a higher level of e-services in the NSR

Module VI (5 hours)
Pilot new service channels, bluetooth services for public transport, online forms in mobile phones and wireless city services

Suggested Readings
1. Smart City on Future Life - Scientific Planning and Construction by XianyiLi
2. The Age of Intelligent Cities: Smart Environments and Innovation-for-all Strategies (Regions and Cities) byNicosKomninos
3. Smart Cities: Big Data, Civic Hackers, and the Quest for a New Utopia by Anthony Townsend.

Mapping of COs to Syllabus

Course Outcomes	Module 1	Module 2	Module 3	Module 4	Module 5	Module 6
CO 1	H	M				
CO 2		H				
CO 3			H	M		
CO 4			M	H	H	
CO 5					H	
CO 6						H

CSEM0138: EMULATION AND SIMULATION METHODOLOGIES

(3 Credits)

Objectives

- This module teaches the fundamentals of simulation and emulation methodologies providing guidance on how to design a performance evaluation campaign
- Set up a test scenario, select the appropriate models, level of granularity
- Metrics for statistical correctness, and discuss the differences between simulation and emulation platforms and how to use them for accurate performance evaluation of communications.

Course Outcomes

1. Define and explain the fundamental concepts of Discrete Event Simulations. (Remembering)
2. Explain about the communication and networking techniques used in DES. (Understanding)
3. Identify the various Application-based Granularity Requirements. (Applying)
4. Analyze the performance evaluation of Statistical Tools (Analyzing)
5. Assess the evaluation of communications for ITS. (Evaluating)
6. Discuss the recent trends of simulation and emulation for IOT. (Creating)

Module I (8 hours)

Fundamentals of Discrete Event Simulations (DES)

Module II (8 hours)

Model-based representation for DES, from communication and networking, to mobility and data traffic.

Module III (8 hours)

Application-based Granularity Requirements: from bit-level, packet-level, to system-level evaluation, and their appropriate selection as a function of the application requirements.

Module IV (12 hours)

Fundamentals on Random Numbers, Fundamentals on Statistical Tools for Performance Evaluation, Simulation vs. Emulations

Module V (8 hours)

Case study for the evaluation of communications for ITS.

Module VI (4 hours)

Recent trends in simulation and emulation for IOT, model based and application based granularity presentation

Suggested Readings

Jack L. Burbank, An Introduction to Network Simulator 3, Wiley

Mapping of COs to Syllabus

Course Outcomes	Module 1	Module 2	Module 3	Module 4	Module 5	Module 6
CO 1	H	M				
CO 2		H				
CO 3			H			
CO 4				H		
CO 5					H	
CO 6					M	H

CSDM0139: DATA WAREHOUSING & MINING

(3 Credits)

Course Outcomes

1. Illustrate different classification, prediction, sequential pattern algorithms (remembering and Understanding)
2. Construct cluster, periodicity and social network analysis. (Applying)
3. Analyze technique to extract patterns from time series data and it application in real world (Analysing)
4. Apprise the Graph mining algorithms to Web mining (Evaluating)
5. Design computing framework for Big Data (Creating)

Module 1 (12 hours)
Introduction to Data Warehousing; Data Mining: Mining frequent patterns, association and correlations; Sequential Pattern Mining concepts, primitives, scalable methods; Classification and prediction; Cluster Analysis – Types of Data in Cluster Analysis, Partitioning methods, Hierarchical Methods; Transactional Patterns and other temporal based frequent patterns.

Module 2 (15 hours)
Mining Time series Data, Periodicity Analysis for time related sequence data, Trend analysis, Similarity search in Time-series analysis; Mining Data Streams, Methodologies for stream data processing and stream data systems, Frequent pattern mining in stream data, Sequential Pattern Mining in Data Streams, Classification of dynamic data streams, Class Imbalance Problem; Graph Mining; Social Network Analysis;

Module 3 (12 hours)
Web Mining, Mining the web page layout structure, mining web link structure, mining multimedia data on the web, Automatic classification of web documents and web usage mining; Distributed Data Mining.

Module 4 (6 hours)
Recent trends in Distributed Warehousing and Data Mining, Class Imbalance Problem; Graph Mining; Social Network Analysis

Suggested Readings
1. Jiawei Han and M Kamber, Data Mining Concepts and Techniques,, Second Edition, Elsevier Publication, 2011.
2. Vipin Kumar, Introduction to Data Mining - Pang-Ning Tan, Michael Steinbach, Addison Wesley,2006.
3. G Dong and J Pei, Sequence Data Mining, Springer, 2007

CO5			M	H

CSWI0140: WEB SEARCH& INFORMATION RETRIEVAL

Course Outcomes
1. Recall basic theories and analysis tools as they apply to information retrieval. (Remembering and Understanding)
2. Apply the understanding of problems and potentials of current IR systems. (Applying)
3. Analyze different retrieval algorithms and systems. (Analysing)
4. Evaluate various indexing, matching, organizing, and evaluating methods to IR problems. (Evaluating)
5. Formulate various theoretical IR research. (Creating)

Module 1 (15 hours)
Information retrieval model, Information retrieval evaluation, Searching the Web, Document Representation, Query languages and query operation, Meta-data search.

Module 2 (15 hours)
Indexing and searching, Scoring and ranking feature vectors, Ontology, domain specific search, parallel and distributed information retrieval.

Module 3 (10 hours)
Text and multimedia languages, Social networks.

Module 4 (5 hours)
Recent trends in Web search and Information retrieval techniques.

Suggested Readings
1. C. D. Manning, P. Raghavan and H. Schütze, Introduction to Information Retrieval, CambridgeUniversity Press, 2008 (available at http://nlp.stanford.edu/IR-book).

2. Chakrabarti, S. (2002). Mining the web: Mining the Web: Discovering knowledge from hypertext data. Morgan-kaufman.
3. B. Croft, D. Metzler, T. Strohman, Search Engines: Information Retrieval in Practice, AddisonWesley, 2009 (available at http://ciir.cs.umass.edu/irbook/).
4. R. Baeza-Yates, B. Ribeiro-Neto, Modern Information Retrieval, Addison-Wesley, 2011 (2ndEdition).

Mapping of COs to Syllabus

CO1	H			
CO2		H		
CO3		M	H	
CO4			M	H
CO5				H

CSDY0141: DATABASE SECURITY AND ACCESS CONTROL

(3 Credits)

Course Outcomes

1. Summarize the access control and implement classical models and algorithms. (Remembering and Understanding)
2. Identify the capabilities and limitations of various access control mechanisms. (Applying)
3. Analyze the data, identify the problems, and choose the relevant models and algorithms to apply. (Analysing)
4. Assess the strengths and weaknesses of various access control models and to analyze their behaviour. (Evaluating)
5. Design and develop access control mechanisms for enterprise IT infrastructures.(Creating)

Module 1 (15 hours)

Introduction to Access Control, Purpose and fundamentals of access control, brief history,Policies of Access Control, Models of Access Control, and Mechanisms, Discretionary Access Control (DAC), Non- Discretionary Access Control , Mandatory Access Control (MAC). Capabilities and Limitations of Access Control Mechanisms: Access Control List (ACL) and Limitations, Capability List and Limitations,

Module 2 (15 hours)

Role-Based Access Control (RBAC) and Limitations, Core RBAC, Hierarchical RBAC, Statically Constrained RBAC, Dynamically Constrained RBAC, Limitations of RBAC. Comparing RBAC to DAC and MAC Access control policy, Biba Integrity model, Clark-Wilson model, Domain type enforcement model, mapping the enterprise view to the system view, Role hierarchies- inheritance schemes, hierarchy structures and inheritance forms, using SoD in real system, Temporal Constraints in RBAC, MAC AND DAC. Integrating RBAC with enterprise IT infrastructures: RBAC for WFMSs, RBAC for UNIX and JAVA environments Case study: Multiline Insurance Company.

Module 3 (10 hours)

Smart Card based Information Security, Smart card operating system, fundamentals, design and implantation principles, memory organization, smartcard files, file management, atomic operation, smart card data transmission, ATR,PPS Security techniques- user identification , smart card security, quality, assurance and testing , smart card life cycle-5 phases, smart card terminals.

Module 4 (5 hours)

Recent trends in Database security and access control mechanisms. Case study ofRole-Based Access Control (RBAC) systems.

Suggested Readings

1. Role Based Access Control: David F. Ferraiolo, D. Richard Kuhn, RamaswamyChandramouli.
2. http://www.smartcard.co.uk/tutorials/sct-itsc.pdf : Smart Card Tutorial.

CO1	H			
CO2		H		
CO3		M	H	
CO5			H	

CSBA0142: BUSINESS ANALYTICS

(3 Credits)

Course Outcomes

1. Recall the scope of business analytics (Remembering)

2. Interpret the modeling relationships and trends in data, simple linear regression. (Understanding)
3. Experiment with knowledge of data analytics (Applying)
4. Analyze critically in making decisions based on data and deep analytics. (Analysis)
5. Asses technical skills in predictive and prescriptive modeling to support business decision-making.(Evaluating)
6. Adapt the ability to translate data into clear, actionable insights.(Creating)

Module 1 (8 hours)
Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview.

Module 2 (8 hours)
Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

Module 3 (8 hours)
Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predictive Modeling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modeling, nonlinear Optimization.

Module 4 (9 hours)
Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models.
Monte Carlo Simulation and Risk Analysis: Monte Carlo Simulation Using Analytic Solver Platform, New- Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

Module 5 (8 hours)
Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, the Value of Information, Utility and Decision Making.

Module 6 (4 hours)
Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

Suggested Readings
1. Business analytics Principles, Concepts, and Applications by Marc J. Schniederjans, Dara G. Schniederjans, Christopher M. Starkey, Pearson FT Press.
2. Business Analytics by James Evans, persons Education.

LABORATORY COURSES

CSDT6076: ADVANCED DATA STRUCTURES LAB
(3 Credits)

Course Outcomes:
1. Demonstrate and explain the various operations of Binary search trees. (Understanding)

2. Develop a program to implement B-Trees and 2-3 Trees. (Applying)
3. Develop a program and test for the pattern matching algorithms like Bayer-Moore and Knuth-Morris-Pratt algorithms. (Creating)
4. Demonstrate the implementation of compression algorithms using program. (Understanding)
5. Develop algorithms for text processing applications. (Creating)

Program List:

Experiment No.	**List of Experiments**
Module 1	
1	Implementation of BST and AVL trees.
2	Implementation of 2-3 trees, B-trees.
3	Implementation of Red Black Trees
Module 2	
4	Pattern matching using Boyer-Moore algorithm.
5	Knuth-Morris-Pratt algorithm for pattern matching.
Module 3	
6	Huffman Algorithm for data compression.
7	Finding Longest Common Subsequence using a dynamic programming technique.
8	Implementation of Standard tries, Suffix tries and Compressed tries
Module 4	
9	Construction of Priority Search Trees, Searching in a Priority Search Tree.
10	Construction of Priority range Trees
Module 5	
11	Implementation of Quad Trees

Suggested Readings:

1. Mark Allen Weiss, Data Structures and Algorithm Analysis in C++, 2nd Edition, Pearson, 2004.
2. M T Goodrich, Roberto Tamassia, Algorithm Design, John Wiley, 2002.

Mapping of COs to Syllabus

CSML6077: MACHINE LEARNING LAB

(2 Credits)

Course Outcomes

1. Apply various classification algorithms to solve classification problem on real world data. (Applying)
2. Apply Clustering algorithms to solve any clustering problem. (Applying)
3. Analyse the performance of various classification algorithms. (Analysing)
4. Select appropriate models for solving a specific problem. (Evaluating)
5. Design neural network based classifiers to classify real world data. (Creating)

List of Experiments

1. Write a program to implement Linear Regression. Use an appropriate dataset to illustrate the working of linear regression.
2. Write a program to implement Decision Tree. Illustrate the classification of sample data using an appropriate dataset.
3. Write a program to demonstrate the classification of sample data using KNN algorithm.
4. Write a program to implement Bayes Classifier for the classification of sample data.
5. Write a program to implement logistic regression for the classification of sample data.
6. Write a program to implement Support Vector Machine. Illustrate the classification of sample data using an appropriate dataset.
7. Write a program to demonstrate the classification of sample data using Random Forest algorithm.
8. Performance analysis of various classification methods using standard matrices applied on confusion matrix.
9. Write a program to implement K-Means Clustering Algorithm.

10. Write a program to implement Agglomerative Clustering Algorithm.
11. Write a program to implement a classifier using MLP. Use appropriate dataset to demonstrate the process of classification.
12. Write a program to implement a sample CNN. Use appropriate dataset to test the performance of the classifier.
13. Implement transfer learning using state of art CNN models. Use appropriate dataset to test the performances of such models.

CSAA6078: ADVANCED ALGORITHM LAB

(3 Credits)

Course Outcomes

1. Recall and explain the fundamentals of design and analysis of basic data structures and experiment with the implementation process. (Remembering, Understanding, Applying)
2. Examine and evaluate the concepts in the specification and analysis of programs. (Analysing, Evaluating)
3. Elaborate the principles for good program design, especially the uses of data abstraction. (Creating)

Module 1:

1. Program to find Breadth First Search of a graph.
2. Program to find Depth First Search of a graph.
3. Program to find strongly connected components of a graph.
4. Implement Prim's algorithm to find a minimal spanning tree of a graph.
5. Implement Kruskal's algorithm to find a minimal spanning tree of a graph.
6. Implement Dijkstra's algorithm to find the shortest path in a graph.

Module 2:

1. Implementation of algorithms to compute a maximum weight maximal independent set.
2. Implementation of graph matching algorithms.
3. Implementation of Ford-Fulkerson Method to compute maximum flow.
4. Implementation of Edmond-Karp maximum-flow algorithm.

Module 3:

1. Implement Strassen's Algorithm.
2. Implement Floyd Warshall Algorithm.

Mapping of COs to Syllabus:

Course Outcomes	Module 1	Module 2	Module 3
CO 1	H	M	
CO 2	M	H	M
CO 3		M	H

CSDV6079: DATA VISUALISATION LAB

(2 credits)

Course Outcomes

1. Recall the design process to develop visualization methods and visualization systems, and methods for their evaluation. (Remembering)
2. Create and process data and visual mapping and the visualization (Creating).
3. Illustrate an understanding of large-scale abstract data. (Understanding)
4. Analyse data in various perspectives. (Analysing)

5. Evaluate the results generated from various applications. (Evaluating)
6. Create visualization methods for different applications. (Creating)

List of Experiments

1. Program to recursively subdivide a tetrahedron to form a 3D Sierpinski gasket. The number of recursive steps is to be specified by the user.
2. Program to implement Liang-Barsky line clipping algorithm.
3. Program to draw a color cube and spin it using OpenGL transformation matrices.
4. Program to create a house-like figure and rotate it about a given fixed point using OpenGL functions.
5. Program to implement the Cohen-Sutherland line-clipping algorithm. Make provision to specify the input line, window for clipping and view port for displaying the clipped image.
6. Program to create a cylinder and a parallelepiped by extruding a circle and quadrilateral respectively. Allow the user to specify the circle and the quadrilateral.
7. Program, using OpenGL functions, to draw a simple shaded scene consisting of a teapot on a table. Define suitably the position and properties of the light source along with the properties of the properties of the surfaces of the solid object used in the scene.
8. Program to draw a color cube and allow the user to move the camera suitably to experiment with perspective viewing. Use OpenGL functions.
9. Program to fill any given polygon using scan-line area filling algorithm. (Use appropriate data structures.)
10. Program to display a set of values {fij} as a rectangular mesh. Project: 11. Develop a suitable Graphics package to implement the skills learnt in the theory and the exercises indicated in Part A. Use the OpenGL..
11. Program to recursively subdivide a tetrahedron to form 3D Sierpinski gasket. The number of recursive steps is to be specified by the user.
12. Program to implement Liang-Barsky line clipping algorithm.
13. Program to draw a color cube and spin it using OpenGL transformation matrices.
14. Program to create a house-like figure and rotate it about a given fixed point using OpenGL functions.
15. Program to implement the Cohen-Sutherland line-clipping algorithm. Make provision to specify the input line, window for clipping and view port for displaying the clipped image.
16. Program to create a cylinder and a parallelepiped by extruding a circle and quadrilateral respectively. Allow the user to specify the circle and the quadrilateral.
17. Program, using OpenGL functions, to draw a simple shaded scene consisting of a tea pot on a table. Define suitably the position and properties of the light source along with the properties of the properties of the surfaces of the solid object used in the scene.
18. Program to draw a color cube and allow the user to move the camera suitably to experiment with perspective viewing. Use OpenGL functions.
19. Program to fill any given polygon using scan-line area filling algorithm. (Use appropriate data structures.) Program to display a set of values {fij} as a rectangular mesh.
20. Project: 1. Develop a suitable Graphics package to implement the skills learnt in the theory and the exercises indicated in Part A. Use the OpenGL.

CSEN6080: DATA ENCRYPTION AND COMPRESSION LAB

(3 Credits)

Course Outcomes

1. Recall the different encryption techniques adopted in both traditional and modern cryptographic mechanisms. (Remembering)
2. Interpret cryptographic algorithms, and their countermeasures. (Understanding)
3. Apply fundamental cryptographic approaches in solving related problems. (Applying)
4. Analyse the working of the different encryption and compression algorithms. (Analysing)
5. Compare and contrast the working of different data encryption and compression mechanisms. (Evaluating)
6. Choose appropriate encryption and compression algorithms to build real-world systems. (Creating)

Module 1:

1. Implementation of run length encoding
2. Implementation of Lempel-Ziv coding

Module 2:

1. Implementation of Huffman Encoding of a sequence
2. Implementation of Huffman Decoding of a compressed bit sequence.

Module 3:

1. Implementation of RC4 algorithm.
2. Implementation of S-DES algorithm for data encryption

Module 4:
1. Implementation of RSA Algorithm

Module 5:
1. Implementation of SHA
2. Implementation of MD5

Module 6:
1. Implementation of JPEG algorithm.

Mapping of COs to Syllabus:

Course Outcomes	Module 1	Module 2	Module 3	Module 4	Module 5	Module 6
CO 1	H	M				
CO 2	M	H	M			
CO 3		M	H	M

CSDI6092: DISSERTATION- I / INDUSTRIAL PROJECT

(10 Credits)

Course Outcomes
1. Recall the enhanced research areas which can be undertaken (Remembering).
2. Illustrate the research gap within the topic that he / she undertakes (Understanding).
3. Apply algorithm to solve the problem stated (Applying).
4. Analyse and categorize the data to be collected to carry on with the research (Analysis).
5. To evaluate the outcome which is expected from the research (Evaluating).
6. Create and implement the methodology to have an outcome (Creation).

CSDI6093: DISSERTATION II

(16 Credits)

Course Outcomes
1. Recall and relate desertation phase I to identify the basic problem specific outcome (Remembering).
2. Illustrate the research gap within the topic that he / she undertake (Understanding).
3. Make use of the algorithm implemented in Phase I for accuracy (Application).
4. Compare the results with the existing system to identify its accuracy (Analysis).
5. Evaluate and summarize the outcome which is expected from the research (Evaluating).
6. Creating an outcome based on the methodology implemented (Creation).

EGRW0015: ENGLISH FOR RESEARCH PAPER WRITING

(Audit Course)

Course Objectives: Students will be able to:
- Understand that how to improve your writing skills and level of readability
- Learn about what to write in each section of a research paper
- Understand the skills needed when writing a title for ensuring the good quality of paper at very first-time submission.

Module I (4 hours)

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

Module II (4 hours)

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction.

Module III (4 hours)

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

Module IV (4 hours)

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature.

Module V (4 hours)

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed whenwriting the Discussion, skills are needed when writing the Conclusions

Module VI (4 hours)

Useful phrases, how to ensure paper is as good as it could possibly be the first- time submission

Suggested Readings

1. Goldbort R (2006) Writing for Science, Yale University Press (available on Google Books)
2. Day R (2006) How to Write and Publish a Scientific Paper, Cambridge University Press
3. Highman N (1998), Handbook of Writing for the Mathematical Sciences, SIAM. Highman's book.
4. Adrian Wallwork , English for Writing Research Papers, Springer New York Dordrecht Heidelberg

EGRW0015: ENGLISH FOR RESEARCH TECHNICAL WRITING (Audit Course)

***Objectives**: Students will be able to:*

- *Understand that how to improve your writing skills and level of readability*
- *Learn about what to write in each section*
- *Understand the skills needed when writing a Title Ensure the good quality of paper at very first-time submission.*

Module I (4 hours)

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

Module II (4 hours)

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticising, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction.

Module III (4 hours)

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

Module IV (4 hours)

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature.

Module V (4 hours)

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions

Module VI (4 hours)

Useful phrases, how to ensure paper is as good as it could possibly be the first- time submission

Suggested Readings

1. Goldbort R (2006) Writing for Science, Yale University Press (available on Google Books)
2. Day R (2006) How to Write and Publish a Scientific Paper, Cambridge University Press
3. Highman N (1998), Handbook of Writing for the Mathematical Sciences, SIAM. Highman's book.
4. Adrian Wallwork, English for Writing Research Papers, Springer New York Dordrecht Heidelberg

SCHOOL OF TECHNOLOGY

DEPARTMENT OF CIVIL ENGINEERING

VISION

To be a recognized leader in Civil Engineering education and learning experiences providing state of the art education guided by innovativ42e research and consultancy, inclusive technology and managerial skills for industry as well as societal needs towards sustainable development.

MISSION

1. To make the department a center of excellence in Civil Engineering education which equips students with a strong conceptual foundation coupled with practical insight to meet the global industrial and environmental challenges.
2. To produce spiritually inspired socially committed and intellectually competent professionals of high caliber and strong ethical principles to serve the society and nation through teamwork and societal leadership.
3. To establish the department as a recognized center of research for developing sustainable solutions to engineering problems by providing knowledge base and consultancy services to the community.

PROGRAMME OUTCOMES

PO1. An ability to conduct field and laboratory experiments and interpret data in construction industry

PO2. An ability to design a system to meet desired needs within realistic constraints such as economic, environmental, social, safety and sustainability in construction industry

PO3. An ability to use the techniques, skills and modern engineering tools

PO4. An understanding of professional and ethical responsibility while working in construction industry

PO5. an ability to engage in life-long learning to update the knowledge in construction materials and management

PROGRAMME SPECIFIC OUTCOMES

1. Exhibit detailed professional knowledge in core sub-specializations of civil engineering including structural engineering, geotechnical engineering, hydraulic and environmental engineering and transportation engineering.
2. Demonstrate analytical and design skills using various technical supports.
3. Display the ability to tackle research projects and development works in various field of civil engineering using analytical, computational and experimental techniques.
4. Ability to integrate the knowledge gained from the various core and elective courses for collaborative and multi-disciplinary solutions of different civil engineering challenges.

PROGRAMME: MTECH IN CIVIL ENGINEERING

DETAILED SYLLABUS

CVSA0108: ADVANCED STRUCTURAL ANALYSIS (L-T-P: 3-1-0)
(4 Credit- 60 hours)
Objectives:
The main objective of the course is to equip students with an advanced understanding of structural analysis techniques and their practical application in solving complex engineering problems. This course will develop the analytical skills of students, to tackle real-world structural engineering challenges effectively.

Course/Learning Outcomes:
At the end of the course, students will be able to:
CO1: Identify the physical significance of coefficients on structural behavior using various approaches. (Understanding)
CO2: Design large structural systems using Matrix analysis and advanced computational methods. (Create)
CO3: Examine the linear and nonlinear structures to ensure structural integrity under various conditions. (Analyze)
CO4: Develop the boundary values using approximate methods. (Create)
CO5: Evaluate the effectiveness of plastic analysis methods in predicting structural behavior. (Evaluate)

Module I: (13 hours)
Influence Coefficients: Physical significance, effects of settlements, temperature change and lack of fit, member approach and structure approach.
Applications to Simple Problems: Beams, plane trusses, plane rigid jointed frames and grids by structure approach and member approach.

Module II: (22 hours)
Matrix Method (Flexibility Method and Stiffness Method) of Analysis: Local coordinates and global coordinates, boundary conditions, solution of matrix equations and calculation of reactions and member forces, Introduction to finite element method.

Module III: (13 hours)
Boundary Value Problems (BVP): Approximate solution of boundary value problems, modified Galerkin method for 1-D BVP, Matrix formulation of the modified Galerkin method.
Plastic Analysis: Incremental plastic analysis, formation of plastic hinges.

Module IV: (12 hours)
Linear Element: Shape functions, solution for Poisson's equation, general One Dimensional equilibrium problem.
Non-Linear Element: Consideration of geometric and material nonlinearity in direct stiffness method, P-delta effects.

Suggested Readings
1. C. K. Wang. "Intermediate Structural Analysis", 1st edition (2017), Tata McGraw Hill.
2. W. Weaver Jr. and James M. Gere. "Matrix Analysis of Framed Structures", 3rd edition (1990), CBS Publishers.
3. W. McGuire, R. H. Gallagher and R. D. Ziemian. "Matrix Structural Analysis", 2nd edition (2020), Faculty Books.
4. Guo-Qiang Li and Jin-Jun Li. "Advanced Analysis and Design of Steel Frames", 1st edition, John Wiley & Sons Inc.
5. Pramod Singh. "Plastic Analysis and Design of Steel Structures", 1st edition (2008), Butterworth-Heinemann Ltd.

CVPW0109: PHYSICO- CHEMICAL TREATMENT OF WATER AND WASTE WATER
4 Credits (4-0-0)
Objectives:
The goal is to provide a theoretical understanding of various chemical and physical unit operations, with direct application of these operations to the design and operation of water and wastewater treatment systems. Students will use the concepts learned in this class to better understand the design and operation of engineered and natural aquatic systems.

Course Outcomes:
On successful Completion of the course , students will be able to:
CO1: Assess and analyze the quality of water and wastewater by examining impurities, characteristics, and conducting various tests to ensure compliance with potable water standards.(Analyse)
CO2: Apply principles of unit operations and processes to design and operate the systems effectively (Create)
CO3: Utilize process techniques to enhance water and wastewater treatment and sludge treatment and understand mechanisms of treatment processes to , manage select suitable treatment system to execute different processes for treating and disinfecting water and wastewater and the sludge , ensuring compliance with quality standards(Analyse)
CO4: Assess the quantity of water and wastewater, understand the spectrum of particulate size distribution, and manage variation of flows to design efficient water and wastewater systems.(Evaluate)

Module I: 10 Hours
Quality of water and wastewater , Wholesome water , Impurity of water ,Characteristics of water,Examination of water ,Standards of potable water quality ,Characteristics of sewage,Examination of sewage ,Standards of quality of treated water and wastewater ,Quantity of water and waste water ,Waste water and gas flow , Water requirement for domestic and industrial purposes , Waste water formation and estimation ,Spectrum of particulate size distribution , Variation of flows.

Module II: 5 Hours
Purpose of screenings and terms: blinding, stratification , contamination , gradation, grading,Flow equalization Types of bar racks and screens Disposal of screenings Removal of oil, grease etc. Floatation Skimming tank Disposal of skimming.

Module III: 15 Hours
SEDIMENTATION - Principles of Sedimentation and Stokes' law applied to fluids Characteristics of the settleable solids ,Classification of sedimentation tanks for water and waste water Factors influencing sedimentation ,Deciding size of sedimentation tank for water and wastewater ,Standard design loading ,Detention period .
Coagulation – purpose, principle ,Types of coagulants and its suitability ,Determination of optimum coagulation dose,Feeding of coagulant and feeding devices ,Flocculation and flocculation tanks and design criteria of flocculator ,Clarifiers, its types and design criteria,Settling efficiency of particles .Grit removal

Module IV: 5 Hours
Theory of filtration- Mechanism for particle size , Hydraulics of filters , Types of filters and their flow direction, Filter clogging, Filter washing,Break through ,Deciding size of filter unit, Advances in filtration

Module V: 15 Hours

Chemical precipitation, Water and wastewater softening,Estimation of dose of chemical, Methods of softening - ammonia, borax, lye, lime-soda, chelating, Ion exchange method etc.,Methods of removal of dissolved solids - solar distillation gadgets and plants, direct freezing, reverse osmosis, electrolysis,Methods of disinfection -chlorination – chlorine dose, chlorine demand, application of chlorine,Use of various forms of chlorine, break through chlorination,Removal of colour

Module VI: 10 Hours

Sources of sludge- Estimation of bulk density of sludge, Estimation of rate of filtration. Principles of dewatering, Methods of dewatering and suitability, Thickening of sludge,Chemical conditioning, Elutriation of sludge, Vacuum and pressure filtration, Sludge lagging

Suggested Readings

CVAF0110: ADVANCED FOUNDATION ENGINEERING

4 credits-60 Hours (L:T:P:4:0:0)

Objective:

1. The students will be able to decide the type of foundations to be recommended for construction of different engineering structures
2. The students will be able to design different types of foundations

Course Outcomes:

CO1: Identify a suitable foundation system for a structure, methods of soil exploration, (understand)

CO2: Calculate Lateral earth pressure and retaining wall, Bearing capacity and settlement of shallow foundation, Analyse and design shallow foundations, and pile foundations.(Evaluate, Apply)

CO3: Evaluate the importance of raft foundation, analyse and design of well foundation.(Analyse , Apply)

CO4: Examine and discuss various machine foundations, Analyse and design Sheet piles and cofferdams, foundation on problematic soil. (Create)

Module 1: (10 hours)

Introduction: Foundation Engineering, Importance and Purpose, Classification and general requirement, Factors influencing the choice of a foundation, Selection of the type

Soil Exploration Introduction, Methods of exploration, Planning the exploration programme, Method of boring, Soil sampling and soil samplers, Vertical and lateral extent of borings, Field tests like

Penetration test (Standard Penetration Test, Static Cone Penetration Test, Dynamic Cone Penetration Test) Pressure meter tests, dialatometer test and field Vane shear test. Groundwater observations, Borehole logs, Site investigation reports

Module II: (15 hours)
Lateral Earth Pressure Theories and Retaining Walls [10 Hours]: Introduction, Effect of wall movement on Earth pressure, Earth pressure at Rest, Classical Earth Pressure Theories, Rankine's theory, Coulomb's theory, Yielding of wall of limited height, Graphical solution for coulomb's earth pressure, Trial wedge method for earth pressure, proportioning of retaining walls, Stability of retaining walls
Flexible Retaining Structures and Coffer Dams [3 Hours]: Introduction, Cantilever sheet pile wall, Anchored wall, Coffer dams

Module V: (10 hours)
Bearing Capacity and Settlement of Shallow Foundations [6 Hours]: Introduction, Basic Definitions and their relationship, Principle modes of soil failure, Bearing capacity by classical Earth pressure theory of Rankine, Pauker and Bell's bearing capacity theory of failure, Prandtl's theory of failure, Terzaghi's method of determining bearing capacity of soil, Effect of water table on bearing capacity, Extension of Terzaghis bearing capacity theory, Recent bearing capacity theories, Bearing capacity from In-situ tests (Plate load test), Types of settlement and their relationships. Allowable settlement and allowable bearing pressure, Steps involved in the proportion of footings. Design of shallow Foudation

Module VI: (8 hours)
Mat Foundations [4 Hours]: Introduction, Common types of mat foundation, bearing capacity and settlement of mat foundations Compensated foundation, Analysis of mat foundation.
Beams on Elastic Foundation

Module VII: (7 hours)
Pile Foundations [6 Hours]: Introduction, Types and uses of piles, Construction of piles, Selection of pile type, Types of foundations to suit subsoil conditions, Pile driving formula, Static pile load formulae, Load test on piles, Dynamics pile formulae, Pile capacity from in-situ tests. Group action of piles, Negative skin friction, laterally load piles, Piles subjected to uplift loads, Uplift capacity of piles, foundations/anchors under uplift loads, well foundation

Module VIII: (10 hours)
Well Foundations : Introduction, Types of wells or caissons, Components of a well foundation, Shapes of wells, Depth of a well foundation, Forces acting on well foundation, Lateral stability of well foundation, Construction and sinking of a well.
Foundations on problematic soils: Foundations for collapsible and expansive soil. : IS and IRC codal provisions, elastic theory and ultimate resistance methods for well foundations, foundations on problematic soils: foundations for collapsible and expansive soil.

Suggested Readings
1. "Foundation Analysis and Design" Joseph E.Bowels. McGraw-Hill International Editions, Fifth Edition, 1997
2. "Principles of Foundation Engineering" Braja M. Das, Fifth Edition, 2003. Thomson/Brookscole
3. "Basic and Applied soil mechanics "Gopal Ranjan and ASR Rao, Second Edition New Age International publishers,2000
4. "Soil mechanics and Foundation Engineering" K. R. Arora Standard Publisher Distribution 1997
5. "A Text Book of Soil Mechanics and Foundation Engineering in SI units "V.N.S. Murthy UBS Publishers Distributors Ltd.Fourth Edition 1993.
6. "A Text Book of Foundation Engineering", Dr. R.K.Poudel and R.Neupane, 1st Edition, 2006.
7. "Pile Foundation Analysis and Design" H.G.Poulos and E.H.Davis, John Wiley and Sons, 1980

CVAH0111: ADVANCED HYDROLOGY

4 Credits 60 hours (L-T-P :3-1-0)

Objectives: The objective of this course is to provide students with an advanced understanding of the analysis and development of the basic tools for analysis of hydrologic processes, apply time series models for hydrologic data generation and forecasting, estimate the design flows and assess impact of climate change and Land use/Land cover on water availability.

COURSE OUTCOMES:

At the end of the course, students will be able to ,

CO1: Understand the hydrologic systems and hydrologic inputs(Understand)

CO2.Analyse the hydrologic abstractions, streamflow measurement and Unit hydrographs (Analyse)

CO3.Analyse and solve problems on Linear and Nonlinear models, Physically based models and hydrological routing.(Apply)

CO4. Analyse and solve problems on frequency analysis, time series analysis, impact of climate change and Land use/Land cover on basin response.(Evaluate)

Module I: (15 hours)

Introduction to hydrologic system and hydrologic budget, fundamental laws of hydrology; atmospheric water vapor, introduction to hydrologic Inputs like precipitation and its forms, snowfall and rainfall; measurement techniques and space-time characteristics.

Module II: (15 hours)

Introduction to Hydrologic Abstractions like infiltration, depression storage, evapotranspiration and its measurement techniques, space time characteristics and their modeling, introduction to stream flow measurement techniques, space-time characteristics, rating curves, introduction to Unit Hydrograph IUH, GIUH.

Module III: (15 hours)

Mathematical Modelling using Linear and Nonlinear models, physically based models, hydrological routing, flood forecasting.

Module IV: (15 hours)

Advanced method of frequency analysis, outliers, time series analysis, study the impact of climate change and Land use/Land cover on basin response.

Suggested Readings

1. Chow, V.T., Maidment, D.R. and Mays, W.L., "Applied Hydrology", McGraw Hill. 1988
2. Ojha, C.S.P., Berndtsson, R. and Bhunya, P., “Engineering Hydrology”, Oxford University Press. 200
3. Wanielista, M., Kersten, R. and Eaglin, R., “Hydrology”, John Wiley. 1997

CVHS0112: HYDRAULIC STRUCTURES

3 Credits 45 hours (L-T-P :3-0-0)

Objectives: The objective of this course is to provide students with an advanced understanding of the analysis and design of various types of hydraulic structures.

COURSE OUTCOMES
CO1: Understand the hydraulic structures for water resources projects(Understand)
CO2: Analyse the construction and design principles of embankment and gravity dam(Analyse)
CO3: Analyse and solve problems on dam outlet works and terminal structures(Apply)
CO4: Analyse and solve problems on dimensional analysis and design of physical models of hydraulic structures (Apply)

Module I: (10 hours)
Introduction: Hydraulic structures for water resources projects.

Module II: (15 hours)
Introduction to embankment dams, its types, design considerations, seepage analysis and control, stability analysis, construction techniques, introduction to gravity dam, forces acting on and failure of a gravity dam, stress analysis, elementary profile, design of gravity dam, other functional features of a gravity dam.

Module III: (10 hours)
Introduction to dam outlet works, types of outlet structures, ogee spillway, chute spillway, siphon spillway, side channel spillway, labyrinth and piano key weir, introduction to terminal structure, hydraulic jump types, stilling basin, roller bucket, ski jump basin, baffled spillway, drop structure.

Module IV: (10 hours)
Introduction to hydraulic modeling and its basic principles, dimensional analysis, design of physical models of hydraulic structures.

Suggested Readings
1. Peterka, A.J, "Hydraulic Design of Stilling Basins and Energy Dissipators", USBR Engineering Monographs No. 25". 1984
2. Design of Small Dams", Third Edition, Water Resources Technical Publication – US Bureau of Reclamation. 1987
3. Singh, B., and Varshney, R.S., "Embankment Dam and Engineering", Nem Chand and Brothers. 2004

CVAP0113: AIR POLLUTION AND CONTROL

Objective:
The objective of the course is to provide the understanding of causes and effects of air pollution and their controlling mechanisms. The course also imparts knowledge on the impacts of air pollution on policy, human health and various contemporary technological innovation for betterment of air quality.

COURSE OUTCOMES:
After Successful completion of this course, the student should be able to:
CO1. Identify several types of air pollution problems and the chemistry and physics affecting them(Understand)

CO2. Discuss (physical, chemical, biological, and social) mechanisms leading to impacts of air pollution on human health, welfare, and the environment. (Understand)
CO3. Discuss air pollution management practices (regulations, strategies, technologies).(Apply)
CO4. Analyze (quantitatively and qualitatively) impacts of air pollution management decisions on air quality, human health, and the environment. (Analyse)
CO5. Select methods for measurement, control, and prevention of air pollution.(Apply)

Module I: (10 Hours)
Air Pollution: Introduction and Impacts of air pollution on human health, vegetation, animals, building materials, structures, and atmosphere, soil and water bodies.Sources, classification and formation/transformation of air pollutants:
Indoor air pollution: sources, types and health impacts. Sampling, assessment and evaluation of Indoor air quality.

Module II:(15 Hours)
Meteorology and Atmospheric Stability.Lapse Rate, Plume Behaviour, and Air Quality Monitoring, Air Quality Index (AQI); Air Quality Modelling, Gaussian dispersion models: point, line and area source models;
Emissions Inventory: Transport, Industrial, Agricultural, Residential and Commercial sectors.
Global and regional environmental issues of air pollution: Ozone depletion, Climate change, Global warming, Acid rain.

Module III: (8 Hours)
Air pollution control devices, equipment and their design

Module IV: **(7 Hours)**
Air pollution emission standards, National and international policies, acts, rules and regulations
Emerging technologies and strategies to mitigate air pollution, Current challenges and way forward

Module V: (**5 Hours)**
Lab-based measurements of air pollutants.

Suggested Readings:
1. Wark, K., Warner, C.F., and Davis, W.T., "Air Pollution: Its Origin and Control", Addison-Wesley Longman. 1998.
2. Boubel, R.W., Fox, D.L., Turner, D.B., Stern, A.C., "Fundamentals of Air Pollution", Academic Press. 2005.

CVTV0114: THEORY OF VIBRATION
(3-0-0)

Objectives
The course deals with the dynamic analysis of structures and applications in design. The main objectives are listed below:

- To understand and apply the method to develop dynamic equation of motions
- To know the method to find out the response time history of structure subjected to different types of excitations.
- To be familiar with the analysis of single degree freedom, multi degree freedom and continuous system
- To know the numerical techniques to solve the problems in structural dynamics

COURSE OUTCOMES

After successful completion of the course , students will be able to:

CO1: Familiarize with the formulation of problems for dynamic analysis (Understand)

CO2: Develop equations of motions for SDF system and different approaches for solution(Apply)

CO3: Find the response of MDF and continuous systems using modal analysis(Evaluate)

CO4: Familiar with different numerical methods to find out the dynamic response of a system (Understand)

Module I Introduction (4 hours)

Importance of vibration analysis, effects of vibration, Nature of excitation, deterministic and random excitation, vibration terminology, Degrees of freedom, Mathematical modelling of dynamic system, initial value and boundary value problems, Types of vibration-Free and forced vibration, Characteristics of discrete systems.

Module II Single Degree Freedom system (12 hours)

Equation of motion, energy method, natural frequency of SDF, viscous damping, damped and undamped oscillation, free vibration response, underdamped, critically damped and overdamped system, logarithmic decrement. Forced vibration, response to harmonic excitation, support motion, vibration isolation, vibration measuring instruments, response to arbitrary excitation, Duhamel integral, concept of response spectra.

Module III Multidegree freedom system (8 hours)

Two degrees of freedom system, natural frequencies and normal modes, forced vibration of multi degree freedom system, mode superposition technique, orthogonality condition of normal modes, modelling of multistoried buildings, response of shear building to base excitation, Rayleigh's approximate method, state-space solution

Module IV: Numerical approach in Structural Dynamics (8 hours)

Numerical solutions of Duhamel integral, numerical Solution to Response using Newmark Method and Wilson Method, Numerical Solution for State Space Response using Direct Integration

Module V: Continuous system (8 hours)

Relation between discrete and continuous system, Axial vibration of rods, Bending vibrations of beams, boundary conditions and eigen value problems, mode shape functions and natural frequencies, orthogonality of mode shape functions, modal analysis.

Module VI: Special topics in Structural Dynamics (5 hours)

Moving Loads, Vibrations caused by Traffic, Blasting and Pile Driving, Foundations of industrial machines, wave propagation

Suggested Readings

1. Thompson, W. T , "Theory of Vibration with applications", CBS Publishers, New Delhi, 1990
2. Meriovitch, L "Elements of Vibration Analysis", Mc Graw Hill Book Co., New York, 1996
3. Chopra, A. K, "Dynamics of Structures: Theory and Applications to Earthquake Engineering" , Prentice Hall of India, New Delhi, 2001
4. Clough R J; Penzien J, "Dynamics of Structures", Mc Graw Hill, New Delhi, 1993
5. Inman, D , "Engineering Vibration" Pearson, New Delhi, 2014

CVGT0115: GEOTEXTILE IN CIVIL ENGINEERING

(3-0-0=3)

Course objectives

The course is framed for Master Degree students with the following objects

- Understand different types of geotextiles
- Design of geotextiles for various geotechnical challenge
- Understand the usage of geotextiles in pavement construction, slope stability and drainage

Course Outcomes

CO1: Understand different types of geotextiles(Understand)
CO2: Summerise the properties and tests for geotextiles(Understand)
CO3: Design of reinforced soil earthen wall(Create)
CO4: Application to different Civil Engineering problems(Apply)

Module I Introduction (4 hours)

Introduction to Geotextiles, historical background, functions, reinforced earth-mechanism and concepts

Module II Types of geotextiles (6 hours)

Classification of geotextiles, woven, nonwoven and combined, natural fibres, manufacturing process

Module III Properties of geotextiles (10 hours)

Tensile strength, impact strength, resistance to stress induced crack, heat resistance and hydraulic properties, laboratory tests, quality control and assurance, sustainability aspects of using geotextiles.

Module IV Geogrid Reinforced Soil wall (10 hours)

Geo-grid reinforced soil wall, guide lines for design of reinforced slopes, geotextiles in road construction, controlling soil erosion, backfill pressure in bridge abutment

Module V Slope Stability (9 hours)

Slope stability analysis-finite and infinite slopes, in-situ slope stabilization, design of reinforced slope, embankments on soft soil

Module VI Drainage facility (6 hours)

Drainage facility improvement using geo synthetics, accelerated consolidation of soft clays using geosynthetics, geotextile tubes for dewatering and decontamination of soil.

Suggested Readings

1. Senthil Kumar R, “Textiles for Industrial Applications “ CRC Press
2. Koerner, R. M, “Geotextiles: From Design to Applications” Woodhead Publishing series
3. Koeerner, R. M, Designing with Geosynthesis, Prentice Hall
4. Shukla, S K, “Geosynthesis and their applications”, Thomas Telford Publishig, London UK

CVIT0116: GROUND IMPROVEMENT TECHNIQUES

3 credits - (L-T-P: 3-0-0)

Objectives: This course aims to provide students with a comprehensive understanding of ground improvement techniques and their applications to various soil conditions and construction

requirements. It covers mechanical, hydraulic, chemical and thermal modification methods as well as soil reinforcement with geosynthetics and promotes the ability to design and analyze stable and efficient reinforced soil structures.

COURSE / LEARNING OUTCOMES

CO1: Understand the need and different situations requiring ground improvement.
CO2: Explain and apply various mechanical and hydraulic modification techniques for ground improvement.(Understand)
CO3: Demonstrate knowledge of chemical modification techniques and their application.(Apply)
CO4: Understand and apply thermal modification techniques for ground improvement.(Understand)
CO5: Analyze and select appropriate soil reinforcement techniques for different scenarios.(Analyse)
CO6: Design and analyze structures using soil reinforcement techniques.(Create)

Module I: Introduction: Need for Ground Improvement, Different types of problematic soils, Emerging trends in ground Improvement.

Module II: Mechanical modification: Dynamic compaction, impact loading, compaction by blasting, vibro-compaction; pre-compression, stone columns; Hydraulic modification: dewatering systems, preloading and vertical drains, electro-kinetic dewatering

Module III: Chemical modification: Modification by admixtures, stabilization using industrial wastes, grouting

Module IV: Thermal modification: Ground freezing and thawing.

Module V: Soil reinforcement: Reinforced earth, basic mechanism, type of reinforcements, selection of stabilisation/improvement of ground using Geotextiles, Goegrid, geomembranes, geocells, geonets, and soil nails.

Module VI: Application of soil reinforcement: Shallow foundations on reinforced earth, design of reinforced earth retaining walls, reinforced earth embankments structures, wall with reinforced backfill, analysis and design of shallow foundations on reinforced earth, road designs with geosynthetics

Suggested Readings

1. S. K. Gulhati and M. Datta, "Geotechnical Engineering", Tata McGraw Hill.
2. H.R. Hausmann, "Principles of Ground Modification", McGraw-Hill Book Company.

CVRD0117: EARTHQUAKE RESISTANT DESIGN OF STRUCTURES

3 credits - (L-T-P: 3-0-0)

Objectives:

The course deals with the principles of earthquake resistant design of structures, measures to be taken to identify seismically deficient buildings and to improve their resistance. The main objectives are listed below:

- To understand the effects of earthquakes on structures
- To carry out lateral load analysis with reference to Indian standard codes
- To be familiar with earthquake resistant design of buildings
- To know the methods for improving earthquake resistance of buildings

Course Outcomes

After successful completion of the course , students will be able to ,

CO1: Familiarization with the damaging effects of earthquakes on different types of buildings (Understand)

CO2: Mode the structures to find dynamic characteristics needed to find seismic forces (Apply)

CO3: Estimate seismic forces on buildings using guidelines of Indian Standard codes(evaluate)

CO4: Understanding earthquake resistant design philosophy, design procedure and to improve earthquake resistance of the buildings.(Understand, Apply)

Module I: Effect of earthquake on structures (6 hours)

Earthquake and its consequences, force generation mechanics, factors affecting structural damage, seismic waves, intensity, magnitude and energy of an earthquake, measurement of ground motions, prominent past earthquakes.

Module II: Modelling of structure for seismic analysis (9 hours)

Basics of structural dynamics, SDF and MDF systems in modelling of structures for dynamic load, Time periods and modes of oscillation, resonance condition, role of damping, base excitation in structure, vibration transmission and isolation, concept of response spectrum.

Module III: Estimation of seismic forces in buildings (10 hours)

Philosophy of earthquake resistant design, lessons learnt from past earthquakes, seismic codes and guidelines, Seismic load calculation as per IS 1893- 2016, Seismic zones in India, Equivalent static approach, Dynamic analysis methods modal participation factors, combination of modes, unsymmetrical configuration of buildings and torsion.

Module IV: Earthquake resistant design of RC building (8 hours)

Earthquake resistant measures at planning stage, architectural features, horizontal and vertical layout of buildings, provisions of IS 4326-1993, Reinforced concrete framed buildings, capacity based design, beam-column joint in moment resistant frame, ductile detailing, provisions of IS 13920-13.

Module V: Earthquake resistant design of Masonry Buildings (6 hours)

Earthquake resistant design of masonry structures, stresses in brick wall due to lateral load, damaging effect of earthquakes and earthquake resistant features of masonry load bearing structures, seismic bands, improving earthquake resistance of low strength brick wall, provisions of IS 13828-1993.

Module VI: Geotechnical consideration and vulnerability studies (6 hours)

Geotechnical consideration in design of structures, liquefaction and its effects, measures to reduce liquefaction potential, vulnerability atlas of India, assessment of seismic vulnerability of buildings, retrofitting and rehabilitation of structures.

Suggested Readings

1. Dowrick D J, “Earthquake resistance Design for Engineers and Architects”, John Wiley and Sons, New York, 1987
2. Agarwal, P ; Shrikhande, M, “Earthquake resistant design of structures”, Prentice Hall of India, New Delhi, 2011
3. Chopra, A. K, “Dynamics of Structures: Theory and Applications to Earthquake Engineering” Prentice Hall of India, New Delhi, 2001
4. Arya, A. S, “Masonry and timber structures including earthquake resistant design”, Nemchand

and Brothers, Roorkee, 1987
5. Krishna J, Chandrasekaran A R, Chandra, B, "Elements of Earthquake Engineering", South Asian Publisher, New Delhi, 1976
6. Guidelines: Improving earthquake resistance of housing, Building Materials and Technology Promotion Council, New Delhi; 2000

CVID0118: IRRIGATION AND DRAINAGE

(*3* credits) (L-T-P: *3*-0-0)

Objective:

To take up the basic concepts of irrigation and basic concepts of water, plants, and their interactions, as well as irrigation and drainage systems design. The structures involved the elementary hydraulic design of different structures and the concepts of maintenance shall also form part. To develop analytical skills relevant to the areas mentioned above, particularly the design of irrigation and drainage projects

.

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO1: Explain the objectives, types, and suitability of different irrigation methods, along with the concepts of soil-water relationships, crop evaporative needs, and irrigation efficiency.(Understand)

CO2: Apply various surface irrigation techniques and employ field measurement techniques for flow measurement.(Apply)

CO3: Design irrigation systems and evaluate drainage needs.(create)

Module I: (10 Hours)

Introduction, objectives of irrigation, type of irrigation and suitability; selection of irrigation method. Irrigation requirement, water balance, soil water relationships, water storage zone, infiltration. Flow of moisture through root zone, soil physical and chemical properties, crop evaporative and drainage requirements, irrigation efficiency and uniformity

Module II: (10 Hours)

Surface irrigation systems, types of surface systems, basin irrigation, border irrigation, furrow irrigation, field measurement techniques, flow measurement, flumes, weirs, irrigation events, advance, wetting, depletion and recession phases.

Module III: (10 Hours)

Infiltration, infiltrometer, ponding methods, soil water, tensiometers, neutron probe, time domain reflectometer, evapotranspiration, crop coefficient, leaf area index, FAO guide lines on evapotranspiration estimation.

Module IV: (10 Hours)

Fundamentals of surface irrigation hydraulics, continuity equation, momentum equation

Module V: (5 Hours)

Drainage principles, need for drainage, steady state equations, Hooghoudt, Kirkham, Dagan and Ernst equations.

Suggested Readings

1. Walker, W.R., and Skogerboe, G.V., "Surface Irrigation Theory and Practice", Prentice Hall, INC. 1987

CVSD0119: SOLID AND HAZARDOUS WASTE MANAGEMENT

3 Credits-(L-T-P:3-0-0)

Objectives:

1. Understanding of problems of municipal waste, biomedical waste, hazardous waste, e waste, industrial waste etc.
2. Knowledge of legal, institutional and financial aspects of management of solid wastes.
3. Become aware of Environment and health impacts solid waste mismanagement
4. Understand engineering, financial and technical options for waste management

COURSE OUTCOMES:

After completion of the course students should be able to:
CO 1: Comprehend the health and environmental impacts associated with solid waste management.(Understand)
CO 2:Perform sampling and characterization of solid waste.(Apply)
CO 3: Analyze hazardous waste constituents, addressing quality assurance and quality control (QA/QC) issues.(Analyze)
CO 4: Implement the steps in solid waste management, including waste reduction at the source, collection techniques, materials and resource recovery/recycling, transportation and disposal.(Apply)
CO 5: Develop sustainable waste management practices tailored to rural settings.(Apply)

Module I:

Solid Wastes: Origin, Analysis, Composition and Characteristics:Solid Waste- Types and classification Waste sources and generation rates Integrated Solid Waste Management System: Collection, Storage, Segregation, Reuse and Recycling possibilities, Transportation, Treatment / Processing and Transformation Techniques, Final Disposal. Factors influencing waste generation and health hazards ,Waste composition ,Waste collection , Characterization of wastes

Module II

Management of: Municipal, Biomedical, Nuclear, Electronic and Industrial Solid Wastes and the rules and regulations.Waste processing : Size and volume reduction Waste minimization, waste hierarchy and waste audit,Recycling of solid wastes.

Hazardous waste- Definition, sources, classification, collection and segregation,Hazardous waste characterization, treatment and disposal,Radioactive wastes

Module III

Composting ,Vermicomposting , Biogas production from solid waste,Thermal treatment of solid waste – Incineration Thermal treatment of solid waste – Pyrolysis and gasification

Module IV

Landfill disposal, Current Management Practices, Environmental audit, Pollution Prevention, Facility Development and operation, Site Remediation: Quantitative risk assessment, site and subsurface characterization, Containment,remedial alternatives.

Module V

Solid waste disposal – Sanitary landfilling- , Landfill leachate, Ground water contamination and gas management,Landfill bioreactors, Fly ash- Generation and management ,Fly ash management ,Solid waste management rules, 2016 , Hazardous and other waste (management and transboundary movement) amendment rules, 2016 Plastic waste management rules, 2016,Basel Convention on the control of transboundary movement of hazardous waste and their disposal ,Mechanical biological treatment of solid wastes

Module VI

Solid waste management in rural areas ,Swachh Bharat Abhiyan , Recent advances in solid waste management

CVGE0120: GEOTECHNICAL EARTHQUAKE ENGINEERING

3 credits - (L-T-P: 3-0-0)

Objectives: The aim of the course is to familiarise students with the causes and quantification of earthquakes and to familiarise them with the effects of earthquakes and the design criteria required for the design of various geotechnical structures.

COURSE / LEARNING OUTCOMES

Upon completion of this course, students will be able to

CO1: Demonstrate the principles of earthquake loading (Apply)

CO2: Quantify earthquake intensity and various ground motions(Evaluate))

CO3: Perform a deterministic and probabilistic seismic hazard analysis considering different soil properties and site conditions (Apply)

CO4: Analyse the liquefaction susceptibility of a site(Analyze)

CO 5: Design earthquake-resistant foundations, retaining walls, slopes etc.(Create)

Module I: Earthquake seismology: Causes of earthquake, Plate tectonics, Earthquake fault sources, Seismic waves, Elastic rebound theory, Quantification of earthquake, Intensity and magnitudes, Earthquake source models.

Module II: Earthquake ground motion: -Strong motion measurement, ground motion parameters and their estimation, seismic hazard analysis - deterministic and probabilistic, wave Propagation - Waves in a Semi- infinite body, layered body, attenuation of stress waves.

Module III: Ground response analysis: One, two and three-dimensional ground response analysis.

Module IV: Liquefaction and lateral spreading - Liquefaction related phenomena, Liquefaction susceptibility: Historical, Geological, Compositional and State criteria. Evaluation of liquefaction by cyclic stress and cyclic strain approaches, Lateral deformation and spreading, Criteria for mapping liquefaction hazard zones.

Module V: Seismic design of foundations, Seismic slope stability analysis: Internal stability and weakening instability and Seismic design of retaining walls.

Suggested Readings

1. S.L. Kramer, Geotechnical Earthquake Engineering, Pentice Hall, international series, Pearson Education (Singapore) Pvt. Ltd., 2004.
2. S.Saran, Soil Dynamics and Machine Foundation, Galgotia publications Pvt. Ltd., New Delhi 1999.
3. Ansal, Recent Advances in Earthquake Geotechnical Engineering and Microzonation, Springer, 2006.
4. Towhata, Geotechnical Earthquake Engineering, Springer, 2008.

CVDS0121: DESIGN OF SUB-STRUCTURES

3 credits-45 Hours (L:T:P: 3:0:0)

COURSE OUTCOMES: At the end of the course, students will be able to

CO1. Decide the suitability of soil strata for different projects.(Understand)

CO2. Design shallow foundations deciding the bearing capacity of soil, and Analyze and design the pile foundation, foundation on expansive soil. (Apply)

CO3. Understand analysis methods for well foundation, Analyze and design of the machine foundation (Understand, Create)

Module I (10 hours): Shallow Foundation

Soil investigation – Basic requirements of foundation, types and selection of foundations, bearing capacity of soil, plate load test, design of reinforced concrete isolated, strip, combined and strap footings, mat foundation.

Module II (10 hours): Pile Foundation
Introduction, Types of pile foundations, load carrying capacity, pile load test, structural design of straight piles, configuration of piles, different shapes of pile cap, structural design of pile cap.

Module III (10 hours): Well Foundation
Types of well foundation, grip length, load carrying capacity, construction of wells, failures and remedies, design of well foundation, lateral stability

Module IV (8 hours): Machine Foundation
Introduction, types of machine foundation, basic principles of design of machine foundation, dynamic properties of soil, vibration analysis of machine foundation, design of foundation for reciprocating machines and impact machines, reinforcement and construction details, vibration analysis.

Module V (7 hours): Special Foundation
Foundation on expansive soils, choice of foundation, under-reamed pile foundation, foundation for concrete towers, chimneys, design of anchors, reinforced earth retaining walls.

Suggested Readings

CVAS0122: ADVANCED STEEL DESIGN (3: 0: 0=3 CREDITS)

Objectives

The steel structures have found significant applications in different infrastructural projects as they offer various advantages over reinforced concrete construction. To understand the behaviour of steel structures and design philosophy, the course is framed for the post graduate students with following objectives:

- To apply the design principles in beams and frames
- To understand design philosophy and stability of beams and columns
- To apply the design methods for industrial buildings.

Course Outcomes

After Successful completion of the course , students will be able to :

CO1: Familiarize with plastic design of steel structures and its applications (Understand)

CO2: Understand failure criteria of tension member and stability of steel columns(Understand)

CO3: Understand the concept of shear centre in steel structure and calculation of stresses in unsymmetrical bending. (Evaluate)

CO4: Design components of industrial buildings(create)

Module I: Properties of Steel (5 hours)
Introduction, Types of structural steel, Mechanical Properties, Residual stress, stress concentration, hysteresis, ductility, Cold formed steel, hot rolled section, High performance and stainless steel.

Module II: Basis of Structural Design (10 hours)
Structural systems and integrity, Joints and mechanical fasteners, Design actions, Methods of Design- Allowable stress, plastic method, Load resistance Factor design, Strength and Drift Criteria: P-Δ Effect, Deformation Based Design; elastic and inelastic analysis, plastic analysis of steel structures, concept of plastic hinge and collapse mechanism, effect of axial force on plastic moment capacity, deflection at ultimate load.

Module III: Axially loaded member (10 hours)
Failure criteria of tension member, staggered bolts, stress concentration due to holes, stability of steel column, Buckling analysis, imperfection in column and its effect on the strength of column, compound columns for heavily loaded structures, Members subjected to combined axial force and bending moment, local buckling of flanges and webs, critical load for steel frames, torsional buckling, column base, design of anchor bolts

Module IV: Flexural member (8 hours)
Stability of Beams, laterally restrained beams, unrestrained beams, flexure-torsional buckling in unrestrained beam, Plastic design of continuous beams and frames, Built up beams, prevention of web buckling, stiffener design, steel-concrete composite construction, composite sectional properties, design of shear connector.

Module V: Unsymmetrical bending (6 hours)
Unsymmetrical steel sections, principal axes, maximum bending stress, shear centre and its calculation for steel section, design of beams under unsymmetrical bending.

Module VI: Industrial Building (6 hours)
Structural framing, selection of roofing and wall material, Roof trusses, Wind load calculations as per IS 875=Pt III, gantry girder, design of sections, columns and foundations.

Suggested Readings

CVFH0123: FLUVIAL HYDRAULICS
(*3* credits) (L-T-P:*3*-0-0)

Objective:
The primary objective of this course is to provide students with a comprehensive understanding of sediment dynamics in river systems. The course covers the properties of sediments, the mechanisms of

sediment transport, and the challenges associated with sediment problems. Students will learn to analyze and design stable channels and sediment control structures using both physical and mathematical models. Emphasis will be placed on practical applications such as bed level variations, local scour, degradation, aggradation, and reservoir sedimentation, along with the design of guide bunds and other river training banks.

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO1. Explain the properties of sediments, the challenges associated with sediment problems, and the concepts of incipient motion for both uniform and non-uniform sediments. (Understand)

CO2. Analyze the formation of bed forms and the factors contributing to channel resistance and evaluate sediment transport mechanisms, including bed load and suspended load transport, for both uniform and non-uniform bed materials. (Analyse)

CO3. Design stable channels and guide bunds and other river training banks, addressing issues such as bed level variations, local scour, degradation, aggradation, and reservoir sedimentation. (Create)

Module I : (10 Hours)

The sediment problems, properties of sediments, incipient motion of uniform and nonuniform sediments.

Module II : (10 Hours)

Bed forms and channel resistance. Bed load and suspended load transport for uniform and non-uniform bed material, total load equations, sediment sampling.

Module III: (15 Hours)

Stable channel design and sediment control. Bed level variations, local scour, degradation, aggradation and reservoir sedimentation. Physical and mathematical models.

Module IV: (10 Hours)

Design of guide bunds and other river training banks.

Suggested Readings

CVAF0124: ADVANCED FLUID MECHANICS

(*3* credits) (L-T-P:*3*-0-0)

Objective:

The subject Fluid Mechanics has a wide scope and is of prime importance in several fields of engineering and science. Present course emphasizes the fundamental underlying fluid mechanical principles and application of those principles to solve real life problems.

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO1. Understand and explain the kinematics of fluid flow and the equation of continuity. (Understand)

CO2. Apply standard 2D flow patterns, such as sources, sinks, and doublets, to construct complex flows through superposition and solve the Laplace equation using graphical, relaxation methods, and conformal mapping.(Apply)

CO3. Evaluate and analyze turbulent flows and interpret turbulence characteristics.(Evaluate, Analyse)

Module I: (5 Hours)
Kinematics of Flow: Equation of continuity in cartesian, polar and cylindrical coordinates.

Module II: (10 Hours)
Standard 2D Flow Patterns: Source, sink, doublet and their combinations, construction of flows by superposition, D'Alembert's paradox, Laplace Equation: Solution by graphical and relaxation methods, conformal mapping, solution by separation of variables

Module III: (8 Hours)
Laminar Flow: Derivation of Navier-Stokes equations – exact solutions for flow between parallel plates, Couette flow, flow near a suddenly accelerated plate and an oscillating plate.

Module IV: **(10 Hours)**
Boundary Layers: Similarity solutions of boundary layer equations, Falkner-Skan Wedge flows, Karman's momentum integral equations, Karman-Puhlhausen approximate solution, separation in boundary layer under adverse pressure gradient, turbulent boundary layer.

Module V: (12 Hours)
Turbulent Flows: Reynolds equations of motion, semi-empirical theories of turbulence, velocity profiles for inner, outer and overlap layers, equilibrium boundary layers. Measurement of Turbulence and Statistical Theory of Turbulence: Isotropic and homogeneous turbulence, probability density functions, correlation coefficients, decay of isotropic turbulence.

CVPA0125: PAVEMENT ANALYSIS AND DESIGN
(3 credits — 45 hours) (L-T-P:3-0-0)
Objectives: *The objective of the course is to provide postgraduate students with a thorough understanding of the principles and practices involved in the design of flexible and rigid pavements. The course covers analytical methods for pavement analysis, selection of design input parameters, material characterisation, drainage, and failure criteria. Students will learn to design pavements using various methods, compare different design approaches, and design overlays and drainage systems, enhancing their expertise in pavement engineering.*

COURSE /LEARNING OUTCOMES
At the end of the course students will be able to:
CO1: Understand the fundamental principles behind the design of flexible and rigid pavements, demonstrating foundational knowledge in pavement engineering. (Understand)

CO2: Analyse and apply various analytical methods to evaluate pavement structures, enhancing their analytical and problem-solving skills. Analyse. Apply)
CO3: Evaluate design inputs, critically assess and select appropriate pavement design input parameters such as traffic loading, volume, and material properties, ensuring accurate and reliable design. (Evaluate)
CO4: Design flexible and rigid pavements using different methodologies, showcasing their ability to synthesise and apply theoretical knowledge to practical scenarios. (Apply)
CO5: Evaluate and compare different pavement design approaches, including overlays and drainage systems, to determine the most effective solutions, demonstrating their capacity for critical thinking and optimisation.(Evaluate)

Module I: Fundamentals and Philosophy of Pavement Design (8 hours)

a) Introduction to pavement types: flexible and rigid pavements, Basic principles and philosophies underlying pavement design, Functional requirements of pavements: structural and serviceability considerations.
b) Analytical methods for pavement analysis: empirical, mechanistic-empirical, and theoretical approaches, Stress-strain behaviour of pavement materials under load.

Module II: Pavement Design Input Parameters and Material Characterisation (10 hours)

a) Traffic data collection and analysis for pavement design, Load equivalency factors and load spectra, Impact of axle loads and tire pressures on pavement performance.
b) Material properties and characterisation techniques for pavement materials, Failure criteria for flexible and rigid pavements, Reliability concepts in pavement design and performance prediction.

Module III: Design Methods for Flexible and Rigid Pavements (17 hours)

Design methodologies for flexible and rigid pavements, Mechanistic-empirical design approaches for both flexible and rigid pavements, Software tools for pavement design

Module IV: Comparative Approaches, Overlays, and Drainage Systems (10 hours)

Comparative analysis of different pavement design approaches: strengths and limitations, Design and rehabilitation of pavement overlays: flexible and rigid, Advanced drainage system design and its integration with pavement structures.

Suggested Readings

CVCS0126: DESIGN OF ADVANCED CONCRETE STRUCTURES

Credit: 3 (L:T:P-3:0:0)

Objective:

The objective of this course is to provide students with an advanced understanding of the principles and practices involved in the structural design of reinforced concrete and steel structures.

COURSE OUTCOMES

At the end of the course, students will be able to

CO1: Evaluate different design approaches and select appropriate methodologies for analyzing and

designing structural systems.(Evaluate)
CO2: Design reinforced concrete structures with advanced techniques using various relevant design codes and able to apply them in practical design scenarios.(create)
CO3: Analyze various steel structures for various engineering applications applying relevant standards such as IS code, AISC standards, and Eurocode. (Analyse)
Module I: (8 hours)
Design Philosophy: Modeling of Loads, Material Characteristics, principles that prioritize safety, durability, sustainability, and efficiency.

Module II: (22 hours)
Reinforced Concrete Structure: Axial load (P) - Bending moment (M), M-phi Relationships, Strut-and-Tie Method, Design of Deep Beam and Corbel, Design of Shear Walls, Compression Field Theory for Shear Design, Design against Torsion; IS, ACI and Eurocode.

Module III: (15 hours)
Steel Structures: Stability Design, Torsional Buckling - Pure, Flexural and Lateral, Design of Beam-Columns, Fatigue Resistant Design, IS code, AISC Standards and Eurocode.

CVEG0127: ENVIRONMENTAL GEOTECHNOLOGY

3 Credits: 45 Hours (L:T:P-3:0:0)
Objectives:
The main objectives of this course are:
1. To understand the soil-environment interaction, Soil mineralogy and Mechanisms of soil-water interaction
2. To learn ground water flow and contaminant transport phenomenon.
3. To Learn about the principles and practices of waste management, including the design and construction of landfills, hazardous waste containment systems, and other waste disposal methods.

Course Outcomes:
After Successful completion of the course students will be able to:
CO1: Understand Soil-environment interaction, Soil mineralogy and Mechanism of soil-water interaction (Understand)
CO2: Demonstrate a thorough understanding of the physical, chemical, and biological processes that govern the behavior and transport of contaminants in soil and groundwater.(Apply)
CO3: Apply principles of geotechnical engineering to design effective waste management systems, including landfills and hazardous waste containment systems.(Apply)
CO4: Select and implement appropriate remediation technologies for various types of contaminated sites, assessing their effectiveness and limitations.(Understand, Apply))

Module I: [8 hours]
Introduction to Geo Environmental Engineering., Sources & Impact of Contamination and Soil-Waste Interaction**.**
Concepts of Integrated SWM & Geoenvironmental Engineering.

Module II: [7 Hours]
Concepts of waste containment; Sources, production and classification of wastes, Environmental laws and regulations, ground water flow and contaminant transport,desirable properties of soil; contaminant transport and retention; contaminated site remediation.

Module II: [10 Hours]

Mechanisms of soil-water interaction: Diffuse double layer models; Force of attraction and repulsion; Soil-water-contaminant interaction; Theories of ion exchange; Influence of organic and inorganic chemical interaction

Principles and Planning of Landfills,Liners for Landlls,Landfill Covers, Generation and Control of Leachate and Gas from Landlls,Stability of Slopes and Settlement of Landlls

Module III: [10 Hours]

Contaminant analysis. Contaminated site characterization, estimation of landfill quantities, landfill site location, design of various landfill components such as liners, covers, leachate collection and removal, gas generation and management, ground water monitoring, end uses of landfill sites.

Solved examples, Monitoring and Detection of Subsurface Contamination, Costs, Construction Aspects and Site Selection of Landlls. Control, Rehabilitation of Old Dumps and Contaminated Sites.

Module IV: [10 Hours]

Slurry Deposited Waste and their Geotechnical Properties .Planning & Design, Incremental Raisings and Failures of Slurry Ponds ,slurry walls and barrier systems, design and construction, stability, compatibility and performance, remediation technologies,stabilization of contaminated soils and risk assessment approaches. Environmental Control Measures at Slurry Ponds, Geotechnical Reuse of Waste

CVPS0128: DESIGN OF PRESTRESSED CONCRETE STRUCTURES

Credit: 3 (L:T:P-3:0:0)

Course Objective:

The objective of the course is to provide students with a comprehensive understanding of the principles and practices involved in the design and analysis of prestressed concrete systems. At the end of this course, students will be equipped with the necessary knowledge and skills to effectively design and analyze prestressed concrete structures, preparing them for professional practice in the field of civil and structural engineering.

Course Outcomes: At the end of the course, students will be able to

CO1: Identify different prestressing systems and understand the behavior of high-strength concrete and high-strength steel.

CO2: Perform deflection and crack width calculations to assess the serviceability of prestressed concrete structures under various loading conditions(Evaluate)

CO3: Perform analysis and design of prestressed flexural members for limit states of collapse, serviceability, shear and torsion(Apply)
CO4: Analyze the transmission of prestress in anchorage zones and design the end blocks.(Analyze)
CO5: Perform analysis and design of statically indeterminate members leading to the determination of cable profile (Apply)

Module I: (4 hours)
Concept of Prestressing, Types of Prestressing, Advantages, Limitations, Pre stressing systems - Pre-tensioning and Post tensioning methods, Anchoring devices, Materials - High strength concrete and High strength steel, Stress-Strain curve for High strength concrete, Analysis of prestressed concrete flexural members – Basic concepts, Ultimate strength in flexure – Codal provisions.

Module II: (5 hours)
Losses in Pre stress: Loss of Prestress due to Elastic shortening, Friction, Anchorage slip, Creep of concrete, Shrinkage of concrete and Relaxation of steel, Deflection and Crack Width Calculations - Deflection due to gravity loads, Deflection due to prestressing force, Total deflection, Limits of deflection, Limits of span-to-effective depth ratio, Calculation of Crack Width - Limits of crack width.

Module III: (14 hours)
Statically Determinate members – Analyze and Design flexural members for ultimate and serviceability limit states, Analyze and design for Shear and Torsion, Codal provisions

Module IV: (14 hours)
Design of End Blocks - Transmission of prestress in Pre-tensioned members, Anchorage zone stresses for Post-tensioned members.

Module V: (8 hours)
Statically Indeterminate members - Analysis and design of continuous beams and frames, Choice of cable profile, Linear transformation and concordancy, Analysis and design of prestressed concrete pipes and columns with moments.

Suggested Readings
1. Prestressed Concrete**,** Author**:** N. Krishna Raju**,** Publisher: McGraw-Hill**.**
2. Design of Prestressed Concrete Structures, Author: T.Y. Lin and Ned H. Burns, Publisher: John Wiley and Sons.
3. Prestressed Concrete: A Fundamental Approach, Author: Edward G. Nawy, Publisher: Pearson College Div.
4. Principles of Prestressed Concrete, Author: N. Rajagopalan, Publisher: Narosa Book Distributors
5. Prestressed Concrete Structures, Author: P. Dayaratnam, Publisher: Medtech
6. IS 1343: Code of Practice for Prestressed Concrete, Publisher: Bureau of Indian Standards
7. IRC 112: Code of Practice for Concrete Road Bridges, Publisher: The Indian Roads Congress

CVWT0129: INDUSTRIAL WASTE TREATMENT TECHNOLOGY
[3-0-0]
Objectives:
This course aims to provide a comprehensive understanding of the characteristics and environmental impacts of industrial wastewater. Students will learn about the physico-chemical and biological

treatment methods, and sludge management. This course equips students with the knowledge and skills to develop sustainable and efficient industrial waste treatment solutions.

COURSE OUTCOMES:
Upon completing the course students will be able to:
CO1:Analyze and Characterize Industrial Wastewater.?(Analyze)
CO2: Design and Implement Waste Minimization Strategies.(Apply)
CO3: Apply Physico-Chemical and Biological Treatment Methods for Industrial waste water.(Apply)
CO4: Manage the production of Sludge and its treatment.(Understand , Apply)
CO5: Evaluate and Implement Wastewater Reuse Systems. (Apply)

Module I [5 Hours]
Industrial wastewater – Characteristics – Environmental impacts – Effects of industrial wastes on streams, land – Effluent standards – Scenario in India –

Module II [10 Hours]
Regulatory requirements for industrial wastewater – Prevention Vs control of industrial pollution – Volume reduction – Process Modification – Strength reduction – Methods and materials changes – Waste minimization strategies – Zero discharge concept.

Module III [10 Hours]
Physico-chemical treatment of industrial wastewater – Equalization and neutralization – Separation of solids – Removal of organic and inorganic solids – Oil separation – Precipitation – Membrane methods – Reverse Osmosis – Biological treatment methods – Aerobic and anaerobic methods.

Module IV[10 Hours]
Separation Vs degradation methods – Chemical oxidation – Phototcatalysis – Ozonation – Ion exchange – Advanced oxidation processes – Electrochemical methods – Nutrient removal – Land treatment – Sludge production and its management – Quantification and characteristics of sludge – Treatment of sludge and its disposal.

Module V[10 Hours]
Reuse of industrial wastewater – Advantages – Quality requirements for reuse – Zero effluent discharge systems – Residuals of industrial wastewater treatments – Individual and common effluent treatment plants.

Suggested Readings
1. Eckenfelder, W. W., Industrial Water Pollution Control, McGraw Hill, 2014.
2. Nemerow N. L., Industrial Water Pollution, Addison-Wesley Publishing Company Inc., USA, 1978.
3. Narayana Rao M. and Amal K. Dutta, Wastewater Treatment, Oxford & IBH Publishing Co., Pvt., Ltd., New Delhi, 2001.
4. Bhatia S. C., Handbook of Industrial Pollution and Control, Volume I & II, CBS Publishers, New Delhi, 2003
5. Mahajan, S. P., Pollution Control in Process Industries, Tata McGraw Hill Publishing company, New Delhi, 1991.

CVCM0130: COST MANAGEMENT OF ENGINEERING PROJECTS

3 credits - (L-T-P: 3-0-0)

Objectives: The course aims to provide comprehensive knowledge of the cost management process and cost accounting systems and to enable students to understand basic concepts of project planning, implementation and control. It covers different types of costs and their behavior, integrates the principles of quality management, and identifies different types of budgets involved in the cost management process. In addition, the course is designed to enhance students' career potential by equipping them with advanced techniques and problem-solving skills in cost management.

COURSE / LEARNING OUTCOMES

After Completion of the Course, Student will able to

CO1: Understand the concepts of the strategic cost management process.(Understand)

CO2: Apply cost concepts in decision making and cost management projects.(Apply)

CO3: Implement different phases of project execution in a team project.(Apply)

CO4: Analyse different decision problems.(Analyse)

CO5: Evaluate different qualitative techniques and cost behaviour.(Evaluate)

Module I:3 Hours

Introduction: Introduction and overview of the process of strategic cost management.

ModuleII: 7 Hours

Cost concepts: cost concepts in decision making; relevant costs, differential costs, incremental costs and opportunity costs. Objectives of a cost accounting system; inventory valuation; creating a database for operational control; providing data for decision making.

Module III:15 hours

Project: meaning, different types, why manage, cost overrun centres, different phases of project execution: conception to commissioning. Project execution as a conglomerate of technical and non-technical activities. Detailed engineering activities. The most important approvals and documents prior to project implementation. Project team: role of the individual members. Significance of the project location: Required data with significance. Project contracts: Types and contents. Project implementation Project cost control. Bar charts and network diagrams. Project commissioning: mechanics and procedures.

Module IV: 15 Hours

Cost behavior and profit planning Marginal costing: Distinction between marginal costing and absorption costing; break-even analysis, cost-volume-profit analysis. Various decision problems. Standard cost accounting and variance analysis. Pricing strategies: Pareto analysis. Target costing, life cycle costing. Cost accounting in the service sector. Just-in-time approach, material requirements planning, enterprise resource planning, total quality management and theory of constraints. Activity-based cost management, benchmarking; balanced score card and value chain analysis. Budget control; flexible budgets; performance budgets; zero-based budgets. Measuring the profitability of business units; pricing decisions including transfer pricing.

Module V: **5 Hours**

Quantitative techniques for cost management, linear programming, PERT/CPM, transportation problems, allocation problems, simulation, learning curve theory.

Suggested Readings

1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2. Charles T. Horngren and George Foster, Advanced Management Accounting
3. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
4. Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher
5. N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

CVER0131 :EARTH RETAINING STRUCTURE

(Provided with B Tech Syllabus -Elective course)

CVCC0132: CEMENT COMPOSITE MATERIALS

(*3* credits) (L-T-P:*3*-0-0)

Objective:

The course aims to equip students with a solid foundation in composite materials, particularly cement composites, and their applications in various structural elements. The course emphasizes both theoretical knowledge and practical skills necessary for analyzing and designing composite material structures.

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO1. Understand and explain the classification, characteristics, and stress-strain relations of composite materials, including orthotropic and anisotropic materials.

CO2. Analyze the mechanical behavior of composite materials using the mechanics of materials approach and elasticity approach to stiffness, and compare different methods.

CO3. Design and apply various types of cement composites such as ferrocement, SIFCON, and fiber-reinforced concrete in practical applications.

Module I: (10 Hours)

Introduction: Classification and Characteristics of Composite Materials- Basic Terminology, Advantages. Stress-Strain Relations- Orthotropic and Anisotropic Materials, Engineering Constants for Orthotropic Materials, Restrictions on Elastic Constants, Plane Stress Problem, Biaxial Strength, Theories for an Orthotropic Lamina.

Module II: (10 Hours)

Mechanical Behaviour: Mechanics of Materials Approach to Stiffness- Determination of Relations between Elastic Constants, Elasticity Approach to Stiffness- Bounding Techniques of Elasticity, Exact Solutions - Elasticity Solutions with Continuity, Halpin, Tsai Equations, Comparison of approaches to Stiffness.

Module III: (10 Hours)

Cement Composites: Types of Cement Composites, Terminology, Constituent Materials and their Properties, Construction Techniques for Fibre Reinforced Concrete - Ferrocement, SIFCON, Polymer Concretes, Preparation of Reinforcement, Casting and Curing. Mechanical Properties of Cement Composites: BehaviorofFerrocement, Fiber Reinforced Concrete in Tension, Compression, Flexure, Shear, Fatigue and Impact, Durability and Corrosion.

Module IV: (10 Hours)

Application of Cement Composites: FRC andFerrocement- Housing, Water Storage, Boats and Miscellaneous Structures. Composite Materials- Orthotropic and Anisotropic behaviour, Constitutive relationship, Elastic Constants.

Module V: (5 Hours)

Analysis and Design of Cement Composite Structural Elements - Ferrocement, SIFCON andFibre Reinforced Concrete.

Suggested Readings

1. Mechanics of Composite Materials, Jones R. M,, 2nd Ed., Taylor and Francis,BSP Books, 1998.
2. Ferrocement – Theory and Applications, Pama R. P., IFIC, 1980.
3. New Concrete Materials, Swamy R.N., 1stEd., Blackie, Academic and Professional, Chapman & Hall, 1983.
4. Material Science and Technology – Vol 13 – Composites by R.W.Cahn – VCH, West Germany.
5. Hand Book of Composite Materials-ed-Lubin.
6. Composite Materials – K.K.Chawla.
7. Composite Materials Science and Applications – Deborah D.L. Chung.

CVOT0133: OPTIMIZATION TECHNIQUES IN CIVIL ENGINEERING

(3 Credits) (L: T:P: 3-0-0)

Objectives

- Impart knowledge on the theory of optimization and conditions for optimality for unconstraint and constraint optimization problems
- Instil modelling skills necessary to formulate and solve optimization problems in the domain of Civil Engineering.
- Familiarize the learners with the working principle of optimization algorithms used to solve linear and non-linear problems

COURSE/ LEARNING OUTCOMES

At the end of this course:

1. Students will learn the basic philosophy of optimization problems.
2. Students will be able to formulate and solve linear programming problems.
3. Students will be able to demonstrate the usage of various direct and indirect non-linear search methods in solving design problems.
4. Students will be able to find the optimum solution of their problems using genetic algorithm.

Module I (5 hours)

Introduction to optimization, classification of optimization problems, classical optimization techniques

Module II (10 hours)

Linear Programming: Formulation of LPP, Graphical solution, Simplex method, Big-M method, Revised simplex method, Duality theory and its application, Dual simplex method, Sensitivity analysis in linear programming.

Module III (10 hours)

Non-Linear Programming: - One dimensional minimization, unconstrained and constrained minimization, direct and indirect methods.

Module IV (10 hours)

Geometric programming, Optimum design of structural elements like beams and columns.

Module V (10 hours)

Introduction to Genetic Algorithms, Operators, applications to engineering optimization problems.

Suggested Readings

1. S. S. Rao, "Engineering Optimization: Theory and Practice", Wiley, 2008.
2. K. Deb, "Optimization for Engineering design algorithms and Examples", Prentice Hall, 2005.
3. S. R. Komaragiri and N. Kumar, "Multicriterion Analysis in Engineering and Management", Prentice Hall, 2010.

CVEI0134: ENVIRONMENTAL IMPACT ANALYSIS AND ASSESSMENT

(3 Credits) (L: T:P: 3-0-0)

Objectives:

- *Understand the concept, historical context and wider importance of EIA*
- *Know the key steps in the EIA process.*
- *Understand the importance of Social Impact Assessments and public participation in the EIA process. Gain an overview of methods and tools that are commonly used to develop an EIA.*
- *Improve collaborative skills and thus gain skills relevant for collaborative EIA development.*

COURSE OUTCOMES

CO1. Identify Environmental Impacts and methods of their assessment. (Understand)
CO2. Select the mitigation methods of different Environmental Impacts. (Apply)
CO3. Interpret the implications Environmental attributes, Environmental settings and EIA notifications.(Evaluate)
CO4. Implement the Prediction Methods of assessments of Impacts (Apply)

Module I:(5 Hours)

Introduction to Environment Management & EIA, Legal, Policy & Regulatory Framework

Module II:[8 Hours]

EIA Procedure - Scoping & Screening and Establishing Baseline Conditions**,** EIA Methodologies

Module III: [8 Hours]

Connectedness: connected spaces and subspaces, Connectedness of the real line, Intermediate value theorem**,** EIA Methods, Tools and Techniques

Module IV:[8 Hours]

Public Involvement in EIA **,** Impact Management - Mitigation & Preparation of Environment Management Plans (EMP)

Module V: [8 Hours]

EIA Reporting & Review of EIA Quality**,** Decision Making & Project Management

Module VI:[8 Hours]

Implementation & Follow up**,** EIA Case Examples

Suggested Readings

1) Wathern P., “Environmental Impact Assessment: Theory and Practice”,Routledge Publishers,1990
2) Marriott B., “Environmental Impact Assessment: A Practical Guide”,McGraw-Hill Publication,1997
3) Shrivastava A.K., Baxter Nicola, Grimm Jacob, “Environmental Impact Assessment”, APH Publishers, 2003

CVGW0135: GROUND WATER ENGINEERING

(3 Credits) (L: T:P: 3-0-0)

Objectives

- To learn the fundamentals of groundwater flow.
- To learn the hydraulics of different kinds of wells.
- To evaluate the aquifer parameters and groundwater level variations for different hydro-geological boundary conditions.
- To understand the various facets of ground water quality modelling.
- Enable the learners to understand the significance of conjunctive use of ground water along with other fresh water sources.

COURSE/ LEARNING OUTCOMES

At the end of this course students will be able to:

1. Understand aquifer properties and movement of ground water.(Understand)
2. Comprehend well hydraulics problems under various hydro-geological scenarios.(Understand)
3. Summerise basic concepts and techniques associated with ground water flow modelling.(Understand)
4. Identify major sources and types of groundwater contamination.(Understand)
5. Understand the challenges and subsequent strategies necessary for groundwater management.(Understand)

Module I (15 hours)

Introduction: Definition of groundwater, role of groundwater in hydrological cycle, groundwater bearing formations, classification of aquifers, flow and storage characteristics of
aquifers, Darcy's law, anisotropy and heterogeneity, Governing Equations for Groundwater Flow: Dupuit-Forchheimer assumptions, general differential equations governing groundwater flows and their analytical solutions.

Module II (10 hours)

Wells and Well Hydraulics: Different types of wells, construction of wells, steady and unsteady state solutions for confined, unconfined and leaky aquifers, effect of boundaries, method of images, pumping test analysis.

Module III (10 hours)

Groundwater Flow Modelling: Role of groundwater flow models, basic introduction to hydraulic, Hele-Shaw and analog models, introduction to numerical modeling.

Module IV (5 hours)

Groundwater Quality: General problem of contamination of groundwater, sources, remedial and preventive measures, seawater intrusion in coastal aquifers.

Module V (5 hours)

Groundwater Conservation: Regional groundwater budget; resource assessment; estimation of recharge, Indian practice for artificial recharge, Planning of Groundwater Development: constraints on the development, role of flow models, optimal groundwater development.

Suggested Readings

1. Todd, D.K., "Groundwater Hydrology", John Wiley. 1959
2. Bear, J., "Hydraulics of Groundwater", McGraw. 1979
3. Bouwer, H., "Groundwater Hydrology", McGraw Hill. 1978

CVSD6050: STRUCTURAL DESIGN LAB

Credits: 2 (L:T:P--0:0:4)

Course Objective:

The course will equip students with the necessary skills and knowledge to independently design and produce detailed drawings of complete structures. Through hands-on projects, students will gain practical experience in applying design principles and standards to real-world structural engineering scenarios. Furthermore, students will learn to design complete multistory buildings using both the Equivalent Static Method and Dynamic Analysis Method.

Course Outcomes: At the end of the course, students will be able to

- **CO1:** Design and Detail all the Structural Components of Frame Buildings.
- **CO2:** Design and Detail complete Multi-Storey Buildings using equivalent static and dynamic analysis method.

List of Experiments/Assignments:

- ***Experiment I:*** Design and detailed drawing of complete G+ 3 structures by individual student using latest relevant IS codes.
- ***Experiment II:*** Design a Multi-Storey building using Equivalent Static Method.
- ***Experiment III:*** Design a Multi-Storey building using Dynamic Analysis Method.

Suggested Readings:

- Sap2000 (Structural Analysis and Design) software.
- STADD Pro (3D Structural Analysis and Design) Software.
- AutoCAD software for 2D and 3D structures
- ETABS (Building Analysis and Design) software.

CVNA6051: NUMERICAL ANALYSIS LAB

2 credits-30 Hours (L:T:P:0:0:2)

Objectives: The course aims to provide the knowledge of computer programming to write the codes for the numerical methods learned in “Numerical Analysis” using C language and/or MATLAB.

COURSE OUTCOMES:

Upon successful completion of the course, students will be able to:

CO1. Write computer programs to solve engineering problems with MATLAB and/or C Language(Apply)

CO2. Implement numerical methods in MATLAB /C Language.(Apply)

CO3. Analyze the stability of the algorithm.(Analyze)

CO4. Analyze and evaluate the accuracy of common numerical methods.(Evaluate)

CO5. Ability to use approximation algorithms in real-world problems.(Apply)

List of Practicals:

1. Gaussian elimination, Jacobi, Gauss Seidel methods.
2. Bisection method, fixed point iteration scheme, Newton-Raphson method, secant method.
3. Lagrange's interpolation formula, Newton's divided difference formula.
4. Trapezoidal rule, Simpson's 1/3,3/8-rules.
5. Euler's method modified Euler's method, Runge-Kutta method, Milne's method, Adams-predictor-corrector method.

Suggested Readings

1. W. H. Press, B. P. Flannery, S. A. Teukolsky, W. T. Vetterling, "Numerical Recipes in C", Cambridge University Press, 1st edition,1988.
2. M. Pal, Numerical Analysis for Scientists and Engineers: Theory and C Programs, Narosa, 2008.

CVSM6052 :SOIL MECHANICS LAB

2 credits - (L-T-P: 0-0-4)

COURSE / LEARNING OUTCOMES

At the end of the course student will be able

CO1: Identify the index properties of soil (Undertand)
CO2: Determine the engineering properties of soil (Apply)
CO3: Assess shear strength using the vane shear test (Evaluate)
CO4: Analyze data from standard, static, and dynamic cone penetration tests(Analyse)

List of Practicals:

1. Determination of Moisture Content and Specific gravity of soil
2. Grain Size Distribution Analysis and Hydrometer Analysis
3. Atterberg Limits (Liquid Limit, Plastic limit, Shrinkage limit)
4. Standard and modified proctor compaction test
5. Falling head permeability test and Constant head permeability test
6. Consolidation test
7. Unconfined compression test
8. Direct shear test
9. Tri-axial compression test – UU, CU, CD tests
10. Laboratory vane shear test
11. Field Vane shear test
12. Standard penetration test
13. Static cone penetration test
14. Dynamic cone penetration test

CVCF6053: COMPUTATIONAL FLUID DYNAMICS LAB

(2 Credits)

Objectives

- To develop basic programming skills in computational fluid dynamics to address engineering problems.
- To understand the basic structure and capabilities of free and opensource CFD framework OpenFOAM.
- To demonstrate the capabilities of OpenFOAM, in conjunction with other opensource software, for simulating flow past 2-dimensional bluff bodies.

COURSE/ LEARNING OUTCOMES

At the end of this course students will be able to:

1. Write simple scripts in GNU Octave for solving partial differential equations using explicit and implicit finite difference method.(Apply)
2. Learn the basic methodology of adopted for any CFD simulation process.(Understand)
3. Comprehend the strengths and weaknesses of the opensource finite volume framework

OpenFOAM.(Understand)

4. Understand the basic structure and usage of OpenFOAM and other opensource packages like GMSH and ParaView demonstrating the significant steps involved in CFD analysis. (Undertsand)
5. Analyze basic bluff body hydrodynamics problems using OpenFOAM.(Analyze)

List of Experiments

1. Solution of one-dimensional unsteady diffusion equation using explicit finite difference method (FDM).
2. Solution of one-dimensional unsteady diffusion equation using implicit FDM.
3. Solution of elliptic partial differential equation – Laplace Equation using FDM.
4. Geometry creation and mesh generation of a 2-dimensional circular cylinder.
5. Simulation of laminar flow past a circular cylinder using OpenFOAM
6. Post-processing of the simulation data using ParaView.

SCHOOL OF TECHNOLOGY

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

VISION

To be a centre of technological excellence for outstanding education and research in electrical and electronics engineering, contributing to the world socially committed engineers capable of accepting the continuous challenges of technological advancements.

MISSION

The department of Electrical and Electronics Engineering of Don Bosco College of Engineering and Technology, School of Technology, Assam Don Bosco University seeks to:

- Achieve excellence in teaching, research, practice and extension activities in the fields of Engineering in general and Electrical and Electronics Engineering in particular.
- Provide a strong foundation for the students to make them professionally competent for industry and research.
- Create an environment for the holistic development of individuals, encouraging them to serve the society with commitment and integrity.
- Offer necessary support and guidance to individuals to shape their ideas into reality.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOS)

- To create an environment, give opportunity and also encourage the individuals to build a strong foundation of Electrical and Electronics Engineering as well as in related interdisciplinary fields of study, to be able to contribute to the need of the industry and the society at large.
- To make students capable of generating ideas, apply their knowledge and analyse the situations for executing live projects in Electrical and Electronics Engineering, with modern tools, equipment and software.
- To inculcate the habit of teamwork and infuse management skills in the students for their future professional life.
- To guide students to become ethical professionals in their own fields of work and be conscious about the effect of technology on the environment.

PROGRAMME-SPECIFIC OUTCOMES (PSO) OF M.TECH. IN ELECTRICAL AND ELECTRONICS ENGINEERING (SPECIALIZATION- POWER SYSTEMS)

PSO 1: Ability to apply the enhanced knowledge in advanced technologies for modeling, analyzing and solving contemporary issues in the power sector with a global perspective and to carry out detailed and independent investigation on multifaceted complex problems in the area of power systems and to envisage advanced research in allied thrust areas.

PSO 2: Ability to express ideas clearly and communicate orally as well as in writing with others in an effective manner, adhering to various national and international standards and practices for the documentation and presentation of the contents.

PSO 3: Ability to critically analyze and identify real-life engineering problems in the area of power systems; and professionally and ethically provide strategic solutions satisfying the safety, societal, cultural, financial and environmental aspects/ needs with an eagerness for continued pursuance of research to design, develop or propose theoretical and practical methodologies towards the research and development support for the power system infrastructure.

PSO 4: Ability to utilize and develop modern tools for modeling, analyzing and solving various scientific problems related to power systems and to take up technical/administrative challenges including the management of various projects of interdisciplinary nature, working in a team with mutual understandings to take unsophisticated challenges leading and motivating the group to inculcate multidisciplinary and collaborative approach.

PROGRAMME-SPECIFIC OUTCOMES (PSO) OF M.TECH. IN ELECTRICAL AND ELECTRONICS ENGINEERING (SPECIALIZATION- CONTROL SYSTEMS)

PSO 1: Ability to apply the enhanced knowledge in advanced technologies for modeling, analyzing and solving contemporary issues in system and control engineering with a global perspective and to carry out detailed and independent investigation on multifaceted complex problems in the area of system engineering and control and to envisage advanced research in allied thrust areas.

PSO 2: Ability to express ideas clearly and communicate orally as well as in writing with others in an effective manner, adhering to various national and international standards and practices for the documentation and presentation of the contents.

PSO 3: Ability to critically analyze and identify real-life engineering problems in the area of control systems; and professionally as well as ethically provide strategic solutions satisfying the safety, societal, cultural, financial and environmental aspects/ needs with an eagerness for continued pursuance of research to design, develop or propose methodologies, both of academic and applied nature, in the area of mathematical and applied control systems.

PSO 4: Ability to use the techniques, skills and modern control engineering tools necessary for engineering practices and to take up technical/administrative challenges including the management of various projects of interdisciplinary nature, while working in a team with mutual understandings to take unsophisticated challenges leading and motivating the group to inculcate multidisciplinary and collaborative approach.

DETAILED SYLLABUS

THEORY COURSES

EESA0048: POWER SYSTEM ANALYSIS

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective

The objective of this course is to give the knowledge of various methods of load flow, analysis of various types of faults in power systems, concept of security & contingency analysis of power systems and their needs for maintaining security of the system. It also introduces the concept of state estimation and the phenomenon of voltage instability in power systems.

Course Outcomes

1. Find different parameters for the analysis of power system. (Remembering)
2. Explain methods of state estimation in power system. (Understanding)
3. Organize various contingencies according to their severity. (Applying)
4. Analyse simultaneous fault using generalized method. (Analysing)
5. Determine voltage magnitude and phase-angles at all buses for the given data using various methods of load flow. (Evaluating)

Module I: Load Flow (10 hours)

Overview of Newton-Raphson, Gauss-Seidel, fast-decoupled methods, convergence properties, sparsity techniques, handling Q-max violations in constant matrix, inclusion in frequency effects, AVR in load flow, handling of discrete variables in load flow.

Module II: Fault Analysis (7 hours)

Simultaneous faults, short circuit and open conductor faults, generalized method of analysis of simultaneous faults in power systems.

Module III: Security Analysis (7 hours)

Security state diagram, contingency analysis, generator shift distribution factors, line outage distribution factor, multiple line outages, overload index ranking.

Module IV: Power System Equivalents (5 hours)

WARD equivalents (Kron reduction), WARD equivalent circuits for power flow studies, REI equivalents for power systems.

Module V: State Estimation (8 hours)

Sources of errors in measurement, Virtual and Pseudo, Measurement, Observability, Tracking state estimation, WSL method, bad data correction.

Module VI: Voltage Stability (8 hours)

Introduction to voltage instability scenario in a single machine infinite bus system, Voltage collapse, P-V curve, multiple power flow solution, continuation power flow, optimal multiplies load flow.

Suggested Readings

EESD0049: POWER SYSTEM DYNAMICS-I

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective

The objective of this course is to give the concept of power system dynamics and its physical interpretation, development of mathematical models for synchronous machine and modeling of induction motor, prime mover controller, load modeling in power systems and stability analysis with and without power system stabilizer.

Course Outcomes

1. List the various stability problems in power systems. (Remembering)
2. Describe the modeling of electrical machines and excitation systems. (Understanding)
3. Solve problems related to various electrical machines and excitation systems. (Applying)
4. Find different parameters of Electrical machines. (Alalyzing)
5. Experiments to observe power system dynamics using simulation. (Evaluating)

Module I: Synchronous Machine (8 hours)

a. Basic concepts of stability, types of stability, stability phenomena Armature and field structure, MMF waveforms, equations, Direct and quadrature axes, Mathematical description of a synchronous machine, Basic equations of synchronous machine.
b. Park’s Transformation (modified), Flux-linkage equations.

Module II: Synchronous Machine Equations (8 hours)

Voltage and current equations, Stator self and mutual inductances, mutual inductances between stator and rotor, Electrical power and torque equations
per unit stator and rotor voltage, flux, inductance, power and torque, phasor representation, dq-0 transformations of stator and rotor Current and Voltage, rotor angle, Formulation of State-space equations, Equivalent

Module III: Modeling and Analysis of Synchronous Machine (6 hours)

Sub-transient and transient inductance and Time constants, Simplified models of synchronous machines

Module IV: Small Signal Model (8 hours)

Introduction to frequency model. Models of governor, turbine, power system stabilizer and FACTS devices.

Module V: Excitation System and Load (8 hours)

Excitation systems requirements, Elements of an excitation system, types of excitation systems: dc excitation systems, ac excitation systems, static excitation systems, Recent developments and future trends, Philips-Heffron model, PSS Load modeling.

Module VI: Induction Motors (7 hours)

Modeling of Induction Motors, equation of induction machines, steady state characteristics modeling of Prime mover, Prime mover controllers.

Suggested Readings

1. P. M. Anderson & A. A. Fouad “Power System Control and Stability”, Galgotia, New Delhi, 1981.
2. J. Machowski, J. Bialek & J. R. W. Bumby, “Power System Dynamics and Stability”, John Wiley & Sons, 1997.
3. P. Kundur, “Power System Stability and Control”, McGraw Hill Inc., 1994.
4. E. W. Kimbark, “Power system stability”, Vol. I & III, John Wiley & Sons, New York 2002.

EEHP0050: HIGH POWER CONVERTERS

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective

Students will be able to understand the need of high power rated converters and analyze the different topologies involved for these converters. It will provide a holistic approach to comprehend the design of protection circuits for these converters.

Course Outcomes

1. Define the characteristics of PSDs such as SCRs, GTOs, IGBTs and use them in practical systems. (Remembering)
2. Explain the working of multi-level VSIs, DC-DC switched mode converters, Cyclo-converters and PWM techniques. (Understanding)
3. Analyze performance of converters based on output characteristics. (Analyzing)
4. Compare various types of Power Inverters. (Evaluating)

Module I: Power Switching Devices (10 hours)

Power electronic systems: an overview of PSDs, multi-pulse diode rectifier, multi-pulse SCR rectifier .

Module II: Power Inverters (15 hours)

Phase shifting transformers, multilevel voltage source inverters: two level voltage source inverter, Cascaded, H bridge multilevel inverter. Diode clamped multilevel inverters, flying capacitor multilevel inverter, PWM current source inverters.

Module III: Power Inverters (13 hours)

DC to DC switch mode converters, AC voltage controllers: Cyclo-converters, matrix converter.

Module IV: Power Inverters (7 hours)

Power conditioners and UPS, design aspects of converters, protection of devices and circuits.

Suggested Readings

1. N. Mohan, T. M. Undel & W. P. Robbins, "Power Electronics: Converter, Applications and Design", John Wiley and Sons, 1989.

EEWS0051: WIND AND SOLAR SYSTEMS)

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective:

The objectives of this course are-

To expose the students to wind and solar energy systems.To make the students understand the factors involved in installation and commissioning of a Solar or Wind plant and to facilitate the students learn the dynamics involved when solar and wind energy systems are interconnected with power system grid.

Course Outcomes

1. Distinguish the various renewable energy sources. (Understanding)
2. Identify various advantages and disadvantages of wind and solar energy systems. (Applying)
3. Identify the possibility of solar power generation in India and across the globe. (Applying)
4. Develop new renewable energy generation system. (Creating)

Module I (8 hours)

Historical development and current status of wind and solar systems. Characteristics of wind and solar power generation. Network integration issues of renewable energy systems.

Module II (8 hours)

Generators and power electronics for wind turbines, Use of DFIG for wind energy, power quality standards for wind turbines, Technical regulations for interconnections of wind farms with power systems.

Module III (8 hours)

Isolated wind systems, reactive power and voltage control, economic aspects.

Module IV (8 hours)

Impact of wind energy systems on power system dynamics and stability, Wind energy systems grid connection and power system interconnection issues.

Module V (6 hours)

Introduction of solar systems, merits and demerits of solar energy conversion systems, solar concentrators, various applications of solar energy conversion systems.

Module VI (7 hours)

Solar thermal power generation, PV power generation, Energy Storage device. Designing the solar system for small installations.

Suggested Readings

1. Thomas Ackermann (Editor), “Wind Power in Power Systems”, John Wiley & Sons. Ltd., 2005.
2. Siegfried Heier, “Grid Integration of Wind Energy Conversion Systems”, 2nd Edition, John Wiley and Sons Ltd, 2006.
3. K. Sukhatme & S. P. Sukhatme, “Solar Energy”, 3rd Edition, Tata McGraw Hill, 1996.
4. NPTEL Lectures

EEPD0052: ELECTRICAL POWER DISTRIBUTION SYSTEM

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Objective

The objective of this course is to make the students familiar with topics on electrical distribution system planning, load characteristics, application of distribution transformers, design of sub-transmission lines, distribution substations, primary systems, and secondary systems, voltage drop and power-loss calculations, application of capacitors, harmonics on distribution systems, voltage regulation, and smart grid concepts.

Course Outcomes

1. Demonstrate the knowledge of various distribution transformers, load characteristics, and associated factors. (Understanding)
2. Illustrate primary and secondary distribution networks. (Understanding)
3. Analyze voltage drops in distribution systems and choose proper measures to counteract voltage drops. (Analyzing)
4. Explain the integration of smart grid with the distribution management system. (Evaluating)

Module I: Distribution System Planning and Automation (8 hours)
Introduction, Distribution System Planning, Factors Affecting System Planning, Present Distribution System Planning Techniques, Central Role of the Computer in Distribution Planning, Distribution System Automation, load characteristics, Diversified demand, Non-coincident demand, Coincidence factor, Contribution factor problems, Relationship between the Load and Loss Factors, Load Forecasting, Rate structure, Customer billing.

Module II: Application of Distribution Transformers (8 hours)
Types of Distribution transformers, Regulation, Efficiency, single-phase transformer connections, Three-phase transformer connections, Auto-transformer, Booster transformer, phasor diagrams, Grounding Transformers.

Module III: Design of Sub-transmission Lines and Distribution Substations (8 hours)
Sub-station bus schemes, Rating of distribution substation, Service area with multiple feeders, Sub-station application curves, Percent voltage drop calculations, Substation Grounding, Types of Ground Faults.

Module IV: Design Considerations of Primary and Secondary Systems (8 hours)
Radial type, Loop type primary feeder, primary feeder loading, Radial Feeders with Uniformly Distributed Load, Introduction to Secondary Systems, secondary Banking, Secondary networks, Network transformers, Economic Design of Secondaries - General Total Annual cost (TAC), equation with and without constraints, Unbalanced loads and voltages.

Module V: Voltage-Drop and Application of capacitors (8 hours)
3-phase and Non 3-phase primary lines, Single-phase two-wire laterals with ungrounded neutral, Single-phase two-wire ungrounded laterals, Application of capacitors to distribution systems, Effect of series and shunt capacitors, power factor correction, Economic justification for capacitors, Optimum location for capacitor bank.

Module VI: Concept of Smart Grid (5 hours)
Need for Establishment of Smart Grid, Distributed Automation, SCADA, Integration of Smart Grid with the Distribution Management System, Evolution of Smart Grid, Smart Microgrids, Topology of a Microgrid, Consumer Information Service (CIS), Automatic Meter Reading (AMR).

Suggested Readings
1. Turan Gönen, “Electric Power Distribution Engineering”, CRC Press, 2014.
2. A. S. Pabla, “Electric Power Distribution”, McGraw Hill Education (India) Private Limited, 2011.
3. T. A. Short, “Electric Power Distribution Equipment And Systems”, CRC Press, 2004.
4. Kamalesh Das, “Electrical power Systems for Industrial Plants”, Jaico Publishing House, 2007.

CO 4	M					H

EEMM0053: MATHEMATICAL METHODS OF POWER ENGINEERING

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective
The objective of this course is to make the students understand the relevance of mathematical methods to solve engineering problems and to facilitate the students to learn how to apply the mathematical methods for a given engineering problem.

Course Outcomes
1. Demonstrate an understanding about vector sources, linear transformation, Eigen values and eigenvectors of linear operators. (Understanding).
2. Apply the knowledge of linear programming problems in various fields of power engineering. (Applying).
3. Utilize various techniques of nonlinear programming for solving constrained and unconstrained nonlinear programming problems. (Applying)
4. Justify the use of stochastic processes in the field of power engineering. (Evaluating)

Module I: Vectors and Linear Transformation (6 hours)
Definition of group and field, Vectors and vector spaces, Characterization of vector spaces, Linear transformation, Singular and Non-singular transformation, Matrix representation of linear transformation.

Module II: Eigen Vectors of Linear Operator (6 hours)
Eigen values and Eigen vectors of linear operator, Eigen spaces, Eigen basis for matrices, Eigen decomposition.

Module III: Introduction to Linear Programming (9 hours)
Linear programming problems, Graphical method, Simplex method, Dual-Simplex method, Duality, Non Linear programming problems.

Module IV: Introduction to Non-Linear Programming (8 hours)
Unconstrained problems, Newton's method, Hessian matrix, Search methods, Constrained problems.

Module V: Constrained Optimization (8 hours)
Lagrange method, Interpretation of Lagrange multipliers, Quadratic Programming problem, Kuhn-Tucker conditions, Random variables, Distributions.

Module VI: Stochastic Model/ Process (8 hours)
Definition, Independent random variables, Marginal and Conditional distributions, Elements of Stochastic process, State space, Index set.

Suggested Readings

1. Kenneth Hoffman & Ray Kunze, "Linear Algebra", 2nd Edition, PHI, 1992.
2. Erwin Kreyszig, "Introductory Functional Analysis with Applications", John Wiley & Sons, 2004.
3. Irwin Miller and Marylees Miller, "John E. Freund's Mathematical Statistics", 6th Edition, PHI, 2002.
4. J. Medhi, "Stochastic Processes", New Age International, New Delhi, 1994.
5. Papoulis and S. Pillai, "Probability, Random Variables and Stochastic Processes", 3rd Edition, McGraw Hill, 2002.
6. John B. Thomas, "An Introduction to Applied Probability and Random Processes", John Wiley, 2000.
7. Hillier F. S. and Liebermann G. J., "Introduction to Operations Research", 7th Edition, McGraw Hill, 2001.
8. Simmons D. M., "Non Linear Programming for Operations Research", PHI, 1975.

EEMC0054: MATHEMATICAL METHODS IN CONTROL

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective
This course aims to give the students an understanding of foundational concepts in linear algebra and random processes for use in control systems. Students will understand Probability and Random variables.

Course Outcomes
1. Define vector space vector space axioms, vector space properties. (Remembering)
2. Explain responses of linear systems to any given input signal. (Understanding)
3. Apply matrix properties and functions to a given problem. (Applying)
4. Solve problems of control system Engineering using probability theory. (Creating)

Module I (10 hours)
Linear Spaces – Vectors and Matrices, Transformations, Norms, Matrix Factorization.

Module II (10 hours)
Eigen value, Eigenvectors and Applications, SVD and Applications, Projections and Least Square Solutions.

Module III (10 hours)
Probability, Random variables, Probability distribution and density functions, Joint density and conditional distribution, Functions of random variables and random vectors.

Module IV (5 hours)
Characteristic functions and correlation matrices, Random Processes and properties.

Module V (5 hours)
Response of Linear systems to stochastic inputs, PSD theorem.

Suggested Readings
1. G. Strang, "Introduction to Linear Algebra", 4th Edition, Wellesley-Cambridge Press, 2009.
2. Papoulis and S. Pillai, "Probability, random variable and stochastic processes", Mcgraw Hill, 2002.
3. H. Stark and J. W. Woods, "Probability and random processes with application to signal processing", Pearson Education Asia, 2002.
4. J. A. Gubner, "Probability and Random processes for Electrical and Computer engineers", Cambridge Univ. Press. 2006.

EENS0055: NON-LINEAR SYSTEMS

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective
This course aims at introducing fundamental concepts of nonlinear dynamical systems and understanding basic tools for mathematical analysis as well as applications.

Course Outcomes
1. Choose tools for stability analysis and response evaluation of control problems with significant nonlinearities. (Remembering)
2. Identify the design problem and distinguish between the controls strategies. (Applying)
3. Analyse non linear systems using describing function methods. (Analysing)
4. Interpret stability of nonlinear systems from Lyapunav stability analysis. (Understanding)

Module I (10 hours)
Introduction to nonlinear systems: Examples of phenomena, models & derivation of system equations.

Module II (15 hours)
Fundamental properties: Existence & uniqueness, Dependence on initial conditions & parameters. Phase plane analysis. Limit cycles & oscillations. Describing function method and applications. Circle criterion.

Module III (12 hours)
Lyapunov stability of autonomous systems. Perturbation theory & Averaging. Singular perturbation model and stability analysis.

Module IV (8 hours)
Basic results on Lie algebra. Controllability and Observability of nonlinear systems. Bifurcations. Chaos. Synchronization.

Suggested Readings
1. H. K. Khalil, "Nonlinear systems", 3 rd edition, Prentice Hall, 2001.
2. J. J. E. Slotine and W. Li, "Applied nonlinear systems", Prentice Hall, 1991.
3. A. Nijemjer and A. van der schaft, "Nonlinear dynamical control systems", Springer, 1989.
4. M. Vidyasagar, "Nonlinear Systems Analysis, Society for Industrial and Applied Mathematics", 2002.
5. S. Strogatz, "Nonlinear Dynamics and Chaos", West view Press, 2001.

EECL0056: DIGITAL CONTROL

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective
This course aims to familiarize the student with the concept of discretization. The objective is to introduce the students to discrete-time system representations and digital control and make the learn to design controllers for digital systems.

Course Outcomes
1. Define a discrete time system. (Remembering)
2. Explain sampled data system. (Understanding)
3. Model control system on differential samping. (Applying)
4. Analyse digital systems in time domain and frequency domain. (Analysing)

Module I (15 hours)
Introduction to discrete-time systems, Frequency domain approach – Analysis and discretization, Time domain approach, analysis and discretization, State space formulation for discretized systems.

Module II (15 hours)
Engineering aspects of computer controlled systems, Sampled data systems, Control of Sampled data systems.

Module III (15 hours)
Concept of differential sampling, Closed loop analysis of differentially sampled systems, Control design based on differential sampling, Recent applications of Digital Control.

Suggested Readings
1. K. Ogata, "Discrete-time Control Systems", 2nd Ed., Prentice-Hall, 1995.
2. Benjamin C. Kuo, "Digital Control Systems", 2nd Ed., Oxford University Press, 1999.

EENC0057: NONLINEAR CONTROL
(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective
This course aims to study concepts and techniques for stability analysis and learning control design of nonlinear systems.

Course Outcomes
1. Define tangent vectors, vector fields. (Remembering)
2. Explain Passivity analysis and applications to control design. (Understanding)
3. Apply deeper ideas from mathematics and specifically from geometry to engineering problems. (Applying)
4. Design control system using disturbance decoupling.(creating)

Module I (8 hours)
Overview of nonlinear Control-Introduction to Advanced Calculus, Elementary notions of Topology, Smooth Manifolds, Sub-manifolds, Tangent Vectors, Vector Fields.

Module II (7 hours)
Lyapunov stability for autonomous and non-autonomous systems, Input-Output Stability and Input-to-State Stability Absolute Stability.

Module III (8 hours)
Passivity analysis and applications to control design, Lyapunov-based feedback control design. Feedback linearization and back stepping.

Module IV (7 hours)
Sussmann's Theorem and global Decompositions, The Control Lie Algebra, the observation space.

Module V (8 hours)

Local Co-ordinates, Transformations, Exact Linearization via Feedback, The Zero dynamics, Local Asymptotic Stabilization, Asymptotic Output Tracking.

Module VI (7 hours)
Disturbance Decoupling, High Gain Feedback, Additional Results on Exact Linearization, Observers with Linear Error Dynamics.

Suggested Readings

1. H. K. Khalil, "Nonlinear Systems", 3rd edition, Prentice Hall, 2001.
2. H. K. Khalil, "Nonlinear Control", Pearson, 2015.
3. J. J. E. Slotine and W. Li, "Applied nonlinear systems", Prentice Hall, 1991.
4. A. Nijemjer and A. van der schaft, "Nonlinear dynamical control systems", Springer, 1989.
5. M. Vidyasagar, "Nonlinear Systems Analysis", Society for Industrial and Applied Mathematics, 2002.
6. Alberto Isidori, "Nonlinear Control Systems", Third Edition, Springer, 1995.

EESC0058: SCADA SYSTEM AND APPLICATIONS

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective
This course aims to familiarize the student with the concept of SCADA and its functions, to know SCADA communication and to get an insight into its application.

Course Outcomes
1. Explain the basic tasks of Supervisory Control Systems (SCADA) as well as their typical applications. (Understanding)
2. Make use of knowledge about SCADA architecture, various advantages and disadvantages of each system. (Applying)
3. Analyse the single unified standard architecture IEC 61850. (Analysing)
4. Select suitable SCADA system components: remote terminal units, PLCs, intelligent electronic devices, HMI systems, SCADA server. (Evaluating)

Module I (15 hours)
Introduction to SCADA: Data acquisition system, Evolution of SCADA, Communication technologies, Monitoring and supervisory functions, SCADA applications in Utility Automation and Industries SCADA.

Module II (15 hours)
Industries SCADA System Components: Schemes- Remote Terminal Unit (RTU), Intelligent Electronic Devices(IED), Programmable Logic Controller (PLC), Communication Network, SCADA Server, SCADA/HMI Systems, SCADA Architecture: Various SCADA architectures, advantages and disadvantages of each system - single unified standard architecture -IEC 61850.

Module III (15 hours)
SCADA Communication: various industrial communication technologies - wired and wireless methods and fiber optics, Industries - oil, gas and water. Case studies, Implementation, Simulation Exercises.

Suggested Readings

1. Stuart A. Boyer, "SCADA-Supervisory Control and Data Acquisition", Instrument Society of America Publications, USA, 2004.
2. Gordon Clarke and Deon Reynders, "Practical Modern SCADA Protocols: DNP3, 60870.5 and Related Systems", Newnes Publications, Oxford, UK, 2004.
3. William T. Shaw, "Cybersecurity for SCADA systems", Penn Well Books, 2006.

EDA0059: DESIGN ASPECTS IN CONTROL

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Objective

This course aims to familiarize the student to the tools and techniques of control system design. Introduction to various aspects of controller design philosophy, learning PID Controller are incorporated into the course.

Course Outcomes

1. Tell about FOPDT and SOPDT systems. (Remembering)
2. Explain zero dynamics in servo control. (Understanding)
3. Model a control system given its parameters. (Applying)
4. Design observer. controllers like PI, PID in a given control system. (Evaluating)

Module I (15 hours)

System Modelling, review of concepts, FOPDT and SOPDT systems and identification of Smith Predictor and its variations.

Module II (15 hours)

PID Controllers – review PID Tuning – Ziegler Nichols, Cohen-Coon techniques. State feedback review – pole placement, Eigen structure assignment, Eigen structure – time response relation, Controller gain selection, controller robustness, disturbance rejection.

Module III (15 hours)

Frequency Domain Loop Shaping, Lag, Lead and Lag-lead compensators, Zero dynamics in servo control, Unstable zero dynamics – control design, Observer – concept and design, Case studies – Applications.

Suggested Readings

1. Karl J. Astrom and Richard M. Murray, “Feedback Systems: An Introduction for Scientists and Engineers”, Princeton University Press, 2010.
2. Thomas Kailath, “Linear Systems”, Prentice-Hall.

EEDP0060: DIGITAL PROTECTION OF POWER SYSTEM

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Illustrate the use of mathematical methods for relaying purposes. (Understanding)
2. Apply the digital relaying techniques in power system protection. (Applying)
3. Assess effectiveness of digital relays over the electromechanical ones for power system protection requirements. (Evaluating)
4. Design digital protection systems for power system applications. (Creating)

Objective

The objectives of this course are-

- To provide an overview of the numerical relays and their working
- Introduce a mathematical approach towards protection
- To provide a detailed treatment of algorithms for numerical protection

Module I (6 hours)

Evolution of digital relays from electromechanical relays, Types of digital relays, Performance and operational characteristics of digital protection.

Module II (6 hours)
Mathematical background to protection algorithms, Finite difference techniques.

Module III (8 hours)
Interpolation formulae, forward, backward and central difference interpolation, Numerical differentiation, Curve fitting and smoothing, Least squares method, Fourier analysis, Fourier series and Fourier transform, Walsh function analysis.

Module IV (8 hours)
Basic elements of digital protection, Signal conditioning: transducers, surge protection, analog filtering, analog multiplexers, Conversion subsystem: the sampling theorem, signal aliasing. Error, sample and hold circuits, multiplexers, analog to digital conversion, digital filtering concepts, digital relay as a unit consisting of hardware and software, Integration of Digital Relays into SCADA systems.

Module V (8 hours)
Mathematical basis of numerical techniques and relay algorithms, Sinusoidal wave based algorithms, Sample and first derivative (Mann and Morrison) algorithm. Fourier and Walsh based algorithms.

Module VI (8 hours)
Fourier Algorithm: Full cycle window algorithm, fractional cycle window algorithm, Walsh function based algorithm. Least Squares based algorithms. Differential equation based algorithms. Traveling Wave based Techniques. Digital Differential Protection of Transformers.Digital Line Differential Protection. Recent Advances in Digital Protection of Power Systems.

Suggested Readings
1. A. G. Phadke and J. S. Thorp, “Computer Relaying for Power Systems”, Wiley/Research studies Press, 2009.
2. A. T. Johns and S. K. Salman, “Digital Protection of Power Systems”, IEEE Press, 1999.

EEPD0061: POWER SYSTEM DYNAMICS-II

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes
1. Recall the basic concepts of dynamic systems and stability definition. (Remembering)
2. Explain the different stability problems arise in power system. (Understanding)
3. Identify different stability problems faced by modern power systems, e.g., multi-machine stability, large signal stability, etc. (Applying)
4. Analyze the stability problems and implement modern control strategies, e.g., damper, AGC etc. (Analyzing)
5. Assess voltage and frequency stability in power systems. (Evaluating)

Objective
The objective of this course is to give the concept of power system dynamics, interpretation of power system dynamic phenomena and various forms of stability problems in power systems & their mitigation technique.

Module I: Power System Stability (8 hours)
Basic Concepts of Dynamic Systems and Stability Definition, Small Signal Stability (Low Frequency Oscillations) of Unregulated and Regulated System, Analysis of stability.

Module II: Damper (8 hours)
Effect of Damper, Flux Linkage Variation and AVR.

Module III: Large Signal Stability (8 hours)
Large Signal Rotor Angle Stability, Dynamic Equivalents and Coherency, Direct Method of Stability Assessment, Stability Enhancing Techniques, Mitigation Using Power System Stabilizer.

Module IV: Multi-Machine Stability (6 hours)

Asynchronous Operation and Resynchronization, concept of multi-Machine Stability.

Module V: Voltage Stability (6 hours)
Dynamic Analysis of Voltage Stability, Voltage Collapse and classification, typical scenario of voltage collapse, Prevention of voltage collapse.

Module VI: Frequency Stability (6 hours)
Introduction to Frequency Stability, Automatic Generation Control, Primary and Secondary Control, Sub-Synchronous Resonance and Counter Measures.

Suggested Readings
1. P. Kundur, "Power System Stability and Control", McGraw Hill Inc, 1994.
2. J. Machowski, J. Bialek and J. Bumby, "Power System Dynamics and Stability", John Wiley & Sons, 1997.

EERP0062: RESTRUCTURED POWER SYSTEMS

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes
1. Explain the various types of regulations in power systems. (Understanding).
2. Illustrate the Technical and Non-technical issues in Deregulated Power Industry.(Understanding).
3. Identify the need of regulation and deregulation. (Applying)
4. Interpret different market mechanisms and various entities in the market. (Applying)

Objective
The objective of this course is to introduce the concepts of restructuring and deregulation of electricity market. This will enable the students to understand the need behind the requirement for deregulation of the electricity market. This course focuses on the understanding of the money, power & information flow in a deregulated power system.

Module I: Introduction to Electricity Market (10 hours)
Fundamentals of electricity market deregulation and restructured system, Market power, Market models and architecture, Independent System Operator (ISO), Power Exchange (PX), Market Clearing Price (MCP), Day-Ahead and Hour-Ahead Markets, Elastic and Inelastic Markets, Social welfare maximization.

Module II: Optimal Power Flow (11 hours)
OPF: Role in vertically integrated systems and in restructured markets, Transmission Open Access, Power Wheeling, Congestion management, Transfer Capability: Definitions and calculations- Available Transfer Capability (ATC).

Module III: Hedging Tools for Managing Risks in Electricity Markets (8 hours)
Optimal bidding; Risk assessment, Hedging; Transmission Pricing; Electricity Pricing: Volatility, Risk and Forecasting.

Module IV: Ancillary Services & Distributed Generations (6 hours)
Ancillary Services, Distributed generation in restructured markets, IT applications in restructured markets.

Module V: Indian sector and Global Electric Utility Markets (10 hours)
Developments in India, Working of restructured power systems in various countries, Standard Market Design (SMD), PJM, Recent trends in Restructuring.

Suggested Readings
1. Mohammad Shahidehpour and Muwaffaq Alomoush, "Restructured electrical power systems: operation, trading and volatility", Marcel Dekker.

2. Kankar Bhattacharya, Jaap E. Daadler and Math H. J. Boolen, "Operation of restructured power systems", Kluwer Academic Pub., 2001.
3. Lorrin Philipson and H. Lee Willis, "Understanding electric utilities and de-regulation", Marcel Dekker Pub., 1998.
4. L. L. Lai, "Power System Restructuring and Deregulation: Trading, Performance and Information Technology", Wiley, 2001.
5. Steven Stoft, "Power system economics: designing markets for electricity", John Wiley and Sons, 2002.

EEAS0063: ADVANCED DIGITAL SIGNAL PROCESSING

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Demonstrate knowledge about the time domain and frequency domain representations as well analysis of discrete time. (Understanding)
2. Apply the design techniques for IIR and FIR filters and their realization structures. (Applying)
3. Utilize knowledge about the finite word length effects in implementation of digital filters. (Applying)
4. Make use of the knowledge about the various linear signal models and estimation of the power spectrum of stationary random signals. (Applying)

Objective

The course helps to develop an in-depth understanding of the digital signal processing techniques. The course helps in learning of the methods used to structure and design various filters and understand their characteristics.

Module I: Fundamentals of Discrete-Time Signal and System (8 hours)

Discrete time signals, Linear shift invariant systems, Stability and causality, Sampling of continuous time signals, discrete time Fourier transform- Discrete Fourier series- Discrete Fourier transform, Z transform-Properties of different transforms.

Module II: Discrete-Time Signals in the Transfer Domain (8 hours)

Linear convolution using DFT, Computation of DFT Design of IIR digital filters from analog filters, Impulse invariance method, Bi-linear transformation method.

Module III: Digital Filter Structures and Design (8 hours)

FIR filter design using window functions, Comparison of IIR and FIR digital filters, Basic IIR and FIR filter realization structures, Signal flow graph representations Quantization process and errors, Coefficient quantization effects in IIR and FIR filters.

Module IV: Analysis of Finite Word length Effects (8 hours)

A/D conversion noise- Arithmetic round-off errors, Dynamic range scaling, Overflow oscillations and zero Input limit cycles in IIR filters, Linear Signal Models.

Module V: Linear Signal Models and Power Spectrum Estimation (7 hours)

All pole, All zero and Pole-zero models, Power spectrum estimation- Spectral analysis of deterministic signals, Estimation of power spectrum of stationary random signals.

Module VI: Optimum Linear Filters (6 hours)

Optimum linear filters, Optimum signal estimation, Mean square error estimation, Optimum FIR and IIR Filters.

Suggested Readings

1. Sanjit K. Mitra, "Digital Signal Processing: A computer-based approach", Tata McGraw-Hill Edition, 1998.
2. Dimitris G. Manolakis, Vinay K. Ingle & Stephen M. Kogon, "Statistical and Adaptive Signal Processing", McGraw Hill international edition 2000.

CO 4		M			H	M

EEAS0064: POWER SYSTEM TRANSIENTS

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Explain the reasons for occurrence of transients in a power system. (Understanding)
2. Utilize the knowledge of various transients that could occur in power systems and their mathematical formulation. (Applying)
3. Illustrate the use of insulation in various equipment in power systems. (Applying)
4. Analyze the power system for transient analysis. (Analyzing)
5. Design various protective devices in power systems for protecting equipment and personnel. (Creating)

Objective

The objective of this course is to introduce the concepts of power system transients. Students will be able to learn the reasons for occurrence of transients in a power system. This will enable the students to understand the change in parameters like voltage & frequency during transient. This course also focuses on the lightning phenomenon and its effect on the power system.

Module I: (8 hours)

Fundamental circuit analysis of electrical transients; Laplace Transform method of solving simple Switching transients; Damping circuits-Abnormal switching transients; Three-phase circuits and transients; Computation of power system transients.

Module II (7 hours)

Principle of digital computation-Matrix method of solution; Modal analysis- Z transform; Computation using EMTP; Lightning, switching and temporary over voltage; Physical phenomena of lightning.

Module III (6 hours)

Interaction between lightning and power system; Influence of tower footing resistance and Earth Resistance; Switching: Short line or kilometric fault; Energizing transients - closing and re-closing of lines; line dropping, load rejection - over voltages induced by faults.

Module IV (8 hours)

Switching HVDC line; Travelling waves on transmission line, Circuits with distributed Parameters; Wave Equation; Reflection, Refraction, Behaviour of Travelling waves at the line terminations; Lattice Diagrams - Attenuation and Distortion; Multi-conductor system and Velocity wave.

Module V (8 hours)

Insulation co-ordination: Principle of insulation co-ordination in Air Insulated substation (AIS) and Gas Insulated Substation (GIS); Coordination between insulation and protection level; Statistical approach.

Module VI (8 hours)

Protective devices; Protection of system against over voltages, lightning arresters, substation earthing.

Suggested Readings

1. Allan Greenwood, “Electrical Transients in Power System”, Wiley & Sons Inc. New York, 1991.
2. Y. G. Paithankar, “Fundamentals of Power System Protection”, Prentice Hall India Learning Private Limited, 2010.
3. Akihiro Ametani, Naoto Nagaoka, Yoshihiro Baba, Teruo Ohno and Koichi Yamabuki, “Power System Transients: Theory and Applications”, CRC Press, 2016.

EEFC0065: FACTS AND CUSTOM POWER DEVICES

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. List various FACTS devices. (Remembering)
2. Describe fundamental principles of Passive and Active Reactive Power Compensation Schemes. (Understanding)
3. Identify suitable FACTS devices for specific applications. (Applying)
4. Experiments with various FACTS devices to improve Power quality. (Evaluating)

Objective

This course gives an introduction to the of flexible ac transmission systems to enhance controllability and power transfer capability in ac systems, involves applications of power electronics in power systems in the range of a few tens to hundred megawatts to improve reliability of power supply and opens up new opportunities for controlling power and enhancing the usable capacity of present, as well as new and upgraded lines.

Module I: Power flow control (6 hours)

Reactive power flow control in Power Systems, Control of dynamic power unbalances in Power System - Power flow control, Constraints of maximum transmission line loading, Benefits of FACTS Transmission line compensation, Uncompensated line - Shunt compensation, Series compensation Phase angle control, Reactive power compensation Shunt and Series compensation principles, Reactive compensation at transmission and distribution level.

Module II: Shunt compensator (10 hours)

Static versus passive VAR compensator, Static shunt compensators: SVC and STATCOM, Operation and control of TSC, TCR and STATCOM -Compensator control, Comparison between SVC and STATCOM.

Module III: Series compensator and regulators (15hours)

Static series compensation: TSSC, SSSC -Static voltage and phase angle regulators, TCVR and TCPAR Operation and Control, Applications, Static series compensation, GCSC, TSSC, TCSC and Static synchronous series compensators and their Control.

Module IV: Combined compensator (8 hours)

SSR and its damping Unified Power Flow Controller, Circuit Arrangement, Operation, and control of UPFC, Basic Principle of P and Q control, Independent real and reactive power flow control-Applications, Introduction to interline power flow controller.

Module V: Power quality (6hours)

Modeling and analysis of FACTS, Controllers, Simulation of FACTS controllers, Power quality problems in distribution systems, harmonics, loads that create harmonics, modeling, harmonic propagation, series and parallel resonances mitigation of harmonics, passive filters, active filtering – shunt, series and hybrid and their control, Voltage swells, sags, flicker, unbalance and mitigation of these problems by power line conditioners, IEEE standards on power quality.

Suggested Readings

EEOC0066: OPTIMAL CONTROL THEORY

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Relate the mathematical methods used in optimal control to derive the solution to variations of the problems studied in the course. (Remembering)
2. Explain dynamic programming and its use in control system engineering. (Understanding)
3. Apply principle of optimality to decision making. (Applying)
4. Utilize the standard algorithms for numerical solution of optimal control problems and use MATLAB to solve fairly simple but realistic problems. (Applying)

Objective

This course aims at introducing the basic and fundamental concepts of optimal control theory, controller design. The course also introduces computational aspects of optimal control.

Module I (15 hours)

Review of Matrix Computations. Maximization of functional of a single and several functions using calculus of variations, Constrained externals, Euler-Lagrange Equation, Necessary conditions for optimal control, Pontryagin's minimum principle and state inequality constraints, Minimum time problems, Minimum control effort problems.

Module II (15 hours)

Linear quadratic regulator problems, Riccati Equation, Singular intervals in optimal control problems, The principle of optimality, Application of the principle of optimality to decision making, Dynamic programming applied to routing problems.

Module III (15 hours)

Solving optimal control problems using dynamic programming, Discrete linear regulator problem, Hamilton-Jacobi-Bellman Equation, Numerical Techniques to determine optimal trajectories, Numerical Aspects of Optimization.

Suggested Readings

1. M. Athans and P. L. Falb, "Optimal Control: An Introduction to the Theory and Its Applications", Dover Books on Engineering, 2006.

EESF0067: STOCHASTIC FILTERING AND IDENTIFICATION

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Tell about different filtering and prediction methods for system design. (Remembering)
2. Take part in convergence analysis of Recursive Identification methods. (Analyzing)
3. Elaborate essential stochastic modeling tools including Markov chains and queuing theory. (Creating)
4. Design control system based on adaptive control. (Creating)

Objective

This course aims at introducing fundamental concepts of stochastic filtering, prediction, control. The course introduces non-linear system identification.

Module I (15 hours)

Introduction to Parameter Estimation and System Identification, MMSE estimation including LMS, Gaussian case, Wiener filtering & prediction, Kalman filtering & prediction, Extended Kalman filtering and its variations, Predictors for difference equation based models including ARMA, Box Jenkins & others.

Module II (15 hours)

Statistical properties of Least Squares estimation and its relationship with Bayes estimation (ML, MAP), convergence analysis, CR bound, Recursive Least Squares, Iterative methods for nonlinear Least Squares Identification problem: Different approaches for linear dynamical system, Offline identification methods including Least Squares, Prediction error framework, Pseudo-linear regression (PLR) & Instrument variable methods. Recursive Identification of linear dynamical system: RLS, PLR, Prediction error framework & its application to ARMA & Innovations representation, Convergence Analysis of Recursive Identification methods: Associated ODE, Martingale.

Module III (15 hours)
Nonlinear system identification, Subspace based method of system identification, Applications including LQG and adaptive control.

Suggested Readings
1. A. Papoulis and S. Pillai, “Probability, random variable and stochastic processes”, McGraw Hill, 2002.
2. T. Soderstrom and P. Stoica, “System Identification”, Prentice-Hall, 1989.

EECS0068: ADVANCE CONTROL SYSTEM

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes
1. Define different approaches for modeling of dynamic systems. (Remembering)
2. Explain philosophy of optimal control system. (Understanding)
3. Apply the concepts of linear algebra and their applications to control systems. (Applying)
4. Design linear quadratic controller, reduced order observer,compensator (Creating)

Objective
The course provides glimpses into the advanced methods of modelling and analysis of the dynamical systems. The course is a strong step in inculcating the research aptitude in the students.

Module I (15 hours)
Math Modelling of Dynamical Systems: Newtonian and Lagrangian approaches, Concept of dynamical state of a system, Concept of equilibrium point, linearization of nonlinear model. Review of Linear Algebra concepts: Field, Vector space, linear combination, linear independence, bases of a vector space, representation of any vector on different basis, matrix representation of a linear operator, change of basis, rank, nullity, range space and null space of a matrix, Eigen value and Eigen vector of a matrix, similarity transform, Diagonalisation

Module II (15 hours)
Modern Control Analysis: Concept and computation of systems modes, controllability theorem and its proof, Observability theorem and its proof, Controllable and observable subspaces. Stability Analysis: Stability of linear systems, stability types and their definitions for any general system, Stability of an equilibrium point, Lyapunov stability theory for LTI systems, Quadratic forms and Lyapunov functions.

Module III (15 hours)
Modern Control Design: Converting the math model to controllable canonical form and its use for pole placement, Concept of linear observer and its design, Design of reduced order observer, Compensator design using separation principle, Poles of compensator, Open-loop and close-loop systems. Optimal Control Theory: Introduction to the philosophy of optimal control, formulation of optimal control problem, different performance criterion, Linear quadratic regulator (LQR) and optimum gain matrix, Riccati equations, conceptual models and statistical models for random processes, Kalman filter.

EEAL0069: ADAPTIVE LEARNING AND CONTROL

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Recall detailed knowledge of classical system identification and the development and properties of various methods. (Remembering)
2. Utilize detailed knowledge of robust adaptive control, neural network based control (Applying)
3. Apply adaptive and learning techniques for control design for uncertain dynamical systems. (Applying)
4. Design control system based on predictive control. (Creating)

Objective

The course introduces adaptive and learning techniques for control design for uncertain dynamical systems. The course also introduces learning based control.

Module I (15 hours)

Introduction to adaptive control, Direct and indirect adaptive control, Model reference adaptive control, Parameter convergence, Persistence of excitation, Review of Lyapunov stability theory.

Module II (15 hours)

Adaptive backstepping, Adaptive control of nonlinear systems, Composite adaptation, Robust adaptive control, Neural Network-based control.

Module III (15 hours)

Reinforcement learning-based control, Repetitive learning control, Predictive control,

Suggested Readings

EEMR0070: MODEL REDUCTION IN CONTROL

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Identify Source of Large Models. (Remembering)
2. Explain sliding mode control for control system design. (Understanding)
3. Make use of Pade approximation for control system design. (Applying)
4. Apply model reduction techniques for a given control design problem. (Applying)

Objective
The course introduces the concept of model reduction of large scale dynamics models from various engineering disciplines. The course also introduces model reduction in control.

Module I (15 hours)
Introduction to Model Reduction, Source of Large Models – Circuits, EM systems, Mechanical Systems. Classical Model Reduction Methods – Modal reduction.

Module II (15 hours)
Pade approximation and moment matching, Routh Approximants, Modern Methods - SVD (Grammian) based methods, Krylov based methods, SVD-Krylov based methods, MOR for Nonlinear Systems – SVD & POD Methods.

Module III (15 hours)
Model Reduction in Control, Sliding Mode Control – Review, SMC as model reducing control, Higher Order Sliding Mode.

Suggested Readings
1. A. C. Antoulas, “Approximation of Large Scale Dynamical Systems”, SIAM, 2005.
2. Ed. Alfio Quarteroni and Gianluigi Rozza, “Reduced Order Methods for Modeling and Computational Reduction”, Springer, 2014.

EERC0071: ROBUST CONTROL

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes
1. Define LTI systems and its applications. (Remembering)
2. Explain Passive system for frequency domain and time domain. (Understanding)
3. Assess stability and performance of passive systems. (Evaluating)
4. Design robust control system based on Riccatti equation (Creating)

Objective
This course introduces the concept of to control techniques with greater emphasis on robustness to modelling uncertainty. The course introduces how to handle parameter variations, and presence of disturbances and noise.

Module I (15 hours)
Modelling of uncertain systems, Signals and Norms, Lyapunov theory for LTI systems.

Module II (15 hours)
Passive systems- frequency domain, Passive systems- time domain, Robust Stability and performance, Stabilizing controllers - Co prime factorization.

Module III (15 hours)
LQR, LQG problems, Ricatti equations and solutions, Ricatti equation solution through LMI, H-infinity control and mu-synthesis, Linear matrix inequalities for robust control.

Suggested Readings
1. L. Fortuna, M. Frasca (Eds.), “Optimal and Robust Control”, CRC Press, 2012.

EEMC0087: ADVANCED MICROCONTROLLER BASED SYSTEMS

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. List the various functional blocks of a basic computer. (Remembering)
2. Recall the architecture of PIC microcontrollers. (Remembering)
3. Summarize the architecture of Intel 8051 and 8086 microcontrollers and microprocessors. (Understanding)
4. Summarize the architecture of DSP processors and FPGA. (Understanding)
5. Develop Intel and PIC microcontroller based systems. (Applying)

Objective

The course will help to develop an in-depth understanding of the basic computer architecture and organizations. Students will be able to understand the architecture and application of advanced microcontrollers, DSP processors and FPGA.

Module I: Basic Computer Organization (7 hours)

Basic computer organization. Accumulator based processes, Architecture, Memory Organization, I/O organization.

Module II: Intel 8051 Microcontroller and 8086 Microprocessor (14 hours)

Intel 8051, Intel 8086- Registers, Memories. I/O Ports, Serial communication. Timers, Interrupts, Programming. Intel 8051- Assembly language programming, Addressing operations, Stack & Subroutines, Interrupts-DMA.

Module III: PIC Microcontrollers (8 hours)

PIC 16F877- Architecture Programming, Interfacing Memory/ I/O Devices, Serial I/O and data communication.

Module IV: Digital Signal Processors (8 hours)

Digital Signal Proc Processor (DSP) – Architecture, Programming, Introduction to FPGA.

Module V: Applications (8 hours)

Microcontroller development for motor control applications. Stepper motor control using microcontroller.

Suggested Readings

EEPQ0088: POWER QUALITY

(3 Credits - 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Explain about the harmonics, harmonic introducing devices and effect of harmonics on system equipment and loads. (Understanding)

2. Explain the series and shunt active power filtering techniques for harmonics. (Understanding)
3. Classify different power quality issues. (Analyzing)
4. Develop analytical modeling skills needed for modeling and analysis of harmonics in networks and components. (Creating)
5. Improve power factor based on static VAR compensators. (Creating)

Objective

The objective of this course is to introduce the different power quality issues faced by the power system and understand the recommended practices by various standard bodies like IEEE, IEC, etc. on voltage & frequency, harmonics and understanding the concept of STATIC VAR Compensators in power systems.

Module I: Power quality issues (8 hours)

Introduction-power quality-voltage quality-overview of power, Quality phenomena classification of power quality issues, Power quality measures and standards-THD-TIF-DIN-C-message weights, Flicker factor transient phenomena-occurrence of power quality problems, Power acceptability curves-IEEE guides, Standards and recommended practices.

Module II: Harmonics (8 hours)

Harmonics-individual and total harmonic distortion, RMS value of a harmonic waveform, Triplex harmonics. Important harmonic introducing devices, SMPS, Three-phase power converters-arcing devices, saturable devices, Harmonic distortion of fluorescent lamps-effect of power system harmonics on power system equipment and loads.

Module III: Modeling of systems (6 hours)

Modeling of networks and components under non-sinusoidal conditions, Transmission and distribution systems, Shunt capacitors-transformers, Electric machines, Ground systems loads that cause power quality problems, Power quality problems created by drives and its impact on drive.

Module IV: Improvement and control in power system (6 hours)

Power factor improvement- Passive Compensation, Passive Filtering, Harmonic, Resonance, Impedance Scan Analysis, Active Power Factor Corrected Single Phase Front End, Control Methods for Single Phase APFC, Three-Phase APFC and Control Techniques, PFC based on Bilateral Single Phase and Three Phase Converter.

Module V: Hamilton-Jacobi-Bellman model (8 hours)

Introduction to Hamilton-Jacobi-Bellman equation - model reference adaptive systems (MRAS) - Design hypothesis.

Module VI: Control methods (8 hours)

Introduction to design method based on the use of Liapunov function, Design and simulation of variable structure adaptive model following control.

Suggested Readings

EEWE0092: WASTE TO ENERGY

(3 Credits – 45 hours) (L-T-P: 3-0-0)

Course Outcomes

1. Select the appropriate method for Biomass pyrolysis, biomass gasification and biomass combustion for waste to energy conversion. (Remembering)
2. Explain waste management systems with respect to its physical properties, and associated critical considerations in view of emerging technologies. (Understanding)
3. Implement energy conversion system for conversion of waste to electrical energy. (Applying)

4. Design cooking stoves, digester, gasifier. (Creating)

Objective

The objective of this course is to introduce different sources, processes to carry on waste to energy conversion. The students will be able to design different systems and devices for converting waste materials to useful energy.

Module I: Introduction to Energy from waste (9 hours)

Classification of waste as fuel, Agro based, Forest residue, Industrial waste, MSW, Conversion devices, Incinerators, gasifiers, digestors.

Module II: Biomass Pyrolysis (9 hours)

Pyrolysis, Types, slow, fast, Manufacture of charcoal, Methods, Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

Module III: Biomass Gasification (9 hours)

FiFixed bed system, Downdraft and updraft gasifiers, Fluidized bed gasifiers, Design, construction and operation, Gasifier burner arrangement for thermal heating, Gasifier engine arrangement and electrical power, Equilibrium and kinetic consideration in gasifier operation.

Module IV: Biomass Combustion (9 hours)

Biomass stoves, Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation, Operation of all the above biomass combustors.

Module V: Biogas (9 hours)

Properties of biogas (Calorific value and composition), Biogas plant technology and status, Bio energy system, Design and constructional features, Biomass resources and their classification, Biomass conversion processes, Thermo chemical conversion, Direct combustion, Types of biogas Plants, Applications, Alcohol production from biomass, Bio-diesel production, Urban waste to energy conversion, Biomass energy programme in India.

CO 4				H	M

LABORATORY COURSES

EESS6033: POWER SYSTEM STEADY STATE ANALYSIS LAB

(2 Credits - 60 hours) (L-T-P: 0-0-4)

Course Outcomes

1. Recall characteristics of IGBT and thyristor. (Remembering)
2. Demonstrate the knowledge of Y-bus and Z-bus formation. (Understanding)
3. Find various performance parameters of a power system by using given data. (Analyzing)
4. Develop program for economic dispatch problems of electrical energy. (Creating)

List of Experiments:

1. Simulation of IGBT Inverters
2. Simulation of Thyristor Converters
3. Transient Stability Studies

4. Short Circuit Studies
5. Evaluation of Z-Bus and Y-Bus
6. Economic Load Dispatch
7. Gauss Seidel Load Flow analysis
8. Newton Raphson Load Flow analysis
9. Load Forecasting and Unit Commitment

Suggested Readings

1. C.L. Wadhwa, Electrical Power systems, (5th Edition) New Age International Publishers.
2. D.P. Kothari, I.J. Nagrath, Power System Engineering, Second edition, Tata McGraw Hill.

Mapping of COs to Experiments

Course Outcomes	Expt.1	Expt.2	Expt.3	Expt.4	Expt.5	Expt.6	Expt.7	Expt.8	Expt.9
CO 1	M	M							
CO 2			H	H					
CO 3					H		H	H	
CO 4						H			H

EERE6034: RENEWABLE ENERGY LAB

(2 Credits - 60 hours) (L-T-P: 0-0-4)

Course Outcomes

1. Identify the V-I characteristics of solar panels. (Applying)
2. Utilize the concepts of Solar Energy and Wind Energy conversion techniques in practical situations. (Applying)
3. Determine the power output from Solar and Wind Farms. (Evaluating)

List of Experiments:

1. Power Curves
2. Build a Wind Farm model.
3. Test the Capabilities of Solar PV array in partial shading condition.
4. Effect of Temperature on Solar Panel Output
5. Variables Affecting Solar Panel Output
6. Effect of Load on Solar Panel Output
7. Wind Turbine Output: The Effect of Load
8. Test the Capabilities of Solar Panels and Wind Turbines

Mapping of COs to Syllabus

CO 1	H							
CO 2		H	M	H			H	H
CO 3					H	H		

EECT6035: CONTROL LAB 1

(2 Credits - 60 hours) (L-T-P: 0-0-4)

Course Outcomes

1. Name the MATLAB commands associated with a robust control system. (Remembering)
2. Model common non-linearities used in control systems. (Applying)
3. Model and analyse digital control system. (Applying)
4. Design and simulate control system models. (Creating)

List of experiments:

1. Design and simulation of Linearised models using MATLAB/PSPICE.
2. Simulation and analysis of State space models for continuous time and discrete time systems using MATLAB/PSPICE.
3. Design and Simulation of LTI models of Feedback Control System using MATLAB/PSPICE.
4. Simulation and analysis of Digital Control System using MATLAB/PSPICE.
5. Simulation and Stability analysis of control systems with common nonlinearities using MATLAB/PSPICE.
6. Familiarization and use of the MATLAB command associated with Robust Control Systems.

7. Familiarization and use of PSIM software.

EECL6036: CONTROL LAB 2

(2 Credits - 60 hours) (L-T-P: 0-0-4)

Course Outcomes

1. Compare position, velocity, and adaptive control. (Understanding)
2. Explain adaptive control system (understanding)
3. Explain analog and digital servo system. (Understanding)
4. Construct PLC based system.(Creating)
5. Design ladder logic for PLC. (Creating)

List of experiments:

1. Designing of Ladder logic for various practical applications.
2. Execution of the Ladders using PLC's.
3. Study of Analog and Digital Servo Systems.
4. Experiment on Position Control System.
5. Experiment on Velocity Control System.
6. Experiment on Adaptive Control System.
7. Experiment on Nonlinear Control Systems.

EEPL6037: POWER SYSTEM PROTECTION LAB

(2 Credits) (L-T-P: 0-0-4)

Course Outcomes

1. Show the ability to propose models for radial and parallel feeder protection. (Remembering)
2. Demonstrate applications of practical power system protection schemes. (Understanding)
3. Apply the knowledge of different types of relays components in practical power system applications. (Applying)
4. Examine the performance characteristics of relays in equipment protection. (Analyzing)
5. Evaluate fault currents due to different types of faults in a network. (Evaluating)

List of experiments (any 8):

1. Introduction to Power System Protection
2. Evaluate fault currents due to different types of faults in a network
3. Over Current Relay (OCR) Testing System - To Plot IDMT Characteristics of OCR
4. Over Current Relay Testing System - To Perform Experiment on Definite/ Instantaneous Mode Setting of the relay.
5. Characteristics of a Differential Relay - To Plot Characteristics of % Biased Differential Relay (Merz-Price Method).
6. Pick-up Test for Differential Relay
7. Transformer Differential Protection Testing - For Transformer In-Zone Trips Fault
8. Transformer Differential Protection Testing - For Transformer Out-Zone or Non-Trip Faults
9. Principle of Reverse Power Protection
10. Concept of Radial Feeder Protection
11. Concept of Parallel Feeder Protection

Mapping of COs to Syllabus

CO 5	L	H	H			H	H				

EEPA6038: POWER ELECTRONICS APPLICATION TO POWER SYSTEM LABORATORY

(2 Credits - 30 hours) (L-T-P: 0-0-4)

Course Outcomes

1. Identify the suitable power electronic devices for designing different power electronic converters. (Applying)
2. Examine the performance characteristics of different types of FACTS devices. (Analyzing)

3. Experiment with various power electronic circuits used in power system applications. (Evaluating)
4. Design different types of power electronic converters. (Creating)

List of Experiments:

Any ten experiments will be performed

1. Three phase fully controlled rectifier
2. Multi-level inverters
3. Active power filters
4. Non-isolated DC- DC converter
5. Characteristic of SVC
6. Characteristic of STATCOM
7. Characteristic of TCSC
8. Improvement of power quality using shunt compensation
9. Improvement of power quality using series compensation
10. Solar power integration to grid
11. Vector control of inverter

Suggested Readings

1. N. G. Hingorani and L. Gyugyi, "Understanding FACTS: Concepts and Technology of FACTS Systems", Wiley-IEEE Press, 1999.
2. M.R. Rashid, Power Electronic Circuits, Devices and Applications, Third Edition, PHI.

EEMP6041: MINI PROJECT (M.Tech)

(2 Credits - 60 hours) (L-T-P: 0-0-4)

Course Outcomes

1. Apply practical knowledge within the chosen area of technology for project development. (Applying)
2. Demonstrate the skills to carry out research work independently. (Understanding)
3. Plan for executing projects with a comprehensive and systematic approach. (Applying)
4. Take part in development of technical projects as an individual or in a team. (Analyzing)
5. Develop effective communication skills for presentation of project related activities. (Creating)

Process:

1. Literature Review
2. Synopsis Presentation
3. Progress Presentation
4. Hardware/Software Project Execution
5. Final Presentation and Demonstration of the Project

EEMM6042: MICROPROCESSOR AND MICROCONTROLLER LAB

(1 Credits - 30 hours) (L-T-P: 0-0-2)

Course Outcomes

1. Demonstrate the usage of Keil software in writing, compiling and debugging 8051 programs (Understanding)
2. Make use of the 8051 assembly language instructions to write programs for a given problem. (Applying)
3. Examine the output of each line of an 8051 program code. (Analysing)

List of Experiments

1. Interfacing of 8051 development kit to PC and programmer.
2. Data transfer operation from registers and internal data memory.
3. Addition and subtraction of two 8 bit numbers.

4. Addition of two 16-bit numbers.
5. Addition of an array of 8-bit numbers.
6. Subtraction of two 16-bit numbers.
7. Multiplication and division of two 8-bit numbers.
8. Multiplication of two 16-bit numbers.
9. Interfacing of LEDs and Switches.
10. Interfacing of seven segment displays.
11. Interfacing of 16 x 2 LCD.
12. Interfacing of ADC.

EEDI6050: DISSERTATION PHASE-I

(10 Credits) (L-T-P : 0-0-20)

Course Outcomes

1. Select a project of interest. (Remembering)
2. Defend the topic of interest for continuing work, by doing initial studies on it. (Understanding)
3. Prepare a working methodology for the project for its successful completion. (Applying)
4. Design and experiment on the selected project. (Analysing)
5. Devise tools and methods for experimenting and troubleshooting for getting expected outcomes. (Evaluating)
6. Explain, justify and defend the project work by presenting the work and writing a report. (Creating)

Objective

During this Phase-I of the M.Tech dissertation, the student will start a research project, applying the knowledge acquired during the first two semesters and also incorporating the recent trends in the chosen area. It should include phases of design, implementation and reporting. This project is to be executed individually within or outside the campus. The mode and components of evaluation and the weightage attached to them shall be published by the department/Institute at the beginning of the semester. At least one review paper is expected to be published by the student in this phase.

EEDI6051: DISSERTATION PHASE–II

(16 Credits) (L-T-P: 0-0-32)

Course Outcomes

1. Define the problem encountered in Phase-I and find suitable methodology to be adopted for the project work. (Remembering)
2. Classify the whole project work in various modules and explain the working model of the proposed work by demonstrating the different modules. (Understanding)
3. Apply mathematical skills to learn how these skills are important in engineering and construct software implementation skills and design skills especially from a systems perspective. (Applying)
4. Analyse the advanced electrical power or control systems and different problems encountered in designing a system. (Analysing)
5. Evaluate the complete system and perceive future scopes of the work carried out. (Evaluating)
6. Elaborate the performance of the work done, contrast on limitations of the system designed. and compile a technical report on the project (Creating)

Objective

During the Phase-II of M.Tech dissertation, the student will carry forward and complete the work that they have started in Phase-I. It is required that the student will publish at least one research paper in a well-known reputed journal to augment their work during this phase. Published papers will carry extra weightage during evaluation. The mode and components of evaluation and the weightage attached to them shall be published by the department at the beginning of the semester.

VALUE ADDED COURSES

EEAL0113: AUTOCAD ELECTRICAL

(2 Credits: 30 hours) (L-T-P : 0-1-2)

Course Outcomes

1. Demonstrate methods of customizing AutoCAD Electrical symbols, circuits, and databases, title block linking, reporting tools, templates, and project files. (Understanding)
2. Build schematic drawings such as ladder logic and single wire and multi wire circuits, panel drawings, and PLC-I/O circuits using automated commands for symbol insertion, component tagging, wire numbering, and drawing modification. (Creating)

Objective

The main objective of this course is to learn how to use the powerful electrical drawing creation tools in the AutoCAD Electrical software.

Module I: Introduction to auto CAD Electrical (6 hours)

Introduction to Electrical CAD interface, Electrical Components and wires, Design methodologies,Project files, Accessing project files,Add a drawing to a project file, managing drawings in a project, Project manager Drawing list.

Module II: Schematic I and schematic II (6 hours)

a. schematic I: Single wires/ Components, Referencing, Ladders, Insert wires, Edit wires, 3 phase components,Source and destination Signal Arrows, Insert component, parent/child components
b. Schematic II: Multiwire and circuits, Dashed Link Lines, 3 Phase Ladders.

Module III Editing Commands and panel drawings (6 hours)

a. Editing commands: Edit Component, Updating Drawings, Scoot & Align, Move & Copy Component, Delete & Surfer Component, Copy Catalogue Assignment, Copy Installation/Location Code Values, Attribute Editing Commands:
b. Insert Footprint and component, Edit footprint, Assign Item numbers, Add balloons.

Module IV: Terminals and Point-to-Point Wiring Drawings (6 hours)

a. Terminals: Insert Terminal Symbols, Multiple Level Terminals, Multiple Insert Component command, insert jumpers, Terminal Strip Editor, DIN Rail Command.
b. Point-to-Point Wiring Drawings: Insert & Edit Connectors, Insert Splices, Insert Multiple Wires, Bend Wires.

Module V: Symbol creation (6 hours)

Schematic Symbols, Naming Convention, Icon Menu Wizard, AutoCAD Electrical Databases, Project & Catalog Databases, Footprint Lookup Database, Insert PLC, Insert Individual PLC I/O Points.

Suggested Readings:

1. James D. Bethune, “Engineering Graphics with AutoCAD 2020”, Macromedia Press.
2. Gaurav Verma and Matt Weber, “AutoCAD Electrical 2021 Black Book”, 6th Edition, Cadcamcae Works.
3. Sham Tickoo, “AutoCAD Electrical 2021: A Tutorial Approach”, 2nd Edition, CADCIM Technologies.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module v
CO 1	H	M	M	M	H
CO 2		H	M	M	

EEAR0112: INTRODUCTION TO ARDUINO AND RASPBERRY PI

(2 Credits - 30 hours) (L-T-P:0-1-2)

Course Outcomes

1. List the different I/O pins available on the Arduino and Raspberry Pi. (Remembering)
2. Execute software programs on Arduino and Raspberry Pi. (Applying)

Module I : Introduction to Arduino (15 hours)

Introduction to Arduino, Arduino boards and their specification, Arduino integrated development environment, Arduino UNO development board, Programming the Arduino boards, Interfacing LEDs, Interfacing switches, interfacing LCDs, Serial

communication, Interfacing analog sensors, PWM control, DC motor interfacing, Servo motor interfacing, Stepper motor interfacing. Circuit design, programming, testing and debugging.

Module II: Introduction to the Raspberry Pi (15 hours)
Introduction to the Raspberry Pi: Features, GPIO. Linux System Administration: Overview, Files & Process, Directories, Basic commands etc. Some common Troubleshooting, Network configuration: interfaces, Configuring the Raspberry Pi: config.txt, cmdline.txt. Pi as Media Centre, Web Server etc.Introduction to python: IDLE, variables, input, loop, installing GPIO library. Hardware hacking, Pi with Arduino, IOT etc.

Suggested Readings:
1. Arduino Programming: Step-by-step guide to mastering arduino hardware and software by Mark Torvalds
2. Raspberry Pi User Guide by Gareth Halfacree and Eben Upton

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II
CO 1	H	H
CO 2	H	H

EEEL0114: ELECTRICAL WIRING

(2 Credits - 30 hours) (L-T-P: 0-1-2)

Course Outcomes
1. Define and explain the difference between direct current and alternating current. (Remembering)
2. Describe conditions likely to affect severity of electrical shock while maintaining safety during installation. (Remembering)
3. Demonstrate the different conductor systems used in residential and light commercial wiring in accordance with the codes and authorities for installation. (Applying)
4. Analyze the essential tools for residential wiring and be able to discuss the basic principles of tool-use and care. (Analysing)

Objective
To improve student electrical wiring skills through systematic training to enable students to create and test different electrical circuits using suitable electrical equipment, wires, protective devices and wiring accessories.

Module I: Basic Electrical Circuits (9 hours)
Measurement of Electrical quantities like Voltage, Currents, Resistance, Impedance, power factor and energy, Various Electrical Symbols, Electricity conductor, insulator, and resistance, Single-phase & three-phase circuits, Serial connection-diagram, Series and Direct Board-different types.

Module II: Different types of electrical wiring / installations (12 hours)
Two-way switch-wiring, 3-phase wiring, Overhead service connection, Definition and testing procedure of voltage current power MCB and bus bars, Earthing Connection – Different earthing systems.

Module III: Fundamentals of electricity-safety measures and precautions, first aid/Tools and equipment (12 hours)
Safely handling Tools & Equipment /Fire Fighting and use of fire extinguishers, Fires in electrical Circuits & Precautions, General Safety of Tools & equipment, Measuring tools, wire gauges etc. Classification, Identification of the electrical equipment cables, wires and electrical accessories.

Module IV: House Wiring Practical (12 hours)
House Wiring by PVC Casing Capping including Testing, House Wiring by PVC Rigid Pipe including Testing, Industrial Wiring by MS Pipe Including Testing, Measurement of Earth Resistance by Earth Tester, Common Faults in AC & DC Fans, Regulators and Remedies.

Suggested Readings
1. J.B. Gupta, “A Course in Electrical Installation Estimating and Costing”, S.K. Kataria & Sons.
2. S.L. Uppal and G.C. Garg, “Electrical Wiring Estimating & Costing”, Khanna Publishers.
3. Satheesh Kumar, “Electrical Wiring: An Introduction”, Ane Books Pvt. Ltd.

CO 4	M	M	H

EEPY0115: PYTHON FOR ELECTRICAL ENGINEERING

(2 Credits: 30 hours) (L-T-P: 0-1-2)

Course Outcomes

1. Simulate Electrical Systems using Python. (Applying)
2. Evaluate the performance of new Electrical designs using Python. (Evaluating)
3. Construct Electrical systems using Python. (Creating)

Objective

The objective of this course is to familiarize the students with the Python Programming environment and its various applications in simulating Electrical Systems. The course will be a combination of tutorial and practical classes, focusing on hands-on exercises to be done by the students using Python and its various modules.

Module I: Introduction to Python (8 hours)

Python Packages, Anaconda, Python Editors, Resources, Installing Python. Python IDE, Python Shell, Running Python from the Console, Scripting Mode. Basic Python Program, Variables, Built-in Functions, Python Standard Library, Using Python Libraries, Packages and Modules, Plotting in Python.

Module II: Python Programming (6 hours)

Loops in Python programming, Creating Functions in Python, Creating Classes in Python, Creating Python Modules, File Handling in Python, Error Handling in Python, Debugging in Python, Installing and using Python Packages.

Module III: Python for Mathematics Applications (6 hours)

Mathematics in Python, Linear Algebra in Python, Complex Numbers in Python, Differential Equations, Optimization. Using Python for Simulations, Differential Equations, Discrete Systems, Real-Time Simulations.

Module IV: Python for Electrical Engineering Applications (10 hours)

Numerical Methods using Python, Numerical integration, Solving ordinary differential equations, Root finding, Interpolation, Curve fitting, Fourier transforms.

Python used for Control Applications, Transfer Functions, State Space Models, Frequency Response, Stability Analysis.

Applications of Python in- Electromagnetics, Circuit Analysis, Electrical Power Systems, Power Electronics, Signal Processing, Electrical System Modeling and Simulation.

Suggested Readings

1. Hans-Petter Halvorsen, “Python”. Available: https://www.halvorsen.blog/documents/programming/python/python.php
2. Hans-Petter Halvorsen, “Python for Science and Engineering”, 2019. Available: https://www.halvorsen.blog/documents/programming/python/resources/Python%20for%20Science%20and%20Engineering.pdf

CO 3		M	L	H

EESL0200: SERVICE LEARNING

(2 Credits – 30 hours)

Course Outcomes

1. Define and explain the understanding of Community-University Engagement (CUE) and outline CUE in relation to higher education policy in India. (Remembering)
2. Analyze and identify the social responsibility of higher education institutions to facilitate engaged teaching, research & service. (Analyzing)
3. Determine the various methods and tools on Community-Based Participatory Research (CBPR). (Evaluating)
4. Evaluate how Higher education institutions can undertake community engagement post COVID-19. (Evaluating)
5. Design a plan for the engagement of students with the community through engaged teaching, research and service. (Creating)

Objective

The objective of this course is to understand the theory and practice of community university engagement. The students provide an insight on the theme of Social Responsibility of Higher Education Institution (HEI) and to introduce community based participatory research and the tools to facilitate engaged research.

Module I: Community University Engagement (CUE) (6 Hours)

History of Community University Engagement (CUE) in Indian Higher Education Policy, Fostering Social Responsibility by Higher Education: COVID-19 and Beyond, Current status and possible interventions, Recent initiatives, Principles of community engagement,

Module II: Social Responsibility of HEIs (5 Hours)

Understanding Social Responsibility of HEIs – Engaged Teaching, Research & Service, Community Engaged teaching and research, Community based participatory research, practice based learning, Community service, Effective Methods and Tools for Engaging Community in Research

Module III: Community Engagement through Electrical and Electronics Engineering (19 Hours)

Power sector scenario including generation, transmission, and distribution scenario of India, Duties and responsibilities of Assistant Electricity Meter Reader, Billing and cash collector and their career progression, Develop circuit and wiring diagram and electrical signage, code specifications to plan wiring layouts, consumption points accurately, as may be required, Standard location of service line connection, layout of main switch, circuit breakers required at main board, Install the protective device i.e.ratings as per the load, Replacement of damaged switches, MCB, fan- capacitor, regulator, lighting points i.e. holder, choke, starters, water coolers and their pump & motor, Operate principle of single phase motor, various types of motors like self start, capacitor start, capacitor run, universal motors and their applications and functions of condenser, Earth testing, Build a wind farm model, Application of drone technology in agriculture, search and rescue, wildlife tracking etc.

Suggested Readings

1. W. James Jacob, Stewart E. Sutin, John C. Weidman, John L. Yeager, “Community Engagement in Higher Education: Policy Reforms and Practice”, Springer, 2015.
2. David Coghlan, Mary Brydon-Miller, “The SAGE Encyclopedia of Action Research”, SAGE, 2014.
3. Book on Electricity rules.
4. Kronick, Robert F., “Emerging Perspectives on Community Schools and the Engaged University”, IGI Global,2019
5. Tami L. Moore, “Community-University Engagement: A Process for Building Democratic Communities”, John Wiley & Sons, 2014.
6. Marshall Welch, “Engaging Higher Education: Purpose, Platforms, and Programs for Community Engagement”, Stylus Publishing, 2016.
7. Barbara Jacoby, “Building Partnerships for Service-Learning”, John Wiley & Sons, 2003.
8. Becca Berkey, Emily A. Eddins, Patrick M. Green, Cara Meixner, “Reconceptualizing Faculty Development in Service-Learning/Community Engagement: Exploring Intersections, Frameworks, and Models of Practice”, Stylus Publishing, 2018.
9. Datasheets from the internet.

SCHOOL OF TECHNOLOGY

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

VISION

To cultivate nation builders, with scientific and engineering expertise and moral integrity, committed towards the upliftment of society.

MISSION

The department of Electronics and Communication Engineering of Don Bosco College of Engineering and Technology, School of Technology, Assam Don Bosco University seeks to provide young and enthusiastic minds with sound theoretical and practical knowledge in electronics and communication technologies, so that they grow up into competent individuals, capable of:

- Converting ideas into reality
- Standing up to challenges to lead from the front and provide progressive solutions
- Contributing towards the growth and development of new technologies
- Creating a positive impact on global society and contributing towards the welfare of mankind

PROGRAM EDUCATIONAL OBJECTIVES

- To create highly professional graduates with sound knowledge in the field of Electronics and Communication Engineering through quality education.
- To cater to global technological needs and to contribute to the industry by delivering the expertise acquired, through problem solving and working on need based projects.
- To groom young minds with a strong sense of commitment towards the betterment of society and environment.

PROGRAMME OUTCOMES OF M.TECH. IN SIGNAL PROCESSING:

PO 1: Ability to apply the knowledge of science, mathematics, and engineering principles for developing problem solving attitude.

PO 2: Ability to identify, formulate and solve engineering problems in the signal processing areas such as Developing robust and problem specific algorithms for acquisition, processing, analysis, synthesis of signals, to be applied in Signal Processing, Machine Vision and Communication Networks.

PO 3: Ability to understand and use different software tools in the domain of signal processing. Analysis and Verification of algorithms, Functional and timing Simulation on platforms like MATLAB, code composer studio and assembly language.

PO 4: Ability to design and conduct experiments, analyze and interpret data, imbibe programming skills for development of simulation experiments.

PO 5: Ability to function as a member of a multidisciplinary team with sense of ethics, integrity and social responsibility.

PROGRAMME OUTCOMES OF M.TECH IN COMMUNICATIONS:

PO 1: Ability to apply the knowledge of science, mathematics, and engineering principles for developing problem solving attitude.

PO 2: Ability to identify, formulate and solve engineering problems in the broad areas like Systems Design using communication and networking platforms and tools. Explore recent developments in areas like optical communication, satellite communication, wireless communication, networking, RF-microwave, antennas, measurements and standards in communication.

PO 3: Ability to understand and use different software tools for Design, Analysis and Verification in the domain of communication and networking. System results are obtained through progressive steps such as Design entry, Synthesis, Functional and Timing Simulation.

PO 4: Ability to design and conduct experiments, analyze and interpret data, imbibe programming skills for development of simulation experiments.

PO 5: Ability to function as a member of a multidisciplinary team with sense of ethics, integrity and social responsibility.

PROGRAMME OUTCOMES OF M.TECH IN VLSI AND EMBEDDED SYSTEM:

PO 1: Ability to apply the knowledge of science, mathematics, and engineering principles for developing problem solving attitude.

PO 2: Identify, formulate and solve engineering problems in the broad areas like System Design using VLSI and Embedded Platforms and tools, Semiconductor Technologies, Applications in Signal Processing, Machine Vision and Communication Networks.

PO 3: Use different software tools in the domain of VLSI and Embedded Systems Design, Analysis and Verification such as Design entry, Synthesis, Functional and Timing Simulation, Floor-planning, Place and route, Layout editors, RTL schematic, Platform specific EDA sets, MATLAB.

PO 4: Design and conduct experiments, analyze and interpret data, imbibe programming skills for development of simulation experiments.

PO 5: Function as a member of a multidisciplinary team with sense of ethics, integrity and social responsibility.

DETAILED SYLLABUS

THEORY COURSES

ECRM0042 RESEARCH METHODOLOGY AND INTELLECTUAL PROPERTY RIGHT (L-T-P: 2-0-0)

(2 credits-30 hours)

Objective:

This course is designed to help students to identify research problems in various fields. It aims at giving potential researchers the knowledge of effectively analysing and interpreting results and presenting the findings to the scientific and technological community of the world. This course also aims at motivating students to bring about their creative ideas for innovation and establishing research impact in the global for a through intellectual ownership.

Course Outcomes

1. Find research problems in various fields (Remembering).
2. Illustrate the concepts related to patents, trademark and copyright (Understanding).
3. Apply scientific investigations to find solutions for research problems of interest (Applying).
4. Develop technical writing and presentation skills (Applying).
5. Analyze the available literature and compile literature review for knowing the state of the art in the areas of interest (Analyzing/ Creating).
6. Formulate a research problem for a given engineering domain (Creating)

Module I (12 Hours)

Meaning, sources, scope and objective of a research problem; Good research problem criteria and characteristics, errors in selecting a research problem; Research problem solutions– approaches for investigation; Approaches to effective literature studies; Data collection, analysis, interpretation and instrumentation; Plagiarism and ethical practices.

Module II (10 Hours)

Effective writing; Research proposal development and its format; Different report types.

Module III (8 Hours)

a. Nature of intellectual property: Patent, design, trade and copyright; Patenting and development process; Patent grant under PCT and procedure; Geographical indications.
b. Patent rights: Administration of patent systems, scope, information and databases, technology licensing.
c. New developments and case studies.

Suggested Readings

1. Goddard Wayne, Melville Stuart, Research Methodology: An Introduction For Science And Technology Students, Juta & Co. Ltd.
2. Kumar Ranjit, Research Methodology A Step By Step Guide For Beginners, SAGE publications Inc.
3. Halbert J. Debora, Resisting Intellectual Property, CRC press.
4. Menell S. Peter, Lemley A. Mark, Merges P. Robert, Intellectual Property In New Technological Age, Clause 8 Publishing.
5. C.R. Kothari, Research Methodology Methods and Techniques, New Age International

ECAP0053 ADVANCED DIGITAL SIGNAL PROCESSING (L-T-P: 3-0-0)

(3 Credit-45 hours)

Objective:

This course is intended to make the students learn the essential advanced topics in digital signal processing that are necessary for successful post graduate-level research. The course includes a review of the linear constant-coefficient system properties

covered in an undergraduate DSP course, and then examines a variety of filter structures, time-varying and adaptive systems, fast algorithms, and other topics relevant to the research areas of the students.

Course Outcomes

1. Recall and illustrate theory of different filters and algorithms. (Remembering, Understanding)
2. Choose the best algorithm for adaptive filter design. (Applying)
3. Understand theory of multirate DSP, solve numerical problems and write algorithms. (Understanding, Applying)
4. Analyse theory of prediction and solution of normal equations. (Analysing)
5. Examine applications of DSP at block level. (Analysing)
6. Interpret the utilization of advanced algorithms like LMS, MMSE etc., for designing adaptive filters. (Evaluating)
7. Design the various types of digital filters. (Creating)

Module I (10 Hours)

Overview of DSP: Discrete time signals and Systems. Characterization in time and frequency, LTI System, the Z-transform, DFT, FFT Algorithms, Digital filter design and structures: Basic FIR/IIR filter design & structures, design techniques of linear phase FIR filters, IIR filters by impulse invariance, bilinear transformation, FIR/IIR Cascaded lattice structures, and Parallel all pass realization of IIR, FIR differentiators.

Module II (7 Hours)

Multi rate DSP: Decimators and Interpolators, Sampling rate conversion, multistage decimator & interpolator, polyphase filters, QMF, digital filter banks, Applications in sub-band coding.

Module III (8 Hours)

inear prediction & optimum linear filters: Stationary random process, forward-backward linear prediction filters, solution of normal equations, AR Lattice and ARMA Lattice-Ladder Filters, Wiener Filters for Filtering and Prediction.

Module IV (8 Hours)

Introduction to adaptive signal processing:Adaptive Filters, FIR adaptive filters: steepest descent adaptive filter, LMS algorithm, Gradient Adaptive Lattice, Minimum mean square criterion, Recursive Least Square algorithm, Applications: noise cancellation, channel equalization, adaptive recursive filters, recursive least squares, Kalman Filter.

Module V (7 Hours)

Estimation of Spectra from Finite-Duration Observations of Signals: Nonparametric Methods for Power Spectrum Estimation, Parametric Methods for Power Spectrum Estimation, Minimum Variance Spectral Estimation, Eigen analysis, Algorithms for Spectrum Estimation.

Module VI (5 Hours)

Application of DSP & Multi rate DSP: Application to Radar, introduction to wavelets, application to image processing, design of phase shifters, DSP in speech processing & other applications.

Suggested Readings

1. J. G. Proakis and D. G. Manolakis “Digital signal processing: Principles, Algorithm and Applications”, 4th Edition, Prentice Hall, 2007.
2. N. J. Fliege, “Multirate Digital Signal Processing: Multirate Systems-Filter Banks– Wavelets”, 1st Edition, John Wiley and Sons Ltd, 1999.
3. Bruce W. Suter, “Multirate and Wavelet Signal Processing”, 1st Edition, Academic Press, 1997.
4. M. H. Hayes, “Statistical Digital Signal Processing and Modeling”, John Wiley & Sons Inc., 2002.
5. S. Haykin, “Adaptive Filter Theory”, 4th Edition, Prentice Hall, 2001.
6. D. G. Manolakis, V.K. Inglean and S. M. Kogon, “Statistical and Adaptive Signal Processing”, McGraw Hill, 2000.

ECDV0054 DIGITAL IMAGE AND VIDEO PROCESSING (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective:
This course is intended to give the students an overview of important topics of image and video processing. The course starts with an introduction to the basics of image and video processing such as sampling, aliasing etc. and image transforms like DFT, DCT etc. and then moves on to advanced topics such as image and video restoration, segmentation, compression etc. It also introduces the students to concepts of colour image processing.

Course Outcomes
1. Define key stages of image processing (Remembering)
2. Explain key stages of image processing (Understanding)
3. Implement image enhancement, restoration, data compression techniques (Applying)
4. Compare object recognition tools (Analyzing)
5. Choose image enhancement technique and object recognition tool for specific applications (5, Evaluating)

Module I (10 Hours)
Digital Image and Video Fundamentals: Digital image and video fundamentals and formats, 2-D and 3-D sampling and aliasing, 2-D/3-D filtering, image decimation/interpolation, video sampling and interpolation, Basic image processing operations, Image Transforms. Need for image transforms, DFT, DCT, Walsh, Hadamard transform, Haar transform, Wavelet transform.

Module II (8 Hours)
Image and Video Enhancement and Restoration: Histogram, Point processing, filtering, image restoration, algorithms for 2-D motion estimation, change detection, motion-compensated filtering, frame rate conversion, deinterlacing, video resolution enhancement, Image and Video restoration (recovery).

Module III (10 Hours)
Image and Video Segmentation: Discontinuity based segmentation- Line detection, edge detection, thresholding, Region based segmentation, Scene Change Detection, Spatiotemporal Change Detection, Motion Segmentation, Simultaneous Motion Estimation and Segmentation Semantic Video Object Segmentation, Morphological image processing.

Module IV (7 Hours)
Colour image Processing: Colour fundamentals, Colour models, Conversion of colour models, Pseudo colour image processing, Full Colour processing.

Module V (5 Hours)
Image and Video Compression: Lossless image compression including entropy coding, lossy image compression, video compression techniques, and international standards for image and video compression (JPEG, JPEG 2000, MPEG-2/4, H.264, SVC), Video Quality Assessment.

Module VI (5 Hours)
Object recognition: Image Feature representation and description-boundary representation, boundary descriptors, regional descriptors, feature selection techniques, introduction to classification, supervised and unsupervised learning, Template matching, Bayes classifier.

Suggested Readings
1. Ed. Al Bovik ,"Handbook of Image and Video Processing", 2nd Edition, Academic Press,2000.
2. J. W. Woods, "Multidimensional Signal, Image and Video Processing and Coding", 2nd Edition, Academic Press,2011.
3. Rafael C. Gonzalez and Richard E. Woods," Digital Image Processing", 3rd Edition, Prentice Hall,2008.
4. M. Tekalp, "Digital Video Processing",2nd Edition, Prentice Hall,2015.
5. S. Shridhar, "Digital Image Processing", 2nd Edition, Oxford UniversityPress, 2016.

ECAU0055 AUDIO PROCESSING (L-T-P: 3-0-0)
(3 credits – 45 hours)

Objective:
This course is intended to introduce the students to the fundamentals of audio processing and then move on to more advanced topics such as LPC, speech coding etc. The course also delves into applications of audio processing such as speech recognition and speaker recognition.

Course Outcomes
1. Define principal characteristics of speech, various speech analysis and synthesis systems (Remembering)
2. Explain principal characteristics of speech, various speech analysis and synthesis systems (Understanding)
3. Implement speech analysis and synthesis systems, speech coding, speech and speaker recognition(Applying)
4. Compare various techniques for speech analysis and synthesis, speech coding, speech and speaker recognition (Analyzing)
5. Choose suitable one amongst various techniques for speech analysis and synthesis, speech coding, speech and speaker recognition (Evaluating)

Module I (8 Hours)
Principle Characteristics of Speech: Linguistic information, Speech and Hearing, Speech production mechanism, Acoustic characteristic of speech Statistical Characteristics of speech. Speech production models, Linear Separable equivalent circuit model, Vocal Tract and Vocal Cord Model.

Module II (10 Hours)
Speech Analysis and Synthesis Systems: Digitization, Sampling, Quantization and coding, Spectral Analysis, Spectral structure of speech, Autocorrelation and Short Time Fourier transform, Window function, Sound Spectrogram, Mel frequency Cepstral Coefficients, Filter bank and Zero Crossing Analysis, Analysis –by-Synthesis, Pitch Extraction.

Module III (7 Hours)
Linear Predictive Coding Analysis: Principle of LPC analysis, Maximum likelihood spectral estimation, Source parameter estimation from residual signals, LPC Encoder and Decoder, PARCOR analysis and Synthesis, Line Spectral Pairs, LSP analysis and Synthesis.

Module IV (10 Hours)
Speech Coding: Reversible coding, Irreversible coding and Information rate distortion theory, coding in time domain: PCM, ADPCM, Adaptive Predictive coding, coding in Frequency domain: Sub band coding, Adaptive transform coding, Vector Quantization, Code Excited Linear Predictive Coding (CELP).

Module V (5 Hours)
Speech Recognition: Principles of speech recognition, Speech period detection, Spectral distance measure, Structure of word recognition system, Dynamic Time Warping (DTW), Theory and implementation of Hidden Markov Model (HMM).

Module VI (5 Hours)
Speaker recognition: Human and Computer speaker recognition Principles Text dependent and Text Independent speaker recognition systems. Applications of speech Processing.

Suggested Readings
1. Sadaoki Furui, “Digital Speech Processing, Synthesis and Recognition” 2nd Edition, Taylor & Francis, 2000.
2. Rabiner and Schafer, “Digital Processing of Speech Signals”, Pearson Education, 1979.

ECCV0056 COMPUTER VISION (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective:

The course is intended to make an insight into different aspects of Computer Vision and Machine learning, working principles, systems associated and applications.

Course Outcomes

1. Recall the working of camera and explain behavior of various sources, surfaces, shadows, human visual systems etc. (Remembering/ Understanding)
2. Illustrate the image formation models and feature extraction for computer vision. (Understanding)
3. Apply various image analysis operations on the images and videos such as segmentation, counting objects, shape determination, feature extraction etc. (Applying)
4. Analyze algorithms for high level vision analysis such as object detection and classifications using input features and classifiers. (Analyzing)
5. Evaluate the segmentation and motion detection and estimation techniques. (Evaluating)
6. Develop small applications and detect the objects in various applications. (Creating)

Module I (10 Hours)

Image Formation Models: Colour- Generation, Human Perception, Representation, Model for an Image Colour; Camera: Pinhole and Lens Types, geometric Camera model and Camera calibration; Monocular imaging system, Orthographic & Perspective Projection, Binocular imaging systems, Binocular Stereopsis: Camera and Epipolar Geometry; Homography, Radiometry, Projections, Transforms- Fourier, Hough and Radon; Rectification, DLT, RANSAC, 3-D reconstruction framework; Auto-calibration.

Module II (8 Hours)

Feature Extraction: Image representations (continuous and discrete), Scene Segmentation and Labeling; Counting Objects; Edge detection, Edge linking, corner detection, texture, binary shape analysis, boundary pattern analysis, circle and ellipse detection, Light at Surfaces; Phong Model; Reflectance Map; Albedo estimation; Photometric Stereo; Use of Surface Smoothness Constraint; Shape from Texture, color, motion and edges;

Module III (10 Hours)

Shape Representation and Segmentation: Statistical Decision Theory; Pattern Recognition Principles; Clustering Approach- K-Means Clustering; Parametric Approach- Bayes' Classifier; Relaxation Approach; Shape Similarity Based Recognition; Expert System; Deformable curves and surfaces, Snakes and active contours, Level set representations, Fourier and wavelet descriptors, B-Splines, Least Squares and Eigen Vector Line Fitting, Medial representations, Multi-resolution analysis, Region Growing, Edge Based approaches to segmentation, Graph-Cut, Mean-Shift, MRFs, Texture Segmentation

Module IV (5 Hours)

Motion Detection and Estimation: Regularization theory, Optical computation, Stereo Vision, Motion estimation, Background Subtraction and Modeling, Optical Flow, KLT, Spatio Temporal Analysis, Dynamic Stereo; Motion parameter estimation, Structure from motion, Motion Tracking in Video.

Module V (7 Hours)

Object recognition: Hough transforms and other simple object recognition methods, Shape correspondence and shape matching, Principal component analysis, Shape priors for recognition, Geometric templates from spatial relations, Probabilistic and inferential methods- neural networks, support vector machines; Recognition by relations between templates.

Module VI (5 Hours)

Applications of Computer Vision: Automated Visual Inspection, Inspection of Cereal Grains, Surveillance, In-Vehicle Vision Systems, CBIR, CBVR, Activity Recognition, computational photography, Biometrics, stitching and document processing.

Suggested Readings

1. D. Forsyth and J. Ponce, "Computer Vision - A modern approach", 2nd Edition, Pearson Prentice Hall, 2012
2. Szeliski, Richard, "Computer Vision: Algorithms and Applications", 1st Edition, Springer Verlag London Limited, 2011.
3. Richard Hartley and Andrew Zisserman, "Multiple View Geometry in Computer Vision", 2nd Edition, Cambridge University Press, 2004.
4. K. Fukunaga,"Introduction to Statistical Pattern Recognition",2ndEdition, Morgan Kaufmann, 1990.
5. Rafael C. Gonzalez and Richard E. Woods," Digital Image Processing", 3rd Edition, Prentice Hall, 2008.

ECAA0057 ADVANCED COMPUTER ARCHITECTURE (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective:
The main objective of this course is to introduce the students with the concept of parallelism and pipelining, the design aspects and challenges. After this course students will be able to evaluate the issues in vector and array processors. They will also learn about high performance scalable multithreaded and multiprocessor systems.

Course Outcomes
1. Define the concept of pipelining and parallelism in various computer architectures. (Remembering)
2. Explain pipelining in software and hardware and hazards associated with it. (Understanding)
3. Identify various issues associated with vector and array processors. (Applying)
4. Analyse different types of multiprocessor architectures. (Analysing)
5. Compare the performance of multiprocessors and multithreaded architectures. (Evaluating)
6. Discuss parallel algorithms for multiprocessors. (Creating)

Module I (5 Hours)
Parallel Processing and Pipelining Processing- Architectural Classification, Applications of parallel processing, Instruction level Parallelism and Thread Level Parallelism, Explicitly Parallel Instruction Computing (EPIC) Architecture.

Module II (10 Hours)
Pipeline Architecture-Principles and implementation of Pipelining, Classification of pipelining processors, Design aspect of Arithmetic and Instruction pipelining, Pipelining hazards and resolving techniques, Data buffering techniques, Advanced pipelining techniques, Software pipelining, VLIW (Very Long Instruction Word) processor.

Module III (8 Hours)
Vector and Array Processor- Issues in Vector Processing, Vector performance modeling, SIMD Computer Organization, Static Vs Dynamic network, Parallel Algorithms for Array Processors: Matrix Multiplication.

Module IV (7 Hours)
Multiprocessor Architecture - Loosely and Tightly coupled multiprocessors, Inter Processor communication network, Time shared bus, Multiport Memory Model, Memory contention and arbitration techniques, Cache coherency and bus snooping, Massively Parallel Processors (MPP).

Module V (5 Hours)
Multithreaded Architecture- Multithreaded processors, Latency hiding techniques, Principles of multithreading, Issues and solutions, Parallel Programming Techniques: Message passing program development.

Module VI (10 Hours)
Parallel algorithms for multiprocessors- Classification and performance of parallel algorithms, operating systems for multiprocessors systems, Message passing libraries for parallel programming interface, PVM (in distributed memory system), Message Passing Interfaces (MPI).

Suggested Readings
1. Kai Hwang, Faye A. Briggs, “Computer Architecture and Parallel Processing” McGraw Hill Education, 2012.
2. Kai Hwang, “Advanced Computer Architecture”, McGraw Hill Education, 1993.
3. William Stallings, “Computer Organization and Architecture, Designing for Performance” Prentice Hall, 6th edition, 2006.
4. Kai Hwang, “Scalable Parallel Computing”, McGraw Hill Education, 1998.
5. Harold S. Stone “High-Performance Computer Architecture”, Addison-Wesley, 1993.

ECSI0058 STATISTICAL INFORMATION PROCESSING (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective
This course is intended to introduce the students to the concepts of information processing. The course starts with the fundamental concepts of random variables and then moves on to random processes, random signal modelling, spectral analysis etc. It also covers concepts of information theory and source coding.

Course Outcomes
1. Define the statistical parameters associated with random variables and random processes. (Remembering)
2. Explain concept of various random signal models like MA, AR, ARMA etc. (Understanding)
3. Identify various hypothesis and methods to estimates parameters in statistical model. (Applying)
4. Inspect concepts of spectral analysis using functions like autocorrelation, periodogram etc.(Analyzing)
5. Evaluate information content, entropy, channel capacity etc. using various source and channel coding techniques (Evaluating)
6. Discuss application of information theory in the area of discrete mathematics (Creating)

Module I (10 Hours)
Review of random variables: Probability Concepts, distribution and density functions, moments, independent, uncorrelated and orthogonal random variables; Vector-space representation of Random variables, Vector quantization, Tchebycheff inequality theorem, Central Limit theorem, Discrete & Continuous RandomVariables. Random process: Expectations, Moments, Ergodicity, Discrete-Time Random Processes Stationary process, autocorrelation and autocovariance functions, Spectral representation of random signals, Properties of power spectral density, Gaussian Process and White noise process.

Module II (5 Hours)
Random signal modeling: MA(q), AR(p), ARMA(p,q) models, Hidden Markov Model & its applications, Linear System with random input , Forward and Backward Predictions, Levinson Durbin Algorithm.

Module III (10 Hours)
Statistical Decision Theory: Bayes' Criterion, Binary Hypothesis Testing, M-ary Hypothesis Testing, Minimax Criterion, Neyman-Pearson Criterion, Composite Hypothesis Testing. Parameter Estimation Theory: Maximum Likelihood Estimation, Generalized Likelihood Ratio Test ,Some Criteria for Good Estimators, Bayes' Estimation Minimum Mean-Square Error Estimate, Minimum, Mean Absolute Value of Error Estimate Maximum A Posteriori Estimate , Multiple Parameter Estimation Best Linear Unbiased Estimator, Least-Square Estimation Recursive Least-Square Estimator.

Module IV (5 Hours)
Spectral analysis: Estimated autocorrelation function, Periodogram, Averaging the periodogram (Bartlett Method), Welch modification, Parametric method, AR(p) spectral estimation and detection of Harmonic Signals.

Module V (8 Hours)
Information Theory and Source Coding: Introduction, Uncertainty, Information and Entropy, Source coding theorem, Huffman, Shanon-Fano, Arithmetic, Adaptive coding, RLE, LZW Data compaction, LZ-77, LZ-78. Discrete Memory less channels, Mutual information, channel capacity, Channel coding theorem, Differential entropy and mutual information for continuous ensembles.

Module VI (7 Hours)
Application of Information Theory: Group, Ring & Field, Vector, GF addition, multiplication rules. Introduction to BCH codes, Primitive elements, Minimal polynomials, Generator polynomials in terms of Minimal polynomials, Some examples of BCH codes, & Decoder, Reed- Solomon codes & Decoder, Implementation of Reed Solomon encoders and decoders.

Suggested Readings
1. Papoulis and S.U. Pillai, "Probability, Random Variables and Stochastic Processes", 4th Edition, McGraw-Hill,2002.

2. D.G. Manolakis, V.K. Ingle and S.M. Kogon, "Statistical and Adaptive Signal Processing", McGraw Hill,2000.
3. MouradBarkat , "Signal Detection and Estimation", Artech House, 2nd Edition,2005.
4. R G. Gallager, "Information theory and reliable communication", Wiley, 1st edition, 1968.
5. F. J. MacWilliams and N. J. A. Sloane, "The Theory of Error-Correcting Codes", New York, North-Holland,1977.
6. Rosen K.H, "Elementary Number Theory", Addison-Wesley, 6th edition, 2010.

ECVD0059: VOICE AND DATA NETWORKS (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective:

This course is intended to give the students an exposure to the design criteria of voice and data networks. The course starts with network design and performance issues in general, moves on to introducing the students to issues in design of voice and data networks and then gives an extensive idea on voice networks and data networks.

Course Outcomes

1. Define the fundamental concepts of network design and network performance issues, network terminology etc. (Remembering)
2. Explain concepts of voice and data networks. (Understanding)
3. Apply designs of voice and data networks such as link layer design etc. (Applying)
4. Inspect concepts of inter-networking, IP protocol and addressing CIDR, TCP, UDP etc. (Analyzing)
5. Evaluate Queuing models, traffic models, Markov systems etc. (Evaluating)
6. Discuss congestion avoidance, quality of service in packet networks etc. (Creating)

Module I (8 Hours)

Network Design Issues, Network Performance Issues, Network Terminology, centralized and distributed approaches for networks design, Issues in design of voice and data networks.

Module II (7 Hours)

Layered and Layer less Communication, Cross layer design of Networks, Voice Networks (wired and wireless) and Switching, Circuit Switching and Packet Switching, Statistical Multiplexing.

Module III (8 Hours)

Data Networks and their Design, Link layer design- Link adaptation, Link Layer Protocols, Retransmission. Mechanisms (ARQ), Hybrid ARQ (HARQ), Go Back N, Selective Repeat protocols and their analysis.

Module IV (7 Hours)

Queuing Models of Networks, Traffic Models, Little's Theorem, Markov chains, M/M/1 and other Markov systems, Multiple Access Protocols, Aloha System, Carrier Sensing, Examples of Local area networks,

Module V (10 Hours)

Inter-networking, Bridging, Global Internet, IP protocol and addressing, Subnetting, Classless Inter domain Routing (CIDR), IP address lookup, Routing in Internet. End to End Protocols, TCP and UDP, Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit/ Fast Recovery.

Module VI (5 Hours)

Congestion avoidance, RED TCP Throughput Analysis, Quality of Service in Packet Networks. Network Calculus, Packet Scheduling Algorithms.

Suggested Readings

1. D. Bertsekas and R. Gallager, "Data Networks", 2nd Edition, Prentice Hall,1992.

ECVC0060: AUDIO, VIDEO CODING AND COMPRESSION (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective

This course is designed to give the students an idea about multimedia systems and processing. The course starts with basic coding techniques such as Huffman coding etc. and transforms such as DCT etc. and then gives an extensive idea on video and audio coding along with their compression systems.

Course Outcomes

1. Define the fundamental concepts of multimedia systems and processing. (Remembering)
2. Outline concepts of lossy and lossless image compression systems, still image compression standards etc. (Understanding)
3. Make use of standards of audio and video coding. (Applying)
4. Analyse motion estimation algorithms. (Analyzing)
5. Evaluate multimedia synchronization, audio-video interleaving video indexing and retrieval etc. (Evaluating)
6. Discuss applications of audio coding, video coding and various compression systems. (Creating)

Module I (5 Hours)

Introduction to Multimedia Systems and Processing, Lossless Image Compression Systems, Huffman Coding, Arithmetic and Lempel-Ziv Coding, Other Coding Techniques.

Module II (10 Hours)

Lossy Image Compression Systems, Theory of Quantization, Delta Modulation and DPCM, Transform Coding & K-L Transforms, Discrete Cosine Transforms, Multi-Resolution Analysis, Theory of Wavelets, Discrete Wavelet Transforms, Still Image Compression Standards: JBIG and JPEG.

Module III (8 Hours)

Video Coding and Motion Estimation: Basic Building Blocks & Temporal Redundancy, Block based motion estimation algorithms, other fast search motion estimation algorithms.

Module IV (5 Hours)

Video Coding Standards: MPEG-1 standards, MPEG-2 Standard, MPEG-4 Standard, H.261, H.263 Standards, H.264 standard.

Module V (7 Hours)

Audio Coding: Basic of Audio Coding, Audio Coding, Transform and Filter banks, Polyphase filter implementation, Format and encoding, Psychoacoustic Models.

Module VI (10 Hours)

Multimedia Synchronization: Basic definitions and requirements, References Model and Specification, Time stamping and pack architecture, Packet architectures and audio-video interleaving, Multimedia Synchronization, Playback continuity. Video Indexing and Retrieval: Basics of content based image retrieval, Video Content Representation, Video Sequence Query Processing.

Suggested Readings

1. Iain E.G. Richardson, "H.264 and MPEG-4 Video Compression", Wiley,2003.

2. Khalid Sayood, “Introduction to Data Compression”, 4th Edition, Morgan Kaufmann, 2012
3. Mohammed Ghanbari, “Standard Codecs: Image Compression to Advanced Video Coding”, 3rd Edition, The Institution of Engineering and Technology, 2011.
4. Julius O. Smith III, “Spectral Audio Signal Processing”, W3K Publishing,2011.
5. Nicolas Moreau, “Tools for Signal Compression: Applications to Speech and Audio Coding”, Wiley, 2011.

ECWM0061 WIRELESS AND MOBILE COMMUNICATION (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective

This course is intended to make the students learn the essential advanced topics in wireless communication. The course starts with an introduction to basics of wireless communication such as cellular concepts and then moves on to important advanced topics related to multiple access techniques, equalizers, fading etc. It also introduces the students to 4G and 5G standards that are relevant topics for today’s times.

Course Outcomes

1. Define the fundamental concepts of cellular communication, multiple access techniques etc. (Remembering)
2. Outline concepts of GSM, GPRS etc. (Understanding)
3. Utilize GSM, CDMA etc. (Applying)
4. Analyse spectral efficiency based on multiple access techniques, equalizers in communication receivers etc. (Analysing)
5. Evaluate path loss, fading, diversity etc. (Evaluating)
6. Discuss 3G, 4G and 5G standards. (Creating)

Module I (10 Hours)

Cellular Communication Fundamentals: Cellular system design, Frequency reuse, cell splitting, handover concepts, Co channel and adjacent channel interference, interference reduction techniques and methods to improve cell coverage, Frequency management and channel assignment. GSM architecture and interfaces, GSM architecture details, GSM subsystems, GSM Logical Channels, Data Encryption in GSM, Mobility Management, Call Flows in GSM.2.5G Standards: High speed Circuit Switched Data (HSCSD), General Packet Radio Service (GPRS),2.75 G Standards: EDGE.

Module II (8 Hours)

Spectral efficiency analysis based on multiple access technologies: TDMA, FDMA and CDMA, Comparison of these technologies based on their signal separation techniques, advantages, disadvantages and application areas, Wireless network planning (Link budget and power spectrum calculations).

Module III (10 Hours)

Mobile Radio Propagation: Large Scale Path Loss, Free Space Propagation Model, Reflection, Ground Reflection (Two-Ray) Model, Diffraction, Scattering, Practical Link Budget Design using Path Loss Models, Outdoor Propagation Models, Indoor Propagation Models, Signal Penetration into Buildings. Small Scale Fading and Multipath Propagation, Impulse Response Model, Multipath Measurements, Parameters of Multipath channels, Types of Small Scale Fading: Time Delay Spread; Flat, Frequency selective, Doppler Spread; Fast and Slow fading.

Module IV (5 Hours)

Equalization, Diversity: Equalizers in a communications receiver, Algorithms for adaptive equalization, diversity techniques, space, polarization, frequency diversity, Interleaving.

Module V (7 Hours)

Code Division Multiple Accesses: Introduction to CDMA technology, IS 95 system Architecture, Air Interface, Physical and logical channels of IS 95, Forward Link and Reverse link operation, Physical and Logical channels of IS 95 CDMA, IS 95 CDMA Call Processing, soft Handoff, Evolution of IS 95 (CDMA One) to CDMA 2000, CDMA 2000 layering structure and channels.

Module VI (5 Hours)
Higher Generation Cellular Standards: 3G Standards, evolved EDGE, enhancements in 4G standard, Architecture and representative protocols, call flow for LTE, VoLTE, UMTS, introduction to 5G.

Suggested Readings
1. V. K. Garg, J. E. Wilkes, "Principle and Application of GSM", Pearson Education, 5thedition,2008.
2. V. K. Garg, "IS-95 CDMA & CDMA 2000", Pearson Education, 4th edition,2009.
3. T. S. Rappaport, "Wireless Communications Principles and Practice", 2ndedition,PHI, 2002.
4. William C. Y. Lee, "Mobile Cellular Telecommunications Analog and Digital Systems", 2nd edition, TMH,1995.
5. Asha Mehrotra, "A GSM system Engineering" Artech House Publishers Bosten, London, 1997.

ECSC0062 SATELLITE COMMUNICATION (L-T-P: 3-0-0)

(3 Credits- 45 hours)

Objective
This course is intended to give the students an exposure to the important concepts of satellite communication. The course starts with fundamental principles of satellite communication and architecture of satellites. It then introduces the students to more advanced topics such as orbital analysis, satellite subsystems, link budget etc.

Course Outcomes
1. Define the brief history of satellite systems and fundamental concepts of satellite communication. (Remembering)
2. Outline concepts of satellite subsystems, modulation and multiple access schemes used in satellite communication etc. (Understanding)
3. Make use of orbital analysis, satellite link budget etc. (Applying)
4. Analyse phenomena in satellite communication such as effect of solar eclipse on satellite, Doppler shift etc. (Analysing)
5. Evaluate subsystems such as AOCS, communication subsystem etc. (Evaluating)
6. Discuss VSAT, DBS-TV etc. (Creating)

Module I (8 Hours)
Architecture of Satellite Communication System: Principles and architecture of satellite Communication, Brief history of Satellite systems, advantages, disadvantages, applications, and frequency bands used for satellite communication and their advantages/drawbacks.

Module II (10 Hours)
Orbital Analysis: Orbital equations, Kepler's laws of planetary motion, Apogee and Perigee for an elliptical orbit, evaluation of velocity, orbital period, angular velocity etc of a satellite, concepts of Solar day and Sidereal Day.

Module III (10 Hours)
Satellite subsystems: Architecture and Roles of various sub-systems of a satellite system such as Telemetry, tracking, command and monitoring (TTC & M), Attitude and orbit control system (AOCS), Communication subsystem, power subsystems, antenna sub-system.

Module IV (7 Hours)
Typical Phenomena in Satellite Communication: Effect of Solar Eclipse on satellite, remedies for Eclipse, Sun Transit Outage phenomena, its effects and remedies, Doppler frequency shift phenomena and expression for Doppler shift.

Module V (5 Hours)
Satellite link budget: Flux density and received signal power equations, Calculation of System noise temperature for satellite receiver, noise power calculation, Drafting of satellite link budget and C/N ratio calculations in clear air and rainy conditions, Case study of Personal Communication system (satellite telephony) using LEO.

Module VI (5 Hours)
Modulation and Multiple Access Schemes used in satellite communication, Typical case studies of VSAT, DBS-TV satellites and few recent communication satellites launched by NASA/ ISRO, GPS.

Suggested Readings
1. Timothy Pratt and Others, "Satellite Communications", Wiley India, 2nd edition,2010.
2. S. K. Raman, "Fundamentals of Satellite Communication", PearsonEducation India,2011.
3. Tri T. Ha, "Digital Satellite Communications", Tata McGraw Hill, 2009.
4. Dennis Roddy, "Satellite Communication", McGraw Hill, 4th Edition, 2008.

ECWN0063 WIRELESS SENSOR NETWORKS (L-T-P: 3-0-0)
(3 Credits- 45 hours)

Objective
The objective of this course is to make the students to understand the basic WSN technology and supporting protocols, with emphasis placed on standardization basic sensor systems and provide a survey of sensor technology, medium access control protocols and address physical layer issues, sensor management , sensor network middleware, operating systems. Also to learn key routing protocols for sensor networks and main design issues, transport layer protocols for sensor networks, and design requirements

Course Outcomes
1. Recall and illustrate the Concepts, Network Architecture and Applications of Ad-hoc and Wireless Sensor Networks. (Remembering, Understanding)
2. Illustrate the Concepts, Architecture of ad-hoc and sensor networks and MAC layer protocols. (Understanding)
3. Identify the design of routing protocols for ad-hoc and wireless networks. (Applying)
4. Analyse the protocol design issues of Ad-hoc Networks. (Analysing)
5. Elaborate and Evaluate the QOS related performance measurements of ad-hoc and sensor networks. (Evaluating, Creating)

Module I (5 Hours)
Introduction: Introduction and overview of sensor network architecture and its applications, sensor network comparison with Ad Hoc Networks, Sensor node architecture with hardware and software details.

Module II (8 Hours)
Hardware:Examples like mica2, micaZ, telosB, cricket, Imote2, tmote, btnode, and Sun SPOT, Software (Operating Systems): tinyOS, MANTIS, Contiki, and RetOS.

Module III (7 Hours)
Programming tools: C, nesC. Performance comparison of wireless sensor networks simulation and experimental platforms like open source (ns-2) and commercial (QualNet, Opnet)

Module IV (10 Hours)
Overview of sensor network protocols:Sensor network protocols (details of at least 2 important protocol per layer): Physical, MAC and routing/ Network layer protocols, node discovery protocols, multi-hop and cluster based protocols, Fundamentals of 802.15.4, Bluetooth, BLE (Bluetooth low energy), UWB.

Module V (5 Hours)
Data dissemination and processing: Data dissemination and processing; differences compared with other database management systems, data storage; query processing.

Module VI (10 Hours)
Specialized features: Energy preservation and efficiency; security challenges; fault tolerance, Issues related to Localization, connectivity and topology, Sensor deployment mechanisms; coverage issues; sensor Web; sensor Grid, Open issues for future research, and Enabling technologies in wireless sensor network.

Suggested Readings
1. H. Karl and A. Willig, "Protocols and Architectures for Wireless Sensor Networks", John Wiley & Sons, India, 2012.
2. C. S. Raghavendra, K. M. Sivalingam, and T. Znati, Editors, "Wireless Sensor Networks", Springer Verlag, 1st Indian reprint, 2010.
3. F. Zhao and L. Guibas, "Wireless Sensor Networks: An Information Processing Approach", Morgan Kaufmann, 1st Indian reprint, 2013.
4. YingshuLi, MyT. Thai, Weili Wu, "Wireless sensor Network and Applications", Springer series on signals and communication technology, 2008.

ECON0064 OPTICAL NETWORKS (L-T-P: 3-0-0)
(3 Credits- 45 hours)

Objective
This course is intended to give the students an exposure to the design criteria of optical networks. The course starts with fundamentals such as SONET etc. and then deals with practical optical network design issues such as network performance, fault management, optical layer protection schemes etc.

Course Outcomes
1. Define the fundamental concepts of optical networks. (Remembering)
2. Outline concepts of SONET, SDH etc. (Understanding)
3. Utilize WDM network elements, OADM architectures etc. (Applying)
4. Analyse network survivability, WDM network design etc. (Analysing)
5. Evaluate network management functions, optical layer services, interfacing etc. (Evaluating)
6. Discuss concepts of OTDM, PON, AON etc. (Creating)

Module I (5 Hours)
SONET/SDH: Optical transport network, IP, routing and forwarding, multiprotocol label switching.

Module II (8 Hours)
WDM network elements: Optical line terminals and amplifiers, optical add/drop multiplexers, OADM architectures, reconfigurable OADM, optical cross connects.

Module III (7 Hours)
Control and management: Network management functions, optical layer services and interfacing, performance and fault management, configuration management, optical safety.

Module IV (5 Hours)
Network Survivability: Protection in SONET/SDH & client layer, optical layer protection schemes

Module V (10 Hours)
WDM network design: LTD and RWA problems, dimensioning wavelength routing networks, statistical dimensioning models.

Module VI (10 Hours)
Access networks: Optical time division multiplexing, synchronization, header processing, buffering, burst switching, test beds, Introduction to PON, GPON, AON.

Suggested Readings

1. Rajiv Ramaswami, Sivarajan, Sasaki, "Optical Networks: A Practical Perspective", MK, Elsevier, 3rd edition,2010.
2. C. Siva Ram Murthy and Mohan Gurusamy, "WDM Optical Networks: Concepts Design, and Algorithms", PHI, EEE, 2001.

CO 6			M		L	H

ECCR0065 COGNITIVE RADIO (L-T-P: 3-0-0)

(3 Credits- 45 hours)

Objective

This course will help the students to understand the spectrum scarcity problem and how cognitive radio deals with this problem. It will also deal with the contribution of cognitive radio systems in wireless networks and its architectures that enable the development of the cognitive radio network (both centralized and distributed). After this course students will be able to learn the technologies to allow an efficient use of TVWS for radio communications. It also discusses various cognitive radio standards along with various research challenges for deployment of cognitive radio networks.

Course Outcomes

1. Recall and illustrate the fundamental concepts of cognitive radio networks. (Remembering, Understanding)
2. Develop the cognitive radio, as well as techniques for spectrum holes detection that cognitive radio takes advantages in order to exploit it. (Applying)
3. Examine technologies to allow an efficient use of TVWS for radio communications based on two spectrum sharing business models/policies. (Analysing)
4. Elaborate and evaluate the fundamental issues regarding dynamic spectrum access, the radio-resource management and trading, as well as a number of optimization techniques for better spectrum exploitation. (Evaluating, Creating)

Module I (10 Hours)

Introduction: Introduction to Cognitive Radios: Digital dividend, cognitive radio (CR) architecture, functions of cognitive radio, dynamic spectrum access (DSA), components of cognitive radio, spectrum sensing, spectrum analysis and decision, potential applications of cognitive radio.

Module II (10 Hours)

Spectrum Sensing: Spectrum sensing, detection of spectrum holes (TVWS), collaborative sensing, geo-location database and spectrum sharing business models (spectrum of commons, real time secondary spectrum market).

Module III (8 Hours)

Optimization Techniques of Dynamic Spectrum Allocation:Linear programming, convex programming, nonlinear programming, integer programming, dynamic programming, stochastic programming.

Module IV (7 Hours)

Dynamic Spectrum Access and Management: Spectrum broker, cognitive radio architectures, centralized dynamic spectrum access, distributed dynamic spectrum access, learning algorithms and protocols.

Module V (5 Hours)

Spectrum Trading: Introduction to spectrum trading, classification to spectrum trading, radio resource pricing, brief discussion on economics theories in DSA (utility, auction theory), classification of auctions (single auctions, double auctions, concurrent, sequential).

Module VI (5 Hours)

Research Challenges in Cognitive Radio: Network layer and transport layer issues, cross layer design for cognitive radio networks.

Suggested Readings

1. Ekram Hossain, Dusit Niyato, Zhu Han, "Dynamic Spectrum Access and Management in Cognitive Radio Networks", Cambridge University Press, 2009.

ECRC0066 RF AND MICROWAVE CIRCUIT DESIGN (L-T-P: 3-0-0)

(3 Credits- 45 hours)

Objective

The objectives of this course are to provide students with RF circuit fundamentals for designing various circuit building blocks in a typical RF transceiver. At the completion of the course, students should appreciate the workings of RF transceivers. They are expected to be able to design key building blocks of RF transceivers, including low-noise amplifiers, standard matching circuits, RF amplifiers, mixers, power amplifiers and RF oscillators.

Course Outcomes

1. Explain the behavior of RF passive components and model active components. (Understanding)
2. Perform transmission line analysis. (Applying, Analysing)
3. Demonstrate use of Smith Chart for high frequency circuit design. (Understanding)
4. Justify the choice/selection of components from the design aspects. (Evaluating)
5. Contribute in the areas of RF circuit design. (Creating)

Module I (8 Hours)

Transmission Line Theory: Lumped element circuit model for transmission line, field analysis, Smith chart, quarter wave transformer, generator and load mismatch, impedance matching and tuning.

Module II (7 Hours)

Microwave Network Analysis: Impedance and equivalent voltage and current, Impedance and admittance matrix, the scattering matrix, transmission matrix, Signal flow graph.

Module III (10 Hours)

Microwave Components: Microwave resonators, Microwave filters, power dividers and directional couplers, Ferromagnetic devices and components.

Module IV (5 Hours)

Nonlinearity And Time Variance in Microwave Circuits: Inter-symbol interference, random process & noise, definition of sensitivity and dynamic range, conversion gain and distortion.

Module V (10 Hours)

Microwave Semiconductor Devices And Modeling: PIN diode, Tunnel diodes, Varactor diode, Schottky diode, IMPATT and TRAPATT devices, transferred electron devices, Microwave BJTs, GaAs FETs, low noise and power GaAs FETs, MESFET, MOSFET, HEMT.

Module VI (5 Hours)

Amplifiers Design: Power gain equations, stability, impedance matching, constant gain and noise figure circles, small signal, low noise, high power and broadband amplifier, oscillators, Mixers design.

Suggested Readings

ECMA0067 MICROCONTROLLERS AND APPLICATIONS (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective

The course helps to develop an in-depth understanding of the operation of microcontrollers, assembly language programming and microcontroller interfacing techniques. The students will be able to design and implement microcontroller based systems in both hardware and software and can apply this knowledge to more advanced structures.

Course Outcomes

1. Define various terminologies related to microprocessor and microcontrollers. (Remembering)
2. Compare between microprocessor and microcontroller and to explain the internal organization of 8051 microcontroller and PIC16C61 microcontroller. (Understanding)
3. Apply 8051 microcontroller to solve real life problems. (Applying)
4. Analyze the performance of 8051 microcontroller and to design and develop 8051 based system. (Analyzing)
5. Explain the fundamentals of PIC microcontroller. (Understanding)

Module I (7 hours)

Introduction: History of Microcontrollers and Microprocessors. Differences between Microcontrollers and Microprocessors, Introduction to MPU of different categories- such as Microcontroller-8051, AVR, PIC, etc., their specific features, advantages.

Module II (10 hours)

Microcontroller 8051: Introduction; MCS-51 Architecture; Registers, I/O Ports, Memory organization.

Module III (12 hours)

Assembly Language Microcontroller 8051: Instructions, Addressing modes, Arithmetical, Logical, Jumps, Loops and Call etc., Interrupts Timers/ Counters and Serial Communications.

Module IV (8 hours)

Application of MCS-51: Interfacing 7-segment display, LCD, Key board, ADC etc. Development of instrumentation system such as temperature, pressure, flow, frequency, pulse width, voltage, rpm, pH etc. monitoring. Generation of PWM wave, Data-logger, alarm enunciators, PID controller, programmable controller and interlock control.

Module V (8 hours)

Introduction to PIC microcontrollers: Architecture, Mid-Range instruction Set, Power Input and Decoupling, Reset, Watchdog Timer, System Clock/Oscillators.

Suggested Readings

1. M. A. Mazidi and J. G. Mazidi, the 8051 Microcontroller and Embedded Systems
2. A V Deshmukh, Microcontrollers: Theory and Applications
3. Subrata Ghoshal, 8051 Microcontroller-Internals, Instructions, Programming and Interfacing, Pearson
4. Md Ali Mazidi, Rolin D. Mc-Kindly and Janice Gillistie, the 8051 Microcontroller and Embedded System Using Assembly and C
5. Lyla B. Das, Embedded Systems-An Integrated Approach, Pearson
6. Relevant Data Sheets

ECPP0068 PARALLEL PROCESSING (L-T-P: 3-0-0)
(3 Credits- 45 hours)

Objective
The objective of this course is to expose the students to the concept of parallel processing and pipelining. In this course students are introduced to the limitations of different architectures of computer. After this course students will be able to Analyse the performance parameters for different architectures.

Course Outcomes
1. Define parallel processing and pipeling, multiprocessor architecture, multithreaded architectures and multithreaded processors (Remembering)
2. Explain parallel processing and pipeling, multiprocessor architecture, multithreaded architectures and multithreaded processors (Understanding)
3. Implement parallel programming techniques (Applying)
4. Compare various parallel processing and pipelining techniques, multiprocessor architecture, multithreaded architectures and multithreaded processors and various operating systems for multiprocessors. (Analyzing)
5. Choose suitable one amongst various parallel processing and pipeling techniques, multiprocessor architecture, multithreaded architectures and multithreaded processors and various operating systems for multiprocessors (Evaluating)

Module I (5 hours)
Overview of Parallel Processing and Pipelining, Performance analysis, Scalability

Module II (10 hours)
Principles and implementation of Pipelining, Classification of pipelining processors, Advanced pipelining techniques, Software pipelining

Module III (10 hours)
VLIW processors, Case study: Superscalar Architecture- Pentium, Intel Itanium Processor, Ultra SPARC, MIPS on FPGA, Vector and Array Processor, FFT Multiprocessor Architecture

Module IV (5 hours)
Multithreaded Architecture, Multithreaded processors, Latency hiding techniques, Principles of multithreading, Issues and solutions

Module V (10 hours)
Parallel Programming Techniques: Message passing program development, Synchronous and asynchronous message passing, Shared Memory Programming, Data Parallel Programming, Parallel Software Issues

Module VI (5 hours)
Operating systems for multiprocessors systems, Customizing applications on parallel processing platforms

Suggested Readings
1. Kai Hwang, Faye A. Briggs, “Computer Architecture and Parallel Processing”, MGH International Edition
2. Kai Hwang, “Advanced Computer Architecture”, TMH
3. V. Rajaraman, L. Sivaram Murthy, “Parallel Computers”, PHI.
4. William Stallings, “Computer Organization and Architecture, Designing for performance” Prentice Hall, Sixth edition

ECPM0069 PATTERN RECOGNITION AND MACHINE LEARNING (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective
The course is intended to make an insight into different statistical models for pattern recognition problems. This course includes different statistical models, linear regression models, different machine learning tools like Neural Network, Fuzzy Logic and different clustering techniques.

Course Outcomes
1. Define various terminologies used in probability theory and statistics, Linear models, neural networks, linear discriminant functions (Remembering)
2. Explain various terminologies used in probability theory and statistics, Linear models, neural networks, linear discriminant functions, unsupervised learning methods (Understanding)
3. Implement various Linear models, neural networks, linear discriminant functions, unsupervised learning methods (Applying)
4. Compare various Linear models, neural networks, linear discriminant functions, unsupervised learning methods (Analyzing)
5. Choose suitable one amongst various neural networks, linear discriminant functions, unsupervised learning methods for specific application (Evaluating)

Module I (10 Hours)
Introduction to Pattern Recognition: Problems, applications, design cycle, learning and adaptation, examples, Probability distributions, Parametric Learning - Maximum likelihood and Bayesian Decision Theory- Bayes rule, discriminant functions, loss functions and Bayesian error analysis

Module II (5 Hours)
Linear models: Linear Models for Regression, linear regression, logistic regression Linear Models for classification

Module III (10 Hours)
Neural Network: Perceptron, multi-layer perceptron, back propagation algorithm, error surfaces, practical techniques for improving back propagation, additional networks and training methods, Adaboost, Deep Learning

Module IV (8 Hours)
Linear discriminant functions: Decision surfaces, two-category, multi-category, minimum squared error procedures, the Ho-Kashyap procedures, linear programming algorithms, Support vector machine

Module V (7 Hours)
Algorithm independent machine learning: Lack of inherent superiority of any classifier, bias and variance, re-sampling for classifier design, combining classifiers.

Module VI (5 Hours)
Unsupervised learning and clustering: k-means clustering, fuzzy k-means clustering, hierarchical clustering.

Suggested Readings
1. Richard O. Duda, Peter E. Hart, David G. Stork, “Pattern Classification”, 2nd Edition John Wiley & Sons, 2001.
2. Trevor Hastie, Robert Tibshirani, Jerome H. Friedman, “The Elements of Statistical Learning”, 2nd Edition, Springer, 2009.
3. C. Bishop, “Pattern Recognition and Machine Learning”, Springer, 2006.

ECDE0070 DETECTION AND ESTIMATION THEORY (L-T-P: 3-0-0)

(3 Credits- 45 Hours)

Objective

The objective of the course is to familiarize the students with mathematical understanding of signal detection and estimation. This course also intends to use various approaches to formulate and solve problems for signal detection and parameter estimation from noisy signals.

Course Outcomes

1. Explain of data computing algorithms like PCA, SVD etc. (Understanding)
2. Identify various measures of random processes associated with LTI system. (Applying)
3. Analyse the concepts of random processes in detection and estimation theory. (Analysing))
4. Discuss the design of different types of filters like Kalman and Weiner. (Creating)

Module I (5 Hours)

Review of Vector Spaces: Vectors and matrices: notation and properties, orthogonality and linear independence, bases, distance properties, matrix operations, Eigenvalues and eigenvectors.

Module II (7 Hours)

Properties of Symmetric Matrices: Diagonalization of symmetric matrices, symmetric positive definite and semi definite matrices, principal component analysis (PCA), singular value decomposition.

Module III (10 Hours)

Stochastic Processes: Time average and moments, ergodicity, power spectral density, covariance matrices, response of LTI system to random process, cyclostationary process, and spectral factorization.

Module IV (10 Hours)

Detection Theory: Detection in white Gaussian noise, correlator and matched filter interpretation, Bayes' criterion of signal detection, MAP, LMS, entropy detectors, detection in colored Gaussian noise, Karhunen-Loeve expansions and whitening filters.

Module V (5 Hours)

Estimation Theory: Minimum variance estimators, Cramer-Rao lower bound, examples of linear models, system identification, Markov classification, clustering algorithms.

Module VI (8 Hours)

Topics in Kalman and Weiner Filtering: Discrete time Wiener-Hopf equation, error variance computation, causal discrete time Wiener filter, discrete Kalman filter, extended Kalman filter. Specialized Topics in Estimation: Spectral estimation methods like MUSIC, ESPIRIT, DOA Estimation.

Suggested Readings

ECIA0071 IOT AND APPLICATIONS (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective

The main objective of this course is to introduce the students with the concept of IOT and M2M. In this course they will study IOT architecture and applications in various fields along with the security and privacy issues in IOT.

Course Outcomes

1. Choose recent technologies related to IOT and Web technologies. (Understanding)
2. Illustrate the concept of IOT, M2M Security and privacy issues in IOT. (Understanding)
3. Apply the concept of IOT architecture and Web technologies. (Applying)
4. Analyze IOT architecture and applications in various fields. (Analyzing)

Module I (10 Hours)
IoT & Web Technology The Internet of Things Today, Time for Convergence, Towards the IoT Universe, Internet of Things Vision, IoT Strategic Research and Innovation Directions, IoT Applications, Future Internet Technologies, Infrastructure, Networks and Communication, Processes, Data Management, Security, Privacy & Trust, Device Level Energy Issues, IoT Related Standardization, Recommendations on Research Topics.

Module II (8 Hours)
M2M to IoT – A Basic Perspective– Introduction, Some Definitions, M2M Value Chains, IoT ValueChains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. M2M to IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.

Module III (7 Hours)
IoT Architecture -State of the Art – Introduction, State of the art, Architecture Reference Model- Introduction, Reference Model and architecture, IoT reference Model, IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views.

Module IV (10 Hours)
IoT Applications for Value Creations Introduction, IoT applications for industry: Future Factory Concepts, Brownfield IoT, Smart Objects, Smart Applications, Four Aspects in your Business to Master IoT, Value Creation from Big Data and Serialization, IoT for Retailing Industry, IoT For Oil and Gas Industry, Opinions on IoT Application and Value for Industry, Home Management, eHealth.

Module V (5 Hours)
Internet of Things Privacy, Security and Governance Introduction, Overview of Governance, Privacy and Security Issues

Module VI (5 Hours)
Contribution from FP7 Projects, Security, Privacy and Trust in IoT-Data-Platforms for Smart Cities, First Steps Towards a Secure Platform, Smartie Approach. Data Aggregation for the IoT in Smart Cities, Security

Suggested Readings
1. Vijay Madisetti and ArshdeepBahga, “Internet of Things (A Hands-on-Approach)”, 1st Edition, VPT, 2014
2. Francis daCosta, “Rethinking the Internet of Things: A Scalable Approach to Connecting Everything”, 1st Edition, Apress Publications, 2013
3. CunoPfister, “Getting Started with the Internet of Things”, OReilly Media, 2011

ECDD0072 DIGITAL DESIGN AND VERIFICATION (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective
The objective of the course is to familiarize the students with Front end design and verification techniques and create reusable test environments. This course also intends to perform verification of increasingly complex designs more efficiently and effectively.

Course Outcomes
1. Define combinational, sequential logic design and PLDs. (Remembering)
2. Explain the design methodology of HDL (VHDL/Verilog). (Understanding)

3. Explain the architecture of PLDs. (Understanding)
4. Apply HDL coding techniques for various combinational and sequential circuit design. (Applying)
5. Compare different circuit designs for speed, power and noise optimization. (Analysing)
6. Verify increasingly complex designs more efficiently and effectively. (Evaluating)
7. Use EDA tools like Xilinx, Cadence, Mentor Graphics for various electronic design. (Creating)

Module I (10 Hours)
Revision of basic Digital systems: Combinational Circuits, Sequential Circuits, Logic families. Synchronous FSM and asynchronous design, Metastability, Clock distribution and issues, basic building blocks like PWM module, prefetch unit, programmable counter, FIFO, Booth's multiplier, ALU, Barrel shifter etc.

Module II (8 Hours)
Verilog/VHDL Comparisons and Guidelines, Verilog: HDL fundamentals, simulation, and testbench design, Examples of Verilog codes for combinational and sequential logic, Verilog AMS

Module III (7 Hours)
System Verilog and Verification: Verification guidelines, Data types, procedural statements and routines, connecting the test bench and design, Assertions, Basic OOP concepts, Randomization, Introduction to basic scripting language: Perl, Tcl/Tk

Module IV (8 Hours)
Current challenges in physical design: Roots of challenges, Delays: Wire load models Generic PD flow, Challenges in PD flow at different steps, SI Challenge - Noise & Crosstalk, IR Drop, Process effects: Process Antenna Effect & Electromigration.

Module V (7 Hours)
Programmable Logic Devices: Introduction, Evolution: PROM, PLA, PAL, Architecture of PAL's, Applications, Programming PLD's, FPGA with technology: Antifuse, SRAM, EPROM, MUX, FPGA structures, and ASIC Design Flows, Programmable Interconnections, Coarse grained reconfigurable devices.

Module VI (5 Hours)
IP and Prototyping: IP in various forms: RTL Source code, Encrypted Source code, Soft IP, Netlist, Physical IP, and Use of external hard IP during prototyping, Case studies, and Speed issues. Testing of logic circuits: Fault models, BIST, JTAG interface.

Suggested Readings
1. Douglas Smith, "HDL Chip Design: A Practical Guide for Designing, Synthesizing & Simulating ASICs & FPGAs Using VHDL or Verilog", Doone publications, 1998.
2. Samir Palnitkar, "Verilog HDL: A guide to Digital Design and Synthesis", Prentice Hall, 2nd Edition, 2003.
3. Doug Amos, Austin Lesea, Rene Richter, "FPGA based Prototyping Methodology Manual", Synopsys Press, 2011.
4. Christophe Bobda, "Introduction to Reconfigurable Computing, Architectures, Algorithms and Applications", Springer, 2007.
5. Janick Bergeron, "Writing Testbenches: Functional Verification of HDL Models", Second Edition, Springer, 2003.

ECBS0073 BIOMEDICAL SIGNAL PROCESSING (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective
The course will help to develop an in-depth understanding of different types of biomedical signals. The students will be able to identify and Analyse different biomedical signals.

Course Outcomes

1. Define the fundamentals of biomedical signals. (Remembering)
2. Interpret the various types of biomedical signals. (Understanding)
3. Experiment with various types of biomedical signals using various technological tool. (Applying)
4. Analyze and assess biomedical signals using various technological tool. (Analyzing)

Module I (5 hours)
Acquisition, Generation of Bio-signals, Origin of bio-signals, Types of bio-signals, Study of diagnostically significant bio-signal parameters

Module II (5 hours)
Electrodes for bio-physiological sensing and conditioning, Electrode-electrolyte interface, polarization, electrode skin interface and motion artefact, biomaterial used for electrode, Types of electrodes (body surface, internal, array of electrodes, microelectrodes), Practical aspects of using electrodes, Acquisition of bio-signals (signal conditioning) and Signal conversion (ADC's DAC's) Processing, Digital filtering

Module III (7 hours)
Biomedical signal processing by Fourier analysis, Biomedical signal processing by wavelet (time- frequency) analysis, Analysis (Computation of signal parameters that are diagnostically significant)

Module IV (9 hours)
Classification of signals and noise, Spectral analysis of deterministic, stationary random signals and non-stationary signals, Coherent treatment of various biomedical signal processing methods and applications.

Module V (8 hours)
Principal component analysis, Correlation and regression, Analysis of chaotic signals Application areas of Bio–Signals analysis Multiresolution analysis (MRA) and wavelets, Principal component analysis(PCA), Independent component analysis(ICA)

Module VI (6 hours)
Pattern classification–supervised and unsupervised classification, Neural networks, Support vector Machines, Hidden Markov models. Examples of biomedical signal classification examples

Suggested Readings
1. W. J. Tompkins, "Biomedical Digital Signal Processing", Prentice Hall, 1993.
2. Eugene N Bruce, "Biomedical Signal Processing and Signal Modeling", John Wiley & Son's publication, 2001.
3. Myer Kutz, "Biomedical Engineering and Design Handbook, Volume I", McGraw Hill, 2009.
4. D C Reddy, "Biomedical Signal Processing", McGraw Hill, 2005.
5. Katarzyn J. Blinowska, JaroslawZygarewicz, "Practical Biomedical Signal Analysis Using MATLAB", 1st Edition, CRC Press, 2011.

Mapping of COs to Syllabus

ECDS0074 DSP ARCHITECTURE (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective
The objective of the course is to familiarize the students with architecture of various DSP hardware. It aims to equip the students with ability to design, programming (assembly and C), and testing code using Code Composer Studio environment and other tools at an intermediate to advanced level that will serve them well towards tackling various problems in this discipline.

Course Outcomes
1. Recall, illustrate and summarize the DSP Architecture. (Remembering, Understanding)
2. Make use of TMS320C6X family DSP processor. (Applying)
3. Explain and solve signal processing problems with the help of FPGA based DSP system. (Understanding, Applying)
4. Develop DSP based Assembly Language Programming. (Creating)
5. Examine and explain complete design of DSP system. (Analyzing, Evaluating)

Module I (10 Hours)
Programmable DSP Hardware: Processing Architectures (von Neumann, Harvard), DSP core Algorithms (FIR, IIR, Convolution, Correlation, FFT), IEEE standard for Fixed and Floating Point Computations, Special Architectures Modules used in Digital Signal Processors (like MAC unit, Barrel shifters), On-Chip peripherals, DSP benchmarking.

Module II (15 Hours)
Structural and Architectural Considerations: Parallelism in DSP processing, Texas Instruments TMS320 Digital Signal Processor Families, Fixed Point TI DSP Processors: TMS320C1X and TMS320C2X Family,TMS320C25 –Internal Architecture, Arithmetic and Logic Unit, Auxiliary Registers, Addressing Modes (Immediate, Direct and Indirect, Bit-reverse Addressing), Basics of TMS320C54x and C55x Families in respect of Architecture improvements and new applications fields, TMS320C5416 DSP Architecture, Memory Map, Interrupt System, Peripheral Devices, Illustrative Examples for assembly coding.

Module III (10 Hours)
VLIW Architecture: Current DSP Architectures, GPUs as an alternative to DSP Processors, TMS320C6X Family, Addressing Modes, Replacement of MAC Moduleby ILP, Detailed study of ISA, Assembly Language Programming, Code Composer Studio, Mixed C and Assembly Language programming, On-chip peripherals, Simple applications developments as an embedded environment.

Module IV (5 Hours)
Application of DSPs for signal processing, communication and multimedia. Multi-core DSPs: Introduction to Multi-core computing and applicability for DSP hardware.

Module V (5 Hours)
FPGA based DSP Systems: Limitations of P-DSPs, Requirements of Signal processing for Cognitive Radio (SDR), FPGA based signal processing design-case study of a complete design of DSP processor.

Suggested Readings
1. M. Sasikumar, D. Shikhare, Ravi Prakash, “Introduction to Parallel Processing”, 1st Edition, PHI, 2006.
2. Fayez Gebali, “Algorithms and Parallel Computing”,1st Edition, John Wiley & Sons, 2011
3. Rohit Chandra, Ramesh Menon, Leo Dagum, David Kohr, DrorMaydan, Jeff McDonald,“Parallel Programming in OpenMP”, 1st Edition, Morgan Kaufman,2000.
4. Ann Melnichuk,Long Talk, “Multicore Embedded systems”, 1st Edition, CRC Press,2010.
5. Wayne Wolf, “High Performance Embedded Computing: Architectures, Applications and Methodologies”, 1st Edition, Morgan Kaufman, 2006.
6. E.S.Gopi, “Algorithmic Collections for Digital Signal Processing Applications Using MATLAB”, 1st Edition, Springer Netherlands,2007.

Mapping of COs to Syllabus

Course Outcomes	Module 1	Module 2	Module 3	Module 4	Module 5

ECRS0075: ANTENNAS AND RADIATING SYSTEMS (L-T-P: 3-0-0)
(3 Credits- 45 hours)

Objective
The objective of this course is to introduce students with the concept of antennas, their principle of operation, analysis and their applications. It will also cover the theory of wave propagation over ground, through the troposphere and ionosphere; diversity principles; propagation effects in microwave systems, satellite, space, and radar links.

Course Outcomes
1. Compute the far field distance, radiation pattern and gain of an antenna for given current distribution. (Applying)
2. Compute the array factor for an array of identical antennas. (Applying)
3. Estimate the input impedance, efficiency and ease of match for antennas. (Evaluating)
4. Design antennas and antenna arrays for various desired radiation pattern characteristics. (Creating)

Module I (10 Hours)
Types of Antennas: Wire antennas, Aperture antennas, Micro strip antennas, Array antennas Reflector antennas, Lens antennas, Radiation Mechanism, Current distribution on thin wire antenna. Fundamental Parameters of Antennas: Radiation Pattern, Radiation Power Density, Radiation Intensity, Directivity, Gain, Antenna efficiency, Beam efficiency, Bandwidth, Polarization, Input Impedance, radiation efficiency, Antenna Vector effective length, Friis Transmission equation, Antenna Temperature.

Module II (8 Hours)
Linear Wire Antennas: Infinitesimal dipole, Small dipole, Region separation, Finite length dipole, half wave dipole, Ground effects. Loop Antennas: Small Circular loop, Circular Loop of constant current, Circular loop with non-uniform current.

Module III (7 Hours)
LinearArrays: Two element array, N Element array: Uniform Amplitude and spacing, Broadside and End fire array, Super directivity, Planar array, Design consideration.

Module IV (8 Hours)
Aperture Antennas: Huygen's Field Equivalence principle, radiation equations, Rectangular Aperture, Circular Aperture. Horn Antennas: E-Plane, H-plane Sectoral horns, Pyramidal and Conical horns.

Module V (7 Hours)
Micro strip Antennas: Basic Characteristics, Feeding mechanisms, Method of analysis, Rectangular Patch, Circular Patch.

Module VI (5 Hours)
Reflector Antennas: Plane reflector, parabolic reflector, Cassegrain reflectors, Introduction to MIMO.

Suggested Readings
1. Constantine A. Balanis, "Antenna Theory Analysis and Design", John Wiley & Sons, 4th edition, 2016.
2. John D Kraus, Ronald J Marhefka, Ahmad S Khan, "Antennas for All Applications", Tata McGraw-Hill, 2002.
3. R.C.Johnson and H.Jasik, "Antenna Engineering handbook", Mc-Graw Hill, 1984.
4. I.J.Bhal and P.Bhartia, "Micro-strip antennas", Artech house, 1980.

ECCN0076 ADVANCED COMMUNICATION NETWORK (L-T-P: 3-0-0)

(3 Credits- 45 hours)

Objective
The main objective of the course is to familiarize the students with concepts in communication networking. This course is intended to teach the students about various protocols in communication networking. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in this discipline.

Course Outcomes
1. Definition of basic taxonomy and terminology of the computer networking area. (Remembering)
2. Understand advanced concepts in Communication Networking. (Understanding)
3. Understand the mechanisms in Quality of Service in networking. (Understanding)
4. Apply the basic concepts to build efficient networks. (Applying)
5. Analyse the network from layers of OSI and TCP/IP model perspective. (Analysing)
6. Evaluate and measure the performance issues in different networks. (Evaluating)
7. Design and develop protocols for Communication Networks. (Creating)

Module I (8 Hours)
Overview of Internet-Concepts, challenges and history. Overview of -ATM. TCP/IP Congestion and Flow Control in Internet-Throughput analysis of TCP congestion control. TCP for high bandwidth delay networks. Fairness issues in TCP.

Module II (10 Hours)
Real Time Communications over Internet. Adaptive applications. Latency and throughput issues. Integrated Services Model (intServ). Resource reservation in Internet. RSVP; Characterization of Traffic by Linearly Bounded Arrival Processes (LBAP).Leaky bucket algorithm and its properties.

Module III (10 Hours)
Packet Scheduling Algorithms-requirements and choices. Scheduling guaranteed service connections. GPS, WFQ and Rate proportional algorithms. High speed scheduler design. Theory of Latency Rate servers and delay bounds in packet switched networks for LBAP traffic.; Active Queue Management - RED, WRED and Virtual clock. Control theoretic analysis of active queue management.

Module IV (7 Hours)
IP address lookup-challenges. Packet classification algorithms and Flow Identification- Grid of Tries, Cross producting and controlled prefix expansion algorithms.

Module V (5 Hours)
Admission control in Internet. Concept of Effective bandwidth. Measurement based admission control. Differentiated Services in Internet (DiffServ). DiffServ architecture and framework.

Module VI (5 Hours)
IPV4, IPV6, IP tunnelling, IP switching and MPLS, Overview of IP over ATM and its evolution to IP switching. MPLS architecture and framework. MPLS Protocols. Traffic engineering issues in MPLS.

Suggested Readings
1. Jean Wairand and Pravin Varaiya, “High Performance Communications Networks”, 2nd edition, 2000.
2. Jean Le Boudec and Patrick Thiran, “Network Calculus A Theory of Deterministic Queueing Systems for the Internet”, Springer Veriag, 2001.
3. Zhang Wang, “Internet QoS”, Morgan Kaufman, 2001.
4. Anurag Kumar, D. Manjunath and Joy Kuri, “Communication Networking: An Analytical Approach”, Morgan Kaufman Publishers, 2004.
5. George Kesidis, “ATM Network Performance”, Kluwer Academic, Research Papers, 2005.

ECMS0077 MIMO SYSTEM (L-T-P: 3-0-0)
(3 Credits- 45 hours)

Objective
This course covers the fundamentals of Multiple input multiple output (MIMO) antenna based wireless communication systems. This course covers important concepts of MIMO communication such as capacity computation, error probability analysis, transmitter and receiver design, multi-user communication, etc. After completion of the course the participants will be able to apply the methods for performance analysis and design of advanced wireless communication systems.

Course Outcomes
1. Explain channel modelling and propagation, MIMO Capacity, space-time coding, MIMO receivers, MIMO for multi-carrier systems (e.g. MIMO-OFDM), multi-user communications, multi-user MIMO. (Understanding)
2. Illustrate, Analyse and interpret the cooperative and coordinated multi-cell MIMO and MIMO in 4G (LTE, LTE-Advanced, WiMAX). (Understanding, Analysing, Evaluating)
3. Perform Mathematical modelling and analysis of MIMO systems. (Creating)

Module I (5 Hours)
Introduction to Multi-antenna Systems, Motivation, Types of multi-antenna systems, MIMO vs. multi-antenna systems.

Module II (10 Hours)
Diversity, exploiting multipath diversity, transmit diversity, Space-time codes, The Alamouti scheme, Delay diversity, Cyclic delay diversity, Space-frequency codes, Receive diversity, The rake receiver, Combining techniques, Spatial Multiplexing, Spectral efficiency and capacity, Transmitting independent streams in parallel, Mathematical notation

Module III (10 Hours)
The generic MIMO problem, Singular Value Decomposition, Eigenvalues and eigenvectors, Equalising MIMO systems, Disadvantages of equalising MIMO systems, Predistortion in MIMO systems, Disadvantages of pre-distortion in MIMO systems, Pre-coding and combining in MIMO systems, Advantages of pre-coding and combining, Disadvantages of precoding and combining, Channel state information.

Module IV (8 Hours)
Codebooks for MIMO, Beam forming, Beam forming principles, increased spectrum efficiency, Interference cancellation, Switched beam former, Adaptive beam former, Narrowband beam former, Wideband beam former

Module V (7 Hours)
Case study: MIMO in LTE, Codewords to layers mapping, Pre-coding for spatial multiplexing, Pre- coding for transmit diversity, Beamforming in LTE, Cyclic delay diversity based pre-coding, Pre- coding codebooks, Propagation Channels, Time & frequency channel dispersion, AWGN and multipath propagation channels, Delay spread values and time variations, Fast and slow fading environments, Complex baseband multipath channels, Narrowband and wideband channels, MIMO channel models

Module VI (5 Hours)
Channel Estimation, Channel estimation techniques, Estimation and tracking, Training based channel estimation, Blind channel estimation, Channel estimation architectures, Iterative channel estimation, MMSE channel estimation, Correlative channel sounding, Channel estimation in single carrier systems, Channel estimation for CDMA, Channel estimation for OFDM.

Suggested Readings
1. Claude Oestges, Bruno Clerckx, “MIMO Wireless Communications : From Real-world Propagation to Space-time Code Design”,Academic Press, 1st edition, 2010.
2. Mohinder Janakiraman, “Space - Time Codes and MIMO Systems”, Artech House Publishers, 2004.

ECSA0078 EMBEDDED SYSTEMS AND APPLICATIONS (L-T-P: 3-0-0)

(3 Credits- 45 hours)

Objective
The objective of this course is to expose the students to the features of advanced microcontrollers such as PIC and AVR. In this course students are introduced to the architecture, programming and interfacing of all these microcontrollers. Industrial applications of these microcontrollers are also introduced in this course.

Course Outcomes
1. Define various terminologies related to PIC and AVR microcontroller. (Remembering)
2. Explain the internal organization of PIC and AVR microcontroller. (Understanding)
3. Apply and analyze PIC and AVR microcontroller based system. (Applying)
4. Design and develop PIC and AVR microcontroller based system. (Creating)

Module I (10 Hours)
PIC Microcontroller: Overview of PIC Microcontrollers, PIC16CXX Series: Architecture, Memory Organization, Registers, Oscillator Connections, Reset Actions, I/O ports, Interrupt, Timers, ADC, Watch Dog timer, Instruction Set

Module II (10 Hours)
PIC16F8XX Series:
a) Architecture, Memory Organization, Registers, Oscillator Connections, I/O ports, Interrupt, Timers, ADC, Instruction Set, Capture/Compare/PWM Module, MSSP Module, USART, Watch Dog Timer.
b) Assembly Language Programming using PIC16CXX and PIC16F8XX

Module III (10 Hours)
PIC24FXX Family Microcontroller: Architecture, Memory Organization, Registers, Oscillator Connections, I/O ports, Interrupt, Timers, Watch Dog timer, ADC, PWM, Serial Communications, Programming using Embedded C.

Module IV (15 Hours)
AVR Microcontroller:

a. Introduction, History, Importance of AVR, Naming Convention of AVR, Mega AVR Series.
b. ATMega8 Microcontroller: Architecture, Pin Diagram, Memory Organization, Registers, Oscillator Connections, I/O ports, Interrupt, Timers, ADC, Watch Dog timer.
c. ATMega16 Microcontroller: Architecture, Pin Diagram, Memory Organization, Registers, Oscillator Connections, I/O ports, Interrupt, Timers, ADC, Watch Dog timer.
d. Programming using ATMega8 and ATMega16.

Suggested Readings

1. V. Deshmukh, Microcontroller: Theory and Applications, TMG, 1st Edition

ECMT0079 MEMORY TECHNOLOGIES (L-T-P: 3-0-0)

(3 Credits- 45 hours)

Objective
The course helps to develop an in-depth understanding of the various memory types. The students will be able to learn. After this course students will be able to design semiconductor memory circuits and subsystems. They can also identify various fault models, modes and mechanisms in semiconductor memories and their testing procedures.

Course Outcomes

1. Define various memory architecture. (Remembering)
2. Explain memory circuits and subsystems. (Understanding)
3. Apply various fault models, modes and mechanisms in semiconductor memories and their testing procedures. (Applying)
4. Analyse advanced memory technologies. (Analysing)
5. Assess various high density memory packing technologies. (Evaluating)
6. Discuss memory testing and reliability issues and start of the art memory chip design. (Creating)

Module I (10 hours)
Random Access Memory Technologies, Static Random Access Memories (SRAMs), SRAM Cell Structures, MOS SRAM Architecture, MOS SRAM Cell and Peripheral Circuit, Bipolar SRAM, Advanced SRAM Architectures, Application Specific SRAMs.

Module II (5 hours)
DRAMs, MOS DRAM Cell, BiCMOS DRAM, Error Failures in DRAM, Advanced DRAM Design and Architecture, Application Specific DRAMs. SRAM and DRAM Memory controllers.

Module III (5 hours)
Non-Volatile Memories, Masked ROMs, PROMs, Bipolar & CMOS PROM, EEPROMs, Floating Gate EPROM Cell, OTP EPROM, EEPROMs, Non-volatile SRAM, Flash Memories

Module IV (10 hours)

Semiconductor Memory Reliability and Radiation Effects, General Reliability Issues, RAM Failure Modes and Mechanism, Non-volatile Memory, Radiation Effects, SEP, Radiation Hardening Techniques. Process and Design Issues, Radiation Hardened Memory Characteristics, Radiation Hardness Assurance and Testing

Module V (10 hours)

Advanced Memory Technologies and High-density Memory Packing Technologies,Ferroelectric Random Access Memories (FRAMs), Gallium Arsenide (GaAs) FRAMs, Analog Memories, MagnetoResistive Random Access Memories (MRAMs), Experimental Memory Devices

Module VI (5 hours)

Memory Hybrids (2D & 3D), Memory Stacks, Memory Testing and Reliability Issues, Memory Cards, High Density Memory Packaging

Suggested Readings

1. Ashok K Sharma, “Advanced Semiconductor Memories: Architectures, Designs and Applications”, Wiley Interscience
2. KiyooItoh, “VLSI memory chip design”, Springer International Edition
3. Ashok K Sharma,” Semiconductor Memories: Technology, Testing and Reliability, PHI

ECBS0080 COMMUNICATION BUSES AND INTERFACES (L-T-P: 3-0-0)

(3 Credits- 45 hours)

Objective

This main objective of this course is to introduce the students with the concept of various communication buses. After this course students will be able to develop APIs for configuration, reading and writing data onto serial bus and can also design and develop peripherals that can be interfaced to desired serial bus

Course Outcomes

1. Define various terminologies related to communication buses. (Remembering)
2. Compare various communication buses. (Understanding)
3. Explain the architecture of various communication buses. (Understanding)
4. Apply and analyze the concept of various communication buses. (Applying/ Analyzing)

Module I (8 hours)

Serial Busses, Physical interface, Data and Control signals, features

Module II (8 hours)

Limitations and applications of RS232, RS485, I2C, SPI

Module III (8 hours)

CAN - Architecture, Data transmission, Layers, Frame formats, applications

Module IV (8 hours)

PCI - Revisions, Configuration space, Hardware protocols, applications

Module V (8 hours)

USB - Transfer types, enumeration, Descriptor types and contents, Device driver

Module VI (5 hours)

Data Streaming Serial Communication Protocol, Serial Front Panel Data Port (SFPDP) using fiber optic and copper cable

Suggested Readings

ECAI0096 ARTIFICIAL INTELLIGENCE (L-T-P: 3-0-0)

(3 credits- 45 hours)

Objective

The main objective of the course is to familiarize the students with concepts of Artificial Intelligence, search techniques and knowledge representation issues. This course also aims to equip the students with knowledge of fuzzy logic and its uses for artificial intelligence, game playing and natural language processing.

Course Outcomes

1. Define Artificial Intelligence and different techniques of Artificial Intelligence. (Remembering)
2. Relate components of a Planning system, AI in solutions that require problem solving, inference, perception, knowledge representation, learning ANN and Fuzzy logic. (Understanding)
3. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation,

learning, ANN and Fuzzy logic (Applying)

4. Analyze the different approaches to AI in solutions that require problem solving, inference, perception, knowledge representation, learning, game playing, ANN and Fuzzy logic (Analyzing)

Module I (10 Hours)

What is AI (Artificial Intelligence)? : The AI Problems, The Underlying Assumption, What are AI Techniques, The Level Of The Model, Criteria For Success, Some General References, One Final Word Problems, State Space Search & Heuristic Search Techniques: Defining The Problems As A State Space Search, Production Systems, Production Characteristics, Production System Characteristics, And Issues In The Design Of Search Programs, Additional Problems. Generate- And-Test, Hill Climbing, Best-First Search, Problem Reduction, Constraint Satisfaction, Means-Ends Analysis.

Module II (10 Hours)

Knowledge Representation Issues: Representations And Mappings, Approaches To Knowledge Representation. Using Predicate Logic: Representation Simple Facts In Logic, Representing Instance And Isa Relationships, Computable Functions And Predicates, Resolution. Representing Knowledge Using Rules: Procedural Versus Declarative Knowledge, Logic Programming, Forward Versus Backward Reasoning.

Module III (8 Hours)

Symbolic Reasoning Under Uncertainty: Introduction To No monotonic Reasoning, Logics For Non-monotonic Reasoning. Statistical Reasoning: Probability And Bayes' Theorem, Certainty Factors And Rule-Base Systems, Bayesian Networks, Dempster Shafer Theory

Module IV (5 Hours)

Fuzzy Logic, Weak Slot-and-Filler Structures: Semantic Nets, Frames. Strong Slot-and- Filler Structures: Conceptual Dependency, Scripts, CYC.

Module V (7 Hours)

Game Playing: Overview, And Example Domain: Overview, MiniMax, Alpha-Beta Cut-off, Refinements, Iterative deepening, The Blocks World, Components Of A Planning System, Goal Stack Planning, Nonlinear Planning Using Constraint Posting, Hierarchical Planning, Reactive Systems, Other Planning Techniques. Understanding: What is understanding? What makes it hard? As constraint satisfaction.

Module VI (5 Hours)

Natural Language Processing: Introduction, Syntactic Processing, Semantic Analysis, Discourse And Pragmatic Processing, Spell Checking Connectionist Models: Introduction: Hopfield Network, Learning In Neural Network, Application Of Neural Networks, Recurrent Networks, Distributed Representations, Connectionist AI And Symbolic AI.

Suggested Readings

1. Elaine Rich and Kevin Knight “Artificial Intelligence”, 2nd Edition, Tata Mcgraw-Hill, 2005.
2. Stuart Russel and Peter Norvig, “Artificial Intelligence: A Modern Approach”, 3rd Edition, Prentice Hall, 2009.

Mapping of COs to Syllabus

CO 1	M	M	L	L	L	L
CO 2	L	H	H	L	L	L
CO 3		M	H	H	L	L
CO 4	L	M	L	L	M	M

ECOT0097 OPTIMIZATION TECHNIQUES (L-T-P: 3-0-0)

(3 credits – 45 hours)

Objective

The objective of the course is to familiarize the students about various optimization methods and algorithms necessary for solving various optimization problems.

Course Outcomes

1. Define single variable, multivariable and constrained and intelligent optimization techniques and also principles of genetic programming. (Remembering)

2. Illustrate the importance of optimization. (Understanding)
3. Apply basic concepts of mathematics to formulate an optimization problem.(Applying)
4. Analyze and appreciate a variety of performance measures for various optimization problems. (Analysing)
5. Evaluate and measure the performance of an optimization algorithm. (Evaluating)
6. Design algorithms, the repetitive use of which will lead reliably to finding an approximate solution. (Creating)

Module I (7 Hours)
Introduction to Classical Methods & Linear Programming Problems Terminology, Design Variables, Constraints, Objective Function, Problem Formulation. Calculus method, Kuhn Tucker conditions, Method of Multipliers.

Module II (5 Hours)
Linear Programming Problem, Simplex method, Two-phase method, Big-M method, duality, Integer linear Programming, Dynamic Programming, Sensitivity analysis.

Module III (8 Hours)
Single Variable Optimization Problems: Optimality Criterion, Bracketing Methods, Region Elimination Methods, Interval Halving Method, Fibonacci Search Method, Golden Section Method. Gradient Based Methods: Newton-Raphson Method, Bisection Method, Secant Method, Cubic search method.

Module IV (10 Hours)
Multi Variable and Constrained Optimization Technique: Optimality criteria , Direct search Method, Simplex search methods, Hooke-Jeeve‘s pattern search method, Powell‘s conjugate direction method, Gradient based method, Cauchy‘s Steepest descent method, Newton‘s method ,Conjugate gradient method. Kuhn - Tucker conditions, Penalty Function, Concept of Lagrangian multiplier, Complex search method, Random search method.

Module V (8 Hours)
Intelligent Optimization Techniques: Introduction to Intelligent Optimization, Soft Computing, Genetic Algorithm: Types of reproduction operators, crossover & mutation, Simulated Annealing Algorithm, Particle Swarm Optimization (PSO) - Graph Grammer Approach – Example Problems

Module VI (7 Hours)
Genetic Programming (GP): Principles of genetic programming, terminal sets, functional sets, differences between GA & GP, random population generation, solving differential equations using GP.

Suggested Readings
1. S. S. Rao, “Engineering Optimisation: Theory and Practice”, Wiley, 2008.
2. K. Deb, “Optimization for Engineering design algorithms and Examples”, Prentice Hall, 2005.
3. C.J. Ray, “Optimum Design of Mechanical Elements”, Wiley, 2007.
4. R. Saravanan, “Manufacturing Optimization through Intelligent Techniques, Taylor & Francis Publications, 2006.
5. D. E. Goldberg, “Genetic algorithms in Search, Optimization, and Machine learning”, Addison-Wesley Longman Publishing, 1989.

ECRS0098: REMOTE SENSING (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective
This course is intended to introduce the students to the concepts of remote sensing. The course starts with the physics used in remote sensing and then gives an idea about the types of platforms and satellites. It also deals with advanced topics such as microwave scatterometry, thermal and hyper spectral remote sensing etc.

Course Outcomes

1. Define the concepts behind the physics of remote sensing. (Remembering)
2. Outline concepts of data acquisition and different platforms such as LANDSAT, SPOT etc. (Understanding)
3. Make use of optical sensors and different types of scanners. (Applying)
4. Analyse different types of RADAR, characteristics of microwave images etc. (Analyzing)
5. Evaluate thermal and hyper spectral remote sensing etc. (Evaluating)
6. Discuss data analysis and data processing techniques. (Creating)

Module I (10 Hours)
Physics Of Remote Sensing: Electro Magnetic Spectrum, Physics of Remote Sensing, Effects of Atmosphere Scattering, Different types, Absorption, Atmospheric window, Energy interaction with surface features, Spectral reflectance of vegetation, soil and water atmospheric influence on spectral response patterns-multi concept in Remote sensing.

Module II (5 Hours)
Data Acquisition: Types of Platforms, Different types of aircrafts, Manned and Unmanned space crafts, sun synchronous and geosynchronous satellites.
Types and characteristics of different platforms: LANDSAT, SPOT, IRS, INSAT, IKONOS, QUICKBIRD etc.

Module III (10 Hours)
Photographic products, B/W color, color IR film and their characteristics, resolving power of lens and film, Optomechanical electro optical sensors, across track and along track scanners, multispectral scanners and thermal scanners, geometric characteristics of scanner imagery, calibration of thermal scanners.

Module IV (10 Hours)
Scattering System: Microwave scatterometry, types of RADAR, SLAR, resolution, range and azimuth, real aperture and synthetic aperture RADAR. Characteristics of Microwave images: topographic effect, different types of Remote Sensing platforms, airborne and space borne sensors, ERS, JERS, RADARSAT, RISAT, Scatterometer, Altimeter, LiDAR remote sensing, principles, applications.

Module V (5 Hours)
Thermal and Hyper Spectral Remote Sensing: Sensors characteristics, principle of spectroscopy, imaging spectroscopy, field conditions, compound spectral curve, Spectral library, radiative models, processing procedures, derivative spectrometry, thermal remote sensing, thermal sensors, principles, thermal data processing, applications.

Module VI (5 Hours)
Data Analysis: Resolution, Spatial, Spectral, Radiometric and temporal resolution, signal to noise ratio, data products and their characteristics, visual and digital interpretation, Basic principles of data processing, Radiometric correction, Image enhancement, Image classification, Aerial Laser Terrain Mapping.

Suggested Readings

1. Lillesand.T.M. and Kiefer.R.W ,"Remote Sensing and Image interpretation", 6th Edition, John Wiley & Sons, 2000.
2. John R. Jensen, "Introductory Digital Image Processing: A Remote Sensing Perspective", 2nd Edition, PrenticeHall,1995.
3. Richards, John A., Jia, Xiuping, "Remote Sensing Digital Image Analysis",5th Edition, Springer-Verlag Berlin Heidelberg, 2013.
4. Paul Curran P.J. Principles of Remote Sensing, 1st Edition, Longman Publishing Group, 1984.
5. Charles Elachi, Jakob J. van Zyl, "Introduction to ThePhysicsand Techniques of Remote Sensing", 2nd Edition, Wiley Serie,2006.
6. Sabins, F.F.Jr, "Remote Sensing Principles and Image Interpretation", 3rd Edition, W. H. Freeman & Co,1978.

ECNN0099: NANOTECHNOLOGY AND NANOELECTRONICS (L-T-P: 3-0-0)
(3 credits – 45 hours)

Objective

This course will introduce the students to Nanotechnology. The course is designed to build up a basic understanding of the nano concepts. It will provide the students the knowledge of synthesis of nanomaterials, their characterization techniques as well as touch upon some applications of nanotechnology. This course will also introduce the students to nano and molecular

Course Outcomes

1. Recognize the concepts underlying this disruptive field of new technology (Remembering)
2. Illustrate the processes involved in making nano components and material. (Understanding)
3. Apply this knowledge for fabrication of new materials and devices in the nanoscale (Application)
4. Analyze new materials and devices in the nanoscale using various characterization tools (Analysis)
5. Evaluate materials for their various properties (Evaluating)
6. Creating solutions for practical problems with appropriate use of nano-materials. (Creating)

Module I (8 Hours)

Basics of Nanotechnology: History, Properties of Nanomaterials, Difference between Bulk and Nanomaterial, Molecular building blocks for nanostructure systems, Forces between atoms and molecules - Particles and grain boundaries – strong Intermolecular forces – Electrostatic and Vander Waals forces between surfaces, Properties of nanomaterials.

Module II (8 Hours)

Physics of nanomaterials: Atomic scale structure of nanoparticles, nanotubes, nanowires, nanodots etc.; electronic and optical characteristic properties of quantum dots, quantum wires and quantum wells; concept of quantum confinement: 0D, 1D and 2D nanostructures; Size effects – Fraction of Surface Atoms – specific Surface Energy and Surface Stress. Nanophotonics, Nanofluidics, Nanothermodynamics, Plasmonics – plasmons and surface plasmons, SPR, Core-shell quantum dots and quantum-dot-quantum wells.

Module III (10 Hours)

Synthesis and Characterization of nanomaterials: Top down approach, Lithography – electron beam and ion beam techniques, Etching – wet and dry etching, Bottom up approach - Solvent based and template based synthesis, other important synthesis methods like CVD, PVD etc.; Doping, Nucleation, Growth and Stability of colloidal nanoparticles, concept of self-assembly. Characterization methods: Transmission electron microscopy (TEM), Scanning electron microscopy (SEM), Atomic force microscopy (AFM), X-ray diffraction spectroscopy (XRD), Optical characterization.

Module IV (12 Hours)

Fundamentals of Nanoelectronics: Quantum particles, Quantum mechanics of electrons, Free and confined electrons, Band theory of solids, Single electron/few electron devices, Coulomb blockade, Semiconductor quantum wells, quantum wires and quantum dots, Nanosensors, Micro and Nano electromechanical systems, Photonic crystals, Nanopiezotronics.

Module V (7 Hours)

Molecular Electronics: Electronic and optoelectronic properties of molecular materials - Electrodes and contacts – functions – molecular electronic devices - elementary circuits using organic molecules- Organic materials based rectifying diode switches – TFTs- OLEDs- OTFTs – logic switches.

Suggested Readings

1. G. L. Hornyak, J. Dutta, H. F. Tibbals, A. Rao Introduction to nanoscience, CRC Press

ECSD0100 SOC DESIGN (L-T-P: 3-0-0)
(3 credits- 45 hours)

Objective
This course will cover the basics of system-on-chip (SoC) design, hardware-software co-specification, co-synthesis, network-on-chip (NoC) systems and system-on-programmable-chip technologies. It provides the advanced knowledge required for system-on-chip design and development, multi-core architectures and embedded systems on a chip. It also involves projects based on FPGA prototyping platform using state-of- the-art synthesis and verification tools and design flows.

Course Outcomes
1. Define System on Chip (SoC) and SoC design methodologies. Also Relate the algorithms used for ASIC construction. (Remembering)
2. Explain the issues involved in ASIC design, including technology choice, design management, tool-flow, verification, debug and test, as well as the impact of technology scaling on ASIC design. (Understanding)
3. Model and specify embedded systems at high levels of abstraction. (Applying)
4. Develop HDL coding techniques for minimization of power consumption, Fault tolerant designs. (Applying)
5. Examine high performance algorithms available for ASICs. (Analysing)
6. Develop examples of applications and systems developed using a co-design approach. (Creating)

Module I (7 Hours)
ASIC: Overview of ASIC types, design strategies, CISC, RISC and NISC approaches for SOC architectural issues and its impact on SoC design methodologies, Application Specific Instruction Processor (ASIP) concepts.

Module II (8 Hours)
NISC: NISC Control Words methodology, NISC Applications and Advantages, Architecture Description Languages (ADL) for design and verification of Application Specific Instruction set Processors (ASIP), No-Instruction-Set-computer (NISC)- design flow, modeling NISC architectures and systems, use of Generic Netlist Representation - A formal language for specification, compilation and synthesis of embedded processors.

Module III (8 Hours)
Simulation: Different simulation modes, behavioural, functional, static timing, gate level, switch level, transistor/circuit simulation, design of verification vectors, Low power FPGA, Reconfigurable systems, SoC related modeling of data path design and control logic, Minimization of interconnects impact, clock tree design issues.

Module IV (7 Hours)
Low power SoC design / Digital system: Design synergy, Low power system perspective- power gating, clock gating, adaptive voltage scaling (AVS), Static voltage scaling, Dynamic clock frequency and voltage scaling (DCFS), building block optimization, building block memory, power down techniques, power consumption verification.

Module V (10 Hours)
Synthesis: Role and Concept of graph theory and its relevance to synthesizable constructs, Walks, trails paths, connectivity, components, mapping/visualization, nodal and admittance graph. Technology independent and technology dependent approaches for synthesis, optimization constraints, Synthesis report analysis Single core and Multi core systems, dark silicon issues, HDL coding techniques for minimization of power consumption, Fault tolerant designs

Module VI (5 Hours)
Case study for overview of cellular phone design with emphasis on area optimization, speed improvement and power minimization.

Suggested Readings

ECBI0129 BIOINFORMATICS

(L:T:P: 3:0:0) (3 credit – 45 hours)

Objective

The objective of the course is to introduce students to the rapidly evolving field of bioinformatics. It will help the students to gain knowledge about various biological databases that provides information about biomolecules. It will also give in depth understanding of various techniques used in bioinformatics.

Course Outcomes

1. Recall the biological concepts. (Remembering)
2. Explain the fundamentals of bioinformatics. (Understanding)
3. Apply various techniques used in bioinformatics. (Applying)
4. Analyse and compare various aspects of bioinformatics. (Analysing)
5. Predict protein structure that helps in drug discovery. (Creating)

Module I (10 hours)

Introduction to bioinformatics and computational biology, Scope of bioinformatics, relation of bioinformatics with molecular biology, Fundamental concepts of biology such as nucleotide, amino acids, proteins, different structure of proteins, DNA, DNA Sequences, Cell, Chromosomes, Gene, Mutation, Genetic Polymorphism

Module II (15 hours)

The form of biological information, Introduction to Biological Databases: Nucleic Acid Databases (NCBI, EMBL, DDBJ,), Protein databases (Primary, Composite and Secondary), Specialized Genome Databases (SGD, TIGR), Structure Databases (CATH, SCOPE and PDBsum), Tools: FASTA, BLAST, BLAT, RASMOL

Module III (10 hours)

DNA sequence analysis, Sequence Based Parameters, DNA sequencing as a diagnostic tool

Module IV (10 hours)

a. Protein Structure and Function, Sequence Alignment, Protein Sequence Analysis, Protein Secondary Structure Prediction, Recent advancement in bioinformatics
b. Introduction to various bioinformatics Softwares: Acua, INCA, Anaconda, PAST3, CodonW
c. DNA Computing

Suggested Readings

1. Arthur M. Lesk, Introduction to Bioinformatics, Fifth Edition, Oxford
2. Jin Xiong, Essential Bioinformatics, First Edition, Cambridge University Press
3. David W. Mount, Bioinformatics: Sequence and Genome Analysis, First Edition, CBS
4. Relevant e resources

LABORATORY COURSES

ECAP6041: ADVANCED DIGITAL SIGNAL PROCESSING LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcomes

1. Find and demonstrate the particular methodology to be adopted for writing the various programs in MATLAB. (Remembering - Understanding)
2. Apply important mathematical skills in writing MATLAB programs for DSP. (Applying)
3. Examine the advance topics of digital signal processing in MATLAB. (Analyzing)

List of Experiments:

1. Basic Signal Representation
2. Different operations on discrete time signals
3. Linear and Circular convolution
4. Correlation Auto And Cross
5. Stability Using Hurwitz Routh Criteria
6. Sampling FFT Of Input Sequence
7. Butterworth Low pass And High pass Filter Design
8. Chebychev Type I, II Filter
9. State Space Matrix from Differential Equation
10. Normal Equation Using Levinson Durbin
11. Decimation And Interpolation Using Rational Factors
12. Maximally Decimated Analysis DFT Filter
13. Cascade Digital IIR Filter Realization
14. Convolution And M Fold Decimation & PSD Estimator
15. Estimation Of PSD
16. Inverse Z Transform
17. Group Delay Calculation
18. Separation Of T/F
19. Parallel Realization of IIR filter

ECDV6042: DIGITAL IMAGE AND VIDEO PROCESSING LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcomes

1. Perform basic gray and colour image processing operations as well as various image procession algorithms. (Applying)
2. Perform basic video processing algorithm and to calculate various features of image. (Applying)

List of Experiments:

1. Perform basic operations on images like addition, subtraction etc.
2. Plot the histogram of an image and perform histogram equalization
3. Implement segmentation algorithms
4. Perform video enhancement
5. Perform video segmentation
6. Perform image compression using lossy technique
7. Perform image compression using lossless technique
8. Perform image restoration
9. Convert a colour model into another
10. Calculate boundary features of an image
11. Calculate regional features of an image

12. Detect an object in an image/video using template matching/Bayes classifier

ECWM6043: WIRELESS AND MOBILE COMMUNICATION LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcomes

1. Define the fundamental concepts of cellular communication like frequency reuse, cell splitting etc. (Remembering)
2. Outline concepts of GSM and CDMA architecture, network concepts etc. (Understanding)
3. Utilize GSM handset for various signalling techniques. (Applying)
4. Analyse transmitter and receiver sections in mobile handset, different modulation techniques etc. (Analysing)
5. Evaluate AT commands in 3G network. (Evaluating)
6. Discuss features of 3G communication systems such as transmission of voice and video calls, SMS etc. (Creating)

List of Experiments:

1. Understanding Cellular Fundamentals like Frequency Reuse, Interference, cell splitting, multipath environment, Coverage and Capacity issues using communication software.
2. Knowing GSM and CDMA architecture, network concepts, call management, call setup, call release, Security and Power Control, Handoff Process and types, Rake Receiver etc.
3. Study of GSM handset for various signaling and fault insertion techniques (Major GSM handset sections: clock, SIM card, charging, LCD module, Keyboard, User interface).
4. To study transmitters and receiver sections in mobile handsets and measure frequency band signal and GMSK modulating signal.
5. To study various GSM AT Commands their use and developing new applications using it.
6. Understating of 3G Communication System with features like; transmission of voice and video calls, SMS, MMS, TCP/IP, HTTP, GPS and File system by AT Commands in 3G network.
7. Study of DSSS technique for CDMA, observe effect of variation of types of PN codes, chip rate, spreading factor, processing gain on performance.
8. To learn and develop concepts of Software Radio in a real time environment by studying the building blocks like Baseband and RF section, convolution encoder, Interleaver and De- Interleaver.
9. To study and Analyse different modulation techniques in time and frequency domain using SDR kit.

ECMA6044: MICROCONTROLLER AND APPLICATIONS LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcomes

1. Apply the concept of 8051 microcontroller to write program using assembly language and embedded C language. (Applying)
2. Design systems using 8051 microcontroller. (Creating)

List of Experiments:

1. Introduction to various simulators used for 8051 microcontroller
2. Assembly language programming of 8051 microcontroller for arithmetic operations
3. Assembly language programming of 8051 microcontroller for logical operations
4. Introduction to development board of 8051 microcontroller
5. Interfacing of LED with 8051 microcontroller
6. Interfacing of Seven segment display with 8051 microcontroller
7. Interfacing of LCD interfacing with 8051 microcontroller
8. Interfacing of Keyboard with 8051 microcontroller
9. Interfacing of ADC with 8051 microcontroller
10. Assignment based on above mentioned experiments.

ECPM6045: PATTERN RECOGNITION & MACHINE LEARNING LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcome

1. Implement various tools such as maximum likelihood algorithm, Bayes classifier, linear regression, deep learning algorithm, linear discriminant algorithm,unsupervised learning. (Applying)

2. Design classifier using perceptron rule, feed forward back-propagation and delta rule, SVM. (Creating)

List of Experiments:

1. Implement maximum likelihood algorithm
2. Implement Bayes classifier
3. Implement linear regression
4. Design a classifier using perceptron rule
5. Design a classifier using feed-forward back-propagation and delta rule algorithms
6. Implement deep learning algorithm
7. Implement linear discriminant algorithm
8. Design a two class classifier using SVM
9. Design a multiclass classifier using SVM
10. Perform unsupervised learning

ECDE6046: DETECTION AND ESTIMATION THEORY LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcomes

1. Identify methods for detection and estimation of signals in white and non-white Gaussian noise. (Applying)
2. Analyse Signals and noise models. (Analysing)
3. Design optimal and suboptimal detection and estimation algorithms under realistic conditions. (Creating)

List of Experiments:

1. Simulate signal and noise models models.
2. Simulate spatially separated target Signal in the presence of Additive Correlated White Noise
3. Simulate spatially separated target Signal in the presence of Additive Uncorrelated White Noise
4. Simulate spatially separated target Signal in the presence of Additive Correlated Colored Noise
5. Detect Constant amplitude Signal in AWGN
6. Detect Time varying Known Signals in AWGN
7. Detect Unknown Signals in AWGN
8. Compare performance comparison of the Estimation techniques - MLE, MMSE, Bayes Estimator, MAP Estimator, Expectation Maximization (EM) algorithm
9. Performance comparison of conventional Energy Detectors and Coherent Matched Filter Techniques

ECRS6047: ANTENNAS AND RADIATING SYSTEMS LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcome

1. Definition of basic taxonomy and terminology of the computer networking area. (Remembering)
2. Understand and build the skills of subnetting and routing mechanisms. (Understanding)
3. Understand basic protocols of computer networks, and how they can be used to assist in network design and implementation. (Understanding)
4. Apply mathematical foundations to solve computational problems in computer networking. (Applying)
5. Analyse performance of various communication protocols. (Analysing)
6. Compare routing algorithms. (Evaluating)
7. Design and develop protocols for Communication Networks and practice packet/file transmission between nodes. (Creating)

List of Experiments:

1. Simulation of half wave dipole antenna.
2. Simulation of change of the radius and length of dipole wire on frequency of resonance of antenna.
3. Simulation of quarter wave, full wave antenna and comparison of their parameters.
4. Simulation of monopole antenna with and without ground plane.
5. Study the effect of the height of the monopole antenna on the radiation characteristics of the antenna.
6. Simulation of a half wave dipole antenna array.
7. Study the effect of change in distance between elements of array on radiation pattern of dipole array.

8. Study the effect of the variation of phase difference 'beta' between the elements of the array on the radiation pattern of the dipole array.
9. Case study.

ECCN6048: ADVANCED COMMUNICATION NETWORKS LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcomes

1. Definition of basic taxonomy and terminology of the computer networking area. (Remembering)
2. Understand and build the skills of subnetting and routing mechanisms. (Understanding)
3. Understand basic protocols of computer networks, and how they can be used to assist in network design and implementation. (Understanding)
4. Apply mathematical foundations to solve computational problems in computer networking. (Applying)
5. Analyse performance of various communication protocols. (Analysing)
6. Compare routing algorithms. (Evaluating)
7. Design and develop protocols for Communication Networks and practice packet/file transmission between nodes. (Creating)

List of Experiments:

1. Study of Networking Commands (Ping, Tracert, TELNET, nslookup, netstat, ARP, RARP) and Network Configuration Files.
2. Linux Network Configuration.
3. Configuring NIC's IP Address.
4. Determining IP Address and MAC Address using if-config command.
5. Changing IP Address using if-config.
6. Static IP Address and Configuration by Editing.
7. Determining IP Address using DHCP.
8. Configuring Hostname in /etc/hosts file.
9. Design TCP iterative Client and Server application to reverse the given input sentence.
10. Design a TCP concurrent Server to convert a given text into upper case using a multiplexing system called "select".
11. Design UDP Client Server to transfer a file.
12. Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address.
13. Configure DNS: Make a caching DNS client, and a DNS Proxy; implement reverse DNS and forward DNS, using TCP dump/Wireshark characterise traffic when the DNS server is up and when it is down.
14. Configure a mail server for IMAP/POP protocols and write a simple SMTP client in C/C++/Java client to send and receive mails.
15. Configure FTP Server on a Linux/Windows machine using a FTP client/SFTP client characterise file transfer rate for a cluster of small files 100k each and a video file of 700mb.Use a TFTP client and repeat the experiment.
16. Signaling and QoS of labeled paths using RSVP in MPLS.
17. Find shortest paths through the provider network for RSVP and BGP.
18. Understand configuration, forwarding tables, and debugging of MPLS.

ECDS6049: DSP ARCHITECTURE LAB

(L-T-P:0-0-4) (2 credits)

Course Outcomes

1. Recall and demonstrate the Code Composer Studio. (1-Remembering, 2-Understanding)
2. Develop the interfacing between MATLAB and Code Composer Studio (3-Applying, 6-Creating)
3. Simplify and explain the real time DSP problems with the help of DSP processor. (4-Analyzing, 5-Evaluating)

List of Experiments:

1. Introduction to Code Composer Studio-I
2. Introduction to Code Composer Studio-II
3. Introduction to the Addressing Modes

4. FFT and Bit Reversal Operation
5. FFT and its Applications
6. Audio Codec and its Applications
7. Real Time Data Exchange
8. FIR filtering by interfacing Matlab with Code Composer Studio
9. Introduction to Interrupts
10. Digital communication using Binary Phase Shift Keying

ECSA6050: EMBEDDED SYSTEMS AND APPLICATIONS LAB

(L-T-P: 0-0-4) (2 credits)

Course Outcomes

1. Perform various experiments using PIC and AVR microcontroller. (Applying)
2. Relate different peripheral devices with PIC and AVR microcontroller. (Analysing)
3. Evaluate the performance of various microcontroller based embedded systems (Evaluating)

List of Experiments:

1. Introduction to MPLAB and Embedded C.
2. LED interfacing with PIC Microcontroller
3. 7 Segment display interfacing with PIC Microcontroller
4. LCD interfacing with PIC Microcontroller
5. Keyboard interfacing with PIC Microcontroller
6. ADC and DAC interfacing with PIC Microcontroller
7. Serial Communication using PIC Microcontroller
8. Timer using PIC Microcontroller
9. Interrupt using PIC Microcontroller
10. Basic programming using AVR Microcontroller
11. Data Acquisition using LabView
12. Interfacing of Microcontroller with LabVIEW

ECMI6051: MINI PROJECT

(L-T-P: 0-0-4) (2 credits)

Objective

The Mini Project work will start in semester III and should preferably be a problem with research potential and should involve scientific research, design, generation/collection and analysis of data, determining solution and must preferably bring out the individual contribution. Seminars should be based on the area in which the candidate has undertaken the dissertation work as per the common instructions for all branches of M. Tech. The examination shall consist of the preparation of a report consisting of a detailed problem statement and a literature review. The preliminary results (if available) of the problem may also be discussed in the report. The work has to be presented in front of the examiners panel set by the Head and PG coordinator. The candidate has to be in regular contact with his guide and the topic of dissertation must be mutually decided by the guide and student.

Course Outcomes

1. Choose various topics for self-learning (Remembering)
2. Explain different problems and recent trends related to the topic (Understanding)
3. Apply the knowledge to find out the solution of the problems related to the topic (Applying)
4. Compare various real life problems related to the topic (Analysing)
5. Evaluate various design problems related to the topic (Evaluating)
6. Develop oral and written communication skills to present and defend their work in front of technically qualified audience (Creating)

ECDI6059: DISSERTATION PHASE–I

(L-T-P: 0-0-20) (10 credits)

Objectives

During this phase the student will start a research project applying the knowledge acquired during the first two semesters and also incorporating the recent trends in the chosen area. It should include phases of design, implementation and reporting. This project is to be executed individually within or outside the campus. The mode and components of evaluation and the weightages attached to them shall be published by the Department/Institute at the beginning of the semester

Course Outcomes

1. Select a project of interest. (Remembering)
2. Defend the topic of interest for continuing work, by doing initial studies on it. (Understanding)
3. Prepare a working methodology for the project for its successful completion.(Applying)
4. Design and experiment on the selected project. (Analysing)
5. Devise tools and methods for experimenting and troubleshooting for getting expected outcomes. (Evaluating)
6. Explain, justify and defend the project work by presenting the work and writing a report. (Creating)

ECDI6060: DISSERTATION PHASE–II

(L-T-P: 0-0-32) (16 credits)

Objective

During this phase the student will carry forward and complete the work that they have started in Phase I. It is expected that the student will publish at least one research paper in a well-known journal to augment their work during this phase. Published papers will carry extra weightage during evaluation. The mode and components of evaluation and the weightages attached to them shall be published by the Department at the beginning of the semester.

Course Outcomes

1. Define the problem encountered in Phase-I. (Remembering)
2. Explain the working model of the proposed work. (Understanding)
3. Apply mathematical skills and how these skills are important in engineering. (Applying)
4. Contrast different problems encountered in designing a system. (Analysing)
5. Interpret knowhow on the topic selected for the project. (Evaluating)
6. Contrast on limitations of the system designed. (Creating)

VALUE ADDED COURSES

ECES6064: ELECTRONIC DISPLAY SYSTEM

(L-T-P: 2-0-0) (2 credits – 30 hours)

Objective

The objective of this course is to introduce the students to opto-electronic devices that are used to make advance display units. This course will also provide an exposure to interfacing of these display devices based on LED.

Course Outcomes

1. Explain and experiment with LED based display system. (Understanding - Applying)
2. Make use of Embedded Systems and its related applications. (Applying)
3. Design electronic displays. (Creating)

Module I (10 hours)

Fundamentals of LED: Introduction to PN Junction Diode, Construction and working of LED, Types of LED, Advantage, Disadvantage and Applications, 7 segment display, LED Dot Matrix Display, Tricolor LED – Construction and Working, LCD. Fundamentals of Microcontroller: 8051 Microcontroller, Basic and Advanced Microcontroller Boards.

Module II (20 hours)

Glowing of various patterns in LED using microcontroller, Microcontroller based up counter and down counter design using LED and 7 segment displays, Displaying of Names in different format using LCD, designing of rolling display using LED and LCD. Implementation of display devices in projects.

Suggested Readings

1. Electronic Devices and Circuits Theory, Boylestead and Nashelsky, 9th Edition, Prentice Hall India, 2007.

2. Electronic Devices and Circuits, Salivahanan et al., 2nd Edition, Tata McGraw Hill, New Delhi, 2008.
3. The 8051 Microcontroller And Embedded Systems Using Assembly And C, Muhammad Ali Mazidi, Janice Gillispie Mazidi and Rolin D. McKinlay,Pearson
4. Microcontrollers : Theory and Applications, A V Deshmukh, Tata McGraw-Hill Education

CO 2	H	H
CO 3	H	H

ECNA6065: NANOTECHNOLOGY and APPLICATIONS

(L-T-P: 2-0-0) (2 credits – 30 hours)

Objective

This course will introduce the students to Nanotechnology. The course is designed to build up a basic understanding of the nano concepts. It will provide the students the knowledge of synthesis of nanomaterials, their characterization techniques as well as touch upon some applications of nanotechnology.

Course Outcomes

1. Define various terms such as nanotechnology, nanoelectronics, nanoscience etc. (Remembering)
2. Explain the operations of various characterization tools. (Understanding)
3. Apply the synthesis process to fabricate various nanostructures. (Applying)
4. Analyze various nanostructures. (Analysing)
5. Evaluate nanomaterials using characterization techniques. (Evaluating)

Module I (17 hours)

Introduction to Nanotechnology, Basics of Material science and Nanoscience, Poor Man's Nanotechnology, Introduction to Characterization Techniques-I, Synthesis of nanomaterials, ImageJ, Origin and Lab Rules, Nano electronics: Novel device fabrication and characterization.

Module II (13 hours)

Introduction to Characterization Techniques – II, Optical properties of nanomaterials, Nano Bioscience, Issues of Nanotechnology, Characterization results, Applications of Nanotechnology.

Suggested Readings

1. G. L. Hornyak, J. Dutta, H. F. Tibbals, A. Rao Introduction to nanoscience, CRC Press
2. G. L. Hornyak, J. Dutta, H. F. Tibbals, A.Rao Introduction to nanotechnology CRC Press
3. T. Pradeep, Nano: The Essentials McGraw Hill
4. G. W. Hanson, Fundamentals of Nanoelectronics, Pearson
5. D. Maclurcan and N. Radywyl (Eds.) Nanotechnology and Global Sustainability CRC Press
6. E. Lichtfouse, J. Shwarzbauer, D. Robert, Environmental Chemistry for a Sustainable World, Vol.2 Springer Verlag

SCHOOL OF TECHNOLOGY
DEPARTMENT OF COMPUTER APPLICATIONS
MASTER OF COMPUTER APPLICATIONS (MCA)

VISION

Imparting knowledge of Computer Applications, to mould individuals into IT professionals, researchers and entrepreneurs who are innovative, versatile and committed to society.

MISSION

To prepare students for professional career and higher studies by providing conducive teaching, learning and research environment.

- To produce skilled individuals and entrepreneurs in emerging areas of technologies by academia-industry collaboration.
- To instill in individuals a sense of commitment to work for the betterment of society using technology.

PROGRAMME – MASTER OF COMPUTER APPLICATIONS (MCA)

PROGRAM OUTCOMES – MCA

PO 1: Computational Knowledge: Apply knowledge of computing fundamentals, computing specialisation, mathematics, and domain knowledge appropriate for the computing specialisation to the abstraction and conceptualisation of computing models from defined problems and requirements.

PO 2: Problem Analysis: Identify, formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines.

PO 3: Design /Development of Solutions: Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

PO 4: Conduct investigations of complex Computing problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: Modern Tool Usage: Create, select, adapt and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations.

PO 6: Professional Ethics: Understand and commit to professional ethics and cyber regulations, responsibilities, and norms of professional computing practices.

PO 7: Life-long Learning: Recognise the need, and have the ability, to engage in independent learning for continual development as a computing professional.

PO 8: Project management and finance: Demonstrate knowledge and understanding of the computing and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 9: Communication Efficacy: Communicate effectively with the computing community, and with society at large, about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations, and give and understand clear instructions.

PO 10: Societal and Environmental Concern: Understand and assess societal, environmental, health, safety, legal, and cultural issues within local and global contexts, and the consequential responsibilities relevant to professional computing practices.

PO 11: Individual and Team Work: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary environments.

PO 12: Innovation and Entrepreneurship: Identify a timely opportunity and using innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

PROGRAM SPECIFIC OUTCOMES – MCA

PSO 1: Develop a comprehensive understanding and proficiency in advanced programming, computer networks, database management, distributed applications, software engineering, and entrepreneurship, enabling the effective design, development, and management of software systems.

PSO 2: Ability to work with latest tools and technologies in the field of computer applications, such as cyber security, data science and artificial intelligence and pursue careers in IT industry, research and development, teaching and allied areas.

LIST OF COURSES -MCA

Mapping Code	Course Name
1.1	Mathematical Foundation for Computer Science
1.2	Theory of Computation
1.3	Operating Systems
1.4	Data Structures and Algorithms
1.5	Programming Through Java
1.6	Operating Systems Lab
1.7	Data Structures and Algorithms Lab
1.8	Programming Through Java Lab
2.1	Software Engineering
2.2	Data Communication and Computer Networks
2.3	Advanced Database Management Systems
2.4	Internet Technology and Applications
2.5	Sensor Networks and Internet of Things
2.6	Data Communication and Computer Networks Lab
2.7	Internet Technology and Applications Lab
2.8	Advanced Database Management Systems Lab
2.9	Constitution of India
3.1	Cyber Law and IT Security
3.2	Machine Learning
3.3	Enterprise Resource Planning
3.4	Research Methodology and IPR
3.5	Elective I *Specialization I: Artificial Intelligence* OR *Specialization II: Data Science*
3.6	Elective II *Specialization I: Artificial Intelligence* OR *Specialization II: Data Science*
3.7	Machine Learning Lab
3.8	Minor Project - MCA
3.9	Communication Skills
3.10	Entrepreneurship
4.1	Major Project - MCA
4.2	Elective III

THEORY COURSES

CAOS0016: OPERATING SYSTEMS

(4 credits – 60 hours)

Objective

The main objective of this course is to introduce the students to a layer of software called Operating Systems, whose job is to manage all the devices of a computer system and provide user programs with a simple interface to the hardware. This course will familiarize the students with the concepts of processes, memory management, file management, Input/Output management and the potential problem of deadlocks. The students will also learn about the Linux operating system, which is a full-blown Unix clone and is fast gaining popularity worldwide.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Elaborate what operating systems are, what they do and how they are designed and constructed. (Creating)
2. Define process concepts like process scheduling, inter-process communication, process synchronization and concurrency. (Remembering)
3. Explain different memory management schemes, relate various approaches to memory management and effectiveness of a particular algorithm. (Understanding)
4. Identify different page replacement algorithms to solve problems. (Applying)
5. Determine the concepts learned with case studies of Linux and Windows. (Evaluating)

Module I: Concepts, Processes and Threads (14 Hours)

Operating system as an Extended Machine and as a Resource Manager, Operating system concepts (Files, Deadlocks, Memory Management, Input/Output, Processes, The Shell, Security), The evolution of Operating Systems (Serial Processing, Simple Batch Systems, Multiprogrammed Batch Systems, Mainframe Operating Systems, Server Operating Systems, Time Sharing Systems, Multiprocessor Operating Systems, Real-Time Systems, Embedded Operating Systems, Smart Card Operating), System Calls (Process Management, File Management, Directory management), Introduction to Processes (The Process Model, Process Creation, Process Termination, Process Hierarchies, Process States, Implementation of Processes, Process Control Block), Threads (The Thread Model, Thread Usage, Implementing Threads(In User Space and Kernel), Scheduler Activation, Pop Up Threads, Interprocess Communication (Race conditions, Critical Sections, Mutual Exclusion with Busy Waiting, Sleep and wakeup, Semaphores, Mutexes, Monitors, Message Passing), Classical IPC problems (The Dining Philosophers Problem, The Sleeping Barber Problem), Process Scheduling (Scheduling in Batch Systems, Scheduling in Batch Systems, Scheduling in Interactive Systems, Scheduling in Real-Time Systems, Thread Scheduling)

Module II: Deadlocks and Memory Management (14 Hours)

a. Resources, Deadlock (Conditions for Deadlock, Deadlock modeling), Deadlock detection and recovery, Deadlock avoidance, Deadlock prevention
b. Memory management without swapping or paging (Monoprogramming without swapping or paging, Multiprogramming with fixed partitions, Relocation and Protection), Swapping, Virtual Memory (Paging, Page Tables), Page Replacement Algorithms (Not-recently-used, First in first out, Second Chance page replacement algorithm, The Clock Page Replacement Algorithm, Least Recently used page replacement algorithm, The Working Set Page Replacement Algorithm, Modeling Paging Algorithms (Belady's Anomaly, Stack Algorithms, Predicting page fault rates), Design issues for Paging Systems, Implementation issues, Segmentation (Implementation of pure segmentation, Segmentation with Paging: MULTICS)

Module III: Input/output and File Systems (16 Hours)

a. Principles of I/O hardware (I/O devices, Device Controllers, Direct memory access), Principles of I/O software, I/O Software Layers, Disks (Disk hardware, disk formatting, disk arm scheduling algorithms, Error handling, Track-at-a-time caching, RAM disks) Clocks (Clock hardware, Clock software), Terminals (Terminal hardware, Input software, Output software)
b. Files (File Naming, File structure, File types, File access, File attributes, File operations, Memory mapped files), Directories, File System layout (Implementing files, Implementing directories, Shared files), Security (The security environment, Generic Security Attacks, Design Principles For Security, User Authentication), Protection mechanisms (Protection Domains, Access Control Lists, Capabilities, Multilevel Security, Covert Channels), Type of File Systems (FAT, VFAT, FAT32, NTFS)

Module IV: Introduction to Linux OS design – Case study (16 Hours)

Overview of Unix, Processes in Unix (Fundamental Concepts, Process Management System Calls in Unix, Implementation of Processes in Unix), Memory Management in Unix, Input/Output in Unix, The Unix File System, Security in Unix

Suggested Readings

1. Andrew S Tanenbaum, Modern Operating Systems , (Second Ed.), Prentice Hall of India, New Delhi,
2. William Stallings, Operating Systems, Fourth Edition, Prentice Hall of India, New Delhi.
3. Silberschatz, Galvin, Operating System Concepts, Fifth Edition, John Wiley and Sons (Asia) Pte.
4. HM Deitel, Operating Systems, Second Edition, Pearson Education.
5. Pramod Chandra P. Bhatt, An Introduction to Operating Systems Concept, Prentice Hall of India.
6. Maurice J. Bach, The Design of the Unix Operating System, Prentice Hall of India, New Delhi.
7. Kernighan and Pike, The Unix Programming Environment, Prentice Hall of India, New Delhi.

CAPJ0018: PROGRAMMING THROUGH JAVA

(4 credits–60 hours)

Objective

The course is designed to impart the knowledge and skill required to solve real world problems using an object-oriented approach utilizing Java language constructs. This course covers the two main parts of Java i.e. Java Language and Java Library (JDK 5). After completion of the course, a student is expected to be able to

- Do Object Oriented Programming using Java
- Implement Exception handling and Multithreading in Java.
- Create Java I/O Applications and Applets.
- Set up a GUI using Swing components
- Do Network Programming in Java.
- Access relational databases from the Java program and use Java Beans and Servlets.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Recall the various features of Object Oriented programming by utilizing the JAVA language construct. (Remembering)
2. Explain the standard library, scope and lifetime of a variable and various control statements used in JAVA programs. (Understanding)
3. Interpret the concept of classes and object in JAVA and apply exception handling to solve various exceptions (Applying)
4. Contrast the different type of inheritance and polymorphism and Analyse it in resolving various problems (Analysing)
5. Select the appropriate GUI and will be able to justify their decision to use a particular GUI by evaluating the required parameters depending on the domain and requirement. (Evaluating)
6. Develop algorithms based on the knowledge they have gained to design cost effective and user friendly applications. (Creating)

Module I: Core Java Programming (14 Hours)

a. Java Overview: Genesis, Java Philosophy, Java and Internet, Object-Oriented Programming features, Java Applet and Application, Java Environment and Java Development Kit (JDK) and Java Standard Library (JSL),
b. Java language fundamentals: The scope and lifetime of variable, Type conversion and casting, Control statements, Arrays
c. Classes and objects: The this keyword, Garbage collection, Overloading constructor, Using object as parameters, Argument passing, Returning objects, Recursion, Introducing Access control (public, private and protected), static, final, nested classes, String class, Command- line argument

Module II: Inheritance, Exception handling, Multithread and Applets (12 Hours)

a. Inheritance: Member access and inheritance, method overriding, dynamic method dispatch, using abstract classes, using final with inheritance, the Object class; Packages, Interface, classpath
b. Exception handling: Fundamentals, Exception types, Java's built-in exceptions, user defined exceptions.
c. Multithreaded Programming: The Java thread model (thread priorities, synchronization and inter-thread communication); Deadlock, Thread Group
d. I/O Basics: Streams, the stream classes, the predefined streams, Reading console input, writing console output, the

transient and volatile modifiers, using instance of native methods

Module III String handling, Utility classes, java.lang and java.io (12 Hours)

a. String handling: String constructors, methods for character extraction, string searching and comparison, data conversion using valueof (), String Buffer.
b. Exploring java. lang: Simple type wrappers, System class, class Class, Math functions
c. The utility classes: Vector, Stack, Hash Table, String Tokenizer, Bit set, Date, Calendar, Gregorian Calendar, Random, Observable
d. Input/Output - Exploring java.io: The java.io classes and interface, File class and methods for creating, renaming, listing and deleting files and directories, I/O stream classes (File Input Sream, File Output Stream, Buffered Input Stream, Buffered Output Stream, Push Back Input Stream, Input Stream Reader, Buffered Reader, Buffered Writer, Print Stream, Random Access File)

Module IV: Networking, Images, Applet class and Swing (12 Hours)

a. Networking: Socket overview, Stream Sockets, Datagram sockets, Manipulating URLs, Establishing a simple Server/Client using Stream Sockets, Connectionless Client/Server Interaction with Datagrams
b. Images: File formats, image fundamentals, creating, loading and displaying images, ImageObserver, MediaTracker
c. The Applet class: applet architecture, passing parameters to applets, getDocumentBase, getCodeBase, and showDocument, AppletContext and AudioClip interfaces, Graphics class and methods for drawing lines, rectangles, polygons and ovals
    I. Swing: Component and Container classes, Layout managers (Flow Layout, Grid Layout, Border Layout), Handling events, Adapter classes, Anonymous inner classes
    II. Swing GUI components: JLabel, JTextField, JTextArea, JButton, JCheckBox, JRadioButton, JList, JComboBox, JScrollBar, JScrollPane, JToolTip, JPanel, JFrame
    III. Menus: JmenuBar, JMenu, JMenuItem, JSeparator

Module V: Java Beans, JDBC, Java Servlets (10 Hours)

a. Java Beans: Introducing JavaBeans Concepts and Bean Development Kit (BDK), Using the Bean Box, Writing a simple Bean, Bean Properties (simple properties), Manipulating events in the Bean Box
b. Java database connectivity (JDBC): Introduction to JDBC, type of JDBC connectivity, Establishing database connections, Accessing relational database from Java programs

Suggested Readings

CASE0019: SOFTWARE ENGINEERING

(4 credits–60 hours)

Objective

The field of software engineering aims to find answers to the many problems that software development projects are likely to meet when constructing large software systems. The objective of this paper is to make students aware of the problems incurred by large-scale software development and the solutions proposed. It covers a framework for studying and evaluating software tools, and stresses the importance of theory in the development of software.

COURSE / LEARNING OUTCOMES

CO1: Demonstrate understanding of fundamental software engineering principles and methodologies by explaining core concepts such as software development life cycle, agile methodologies, and software project management. (Understanding)

CO2: Apply software engineering techniques and tools to design and develop software solutions by implementing design patterns, writing test cases, and using version control systems. (Applying)

CO3: Analyze software requirements and specifications to identify potential risks, resource needs by conducting requirement analysis, feasibility studies, and risk assessments. (Analysing)

CO4: Create comprehensive software project plans and design documentation that address software requirements and constraints by developing detailed project plans, system architectures, and design documents. (Creating)

Module I (10 Hours)

a. The Product and The Process: The Product - Evolving Role of Software, Software (Characteristics, Components and Applications;
b. The Process – Software Engineering A Layered Technology, The Software Process, Software Process Models, The Linear Sequential Model, The Prototyping Model, The RAD Model, Evolutionary Process Models (The Incremental Model, The Spiral Model, The Component Assembly Model, The Concurrent Development Model), The Formal Methods Model, Fourth Generation Techniques;
c. Project Management Concepts – The Management Spectrum (People, the Problem, the Process and the Project);
d. Software Process and Project Metrics – Measures, Metrics and Indicators, Metrics in the Process and Project Domains, Software Measurement, Reconciling Different Metrics Approaches, Metrics for Software Quality;
e. Software Project Planning – Observation on Estimating, Project Planning Objectives, Software Scope, Resources, Project Estimation Technique – Empirical estimation techniques (Expert Judgement Technique, Delphi Cost Estimation), Heuristic estimation techniques (COCOMO Model), Halstead Software Science (An Analytical Technique), The Make-Buy Decision;

Module II (10 Hours)

a. Project Scheduling and Tracking - Basic Concepts, The Relationship between People and Effort, Defining a Task set for the Software Project, Selecting Software Engineering Tasks, Defining a Task Network, Scheduling, The Project Plan;
b. Software Projects Risks, Quality Assurance and Configuration Management: RiskManagement- Reactive Vs. Proactive Risk Strategies, Software Risk, Risk Identification, Risk Projection, Risk (Mitigation, Monitoring and Management), Safety Risks and Hazards, The RMMM Plan;
c. Software Quality Assurance - Quality Concepts, The Quality Movement, Software Quality Assurance, Software Reviews, Formal Technical Reviews, Statistical Quality Assurance, Software Reliability, The SQA Plan, The ISO 9000 Quality Standards;
d. Software Configuration Management - Software Configuration Management, The SCM Process, Identification of Objects in the Software Configuration, Version Control, Change Control, Configuration Audit, Status Reporting;
e. System Engineering - Computer Based Systems, Product Engineering

Module III (20 Hours)

a. Analysis and Design: Analysis Concepts and Principles - Requirements Analysis, Communication Techniques, Analysis Principles, Software Prototyping, Specification, Specification Review;
b. Analysis Modeling- The Elements of the Analysis Model, Data Modeling, Functional Modeling and Information Flow, Behavioral Modeling, the Mechanics of Structured Analysis, the Data Dictionary;
c. Design Concepts and Principles - Software Design and Software Engineering, the Design Process, Design Principles, Design Concepts, Effective Modular Design, Design Heuristic for Effective Modularity, the Design Model, Design Documentation;
d. Design Methods - Data Design, Architectural Design, the Architectural Design Process, Architectural Design Optimization, Interface Design, Human-Computer Interface Design, Interface Design Guidelines, Procedural Design;
e. Design For Real Time systems - Real Time Systems;
f. Case studies on diagram - Use case, Class, Activity, Sequence

Module IV (10 Hours)

a. Software Testing: Software Testing Methods - Software Testing Fundamentals, Test Case Design, White Box Testing, Basis Path Testing, Control Structure Testing, Black Box Testing, Testing for Specialized Environments;
b. Software Testing Strategies - A Strategic Approach to Software Testing, Strategic Issues, Unit Testing, Integration Testing, Validation Testing, System Testing, The Art of Debugging;
c. Technical Metrics For Software - Software Quality, A Framework For Technical Software Metrics, Metrics for the Analysis Model, Metrics for the Design Model, Metrics for Source Code, Metrics for Testing, Metrics for Maintenance

Module V (10 Hours)

a. Object Oriented Software Engineering: Object Oriented Concepts and Principles - The Object Oriented Paradigm, Object Oriented Concepts, Identifying the Elements of an Object Model, Management of Object Oriented Software Projects
b. Object Oriented Analysis - Object Oriented Analysis, Domain Analysis, Generic Components of the Object Oriented Analysis Model, the OOA Process, the Object Relationship Model, the Object Behavior Model
c. Object Oriented Design - Design for Object Oriented Systems, The Generic Components of the OO Design Model, The

Systems Design Process, The Object Design Process, Design Patterns, Object Oriented Programming

d. Advanced Topics in Software Engineering: Cleanroom Software Engineering- The Cleanroom Approach, Functional Specification, Design Refinement and Verification, Cleanroom Testing
e. Software Reuse - Management Issues, the Reuse Process, Domain Engineering, Building Reusable Components, Classifying and Retrieving Components, Economics of Software Reuse
f. Reengineering - Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering, Economics of Reengineering
g. Computer Aided Software Engineering - Case Definition, Building Blocks of Case, Taxonomy of Case Tools, Integrated Case Environments, the Integration Architecture, the Case Repository

CAIT0022: INTERNET TECHNOLOGY AND APPLICATIONS

(4 credits – 60 hours)

Objective

The objective of the course is to familiarize the students with a discussion on Internet and its growth. It also provides the students a study on the basic services provided by the Internet. A familiarization on the markup languages, scripting languages and web application development are also being discussed to make the student competent to design websites. It has been taken into consideration that this paper assumes that the students must know well in advance about the various protocols of the Internet and the knowledge of HTML and databases.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Recall and examine the growth of Internet and identify the history behind it. (Remembering)
2. Identify and differentiate the various services provided by the internet. (Understanding)
3. Experiment with various mark-up languages and scripting languages. (Applying)
4. Analyse and design a website of their own and can also identify the faults in the design. (Analysing)
5. Develop and create a website of their own. (Creating)
6. Summarize and validate a practical solution towards a web application development and also deploy a website of their own. (Evaluating)

Module I: Introduction to Internet (10 Hours)

History of the Internet; History of the World Wide Web; W3C (World Wide Web Consortium); Levels of Internet Connectivity (Dial-up, Leased Line, DSL, VSAT); Requirements for Internet connectivity; Use of Browsers; Different types of browsers (IE, Opera, Netscape, Firefox); Search engines; FTP; Electronic Mail; Instant Messaging; DHCP; DNS; HTTP; URL; Proxy Servers.

Module II: Internet Markup Languages (12 Hours)

a. XHTML: What is XHTML? Components of XHTML; Elements of XHTML (Headers, Paragraphs,
b. Linking, Images, Special Characters, Lists, Tables, Forms, Framesets)
c. Cascading Style Sheets: Inline Styles; Embedded Style; Conflicting Style; Linking External Styles; W3C CSS Validation Service; Use of CSS (Positioning Elements, Backgrounds, Text flow)
d. XML: What is XML? Structuring Data; XML Namespaces; Document Type Definitions and Schemas; XML Vocabularies; Document Object Model (DOM and its methods); Extensible Style Sheet Language (XSL)

Module III: Web servers, Databases and Scripting Languages (18 Hours)

a. Web servers: What is a web server; HTTP Request Types; System Architecture of a Web server; Client-side Scripting versus Server-side Scripting; Accessing Web servers; Apache Web Server.
b. Databases: Introduction to each one of the following: SQL, MYSQL, DBI
c. Scripting Languages: Javascript: Operators, Data Types, Control Structures, Functions, Arrays, String Manipulation. JQuery, ASP.NET. Introduction to Perl and CGI (Common Gateway Interface). JSP: Introduction; JSP Overview; Scripting; Standard Actions; Directives
d. Java Servlets: Servlet overview and architecture, Servlet Interface and Servlet life cycle, HttpServlet Class, HttpServletRequest Interface, HttpServletResponse Interface, Handling HTTP get Requests, deploying a web application, Handling HTTP get requests containing data, Handling HTTP post requests.

Module IV: Web Application Development Using PHP (20 Hours)

a. Web Site Design Considerations: Using Logical Design: Planning your website, drawing a map, using a top-down approach, flexibility, other web design metaphors. Creating templates. Creating a Compatible Design: Designing for different color depths, resolutions, different browser considerations, accommodating limited bandwidth. Validating your work.
b. PHP: Introduction to PHP; Data Types; Control Structures; Functions; Strings; Arrays; Querying Web Databases using PHP; Writing to Web Databases; Errors, Debugging and Deployment; Reporting in PHP; Validation Techniques in PHP.

Suggested Readings

1. Deitel and Deitel, Internet and World Wide Web: How to Program, 2nd Edition, Prentice Hall of India Pvt. Ltd., New Delhi
2. Hugh E. Williams and David Lane, PHP and MySQL, 2nd Edition, O'Reilly, Shroff Publishers and Distributors Pvt. Ltd.
3. Moss, K., Java Servlets (Second Edition), New Delhi: Tata McGraw-Hill
4. Internet Complete, 2nd Edition, BPB Publications, New Delhi
5. Douglas E. Comer, The Internet Book: Everything you need to know about Computer Networking and how the Internet works, 3rd Edition, Prentice Hall of India Pvt. Ltd., New Delhi

CAEP0024: ENTERPRISE RESOURCE PLANNING

(4 credits–60 hours)

Objective

To help the student understand the conceptual elements of ERP and its theory and implementation. This is especially poignant in view of large number of organizations implementing ERP applications in recent years. The student will appreciate the impact that ERP brings into the daily operations of firms with respect to their productivity, integration, communication, etc.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Recall the conceptual elements of ERP. (Remembering)
2. Demonstrate the Influence of ERP in Large Organizations. (Understanding)
3. Identify the impact of ERP into the daily operations of firms with respect to their productivity, integration, communication etc. (Applying)
4. Analyse the practical side of ERP implementation with different vendors. (Analysing)
5. Discuss and evaluate the best practices of ERP with various case studies and real time examples. (Creating, Evaluating)

Module I: ERP Basics (15 hours)

a. Evolution and structure of ERP, ERP concepts, growth of the ERP market, conceptual model of ERP, 2-tier and 3-tier architecture, elements in ERP architecture, advantages/benefits of ERP, overview of an enterprise, integrated management information, business modeling, integrated data model
b. ERP and related technologies: Business Process Reengineering (BPR), Management Information Systems (MIS), Decision Support Systems (DSS), Data Warehousing, Data Mining, Online Analytical Processing (OLAP), Supply Chain Management.

Module II: ERP Modules (15 hours)
Item types in ERP, Manufacturing, distribution and Financial requirements, item control module in ERP, Finance module, Manufacturing and Production Planning module, Sales and Distribution module, Plant Maintenance module, Quality Management module, Materials Management module, Capital Requirement Planning module, Purchase Control module, Human Resources modules; concept of Bill of materials, concept of formula management.

Module III: Profiling ERP Vendors (10 hours)
a. SAP AG: R/3 –, overview of R/3 system, R/3 modules, R/3 and the internet
b. BAAN: Baan ERP modules, Baan ERP Tools
c. Oracle: Oracle modules – Financials, Human Resources, Projects, Manufacturing, Supply chain.
d. PeopleSoft: Accounting and control, Treasury Management, Performance Management, Sales and Logistics, Procurement.

Module IV: ERP Implementation Lifecycle (10 hours)
Elements of implementation methodology, Pre-evaluation Screening, Package evaluation, project planning phase, Gap Analysis, Business Process Re-engineering, configuration, Implementation team training, testing, product migration and support, Problems in ERP implementation, cost of ERP.

Module V Best Practices in ERP (10 hours)
a. Concept of Best Practices, concept of Customer Order Decoupling Point(CODP), Demand Management – Sales and Operations Planning, ERP scenario in India, future directions in ERP.
b. Case studies should also be introduced to highlight situations where ERP projects are implemented, and the success stories/benefits/difficulties of these implementations.

Suggested Readings
1. O'Leary, Daniel E, Enterprise Resource Planning Systems: systems, life cycle, electronic commerce and risk, Cambridge University Press.
2. Alexis Leon, Enterprise Resource Planning, 14th reprint, Tata McGraw Hill, New Delhi 2005
3. Rahul V Altekar, Enterprise Resource Planning (Theory and Practice), Prentice Hall India, New Delhi 2004
4. Alexis Leon, ERP Demystified, Tata McGraw Hill Pub. Co. Ltd, 2000
5. Kent Sandoe, Enterprise Integration, John Wiley and Sons
6. Garg and Venkitakrishnan, Enterprise Resource Planning : Concepts and Practice, 2nd edition, Prentice Hall India
7. Garg and Venkitakrishnan, ERPWARE: ERP Implementation Framework, Prentice Hall India
8. ERP – Concepts and Cases, ICFAI University Press, 2004

CAPA0030: PRINCIPLES OF ARTIFICIAL INTELLIGENCE

(4 credits – 60 hours)

Objective
Artificial Intelligence has embraced the larger scientific goal of constructing information- processing theory of intelligence. If such a science of intelligence could be developed, it could guide the design of intelligent machines as well as explicate intelligent behaviour as it occurs in humans and other animals. This paper describes the fundamental AI ideas that underlie many of the AI applications and provides a base for understanding natural intelligence.

Module I: General Issues and Overview of AI (12 Hours)
Introduction to AI: The AI problems, the underlying assumption, AI techniques, the level of the model, criteria for success, AI applications. Problem solving, search and control strategies: defining the problem as a state space search, production systems, control strategies, breadth-first search, depth-first search, problem characteristics, production system characteristics, issues in the design of search programs.

Module II: Search Strategies for AI Production Systems (16 Hours)
Heuristic search techniques: generate-and-test, hill climbing, simple hill climbing, steepest- ascent hill climbing simulated annealing, best-first search, OR-graphs, the A* algorithm, problem reduction, AND-OR graphs, the AO* algorithm, constraint satisfaction, means-end analysis. game playing: overview, the minimax search procedure, adding alpha-beta cutoffs, additional

refinements, iterative deepening.

Module III: Knowledge Representation (16 Hours)
Knowledge representation issues: representations and mappings, representing simple facts in logic, knowledge representation attributes, computable functions and predicates, resolution, conversion to clause form, the basics of resolution, resolution in propositional logic, procedural vs. declarative knowledge, logic programming, forward vs. backward reasoning, matching, control knowledge. statistical reasoning: probability and Bayes' theorem, certainty factors and rule-based systems, Bayesian networks, Dempster-Shafer theory, basic notions and concepts of fuzzy sets, fuzzy set operations, information - based characterization of fuzzy sets, fuzzy relations and their calculus.

Module IV: Advanced AI (16 Hours)
Natural language processing: overview, morphological analysis, syntactic analysis, semantic analysis, discourse integration, pragmatic analysis, parsing techniques, top-down parsing, bottom- up parsing, augmented transition networks (ATN). Learning: rote learning, learning by taking advice, learning by induction, explanation-based learning. Expert system: representing and using domain knowledge, expert system shells, explanation, knowledge acquisition.

COURSE / LEARNING OUTCOMES
At the end of this course students will be able to:
1. Recall and identify the need of incorporating human intelligence into machine and define the basic terms related to the concept of knowledge and representation, learning and reasoning, communication and language processing. (Remembering)
2. Define problem state space, design algorithms to solve problems, generalized schema for knowledge interpretation and planning and language processing. (Understanding)
3. Compute and demonstrate the problem in terms of state space and apply different AI algorithms to solve problems and construct logic to represent knowledge in the computational domain and also to interpret the natural language. (Applying)
4. Compare and analyse the performance of algorithms based on problem domain. (Analysing)
5. design and create new intelligent algorithms for application development by integrating experience based learning. (Creating)
6. Judge and assess the algorithms based on completeness, optimality, and space and time complexity for solving a problem in an intelligent manner. (Evaluating)

Suggested Readings
1. Rich, E.; K. Knight, Artificial Intelligence, (Second Edition), New Delhi: Tata McGraw-Hill, 1997
2. Nilson, N. J., Principles of Artificial Intelligence, New Delhi: Narosa Publishing House, 2002
3. Pedrycz, W.; F. Gomide, An Introduction to Fuzzy Sets: Analysis and Design, New Delhi: Prentice- Hall India, 2004.
2. Winston, P. H., Artificial Intelligence, New Delhi: Pearson Education Asia, 2002
3. Charniak, E.; D. McDermott, Introduction to Artificial Intelligence, New Delhi: Pearson Education, 2002
4. Russell, S.; P. Norvig, Artificial Intelligence: A Modern Approach (Second Edition), New Jersey: Prentice-Hall, 2003

CACL0033: CYBERLAW and IT SECURITY (4-0-0)
(4 credits – 60 hours)

COURSE/LEARNING OUTCOMES:
1. Apply fundamental concepts of Information Security threats and vulnerabilities to adopt right security measures and design real time scenarios. (Applying)
2. Determine and analyze software vulnerabilities and security solutions to reduce the risk of exploitation. (Analyzing)
3. Analyze and evaluate the cyber security needs of an individual/organization. (Analyzing, Evaluating)
4. Design operational and strategic cyber security strategies and policies. (Creating)
5. Analyze various types of cybercrime and formulate procedures for real world cybercrime Investigations. (Analyzing)

Module I: (12 hours)
Object and Scope of the IT Act - Genesis, Object, Scope of the Act. Encryption -Symmetric Cryptography, Asymmetric Cryptography, RSA Algorithm, Public Key Encryption

Module II: (14 hours)
Digital Signature- Technology behind Digital Signature, creating a Digital Signature, Verifying a Digital Signature, Digital Signature and PKI, Digital Signature and the Law. E-Governance and IT Act 2000- Legal recognition of electronic records, Legal recognition of digital signature, Use of electronic records and digital signatures in Government and its agencies, Certifying Authorities. Need of Certifying Authority and Power. Appointment, function of Controller. Who can be a Certifying Authority? Digital Signature Certifications. Generation, Suspension and Revocation of Digital Signature Certificate.

Module III: (12 hours)
Domain Name Disputes and Trademark Law: Concept of Domain Names, New Concepts in Trademark, Jurisprudence, Cyber-squatting, Reverse Hijacking, Meta tags, Framing, Spamming, Jurisdiction in Trademark Dispute

Module IV: (12 hours)
Cyber Regulations Appellate Tribunal: Establishment & Composition of Appellate Tribunal, Powers of Adjudicating officer to Award Compensation, Powers of Adjudicating officer to impose Penalty.

Module V: (10 hours)
The Cyber Crimes (S-65 to S-74): Tampering with Computer Source Documents(S-65), Hacking with Computer System(S-66), Publishing of Information Which is Obscene in Electronic Form(s-67), Offences: Breach of Confidentiality & Privacy (S-72), Offences: Related to Digital Signature Certificate (S-73 & S-74)

Suggested Readings

1. Farooq Ahmad, Cyber Law in India, Pioneer Books
2. Vakul Sharma, Information Technology Law and Practice, Universal Law Publishing Co. Pvt. Ltd.
3. Suresh T Vishwanathan, The Indian Cyber Law, Bharat Law house New Delhi.
4. P.M. Bakshi and R.K.Suri, Hand book of Cyber and E-commerce Laws, Bharat Law house New Delhi.
5. Rodney D. Ryder, Guide to Cyber Laws, Wadhwa and Company Nagpur.
6. The Information Technology Act, 2000, Bare Act, Professional Book Publishers, New Delhi.

CAMF0043: MATHEMATICAL FOUNDATION OF COMPUTER SCIENCE

(4 Credits)

Objective

- To introduce the concepts of mathematical logic.
- To introduce the concepts of sets, relations, and functions and relate practical examples to the appropriate set, function, or relation model, and interpret the associated operations and terminology in context.
- To perform the operations associated with sets, functions, and relations.
- To understand combinatorics and apply in solving problems.
- To use Graph Theory for solving problems

COURSE/LEARNING OUTCOMES

1. Ability to apply mathematical logic to solve problems (Remembering, Understand)
2. Recall some basic concept of set theory and understand the concept of graph theory and Group theory. (Remembering)
3. Interpret logic sentence in terms of predicates, quantifiers, and logical Connectives (Understanding)
4. For a given a discrete problem, classify its algebraic structure (Analyzing)
5. Derive the solution of a problem using deductive logic and prove the solution based on logical inference (Applying)
6. Evaluate Boolean functions and simplify expressions using the properties of Boolean algebra (Evaluating)
7. Develop the given problem as graph networks and solve with techniques of graph theory. (Creating)

Module I (13 hours)

Mathematical Logic: Statements and notations, Connectives, Well-formed formulas, Truth Tables, tautology, Logical equivalence: The Laws of logic, Logical Implication, Normal forms, Quantifiers, universal quantifiers. Predicates: Predicative logic, Free & Bound variables, Rules of inference, Consistency, proof of contradiction.

Module II (20 hours)

Set theory: Introduction, Basic Concepts of Set Theory, Representation of Discrete Structures, Relations and Ordering, Matrix representation of relations and partial ordered sets, representation of relations by Graphs; Lattices as Partially Ordered Sets, Boolean algebra; Functions. Algebraic Structures: Introduction, Algebraic Systems, Semi groups and Monoids; Groups, Congruence Relation and Quotient Structures, permutation groups, Lagrange's Theorem; Normal subgroups. Algebraic Structures with two Binary Operation, Rings, Integral Domain and Fields. (Definition, basic properties and examples)

Module III (12 hours)

Elementary Combinatorics: Basics of counting, Combinations & Permutations with repetitions, Constrained repetitions, Binomial Coefficients, Binomial and Multinomial theorem, Pigeonhole Principle, principles of Inclusion – Exclusion.

Module IV (15 hours)

Graph Theory: Basic Concepts, Sub graphs, Multi graphs Representation of Graphs, Isomorphism, Paths and Circuits, Traversing a Graph, DFS, BFS, Eulerian and Hamiltonian graphs, Shortest path algorithms, Planar Graphs, Chromatic Numbers. Tree and Spanning Trees. Applications of Graph Theory.

Suggested Readings

1. Discrete Mathematical Structures with Applications to Computer Science by J. P. Tremblay and R Manohar, Tata McGraw-Hill Publications, 1997.
2. Graph Theory by Narsingh Deo, Prentice-Hall of India publications, 2004.
3. Discrete Mathematical Structures, Theory and Applications. D.S. Malik, Thomson Learning, I Edn
4. Discrete Mathematics for Computer Science, Haggard, Thomson Learning, I Edn
5. Discrete Mathematics and Its Applications by Kenneth H Rosen. Tata McGraw-Hill Publications
6. Mathematical foundation of Computer Science by Y. N Sings. New Age international Publishers
7. Bernard Kolman, Robert. C.Busby & Sharon Ross, "Discrete Mathematical structures" Prentice Hall of India,2001.

CADA0044: DATA STRUCTURES AND ALGORITHMS

(4 Credits – 60 Hours)

Objectives

- To introduce first level topics covering basics in algorithms and data structures.
- To enable students to choose appropriate data structures, understand the ADT/libraries, and use of it to design algorithms for a specific problem.
- To understand the necessary mathematical abstraction to solve problems.
- To apply important algorithmic design paradigms and methods of analysis.

COURSE/LEARNING OUTCOMES

At the end of the course, students would be able to:

1. Know the formal definition of algorithms, importance of analysis of an algorithm and get familiar with different types of problem and their solutions. (Remembering and Understanding)
2. Choose appropriate data structure as applied to specified problem definition. (Applying)
3. Understand different design strategies such as brute force, divide-and-conquer, dynamic programming, greedy technique and backtracking used for the design of algorithms. (Understanding)
4. To design and analyse algorithms for given problems. (Applying)
5. Compare and analyse different design strategies and assess an algorithm in terms of correctness, computation cost and memory space used. (Analysing and Evaluating) .

6. Design new algorithms for given problems by using most appropriate algorithmic strategy considering the problem domain. (Creating)

Module I (14 Hours)
Introduction to Algorithms, Fundamentals Stages of Problem Solving, and Classification of Algorithms - Based on Implementation, Based on Design, Based on Area of Specialization, Based on Tractability, Basics of Algorithms Analysis, Asymptotic Analysis, Mathematical Analysis of Iterative and Recursive Algorithms, Empirical Analysis of Algorithms, Models of Computations - RAM model, Turing Machine.

Module II (12 Hours)
Data Structures: Abstract Data Types (ADTs), Stacks, Queues, Circular Queues, Implementation of Stacks using Queues, Implementation of Queues using Stacks, Priority Queues, Heaps, Linked Lists, Search and Update Operations on Varieties of Linked Lists, Graphs, Binary Trees, Tree Traversals, Binary Search Trees (BSTs), AVL Trees, Red Black Trees, Splay Trees, B-Trees, Disjoint Sets.

Module III (12 Hours)
Analysis of Sorting and Searching Algorithms: The sorting problem, Brute Force Approach - Sequential Search, Bubble Sort, Selection Sort, Decrease-and-Conquer Approach - Insertion Sort, Binary Search, Divide-and-Conquer Approach - Quick Sort, Merge Sort, Transform-and-Conquer Approach - Heap Sort, Linear Sorting Algorithms - Counting Sort, Radix Sort, Bucket Sort, Hashing - Hash Function, Collisions in Hashing, Separate Chaining, Open Addressing, Analysis of Search Operations.

Module IV (14 Hours)
Graph Algorithms: Graphs and their Representations, Graph Traversal Techniques - Breadth First Search (BFS) and Depth First Search (DFS), Minimum Spanning Trees (MST), Greedy Techniques - Prim's and Kruskal's algorithms for MST, Dijkstra's Algorithm for Single Source Shortest Paths, Dynamic Programming - Warshall's Algorithm for finding Transitive Closure of a Graph, Floydd's Algorithm for All-Pairs Shortest Paths Problem.
Algorithmic Design Techniques: Greedy Algorithms - Coin Change Problem, Scheduling Problem, Knapsack Problem, Huffman Trees, Divide-and-Conquer Approach - Strassen Matrix Multiplication, Closest-pair Problem, Tiling Problem, Dynamic Programming – Longest Common Subsequence (LCS) problem, Optimal Binary Search Trees, Travelling Salesperson Problem, Chain matrix multiplication.

Module V (8 Hours)
Tractable and Intractable Problems: Computability of Algorithms, Computability Classes – P, NP, NP-Complete, NP-Hard.
Basics of Backtracking, Branch-and-bound methodologies for Algorithm design, Approximation algorithms, Randomized algorithms.

Suggested Readings
1. Mark Allen Weiss, Data Structure and Algorithm Analysis in C++, Fourth Edition, Pearson, 2014.
2. S. Sridhar, Design and Analysis of Algorithms, Oxford University Press, 2014.
3. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein, Introduction to Algorithms, Third Edition, The MIT Press, 2009.

CACC0045: DATA COMMUNICATION AND COMPUTER NETWORKS

(4 credits)

Objective
This course introduces students to computer networks and concentrates on building a firm foundation for understanding Data Communications and Computer Networks. It deals with the Data link layer, the Network layer, the Transport layer and the Application Layer. This course also introduces the concepts of network security and cryptography.

Module I: Digital Communications

Signals, noise, Nyquist rate, Shannon capacity; Analog transmission: modulation techniques, FDM; Digital transmission: PCM, TDM, line coding, xDSL,; Transmission media: Guided (twisted pair, coaxial, fiber optic) and unguided media; Local area networks: Ethernet, Fast Ethernet, introduction to Gigabit Ethernet and WLANs; Repeater, Hubs, Bridges, Switches, Router and Gateway.

Module II: Media Access Control and Data Link Layer
Data Link Layer Fundamentals: Framing, Error Control, Flow Control, Error Detection and Correction; Data link protocols: Stop-&-Wait ARQ, Go-Back-NARQ, Selective Repeat ARQ, Piggybacking
Multiple Access Protocols: Advantages of Multiple-Access Sharing of Channel Resource, Pure ALOHA, Slotted ALOHA, Carrier Sense Multiple Access (CSMA), CSMA with Collision Detection (CSMA/CD), Asynchronous Transfer Mode (ATM)

Module III: Network Layer
IPv4 Addresses: Address space, Notations, Classful addressing, classless addressing, NAT; IPv6 Addresses: advantages, structure, address space, packet format, extension header; Transition from IPv4 to IPv6; Address Mapping, Delivery, Forwarding, Unicast Routing Protocols, Multicast Routing Protocols.

Module IV: Transport Layer and Application Layer
Process to Process Delivery: Client Server paradigm, Connectionless vs Connection Oriented Service, Services provided to upper layers, Transport Service primitives. UDP: Introduction, User Datagram, Checksum, UDP operations, use of UDP, Remote Procedure call TCP: Introduction, TCP Service Model, TCP Protocol, segment header, Connection Establishment and release, Transmission Policy, Congestion Control, Timer Management, Wireless TCP and UDP . Application Layer: Domain Name System, Simple Mail Transfer Protocol (SMTP), POP3, IMAP, File Transfer Protocol (FTP) Network Security: Cryptography, Symmetric Key Algorithms, Public Key Algorithms, Digital Signatures, Communication Security, Web Security

COURSE/LEARNING OUTCOMES:
At the end of the course the students will be able to:
1. Understand and explain Data Communications System and its components (Understand, Explain)
2. Understand and identify different networking terminologies and network architecture. Design issues in network and network transition. (understand)
3. Students would be able to distinguish between IPV4 and IPV6 network together with MAC layer transmission and modulation schemes. (Analyze)
4. Students would be able to understand and analyze what type of network to implement and decide what protocols to configure(Analyze)
5. Students would be able to know why different layers are embodied with different protocols and different network architecture for different network needs. (Evaluate)
6. Have a basic knowledge of the use of cryptography and network security; (Apply)

Suggested Readings
1. Andrew S. Tenenbaum, Computer Networks (Fourth Ed.), Prentice Hall of India, 2002
2. W Richard Stevens, UNIX Network Programming – Volume I (2nd Ed.), Prentice Hall of India, 2002
3. William Stallings, Data and Computer Communications (Sixth Ed.), Prentice Hall of India, 2000
4. Fred Halsall, Data Communication, Computer Networks and Opens Systems, (4th Ed.), Pearson Education, 2000
5. William Stallings, Cryptography and Networking Security - Principles and Practice, Pearson

CADM0046: ADVANCED DATABASE MANAGEMENT SYSTEMS
(4 Credits - 60 hours)

Objective
The objective of this course is to introduce the basic conceptual background necessary to design and develop simple database systems. The course stresses on database modeling and design, physical file storage techniques and SQL query language

facilities provided by database management systems. The course also presents some advanced database management concepts like query processing and optimization, transaction processing, concurrency control, recovery and security issues in database management systems.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Explain the core terms, concepts, and tools of relational database management systems (Understanding)
2. Understand Normalization and Design ER-diagrams and corresponding schema diagrams for handling database projects (Creating)
3. Recall and identify the techniques used by a DBMS to process, optimize and execute high level queries. (Remembering)
4. Describe fundamentals of transaction processing system, including ACID properties of a transaction. (Understanding)
5. Illustrate concurrency control & analyze several concurrency control techniques for ensuring serializability, locking, timestamping. (Analysing)
6. Discuss some of the techniques that can be used for database recovery from failures and summarize the control measure for securing databases against a variety of threats. (Understanding)

Module I: Introduction (3 Hours)

Introduction: Introduction to databases, characteristics of the database approach, database users and designers, role of a DBA, advantages of using a DBMS, data models, schemas, instances, DBMS architecture (Three-Schema Architecture), Database systems- Network, Hierarchical, Relational, Data Independence

Module II: Relational Data Model and ER Models (12 Hours)

Relational Model: Domains, Attributes, Tuple and Relation; Super keys Candidate keys and Primary keys for the Relations. Relational Constraints: Domain Constraint, Key Constraint, Integrity Constraint.

Relational Algebra: basic relational algebra operations-SELECT, PROJECT, UNION, INTERSECTION, SET DIFFERENCE, Cartesian PRODUCT, JOIN, Aggregate functions.

Entity Relationship (ER) Model: Entities, Attributes, Relationships. More about Entities and Relationships, E-R Diagram, Conversion of E-R Diagram to Relational Database, Case Study.

Module III: Functional Dependencies and Normalization (10 Hours)

Functional Dependencies, First Normal Form, Second Normal Form, Third Normal Form, Boyce-Codd Normal Form, Multivalued Dependencies.

Module IV: Data Storage, Indexing, Query Processing and Query Optimization (11 Hours)

Overview of physical storage media, Magnetic Disks, RAID, File Organization: Fixed-length records, variable-length records. Organization of records in Files - Heap Files, Sequential File, Hashed Files. Indexing: Types of Single-level Ordered Indexes (Primary Indexes, Clustering Indexes, Secondary Indexes), Multilevel Indexes, Multilevel indexing using B tree and B+ tree, Indexing on multiple keys. Query Processing: Overview of query processing, Algorithms for query processing, Query Optimization

Module V: Transaction Processing and Concurrency Control (14 Hours)

Transaction Processing: Transaction, ACID properties of transaction, transaction states, schedules, serializability, tests for serializability, recoverability, transaction definition in SQL. Concurrency Control: Concurrent execution of transaction, Lock-based techniques for concurrency control, Graph-based protocol, Timestamp based protocol, Deadlock, Deadlock prevention methods, Deadlock detection Deadlock recovery.

Module VI: Recovery and Security (10 Hours)

Recovery system: Types of failure, types of storage, recovery and Atomicity, Log-based recovery, shadow paging, recovery with concurrent transactions, buffer management, logical undo logging, transaction rollback, checkpoints, restart recovery, fuzzy checkpointing.

Security: Security and Integrity-security violations, authorization and views, granting of privileges, security specifications in SQL, encryption, and statistical databases.

Suggested Readings

1. Silberschatz, HF Korth, S Sudarshan, Database System Concepts, Tata- McGraw Hill, 1997.
2. R Elmasri, SB Navathe, Fundamentals of Database Systems, Addisson, Wesley (Third Edition) 2000

CATC0048: THEORY OF COMPUTATION

(4 credits – 60 hours)

Objective

The objective of the Theory of Computation is to introduce and study abstract, mathematical models of computation (such as finite state, pushdown and Turing machines), and to use the abstract machine models to study the ability to solve computational problems. At the complete course students will be able to use regular expressions effectively and appropriately, construct derivations and parse trees, write simple programs for a Turing machine, understand the equivalence of grammars, languages and automata and translate between grammars, languages and automata.

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. Define basic terminology like Deterministic and Non deterministic automata, Pushdown Automata, Parse Tree, Regular Languages, Turing Machines etc. (Remembering)
2. Make use of techniques, components and tools of a typical automated machine and apply it in designing new machines (Applying)
3. Design deterministic and non-deterministic context-free grammars and understand their capabilities and limits. (Creating)
4. Design deterministic and non-deterministic pushdown automata and Turing Machine. (Creating)
5. Demonstrate the understanding of complexity classes and current unsolved problems in theoretical computer science. (Understanding).

Module I Theory of Automata (15 Hours)

Definition of an Automaton, Description of a Finite Automaton, Transition Systems, Properties of Transition Functions, Acceptability of a String by a Finite Automaton, Nondeterministic Finite State Machines, The Equivalence of DFA and NDFA, Mealy and Moore Models, Minimization of Finite Automata.

Module II Formal Languages, Regular Sets and Regular Grammars (15 Hours)

Definition of formal languages, Chomsky Classification of Languages, Languages and Their Relation, Recursive and Recursively Enumerable Sets, Operations on Languages, Languages and Automata; Regular Expressions, Finite Automata and Regular Expressions, Pumping Lemma for Regular Sets, Application of Pumping Lemma, Regular Sets and Regular Grammars.

Module III Context-free Languages (15 Hours)

Context-free Languages and Derivation tree, Ambiguity in Context-free Grammars, Simplification of Context-free Grammars, Normal Forms for Context-free Grammars, Pumping Lemma for Context-free Languages, Decision Algorithms for Context-free Languages.

Module IV Pushdown Automata Turing Machines and Linear Bounded Automata (15 Hours)

Basic Definitions, Acceptance by PDA, Pushdown Automata and Context-free Languages, Parsing and Pushdown Automata; Turing machine Model, Representation of Turing Machine, Language Acceptability by Turing Machines, Design of Turing Machines, Universal Turing Machine and Other Modification, The Model of Linear Bounded Automaton, Turing Machines and Type 0 Grammars, Linear Bounded Automata and Languages, Halting Problem of Turing Machines, NP-Completeness.

Suggested Readings

1. K.L.P. Mishra, N. Chandrasekaran, Theory of Computer Science, BPB Publication, Prentice-Hall of India, Second Edition.
2. H.R. Lewis and C.H.Papadimitriou, Elements of the Theory of Computation, Second Edition, Prentice Hall of India.
3. H.E. Hopcraft and J.D. Ullamn, Introduction to Automata Theory, Languages and Computation, Narosa Publications.
4. J.C. Martin, Introduction to Languages and the Theory of Automata, Tata McGraw-Hill.
2. C.H. Papadimitriou, Computation Complexity, Addison-Wesley.

CAML0049: MACHINE LEARNING

(4-0-0) (4 Credits – 60 Hours)

COURSE/LEARNING OUTCOMES:

1. Learn mathematical principles used in learning algorithms and relate them to learning principles. (Understanding)
2. Construct and classify learning algorithms used in different problems. (Applying)
3. Know what and how to perform pre-processing to make dataset ready for learning algorithms(Analysing)
4. Create learning models and evaluate the effect of it in a given problem domain. (Evaluation)

Module I: (15 hours)

Mathematical Foundations of Machine Learning: Linear Algebra-Linear equations & vector spaces,matrix decomposition: determinant, Eigen values, singular value decomposition, matrix approximation, Calculus: Differentiation & partial differentiation, gradient of matrices, Probability & Distributions: Discrete and Continous probabilities, Gaussian distribution, Continous optimization:Gradient descent, Lagrange Multiplier.

Module II: (10 hours)

Learning: supervised and unsupervised learning,necessary of supervised learning, KNN,regression models,Naive Bayes' classifier, decision trees,random forest classifier, SVM:linear, non-linear.

Module III: (11 hours)

Data preprocessing & Scaling: Different kinds of preprocessing, Data transformations, Scaling: training data & testing data, Types of unsupervised learning, dimensionality reduction, clustering: k-Means, Fuzzy C -Means, DBSCAN, Comparing and evaluating clustering.

Module IV: (13 hours)

Neural Network: Biological to Artificial neurons, Logical computations with neurons, perceptron, MLP & backpropagation, Tuning neural network hyperparameters, vanishing and exploding gradient problems,momentum optimization:AdaGrad, Adam optimization, Regularization: L1 & L2, Convolutional property of neural network.

Module V: (11 hours)

Deep learning: Convolutional Neural Network: AlexNet, GoogleNet, ResNet, RNN: Training a RNN, deep RNN, LSTM cell, Auto encoders: stacked auto encoders, sparse auto encoder.

Suggested readings:

1. Hands-On Machine Learning with Scikit-Learn & TensorFLow. Second edition, Aurelien Geron,2017, O' Reilly Media.
2. Machine Learning-An Algorithmic Perspective, second edition, Stephen marshland,2015, CRC Press.
3. Deep Learning, John D. Kelleher,2019, Massachusetts Institute of Technology(MIT).

CAHC0050: HUMAN COMPUTER INTERACTION (HCI)

(4-0-0) (4 Credits – 60 Hours)

COURSE OUTCOMES:

Upon completion of the course, the student should be able to:

1. Learn the basic physiological, perceptual, and cognitive components of human learning and memory and gain theoretical knowledge of the fundamental aspects of designing and implementing user interfaces (Remembering)

2. Explain the HCI implications for designing various applications such as multimedia/apps/ ecommerce/ e-learning Web sites. (Understanding)
3. Design effective HCI for individuals. (Applying)
4. Analyze the quality of user interface (Analyzing)
5. Assess the importance of user feedback. (Evaluating)
6. Develop meaningful user interface. (Creating)

Module I: Introduction to HCI And History (10 Hours)
What is HCI? Historical evolution of the field. Human brain and computer: The Human sensation and perception–Human Memory – Reasoning and problem solving; The computer and its I/O Devices – Memory – processing and networks; Interaction: Models – frameworks – Ergonomics – styles – elements – interactivity- Paradigms- Problems and challenges.

Module II: Design and Software Process (22 Hours)
Interactive Design basics – process – scenarios – navigation – screen design – Iteration and prototyping. HCI in software process – software life cycle – usability engineering – Prototyping in practice – design rationale. Design rules – principles, standards, guidelines, rules. Design Evaluation Techniques – Experimental evaluation and Empirical Methods: Hypothesis testing, Choosing participants and sample size, Variables: independent and dependent measures, Types of experimental designs, Data analysis.

Module III: Models and Theories (9 Hours)
Cognitive models –Socio-Organizational issues and stake holder requirements –Communication and Collaboration models-Hypertext, Multimedia and WWW. Design Case studies: Multi-Key press Hindi Text Input Method on a Mobile Phone, Employment Information System for unorganized construction workers on a Mobile Phone.

Module IV: Mobile HCI (7 Hours)
Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile
Design, Tools.

Module V: Brain-Computer Interaction (BCI) and Neuroprosthetics/Sensory substitution (12 HOURS)
What is BCI? BCI and brain plasticity-Neuroergonomics and Neurocognitive Engineering-Medical applications of BCI: Neuroprosthetics, Commercial Applications of BCI, Ethical implications of these interfaces, Neuroprosthetics vs. sensory substitution, Most sensory substitution devices compensate for loss of vision: discussion of visual to tactile and visual to auditory devices, Components of sensory substitution devices, Underlying theories and why it works?

Suggested Readings:

1. "Human Computer Interaction", 3rd Edition , Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, 2004, Pearson Education.
2. "Designing the User Interface: Strategies for Effective Human-Computer Interaction", 5th Edition, Shneiderman, Plaisant, Cohen, and Jacobs, 2009, Addison Wesley.
3. "Introduction to Human Factors Engineering", 2nd Edition, Wickens, Lee, Liu, and Gordon-Becker, 2004, Pearson.
4. "Human Computer Interaction", Preece J., Rogers Y., Sharp H., Baniyon D., Holland S. and Carey T., 1994, Addison-Wesley.
5. "Designing the User Interface", B. Shneiderman; 2000, Addison Wesley(Indian Reprint).
6. "Mobile Design and Development", First Edition, Brian Fling, 2009, O'Reilly Media Inc.
7. "Designing Web Interfaces", First Edition, Bill Scott and Theresa Neil, 2009, O'Reilly.

CABI0051: BIOINFORMATICS

(4-0-0) (4 Credits – 60 Hours)

Course Outcomes:
1. Relate the different mathematical principles that are necessary in sequence analysis and searching. (Remembering).
2. Explain the different protein structure and use algorithm models for alignment analysis. (Understanding)

3. Design phylogenetic tree for discovering pattern in sequence analysis. (Creating)
4. Analyze , predict and model protein structure and assess the structures.(Evaluating)

Module I: (16 hours)
Introduction to bioinformatics, opportunity and challenges in bioinformatics, protein sequence, analyzing protein sequences, analyzing DNA sequences, palindromes in DNA sequences, coding DNA sequences, RNA structures and sticky strands, pubmed, Expasy, Assessment of structure prediction, protein engineering.

Module II: (15 hours)
Genome organization, picking out genes in genomes, genome of homosapiens, database indexing, nucleic acid sequence database,genome database, protein sequence database, database of protein families, structures, protein identification resource, sequence alignments and dotplots, sequence similarity quantification, scoring schemes, dynamic programming for optimal pairwise alignment, multiple sequence alignment, editing and publishing alignments.

Module III: (14 hours)
phylogenetic tree, taxonomic relationships, clustering and cladistic methods, ancestral sequences and its reconstruction, evolution and varying rates of evolution, preparing data for phylogenetic tree, BLAST search, building the tree specific to a problem, phylip and open source tools for generating tree, maximum likelihood tree.

Module IV: (15 hours)
Folding and protein stability, sidechains, denaturation in relation to protein stability, coiled-coiled proteins, helical model, structural elements and superposition, mustang, dali, protein structure evolution, SCOP classification, prediction of protein structure and modeling, assessment of structure prediction, secondary structure and prediction, homology modeling and fold recognition. Three dimensional profiles to assess quality of structures.

Suggested readings:
1. Bioinformatics for dummies, second edition, Jean-Michel, Cedric Notredame, 2007, Wiley publishing
2. Introduction to bioinformatics, fourth edition, Arthur M. Lesk,2014, Oxford University Press.

CO 4				H

CADL0052: DEEP LEARNING

(4-0-0) (4 Credits – 60 Hours)

Course Outcomes:
1. Recall the various deep learning related terms, tools, and technologies (Remembering)
2. Compare and contrast the various types of neural networks (Analysing)
3. Test, explore and estimate all the parameters for neural networks. (Evaluating)
4. Illustrate the various deep unsupervised learning techniques for solving specific real-world problems. (Understanding)
5. Experiment how to deploy neural network algorithm to solve real-world problems. (Applying)

Module I: Basics of Deep Learning (14 Hours)
Introduction: Basics of Artificial Intelligence, Machine learning, and Deep learning; History and Capabilities of Deep Learning, Deep Learning primitives – Soft Max Function, Sigmoid, Tanh and ReLU Neurons, Functions and Gradient Descent, Linear/Logistic regression, Vectorizing Logistic regression,
Neural Network: Basic concepts of artificial neurons, single and multi-layer perceptrons, perceptron learning algorithm, perceptron convergence theorem, gradient descent and backpropagation algorithm, the vanishing gradient problem, gradient descent, regularization, dropout

Module II: Types of Neural Networks (18 Hours)
Convolutional Neural Networks (CNN): Introduction to CNN, CNN Architectures, Convolution / pooling layers, Correlation, Filtering, CNN architectures, Detection and Segmentation, Advanced CNNs for computer vision
Advanced Deep Architectures: Recurrent Neural Networks, Long Short-Term Memory Units (LSTM), Gated Recurrent Unit (GRU), Encoder Decoder architectures, Generative Adversarial Networks (GANs)

Module III: (10 Hours)

Deep Unsupervised Learning: Autoencoders (standard, sparse, denoising, contractive, etc), Variational Autoencoders, clustering learning, Adversarial Generative Networks, Learn-from-data model, Autoencoder and DBM Attention and memory models, Maximum Entropy Distributions, Unsupervised learning of visual representations from image patches and locality, Unsupervised Learning of Visual Representations using Videos

Module IV: Deep Learning in Practice (18 Hours)
Deep Learning for Computer Vision: Introduction to convnets, training a convnet on small datasets, using a pretrained convnet, Applying Deep Learning for Object detection, face recognition, and automatic image classification
Deep Learning for Natural Language Processing (NLP): Introduction to NLP, Vector Space Model of Semantics, Word Vector Representations: Continuous Skip-Gram Model, Continuous Bag-of-Words model (CBOW), Glove, Evaluations and Applications in word similarity, analogy reasoning, Named Entity Recognition, Opinion Mining using Recurrent Neural Networks, Parsing and Sentiment Analysis using Recursive Neural Networks, Sentence Classification using Convolutional Neural Networks

Suggested Readings
1. Nielsen, Michael A. *Neural networks and deep learning*. Vol. 25. San Francisco, CA: Determination press, 2015.
2. Goodfellow, Ian, et al. *Deep learning*. Vol. 1. No. 2. Cambridge: MIT press, 2016.
3. Deng, Li, and Yang Liu, eds. *Deep learning in natural language processing*. Springer, 2018.
4. Wani, M. Arif, et al. *Advances in deep learning*. Springer, 2020.

CASC0053: SOFT COMPUTING

(4-0-0) (4 Credits – 60 Hours)

Course/Learning Outcomes
At the end of the course, students would be able to:
1. Identify and describe soft computing techniques and their roles in the development of smart machines. (Remembering and Understanding)
2. Apply fuzzy logic and reasoning to deal with uncertainty and solve various problems. (Applying)
3. Analyze the architecture and algorithms of Neural networks to meet the challenges of soft computing problems. (Analyzing)
4. Analyze genetic algorithms to combinatorial optimization problems. (Analyzing)
5. Evaluate and compare solutions to a given problem using various soft computing approaches. (Evaluating and Creating)
6. Effectively use existing software tools to solve real problems using a soft computing approach. (Applying)

Module I (6 Hours)
Introduction to Soft Computing, Characteristics of Soft Computing, Soft Computing Versus Hard Computing, Soft Computing Constituents, Applications of Soft Computing techniques, Evolutionary Computing, Machine Learning Basics.

Module II (11 Hours)
Fuzzy Logic: Introduction to Fuzzy logic, Fuzzy sets and Crisp sets, Fuzzy sets and membership functions, Operations on Fuzzy sets, Fuzzy relations, Rules, Propositions, Implications and Inferences, Fuzzification and Defuzzification, Fuzzy ogic controller, Fuzzy Expert Systems, Fuzzy Decision Making, Applications of Fuzzy logic.

Module III (15 Hours)
Neural Networks: Biological neurons and its working, Introduction to Artificial Neural Network, Artificial Neural Networks Versus Biological Neural Networks, Activation functions, ANN architectures : McCulloch & Pitts model, Perceptron, ADALINE, MADALINE, Activation functions, Supervised Learning: Introduction, Neuron as a simple computing element, The perceptron, Backpropagation Networks: Architecture, Multilayer Perceptron, Back propagation learning-input layer, Radial Basis Function Networks. The Hopfield Network, Unsupervised Learning Neural Networks: Hebbian Learning, Self-Organizing Computational Maps: Kohonen Network, Applications of ANNs.

Module IV (13 Hours)
Genetic Algorithms: Introduction to Genetic Algorithm (GA), Working Principle, Difference between traditional algorithms and GA, Phases of Genetic Algorithm, Basic GA framework and different GA Architectures, Convergence of GA, Applications of GA

case studies. Introduction to genetic programming-basic concepts.

Module V (15 Hours)
Deep Learning: Basics of Deep Learning, Convolutional Neural Network, Recurrent Neural Network. Matlab/Python Lib: Study of Neural Network Toolbox and fuzzy logic toolbox, Simple implementation of ANN and fuzzy logic.

Suggested Readings

1. R. Rajasekaran and G. A Vijayalakshmi Pai, Neural Networks, Fuzzy Logic, and Genetic Algorithms: Synthesis and Applications, Prentice Hall of India. 2003.
2. Timothy J. Ross, Fuzzy Logic with Engineering Applications, Wiley, 2011.
3. N.P.Padhy, Artificial Intelligence and Intelligent Systems, Oxford University Press. 2005.
4. Simon O. Haykin, Neural Networks and Learning Machines, Pearson, 2009.
5. MATLAB Toolkit Manual.

CADS0054: DATA SCIENCE
(4-0-0) (4 Credits – 60 Hours)

Course/Learning Outcomes:
At the end of this course, students will demonstrate the ability to
1. Understand the basic concepts and technologies related to Data Science. (Understanding)
2. Obtain, clean/process, and transform data and analyze the transformed data using an ethically responsible approach (Applying and Analyzing)
3. Relate which tools and methodologies can be applied to solve data science tasks. (Remembering)
4. Integrate Data Science capabilities into the formation of a situation analysis (Evaluating)
5. Formulate and use appropriate models of data analysis to solve hidden solutions to business-related challenges (Creating)
6. Interpret data findings effectively to any audience, orally, visually, and in written formats. (Understanding)

Module I: Introduction to Data Science, Preprocessing, and Data Visualization (14 Hours)
Introduction to Data Science: Why Learn Data Science, Data Analytics Life Cycle, Types of Data Analysis, Types of Jobs in Data Analytics, Data Science Tools, Fundamentals Areas of Study in Data Science
Data Preprocessing: Introduction to Data Preprocessing, Data Types and Forms, Possible Data Error Types, Various Data Preprocessing Operations - Data Cleaning, Data Integration, Data Transformation, Data Reduction, and Data Discretization
Data Plotting and Visualization: Introduction to Data Visualization, Visual Encoding, Data Visualization Libraries, Basic Data Visualization Tools (Histograms, Bar Charts, Scatter Plots, Line Charts, Area Plots, Pie Charts, Donut Charts); Specialized Data Visualization Tools (Box Plots, Bubble Plots, Violin Plots, Heat Map, Dendogram, Radar Chart, Venn Diagram, 3D Scatter Plots), Advanced Data Visualization Tools (Wordclouds, Chord Diagram, Waffle Charts, Choropleth Map, Bubble Map), Data Visualization Types

Module II: Statistical Data Analysis and Machine Learning (18 Hours)
Statistical Data Analysis: Role of Statistics in Data Science, Kinds of Statistics, Descriptive Statistics (Measures of Frequency, Central Tendency, Dispersion, and Position), Inferential Statistics, Parametric vs Non-Parametric Hypothesis Testing, Probability Theory, Four Perspectives on Probability, Bayesian Probability, Probability Distribution
Machine Learning for Data Science: Overview of Machine Learning, Supervised Machine Learning - Regression Methods (linear, polynomial, and logistic), Classification Methods (KNN Classification, Support Vector Machine (SVM) Classification, and Decision Tree Classification); Unsupervised Machine Learning - Clustering Methods (Fuzzy c-means Clustering and Principle Component Analysis (PCA) Clustering), Association Analysis - Apriori Algorithm and FP-Growth Analysis, Introduction to Reinforcement Learning

Module III: Time-Series Analysis and Deep Learning (12 Hours)

Time-Series Analysis: Overview of Time-Series Analysis, Components of Time-Series, Time-Series Forecasting Models using Stochastic Models (AR, MA, ARMA and ARIMA), Time-Series Forecasting using Support Vector Machines Based Models
Deep Learning for Data Science: Introduction to TensorFlow, Pytorch, Deep Learning Primitives, Convolutional Neural Network (Softmax, ReLU, Sigmoid or Logistic Activation function, and Pooling), TensorFlow and CNN, AutoEncoder (Convolutional Autoencoder and Sparse Autoencoder)

Module IV: Social Media Analytics, Business Analytics, and Big Data Analytics (16 Hours)
Social Media Analytics: Overview of Social Media Analytics, Seven Layers of Social Media Analytics, Social Network Analysis (Link Prediction, Community Detection, and Influence Maximization), Text Analytics/Mining (Text Categorization, Document or Text Summarization, and Sentiment Analysis), Trend Analytics
Business Analytics: An Overview of Business Analytics, The Business Analytics Life Cycle, Basic Tools Used in Business Analytics, Financial Analytics, Market Analytics, Customer Analytics, and Employee Analytics
Big Data Analytics: An Overview of Big Data, Hadoop, Hadoop Distributed File System, Interacting with HDFS from Python Applications, Introduction to Snake, Pig and Spark

Suggested Readings
1. J. Grus, Data Science from Scratch: First Principles with Python, O'Reilly, 2nd Edition, 2019
2. Silberschatz, H. F. Korth, S Sudarshan, Introducing Data Science: Big Data, Machine Learning, and More, Using Python Tools, 1st Edition, Dreamtech, 2016
3. C. Neil, R. Schutt, Doing Data Science: Straight Talk from the Frontline, O'Reilly, 1st Edition, 2019.

CAVS0055: DATA VISUALIZATION FOR DATA SCIENCE

(4-0-0) (4 Credits – 60 Hours)

Course/Learning Outcomes
1. Learn what data visualization is, how it's used, and how computers display information. Also explore different types of visualization and how humans perceive information. (Remembering)
2. Apply principles of design and colour to make visualizations more engaging and effective. (Applying).
3. Learn how to visualize graphs that depict relationships between data items. (Understanding)
4. Designing your own visualization system for large datasets and dashboards. (Creating)
5. Create and interpret the visualization from the data set, and apply techniques from user-interface design to create an effective visualization system. (Creating, Evaluating)

Module I: (12 hours)
Introduction to Data Visualization: Overview of Visualization, Defining data visualization; Visualization workflow: describing data visualization workflow, process in practice; Data representation: chart types: categorical, hierarchical, relational, temporal & spatial.

Module II: (15 hours)
Visualization Tools: 2-D: bar charts, clustered bar charts, dot plots, connected dot plots, pictograms, proportional shape charts, bubble charts, radar charts, polar charts, Range chart, Box-and-whisker plots, univariate scatter plots, histograms word cloud, pie chart, waffle chart, stacked bar chart, back-to-back bar chart, all relevant 2-D charts. 3-D: surfaces, contours, hidden surfaces, pm3d coloring, 3D mapping; multi-dimensional data visualization; manifold visualization; graph data visualization; Annotation; Word Clouds, Seaborn and Regression Plots.

Module III: (12 hours)
Visualization of Numerical Data**:** Data, Mapping, Charts, Glyphs, Parallel Coordinates, Stacked Graphs, Tufte's Design Rules.

Module IV: (10 hours)
Visualization of Non-Numerical Data**:** Graphs and Networks**,** Embedding Planar Graphs**,** Graph Visualization**,** Creating Maps and Visualizing Geospatial Data, Introduction to Folium, Maps with Markers, Choropleth Maps, Tree Maps**,** Principal Component Analysis**,** Multidimensional Scaling**,** Packing.

Module V: (11 hours)

The Visualization Dashboard: Introduction, Visualization Systems, the Information Visualization, Database Visualization, Visualization System Design.

Suggested Readings

1. Andy Kirk, Data Visualization A Handbook for Data Driven Design, Sage Publications, 2016
2. Philipp K. Janert, Gnuplot in Action, Understanding Data with Graphs, Manning Publications, 2010.

CABD0056: BIG DATA MANAGEMENT

(4-0-0) (4 Credits – 60 Hours)

COURSE / LEARNIG OUTCOMES:

1. List the components of Hadoop and Hadoop Ecosystem. (Remembering)
2. Understanding of big data basics and problems over big data. (Understanding)
3. Identify Big Data and its Business Implications. (Applying)
4. Make use of Hadoop and MapReduce programming to tackle big data problems. (Applying)
5. Demonstrate Machine Learning Techniques using R/Python. (Understanding)

Module I (12 Hours)

Introduction to Big Data and Hadoop Types of Digital Data: Introduction to Big Data, Big Data Analytics, History of Hadoop, Apache Hadoop, Analysing Data with Unix tools, Analysing Data with Hadoop, Hadoop Streaming, Hadoop Ecosystem, IBM Big Data Strategy, Introduction to Infosphere Big, Insights and Big Sheets.

Module II (12 Hours)

HDFS (Hadoop Distributed File System): The Design of HDFS, HDFS Concepts, Command Line Interface, Hadoop file system interfaces, Data flow, Data Ingest with Flume and Scoop and Hadoop archives, Hadoop I/O: Compression, Serialization, Avro and File-Based Data structures.

Module III (10 Hours)

Map Reduce: Anatomy of a Map Reduce Job Run, Failures, Job Scheduling, Shuffle and Sort, Task Execution, Map Reduce Types and Formats, Map Reduce Features.

Module IV (14 Hours)

Hadoop Ecosystem: Pig: Introduction to PIG, Execution Modes of Pig, Comparison of Pig with Databases, Grunt, Pig Latin, User Defined Functions, Data Processing operators. Hive: Hive Shell, Hive Services, Hive Metastore, Comparison with Traditional Databases, HiveQL, Tables, Querying Data and User Defined Functions. HBase : HBasics, Concepts, Clients, Example, HBase Versus RDBMS.

Module V (12 Hours)

Machine Learning: Introduction, Supervised Learning, Unsupervised Learning, Collaborative Filtering. Introduction to Big Data Analytics with BigR.

Suggested Readings

1. Hadoop: The Definitive Guide, Third Edition, Tom White, 2012, O'reily Media.
2. Big Data Analytics, Seema Acharya, Subhasini Chellappan, 2015, Wiley.
3. Machine Learning (in Python and R), First Edition, J. P. Mueller, L. Massaron, 2016, Wiley.

CAWA0057: WEB ANALYTICS AND DEVELOPMENT

(4-0-0) (4 Credits – 60 Hours)

Course Outcomes:

1. Recall the various Web Analytics--related terms, tools, and technologies (Remembering)
2. Illustrate the various web data capturing procedures and the various important web metrics (Understanding)
3. Experiment how to deploy web intelligence to improve the outcomes of marketing or business plan. (Applying)
4. Compare and contrast the various web analytics tools (Analysing)
5. Analyze, test, and judge results based on search analytics, competitive intelligence analytics and Google analytics. (Analyzing, Evaluating)

Module I: Basic Concepts of web Analytics and Web Data Collection (14 Hours)

Introduction: Web Analytics – brief history, evolution, importance and need; advantages and limitations of web analytics, site references, Basic Terms - keywords and key phrases, onsite web, offsite web, visit characterization terms, content characterization terms, conversion metrics; Web analytics platform

Data Collection: Clickstream Data - Web logs, Web Beacons, JavaScript tags, Packet Sniffing; Outcomes Data: E-commerce, Lead generation, Brand/Advocacy and Support; Research data: Mindset, Organizational structure, Timing; Competitive Data: Panel-Based measurement, ISP-based measurement, Search Engine data.

Module II: Web Data Capturing and Web Metrics (16 Hours)

Capturing data: Web logs, data capture, Type and size of data, Innovation, Integration, selecting optimal web analytic tool, Understanding click stream data quality, identifying unique page definition, Using cookies, Link coding issues

Web Metrics: Common metrics: Hits, Page views, Visits, Unique visitors, Unique page views, Bounce, Bounce rate, Page/visit, Average time on site, New visits; Optimization (e-commerce, non-ecommerce sites): Improving bounce rates, optimizing adwords campaigns; Real time report, Audience report, Traffic source report, Custom campaigns, Content report, Google analytics, Introduction to KPI, characteristics, Need for KPI, Perspective of KPI, Uses of KPI.

Module III: Search Analytics and Qualitative Analysis of Web Data (12 Hours)

Search Analytics: Performing Internal Search Site Analytics, Search engine optimization, Measuring SEO Efforts, Analyzing Pay per Click effectiveness,

Qualitative Analysis: Essence of customer eccentricity, Heuristic evaluations, Site Visits: Conducting a site visit, Benefits of site visits; Surveys - Website surveys, Post-visit surveys, creating and running a survey, Benefits of surveys .

Module IV: Web Analytics Tools, Competitive Intelligence and Google Analytics (18 Hours)

Web Analytics tools: Click Stream Analysis, A/B testing, Online Surveys

Competitive Intelligence (CI) analysis: CI data sources, Toolbar data, Panel data, ISP data, Search engine data, Hybrid data, Website traffic analysis: Comparing long term traffic trends, Analyzing competitive site overlap and opportunities.

Google Analytics: Brief introduction and working, Adwords, Benchmarking, Categories of traffic: Organic traffic, Paid traffic; Google website optimizer, Implementation technology, Limitations, Performance concerns, Privacy issues.

Suggested Readings

1. Kaushik, Avinash. Web Analytics: An Hour a Day. United States, Wiley, 2007.
2. Clifton B., Advanced Web Metrics with Google Analytics, Wiley Publishing, Inc.2nd ed
3. Kaushik A., Web Analytics 2.0, The Art of Online Accountability and Science of Customer Centricity, Wiley Publishing, Inc. 1st ed.

CASI0058: SENSOR NETWORK AND INTERNET AND INTERNET OF THINGS

(3 Credits – 45 Hours)

Objective

This course will introduce the students to the Internet of Things(IoT) and basic structure of communication protocols in sensor networks. The course is designed to build up basic understanding of how to set up an application specific IoT network with

better orientation and representation of sensor nodes.

COURSE/LEARNING OUTCOMES:

CO1: Utilize IoT concepts, hardware knowledge, and device platforms like Arduino, Raspberry Pi, and WSNs to design and develop effective networks, addressing real-world challenges.**(Applying)**

CO2: Assess sensor protocols and network architectures to optimize communication efficiency and evaluate the suitability of different protocols for specific IoT applications. (**Analyzing**)

CO3: Critically evaluate the reliability, scalability, and security of IoT systems, and make informed decisions on protocol selection and energy preservation techniques. (**Evaluating**)

CO4: Integrate knowledge and skills to design, test, and deploy complete IoT systems, demonstrating proficiency in prototyping, programming, and data analysis for domain-specific applications. **(Creating)**

Module I: Introduction to IOT (10 Hours)

Definitions and Characteristics of IoT, Historical Evolution of IoT: Predecessors of IoT-Wireless Sensor Networks, Machine-to-Machine Communications, IoT versus M2M; Impact of IOT in various industries, IoT Hardware Technologies - Microcontrollers, Sensors, Actuators, RFID; Types of sensors and actuators; IoT Device Platforms - Arduino, Raspberry Pi, IOT Reference Architecture: Main Design Objectives of IOT, Layers of IoT Reference Architecture, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views; IoT Data Management and Compute Stack, Edge, Fog, and Cloud computing. Emerging Trends and Technologies, IOT value chain.

Module II: IoT Communication Model and Protocols (10 hours)

Communication Models: Request-Response, Publisher-Subscriber, Push-Pull, Exclusive Pair; Key protocols Key Protocols in IoT: Physical and Data Link Layer Protocols-IEEE 802.11 (Wi-Fi), IEEE 802.15.4, ZigBee, RFID, Bluetooth and Bluetooth Low Energy (BLE), Z-Wave, LoRa and LoRaWAN; Network Layer Protocols- IPv4 and IPv6, RPL, 6LoWPAN; Transport Layer Protocols-TCP, UDP; Application Layer Protocols: MQTT, CoAP, HTTP/HTTPS, WebSockets, AMQP, DDS, XMPP

Security Challenges in IoT Communication: Encryption and Authentication Techniques- Symmetric and asymmetric protocols, authentication protocol- Digital Signatures, Secure Communication Protocols- MQTT with TLS/SSL, CoAP with DTLS, HTTPS, AMQP with SASL, AMQP with SASL.

Module III: IoT Development with Arduino and Raspberry Pi (12 Hours)

IOT with Arduino: Overview of Arduino, Hands-on Experience with Arduino (Firmware development & RTOS)Setting up Arduino IDE and development environment, General Purpose I/O (GPIO) programming with Arduino, Interfacing sensors with Arduino, Serial communication interfaces: RS-232/485, I2C, SPI

IoT with Raspberry PI: Overview of Raspberry Pi, Setting up Raspberry PI SD Card, Raspberry PI booting up & Initialization; General Purpose I/O(GPIO), Serial Communication Interfaces: RS-232/485, Synchronous Peripheral Interfaces: I2C, SPI; Sensors Interfacing with Raspberry PI Domain-specific applications of IoT: Home automation, Industry applications, Surveillance, applications, Other IoT applications.

Module IV. **Wireless Sensor Networks & Protocols (13 Hours)**

Key definitions of sensor networks, Advantages of sensor Networks, Wireless Sensor Networks Applications, Unique constraints and challenges, Driving Applications.

Single node architecture: hardware and software components of a sensor node, Energy Consumption of Sensor Nodes, WSN Network architecture: Design Principles for WSNs- Gateway Concepts, Need for gateway, data relaying and aggregation strategies, Classification of sensor nodes in WSN based on behaviour, network topologies in WSN, Personal area networks (PANs), hidden node and exposed node problem, Topologies of PANs, MANETs, WANETs. WSN Operating Systems-Operating System Design Issues - Examples of Operating Systems – Introduction to Tiny OS, Mate , MagnetOS , MANTIS etc.

Overview of sensor network protocols: Sensor network protocols : Physical, MAC and routing/ Network layer protocols, node discovery protocols, multi-hop and cluster based protocols, Fundamentals of 802.15.4, Bluetooth, BLE (Bluetooth low energy), UWB.

Specialized features: Energy preservation and efficiency; security challenges; fault tolerance, Issues related to Localization, connectivity and topology, Sensor deployment mechanisms; coverage issues; sensor Web; sensor Grid, Open issues for future research, and Enabling technologies in wireless sensor network.

Suggested Readings

ECRM0042 RESEARCH METHODOLOGY AND INTELLECTUAL PROPERTY RIGHT (L-T-P: 2-0-0)

(2 credits-30 hours)

Objective:

This course is designed to help students to identify research problems in various fields. It aims at giving potential researchers the knowledge of effectively analysing and interpreting results and presenting the findings to the scientific and technological community of the world. This course also aims at motivating students to bring about their creative ideas for innovation and establishing research impact in the global for a through intellectual ownership.

Course Outcomes

1. Find research problems in various fields (Remembering).
2. Illustrate the concepts related to patents, trademark and copyright (Understanding).
3. Apply scientific investigations to find solutions for research problems of interest (Applying).
4. Develop technical writing and presentation skills (Applying).
5. Analyze the available literature and compile literature review for knowing the state of the art in the areas of interest (Analyzing/ Creating).
6. Formulate a research problem for a given engineering domain (Creating)

Module I (12 Hours)

Meaning, sources, scope and objective of a research problem; Good research problem criteria and characteristics, errors in selecting a research problem; Research problem solutions– approaches for investigation; Approaches to effective literature studies; Data collection, analysis, interpretation and instrumentation; Plagiarism and ethical practices.

Module II (10 Hours)

Effective writing; Research proposal development and its format; Different report types.

Module III (8 Hours)

a. Nature of intellectual property: Patent, design, trade and copyright; Patenting and development process; Patent grant under PCT and procedure; Geographical indications.
b. Patent rights: Administration of patent systems, scope, information and databases, technology licensing.
c. New developments and case studies.

Suggested Readings

1. Goddard Wayne, Melville Stuart, Research Methodology: An Introduction For Science And Technology Students, Juta & Co. Ltd.
2. Kumar Ranjit, Research Methodology A Step By Step Guide For Beginners, SAGE publications Inc.
3. Halbert J. Debora, Resisting Intellectual Property, CRC press.
4. Menell S. Peter, Lemley A. Mark, Merges P. Robert, Intellectual Property In New Technological Age, Clause 8 Publishing.
5. C.R. Kothari, Research Methodology Methods and Techniques, New Age International

EGEH0111: ENGLISH (2 Credits- 30 hours) (L-T-P: 2-0-0)

Objective: *The student will acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.*

Module I: Vocabulary Building (6 hours)

1. The concept of Word Formation
2. Root words from foreign languages and their use in English
3. Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives.
4. Synonyms, antonyms, and standard abbreviations.

Module II: Basic Writing Skills (6 hours)

a) Sentence Structures
b) Use of phrases and clauses in sentences
c) Importance of proper punctuation
d) Creating coherence
e) Organizing principles of paragraphs in documents
f) Techniques for writing precisely

Module III: Identifying Common Errors in Writing (5 hours)

Subject-verb agreement, Noun-pronoun agreement, Misplaced modifiers, Articles, Prepositions, Redundancies, Clichés

Module IV: Nature and Style of sensible Writing (6 hours)

Describing, Defining, Classifying, providing examples or evidence, Writing introduction and conclusion

Module V: Writing Practices (7 hours)

Comprehension, Précis Writing, Essay Writing

Suggested Readings

1. *Practical English Usage*. Michael Swan. OUP. 1995.
2. *Remedial English Grammar*. F.T. Wood. Macmillan.2007
3. *On Writing Well.* William Zinsser. Harper Resource Book. 2001
4. *Study Writing*. Liz Hamp-Lyons and Ben Heasly. Cambridge University Press. 2006.

LABORATORY COURSES

CAOS6012: OPERATING SYSTEMS LAB

(2 credits)

COURSE / LEARNING OUTCOMES

At the end of the Lab experiments students will be able to:

1. Recall and label the basic commands in Linux. (Remembering)
2. Classify system calls, library functions calls to write on standard output device. (Understanding)
3. Experiment with shell programs. (Applying)
4. Construct programs on process scheduling, page replacement algorithms. (Creating)
5. Evaluate free space management using programs. (Evaluating)

Module1

Introduction to Linux

File System (Types of file, Filename, parent-child relationship, absolute and relative pathname, file and directory permissions) Introduction to vi editor (start vi, the three modes, create, save and open a text file, positioning by character, positioning by line, positioning by word, positioning in the word, positioning on a numbered line, inserting text, deleting text), Simple Linux commands, Shell Programming

Module2:

Semaphores, Shared Memory and Message Queues: Semaphore (Binary semaphore, Linux Semaphore Facilities, Using Semaphores), Shared Memory, Message Queues

Module3:

Processes and Signals : Process Structure, Starting a new Process, Replacing a Process Image, Duplicating a Process Image, Waiting for a process, Zombie Processes, Terminating a Process, Signals (Signal handling, Sending signals, Signal interface, Signals sets).

Module4:

POSIX Threads: Creating threads, Simultaneous execution of threads, Synchronization and Critical sections, Synchronization with Semaphores, Synchronization with Mutexes, Thread Attributes, Cancelling a thread.

Inter-Process Communication: Pipes, Process Pipes, and The Pipe Call, Parent and Child processes, FIFOs (Accessing a FIFO, opening a FIFO, Reading and Writing FIFO).

Mapping of COs with Syllabus:

Course Outcomes	Module1	Module2	Module3	Module4
CO1	H	M		
CO2		H	M	
CO3		M	H	L
CO4	L	M	H	
CO5		L	M	H

CAPJ6014: PROGRAMMING THROUGH JAVA LAB

(2 credits)

COURSE / LEARNING OUTCOMES

At the end of this course students will be able to:

1. List various GUI and thus will be able to select the suitable GUI to resolve a given problem. (Remembering)
2. Distinguish among the various utility class like vector, stack, Hash Table, String Tokenizer, etc. (Understanding)
3. Apply their knowledge to solve practical problems like reading from a dataset, writing into a file and develop games using JAVA program. (Applying)
4. Evaluate the performance of various swing GUI components and design various applications using Swings depending on the domain and requirement. (Evaluating)

At the end of the experiments, students will be able to

1. Program to illustrate class, objects and constructors
2. Program to implement overloading, overriding, polymorphism etc
3. Program to implement the usage of packages
4. Program to create our own exception
5. Program for handling file operation

6. Implement the concept of thread programming
7. Program to implement Generic class and generic methods
8. Program for event-driven paradigm in Java
9. Program that uses Menu driven Application
10. Program to implement JDBC in GUI and Console Application
11. Socket programming to implement communications
12. Develop a multi-threaded GUI application of your choice.

CAIT6017: INTERNET TECHNOLOGY AND APPLICATIONS LAB

(2 credits)

COURSE / LEARNING OUTCOMES
At the end of this course students will be able to:

1. Utilise and experiment with mark-up languages such as XHTML and style sheets such as CSS to design static web pages. (Applying)
2. Design and validate a website and can also identify the faults in the design. (Analysing)
3. Create and develop a web application using various available frameworks and scripting languages such as JavaScript and PHP. (Creating)
4. Validate and examine a dynamic web application using database handling and various other services and deploy them after proper validation (Evaluating and creating)

Module I

a. XHTML: Components of XHTML; Elements of XHTML (Headers, Linking, Images, Special Characters, Lists, Tables, Forms, Framesets)
b. Cascading Style Sheets: Inline Styles; Embedded Style; Conflicting Style; Linking External Styles; W3C CSS Validation Service; Use of CSS (Positioning Elements, Backgrounds, Text flow)
c. Web Site Design Considerations: Using Logical Design: Planning your website, drawing a map, using a top-down approach, flexibility, other web design metaphors. Creating templates. Creating a Compatible Design: Designing for different color depths, resolutions, different browser considerations, accommodating limited bandwidth. Validating your work.

Module II

a. Web servers: HTTP Request Types; System Architecture of a Web server; Client-side Scripting versus Server-side Scripting; Accessing Web servers; Apache Web Server. b) Databases: Introduction to each one of the following: SQL, MYSQL, DBI
b. Scripting Languages: JavaScript: Operators, Data Types, Control Structures, Functions, Arrays, String Manipulation. VBScript Introduction to Perl and CGI (Common Gateway Interface).
c. PHP: Introduction to PHP; Data Types; Control Structures; Functions; Strings; Arrays; Querying Web Databases using PHP; Writing to Web Databases; Errors, Debugging and Deployment.

Suggested Readings

1. Deitel and Deitel, Internet and World Wide Web: How to Program, 2nd Edition, Prentice Hall of India Pvt. Ltd. , New Delhi
2. Hugh E. Williams and David Lane, PHP and MySQL, 2nd Edition, O'Reilly, Shroff Publishers and Distributors Pvt. Ltd.
3. Internet Complete, 2nd Edition, BPB Publications. , New Delhi
4. Douglas E. Comer, The Internet Book: Everything you need to know about Computer Networking and how the Internet works, 3rd Edition, Prentice Hall of India Pvt. Ltd., New Delhi

CADA6033: DATA STRUCTURES AND ALGORITHM LAB

(2 Credits)

Objectives

1. To introduce first level topics covering basics in algorithms and data structures.
2. To enable students to choose appropriate data structures, understand the ADT/libraries, and use of it to design algorithms for a specific problem.
3. To understand the necessary mathematical abstraction to solve problems.
4. To apply important algorithmic design paradigms and methods of analysis.

COURSE/LEARNING OUTCOMES

At the end of the course, students would be able to:

1. Get introduced to existing algorithms and how to analyse them using graph notation. (Remembering)
2. Demonstrate the existing standard algorithms. (Understanding)
3. Apply existing algorithms in developing different applications. (Applying)
4. Analyse the time complexity of standard algorithms. (Analysing and Evaluating)
5. Create efficient applications by using the right algorithm depending on input pattern and size. (Creating).

List of Programs

1. Implement the linear search and binary search algorithm to search for a given element e from a list of n numbers. Analyze the algorithms.
2. Prove that the Bubble Sort algorithm has time complexity of $O(n^2)$ by showing the graph notation.
3. Prove that the Selection Sort algorithm has time complexity of $O(n^2)$ by showing the graph notation.
4. Implement the Insertion Sort algorithm and analyse the algorithm using the graph notation.
5. Implement the Divide-and-Conquer technique and analyze the algorithm showing the graph notation.
6. Implement the Greedy Programming technique and analyze the algorithm showing graph notation.
7. Implement the Dynamic Programming technique and analyze the algorithm showing graph notation.
8. Design a small file compressor and decompressor by using Huffman coding technique.

Suggested Readings

1. Alfred V Aho, John E Hopcroft and Jeffrey D Ullman, The Design and Analysis of Computer Algorithms. Addision Wesley, 2001. (Modules I, II, III and IV)
2. Alfred V Aho, John E Hopcroft and Jeffrey D Ullman, Data Structures and Algorithms.. Addision Wesley, 2000. (Modules I and V)
3. Thomas H Corman, Charles E Leiserson, Ronald L Rivest and Clifford Stein, Introduction to Algorithms, 2nd PHI, 2004
4. V Manbar, Introduction to Algorithms - A Creative Approach, Addision Wesley, 2000.
5. Ellis Harwitz, Sartaz Sahani, Fundamentals of Computer Algorithms.. ,Computer Science Press, 2000.
6. Peter Linz, An Introduction to Formal Languages and Automata. Narosa Publishing House 2001

CACC6034: DATA COMMUNICATION AND COMPUTER NETWORKS LAB

(2 Credits)

Objective

Network programming involves writing programs that communicate with other programs across a computer network. Most operating systems provide pre-compiled programs that communicate across a network. This course envisages providing an introduction to such networking programming, whereby students will learn to write their own network programs. At the end of this course in network programming, the students are expected to have elementary ideas about the socket programming and their usage in setting up TCP and UDP communications.

COURSE / LEARNING OUTCOMES

At the end of the Lab experiments students will be able to:

1. List various network related commands. They will get introduced to socket programming in TCP and UDP environments. (Remembering)

2. Illustrate the functions used in TCP and UDP client server communication. (Understanding)
3. Apply their knowledge of socket programming to perform various types of communications, address conversions and so on. (Applying)
4. Analyze the efficiency of TCP and UDP client –server communication. (Analysing)
5. Design and evaluate code for conducting chat or communication between client and server in UDP environment. (Creating, Evaluating)

Module I

a. Introduction to Network Programming: Introduction to Sockets; Address Structure – IPv4, IPv6; Value-Result Arguments; Byte Order Functions; Byte Manipulation Functions; inet_aton, inet_addr, inet_ntoa, inet_pton, inet_ntop, readn, written, readline, isfdtype functions
b. Elementary TCP Sockets: Introduction; socket, connect, bind, listen, accept, fork, exec, close, getsockname, getpeername functions; TCP Client Server example; signal, sigaction, wait, waitpid functions; Connection Termination; SIGPIPE signal
c. i/O Multiplexing: I/O models; select function; Batch input; shutdown, pselect, poll functions; Example – TCP Echo Server.
d. Socket Options: getsockopt, setsockopt, fcult, ioclt functions; Socket status – generic socket options
e. Elementary UDP Sockets: Introduction; recvfrom, sendto functions; UDP Examples; connect function with UDP; UDP socket receive buffer; Example – UDP Echo Server

Module II

a. Elementary Name and Address Conversion: Introduction; gethostbyname function; RES_USE_INET6 resolver option; gethostbyaddr, uname, gethostname, getservbyname, getservbyport functions.
b. IPv4 and IPv6 Interoperability: Introduction; IPv4 Client - IPv6 Server, IPv6 Client – IPv4Server; IPv6 Address Testing Macros, IPV6_ADDRFORM.
c. Advanced Name and Address Conversions: Introduction; getaddrinfo, gai_strerror, freeaddrinfo, getnameinfo functions; Reentrant functions.
d. Daemon Processes: Introduction; syslogd daemon; syslog, daemon_init functions; inetd daemon; daemon_inetd function.

Suggested Readings

1. W Richard Stevens, UNIX Network Programming – Volume I, Second Edition, Prentice Hall of India Pvt. Ltd., 2002
2. Douglas E Comer, Internetworking with TCP/IP: Principles, Protocols, and Architectures Volume I, Fourth Edition, Prentice Hall of India Pvt. Ltd.
3. Douglas E Comer, David L Stevens, Internetworking with TCP/IP: Design, Implementation, and Internals – Volume II, Third Edition, Prentice Hall of India Pvt. Ltd.
4. Douglas E Comer, David L Stevens, Internetworking with TCP/IP: Client Server Programming and Applications – Volume III, Second Edition, Prentice Hall of India Pvt. Ltd.

CADM6035: ADVANCED DATABASE MANAGEMENT SYSTEMS LAB

(2 Credits)

Objectives:

1. Learn to create and use a database
2. Be familiarized with a query language.
3. Have hands on experience on DDL Commands
4. Have a good understanding of DML Commands and DCL commands
5. Familiarize advanced SQL queries.
6. Be Exposed to different applications

COURSE / LEARNING OUTCOMES

At the end of the Lab experiments students will be able to:

1. Identify basic SQL operations and fetch results with respect to specific requirement. (Remembering/Evaluating)
2. Describe PL/SQL program structure like conditional constructs, iterative construct, and exception handling. (Understanding)
3. Use different program structures and apply them to solve problems. (Applying)

4. Apply and analyze PL/SQL procedures, functions, packages, triggers to practice assignments. (Analysing)
5. Create applications using Oracle forms and Oracle report. (Creating)

Module I: Query handling with SQL in Oracle

a. Creation, altering and dropping of tables and inserting rows into a table (use of constraints while creating tables) examples using SELECT command.Queries using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSECT, Constraints.
b. Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and dropping of Views.Queries implementing various joins (left,right,full). Implementation of complex queries: nested queries,sub queries.
c. Queries using Conversion functions (to_char, to_number and to_date), string functions (Concatenation, lpad, rpad, ltrim, rtrim, lower, upper, initcap, length, substr and instr), date functions

Module II: PL/SQL Programming

a. Language fundamentals - PL/SQL block structure, character set, identifiers, literals, delimiters, comments, data types in PL/SQL
b. Program Structure - Conditional constructs, Iterative constructs, Exception handling
c. SQL in PL/SQL- DML and Transaction Management (Commit and Rollback), Data Retrieval, Cursors (Explicit and Implicit), error handling with Cursors
b. d) Procedures, Functions, packages, Triggers- creating and managing functions, procedures, packages and triggers
a. Built-in functions - String functions (ascii, chr, concat, greatest, instr, least, length, lower, lpad, ltrim, replace, rpad, rtrim, substr, trim, upper) Numeric functions (bitand, ceil, exp, floor, ln, mod, power, round, sign, sqrt, trunk) , Date and time functions (add_months, current_date, current_timestamp, last_day, months_between, next_day, round, sysdate, systimestamp, trunk) Conversion functions (to_number, to_char, cast, to_date, to_timestamp)

Module II: Forms Builder and Reports Builder

Components of application development in Oracle Forms (Form modules, menus, PL/SQL libraries, Object libraries, Database objects), Features of the Report Builder, defining a data model for a report, specifying the layout of the report using the Oracle Reports Wizard.

Suggested Readings

1. Ivan Bayross, Commercial Application Development Using Oracle Developer 2000 Forms 6i, BPB Publications, 2nd Revised Edition, 2005
2. John Day, Craig Van Slyke, Starting out with Oracle, Dreamtech Press, 2004
3. Steven Feuerstein, Oracle PL/SQL Programming, O'Reilly Publications, 3rd Edition.

CAML6036: MACHINE LEARNING LAB

(0-0-2) (2 Credits – 30 Hours)

COURSE/LEARNING OUTCOMES:

1. Explain the implementation procedures for the machine learning algorithms. (Understanding)
2. Design Java/Python programs for various Learning algorithms. (Creating)
3. Apply appropriate data sets to the Machine Learning algorithms. (Applying)
4. Identify and apply Machine Learning algorithms to solve real world problems (Applying)

Experiments:

1. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
2. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
3. Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.
4. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.

5. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.
6. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
7. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
8. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
9. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

Suggested Readings:

1. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow: Concepts, Tools, and Techniques to Build Intelligent Systems – 2nd edition, Aurelien Geron, O'Reilly.
2. Building Machine Learning Systems with Python, Willi Richert and Luis Pedro Coelho, Packt Publishing.

CAMN6038: MINOR PROJECT – MCA (5 CREDITS)

***Objective**: The objective of the Minor project is to consolidate the concepts and practices that were learned during the course and to serve as a record of competence. It should enable a student to apply concretely in a small package the concepts gained from Software Engineering.*

COURSE / LEARNING OUTCOMES

At the end of this Minor Project students will be able to:

CO1: Recall and distinguish client end programming from a server end programming, web based application from a smart phone based application, approach to an application based project from a research based project. (Remembering, Understanding)

CO2: Identify different API and development environment tools for building the project, research terminologies for research-based projects. (Applying)

CO3: Apply the knowledge of programming to develop application specific but not limited to Web, Android, IoT etc., for research-based projects the different algorithm design techniques. (Applying)

CO4: Analyse the advantage and limitation of different development languages, APIs, platforms, algorithms. (Analysing)

CO5: Create applications to meet real time needs (Creating)

CO6: Judge the efficiency of the project using various evaluation parameters and testing methodologies, efficiency of the algorithm for research-based complexity measure. (Evaluating)

E-resource for learning

LaTeX, www.spoken-tutorial.org

CAMP6039: MAJOR PROJECT – MCA

(18 Credits)

Objective

The primary objective of the Major Project is to enable students to have a thorough understanding of the theoretical principles learnt in earlier five semesters through a prolonged practical experience. The major project is oriented towards developing requisite skills, knowledge of latest technologies and an entrepreneurial attitude in a student which are needed to make an effective start as a computer/IT professional.

COURSE / LEARNING OUTCOMES

At the end of Major Project students will be able to:

CO1: Apply programming knowledge and requirement analysis to develop solutions for Web, Android, IoT, etc. Applying algorithm design, classification, and clustering techniques for research projects, including detailed project planning and resource allocation. (**Applying**)

CO2: Analyze the pros and cons of various development languages, APIs, platforms, and algorithms. Conduct feasibility studies and risk analysis to inform tool and technique selection. (**Analyzing**)

CO3: Create applications to meet real-time needs with comprehensive project plans that include requirement analysis, risk management, and feasibility assessments. Design novel or hybrid research techniques for research projects. (**Creating**)

CO4: Evaluate project efficiency using evaluation parameters, testing methodologies, and continuous requirement validation. Assess algorithm complexity for research projects and ensure deliverables meet objectives through risk assessment and feasibility study. (**Evaluating**)

VALUE ADDED COURSES

CARP6051: ROBOTIC PROCESS AUTOMATION

(30 Hours)

COURSE/ LEARNING OUTCOMES

1. Explain the RPA Developer enablement journey and an introduce to the role. (Understanding)
2. Explain the three constructs that are fundamental in any software process: variables, arguments and control flow. (Understanding)
3. Address what selectors are, the UI Explorer, the Property Explorer, Selector types, where to use them and how to fine-tune Selectors when encountering difficult situations. (Remembering)
4. Creating UI input and output actions. (Creating)
5. Learn about the many email tasks that can be automated to help you save valuable time. Cover an essential aspect of development, identifying and solving bugs in your projects and learn about how to get automation production-ready: how to anticipate, detect and resolve errors in your workflows. (Applying)

Module I: (8 Hours)

RPA Overview: Overview of Robotic Process Automation (RPA), Benefits of RPA in industries and business processes, Introduction to the RPA Developer Role, Variables, Data Types and Control Flow, Version Control, Data Manipulation, Excel and Data Tables, Selectors.

Module II: (22 Hours)

Bot Building: UI Automation, Introduction to Logging in Studio, IMDB Movie Rating, Contact Details, RPA Challenge.

Amazon Data Scraping, Recording Demo.

Calculate Client Hash, PDF Automation, Error and Exception Handling, Debugging.

Email Automation, Connecting Robot to Orchestrator, Publishing workflow to Orchestrator, Orchestrator Demos.

Suggested Readings

1. The Robotic Process Automation Handbook: A Guide to Implementing RPA Systems by Tom Taulli, Publisher: Apress
2. Learning Robotic Process Automation: Create Software Robots and Automate Business Processes with the Leading RPA Tool – UiPath by Alok Mani Tripathi, Publisher: Packt Publishing; 1st edition
3. Robotic Process Automation Projects: Build Real-world RPA Solutions Using UiPath and Automation Anywhere by Arun Kumar Asokan and Nandan Mullakara, Publisher: Packt Publishing Limited

CABC6052: BLOCKCHAIN

(30 Hours)

COURSE/ LEARNING OUTCOMES

1. To understand what Blockchain is and why it is used. (Remembering)
2. To be able to explain the different components involved within Blockchain. (Understanding)
3. To know when and why you may want to use Blockchain within your environment. (Remembering)

Module I: (7 Hours)

Introduction to Blockchain Technology and its Importance; Evolution of the Blockchain Technology,

Module II: (7 Hours)

Elements of a Blockchain, Basic Crypto Primitives – Cryptographic Hash, Digital Signature

Module III: (16 Hours)

Blockchain Consensus I – Permissionless Models, Blockchain Consensus II – Permissioned Models, Smart Contract Hands On I – Ethereum Smart Contracts (Permissionless Model), Blockchain Applications

Suggested Readings

1. Mastering Blockchain: A deep dive into distributed ledgers, consensus protocols, smart contracts, DApps, cryptocurrencies, Ethereum, and more, 3rd Edition, Imran Bashir, Packt Publishing, 2020,
2. Hyperledger Tutorials - https://www.hyperledger.org/use/tutorials

CAAW6053: ADVANCED WEB APPLICATION DEVELOPMENT TECHNIQUES

(30 Hours)

COURSE/ LEARNING OUTCOMES

1. Explain the JavaScript and an introduce to the role in client server architecture.(Understanding)
2. Explain the importance of data validation and understand the process of data sanitization. (Understanding)
3. Address the threat handling mechanism while development. (Remembering)
4. Creating User interface, service design pattern, and remote connection. (Creating)
5. Learn about the recent trend in web development architecture based on micro service design pattern. Cover an overview of recent trend in management of load balancing and service scalability. (Applying)

Module I: (18 Hours)

JavaScript Overview: Form events, Client Side Validation (Length check, Numeric field check, Alphanumeric field check, Empty Field, special character, password format, All field entry check), Server Side validation (Data sanitization), SQL Injection, Overview of session management, Cross site scripting, URL validation, Importance of Asynchronous JavaScript and XML (Ajax), loading page content using AJAX, Database connection, Back end data update using AJAX.

Module II: (12 Hours)

Micro Service Applicability: Micro Service design pattern, Overview of Service Oriented Architecture, Principles of Web Service, SOAP / RESTful Web Service, Overview of Containerization: Kubernetes with Docker.

Suggested Readings

1. Beginning JavaScript with DOM Scripting and Ajax – Russ Ferguson and Christian Heilmann, Publisher: Apress ; 2nd edition
2. Ajax programming for the absolute beginner, Jerry Lee Ford, Jr. Publisher: Course Technology, 1st Edition
3. Kubernetes Microservices with Docker by Deepak Vohra, Publisher: Apress, 1st Edition

CASL0200: SERVICE LEARNING

(2 Credits)

Objective

The objective of this course is to understanding of the theory and practice of community university engagement. The students provide an insight on the theme of Social Responsibility of Higher Education Institution and to introduce community based participatory research and the tools to facilitate engaged research.

COURSE/LEARNING OUTCOMES

At the end of this course, students will demonstrate the ability to

1. Define and explain the understanding of Community-University Engagement (CUE) and outline CUE in relation to higher education policy in India. (Remembering)
2. Analyze and identify the social responsibility of higher education institutions to facilitate engaged teaching, research & service. (Analyzing)
3. Determine the various methods and tools on Community-Based Participatory Research (CBPR). (Evaluating)
4. Evaluate how Higher education institutions can undertake community engagement post COVID-19. (Evaluating)
5. Design a plan for the engagement of students with the community through engaged teaching, research and service. (Creating)

Module I: Community University Engagement (CUE) (7 Hours)

History and Role of Community University Engagement (CUE) in Indian Higher Education Policy, Fostering Social Responsibility by Higher Education, Current status and possible interventions, Recent initiatives related to CUE, Principles of community engagement and its principles, Forms of community engagement

Module II: Social Responsibility of HEIs. (8 Hours)

Understanding Social Responsibility of HEIs – Engaged Teaching, Research & Service, Community Engaged teaching and research, community-based participatory research, practice-based learning, Community service, Reforming Existing and developing new courses, Engaged service on educating students to become active citizens, Effective Methods and Tools for Engaging Community in Research

Module III: Community Based Participatory Research (CBPR) (8 Hours)

Understanding Community Based Participatory Research (CBPR), Engaged research, Knowledge and research, Development and use of CBPR, Building Partnerships in Research, data collection and Analysis Multi modal, Knowledge sharing and Mobilisation, Practical challenges, littered dignity, Solutions for sustainable livelihoods, Capacities of panchayats and small nagarpalikas for disaster preparedness

Module IV: Service Learning-based Assignments (7 Hours)

Carrying out group assignments on service-learning for community university engagement

Sample use cases:

Digitally literate the unemployed youth/women/rural area-based students to train them to learn the basics of computer and digital transactions

Identify an area of need in the nearby community and design a project related to it addressing their social well-being.

Build awareness in the community about various social and ethical issues in Information Technology.

Launch digital campaign to raise awareness around – Personal hygiene and cleanliness, metal health, environment, food and nutrition.

Suggested Readings

1. W. James Jacob, Stewart E. Sutin, John C. Weidman, John L. Yeager, “Community Engagement in Higher Education: Policy Reforms and Practice”, Springer, 2015.
2. David Coghlan, Mary Brydon-Miller, “The SAGE Encyclopedia of Action Research”, SAGE, 2014.
3. Kronick, Robert F., “Emerging Perspectives on Community Schools and the Engaged University”, IGI Global,2019
4. Tami L. Moore, “Community-University Engagement: A Process for Building Democratic Communities”, John Wiley & Sons, 2014.
5. Marshall Welch, “Engaging Higher Education: Purpose, Platforms, and Programs for Community Engagement”, Stylus Publishing, 2016.
6. Barbara Jacoby, “Building Partnerships for Service-Learning”, John Wiley & Sons, 2003.
7. Becca Berkey, Emily A. Eddins, Patrick M. Green, Cara Meixner, “Reconceptualizing Faculty Development in Service-Learning/Community Engagement: Exploring Intersections, Frameworks, and Models of Practice”, Stylus Publishing, 2018.

AUDIT COURSES

EGCS0110: COMMUNICATION SKILLS (Audit Course)

***Objective**: The objective of this audit course is to prepare students to be effective in their career in the corporate world where they will use their professional expertise. This course enables students*

- *To understand the difference between hard skills and soft skills*
- *To learn the importance of communication skills as part of the soft skills,*
- *To be familiar with the various features of effective communication, which includes verbal, non-verbal, written communication and body language.*

COURSE/LEARNING OUTCOMES

At the end of this course students will be able to:

CO 1: *Recognise* the difference between hard and soft skills
CO 2: *Understand* the importance of communication skills
CO 3: *Analyse* features of effective communication
CO 4: *Apply* the soft skills in the corporate world

CMES0023: ENTREPRENEURSHIP (AUDIT COURSE)

***Objective**: The objective of the course is to introduce students to the concept of entrepreneurship, entrepreneurial skills and their use in a variety of situations. The students are examined on the personal skills to help them define entrepreneurial opportunity and are taught to develop a criteria to judge a situation to develop into a venture, plan and prepare business plans considering the market, technical, financial and legal requirements.*
The various topics that are generally covered in the course are:

- *Meaning of entrepreneur and entrepreneurship and its relation with problem - solving, characteristics of an entrepreneur, factors influencing entrepreneurship*
- *Identify and explain entrepreneurial opportunities, generating a list of entrepreneurial opportunities in a number of commercial and non-commercial situations*
- *Preliminary Project appraisal methods - Selecting the right opportunity, market*
- *Survey and research, techno-economic feasibility, financial feasibility- sources of finance – identify various sources of capital, ways to access the capital. Legal environment – identify the types of the regulatory systems and predict their effects on the creation of the entrepreneurial venture, role of government and government agencies.*
- *Creating the business model – business plan preparation.*
- *Recognize and assess the expected life of a venture, break-even analysis, recognize the common causes of failure of business ventures, how to deal with seven business crisis- planning for survival and growth.*

SEMESTER IV				
Core Course (Theory)	CMEM0060	Entrepreneurship Management and E-Commerce	4-0-0	1248
Project Work	CMDS6007	Dissertation – II	6-0-0	1256
Specialisation:	CMMD0061	Modern Accounting	4-0-0	1249
Accounting and Taxation(Theory)	CMAV0062	Advanced Accounting	4-0-0	1251
Specialisation:	CMFI063	Financial Institution Management	4-0-0	1252
Finance and Investment(Theory)	CMPN0064	Portfolio Management	4-0-0	1252
Specialisation:	CMIL0065	Management of Industrial Laws	4-0-0	1254
Management(Theory)	CMSM0066	Supply Chain Management	4-0-0	1254
	CMSP0067	Security Analysis And Portfolio Management	5-0-0	1252
Total Credits			**18**	
Total Programme Credits			**80**	

Note: Mandatory Course EDPC0201: Indian Polity and Constitution

DEPARTMENT OF COMMERCE

MASTER OF COMMERCE

(Specialisations in Accounting and Taxation, Finance and Investment and Management)

PROGRAMME OUTCOMES (POs)

PO 1: **Critical Thinking**: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

PO 2: **Effective Communicatio**n: Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.

PO 3: **Social Interaction:** Elicit views of others, mediate disagreements and help reach conclusions in group settings.

PO 4: **Ethical and responsible citizen:** Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them. : Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO 5: **Environment and Sustainability:** Understand the issues of environmental contexts and sustainable development.

PO 6: **Leadership, Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes

PROGRAMME SPECIFIC OUTCOMES (PSOs)

PSO 1: **Knowledge of Commerce:** To accustom the students with conventional as well as contemporary areas in the discipline of Commerce. To inculcate the knowledge of business and the techniques of managing the business with special focus on accounting and taxation, finance and investment and management

PSO 2: **Research, Innovation and Advancements:** To serve industry and society with contemporary knowledge and skills in the area of Commerce and Management and the ability to create new knowledge which can be added on to the existing knowledge on emerging fields and to pursue advanced education in the domain of Commerce

PSO 3: **Entrepreneurial Ability:** To enable them to start their own business by enhancing the horizon of knowledge in various field of commerce through teamwork, effective communication, ethical decision-making ability

LIST OF COURSES IN MCOM

COURSES
1.1 Organizational Theory & Behavior
1.2 Business Statistics & Decisions
1.3 Financial Statement Analysis
1.4 Managerial Economics
1.5 Cost & Management Accounting
2.1 Research Methodology iIn Commerce
2.2 Business Environment
2.3 Business Law
2.4 Corporate Finance
2.5 Principles of Marketing
2.6 International Business
3.1 Strategic Human Resource Management
3.2 Consumer Behaviour
3.3 Dissertation – I
COURSES
3.4 (A) Corporate Tax Management
3.5 (A) Accounting Theory and Financial Reporting
3.4 (F) Advance Corporate Finance
3.5 (F) Investment Banking
3.4 (M) International Marketing
3.5 (M) Business Ethics and Corporate Governance

4.1 Entrepreneurship Management and E-Commerce
4.2 Dissertation – II
4.3 (A) Modern Accounting
4.3 (A) Advanced Accounting
4.4 (F) Financial Institution Management
4.4 (F) Portfolio Management
4.4 (M) Management of Industrial Laws
4.4 (M) Supply Chain Management

DETAILED SYLLABUS

CMOT0041: ORGANISATIONAL THEORY AND BEHAVIOUR (4 CREDITS– 60 HOURS)

***Objective**: The objective of this paper is to provide the students an insight into the principles of organizational behaviour and its relation to other activities in an organization, and to introduce the students to the techniques of organisational behaviour used as a management tool.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO 1: Define the concepts of Organisational Behaviour in the global context (Remembering)
CO 2: Explain the Cognitive processes of organizational behavior and its application in workplace (Understanding)
CO 3: Develop models of group dynamics, leadership theories, power & politics in terms of its application in workplace (Applying)
CO 4: Analyse the importance of communication and decision making techniques for improving productivity of employees (Analysing)
CO 5: Determine and develop models of Organizational culture, work stress and Conflict & negotiation in various workplace settings (Evaluating and Creating)

Module I: Introduction to Organizational Behaviour (8 Hours)

Defining Organisational Behaviour, historical background: the Hawthorne Studies; early development, conceptual development; the nature of people; theoretical frameworks; explaining and predicting behaviour; OB in the global context.

Module II: Cognitive processes of organizational behavior (12 Hours)

Nature and importance of Perception and attribution; perception and individual decision making; values, nature and dimensions of attitudes and job satisfaction; personality; aptitude; interests; learning; intelligence, motivation - theories of motivation.

Module III: Group Dynamics (14 Hours)

a) Understanding group dynamics, types of groups, group goals, group cohesiveness, group pressure and norms, teamwork; group structure - formal leadership, roles and norms; group member resources - abilities, personality, characteristics, stages in group development.
b) Leadership Theories - trait, behavioural, contingency, attributional, charismatic, transactional vs. transformational.
c) Power and politics: Contrasting leadership and power; power in groups; power tactics; politics-power in action.

Module IV: Communication and Decision Making (12 Hours)

Role of communication; Communication media and technology, communication networks - formal vs. informal; barriers to effective communication; communication skills; feedback information; persuasion in communication; active listening; participative decision-making techniques; groups vs. the individual; groupthink and group shift; the decision-making process

Module V: Organizational culture and Work Stress (14 Hours)

a) Definition of organizational culture; cultural typologies; organizational culture vs. national culture; functions of culture; formation of cultures; potential sources of stress - environmental factors, organizational factors; individual differences - perception, job experience, social support, locus of control, hostility; Stress – the emergence of stress, causes of stress; stress consequences - physiological symptoms, psychological symptoms, behavioural symptoms, stress management strategies : individual approaches, organizational approaches.
b) Conflict and negotiation: Definition of conflict; the conflict process; conflict in intergroup relations; creating functional conflicts; bargaining strategies; role of personality traits on negotiation; third party negotiations; intergroup relations and factors affecting intergroup relations.

Suggested Readings

1. Luthans Fred, Organisational Behaviour, 10th Edition, McGraw Hill India, 2005
2. Robbins Stephen P, Organizational Behaviour, 11th Edition, Prentice Hall of India Pvt. Ltd., New Delhi, 2004
3. Gilmer, Industrial Psychology, McGraw Hill.
4. Ghiselle and Brown, Personnel and Industrial Psychology, McGraw Hill.
5. Davis Keith, Human Relations at Work, Tata McGraw Hill.
6. Leavitt, Managerial Psychology, University of Chicago Press.
7. Bass B M , Leadership Psychology and Organizational Behaviour, Harper International.
8. Litterer, Analysis of Organizations, John Wiley.

CMBD0042: BUSINESS STATISTICS AND DECISIONS (4 CREDITS-60 HOURS)

***Objective**: The objective of this course is to familiarize students with the applications of statistical techniques in business decisions. This purpose of this course is to provide students with statistical tools needed by managers. The course emphasizes understanding the process associated with statistical decisions, defining and formulating problems, Analysing the data, and using the results in decision making.*

COURSE/LEARNING OUTCOMES

After learning this course, the students will be able to:

CO 1: Find the techniques for decision-making under uncertainty.(Remembering)
CO 2: Demonstrate understanding of statistical thinking and data analysis. (Understanding)
CO 3: Apply methods of Correlation, Regression and also use Time based data. (Applying)
CO 4: Analyse from theoretical and practical perspectives, decision making concepts and processes in business settings. (Analysing)
CO 5: Estimate different kinds of Statistical methods like Mean, Median, Mode, Standard Deviation, Index Number. (Evaluating)
CO 6: Combine research concepts and methods in a business setting. (Creating)

Part A: BUSINESS STATISTICS

Module I: Uni-variate Analysis (15 hours)

Measures of Central Tendency including Arithmetic mean, Geometric mean and Harmonic mean: properties and applications; Mode and Median. Partition values - quartiles, deciles, and percentiles. Measures of Variation: absolute and relative. Range, quartile deviation and mean deviation; Variance and Standard deviation: calculation and properties.

Module II: Bi-variate Analysis (10 hours)

Simple Linear Correlation Analysis: Meaning, and measurement. Karl Pearson's coefficient and Spearman's rank correlation. Simple Linear Regression Analysis: Regression equations and estimation. Relationship between correlation and regression coefficients.

Module III: Time-based Data: Index Numbers and Time Series Analysis(15 hours)

Meaning and uses of index numbers; Construction of index numbers: Aggregative and average of relatives – simple and weighted, Tests of adequacy of index numbers, Construction of consumer price indices.

Components of time series; additive and multiplicative models; Trend analysis: Finding trend by moving average method and Fitting of linear trend line using principle of least squares.

Part B: BUSINESS DECISION

Module IV (10 hours)

Course introduction. Introduction to Evidence Based Management. Introduction to measurement theory and statistical inference. Simple decision tools; Rational choice, limited rationality and biases; Modern test theory. Rapid evidence assessment. Academic Survey design and testing.

Module V (10 hours)

Multiple-person decision making. Exploratory data analysis; Forecasting; roadmaps Optimisation; Big data, inference and dimension reduction. Forecasting, roadmaps.

Suggested Readings

1. Sharma J. K., Business Statistics, Pearson Education.
2. Gupta S.C., Fundamentals of Statistics, Himalaya Publishing House.
3. Gupta S.P. and Gupta A, Elementary Statistics, Sultan Chand and Sons, New Delhi.
4. Levin R and Rubin David S, Statistics for Management, Prentice Hall of India, New Delhi.
5. Spiegel M.R., Theory and Problems of Statistics, Schaum's Outlines Series, McGraw Hill Publishing

CMFY0043: FINANCIAL STATEMENT ANALYSIS (4 credits – 60 hours)

***Objective**: The course introduces the knowledge of decision makers information about a business enterprise for use in decision-making and to evaluate the economic situation of the firm and predicting its future course based on the financial statements.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO 1: Define the role of standard setters and regulators in Financial Reporting (Remembering).
CO 2: Illustrate the information provided by Balance Sheet, Income Statement and Cash Flow Statement (Understanding)
CO 3: Identify and compare cash flow classifications of operating, investing and financing activities (Applying)
CO 4: Analysing the link between Income statement, Balance Sheet and Cash Flow Statement (Analysing)
CO 5: Criticise rations used to analyse a company's liquidity, profitability, solvency and efficiency (Evaluating)
CO 6: Build a strong base on financial statement analysis (Creating)

Module I: Introduction to Financial Statement Analysis (10 hours)

Scope of Financial Statement Analysis; Financial Statements and other information sources; Financial Statement Analysis Framework; Classification of Business Activities; Financial Reporting Standards; Regulatory Authorities; International Financial Reporting Standards Framework (IFRS); Comparison of IFRS with other Reporting Standards.

Module II: Analysis of Income Statement (15 hours)

Components and format of Income Statement; Revenue Recognition; Expense Recognition; Non- recurring and Non-operating items; Earnings Per Share(EPS) : Simple Vs complex capital structure, Basic EPS, Diluted EPS; Analysis of Income Statement: Common size analysis, Income Statement Ratios.Case Study I

Module III: Balance Sheet (10 hours)

Components and format of Balance Sheet; Measurement Bases of Assets and Liabilities; Equity: Components, Statement of Changes in Shareholders Equity; Uses and Analysis of Balance Sheet: Common size analysis, Balance Sheet Ratios.Case Study II

Module IV: Cash Flow Statement (15 hours)

Components and format of Cash Flow Statement; Linkages and Preparation: Cash Flow Statement with Income Statement and Balance Sheet, Preparation of Cash Flow Statement, Conversion from Indirect to Direct method; Cash Flow Statement Analysis: Evaluation of Sources and Uses of Cash, Common size analysis, Free Cash Flow to Firm and Free Cash Flow to Equity, Cash Flow Ratios.Case Study III

Module V: Financial Statement Analysis Techniques (10 hours)

Financial Analysis Process; Analysis tools and techniques; Common Ratios: Activity Ratios, Liquidity Ratios, Solvency Ratios, Profitability Ratios; Integrated Financial Ratio Analysis.Case Study IV

Suggested Readings

1. Thomas R. Robinson and Elaine Henry: International Financial Statement Analysis, Wiley.
2. Charles H. Gibson:Financial Statement Analysis, Cengage.
3. Subramanyam K R and Wild John J. :Financial Statement Analysis, McGraw Hill.

CMMG0044: MANAGERIAL ECONOMICS (4 CREDITS-60 HOURS)

***Objective**: The objective of the course is to acquaint students with the basic principles of micro and macroeconomics for developing the understanding of theory of the firm, markets and the macro environment. This will help them in managerial decision making processes.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO 1: Understand the scope of managerial economics.
CO 2: State the difference between demand and supply.
CO 3: Outline the determinants of supply and estimate elasticity of supply.
CO 4: Summarize the concept of production function and relate it with economies and diseconomies of scale.
CO 5: Explain the various kinds of production functions.
CO 6: Estimate cost of production of firms.
CO 7: Summarize and evaluate fiscal policy and monetary policy to control inflation.
CO 8: Describe Balance of Payments and its various components.
CO 9: Outline various Open macro-economic concepts

Module I: Managerial Economics (10 Hours)

Introduction to Managerial Economics; Economic factors influencing decisions, Functions Role and Responsibilities of Managerial Economist; Principles in Managerial decision analysis; Micro-Macro Economics, Paradox of Micro Economics, Distinction between Micro and Macro Economics.

Module II: Demand Analysis (10 Hours)

Theories in Demand, Derivation of demand, types, Environment influencing demand; Elasticity of Demand; Advertising or promotional Elasticity; Demand forecasting ; Demand forecasting for new products, Demand Estimation for consumer durables and non-consumer durables.

Module III: Production And Cost Analysis (15 Hours)

Production Function; Law of variable proportions, Production with two variable inputs; Cost Analysis: concept, importance, types – Real opportunity, Money, Fixed, variable, Direct, indirect, Explicit, implicit, past, feature, controllable and uncontrollable, Escapable, inescapable, urgent, potable cost, Replacement and Historical cost, Total Average and Marginal cost in short Run – and Long Run curve; Revenue - Concepts, definition, types-Total, Average, Marginal and relationship with AR and MR

Module IV: Market Structure (13 Hours)

Concept, meaning and classification of Market; Perfect competition-features and price determination; Monopoly – definition, features, types and price determination; Monopolistic competition-meaning, concept, types, price determination and defects; Pricing - types, cost pulls, going rate, Intuitive, Imitative, Marginal cost, Pioneering, Transfer pricing; Price discrimination – Definition, Concept, meaning, types, conditions, Dumping and socio – economic consideration in pricing; Firm objectives, staff, sales and growth Maximization.

Module V: Business Cycle (13 Hours)

Business cycle–cobweb, Hick's Samuelson Theories of Trade cycle; Measures to control Business Cycle; Inflation; Deflation; Economic effects on production distribution and employment, remedies demand full v/s cost push Inflation; Monetary and fiscal policies objectives, role and impact on economic development, Concept of sustainable development, consumption and its inclusive growth.

Suggested Readings

CMAG0045: COST AND MANAGEMENT ACCOUNTING (4 CREDITS-60 HOURS)

Objectives:

- *To understand the different concepts of cost, costing and cost accounting and their practical application in real world scenarios.*

- *To provide in-depth knowledge of the detailed procedure and documentation involved in cost ascertainment systems.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO1: Define the meaning of cost, costing and cost accounting. (Remembering)
CO2: Illustrate the application of management accounting. (Understanding)
CO3: Identify the detailed procedure and documentation involved in the cost ascertainment system. (Applying)
CO4: Compare profit maximization and wealth maximization as an objective to financial management. (Analysing)
CO5: Interpret the effective techniques for inventory control. (Evaluating)
CO6: Estimate cost of production under different situations. (Creating)

Module I: Introduction to Cost and Management Accounting (10 Hours)

Concepts of Costs; Classifications and Elements of Cost; Cost Centre and Cost Unit; Methods and Techniques of Costing; Installation of a Costing System.

Module II: Management Accounting (10 Hours)

Tools and Techniques of Management Accounting; Relationship of Cost Accounting, Financial Accounting, Management Accounting and Financial Management; Conflicts in Profit Vs Value Maximisation Principle; Role of Management Accountant in Decision Making.

Module III: Material Cost (10 Hours)

Materials Control – Concept and Techniques; Stock Verification; Methods of Pricing of Material: FIFO, LIFO, Simple Average, Weighted Average; Inventory Management: Techniques of fixing of minimum, maximum and reorder levels, Economic Order Quantity, ABC Analysis ; Stock Verification and Perpetual Inventory.

Module IV: Activity Based Costing (Abc) And Cost Records (10 Hours)

ABC Vs Traditional Costing; Uses and Limitations; Cost Ledgers – Integrated Accounts and Non- Integrated Accounts; Reconciliation of Cost and Financial Accounts.

Module V: Costing Systems (20 Hours)

Unit and Output Costing; Job Costing: Job Cost Cards, Collecting Direct Costs; Batch Costing: Features and Applications; Contract Costing: Features, Distinction between Job and Contract Costing, Contract Accounts, Accounting for Material, Accounting for Plant Used in a Contract; Process Costing: Features, Applications and Types of Process Costing; Joint Products, By-Products; Service Costing: Features and Applications; Unit Costing and Multiple Costing.

Suggested Readings

1. Arora, M. N., “Cost and Management Accounting”, Vikash Publishing House, New Delhi.
2. Zad, N. S., “ Cost and Management Accounting”, Taxman, New Delhi.
3. Aggarwal, P., “Cost and Management Accounting”, Bharat Law House, New Delhi.
4. Banarjee, H., “Cost and Management Accounting”, Prentice Hall India Pvt, Ltd, New Delhi.

CMRC0046: RESEARCH METHODOLOGY IN COMMERCE (4 CREDITS-60 HOURS)

***Objective**: This course is designed to provide students with the necessary skills and knowledge to determine the information necessary to address an identified research problem (basic or applied) and, using this understanding, develop and use an actionable research proposal. In this process, the students will gain an understanding of relevant approaches and elements of undertaking a research enquiry specifically to provide insights to solving a relevant problem.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO1: Define and tell why research and its methodology are important. (Remembering)
CO2: Explain the use of methodology in understanding the process of research. (Understanding)
CO3: Identify the sources of data and apply various data collecting techniques. (Applying)

CO4: Classify, analyse and draw inferences from Data. (Analysing)
CO5: Justify the use of various methods in evaluating data. (Evaluating)
CO6: Design methodology specific to the study under consideration. (Creating)

Module I: Introduction to research (10 Hours)

Concept, objectives, types of research, approaches to research-qualitative and quantitative research, case study research, research methodology.

Module II Research Design (10 hours)

Defining and developing a Research Problem, how to approach. Types of research and research design.

Module III Survey design & Measurement (20 hours)

Survey design & Measurement: Survey Design- Variables, design of research instruments and data preparation - Validity & Reliability, Best Practices.
Measurement & Scaling Types, Sampling – sample size and techniques.

Module IV Research Analytics (15 hours)

Research Analytics: Hypotheses testing, Correlation and Regression overview and intro to SPSS, MS-Excel, Factor analysis, Cluster Analysis, MS-Excel

Module V Research Report writing(15 hours)

Best practices, References and Bibliography, Ethics in Research.

1. Kothari C.R , Research Methodology: Methods and Techniques, New Age International,
2. Srivastava, S. C. : Foundation of Social Research and Economics Techniques, Himalaya Publishing House, 1990.
3. Sharma H.D. and Mukherji S. P: Research Methods in Economics and Business, New York : The Macmillan Company, 1992.

CMBE0047: BUSINESS ENVIRONMENT (3 CREDITS– 45 HOURS)

***Objective**: To apply relevant knowledge, skills and exercise professional judgement in understanding the macro environment in which a business organisation operates. The course would also make the students capable of analysing and understanding policies of the government implemented from time to time and assess their impact on business.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:
CO1: Define economic systems in depth (Remembering)
CO2: Outline how an entity operates in a business environment (Understanding)
CO3: Identify the role of Public and Private sector in the business environment (Applying)
CO4: Examine the trade environment in details (Analysing)
CO5: Explain the impacts of Government policy on the economic environment (Evaluating)
CO6: Elaborate the various trade blocs and the role of WTO (Creating)

Module I: Business Environment (9 classes)

Concept, Components and importance of Indian Business Environment; Types of Business Environment-Cultural, social, political, technological, economic and legal environment; scanning techniques of environmental forecasting.

Module II: Economic trends (9 hours)

Economic reforms in India –Liberalization, privatization and globalization; Competitive Strength of Indian industry; Impact of liberalization policy on different sectors; Foreign Investments policy in India.

Module III: Multinational Corporations (8 classes)

Multinational corporations and their participation in India; strategies of multinational corporations;competitive strengths policies and performance.

Module IV: Business Ethics and Social Responsibilities (9 classes)

Business ethics and social responsibilities; relationship between business and society; Corporate power social accountability; Ethical issues and values in business; Corporate Social policies - issues and challenges; Ecological and environmental issues.

Module V: Economic Development of North Eastern Region (10 classes)

Special package for economic development of the north eastern region; DONER and its role in economic development, infrastructure and industry; North East Industrial Policy- promotional measures for cross-border trade, Role of NEC and NEDFI. Problems and prospects of the industry in Assam, Brief study of the tea industry, paper industry, food processing industry, silk industry and bell metal industry; tourism industry.

Suggested Readings

1. Wheelen, Concepts of Strategic Management and Business policy, Pearson Education, New Delhi.
2. Islam Swabera & Kharkongor; Business Environment, Taxman's Publication, New Delhi.
3. Misra S.K., Puri V.K.; Indian Economy, Himalaya Publishing House, Mumbai.
4. Deepashree, Indian Economy, Tata McGraw Hill, New Delhi.
5. Dutta Rnddar and Sundaram KPM , S. Chand & Co. Ltd., New Delhi.
6. Agarwal A.N., Indian Economy, New Delhi.
7. Kazhmi Azhar, Business Policy,
8. Gupta, Liberalisation - its impact on Indian Economy, Macmillan.

CMEM0060: ENTREPRENEURSHIP MANAGEMENT AND E-COMMERCE (4 CREDITS- 60 HOURS)

***Objective**: The students develop and can systematically apply an entrepreneurial way of thinking that will allow them to identify and create business opportunities that may be commercialized successfully.*

COURSE/LEARNING OUTCOMES

CO1: Define entrepreneurship, its features and ability to discern distinct entrepreneurial traits (Remembering)
CO2: Illustrate the parameters to assess opportunities and constraints for new business ideas (Understanding)
CO3: Demonstrate the systematic process to select and screen a business idea(Understanding)
CO4: Choose the entrepreneurship as a career objective (Applying)
CO5: Analysing the legal framework to set up new ventures (Analysing)
CO6: Find the meaning and Concept of E-Commerce; Business Model for E Commerce (Remembering)
CO7: Discuss the entrepreneurial prospects in e-commerce (Creative)

Module I (15 Hours) Entrepreneurship Development Perspective

a) Entrepreneurship: Definition, Concept, Growth and role. The Entrepreneur : Types, characteristics, theories of entrepreneurial class, Urges and importance of Entrepreneurship Stimulates; Seed Beds of Entrepreneurship, Influencing Factors; Problems(Operational and Non Operational) and Obstacles. Entrepreneurial Management. Role of socio economic environment.

b) Skills for a New Class of Entrepreneurs; The Ideal Entrepreneurs; The Entrepreneurship Audit; Identification of opportunities by an Entrepreneur; The steps to identify the project/ ventures; Process of converting business opportunities into reality; Feasibility Report and analysis; Process of setting up a small scale industry/unit.

Module II (15 Hours) Creation Entrepreneurial Venture

Promotion of a venture, External Environment Analysis; Economic, Social, Technological and competition; Legal Framework for establishing and fund raising Venture Capital: Sources and Documents required, SWOC Analysis.

Module III (15 Hours) Promotion and Development of Entrepreneurship

Exports and entrepreneurs. Balanced Regional Development and Entrepreneurs, relevant Acts for Entrepreneurs (An overview only); Foreign Exchange and Entrepreneurs; Micro and small enterprises; Recent Initiatives taken by the government to revitalize the Entrepreneurship. NPSD – National Policy for Skill Development and Entrepreneurship 2015, Institutions in aid of Entrepreneurship Development – The National institute for Entrepreneurship and small business development, District Industry Centre (DIC), National Alliance of young Entrepreneurs.

Module IV (15 Hours)

a) Introduction to E-commerce: Meaning and Concept of E-Commerce; Business Model for E Commerce; Sales and Marketing Cycle; Features of E Commerce; Element of E-Commerce; Benefits and Limitations of E-Commerce; Types of E-Commerce

System; B2B, B2C, C2C, C2B, B2G andG2C.

b) Electronic Payment systems : Features of an ideal electronic payment system; Types of an Electronic Payment System, Credit Cards, Debit Cards, Smart Cards, E-Money, E Check and Electronic fund transfer (EFT). Need of security in E Commerce; Essential security requirements for safe electronic payments; Security Schemes for an Electronic Payment Systems, Encryption, Digital Signature, Security Certificates; internet security Protocol, SSL, HTTP,SET.

Suggested Readings

SPECIALISATION: ACCOUNTING AND TAXATION

CMMD0061: MODERN ACCOUNTING (4 CREDITS-60 HOURS)

***Objectives**:*

- *To provide knowledge about the various concepts of accounting.*
- *To learn the application of various accounting concepts.*
- *To categorize the key areas of modern accounting.*

COURSE/LEARNING OUTCOMES

At the end of the course the students will be able to:

CO1: Define the concept of modern accounting. (Remembering)
CO2: Compare various systems of modern accounting. (Understanding)
CO3: Apply the knowledge of environmental accounting. (Applying)
CO4: Analyse behavioural accounting. (Analysing)
CO5: Assess the challenges in social accounting. (Evaluating)
CO6: Adapt the thought of forensic accounting. (Creating)

Module I: Introduction to Modern Accounting (10 Hours)

Various concepts of modern accounting: inflation accounting, environmental accounting, social accounting, forensic accounting and behavioural accounting; its application, process and its scope.

Module II: Inflation Accounting (10 Hours)

Meaning; techniques of inflation accounting; determination of value of assets and liabilities under inflation accounting; accounts preparation under inflation accounting.

Module III: Social and Environmental Accounting (10 Hours)

Meaning; purpose of social accounting; scope & objectives of social accounting; benefits & challenges of social accounting; accounting under social accounting, Meaning; functions of environmental accounting; valuation process under environmental accounting, methods of evaluation under environmental accounting; accounts preparation under environmental accounting.

Module IV: Forensic Accounting (10 Hours)

Meaning;branches of forensic accounting; activities under forensic accounting; procedure of forensic accounting; stages of forensic accounting; application and consequences of forensic accounting.

Module V: Behavioural Accounting (10 Hours)

Meaning; process of behavioural accounting; application of behavioural accounting; techniques of behavioural accounting; influence of accounting information on behaviour.

Module VI:
Definition and objectives of HRA, Evolution and historical development, Importance and relevance in modern business, Methods of Human Resource Valuation- Cost-based methods (historical cost, replacement cost), Economic value methods (present value of future earnings, opportunity cost) Behavioral approaches to valuation, Human Capital Reporting Standards and Guidelines Global standards (e.g., International Accounting Standards - IAS) Reporting guidelines for human capital

Suggested Readings

1. Lal, Jawahar, Accounting Theory and Practice, Himalaya Publishing House, New Delhi
2. Pedneault, Stephen, Forensic Accounting and Fraud Investigation for Non–Experts, John Wiley & Sons; 3rd edition , New Delhi.
3. Pahuja, Shuchi, Environmental Accounting & Reporting: Theory, Law & Empirical Evidence, New Century Publications, New Delhi.
4. Hellmann, Andreas, Behavioural Accounting, Routledge; 1 edition, New Delhi.
5. Rao, P.M., Corporate Social Accounting and Reporting, Deep & Deep Publications Pvt.ltd , Delhi.

CMAV0062: ADVANCED ACCOUNTING (4 Credits- 60 hours)

***Objective**: The objective of this course is to provide advanced knowledge in the field of accounting. It stresses on specialised accounting processes followed in specific organisations. This course also gives insight into various modern concepts of Accounting.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO1: Define the recent concepts of accounting (Remembering)
CO2: Explain the various modes of liquidation of companies (Understanding))
CO3: Compare the accounting techniques followed under general and special processes and determine insurance claims from loss of profit and stock (Analysing and Applying)
CO4: Construct financial statements of insurance and banking companies (Creating)

Module I: Conceptual Framework (10 credits)
Capital Maintenance Adjustments, Recognition of the elements of Financial Statements, Concept of Capital and Capital Maintenance, GAAP and Accounting Standards in India, Compliance Requirements of Accounting Standards in India, Applicability of Accounting Standards in India, Applicability of Indian Accounting Standards (IND-AS)

Module II: Accounts of Banking Companies (15 credits)
Accounting of Banking Companies: Nature, Features of Banking Companies, Banking Regulation Act, 1949, Rebate on Bills Discounted, Income recognition, Statutory books to be maintained, special features of Bank bookkeeping, Preparation and presentation of Financial Statements of Banks, Advances and its classification, provisions to be made against advances.

Module III: Accounts of Insurance Companies and Insurance Claims (15 credits)
Accounting of Insurance Companies: Meaning of Insurance Business, Accounts of Life insurance company – Revenue Account, Profit and Loss Account and Balance Sheet, Ascertainment of profit under Life insurance business, Accounts of general insurance business – Revenue Account, Profit and Loss Account and Balance Sheet.
Insurance Claims: Average clause, indemnity period, procedure of ascertaining loss of stock and loss of profit, Ascertainment of claims against loss of stock and loss of profit.

Module IV: Investment Accounts and Liquidation of a company (15 credits)
Investment Account: Meaning, features, concept of cum-interest, ex-interest, cum-dividend, ex- dividend, Accounting for fixed interest learning securities and variable earning securities, bonus shares and right shares, Intercompany investment.
Winding up of a company: Meaning, winding up by National Company law Tribunal, Modes of Winding up, preferential payments, Preparation of Statement of Affairs, Liquidator's Final statement of Account.

Module V: Inflation and Government Accounting (5 credits)

Government Accounting: Meaning, features and Objectives of Government Accounting; difference between commercial accounting and Government Accounting; General Principles of Government Accounting; System of financial administration and financial control in India; Accounts keeping of the government; Classification of Accounts in Government Accounting, Accounting for Human Resources in an Organisation.

Suggested Readings

1. JawaharLal, Financial Accounting, S Chand
2. Hanif & Mukherjee Advanced Accounting, McGraw Hill Education.

SPECIALISATION: FINANCE AND INVESTMENT

CMFI0063: FINANCIAL INSTITUTIONS MANAGEMENT (4 CREDITS – 60 HOURS)

***Objectives**: The objective of this course is to impart the knowledge of the banking, finance and insurance industry to the students. The student will be able to articulate the operations of each of this industry; understand the various potential conflicts of interests and analyse the regulatory structure of the industry.*

COURSE/LEARNING OUTCOMES

After learning this course, the students will be able to:

CO1: Explain the operations of the banking industry. (Understanding)
CO2: Analyse the potential conflicts of interest in the banking industry. (Analysing)
CO3: Explain the operations of the Insurance industry. (Understanding)
CO4: Explain the operations of the financial services industry. (Understanding)
CO5: Outline the risks in the financial industry. (Understanding)
CO6: Analyse the regulatory framework in the banking and financial industry. (Analysing)

Module I: Banking (15 hours)

Commercial Banking; Capital requirements of Banks; Merchant Banking; Investment Banking; Securities trading; Potential conflicts of Interests in Banking; Large Banks and their implications; Risks in Banking. Case study: 2008 financial crisis

Module II: Insurance companies (15 hours)

Life insurance companies: size, structure, composition of industry, recent trends and regulations; Property-casualty insurance: size, structure, composition of industry, recent trends and regulation; Health insurance; Moral hazard and adverse selection; risks in insurance industry.

Module III: Financial services industry (15 hours)

Mutual funds: size, structure, composition of industry, types, objectives, costs, recent trends and regulations; Hedge funds: types of hedge funds, fees in hedge funds industry, offshore hedge funds, and regulation of hedge funds.

Module IV: Risk and regulation (15 hours)

Interest rate risk; Market risk; Credit risk; Off balance sheet risk; Foreign exchange risk; Sovereign risk; Technology and Operational risk; Liquidity risk; Insolvency risk; Liability and liquidity management; Deposit insurance; Basel norms: rationale, Basel I, Basel II, Basel III; Dodd-Frank Act.

Suggested Readings

1. John C Hull: Risk Management and Financial Institutions, Wiley Finance Series.
2. Saunders: Financial Institutions Management, McGraw Hill.
3. Kohn: Financial Institutions and Markets, Oxford University Press.

4. Frank J Fabozzi, Franco Modigliami: Capital Markets – Institutions and Instruments, PHI Learning.

CMSP0067: SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT
Credit 5 (60 hours)

This course provides a broad overview of investment management, focusing on the application of finance theory to the issue faced by portfolio managers and investors in general and to provide conceptual foundation for the purpose of undertaking Investment analysis for securities as well as portfolios

Objectives:

1. Gain knowledge and insights on the functioning of Financial Market.
2. Develop tools and skills for security analysis.
3. Develop tools and approaches to help navigate the complexities and challenges in Financial Market.

COURSE OUTCOMES:

CO1: Remembering: Remembering the key terms/concepts in the field of investments.
CO2: Understanding: To provide a theoretical and practical background in the field of investments.
CO2: Understanding: Understand both the mechanics and operations of financial markets
CO3: Applying: Application of models used in valuation of equity and portfolio management.
CO4: Analysing: Fundamental and technical evaluation of securities in equity and bond markets.

Module I Introduction (10 hours)

Investment alternatives and their evaluation: Risk and Return- measurement of risk and return, Risk in a contemporary mode- beta, CAPM, Fixed income securities, Stock market and indices, Index calculation, Bond Market and Government Securities.

Module II Security analysis II (20 hours)

Evaluation of Fixed income securities, Evaluation of equities- Fundamental analysis: Concept of intrinsic and market value, economy, industry and company analysis. Technical analysis: chart pattern, price actions, determining support and resistance, break outs and break downs, working on tools. Valuation of shares based on: Earnings, Dividend and Net assets, CAPM, Valuation of bonds and bond yields. – Working with analytics - Beta, covariance, variance and standard deviation, correlation and regression.

Module III Portfolio Management (15 hours)
Portfolio Management – Risks and Returns: Concept of portfolio and portfolio management, concept of risk, optimal portfolio- portfolio diversification, mechanics of diversification. Working with efficient frontier, capital market line and indifference curve on a hypothetical portfolio.

Module IV Financial Derivatives (15 hours)
Financial Derivatives: Futures, Options, Portfolios of futures and options synthetics, Exotics and Financially engineered products.

CMIL0065: MANAGEMENT OF INDUSTRIAL LAWS (4 CREDITS- 60HOURS)

***Objective**: The objective of this course is to make the students aware of the legal aspects of management. Every industrial concern is set to follow certain terms and guidelines and the management has to take due care about it. This course will give a detailed idea about the various industrial laws and its provisions.*

COURSE/LEARNING OUTCOMES

At the end of the course students will be able to:

CO1: Define the terms commonly used in industrial laws (Remembering)
CO2: Explain the various provisions of labour laws (Understanding)
CO3: Identify the factors essential for management of labour unions (Applying)
CO4: Analyse the different theories of Trade Unionism.(Analysing)
CO5: Assess the impact of economic changes upon labour management (Evaluating)
CO6: Develop a model of business management abiding by all industrial laws (Creating)

Module I: Introduction to Labour Laws (15 credits)

Origin and Development, Objectives and Principles of Labour Laws, Development of Labour Laws in India, Concept of Industrial Relations- Importance, Scope & Aspects of Industrial Relations, Factor Affecting Industrial Relations, Different approaches/perspectives of Industrial Relations, Industrial conflict, unfair labour practices, concept of Labour welfare & activities of labour welfare officer, Political influence on trade unions, Workers Education, Role of trade union in the changed economic scenario.

Module II: Regulatory framework for management of industries (15 credits)

Trade Union Act, 1926, The Industrial Employment (Standing Orders) Act, 1946, Factories Act, 1948, Payment of Bonus Act, 1956, Payment of Wages Act, 1936: scope, objectives and important provisions

Module III: Dispute and settlement (15 credits)

Industrial Disputes Act, 1947: Industrial Disputes, Development of Industrial Disputes Legislations in India, Mechanisms for settlement of Industrial Disputes, Constitutional and Statutory Framework in India, unions and technological changes, Industrial relation system, Instruments of economic coercion, discipline, domestic enquiry grievance procedure and disciplinary action, Principle of natural justice.

Modu:le IV Prevention and legal regulations regarding labour management (15 credits)

Machinery for prevention of industrial disputes, Welfare Officer works committees, Joint Management Council, Ethical Codes, Methods of setting Industrial Disputes, Arbitration Adjudication, Tripartite and Bipartite Machinery, Collective Bargaining, workers' participation in management, Labour management and cooperation, Industrial relations and related legislations with special reference to industrial disputes Act, 1947, labour welfare and social security, Lok Adalat as a body to conduct mediation. Case studies

CMSM0066: SUPPLY CHAIN MANAGEMENT AND LOGISTICS (4 CREDITS – 60 HOURS)

Objective*: The objective of this paper is to acquaint the students with the concepts and tools of supply chain management and logistics as relevant for an international firm.*

COURSE/LEARNING OUTCOMES

After learning the course, the students will be able to:

CO1: Define the process of supply chain management. (Remembering)

CO2: Demonstrate operational purchasing methods and techniques on supplier management and supply in specific business contexts. (Understanding)

CO3: Explain the strategic importance of logistics elements and describe how they affect supply chain management. (Understanding)

CO4: Apply sales and operations planning, MRP and lean manufacturing concepts. (Applying)

CO5: Analyse the creation of new value in the supply chain for customers, society and the environment. (Analysing)

Module I: Basic Framework (9 hours)

Concept of supply chain management (SCM); SCM and trade Logistics; Business view of SCM; Push and pull of SCM; Decision phases; Impellers and drivers in SCM Process views of SCM, planning and operations; Supply chain modeling; Role of Relationship marketing in SCM; managing relationships with suppliers and customers; Designing strategic distribution network; Factors influencing distribution network.

Module II: Supply Chain and Information Management Systems (13 hours)

Purchasing Process- Strategic role of purchasing in the supply chain and total customer satisfaction; Types of purchases; Purchasing cycle;Supplier selection and evaluation; Vendor development; Importance of information management; Distribution and sharing of information; Information Technology as a platform for effective and efficient supply chain management.

Module III: Logistic System (10 hours)

Concept, objectives and scope of logistics; System elements; Inbound and Outbound logistics. Reverse inventory, Value added role of logistics, Logistics interface with manufacturer and marketing, Packing, Marking, Just in time concept; Third party logistic outsourcing–challenges and future directions.

Module IV: Transportation (16 hours)

Importance of effective transportation system; Service choices and their characteristics; inter- modal services; Transport cost characteristics and rate fixation; Carrier selection determinants and decision; Structure of Shipping: World seaborne trade; international shipping - characteristics and structure;Liner and tramp operations; Liner freighting; Chartering-Types, principles and practices; Charter, party agreement; Development in sea transportation-Unitization, containerisation, inter and multimodal transport; CFC and ICD; Indian shipping – growth, policy and problems; Ports and port trust; International Air transport: International set up for air transport: Freight rates; India's exports and imports by air – Problems and prospects;Carriage of Goods by sea, sea and combined transport.

Module V: Warehousing and Inventory Management (12 hours)

Warehousing And Marketing Strategy;Objectives and functions of warehousing; Warehouse Strategies; Material handling equipment and material mobility Warehousing evaluation and requirements.

Inventory management-inventory categories, EOQ, LT, ICC; Inventory levels; Material planning and sourcing of procurement; Methods of cost reduction.

Suggested Readings

1. Ballau, R.H., Business Logistics Management, Prentice Hall,Englewood Cliffs.
2. Bes, J., Chartering Practices.
3. Bes, J., Dictionary of Shipping and chartering Practices.
4. Christopher, M., Logistics and Supply Chain Management, Prentice Hall.

CMDS6006: DISSERTATION-I (RESEARCH SOFTWARE) (4 CREDITS- 60 HOURS)

***Objective**: The objective of the course would be to educate the students about the various dimensions of a research based project work. The students will also be taught about the application of statistical tools through SPSS.*

This phase of the Dissertation will comprise of the following:

1. **Synopsis**: Submission of a write up on a specific area/topic of study (10hours)
2. **Review of Literature**: Submission of a specified number of reviews to respective guide (15 hours)
3. **Research Methodology**: Lecture based on the topic of study. (10 hours)
4. **Referencing Style**: Lecture on referencing style to be followed while submitting report (5 hours)
5. Training on application of Statistical software used in research (20hours)
6. **Submission of Progress Report after completion of Phase I**: Report should comprise of Introduction, Review of Literature, Research Methodology and References.

EVALUATION:

A diary will be maintained by every student to keep a record of meeting with his/her guide. A format of the diary will be circulated at the beginning with the semester. Evaluation at Phase I will be done by the respective guide based on timely submission of part-work and quality of work as follows:

Synopsis (30marks)
Review of Literature (30marks)
Research Methodology (30marks)
Referencing (10marks)

CMDS6007: DISSERTATION-II (6 credits - 75 hours)

***Objective**: The objective of the course would be to develop analytical skills among the students for solving any research queries. The students will also be taught about the preparation of a project report.*

This phase of the Dissertation will comprise of the following:

1. **Field Work**: Collection of data and validation with the respective guide (30 hours)
2. **Analysis of Data**: Analysis and presentation of the data collected though application of various statistical tools though SPSS and other statistical software packages. (10 hours)
3. Test of Plagiarism.
4. **Submission of Project Report**: Submission of the complete report in continuation from Phase I.
5. Presentation of work using PPT and Viva Voce Examination.

EVALUATION:

Evaluation at Phase II will be done by a panel comprising of an external and internal expert along with the respective guide based on quality of work as follows:

Report (50marks)
Presentation (30marks)
Viva-Voce (10marks)

Suggested Reading

SCHOOL OF FUNDAMENTAL AND APPLIED SCIENCES
DETAILED SYLLABUS
DEPARTMENT OF CHEMISTRY

VISION:

To produce competent chemistry graduates through dedicated teaching in classrooms, through labs and research, who can contribute meaningfully to society while fulfilling their ambitions in academia, research or industry.

MISSION:

The objective of the department is to provide dedicated guidance and support to students to equip them with a sound understanding of the fundamentals of chemistry

- to enable them to explore the diverse and hitherto unexplored resources of the north-eastern region
- to make significant contributions to fundamental and socially relevant research in the frontiers ofchemistry
- to help them generate their ideas and provide them the knowhow to convert them into reality

PROGRAM OUTCOMES – MSC PROGRAMME

PO 1: **Critical Thinking**: Inculcate critical thinking to carry out scientific investigation objectively. Formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. Critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

PO 2: **Knowledge Skil**l: Equip the student with skills to analyse problems, formulate an hypothesis, evaluate and validate results, and draw reasonable conclusions thereof. Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems , rather than replicate curriculum content knowledge .

PO 3: **Scientific Communication Skills**: Imbibe effective scientific and / or technical communication in both oral and writing. Ability to show the importance of the subject as precursor to various scientific developments since the beginning of the civilization.

PO 4: **Ethics**: Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned .Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective , unbiased and truthful actions in all aspects .

PO 5: **Enlightened Citizenship**: Create awareness to become an enlightened citizen with commitment to deliver one's responsibilities within the scope of bestowed rights and privileges

PO 6: **Analytical Reasoning**: Ability to evaluate the reliability and relevance of evidence;identify logical flaws and holes in the arguments of others; analyse and synthesise data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

PO 7: **Multicultural Competence**: Development of a set of competencies in order to enhance and promote the growth of multicultural sensitivity within universities. Integrating multicultural awareness such as race, gender, physical ability, age, income and other social variables, and by creating an environment that is , "welcoming for allstudents" .

PO 8: **Lifelong Learning**: Ability to think, acquire knowledge and skills through logical reasoning and to inculcatethe habit of self-learning throughout life, through self- paced and self- directed learning aimed at personal development, and adapting to changing academic demands of work place through knowledge/ skill development/reskilling .

PO 9: **Leadership Qualities**: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination in a smooth and efficient way.

PO 10: **Research Skills**: Prepare students for pursuing research or careers in industry in concerned subject and allied fields. Capability to use appropriate software to solve various problems and to apply programming concepts of C++ and Mathematica/Matlab to various scientific investigations , problem solving and interpretation

PROGRAMME SPECIFIC OUTCOMES FOR MSC CHEMISTRY

PSO 1: **Scientific Problem solving skills:** Deep knowledge of the topic which can develop the problem solving skills using chemical principles.

PSO 2: **Analytical skills:** Develop analytical skills such as synthesizing, separating, characterizing chemical compounds and chemical reaction with the help of sophisticated instruments.

PSO 3: **Research ski**lls: Develop research skills through dissertation/Project work in different fields of chemistrysuch as organic, nanoscience, analytical, physical etc.

PSO 4: **Learning skills on life processes:** Acquire advanced level of knowledge in natural products as well asbiological system

from the chemistry point of view.

COURSES OFFERED IN MSC CHEMISTRY

Sl. No.	Course Name
1.1	Fundamentals of Inorganic Chemistry
1.2	Fundamentals of Organic Chemistry
1.3	Fundamentals of Physical Chemistry
1.4	Introduction to Quantum Chemistry and Group Theory
1.5	Inorganic Qualitative and Quantitative Analyses and Preparations - Lab
1.6	Value Added Course
2.1	Advanced Inorganic Chemistry I
2.2	Advanced Organic Chemistry I
2.3	Advanced Physical Chemistry I
2.4	Fundamentals of Spectroscopy
2.5	Introduction to Green and Environmental Chemistry
2.6	Experimental Physical Chemistry - Lab
2.7	Service learning
2.8	Value Added Course
3.1	Advanced Inorganic Chemistry II
3.3	Advanced Organic Chemistry II
3.3	Advanced Physical Chemistry II
3.4	Special Topics in Biochemistry
3.5	Applied Spectroscopy
3.6	Research Methodology for Chemistry
3.7	Organic Qualitative Analysis and Synthesis Lab
3.8	Value Added Course
4.1.1	Materials Chemistry
4.1.2	Computational Chemistry
4.1.3	Food Chemistry
4.1.4	Industrial Chemistry
4.1.5	Medicinal Chemistry
4.2.1	Organometallic Chemistry
4.2.2	Inorganic Rings, Clusters and Polymers
4.3.1	Recent Advances in Catalysis
4.3.2	Biophysical Chemistry
4.4.1	Heterocyclic Chemistry
4.4.2	Natural Products Chemistry
4.5	Research Project
4.6	Value Added Course

THEORY COURSES

CHIC0003: Fundamentals of Inorganic Chemistry

(4-0-0)

Course Outcomes

CO 1: Recall the fundamental concepts associated with hard and soft acids and bases. (Remembering)
CO 2: Explain the general characteristics and applications of coordination compounds. (Understanding)
CO 3: Make use of the electronic spectra to understand the electronic transition in coordination complexes. (Applying)
CO 4: Analyse the Metal-ligand bonding in transition metal complexes. (Analysing)
CO 5: Explain the Magnetic properties of transition metal complexes. (Evaluating)
CO 6: Design complexes of transition metal and predict their electronic and magnetic properties. (Creating)

Module I: Concepts of Acids and bases (10 lectures)

Hard and soft acid-base concept, non-aqueous solvents, redox chemistry.

Module II: Transition Metal Chemistry (8 lectures)

Descriptive chemistry of transition metals including lanthanides and actinides, coordination chemistry - coordination number and geometry, isomerism, thermodynamic stability - successive and overall stability constants, Irving-William series, chelate and macrocyclic effects.

Module III: Bonding in Inorganic and Coordination Compounds (20 lectures)

VBT (hybridization), CFT and their limitations, ligand field theory, d-orbital wave functions, d-orbital splitting in octahedral, square planar, square pyramidal, trigonal bipyramidal, and tetrahedral complexes; Jahn-Teller distortion, CFSE for d1 to d10 systems, pairing energy, low-spin and high-spin complexes and molecular orbital (MO) theory of selected octahedral, tetrahedral complexes and other geometries, Walsh Diagram.

Module IV: Electronic Spectra of Transition Metal Complexes (12 lectures)

d-d transition, charge transfer transition, color, intensity and origin of spectra, interpretation, term symbols and splitting of terms different geometries, selection rules for electronic transitions, correlation, Tanabe-Sugano and Orgel diagrams, calculation of Dq, B and C, nephelauxetic ratio.

Module V: Magnetic Properties of Transition Metal Complexes (10 lectures)

Magnetic properties of free ions, types of magnetic behavior: dia-, para-, ferro- and antiferro-magnetism, temperature independent paramagnetism, magnetic susceptibility - Van Vleck equation, experimental measurement, magnetic moment - orbital contribution, quenching of contribution, effect of spin orbit coupling, spin crossover, temperature dependence of magnetic susceptibility, exchange coupling effects, magnetic properties of second and third transition series and lanthanides.

Suggested Readings

1. Inorganic Chemistry: Principles of Structure and Reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education.
2. Ligand Field theory and its Applications, B. N. Figgis and M. A. Hitchman, Wiley India.
3. Inorganic Chemistry, G. L. Miessler and D. Tarr, Pearson Education.
4. Inorganic Chemistry, P.W. Atkins, T. Overton, J. Rourke, M. Weller and F. Armstrong, Oxford UniversityPress.
5. Fundamental Concepts of Inorganic Chemistry, Vols. 1-7, A. K. Das and M. Das, CBS Publishers and Distributors.
6. Essentials of Nuclear Chemistry, H. J. Arnikar, Wiley Eastern, New Delhi.
7. Advanced Inorganic Chemistry, F. A. Cotton, G. Wilkinson, C. A. Murillo and M. Bochmann, Wiley.
8. Inorganic Chemistry, C. E. Housecroft and A. G. Sharpe, Prentice Hall.
9. Chemical Applications of Group Theory, F. A. Cotton, Wiley.
10. Lanthanide and Actinide Chemistry, S. A. Cotton, John Wiley.
11. Nuclear and Radiochemistry, G. Fridlander, J.W. Kennedy, E. S. Macias and J. M. Miller, John Wiley, New York.
12. Inorganic Chemistry, M. Weller, F. Armstrong, J. Rourke and T. Overton, Oxford University Press.
13. Elements of Magnetochemistry, R. L. Dutta and A. Syamal, Affiliated East-West Press Pvt. Ltd.-New Delhi.
14. Magnetism and Transition Metal Complexes, F. E. Mabbs and D. J. Machin, Dover Pub. Inc.

CO 4			H		
CO 5		L			H

CO 6				H	M

CHOC0004: Fundamentals of Organic Chemistry
(4-0-0)

Course Outcomes
CO 1: Recall various concepts associated with the kinetics of organic reaction mechanisms. (Remembering)
CO 2: Explain the generation and application of different reaction intermediates in organic synthesis. (Understanding)
CO 3: Analyse Point group of organic molecules and their connection with optical activity. (Analysing)
CO 4: Determine the absolute or relative configuration of chiral organic molecules and design asymmetric synthesis. (Evaluating)
CO 5: Predict the stereochemistry of the product of different reactions. (Creating)

Module I: Kinetics and Energetics of Reaction Mechanism (15 lectures)
Transition state theory of reaction rates - kinetics and thermodynamics of activation, reaction profiles for multistep reactions, Hammond postulate, Curtin-Hammett Principle, kinetic and thermodynamic control, Linear free energy relationships (LFER), Hammett equation - substituent and reaction constants, the Taft treatment of polar and steric effects in aliphatic compounds, kinetic isotope effects in organic reactions, effects of conformation on reactivity, stereoelectronic effects, neighbouring group participation, anomeric effect.

Module II: Reaction Mechanisms and Intermediates (Structure and Reactivity) - I (15 lectures)
a. Carbanions: enolates and enamines, kinetic and thermodynamic enolates, lithium and boron enolates in Aldol and Michael reactions, alkylation and acylation of enolates, name reactions under carbanion chemistry - Claisen, Dieckmann, Knoevenegal, Stobbe, Darzen, Acyloin condensations, Shapiro reaction, Julia olefination, Brook rearrangement, Sakurai reaction, Henry reaction, Kulinkovich reaction, Nef reaction, Baylis-Hillman reaction.
b. Ylids: Chemistry of phosphorous and sulfur ylids - Wittig and related reactions, Peterson olefination.
c. Carbocations: structure and stability of carbocations, classical and non-classical carbocations, neighbouring group participation and rearrangements including Wagner-Meerwein, pinacol-pinacolone, semi-pinacol rearrangement, C-C bond formation involving carbocations, oxymercuration, halolactonisation, Tishchenko reaction, Ritter reaction, Prins reaction.

Module III: Reaction Mechanisms and Intermediates (Structure and Reactivity) – II (15 lectures)
a. Carbenes and Nitrenes: Structure of carbenes, generation of carbenes, addition and insertion reactions, rearrangement reactions of carbenes such as Wolff rearrangement, generation and reactions of ylids by carbenoid decomposition (existence of O and N based ylids), Structure of nitrene, generation and reactions of nitrene and related electron deficient nitrogen intermediates, Curtius, Hoffmann, Schmidt, Beckmann rearrangement, structure and reactivity of benzynes.
b. Radicals: Generation of radical intermediates and its addition to alkenes, alkynes (inter &intramolecular) for C-C bond formation and Baldwin's rules, name reactions involving radical intermediates such as Barton deoxygenation and decarboxylation, Mc Murry coupling.

Module IV: Stereochemistry (15 lectures)
a. Classification of organic molecules into different Point Groups, R and S, E and Z nomenclature in C, N, S, P containing compounds, concept of absolute and relative configuration, chirality in molecules devoid of chiral centres - allenes, spiranes and biphenyls.
b. Concepts of stereogenic centres – chirotopic and achirotopic centres, homotopic and heterotopic ligands and faces, optical purity and enantiomeric excess, conformation of acyclic organic molecules, cyclohexane and decalins.
c. Dynamic stereochemistry, stereoselective synthesis, classification of stereoselective synthesis, diastereoselective, enantioselective and double stereo-differentiating reactions, nucleophilic addition to aldehyde and acyclic ketones, Prelog's rule, nucleophilic addition to cyclic ketones.
d. Enantioselective synthesis, use of chiral reagent, chiral catalyst and chiral auxiliary, stereospecific and stereoselective reactions.

Suggested Readings
1. Advanced Organic Chemistry, Part A and B, F. A. Cary and R. I. Sundberg, Springer.
2. Stereoelectronic Effects, A. J. Kirby, OUP.
3. Modern methods of Organic Synthesis, W. Carruthers and I. Coldham, Cambridge University Press.
4. Mechanism and Theory in Organic Chemistry, T. H. Lowry and K. S. Richardson.
5. Organic Chemistry, J. Clayden, N. Greeves and S. Warren.
6. Modern Physical Organic Chemistry, E. V. Anslyn and D. A. Dougherty, University Science Books.

CHPC0005: Fundamentals of Physical Chemistry

(4-0-0)

Course Outcomes

CO 1: Explain the laws of thermodynamics. (Understanding)
CO 2: Explain the methods to determine the properties of polymers. (Understanding)
CO 3: Explain the various terms involved in data analysis. (Understanding)
CO 4: Apply the laws of thermodynamics and kinetics of polymerization to solve problems. (Applying)
CO 5: Distinguish between different types of systems, polymers and various statistical parameters. (Analysing).
CO 6: Calculate the sizes of polymer molecules and analyses the results of different chemical experiments from thestatistical point of view. (Evaluating)

Module I: Equilibrium and Non-Equilibrium Thermodynamics (22 lectures)

a. Laws of thermodynamics, state and path functions and their applications, Maxwell 's relations, spontaneity and equilibria, Le Chatelier principle.
b. Non-ideal system - thermodynamics of real gases and gas mixtures, fugacity and its determination, non-ideal solutions, activity and activity coefficient, different scales of activity coefficient, electronic activity coefficients.
c. Phase equilibrium - thermodynamic criteria of phase equilibrium, Gibbs phase rule and its application to three component systems- triangular plots - water-acetic acid-chloroform system and ammonium chloride-ammonium sulphate-water system.
d. Non-equilibrium thermodynamics - forced flows and entropy of production, coupled flows and phenomenological relations, Onsager reciprocal relations, thermodynamic effects-Seebeck, Peltier and Thomson effects.

Module II: Statistical Thermodynamics (22 lectures)

a. Statistical mechanics of systems independent particles - Maxwell Boltzmann distribution, entropy and probability, calculation of thermodynamic properties for independent particles, molecular partition functions, evaluation of translational, rotational and vibrational and nuclear partition functions.
b. Thermodynamic properties of monatomic and diatomic gases (Suckur Tetrode equation), calculation of partition functions, thermodynamic function, principles of equipartition, heat capacities (Einstein model and Debye modification), residual entropy, equilibrium constant.

Module III: Polymer Chemistry (8 lectures)

Molecular weight of polymers, determination of molecular weight, kinetics of polymerization reaction, copolymerization, average dimension of polymer molecules, size exclusion chromatography.

Module IV: Sampling and Data Analysis (8 lectures)

Sampling of solid, liquid and gaseous samples, mean and standard deviation, absolute and relative errors, linear regression, covariance and correlation coefficient.

Suggested Readings

1. Physical Chemistry, P. Atkins and J. Paula, Oxford University Press.
2. Physical chemistry, I. R. Levine, Mcgraw Hill Education.
3. Physical Chemistry: A Molecular Approach, D. A. McQuarrie and J. D. Simon, Viva Student Edition.
4. Physical Chemistry, R. S. Berry, S. A. Rice and J. Ross, Oxford University Press.
5. Statistical Mechanics, D. A. McQuarrie, University Science Books, California.
6. Vogel's Textbook of Quantitative Chemical Analysis, J. Mendham, R. C. Denney, J. D. Barnes, M. Thomas and B. Sivasankar, Pearson.
7. Polymer Science, V. R. Gowarikar, N. V. Viwanathan and J. Sreedhar, New age International Publishers.
8. Principles of Polymerization, G. Odian, Willy Student Edition.

CHIR0007: Advanced Inorganic Chemistry I
(4-0-0)

Course Outcomes
CO 1: Recall the concepts of organometallic chemistry. (Remembering)
CO 2: Illustrate the photochemistry of different inorganic compounds. (Understanding)
CO 3: Select the inorganic compounds for their suitable analytical and industrial use. (Applying)
CO 4: Analyse the structure, bonding and synthesis of some inorganic compounds. (Analysing)
CO 5: Explain the bonding in solid-state chemistry. (Evaluating)
CO 6: Discuss the mechanism of Inorganic reactions. (Creating)

Module I: Descriptive Inorganic Chemistry (20 lectures)
a. Structure and bonding in polyhedral boranes and carboranes, styx notation, Wade's rules, electron count in polyhedral boranes, synthesis of polyhedral boranes, isolobal analogy, boron halides, phosphine-boranes, boron heterocycles, borazine.
b. Silanes, silicon halides, silicates, silicones, silanols, zeolites, germanium, tin and lead organyls, silenes, germenes, stannenes, phosphorous halides, phosphazenes, sulphur halides, structural features and reactivity of S-N heterocycles.
c. Synthesis and reactivity of organo-lithium, beryllium and magnesium compounds, calixarines, cryptands and crown ethers in complexation chemistry.
d. Preparation and reactivity of aluminium organyls, carbalumination, hydro alumination, chemistry of Ga (I) and In (I), reduction of Al, Ga and In organyls, Metal organic framework structures (MOFs).

Module II: Introduction to Solid State Chemistry (10 lectures)
Structure of simple solids – metals, alloys and compounds; common structure types; synthesis of solid state compounds - ceramic method, microwave synthesis, sol-gel, precursor method, hydrothermal synthesis, CVD and intercalation; characterization of solids, bonding in solids – free-electron and molecular orbital theory; bands in solid state compounds, properties of solids – optical, magnetic and electrical properties of solids.

Module III: Organometallic Chemistry (15 lectures)
a. Valence electron count (16/18 electron rules), synthesis, structure, bonding and reactivity of mono and polynuclear
b. metal carbonyls, substituted metal carbonyls, vibrational spectra of metal carbonyls, metal-metal bonding.
c. Types of M-C bonds, synthesis and reactivity of metal alkyls, carbenes, alkenes, alkynes, and arene complexes, metallocenes and bent metallocenes, isolobal analogy.
d. Reactions of organometallic complexes: Substitution, oxidative addition, reductive elimination, insertion and de insertion, catalysis, hydrogenation, hydroformylation, Monsanto process, Wacker process, alkene polymerization.

Module IV: Mechanism of Inorganic Reactions (10 lectures)
Substitution in octahedral and square planar complexes, lability, trans-effect, conjugate base mechanism, racemisation, electron transfer reactions - inertness and lability, inner sphere and outer sphere mechanism, Marcus theory, solid state reactions – topotactic and epitactic mechanisms.

Module V: Inorganic Photochemistry (5 lectures)
Photosubstitution and photoredox reactions of chromium, cobalt and ruthenium compounds, Ligand field and charge transfer state (Thexi and DOSENCO states), cis-trans isomerization, photocatalysis and solar energy conservation by ruthenium complexes.

Suggested Readings
1. Advanced Inorganic Chemistry, F. A. Cotton, G. Wilkinson, C. A. Murillo and M. Bochmann, Wiley.
2. Chemistry of elements, N. N. Greenwood and E. A. Earnshaw, Butterworth-Heinemann.
3. Inorganic Chemistry: Principles of Structure and Reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, PearsonEducation.
4. Inorganic.Chemistry, G. L. Miessler and D. Tarr, Pearson Education.
5. Inorganic Chemistry, P.W. Atkins, T. Overton, J. Rourke, M. Weller and F. Armstrong, Oxford UniversityPress.
6. Concepts and Models of Inorganic Chemistry, B. E. Douglas, D. H. McDaniel and J. J. Alexander, John Wiley.
7. Inorganic Chemistry, G. Wulfsberg, University Science Books.
8. Solid State Chemistry: An Introduction, L. Smart, E. Moore, Nelson Thorns Ltd.

9. Fundamental Concepts of Inorganic Chemistry, A. K. Das and M. Das, CBS Publishers and Distributors.
10. Organometallic Chemistry of the Transition Metals, R. H. Crabtree, John Wiley.
11. Mechanisms of Inorganic Reactions, F. Basalo and R. G. Pearson, John Wiley

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V
CO 1			H		
CO 2					H
CO 3	L	L	M		
CO 4	H			L	
CO 5		H			
CO 6				H	

CHOG0008: Advanced Organic Chemistry-I

Course Outcomes

CO 1: Recall nucleophilic and electrophilic substitution reactions and the factors related to the rate of these reactions. (Remembering)
CO 2: Explain the stereo chemical aspects and mechanism of elimination reactions. (Understanding)
CO 3: Apply the practical utility of metal and metal-free oxidising agents in organic synthesis. (Applying)
CO 4: Compare various kinds of reducing agents in chemo selective and stereo selective synthesis. (Analysing)
CO 5: Select name reactions for constructing compounds having industrial and academic importance. (Evaluating)

Module I (15 lectures)

a. **Nucleophilic Substitution**: S_N1, S_N2 and related mechanisms; Factors influencing reaction rates; Neighboring group participation by π- and σ-bond; Anchimeric assistance; Aromatic Nucleophilic Substitution: The SNAr, S_N1, benzyne and SR_N1 mechanisms. Reactivity; effect of substrate structure, leaving group and attacking nucleophile; The S_Ni mechanism. Nucleophilic substitution at an allylic, aliphatic trigonal and a vinyl carbon. Aromaticity, antiaromaticity and homoaromaticity.

b. **Electrophilic Substitution**: Aliphatic: Bimolecular mechanisms: SE1, SE2 and SEi. The SE1mechanism, electrophilic substitution accompanied by double bond shifts. Effect of substrates, leaving group and the solvent polarity on the reactivity. Aromatic: The arenium ion mechanism, orientation and reactivity, energy profile diagrams. The ortho/para ratio, ipso attack, orientation in other ring systems.

Module II (15 lectures)

a. **Elimination reactions**: Mechanism and stereochemistry of different types of elimination reactions; Effects of substrate structure, attacking base, leaving group and medium; Formation of other double bonds (C=N, C=O) and triple bonds by elimination reactions; Mechanism and orientation in pyrolytic elimination.

b. **Miscellaneous Reactions:** Biginelli reaction, Passerini reaction, Nazarov cyclisation, Pd-catalyzed reactions, Vilsmeier Hack reaction, Ugi reaction, Robbinson annulations, Mitsonobu reaction, Appel reaction, Favoriskii rearrangement.

Module III: Oxidation Reactions (15 lectures)

Metal and non-metal based oxidations (Cr, Mn, Al, Ag, Os, Ru, Se, DMSO, hypervalent iodine), reagents (Fremy's salt, silver carbonate, peroxides/per-acids), Sharpless asymmetric epoxidation, Jacobsen epoxidation, Shi epoxidation, Sharpless asymmetric dihydroxylation, Baeyer-Villiger oxidation, Wacker oxidation, hydroboration-oxidation, Prevost reaction and Woodward modification.

Module IV: Reduction Reactions (15 lectures)

Catalytic hydrogenation (Pd/Pt/Rh/Ni), Wilkinson catalyst, Noyori asymmetric hydrogenation, metal based reductions using Li/Na/Ca in liquid ammonia, Sodium, Magnesium, Zinc, Titanium and Samarium (Birch, Pinacol formation, McMurry, Acyloin formation, dehalogenation and deoxygenations), Hydride transfer reagents from Group III and Group IV in reductions ($NaBH_4$triacetoxyborohydride, L-selectride, K-selectride, Luche reduction, $LiAlH_4$, DIBAL-H, and Red-Al, Trialkylsilanes and Trialkylstannane, Meerwein-Pondorff-Verley reduction), stereo/enantioselective reductions (Chiral Boranes, Corey-Bakshi-Shibata).

Suggested Readings

1. Advanced Organic Chemistry, Part A and B, F. A. Cary and R. I. Sundberg, Springer.
2. Organic Synthesis, M. B. Smith, Academic Press.
3. Modern Methods of Organic Synthesis, W. Carruthers and I. Coldham, Cambridge University Press.
4. Organic Chemistry, J. Clayden, N. Greeves and S. Warren. Oxford University Press.
5. Organic Chemistry, S. H. Pine, McGraw-Hill Bool.

6. Advanced Organic Chemistry: Reactions, Mechanisms and Structure (4th edn.), J. March, Wiley Student Edition, John Wiley & Sons Asia Pte. Ltd.
7. Modern Synthetic Reaction, H. O. House, W. A. Benjamin Inc.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV
CO 1	H			
CO 2		H		
CO 3			H	
CO 4				H
CO 5	L	H	H	H

CHAP0009: Advanced Physical Chemistry I

(4-0-0)

Course Outcomes

CO 1: Recall the kinetics of different types of chemical reactions. (Remembering)
CO 2: Explain the interactions of ionic species with solvent molecules. (Understanding)
CO 3: Apply the knowledge of chemical kinetics to some important types of reactions. (Applying)
CO 4: Analyse the application of electrochemistry in different fields. (Analysing)
CO 5: Calculate the rate of different types of chemical reactions. (Evaluating)

Module I: Chemical Kinetics (15 lectures)

Theories of unimolecular reactions: Lindemann theory, drawbacks of Lindemann theory- Hinshelwood modification, RRK theory, Slaters treatment, RRKM theory. Steady state approximation and its applications, oscillating reactions, chemical chaos, Belousov-Zhabotinski reaction, straight chain reactions - hydrogen-halogen reactions, alkane pyrolysis, Branching- chain reactions - the hydrogen-oxygen reaction, explosion limits, Enzyme catalyzed reactions, Michaelis-Menten mechanism- Lineweaver-Burk and Eadie plots, enzyme inhibiton.

Module II: Study of Fast Reactions (5 lectures)

Stopped flow technique, temperature and pressure jump methods, NMR studies in fast reactions, shock tube kinetics, relaxation kinetics, Linearized rate equation, relaxation time in single step fast reactions, determination of relaxation time.

Module III: Molecular Reaction Dynamics (15 lectures)

Collisions of real molecules- trajectory calculations, Laser techniques, reactions in molecular beam, reaction dynamics, estimation of activation energy and calculation of potential energy surface- the transition state theory (TST) of bimolecular gaseous reactions, statistical and thermodynamic formulations. Comparison between TST and hard sphere collision theory, theory of unimolecular reactions- Lindemann theory and its limitations, kinetics of reactions in solution-diffusion controlled and chemically controlled reactions, TST of reactions in solution- Bronsted and Bjerrum equation, effect of ionic strength, kinetic salt effect.

Module IV: Electrochemistry - I (10 lectures)

a. Ion-solvent interaction- the Born model, Thermodynamic parameters of ion solvent interactions- structural treatment, the ion-dipole model-its modifications, ion-quadrupole and ion-induced dipole interactions.
b. Primary solution- determination of hydration number, compressibility method and viscosity-mobility method, Debye-Huckel theory of ion-ion interactions, derivation, validity and limitations, extended Debye-Huckel-Onsager equation, random walk model of ionic Diffusion-Einstein Smoluchowski reaction.

Module V: Electrochemistry – II (15 lectures)

a. **Theories of Electrical Interface:** Electrocapillary phenomena - Lippmann equation, electron transfer at interfaces, polarizable, non-polarizable and non-polarisable interfaces, Butler-Volmer equation, Tafel plot.
b. **Electro-analytical Techniques:** Potential step methods, potential sweep methods, Polarography and Pulse voltammetry, controlled current techniques, techniques based on impedance.
c. **Systems for Electro-Chemical Energy Storage and Conversion**: Types of Batteries, Lead- acid batteries, Nickel-cadmium batteries and Li-ion batteries, electrical double layer capacitor, pseudo-capacitor, fuel cells.

Suggested Readings

1. Physical Chemistry, P. Atkins and J. Paula, Oxford University Press, Oxford.
2. Physical chemistry, I. R. Levine, Mcgraw Hill Education.
3. Chemical Kinetics, K. J. Laidler, Pearson.
4. Modern Electrochemistry Part 1, 2A and 2B, J. O. Bockris and A. K. N. Reddy, Springer.
5. Electrochemical Methods Fundamentals and Applications, J. Bard and L. R. Faulkner, Willy India.

CO 2				H	M
CO 3	H	M	M		
CO 4				L	H
CO 5	M	M			

CHGC0011: An Introduction to Environmental and Green Chemistry

Course Outcomes

CO 1: Recall the basic concepts of green chemistry. (Remembering)
CO 2: Explain the principles of green chemistry, green reaction conditions, renewable sources of energy etc.(Understanding)
CO 3: Apply the concept of green chemistry in the applied research field. (Applying)
CO 4: Analyse and solve the problems related to the environment. (Analysing)
CO 5: Identify the causes of environmental degradation and find solutions for its protection. (Applying)

Module I: Environmental pollution (15 lectures)

Chemistry and environmental pollution: Chemical hazards, chemical disasters, Water pollution, air pollution and soil pollution; agricultural pollution, pollution by plastics; environmental biochemistry, toxicological chemistry, e-pollution and nuclear hazard.Environmental analysis: Analysis of water and wastewater, solid-wastes and air pollution.

Module II: Environmental protection (10 lectures)

Environmental protection: pollution prevention, green chemistry, biodegradation, water and wastewater purification – removal of arsenic, iron, fluoride, etc.; air purification, waste minimization, industrial and municipal waste treatment and soil remediation.

Module III: Principles and concepts of Green Chemistry (10 lectures)

Green chemistry: Principles of green chemistry, development of green chemistry; atom economy reactions – rearrangement reactions, addition reactions; atom uneconomic reactions–sublimation, elimination; toxicity measures, need of green chemistry in day-to-day life.

Module IV: Emerging Green Technology and alternative energy sources (10 lectures)

Design for energy efficiency, photochemical reactions – advantages, disadvantages; microwave technology in chemistry - microwave heating, microwave assisted reactions, ultrasound assisted reactions, reactions in organic liquids, reactions in aqueous media, electrochemical synthesis- examples. Supercritical solvents, ionic liquids, green catalyst, auto-exhaust catalyst and clean technology. Real world examples.

Suggested Readings

1. Environmental Chemistry, S. E. Manahan, CRC Press, Boca Raton.
2. Green Chemistry: Theory and Practice, P. T. Anastas and J. C. Warner, Oxford University Press.
3. Environmental Chemistry, J. W. Moore and E. A. Moore, Academic Press, London.
4. Green Chemistry: An Introductory Text, M. Lancaster, RSC.
5. Handbook of Environmental Chemistry, O. Hutzinger, Springer-Verlag.
6. M. C. Cann and M. E. Connelly, Real World Cases in Green Chemistry, ACS.

Mapping of COs to Syllabus

CO 2			H	H
CO 3			M	H
CO 4	H	H		
CO 5	H	H		

CHAI0012: Advanced Inorganic Chemistry II

(4-0-0)

Course Outcomes

1. Recall the concepts of analytical techniques used in inorganic analysis. (Remembering)
2. Illustrate the role of metal ions in the function of biological macromolecules. (Understanding)
3. Apply the special Analytical Techniques for the characterization of inorganic compounds. (Applying)

4. Analyse the principles and application of Nuclear and Radiochemistry. (Analysing)
5. Explain the nature of supramolecular interactions. (Evaluating)
6. Develop a fundamental knowledge of nanomaterials. (Creating)

Module I: Special Analytical Techniques (25 lectures)

a. Principles and applications of Scanning Electron Microscopy (SEM), Energy Dispersive X-ray Spectroscopy (EDS/EDX), Transmission Electron Microscopy (TEM), Selected Area (Electron) Diffraction (SAED), Thermal methods of analysis – thermogravimetric analysis (TGA), Differential Thermal Analysis (DTA), Differential Thermogravimetry (DTG), Differential Scanning Calorimetry (DSC), Powder X-ray Diffraction, Single crystal X-ray diffraction.

b. Principles and applications of atomic absorption spectroscopy, atomic emission spectroscopy, Infrared and Raman Spectroscopy, Magnetic Resonance Spectroscopy- Electron Spin Resonance (ESR) of d^1 and d^9 transition metal ions in cubic and tetragonal ligand fields, applications of ^{31}P, ^{19}F, ^{119}Sn and ^{195}Pt nuclear magnetic resonance (NMR) spectroscopy.

Module II: Bioinorganic Chemistry (15 lectures)

Role of metal ions in biology and their toxic effects; Iron management in biological systems– siderophores, ferritin and transferrin; Dioxygen storage and transport – structure of myoglobin and haemoglobin, cooperativity of O_2 binding in haemoglobin, Bohr effect and Hill coefficients; Electron transfer proteins (structure and function) - Fe-S proteins, cytochromes and plastocyanines; Structure of nitrogenase and its role in di-nitrogen fixation; Structure and function of vitamin B_{12} and mechanism of 1,2-shift reaction; Inorganic therapeutics - chelate therapy, metal based drugs.

Module III: Introduction to Supramolecular Chemistry (5 lectures)

Supramolecular chemistry: Definition, supramolecular host-guest compounds, macrocyclic effect, nature of supramolecular interactions.

Module IV: Introduction to Nanomaterials (5 lectures)

Fabrication of nanomaterials – top-down and bottom-up approaches; solution-based synthesis of nanoparticles; other methods of nanomaterial synthesis – brief overview. Carbon fullerenes and nanotubes. Applications of nanoparticles.

Module V: Nuclear and Radiochemistry (10 lectures)

Radioactive decay and equilibrium. Mass defect and binding energy, packing fraction, stability of nucleus, neutron-proton ratio, Artificial radioactivity. Nuclear reactions; Q value, cross sections, types of reactions, Chemical effects of nuclear transformations; fission and fusion, fission products and fission yields. Radioactive techniques; nuclear reactors, separation of isotopes; tracer technique, neutron activation analysis, counting techniques such as G.M. ionization and proportional counter. Application of radio-isotopes in agriculture, medicine and industry. Radiocarbon dating**.**

Suggested Readings

1. Fundamentals of Light Microscopy and Electronic Imaging, D. B. Murphy and M. W. Davidson, Wiley.
2. Transmission Electron Microscopy a Textbook for Materials Science, D. B. Williams, C. B. Carter, Springer.
3. Principles of Biochemistry, D. Nelson, A. L. Lehninger and M. M. Cox, W. H. Freeman & Co.
4. Biochemistry, R. H. Abeles, P. A. Frey and W. P. Jencks, Jones and Bartlett Publishers, Boston
5. Fundamentals of Biochemistry: Life at the Molecular Level, D. Voet, J. G. Voet and C. W. Pratt.
6. Bioinorganic Chemistry, I. Bertini, H. B. Gray, S. J. Lippard and J. S. Valentine, Viva books Pvt. Ltd.
7. Inorganic Biochemistry: An introduction, J. A. Cowan, Wiley.
8. Supramolecular chemistry, J. W. Steed and J. L. Atwood, John Wiley
9. Supramolecular Chemistry: Concepts and Perspectives, J. M. Lehn, Wiley-VCH.
10. Nanostructures and Nanomaterials: Synthesis, Properties and Applications, C. G. Zhong, Imperial College Press.
11. Nuclear and Radiochemistry, G. Friedlander, J.W. Kennedy, E. S. Macias and J. M. Miller, John Wiley, New York.
12. Perspectives in Supramolecular Chemistry and Molecular Recognition, G. R. Desiraju, Wiley.
13. Nanotechnology: A Gentle Introduction to the Next Big Idea, M. Ratner and D. Ratner, Pearson Education.

CO 2		H			
CO 3	H				
CO 4					H
CO 5			H		
CO 6				H	

CHAO0013: Advanced Organic Chemistry-II

(4-0-0)

Course Outcomes

CO 1: Recall the principles of organic photochemistry, pericyclic reactions. (Remembering)
CO 2: Explain the theories related to pericyclic reactions. (Understanding)
CO 3: Apply the knowledge of different reactions in research and industrial field. (Applying)
CO 4: Analyse the problems related to photochemistry and synthetic strategy. (Analysing)
CO 5: Demonstrate different theories in pericyclic reaction and photochemistry to check the feasibility of chemicalreactions. (Understanding)

Module I: Organic Photochemistry (15 lectures)

a. Introduction to organic photochemical-photophysical processes, chemiluminescence, photosensitization.
b. Photochemistry of carbonyl compounds - α-cleavage, β-cleavage, intramolecular H-abstraction, addition to π-systems-Paterno-Buchi reaction, electron transfer reactions, Photochemistry of olefins – photo stereomutation of cis-trans isomers, optical pumping, cycloaddition, photochemistry of conjugated polyenes. Photochemistry of enones, photo-rearrangement reactions- di-π-methane rearrangement, Photo-rearrangement of cyclohexadienones, Barton rearrangement, singlet oxygen photochemistry.

Module II: Pericyclic Reactions (15 lectures)

Main features of pericyclic reactions; Woodward-Hoffman rules, correlation diagram and FMO approaches; Electrocyclic reactions – conrotatory and disrotatory motions for 4n and 4n+2systems; Cycloadditions – antarafacial and suprafacial additions, [2+2] and [4+2] reactions (hv and Δ), 1,3-dipolar cycloadditions and chelotropic reactions; Sigmatropic[i,j] shifts of C-H and C-C bonds; Sommelet-Hauser, Claisen, thio-Claisen, Cope and aza-Cope rearrangements.

Module III: Introduction to Heterocyclic chemistry (15 lectures)

Nomenclature of heterocyclic compounds. Structure, reactivity, synthesis and reactions Pyridine, quinoline, Isoquinoline, Indole, Benzofuran, Benzothiophene, pyrazole, Imidazole, oxazole, Isoxazole, Thiazole, Isothiazole, pyridazine, pyrimidine and pyrazine.

Module IV: Synthetic Strategies (15 lectures)

Synthons and synthetic equivalents, disconnection approach, functional group inter-conversions, importance of order of events in organic synthesis, one group and two group C-X disconnections, chemo selectivity, reversal of polarity, cyclisation reactions, amine synthesis.

One group C-C disconnections – alcohols and carbonyl compounds, regioselectiviity, alkene synthesis, use of acetylenes and aliphatic nitro compounds in organic synthesis.

Two group C-C disconnections – Diels-Alder reaction, 1,3-difunctionalised compounds, α, β-unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds, Michael addition and Robinsonannelation. Principle of protection of alcohol, amine, carbonyl and carboxyl groups; Common protecting groups.

Suggested Readings

1. Organic Chemistry, J. Clayden, N. Greeves and S. Warren, Oxford University Press.
2. Principles of Organic Synthesis, R. O. C. Norman and J. M. Coxon, Blackie Academic and Professional.
3. Strategies and Tactics in Organic Synthesis 4 & 5, M. Harmata, Academic Press.
4. Modern Heterocyclic Chemistry, L. A. Paquette, John Wiley.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV

CO 2		H		
CO 3	M	H	H	L
CO 4	H			H
CO 5	H	H		

CHAP0014: Advanced Physical Chemistry II

(4-0-0)

Course Outcomes

CO 1: Recall the basic structure and properties of solids. (Remembering)
CO 2: Explain the electrical properties in terms of semiconductor, superconductor etc. (Understanding)
CO 3: Interpret the results of problems related to adsorption processes and electro kinetic phenomena of surfaces.(Applying)

CO 4: Analyse the process of surface adsorption and types of different catalysed reactions. (Analysing)
CO 5: Apply the properties of solids to interpret the conducting behaviour of different types of materials. (Applying)

Module I: Solid state (18 lectures)
Structures of solids - crystal planes and Miller indices, Bragg's law and applications, Debye-Scherrer powder method, nanoparticles and nanotechnology, defects in solids, thermodynamics of Schottky and Frenkel defect formation, thin films, Langmuir-Blodget film. Electrical properties of solids, intrinsic and extrinsic semiconductors, doping of semiconductors, p-n junction, super conductors, conducting polymers, organic conductors, molecular electronic devices, nonlinear optical materials, optical reflectance, photoconduction, ionic conductors, Meissner effect, BCS theory.

Module II: Surface Chemistry (22 lectures)
a. Electrical aspects of surface chemistry, Electro kinetic phenomena, the structure of electrical double layer, Zeta potential and colloidal stability, Measurement of zeta potential. Surfactants – definition and classification, micelle formation and determination of critical micelle concentration.
b. Reverse micelle and its application, solubilization, microemulsion.
c. Adsorption of gases on solid surfaces – Langmuir's theory and its limitations. Derivation of BET equation – determination of surface area of an adsorbent, thermodynamics of adsorption processes. Capillary condensation – adsorption in micro pores, Kinetics of heterogeneous catalysis – Langmuir-Hinshelwood model and Eley-Riedel mechanism.

Module III: Catalysis and Photochemistry (20 lectures)
a. Catalysts, classification of catalysts. Characterization of catalysts: Methods of surface analysis, surface area, pore size, void fraction, particle size, mechanical strength, surface chemical composition, surface acidity and reactivity. Rates of homogeneously catalysed reactions, turnover number and frequency.
b. Photochemistry - kinetics of photophysical and photochemical processes, complex photochemical processes.

Suggested Readings
1. Solid State Chemistry and its Applications, A. R. West, John Wiley.
2. Solid State Chemistry, D.K. Chakrabarty, New Age Publishers.
3. New Directions in Solid State Chemistry, C.N. R. Rao and J. Gopala Krishnan.
4. Catalytic Chemistry, B. C. Gates, John Wiley & Sons.
5. Fundamentals of Industrial Catalytic Processes, C. H. Bartholomew and R. J. Furrauto , Wiley Interscience.
6. Surfactants and Interfacial Phenomena, M. J. Rosen, John Wiley.
7. Physical Chemistry, J. P. Atkins, Oxford University Press.

CO 2	H		
CO 3		H	
CO 4		H	M
CO 5	H		

CHSP0015: Special Topics in Biochemistry
(3-0-0)

Course Outcomes
CO 1: Recall the characteristic, properties of carbohydrates. (Remembering)
CO 2: Explain the synthesis and biosynthesis of different biomolecules. (Understanding)
CO 3: Distinguish between the physical, chemical and biochemical properties of amino acids, proteins, peptides, enzymes etc. (Analysing)
CO 4: Explain the chemistry of nucleic acids. (Understanding)
CO 5: Explain the importance of vitamins for a living being. (understanding)

Module I: Carbohydrates (9 lectures)
Characteristics and properties of carbohydrates – nomenclature and stereochemistry of monosaccharides, typical carbohydrates, sweetening agents; chemistry of monosaccharides – cyclic structures, Haworth and conformational representations, oxidation, determination of ring size, structure of correlations, synthesis, glycosides; Oligosaccharides and Polysaccharides – sucrose and other oligosaccharides, starch, cellulose and other polysaccharides.

Module II: Lipids (9 lectures)
a. Glycerol derivatives- fats and oils, fatty acid biosynthesis, phospholipids, glycolipids, properties of lipid aggregates, micelles, bilayers, liposomes and biological membranes.

b. Steroids – structural characteristics, synthesis and biosynthesis, steroid hormones; prostaglandins – structural characteristics, synthesis and biosynthesis.
c. Pheromones – structure and origin, synthesis.

Module III: Nucleosides, Nucleotides and Nucleic acids (9 lectures)

a. Nucleosides and Nucleotides: The structure of nucleosides, chemistry of nucleosides, nucleotides; sunlight, carbohydrates and energy – photosynthesis, glycolysis and metabolic energy.
b. Nucleic acids: Structure and function of DNA, RNA (m-RNA, t-RNA, r-RNA), an overview of gene expression (replication, transcription and translation), genetic code (origin, Wobble hypothesis and other features), genetic errors, carcinogenesis and recombinant DNA technology.

Module IV: Amino acids, Peptides and Proteins (9 lectures)

a. Amino Acids – structural characteristics, acid-base properties, synthesis.
b. Peptides – amino acid analysis, terminal group analysis, the amino acid sequence, synthesis; I Proteins, enzymes and biosynthesis – the alpha-helix, other secondary and tertiary structural characteristics, enzymes; protein synthesis.

Module V: Vitamins (9 lectures)

Vitamins: Classification; occurrence; chemistry of Vitamins – structure elucidation and synthesis; biochemical functions; deficiency syndromes.

Suggested Readings

1. Organic Chemistry, S. H. Pine, J. B. Hendrickson, D. J. Cram and G. S. Hammond, McGraw Hill.
2. Organic Chemistry, J. Clayden, N. Greeves, S. Warren and P. Wothers, Oxford University Press.
3. Biochemistry, J. M. Berg, J. L. Tymoczco, G. J. Gatto and L. Stryer, W. H. Freeman & Co.
4. Biochemistry, D. Voet and J. G. Voet, John Wiley and Sons Berg.
5. Principles of Biochemistry, D. Nelson, A. L. Lehninger, M. M. Cox, W. H. Freeman & Co.

CO 5					H

CHRM0017: Research Methodology for Chemistry

(3-0-0)

Course Outcomes

CO 1: Explain the different methods of scientific Research. (Understanding)
CO 2: Explain how to use e-resources for research. (Understanding)
CO 3: Explain the analysis and presentation of data. (Understanding)
CO 4: Apply the knowledge of chemical safety and handle chemicals safely in the lab. (Applying)
CO 5: Construct a proposal for project funding. (Creating)

Mode of Assessment:

Modules I-II will be assessed based on a written examination (2 credits) while Module III will be assessed on the basis of a seminar (1-credit).

Module I: Methods of Scientific Research and Chemical Safety (15 lectures)

a. Print resources, digital resources, information technology and library resources, reporting practical and project work, writing literature surveys and reviews, organizing a poster display, giving an oral presentation, writing scientific papers – justification for scientific contributions, bibliography, description of methods, conclusions, the need for illustration, style, publication of scientific work; writing ethics – avoiding plagiarism.
b. Safe working procedure and protective environment, protective apparel, emergency procedure and first aid, laboratory ventilation. Safe storage and use of hazardous chemicals, procedure for working with substances that pose hazards, flammable or explosive hazards, procedures for working with gases at pressures above or below atmospheric safe storage and disposal of waste chemicals, recovery, recycling and reuse of laboratory chemicals, procedure for laboratory disposal of explosives, identification, verification and segregation of laboratory waste, disposal of chemicals in the sanitary sewer system, incineration and transportation of hazardous chemicals, overview of chemical regulations in India.

Module II: Data Analysis (15 lectures)

The Investigative Approach: Making and Recording Measurements. SI Units and their use. Scientific method and design of experiments.

Analysis and Presentation of Data: Descriptive statistics. Choosing and using statistical tests. Chemometrics, Analysis of variance (ANOVA), Correlation and regression, Curve fitting, fitting of linear equations, simple linear cases, weighted linear case, analysis of residuals, General polynomial fitting, linearizing transformations, exponential function fit, r and its abuse. Basic aspects of multiple linear regression analysis.

Module III: Project Proposal Writing (Seminar Module) (15 lectures)

In this module, students will be reviewing scientific articles, writing reports on the papers they have read and finally prepare a research proposal.

Suggested Readings

1. Practical skills in chemistry, J. R. Dean, A. M. Jones, D. Holmes, R. Reed, J. Weyers and A. Jones, Prentice-Hall, Harlow.
2. Data analysis for chemistry, D. B. Hibbert and J. J. Gooding, Oxford University Press.
3. Errors of observation and their treatment, Fourth Ed., J. Topping, Chapman Hall, London.
4. Quantitative chemical analysis, D. C. Harris, Freeman.
5. How to use Excel in analytical chemistry and in general scientific data analysis, R. de Levie, Cambridge Univ. Press.
6. Chemical safety matters – IUPAC – IPCS, Cambridge University Press, 1992.
7. OSU safety manual 1.01.

CO 5			H

CHMC0018: Materials Chemistry

(3-0-0)

Course Outcomes

CO 1: Recall the knowledge of the basic structure of materials. (Remembering).
CO 2: Explain how molecular structure affects the properties of materials. (Understanding)
CO 3: Explain the properties of different materials based on their structures. (Applying)
CO 4: Analyse the application of different types of materials in a different field. (Analysing).
CO 5: Predict and control material properties. (Creating)

Module I: Solid state ionic conductors (11 lectures)

Structure, physico-chemical principles, applications of Ferrous alloys, Fe-C phase transformations in ferrous alloys, non- ferrous alloys, properties and applications of ferrous and non-ferrous alloys, magnetic alloy, metallic glass, ceramics, nano- materials and optical materials.

Module II: Polymeric materials and inorganic Polymers (12 lectures)

a. Molecular shape, structure and configuration, crystallinity, stress-strain behaviour, thermal behaviour, polymer typesand their applications, conducting and ferro-electric properties.
b. Polysiloxanes, polysilanes, polyphosphazenes, polymeric sulphur - synthesis, structure, properties and applications,co-ordination polymers and organometallic polymers.

Module III: Liquid crystals and high-temperature superconductors (High-Tc or HTS) materials (12 lectures)

Nomatic, smectic, cholesteric - properties and applications, high Tc materials, defect perovskites, high Tc superconductivity in cuprates, 1-2-3 and 2-1-4 materials, anisotropy, temperature dependence of electrical resistance, optical phonon modes, superconducting state, heat capacity, coherence length, elastic constants, position lifetimes, micro-wave absorption pairing and multi gap structure in high Tc materials, applications of high Tc materials.

Module IV: Organic solids and molecular devices (10 lectures)

a. Conducting organics, organic superconductors, magnetism in organic materials, fullerenes, doped fullerenes as superconductors.
b. Molecular rectifiers and transistors, artificial photosynthetic devices, sensors, clay -polymer and carbon composites, phosphor and laser materials.

Suggested Readings

1. Principles of the Solid State, H. V. Keer, Wiley Eastern.
2. Material Science and Engineering- An Introduction, W. D. Callister, Wiley, New York.
3. Materials Science, K. D. Lever, J. M. Alexender and R. D. Rawlings, J.C. Senderson, ELBS.
4. Inorganic Polymers, J. E. Marck, H. R. Allcock and R. West, Prentice Hall.
5. Solid State Physics, N. W. Ashcroft and N. D. Mermin, Saunders College.
6. Thermotropic Liquid Crystals, G.W. Gray, John Wiley.
7. Handbook oi Liquid Crystals, K. V. Chemie Verlag.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV
CO 1	M	H	M	H
CO 2	H		H	
CO 3	M	M		
CO 4	M			H
CO 5		M	M	M

CHCC0019: Computational Chemistry

(3-0-0)

Course Outcomes

CO 1: Recall the programming and some numerical methods in Chemistry. (Remembering)
CO 2: Explain the molecular mechanics methods. (Understanding)
CO 3: Apply QM/MM methods in organic, inorganic and organometallic systems. (Applying)
CO 4: Explain the quantum mechanical methods. (understanding)

Module I: Programming and some numerical methods in chemistry (10 lectures)

Introduction to Linux/UNIX and shell scripts; programming in C /python; Least squares fit; root finding; numerical differentiation; integration and solution of ODE; matrix multiplication, inversion and diagonalization; interpolation; pattern recognition techniques and molecular graphics.

Module II: Molecular Mechanics (MM) Methods (10 lectures)

Basic geometrical description of molecules; force field energy, force field parameterization, differences between force fields, computational considerations, validation of force fields, advantages and limitations of force field methods, transition structure modelling, hybrid force field – electronic structure methods.

Module III: Electronic structure (or Quantum Mechanical, QM) Methods (15 lectures)

Many electron systems, Hartree-Fock method, basis sets, electron correlation and its treatment, basics of density functional theory, DFT based reactivity descriptors. Introduction to popular softwares (like Gaussian, DMol, GAMESS). Applications to simple molecular systems. Monte Carlo and molecular dynamics simulations.

Module IV: Combined QM/MM methods (10 lectures)

Implications of the choice of QM and MM methods; Application of QM/MM methods in organic, inorganic and organometallic systems including bio-organic and bio-inorganic molecules.
Quantitative structure activity relation (QSAR): Early approaches, topological indices, fragmental models; quantum mechanical descriptors.

Suggested Readings

1. Modelling Molecular Structure, A. Hinchcliffe, John Wiley and Sons.
2. Molecular Modeling Basic Principles and Applications, H. D. Holtje, W. Sippl, D. Rognan and G. Folkers , Wiley-VCH.
3. Molecular Modeling: Principles and Applications, A. R. Leach, Pearson Education.
4. Introduction to computational chemistry, F. Jensen, John Wiley and Sons Press.
5. Numerical Recipes in Fortran/C, S. A. Tenkolsky, W. T. Vetterling and P. Flannery, Cambridge University Press.
6. Python programming for the absolute beginner, Course Technology, M. Dawson, CENGAGE learning.
7. C Programing for the absolute beginner, M. Vine, Thomson Course Technology.

CO 2		H		
CO 3		M	M	H

CO 4			H	

CHFC0020: Food Chemistry

(3-0-0)

Course Outcomes

CO 1: Recall the relationship between food, nutrition and health. (Remembering)
CO 2: Explain the nutritional needs during the life cycle and nutritional deficiency and their prevention. (Understanding)
CO 3: Apply the knowledge of food chemistry for entrepreneurial development. (Applying)
CO 4: Explain the sources, functions of major nutritional constituents. (Analysing).
CO 5: Outline the changes in nutrition during cooking, ripening, storage of different categories of food. (understanding)
CO 6: Explain nutritional perspectives of diets. (understanding)

Module I: Basic idea of food and nutrients (2 lectures)

Relationship between food, nutrition and health; functions of food: physiological and social.

Module II: Major nutritional constituents (12 lectures)

Functions, sources, deficiency/excess diseases of the following major nutrients:(a) Carbohydrates; (b) Amino acids and proteins; (c) Lipids, sterols, metabolite; (d) Mineral; (e) Vitamins: A, D, E, K.

Module III: Different categories of food (7 lectures)

Selection, nutritional contribution and changes during Cooking/Ripening/storage of the following categories of food: (a) Cereals; (b) Pulses; (c) Fruits and vegetables; (d) Milk and milk products; (e) Egg, meat, poultry and fish; (f) Fats and oils.

Module IV: Nutritional needs during life cycle (6 lectures)

Body composition, Influence of Nutrition, Physical Activity, Growth and Aging; Maternal Nutrition, Nutritional Requirement during Infancy, Childhood; Diet, Nutrition and Adolescence; Nutrition in the Elderly.

Module V: Prevention and management of deficiencies (6 lectures)

Causes, symptoms, treatments and preventions of the following: Protein-Energy malnutrition among children; Vitamin A deficiency; Iron deficiency; Fluorosis: Over nutrition, obesity, coronary heart diseases, Diabetes (Type I & II); Diet, Nutritionand cancer.

Module VI: Dietary goals & guidelines (10 lectures)

National Perspectives; nutritional perspectives of vegetarian diets; Social Health Issues – Smoking, Alcoholism, DrugAddiction, AIDS and AIDS Control Programs; Food Preservation & Food Additives & Colorants.

Module VII: Entrepreneurship Development (2 lectures)

Scope of Food based items for Entrepreneur Development in North East India & Identification of Resources; Developmentof a Project Plan.

Suggested Readings

1. Fundamentals of Foods, Nutrition and Diet Therapy, S. R. Mudambi and M. V. Rajagopal, New Age International.
2. Nutrition Science, B. Srilakshmi, New Age International.
3. Handbook of Food and Nutrition, M. Swaminathan,BAPPCO.
4. Perspectives of Nutrition, G. M. Wardlaw and J. S. Hanpl, McGraw Hill.
5. Food Science, Nutrition and Food Safety, S. Sari, A. Malhotra, Pearson India Ltd.
6. Nutritive Value of Indian Foods, NIN, ICMR, C. Gopalan, B.V. Rama Sastri and S. C. Balasubramanian.
7. Textbook of Human Nutrition, M. S. Bamji, Oxford & IBH Pub Co Pvt Ltd.

CO 6						H	

CHIC0021: Industrial Chemistry

(3-0-0)

Course Outcomes

CO 1: Recall the origin, importance of elastomers. (Remembering)
CO 2: Recall the classification, limitations of synthetic fibers. (Remembering)
CO 3: Illustrate the classification and utility of fertilizers and pesticides. (Understanding)
CO 4: Compare and Analyse different chemical reactions and procedures adopted in different industries. (Analysing)
CO 5: Evaluate the challenges existing in the tea and sugar industries and suggest ways to overcome them. (Evaluating)
CO 6: Explain the classes, manufacturing of different paints. (Understanding)

Module I: Elastomers (7.5 lectures)

Rubbers: origin, importance, types of rubber, natural rubber, gutta-percha, guayle rubber, balata. Refining of crude rubber, drawbacks of natural rubber, vulcanization, technique of vulcanization. Synthetic rubber, poly butadiene, buna –S or SBR rubber, neoprene, nitrile rubber, butyl rubber, silicone rubber, & poly urethane.

Module II: Synthetic Fibres (5 lectures)

Introduction, natural and artificial fibres characteristics and limitations. Study of following synthetic fibres- Rayon (nitro cellulose) cupra ammonium rayon, acetate rayon, nylon 66, nylon-6, terylene (Dacron) Teflon & Saran.

Module III: Fertilizers and Pesticides (10 lectures)

a. Fertilizers: Plants nutrients, need for fertilizers, qualities of fertilizers, NPK ratio, classification of fertilizers, straight and mixed fertilizers. Nitrogenous fertilizers, manufacture of ammonium nitrate, urea, ammonium sulphate, phosphate fertilizers manufacture of triple phosphate and super phosphate, potassium fertilizers.
b. Pesticides: Introduction, classification, Study of the following types: - Organo chlorine pesticides like DDT, BHC and Aldrin. Organo phosphorous pesticides, malathion& parathion. Rodenticides, fungicides, herbicides, fumigants and repellants (one example each).

Module IV: Sugar and Fermentation Industries (10 lectures)

a. Sugar: Importance of sugar industry, manufacture of raw and refined sugar with flow sheet, estimation of sugar (physical and chemical methods).
b. Fermentation: Definition of fermentation, importance of various fermentation industries, basic requirements for fermentation, steps in fermentation process. Manufacture of alcohol from molasses, distillation, coffee still, preparation of absolute alcohol, various useful fractions and their uses, proof sprit, denatured spirit.

Module V: Tea Industry (7.5 lectures)

Chemical composition - an overview, Polyphenols in tea- Mechanism of theaflavin formation, biochemistry of tea - Biosynthesis of caffeine, Cinnamate, flavonoids, Chemical properties of tea- Polyphenols as Antioxidants.

Module VI: Paints (5 lectures)

Introduction, classification of paints, constituents of paints in brief. Manufacture of paints, qualities of good paint, emulsion paints, paint removers, varnishes enamels, lacquers, thinners in brief.

Suggested Readings

1. Industrial Chemistry, B. K. Sharma, Goel Publishing House Meerut, India.
2. Shreeve's Chemical Process Industries, G. T. Austin, Mc Graw Hill.
3. Organic Chemistry Vol I, I. L. Finar.
4. Organic Chemistry Vol II, I. L. Finar.
5. Introduction to Paint Chemistry and Principles of Technology, J. Bentley and G. P. A. Turner, Springer Science.

CHMD0022: Medicinal Chemistry

(3-0-0)

Course Outcomes

CO 1: Recall the definition of drugs and pro drugs and history of drug development. (Remembering)
CO 2: Explain the mechanisms and theoretical aspects of drug action. (Understanding)
CO 3: Explain the properties and synthetic methods of antibiotics, antiviral, antimalarials etc. (Understanding)
CO 4: Explain the classes of neurotransmitters, drugs affecting cholinergic and adrenergic pathways. (Understanding)
CO 5: Recall about antihistamines, anti-inflammatory drugs, analgesics, anticancer gene therapy etc. (Remembering)

Module I: Introduction and History of Drug Development (5 lectures)

Definition of drug and prodrugs; need of drugs; germ theory of diseases; history of sulpha drugs and their mode of action; antibacterial agents.

Module II: Mechanisms and Theoretical aspects of drug action, drug discovery, design and delivery (10 lectures)

Receptors – two-state model of receptor theory, drug-receptor interaction and Clark's Occupancy Theory; physiological response; drug agonist and antagonist – classification; Need of quantification of drug action; definition of chemotherapeutic index and therapeutic index; factors affecting bioactivity of drugs; pharmacokinetics and pharmacodynamics; QSAR; Lead compounds in drug discovery; importance of SAR and molecular modification; importance of combinatorial library and molecular modelling in drug discovery; drug delivery – controlled drug delivery methods.

Module III: Antibiotics, Antivirals and Antimalarials (15 lectures)

a. General introduction to antibiotics – their sources and classification; causes and concerns of bacterial resistance to antibiotics; definition and need of broad Spectrum Antibiotics. Mechanism of action of lactam antibiotics, non-lactam antibiotics and quinolones.
b. Antivirals – difficulty in developing clinical solutions to viral diseases, introduction to antiviral agents, AIDS –its cause and prevention.
c. Antimalarials – classification of human malaria and plasmodia responsible for human malaria; discovery of quinine and its structure-activity-relationship (SAR), importance of quinine as a lead to the discovery of low cost antimalarials,artemisinin and its derivatives – their SAR and importance in dealing with chloroquine resistant malaria, mode of action.

Module IV: Neurotransmitters (5 lectures)

Classes of neurotransmitters, drugs affecting cholinergic and adrenergic pathways.

Module V: Miscellaneous topics (10 lectures)

Antihistamines, anti-inflammatory drugs, analgesics, anticancer and antihypertensive drugs, gene therapy, anti-sense and anti-gene strategies and drug resistance.

Suggested Readings

1. Medicinal Chemistry: An Introduction, G. Thomas, John Wiley & Sons.
2. An Introduction to Medicinal Chemistry, G. L. Patrick, Oxford University Press.
3. Introduction to Medicinal Chemistry, A. Gringauz, Wiley India Pvt Ltd.
4. Medicinal Chemistry, D. Sriram and P. Yogeeswari, Pearson Education. (Dorling Kindersley India).

CHRC0023: Recent Advances in Catalysis

Course Outcomes

CO 1: Recall the kinetics of heterogeneous catalysis. (Remembering)
CO 2: Explain the preparation and characterization of industrial catalysts. (Understanding)
CO 3: Explain the synthesis and properties of Zeolite and clays. (Understanding).
CO 4: Explain the environmental catalyst and role of catalyst in the petroleum industry. (Understanding)

Module I: Kinetics of heterogeneous catalysis (10 lectures)

Adsorption and catalysis, mechanism of heterogeneous catalysis, kinetics of heterogeneous catalytic reactions, volcano principle, shape and size selectivity of catalysts, characterization of catalysts and their surfaces, methods of surface analysis,

surface area, pore size, void fraction, particle size, mechanical strength, surface chemical composition, surface acidity and reactivity.

Module II: Preparation and characterization of industrial catalysts (8 lectures)
Catalyst design methods, catalyst support and preparation of industrial catalyst, supported and unsupported metal catalysts, bimetallic catalysts, Electron microscopy, XPS and PES, ESCA, IR and magnetic resonance spectroscopy, temperature programmed desorption (TDP), and DTA and TGA.

Module III: Zeolite and clays (15 lectures)
a. Synthesis of some selected important zeolites, modification of zeolites, ion exchange, metals supported on zeolites, dealumination and desilication of zeolites, shape selective catalysis in zeolites.
b. Properties of pillared clays, use of coordination and organometallic compounds as pillaring, pillaring of acid activated clays, mesoporous materials, ordered mesoporous materials, synthesis of silica molecular sieve materials,characterization of mesoporous molecular sieves, catalytic properties of mesoporous materials, catalytic applications of zeolite, clays and mesoporous materials.

Module IV: Catalysis in petroleum industry and environmental catalysts (12 lectures)
Design of catalytic reactors, promotion and promoters, catalytic processes in petroleum industry, reforming, cracking and hydrotreating, hydrogenation, hydrodesulphurization, Fischer-Tropsch process, Catalytic deactivation and reactivation, control of pollution from automobile exhaust, catalytic converters, abatement of nitrogen oxides and odours, cleaning of industrial effluents.

Suggested Readings
1. Fundamentals of Industrial Catalytic Processes, C. H. Bartholomew and R. J. Furrauto, Wiley Interscience.
2. Heterogeneous Catalysis, D. K. Chakrabarty and B. Viswanathan, New Age Int.
3. Catalytic Chemistry, B. C. Gates, John Wiley & Sons.
4. Heterogeneous Catalysts for Synthetic Chemists, R.L. Augustine, Marcel-Dekker.
5. Catalysis and zeolites – fundamentals and applications, J. Weitkamp and L. Puppe, Springer-Verlag.
6. Handbook of Heterogeneous Catalysis, Vol 4 and 5, G. Ertl, H. Knozinger and J. Weitkamp, Wiley-VCH.

CO 1	H			
CO 2		H		
CO 3			H	
CO 4				H

CHBC0024: Biophysical Chemistry

(3-0-0)

Course Outcomes
CO 1: Recall the fundamentals of biological macromolecules. (Remembering)
CO 2: Explain the molecular modelling and conformational analysis of biological macromolecules. (Understanding)
CO 3: Explain different methods for analysis and separation of biomolecules. (Understanding)
CO 4: Explain different techniques for the structural determination of biomolecules. (Understanding)
CO 5: Explain different optical methods in biological systems. (Understanding)

Module I: Fundamentals of biological macromolecules (5 lectures)
Chemical bonds in biological systems; properties of water; thermodynamic principles in biological systems; properties and classification of amino acids; protein structure and function; properties of nucleosides and nucleotides; composition of nucleic acids; structure of nucleic acids.

Module II: Molecular modelling and conformational analysis (10 lectures)
Complexities in modelling macromolecular structure; polypeptide chain geometries and internal rotation angles; Ramachandran plots; Molecular mechanics; stabilizing interactions in biomolecules; simulating macromolecular structure; energy minimization; molecular dynamics.

Module III: Methods for analysis and separation of biomolecules (10 lectures)
General principles, chromatography; analytical centrifugation – basic principles, sedimentation velocity, sedimentation equilibrium, density gradient sedimentation – isopycnic and rate- zonal centrifugation; electrophoresis, isoelectric focussing; capillary electrophoresis, MALDI-TOF, calorimetry – introduction, isothermal titration calorimetry, differential scanning calorimetry.

Module IV: Structural determinations: Physical Methods (10 lectures)
Ultracentrifugation and other hydrodynamic techniques; light scattering – fundamental concepts, scattering from a number of small particles, Rayleigh scattering, scattering from particles that are not small compared to the wavelength of radiation, dynamic light scattering, low angle X-ray scattering, neutron scattering, Raman scattering.

Module V: Optical Methods and Applications (10 lectures)
Optical techniques in biological systems – refraction, evanescent waves and plasmons-surface plasmon resonance; absorption spectroscopy, fluorescence spectroscopy, linear and circular dichroism, single and multidimensional NMRspectroscopy.

Suggested Readings
1. Biophysical Chemistry Parts I-III, C. R. Cantor and P. R. Schimmel, Macmillan.
2. Principles of Biochemistry,A. L. Lehninger, D. L. Nelson, L. Lehninger and M. M. Cox, W. H. Freeman.
3. Biophysical Chemistry the Royal Society of Chemistry, A. Cooper, UK.
4. Biophysical Chemistry, J. P. Allen, Blackwell Publishing.

CHHC0025: Heterocyclic Chemistry
(3-0-0)

Course Outcomes
CO 1: Recall the systematic nomenclature of heterocyclic compounds. (Remembering)
CO 2: Explain the synthesis and properties of azoles and condensed five-membered rings. (Understanding)
CO 3: Explain the synthesis and properties of three and four-membered heterocyclic compounds. (Understanding)
CO 4: Explain the importance and chemistry of natural heterocyclic compounds. (Understanding)
CO 5: Explain synthesis and properties of Diazines, bicyclic heterocycles & seven-membered heterocycles. (Understanding)

Module I: Introduction & Small Ring Heterocycles (10 lectures)
Hantzsch-Widman nomenclature for monocyclic, fused and bridged heterocycles; General approaches to heterocyclic synthesis; Aliphatic and aromatic heterocycles; Basicity and aromaticity of heterocycles.
Syntheses of aziranes, oxiranes &thiiranes; Ring openings and heteroatom extrusion; Synthesis & reactions of azetidines, oxetanes & thietanes; Strain.

Module II: Azoles and condensed five membered Rings (15 lectures)
Physical and chemical properties; Synthesis of pyrazole, isothiazole and isoxazole; Synthesis of imidazoles, thiazoles & oxazoles; Nucleophilic and electrophilic substitutions; Ring cleavages; Benzofused analogues.
Synthesis of indole, benzofuran and benzo-thiophene; Nucleophilic, electrophilic and radical substitutions; Additionreactions; Indole rings in biology.

Module III: Diazines, bicyclic heterocycles & seven membered heterocycles (10 lectures)
Physical & chemical properties and synthesis of pyridazines, pyrimidines, pyrazines; Nucleophilic and electrophilic substitutions.
Synthesis of quinolines, isoquinolines, benzofused diazines, acridines, phenothiazines, carbazoles and pteridines; Substitution reactions.
Synthesis & reactions of azepines, oxepines, thiepines & diazepines.

Module IV: Natural heterocycles (10 lectures)
a. **Porphyrins:** Classification and synthesis of porphin rings.
b. **Nucleic Acids:** Primary, secondary and tertiary structure of DNA; DNA replication and heredity; Structure and function of mRNA, tRNA and rRNA.
c. **Proteins:** Acid-base properties of amino acids; polypeptides; primary, secondary, tertiary and quaternary protein structures; classification of proteins on basis of structure and biological function; Merrifield peptide synthesis.

Suggested Readings
1. Modern Heterocyclic Chemistry, L. A. Paquette, W. A. Benjamin.
2. Organic Chemistry, Vol. II, I. L. Finar, ELBS.

3. Heterocyclic Chemistry, T. L. Gilchrist, Longman.
4. Biochemistry, A. L. Lehninger, Kalyani Publishers.

CO 5			H	

CHNP0026: Natural Products Chemistry

Course Outcomes

CO 1: Recall the chemistry of medicinal compounds of natural origin. (Remembering)
CO 2: Explain the role of co-enzyme during Bio-synthesis of natural products. (Understanding)
CO 3: Illustrate the biosynthesis and total synthesis of terpenoids and alkaloids. (understanding)
CO 4: Analyse the presence of isoprene units in the natural product. (Analysing)
CO 5: Analyse the practical utility of steroid chemistry. (Analysing)

Module I: Natural Products and their Biosynthetic Pathways (15 lectures)

General classification of natural products, sources and their isolation, characterisation and biosynthesis of common plant products; Extraction and Separation of Natural Products Biosynthesis pathways for natural products using co-enzymes and enzymes, general biogenesis and synthesis of cis-jasmone, methyl jasmonate, prostaglandins, exaltone and muscone.

Module II: Terpenoids and Alkaloids (15 lectures)

Terpenes and the Isoprene Rule; General biosyntheses of mono- and sesquiterpenes, trans-chrysanthemic acid, cyclo- pentato monoterpene lactones; Synthesis of α-vetinone and total synthesis of β-eudesmol; Synthesis of hirsutene, abietic acid, cis juvenile hormone, trans annular cyclisation of caryophyllene; Synthesis of caryophyllene and isocaryophyllene; Rearrangements of santonic acid and thujospene; Synthesis and rearrangement of longifolene; Structure, synthesis and biosynthesis of common alkaloids: reticuline, yohimbine and tylophorine.

Module III: Steroids (15 lectures)

Nomenclature of steroids and synthesis of squalene; Lanosterol and caretonoids; Synthesis of equlenins; Estrogens and total synthesis of non-aromatic steroids (progesterones); Corticosteroids; Degradation of diosgenin to progesterone and itssynthesis; Miscellaneous transformations of steroid molecules.

Suggested Readings

1. Natural Products Chemistry, Vols. I and II, K. Nakanashi, Academic Press, New York and London.
2. Natural Products Chemistry, sources, separations and structures, R. Cooper and G. Nicola, CRC Press, Taylor & Francis Group.
3. Chemistry of Natural Products, S. V. Bhat, B. A. Nagasampagi and M. Sivakumar, Springer Science & Business Media.

CHOC0027: Organometallic Chemistry

(3-0-0)

Course Outcomes

CO 1: Recall the fundamentals of organometallic compounds and their reactions. (Remembering)
CO 2: Explain the physical techniques required for the characterization of Organometallic compounds. (Understanding)
CO 3: Explain the synthesis and application of the main group organometallic compounds. (Understanding)
CO 4: Analyse the function of transition metal-based organometallic compounds. (Analysing)
CO 5: Evaluate potential applications of Organometallic chemistry in organic synthesis. (Evaluating)
CO 6: Design one-pot synthesis of complex molecules using organometallic chemistry. (Creating)

Module I: Introduction to organometallic compounds and reaction mechanisms (7 lectures)
History of Organometallic Chemistry, 18 electron rule, Electronic structure, Ligand substitution, oxidative addition, reductive elimination, migratory insertion, hydride elimination, trans-metallation, nucleophile and electrophilic attack on the ligands coordinated to metals.

Module II: Physical methods in organometallic chemistry (8 lectures)
Characterization of organometallic compounds using NMR, EPR, Mossbauer, IR, Mass spectroscopy and X-ray crystallography; Isotope effect; Fluxionality of organometallic complexes.

Module III: Main group organometallic compounds (8 lectures)
Synthesis and reactions of main group organometallic compounds including organo lithium, organo magnesium, organo boron, organo aluminium, organosilicon and organotin compounds.

Module IV: d-block organometallic compounds (8 lectures)
Structure, Preparation, and Chemistry of Transition metal carbene and –carbyne complexes. N-Heterocyclic Carbenecomplexes; Transition metal compounds with M-H bonds (classical and non-classical metal-hydrides), Agostic interaction.

Module V: Organometallic catalysis and application of organometallic chemistry to organic synthesis (14 lectures)
Synthetic applications of metathesis reactions, ring opening, ring closing metathesis in organic synthesis, macrocycle synthesis. Asymmetric hydrogenation, Hydrosilylation, Hydrocyanation, Palladium in Homogenous catalysis- Heck coupling, Stille coupling, Suzuki coupling, Negishi coupling, Sonogashira coupling and Buchwald-Hartwig coupling reactions. Synthetic utility of organotitanium, organochromium, organonickel, organocopper, organ rhodium compounds.

Suggested Readings

1. Organometallics, C. Elschenbroich, Wiley.
2. The Organometallic Chemistry of the Transition Metals, R. H. Crabtree, Wiley-Blackwell.
3. Organometallics and Catalysis: An Introduction, M. Bochmann, Oxford University Press.
4. Organometallic Chemistry, G. O. Spessard and G. L. Miessler, Oxford University Press, New York.
5. Transition Metal Organometallic Chemistry, F. Mathey, Springer.
6. Organic Synthesis, M. B. Smith, McGraw Hill Higher Education.

CHIP0028: Inorganic Rings, Clusters and Polymers

(3-0-0)

Course Outcomes

CO 1: Recall the knowledge of inorganic rings, clusters and inorganic polymers with respect to their structural diversity. (Remembering)
CO 2: Illustrate different theories to predict the structure of metal clusters. (Understanding)
CO 3: Make use of isolobal analogy in the understanding of structure and bonding of heteroboranes. (Applying)
CO 4: Analyse the concept of electron deficiency and sufficiency of Polyhedral boranes. (Analysing)
CO 5: Compare inorganic polymers with organic polymers. (Evaluating).
CO 6: Discuss the synthesis, structure, bonding and applications of inorganic polymers. (Creating)

Module I: Boranes and Heteroboranes (13 lectures)
Polyhedral boranes, concept of electron deficiency and sufficiency, types and IUPAC nomenclature of polyhedral boranes. Polyhedral skeleton electron pair theory (PSEPT). W. N. Equivalent and resonance structures. Wade's vs Lipscomb'smethods of studying higher boranes.
Heteroboranes: types and IUPAC nomenclature, structure and bonding of heteroboranes with special reference to carboranes, Metallaboranes, Metallacarboranes, metal σ and μ bonded borane/carborane clusters. Resemblance of Metallaboranes/Metallacarboranes with ferrocene and related compounds. Applications of Metallaboranes/Metallacarboranes as drug delivery system. Applications of PSEPT over heteroboranes.

Module II: Isolobility (6 lectures)
Concept of isolobility and isolobal groups with examples. Its application in the understanding of structure and bonding of heteroboranes.

Module III: Metal Clusters (11 lectures)
Metal-metal bonding, quadrupolar bond and its comparison with a C-C bond; Types of metal clusters and multiplicity of M- M bonds. Simple and condensed metal carbonyl clusters. Applications of PSEPT and Wade's-Mingo's and Lauhr's rule over metal carbonyl clusters. Metal halide and metal chalcogenide clusters, polyatomic Zintl ions, Bloomington shuffle.

Module IV: Inorganic Polymers (15 lectures)
Inorganic polymers, classification of inorganic polymers, comparison with organic polymers, Boron-oxygen and boron- nitrogen polymers, silicones, polysilanes, polyphosphazenes, coordination polymers, sulphur-nitrogen, sulphur-nitrogen- fluorine compounds, preceramic inorganic polymers.

Suggested Readings
1. Advanced Inorganic Chemistry, F. A. Cotton and G. Wilkinson, John Wiley & Sons, New York.
2. Inorganic Chemistry, J. E. Huheey, Addison Wesley Pub. Co., New York.
3. Chemistry of the Elements, N. N. Greenwood and A. Earnshaw, Butterworth Heinemann, London.
4. Inorganic polymers, J. E. Mark, H. R. Allcock and R. West, Oxford University Press, New York.

Mapping of COs to Syllabus

CO 6				H

CHQT0029: Introduction to Quantum Chemistry and Group Theory

Course Outcomes
CO 1: Recall the postulates and principles of quantum chemistry. (Remembering)
CO 2: Explain the Schrodinger equation. (Understanding)
CO 3: Solve the problems related to wave functions. (Applying)
CO 4: Distinguish one approximation method from another, one molecular point group from another. (Analysing)

Module I: Quantum Chemistry I (20 lectures)
Planck's theory, wave-particle duality, uncertainty principle, operators, eigen functions and eigen values in quantum mechanics, postulates of quantum mechanics, Schrodinger equation, free particle, particle in a box, degeneracy, harmonic oscillator, rigid rotator, the hydrogen atom, angular momentum, electron spin, spin-orbit coupling.

Module II: Quantum Chemistry II (20 lectures)
Approximate methods in quantum mechanics - the variation theorem, linear variation principle and perturbation theory (first order and non-degenerate), application of variation method and perturbation theory to the Helium atom, anti- symmetry, Slater determinant, term symbols and spectroscopic states, Huckel approximation for small pi-conjugated molecules.

Module III: Chemical Applications of Group Theory (20 lectures)
Symmetry elements and operations, equivalent symmetry elements and equivalent atoms, identification of symmetry point groups with examples, groups of very high symmetry, molecular dissymmetry and optical activity, systematic procedure for symmetry classification of molecules and illustrative examples, brief review of matrix representation of groups, reducible and irreducible representations, rules about irreducible representations as derived from great orthogonality theorem, relationship between reducible and irreducible groups, character tables.

Suggested Readings
1. Molecular quantum Mechanics, P. Atkins and R. Friedman, Oxford University Press.
2. Quantum Chemistry, I. N. Levine, PHI Learning Pvt. Ltd.
3. Introduction to Quantum mechanics, D. J. Griffiths, Pearson Education Ltd.
4. Chemical Applications of Group Theory, F. A. Cotton, Willey India Pvt. Ltd.
5. Molecular Symmetry and Group Theory, R. L. Carter, John Wiley & Sons.
6. Molecular Symmetry and Group Theory, A. Vincent, Wiley.

CHFY0030: Fundamentals of Spectroscopy

(4-0-0)

Course Outcomes

CO 1: Recall the fundamental aspects of absorption and emission spectroscopy. (Remembering)
CO 2: Explain the basic concepts of rotational and vibrational spectroscopy. (Understanding)
CO 3: Illustrate basics and applications of electronic spectra. (Understanding)
CO 4: Explain theories and applications of NMR, ESR and Mossbauer spectroscopy. (Understanding)
CO 5: Identify unknown molecules with the help of different spectroscopic techniques. (Applying)

Module I: Interaction of light with matter (5 lectures)

Fundamental aspects of absorption and emission spectroscopy, probability of transition, oscillator strength, dipole strength, Spontaneous and stimulated emission, origin of selection rules.

Module II: Rotational and Vibrational Spectroscopy (15 lectures)

Degrees of freedom of molecules, rigid rotor model, rotational spectra of diatomics and polyatomics, effect of isotopic substitution and non-rigidity, selection rules and intensity distribution, Vibrational spectra of diatomics, effect of anharmonicity, Morse potential, Vibrational-rotational spectra of diatomics, P, Q, R branches, normal modes of vibration, overtones, hot bands, Raman spectroscopy – Origin, rotational and vibrational Raman spectra of diatomics.

Module III: Electronic Spectroscopy (15 lectures)

Electronic spectra of diatomic molecules, Frank-Condon principle, vibronic transitions, Spectra of organic compounds, $\pi \rightarrow \pi^*$, $n \rightarrow \pi^*$ transition, Photoelectron Spectroscopy – basic principle, photoelectron spectra of simple molecules, X-ray photoelectron spectroscopy (ESCA), Auger electron spectroscopy, Lasers – Laser action, population inversion, properties oflaser radiation, examples of simple laser systems.

Module IV: Magnetic Resonance Spectroscopy (15 lectures)

a. **Nuclear Magnetic Resonance:** Nuclear spin and nuclear spin states in magnetic field, resonance phenomenon, relaxation process, NMR line shapes and saturation, shielding and de-shielding of magnetic nuclei, chemical shift, spin-spin interactions, spectra of two-spin system (A_2, AB and AX cases), ^{13}C, ^{19}F and ^{31}P NMR spectroscopy.
b. **Electron Spin Resonance:** Basic principles, factors affecting g values, hyperfine coupling, spin densities and McConnell relationship, Zero field splitting.

Module V: Mass spectrometry and Mossbauer spectroscopy (10 lectures)

a. **Mass spectrometry**: Basic principles, ionization techniques, isotope abundance, molecular ion, fragmentationprocesses of organic molecules, deduction of structure through mass spectral fragmentation
b. **Mossbauer spectroscopy**: Principles, instrumentation and applications.

Suggested Readings

1. Fundamentals of Molecular Spectroscopy, C.N. Banwell and E. M. McCash, Tata McGraw Hill.
2. Introduction to Spectroscopy, D.L. Pavia, G. M. Lampman and G. S. Kriz, Brooks/Cole Cengage Learning.
3. Physical Methods in Chemistry, R.S. Drago, Saunders, Thomson Learning.
4. Spectrometric Identifications of Organic Compounds, R.M. Silverstein, F. X. Webster, D. J. Kiemle and D. L. Bryce, Wiley India Pvt. Ltd.
5. Organic Spectroscopy, W. Kemp, Palgrave Macmillan.
6. Organic Structures from Spectra, L. D. Field, S. Sternhell and J. R. Kalman, John Wiley and Sons.
7. Structural Methods in Molecular Inorganic Chemistry, D. W. H. Rankin, N. Mitzel and C. Morrison, Wiley.

Mapping of COs to Syllabus

Course Outcomes	Module I	Module II	Module III	Module IV	Module V
CO 1	H				
CO 2		H			
CO 3			H		

CO 4				H	H
CO 5	L	L	M	H	H

CHAP0031: Applied Spectroscopy

(3-0-0)

Course Outcomes

CO 1: Recall various principles involved in UV-Visible spectroscopy. (Remembering)
CO 2: Explain the theories and applications of IR and mass Spectrometry. (Understanding)
CO 3: Apply the NMR spectroscopy for structural elucidation of simple and complex molecules. (Applying)
CO 4: Explain the role of various spectroscopic tools required for analysing the structure of unknown molecules. (Analysing)
CO 5: Interpret the progress of organic reactions by FT-IR spectroscopy. (Evaluating)

Module I: Ultraviolet and visible spectroscopy (10 Lectures)

Electronic transitions, chromophores, auxochromes, red and blue shift, applications of UV spectroscopy, spectrum shifts with solvents, isolated and conjugated double bonds, woodward Fieser rules, Analytical uses of UV spectroscopy in polyenes, carbonyl compounds and aromatic systems.

Module II: IR and Mass Spectrometry (15 lectures)

a. **Infrared Spectroscopy**: Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols, amines; Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acid anydrides, lactones, lactams, conjugated carbonyl compounds); Effects of H- bonding and solvent effect on vibrational frequency, extension to various organic molecules for structuralassignment.
b. **Mass Spectrometry**: Mass spectral fragmentation of organic compounds, common functional groups; molecular peak, McLafferty rearrangements, examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Module III: NMR spectroscopy (20 lectures)

a. **Nuclear Magnetic Resonance Spectroscopy**: Approximate chemical shift values of various chemically non- equivalent protons and correlation to protons bonded to carbon (aliphatic, olefinic, aldehydic and aromatic); Protons bonded to other nuclei (alcohols, phenols, enols, carboxylic acids, amines, amides, SH); Chemical exchange, effect of deuteration; complex spin-spin interaction between two, three, four and interacting nuclei (first order spectra); Complex interaction, virtual coupling, stereochemically hindered rotation, Karplus curve, variation of coupling constant with dihedral angle, nuclear magnetic double resonance, simplification of complex spectra using shift reagents, Fourier transform technique and nuclear Overhauser effect (NOE).
b. **C-13 NMR Spectroscopy**: Chemical shift (aliphatic, olefinic, alkynes, aromatic, hetero-aromatic, carbonyl carbon);Coupling constants, two-dimensional NMR spectroscopy, NOESY, DEPT and INEPT terminologies.
c. **Applications:** IR, NMR and Mass spectroscopy for structure elucidation of organic compounds.

Suggested Readings

1. Spectroscopic Identification of Organic Compounds, R. M. Silverstein, G. C. Basseler and T. Morill, C.John Wiley.
2. Organic Spectroscopy, W. Kemp, McMillan Press Ltd.
3. Spectroscopic Methods in Organic Chemistry, W. Williams, I. Fleming, McGraw Hill.
4. Fundamentals of Molecular Spectroscopy, C. N. Banwell and E. M. McCash, Tata McGraw- Hill, New Delhi.
5. Introduction to Spectroscopy, D.L. Pavia, G. M. Lampman and G. S. Kriz, Harcourt College Publisher NY.

CHSL0200: Elements of Service

(2-0-0)

Course Outcomes

1. Understanding social responsibility of higher educational institutes. (Understanding)
2. Identifying problems in the community and where students originated. (Applying)

3. Influence to get involved in the local community to gain insight into local issues. (Evaluating)
4. Adopt strong leadership skills which allow students to work well in a team. (Creating)

Module I (6 lectures)
Understanding social responsibility of higher educational institutes; community university engagement (CUE) and its importance, engaged teaching, engaged research. Community Based Participatory Research (CBPR). Statutory bodies of higher educational institutions and social responsibility.

Module II (9 lectures)
Service learning and active learning.; principles of service learning; classification of service learning models; servicelearning vis a vis other community experiences; historical context of university community partnership; chemistry and service learning; service Learning for a postgraduate chemistry student and its scope in research.

Module III (15 lectures)
Conceptualisation of the idea of service learning through their practical implementations (any two): (i) demonstrating experiments to inoculate scientific temper for nearby communities, (ii) organising awareness programmes for school children to eradicate the fear of pursuing higher studies in science, (iii) engaging with communities to find out various possibilities of providing the solutions to societal problems from chemistry point of view, (iv) providing consultancy to school students for various inter school science competitions.

Suggested Readings
1. Service-Learning Essentials: Questions, Answers, and Lessons Learned, B. Jacoby, Jossey-bass.
2. Where's the Learning in Service-Learning? J. Eyler, and D. E. Giles Jr., Jossey-bass.

LABORATORY COURSES

CHIQ6002: Inorganic Qualitative and Quantitative Analysis – Lab

(0-0-3)

Course Outcomes

CO 1: Recall the procedures followed to carry out the qualitative and quantitative analysis. (Remembering)
CO 2: Explain the reason behind each step for Analysing mixtures and preparing compounds and metal nanoparticles. (Understanding)
CO 3: Apply different spectroscopic methods to characterize coordination compounds. (Applying)
CO 4: Design protocols for Analysing inorganic mixtures and synthesizing nanoparticles. (Creating)

Experiments:

a. Qualitative analysis (tertiary mixtures, alloys, ores).
b. Quantitative analysis (binary mixtures, alloys, ores).
c. Inorganic preparation (crystallization, precipitation, calcination).
d. Coordination compounds through ligand synthesis and spectroscopic characterization, magnetic properties.
e. Metal Nanoparticle synthesis and characterization.

Suggested Readings

1. Vogel's Textbook of Quantitative Chemical Analysis,J. Mendham, R. C. Denney, J. D. Barnes, M. Thomas, and B. Sivasankar, Pearson.
2. Vogel's Qualitative Inorganic Analysis, G. Svehla and S. Mittal, Pearson Education.

CHEQ6003: Experimental Physical Chemistry – Lab

(0-0-3)

Course Outcomes

CO 1: Recall the theoretical concepts of experiments related to chemical kinetics and electrochemistry etc. (Remembering)
CO 2: Explain the principles and the procedures for spectrophotometry based experiments. (Understanding)
CO 3: Apply the theoretical knowledge for determination of rate constant, pH, emf etc. (Applying)
CO 4: Analyse the practical utility of different theories of chemical kinetics, electrochemistry, adsorption etc. (Analysing)

Experiments:

a. Chemical Kinetics based experiments.
b. Electrochemistry based experiments.
c. Spectrophotometry based experiments.
d. pH-metric Titrations.
e. Adsorption on porous materials - equilibrium, kinetic and thermodynamic studies.

Suggested Readings

1. Advanced Practical Physical Chemistry, J. B. Yadav, Goel Publishing House.

CHQA6004: Organic Qualitative Analysis and Synthesis Lab

(0-0-3)

Course Outcomes

CO 1: Recall the procedures for qualitative analysis, separation of binary mixtures of organic compounds. (Remembering)
CO 2: Explain the chemistry behind the preparation of some important organic compounds. (Understanding)
CO 3: Apply different chromatographic techniques for the identification and purification of organic compounds. (Applying)
CO 4: Analyse practical utility of chromatographic techniques. (Analysing)
CO 5: Identify and extract different types of natural products. (Applying)

a. Qualitative analysis of binary mixtures of organic compounds

1. Separation of binary mixture into individual components.
2. Qualitative analysis of individual components by
   I. Detection of extra elements N, S, Halogens.
   II. Test for functional groups by systematic analysis.
   III. Solubility, melting point.
   IV. Preparation of a derivative and determination of its melting point.

b. Preparation of organic compounds by using single and multistep process.

1. Chromatographic techniques
2. Qualitative TLC separation and identification.
3. Column chromatographic separation of a mixture of compounds.

c. Extraction of natural products.

Suggested Readings

1. Vogel's Textbook of Practical Organic Chemistry, Including Qualitative Organic Analysis (5th Edition).
2. Practical Organic Chemistry, F. G. Mann and B. C. Saunders, Pearson Education.
3. Practical Organic Chemistry, B. S. Furniss, A. J. Hannaford, P. W. G. Smith and A. R. Tatchell, 2012, Pearson.
4. Comprehensive Practical Organic Chemistry, V. K. Ahluwali and S. Dhingra, University Press.

CHRP6005: Research Project

(0-0-12)

Course Outcomes

This will be a research-based module, whereby, students will carry out either theoretical or wet lab experiments and present their findings in a thesis and perhaps as a paper in a conference or a journal.

CO 1: Learn to carry out experiments to fulfil their research objectives and will in the process learn a wide range of techniques both scientific and statistical, and also probably add to the existing body of scientific knowledge. (Remembering)
CO 2: Develop an understanding of the methods they use to carry out their research and why a certain set of methods is chosen. (Understanding)
CO 3: Apply their understanding to steer their research in the right direction. (Applying)
CO 4: Troubleshoot when a chosen approach does not yield the expected result. (Analysing)
CO 5: Critically analyse the results they obtain to decide whether the data obtained proves or disproves a stated hypothesis. (Evaluating)
CO 6: Learn to choose a methodology or approach to fulfil a set of objectives or prove or disprove a hypothesis. (Creating)

In this course, each student undertakes research on a topic that he/she chooses in project phase I or on a topic assigned to him/her by the concerned mentor.

To this end, the student will first review the current status of research on the selected topic, state a hypothesis or a set of objectives and then carry out experiments (either wet-lab or theoretical) to gather data, which he/she will then analyse, draw conclusions and finally present in a dissertation at the end of the semester.

The format for the final dissertation will be as prescribed by the department. There will be a viva voce examination on the dissertation by an expert committee comprising external and internal members of the department. The mode andcomponents of the evaluation and the weightages attached to them shall be published by the department at the beginning of the semester.

CHPC6137: Petroleum Chemistry

(1-0-1)

Course Outcomes

CO 1: To gain knowledge about the composition of crude petroleum and the refining process. (Remembering)
CO 2: To correlate the quality of fuels with various parameters. (Understanding)
CO 3: Determination of different types of water testing parameters required in thermal power plant. (Applying)
CO 4: Analysing of chemical impurities and their separation techniques. (Analysing)
CO 5: Designing of eco-friendly and sustainable energy source in future. (Evaluating)

Module I: Oil Section (15 Lectures)

Renewable and non-renewable source of energy, Petroleum, Composition of crude petroleum, Hydrocarbon, Distillation (Upper distillation, middle ditillation, Residue distillation), crude distillation unit, Fractional distillation, petroleum refining-applications of various fractions, Cracking, Reforming, Petrol, Diesel, viation turbine fuel, Kerocene, LPG, CNG, LNG, clean fuels, Octane number, Cetane number, Flash point, calorific value, knocking and antiknocking, isomerization, smoke point, Lubricants, viscosity index, cloud point, pore point, Density, Gas chromatography, HPLC.

Module II: Water section (15 Lectures)

Thermal power plant station, concept of zero discharge refinery, Oil content, Effluent treatment plant, boiler, demineralization, uses of cationic and anionic resin during neutralization reaction, requirement of *p*H determination, BOD, COD, TDS, TSS, DO, Microbiological treatment, Scavenger, alkalinity, corrosion monitoring, permanent alkalinity, Total hardness, temporary hardness, silica and phosphate removal process, removal of sulphate, sulphite, ammonia, cyanide, water testing.

Suggested Readings

1. Engineering Chemistry, P. C. Jain and M. Jain, Dhanpat Rai & Sons, Delhi.
2. Industrial Chemistry, B. K. Sharma, Goel Publishing House, Meerut
3. Fundamentals of Petroleum and Petrochemical Engineering, U.R. Chaudhuri, CRC Press, Taylor & Francis group.

CHPA6138: Pharmaceutical Chemistry and its applications

(1-0-1)

Course Outcomes

CO 1: Explanation of the preliminary concept of drug and their classification. (Remembering)
CO 2: To understand the mode of action of different kinds of drugs. (Understanding)
CO 3: Synthesis of simple drug molecules and their purification techniques. (Applying)
CO 4: Extraction of the medicinally active component from a plant source and their characterization techniques. (Analysing)
CO 5: To provide knowledge of computational chemistry in designing drug molecules. (Evaluating)

Module I: Introduction and importance of drug Chemistry (15 Lectures)

Definition of drug, pro-drug, host-receptors interactions in connection to biological response, pharmacokinetics andmechanism of drug action-absorption, distribution, metabolism, and excretion (ADME), Structure activity relationship (SARand QSAR), drug classification based on mode of action, analgesics and anti-inflammatory drug, COX-2 inhibitors, mode of action of NSAID and SAID, anti-histamine drugs, antidepressant drugs, narcotics, sedative-hypnotics and their mechanism of action, antibiotics, antiviral drugs, anti-bacterial drugs, anti-neoplastic drug, drugs derived from natural origin including plants and bacteria, chemotherapy, nano-drug delivery systems, toxicology, positive and negative aspect of drug chemistry, future scope of drug chemistry.

Module II: Hands on experience on drug chemistry (15 Lectures)

Experimental aspect of drug chemistry: Synthesis of simple drug molecules, various techniques used for purification including crystallization / recrystallization, acid-base purification, column chromatography, quality control / purity determination of drugs

using GC-MS, HPLC etc., extraction of active ingredient from various plants in North-eastern region having medicinal importance, procedure for bioactivity test.

Theoretical feature of drug chemistry: Application of computational chemistry in designing of drug molecule, computer simulation to assist in solving chemical problems, drug-DNA interaction study, drug-delivery study.

Suggested Readings

1. An Introduction to Medicinal Chemistry, G. L. Patrick, Oxford University Press.
2. Introduction to Medicinal Chemistry, A. Gringauz, Wiley India Pvt Ltd.
3. Medicinal Chemistry, A. Kar, New Age International Publishers.
4. Medicinal Chemistry: An Introduction, G. Thomas, John Wiley & Sons
5. Computational Chemistry: A Practical Guide for Applying Techniques to Real World Problems, D. C. Young, John Wiley & Sons, Inc.
6. Computational Materials Science: An Introduction, J. G. Lee, CRC press, Taylor & Francis Group.

DEPARTMENT OF MATHEMATICS

VISION:

To elucidate the philosophy of Mathematical principles coupled with the exhibition of Mathematical laws in fundamental and frontier areas of science whereupon fostering an intuitive mathematical mind.

MISSION:

- To provide adequate understanding of Mathematical laws by means of both conventional techniques and skilful approaches.
- To familiarize students as well as faculty members with the state-of –the –art by means of talks,workshops, symposia.
- To invoke interest tinged with anxiety to facilitate further pursuit in terms of research pertaining to advanced knowledge.

PROGRAM OUTCOMES – MSC PROGRAMME

PO 1: **Critical Thinking**: Inculcate critical thinking to carry out scientific investigation objectively. Formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. Critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

PO 2: **Knowledge Skil**l: Equip the student with skills to analyse problems, formulate a hypothesis, evaluate and validate results, and draw reasonable conclusions thereof. Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculumcontent knowledge.

PO 3: **Scientific Communication Skill**s: Imbibe effective scientific and / or technical communication in both oral and writing. Ability to show the importance of the subject as precursor to various scientific developments since thebeginning of the civilization.

PO 4: **Ethics**: Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behaviour such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actionsin all aspects.

PO 5: **Enlightened Citizenship**: Create awareness to become an enlightened citizen with commitment to deliver one's responsibilities within the scope of bestowed rights and privileges

PO 6: **Analytical Reasoning**: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyse and synthesise data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

PO 7: **Multicultural Competence**: Development of a set of competencies in order to enhance and promote the growth of multicultural sensitivity within universities. Integrating multicultural awareness such as race, gender, physical ability, age, income and other social variables, and by creating an environment that is, "welcoming for all students".
